Kazakhstan is eligible for admission to the Council of Europe. In recent years, Kazakhstan has increased cooperation with the Council of Europe. A previous agreement was limited to criminal justice. The Neighborhood Co-operation Priorities for Kazakhstan 2019-2022 introduces new areas of cooperation, including the fight against economic crime, promoting a common legal space and human rights standards, and assistance in the electoral field. The document was adopted by the Committee of Ministers in April 2019. Kazakhstan participates in the Central Asia Rule of Law Programme, launched in 2020, which has the goal of "[i]mproving the lives of citizens by reinforcing human rights, democracy and rule of law."²⁸⁴⁹ Corruption in Kazakhstan remains a serious

concern, entrenched in different sectors, institutions, and public and private spheres.²⁸⁵⁰

OECD / G20 AI Principles

Kazakhstan has not endorsed the OECD AI Principles. According to the OECD AI Observatory, the Digital Kazakhstan Government Program, a national initiative, addressed some of the OECD AI principles of inclusive growth, sustainable development, well-being, investment in AI R&D and fostering an ecosystem for AI.²⁸⁵¹

The country's major AI research center, the Institute of Smart Systems and Artificial Intelligence at Nazarbayev University,²⁸⁵² operates in accordance with the following ethical principles: Societal Well-being, Human Centered Values, Transparency, Technical Resilience and Robustness, and Accountability

UNESCO Recommendation on the Ethics of Artificial Intelligence

Kazakhstan is a UNESCO member since 1992²⁸⁵³ and endorsed the UNESCO Recommendation on the Ethics of AI.²⁸⁵⁴

Kazakhstan contributed actively to the drafting of the UNESCO Recommendation. A country delegation from the Institute of Smart Systems and Artificial Intelligence of Nazarbayev University (ISSAI) participated in the UNESCO Session on the Ethics of Artificial Intelligence held online on July 23-24, 2020. The event gathered feedback and stakeholder contributions for the review of, and comment on the draft recommendation. The ISSAI delegation submitted the ISSAI Ethical Principles document as a sample of organizational AI Ethics statements. The Kazakhstani delegation offered observations on the UNESCO draft document with

²⁸⁵⁴ UNESCO, UNESCO Member States Adopt the First Ever Global Agreement on the Ethics of Artificial Intelligence (Apr. 21, 2022)

https://www.unesco.org/en/articles/unesco-member-states-adopt-first-ever-globalagreement-ethics-artificial-intelligence

regard to explainability, accountability and responsibility of AI systems, and the need to respect human rights and human dignity.²⁸⁵⁵ Kazakhstan has yet to take concrete steps to implement the UNESCO Recommendation on AI Ethics.

Evaluation

Kazakhstan has acknowledged its limits in embracing the AI revolution and has yet to develop a national AI policy. However it has already endorsed smart surveillance systems in various cities that have led to fears that the country would transform into a digital authoritarian regime and a real life-laboratory for foreign companies under US sanctions for unethical use of AI technology. The Personal Data Protection Law has not addressed the areas of automated decision-making and algorithmic transparency. The Presidential Decree of 2021 is a positive step into the definition and regulation of artificial intelligence, with a special mention to the matter of accountability. The government has yet to ensure that civil society participates systematically in policy-making. Kazakhstan's endorsement of the UNESCO Recommendation on AI Ethics and its active participation in the drafting of the Recommendation sets a commitment to taking specific steps for implementation.

²⁸⁵⁵ ISSAI, UNESCO Hosts Session on the Ethics of Artificial Intelligence – ISSAI delegation represents on behalf of Kazakhstan (Jul. 25, 2020), https://issai.nu.edu.kz/2020/08/10/unesco-hosts-session-on-the-ethics-of-artificial-intelligence/

Kenya

National AI Strategy

Although Kenya does not have a national AI strategy, the country is a front-runner in the transition to a digital economy and has taken concrete steps to formulate plans, blueprints, and strategies that position the country to create a national AI Strategy.

In February 2018, the government of Kenya empaneled a Blockchain and AI taskforce with the mandate to provide recommendations on harnessing these emerging technologies.²⁸⁵⁶ Notably, the taskforce explored the use of AI in public service delivery, financial inclusion, cybersecurity, and election processes. In July 2019, the taskforce published its report identifying three main axes for AI development and application:²⁸⁵⁷

(1) The need to leverage Blockchain and AI in the fight against corruption.

(2) The critical role of AI in the financial sector.

(3) The application of AI to "bolster election fairness through fast tallying and providing real-time polling results, and by extension, strengthen democracy".²⁸⁵⁸

The taskforce concluded that effective regulation of these technologies would allow to address both citizen protection and private sector innovation.²⁸⁵⁹ The taskforce recommendations are yet to translate into public policy, legislation, or strategy on AI.²⁸⁶⁰

In May 2019, the Ministry of Information, Communications and Technology (MoICT) and the Youth Affairs and the National Communications Secretariat (NCS) released the Kenya's Digital Economy Blueprint.²⁸⁶¹ The Blueprint followed the steps of the Digital Economy Blueprint for Africa. The release took place during the Transform Africa

Summit²⁸⁶². The Blueprint set outcomes, and identifies opportunities and areas for further focus in the Kenyan digital economy ecosystem, including plans of action for the government, private sector, and citizens. The Blueprint identifies six pillars of the digital economy in Kenya: Digital Government, Digital Business, Infrastructure, Innovation-Driven Entrepreneurship and Digital Skills, Values and Digital Inclusion.²⁸⁶³

Kenya also adopted the Digital Economy Strategy 2020.²⁸⁶⁴ The strategy prioritized digital infrastructure for AI (e.g. cloud resources, computing power), business innovation and innovative entrepreneurship, education, and skills, technology transfers, and commercialization. These address the following OECD AI principles; (1) Inclusive growth, (2) sustainable development and well-being, (3) Transparency and Explainability, (4) accountability, (5) investing in AI R&D, (6) fostering a digital ecosystem for AI, and (7) providing an enabling policy environment for AI.

In April 2022, the Government of Kenya, through the MoICT issued a new digital Blueprint: Kenya Digital Master Plan (DMP) 2022-2032.²⁸⁶⁵ This new Blueprint builds on the conceptualization of the 2014-2017 Master Plans of, the 2013Master Plan, the 2004 e-Government Strategy, and the 2005 ICT Policy.²⁸⁶⁶ The new Blueprint, identified 20 flagship programs and the specific actors tasked with their implementation, four pillars, and an overarching policy, legal and regulatory framework:

(1) Digital infrastructure. (8 flagship programs)

(2) Digital government, services, products, and data management (5 flagship programs)

(3) Digital skills (4 flagship programs)

²⁸⁶⁶ Ministry of ICT, Innovation and Youth Affairs. *The Kenya National Digital Master Plan 2022-2032* (Apr, 2022),

(4) Digital enterprise, innovation and businesses (3 flagship programs)

Overarching the pillars, is the Policy, Legal and Regulatory Framework: Harmonization/enactment of policies and government regulation to mobilize funds.

Notable in the Master Plan 2022-2032 is the integration of the recommendations of the Smart Africa Alliance, in relation to the "long-term outcomes of digital governance that include: "fairness", "equity", "transparency", "trust" and "accountability."²⁸⁶⁷

With the support of various organizations, such as the German Federal Ministry for Economic Cooperation and Development (BMZ), the European Union (EU) and the Digital Centre (DZ), Kenya is undertaking a "transformation towards a sustainable and human-centered digital economy and Society."²⁸⁶⁸

In March 2022, the government of Kenya developed a National Cyber Security Strategy²⁸⁶⁹ for a unified approach to the implementation of cyber security activities in the country. The strategy establishes foundations and pillars for effective cyber security for the public and private sectors by combining good governance with a set of initiatives and interventions. Spearheaded by the Ministry of ICT, Innovation and Youth Affairs and the Ministry of Interior and Co-ordination of National Government, the strategy further provides a framework to defend and protect the cyberspace of the Republic of Kenya.

As a member of the African Union (AU), Kenya is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU digital transformation strategy²⁸⁷⁰ and the Continental Data Policy Framework.²⁸⁷¹ The AU AI Working Group is endowed with the mission to foster collaboration among African states in order to "help countries develop AI strategies, identify

other regulatory and governance issues, and learn from regional best practices."2872

Research & Development

Over the last decade, Kenya's total value of the investment in AI reached Sh13 billion (US\$120 million).²⁸⁷³ Kenya's journey in digital transformation dates back to 2013²⁸⁷⁴ when the ministry of Information, Communication and Technology (ICT) introduced the Kenya's Digital Literacy Programme (Digischool). DigiSchool aimed at introducing primary school children in public schools to the use of digital technology and communications. The program faced challenges that have slowed down the implementation: lack of adequate funding, lack of electricity in certain parts of the country, shortage of teachers with relevant and adequate digital literacy skills, lack of storage for gadgets among others.²⁸⁷⁵ According to the OECD.AI observatory, the Digischool initiative would address goals of inclusive growth, sustainable development, and well-being, building human capacity, and preparing for labor market transition.²⁸⁷⁶

The government of Kenya has funded research in AI-applications. In November 2021 the Kenya Space Agency²⁸⁷⁷ awarded research grants of Kshs 500,000 (\$5000) each to 5 public universities (University of Nairobi, Jomo Kenyatta University of Agriculture and Technology, Dedan Kimathi University of Technology, Egerton University and Taita Taveta University to develop AI/ML applications for agriculture. The researchers aimed to use

Google Earth Engine, Artificial Intelligence (AI) and Machine Learning (ML) algorithms together with satellite data to map small scale crops and improve food production, especially for small holder farms.

In 2022, the government of Kenya embarked on developing the Konza Technopolis Smart City, allocating \$73M. This initiative seeks to enhance Kenya's innovation ecosystem and digital economy by providing infrastructure and technological link.²⁸⁷⁸ This initiative addresses OECD AI principles: inclusive growth, sustainable development, and well-being; robustness, security, and safety; investment in AI and research and development; fostering a digital ecosystem for AI and providing an enabling policy environment for AI.²⁸⁷⁹

Other use cases for AI in Kenya include the 'Emerging digital technologies for Kenya- Exploration and Analysis", led by the Ministry of ICT, Innovation and Youth Affairs²⁸⁸⁰. The goal of the study is examine how to leverage Blockchain and AI to promote sustainable development in different sectors. Use cases of AI in electoral processes to ensure safer and more democratic elections and in the environmental sector to promote food and nutrition security among others. This initiative addresses the following OECD AI principles:²⁸⁸¹ inclusive growth, sustainable development, and well-being; transparency and explainability; robustness, security, and safety; accountability; investment in AI and research and development; fostering a digital ecosystem for AI; providing an enabling policy environment for AI; and building human capacity and preparing for labor market transition.

Kenya, in cooperation with UNESCO, hosted workshops on AI and Fairness at the Deep Learning Indaba 2019 annual gathering at Kenyatta University.²⁸⁸² The workshops connected researchers and students in the exchange of ideas intersecting law, gender, AI, ICTs, and community development. Kenya's Digital Terrestrial Television Infrastructure, was the

highlight of the UN E-government report of 2022, as an example of the use of technologies and development of policies that support and advance the SDGs, through attention to underserved populations.

Al Safety Summit

In November 2023, Kenya participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁸⁸³ Kenya thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Public Participation

Kenya has made strides in establishing a systematic process to engage stakeholders in meaningful participation in policy-making. Kenya has a systematic process to receive input in policy-making through the Public Consultation portal of the Communications Authority of Kenya (CA).²⁸⁸⁴ In the most recent consultation, the CA invited comments from all stakeholders for the development of the Framework for a Regulatory Sandbox.²⁸⁸⁵ The Regulatory Sandbox aims to nurture and support innovation by exploring the application of innovative regulatory solutions.²⁸⁸⁶

A previous stakeholders consultation took place in 2018, during the development of Kenya's Blockchain and AI Taskforce report. The taskforce received 150 presentations and consulted with approximately 90 stakeholders.²⁸⁸⁷ The composition of the taskforce was inclusive and diverse, with four women in the pool of 14 experts drawn from academia, research institutions, tech entrepreneurs, consultants and private businesses, such as Safaricom, Cisco, IBM Research Africa, the African Development Bank. The Lead of the Taskforce was the academic and former ICT Permanent Secretary, Bitange Ndemo.²⁸⁸⁸ The consultation also included approximately 31 AI startups operating in various sectors of the Kenyan economy including agriculture, finance. accounting. health. communications, education, business development, and law.

In April 2019, the Artificial Intelligence for Development Africa²⁸⁸⁹ held the regional conference "Toward a Network of Excellence in Artificial Intelligence for Development (AI4D) in sub-Saharan Africa." The event hosted in Nairobi, Kenya was attended by 60 African and international experts, to promote the African conversation on AI, primarily on policy and regulations; skills and capacity building; and the application of AI. The Delegates to the conference had several aspirations:²⁸⁹⁰

(1) achieve that 30 African countries develop AI specific policies and strategies by 2024;

(2) create a pipeline of 400 African PhDs in AI, data science, and other interdisciplinary fields,

(3) create a collective investment of US\$ 1 billion dollars in collaborative innovation and research prioritizing solution areas for sustainable development in Africa;

(4) establish an AI Centre of Excellence in each African country by 2030; and

(5) invest in capacity building in AI policy and regulatory frameworks that are relevant for the African context.²⁸⁹¹

In the most recent UN e-Government Survey of 2022, Kenya ranked 36th out of 193 countries in the world in e-participation, and among the top

15 African countries, in terms of e-Government development index (EGDI).²⁸⁹² The UNESCO Internet Universality National Assessments of 2018 evaluated member states in their adherence to the R.O.A.M. X principles and their contribution to sustainability.²⁸⁹³ R.O.A.M. refers to Rights, Openness, Accessibility, and Multi-stakeholder participation. The assessment concerning Kenya confirmed its robust internet environment aligned with international best practices and its sustained growth in access to ICTs. The report included recommendations for academia to research the impact of AI to inform policy-making.

Kenya participated in a consultative workshop organized by the African Union High-Level Panel on Emerging Technologies (APET) in May 2022.²⁸⁹⁴ The discussions at APET aimed at demystifying the concept of AI and gathering input about "myths, challenges, and benefits of Artificial Intelligence (AI) in Africa", urging the African countries to invest in AI literacy, cooperate internationally for AI innovation, enhance data protection, invest in infrastructure, and review policy implementation frameworks governing AI.

Data Protection

In November 2019, Kenya enacted the Data Protection Act (DPA),²⁸⁹⁵ establishing protections for personal data and reaffirming the right to Privacy.²⁸⁹⁶ The DPA seeks to give effect to Article 31(c) and (d) of the Constitution that contains the right to privacy; regulate the processing of personal data; provide for data subjects' rights; and create obligations for data 'controllers' and 'processors." Applicability to AI can be inferred where personal data is involved in AI-based transactions.²⁸⁹⁷

The DPA contains principles of data protection that relate to the fair, transparent processing of personal data (Section 25), the right to erasure, and right to rectification, and rights related to automated decision-making (Section 35).²⁸⁹⁸

Pursuant to the DPA, the Office of the Data Protection Commissioner (ODPC) was established in 2020. In 2022, the ODPC became a member of the Global Privacy Assembly (GPA).²⁸⁹⁹ The Global Privacy Assembly seeks to provide leadership in data protection and privacy by connecting the efforts of more than 130 data protection authorities across the globe.²⁹⁰⁰ The ODPC has not endorsed the 2018 GPA Declaration on Ethics and Data Protection,²⁹⁰¹ the GPA 2020 Resolution on Accountability in the Development and Use of AI,²⁹⁰² the GPA 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology²⁹⁰³ or the 2023 GPA Resolution on Generative AI.²⁹⁰⁴

Although the African Union developed the AU Convention on Cyber Security and Personal Data Protection (Malabo Convention),²⁹⁰⁷ Kenya has not signed or ratified the Convention.²⁹⁰⁸ Calls to the government of Kenya to sign and ratify the Malabo Convention re-emerged, amid the concerns surrounding data localization requirements and cross-border data transfer, that would require reciprocity with Malabo signatories. Signing the convention would signal Kenya's commitment to the intra-African partnership and regional cooperation.²⁹⁰⁹

Algorithmic Transparency

Section 22 of the DPA provides for algorithmic transparency. A data controller or data processor shall not only "inform a data subject when engaging in processing based on automated individual decision making" but also "provide meaningful information about the logic involved."²⁹¹⁰

Kenya was one of 49 countries subject of a study by Human Rights Watch about the use of government-endorsed or government-built Ed Tech tools for online learning during the COVID-19 pandemic.²⁹¹¹ The findings show that Kenya Education Cloud, a platform used by the Ministry of

Education to deliver online education to primary and secondary students, shared children's data with AdTech companies. The platform designed for children contained ad trackers that sent data about users to third-party companies (Google) as 'remarketing audiences' to target ads across the internet.²⁹¹² The platform did not have any publicly available privacy notice that would give children the right to object to being surveilled. The platform "denied the knowledge or opportunity to challenge these practices."²⁹¹³ Human Rights Watch exhorted UN the Human Rights Commission to address questions with the government of Kenya in regard to children's rights challenged through this practice. Given the increasing matter of algorithmic discrimination, which the DPA does not address directly, there is a need for a comprehensive non-discrimination statute that addresses these risks.²⁹¹⁴ The Kenva Ministry of Education planned to implement automated decision-making in admission decisions. In response to the public outcry, the Ministry explained the factors underlying the model, including the reliance on criteria of merit, equity, choice, category of school, and school capacity. Reports about the outcomes of the model are forthcoming.²⁹¹⁵ A previous process of quotas in the Form One selection in Kenva led to complaints by parents who argued discrimination in 2012.²⁹¹⁶

Biometrics

In 2015 the government started an upgrade of the medical records system, in a bid to stop health insurance fraud in Kenya's Hospital Insurance Fund (NHIF). The NHIF has 6.7M members, serving a population of 48M. The government started the biometric registration of civil servants and security officers to migrate the system to smart cards.²⁹¹⁷ In 2018, the government deployed biometric kits to 1.370 hospitals.

²⁹¹⁷ Chris Burt, Kenya progressing toward biometric deployment in all hospitals to curb health insurance fraud (Sept. 11, 2018),

In 2018, the biometric plan included the registration of students into a health insurance plan nationwide and the registration of newborns.²⁹¹⁸ The infant biometrics plan emerged from the need of the country to ensure that kids of HIV-affected mothers, returned to the hospitals for treatment. UC San Diego conducted fundamental research on fingerprinting engineering.

Kenya biometric ID system Huduma Namba went live in 2019 in the midst of allegations of insufficient protections for privacy rights and challenges by digital rights groups. The Bill since then has remained in Parliament. The Cabinet Secretary for ICT, the sponsor of the Bill, asserted that the project "ran into trouble because of inadequate sensitization and a lack of trust in the system by a vast majority of citizens." ²⁹¹⁹

Kenya is set to revamp the ID scheme as part of the digitization efforts of the country. The Cabinet Secretary for Information, Communication, and Digital Economy announced the plans to to replace the controversial Huduma Namba by a new digital identity in February 2024.²⁹²⁰ The online identification will have a centralized database, that will connect with the National Information Management system. The system will contain a comprehensive set of data held by the government on Kenyans, to facilitate access to public services, and also to be linked to the birth-to-death Unique Personal Identifier (UPI).²⁹²¹ The plans include the assignment of a number to the newborn that will remain as the identifier at school and as the National Identity number, social security number, and death certificate number.

Most recently, the Cabinet Secretary of the Ministry of Interior and National Administration also announced the issuance of biometric passports, which were launched in 2022.²⁹²² Citizenship and Residency documents with advanced features of third-generation security will be part of this innovation to the immigration process.

Facial Recognition

In 2018 the Kenyan National Police Service (NPS) launched facial recognition on major roads and highways, through an urban CCTV network.²⁹²³ This system called Integrated Command and Control system (ICCS) relied on CCTV cameras to do Automatic Number Plate Recognition (ANPR) to detect vehicles involved in crimes as part of the Critical Incident Management suite (CIMS).

The NPS partnered with a Japanese firm to install an upgrade of the ICCS, to "help in a fast and accurate identification of suspects through NEC's NeoFace."²⁹²⁴ The new ICCS system will use thousands of cameras to "scan the street, instantly analyzing the faces of everyone on sight" and match the photographs fed into the system and analyzed via an algorithm that will raise an alert.²⁹²⁵ The NPS Plans include using the Neo Face as an alternative when law enforcement cannot identify a suspect using fingerprints.

Human Rights

According to Freedom House, Kenya is "Partly Free" with a score of 48/100 for political rights and civil liberties.²⁹²⁶ The country's media and civil society sectors are vibrant, even as journalists and human rights defenders remain vulnerable to restrictive laws and intimidation. Concerns exist about the government's interference with the right to privacy of individuals and the frequent use of cybercrime laws to crack down on online critics of the government. The Ibrahim Index of African Governance in 2021 scores Kenya at 58.7/100 for overall governance, and 55.3/100 in

Participation Rights & Inclusion, placing the country in position 13 out of 45 African countries.²⁹²⁷

Kenya's Constitution contains the Bill of Rights under Chapter 4, with a catalog of fundamental civil and political rights, and socio-economic and cultural rights. These rights include Freedom and security of the person, right to Privacy, Freedom of expression, Freedom of the media, right to access to information, and right to dignity.²⁹²⁸ Kenya's Human Rights Commission has an oversight mandate on human rights protection and promotion.

Kenya is a signatory to various regional and international human rights treaties and conventions including the African Charter on Human and Peoples Rights, the International Convention on Civil and Political Rights (ICCPR), and the International Covenant on Economic, Social and Cultural Rights (ICSECR).

OECD / G20 AI Principles

Kenya is not a member of the OECD and has not endorsed the OECD AI principles.²⁹²⁹ The country maintains communication with the OECD AI Observatory, reporting on AI strategies, initiatives, and policies such as AI Use Case in the Public Sector; Blockchain and AI Task Force; Emerging Digital Technologies for Kenya- Exploration and Analysis; Kenya's Digital Economy Blueprint; Kenya's Digital Economy Strategy; and Kenya's Digital Literacy Program (Digischool). These initiatives address the commitment to one or more OECD AI principles however no reports are available about implementation.²⁹³⁰

UNESCO Recommendation on the Ethics of AI

Kenya is a UNESCO member state since 1964,²⁹³¹ and was one of the 193 member states that adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021.²⁹³²

According to the UNESCO AI Needs Assessment Survey in Africa, Kenya has been active in initiatives to improve participation through improvements in internet access under the Rights, Openness, Accessibility, and Multi-stakeholder participation. The report does not include information about Kenya's progress in strategies, policies, legislations, ethical guidelines, centers of excellence on AI, start-up, and incubation centers.²⁹³³

In March 2022, the Government of Kenya in collaboration with UNESCO organized the first Eastern Africa Sub-Regional Forum on Artificial Intelligence in order to examine the potential for AI to bring new possibilities for sustainable development and societal change for Eastern Africa and the adjacent Indian Ocean islands. The purpose of the Forum was to "stimulate discourse on the AI policy environment within the Eastern African Sub-region to support the development and use of universally agreed ethical practices in AI globally. It will highlight how Eastern African Member States can benefit from AI if harnessed well, and how to surmount challenges with a particular focus on achieving the United Nations Agenda 2030 Sustainable Development Goals and the African Union Agenda 2063."²⁹³⁴

Kenya is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.²⁹³⁵ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.²⁹³⁶

Evaluation

Kenya is stepping up its efforts in establishing a comprehensive framework for digital policies in line with developments in the African Union. Kenya has updated its data protection legal regime, created an independent data protection commission and provided for the right to algorithmic transparency. However, Kenya is yet to adopt a national AI policy which would reflect the commitment it took by endorsing the UNESCO Recommendation on the Ethics of AI. Serious concerns exist with regard to practices akin to AI-powered mass surveillance.

Korea

National AI Strategy

Korea's "National Strategy for Artificial Intelligence"²⁹³⁷ was announced in December 2019. While its main focus is on building a worldclass AI technical capacity through ambitious targets such as "achieving a world top 3 digital competitiveness by 2030", it also aims to address AI ethics and algorithmic transparency-related issues under the pillar of realizing people-centered AI.

The National Strategy materializes the "Presidential Initiative for AI" that former President Moon Jae-in announced on October 28, 2019. "AI is moving beyond scientific and technological advancements and is approaching us as a new civilization (...) AI will not only affect industrial sectors but also solve many issues facing our society: public health in an aging society, welfare for senior citizens living alone, the safety of women living by themselves, and the prevention of crimes that are becoming more sophisticated," stated former President Moon Jae-in.

Korea's National Strategy identifies nine major axes and 100 major tasks in three major areas. The major areas are (1) fostering a global-leading AI ecosystem, (2) becoming a country unrivaled for its use of AI, and (3) realizing people-centered AI. The Strategy is the result of a cooperation of the entire Korean ministries and offices including the Ministry of Science and ICT, the Ministry of the Interior and Safety, the Ministry of Education, and the Presidential Committee on the Fourth Industrial Revolution (PCFIR).²⁹³⁸

In September 2022, the Presidential Committee on the Fourth Industrial Revolution (PCFIR) was formally ended²⁹³⁹ and the Presidential Committee on Digital Platform Government was launched on September 2.²⁹⁴⁰ The new Committee will be responsible for evaluating policies and

projects related to AI, infrastructures, and services for creating a Digital Platform for Government according to a human-centered vision.²⁹⁴¹

Meanwhile, the National Data Policy Committee announced that specific regulatory amendments pertaining to the metaverse will be developed.²⁹⁴² The Committee found specifically that the South Korean framework that exists for video gaming was insufficient to deal with metaverse issues. Vice Chairman of the Korea Communications Commission, Ahn Hyoung-hwan, met with a metaverse platform provider to discuss growing concerns over South Korean minors being subjected to sexual harassment on metaverse platforms.²⁹⁴³

In September 2022, President Yoon Suk-yeol visited University of Toronto for AI roundtable, discussed AI and collaboration between University of Toronto and South Korean partners.²⁹⁴⁴ As an extension of the roundtable, the Ministry of Science and ICT announced "The Digital Strategy of Korea" in line with President Yoon's vision. The purpose is for Korea "to become a best practice country in digital innovation and take a leap forward as a leading country in the digital era, rather than staying stagnant as a fast-follower."²⁹⁴⁵

In addition, MSIT announced the 'Plan for Mainstreaming Artificial Intelligence and Industrial Advancement' in January 2023, as a follow-up plan for the Korean Digital Strategy. The plan will promote the advancement of AI industry and technology while sharing benefits with the public by investing in 10 core AI projects.²⁹⁴⁶

AI Ethics

Korea's "National Strategy for Artificial Intelligence" includes "preventing AI dysfunction and establishing AI ethics" as one of nine major actions and aims to set up AI Ethics Principles through public consultation.²⁹⁴⁷

As a follow-up action to establish the comprehensive AI ethical standards which all members of society – developers, providers, and users – can refer to, from development to use of AI, the Korean government has formed an AI ethics research team and analyzed the commonalities and differences in OECD AI Principles and 25 global major AI ethical principles. As a result, in December 2020, the Korean Ministry of Science and ICT announced the Korean AI Ethical Standards²⁹⁴⁸ at the plenary session of the Presidential Committee on Fourth Industrial Revolution. The Standards include 3 basic principles to ultimately materialize 'Humanity' in the development and utilization of AI, as well as 10 key requirements to back up these principles. The 3 basic principles are Human dignity, Public interests and Technological teleology. The 10 key requirements are Human rights advocacy, Privacy protection, Respect for Diversity, Injunction against infringement, Public interests, Solidarity, Data management, Accountability, Safety and Transparency.

In May 2021, the Ministry of Science and ICT announced the national strategy to build social trust in the era of AI. The strategy explicitly put an emphasis on the development of relevant technologies to pursue three ethical values, namely Explainability, Fairness and Robustness.²⁹⁴⁹

Improvement of Policies and Laws for the Era of AI

In May 2020, the Korean government amended the Framework Act on National Informatization,²⁹⁵⁰ now the Framework Act on Intelligence Informatization. "The purpose of this Act is to contribute to realizing an

²⁹⁴⁷ National Strategy for Artificial Intelligence (Dec. 2019), p. 49,

intelligent information society, securing the national competitiveness, and improving the quality of life for citizens, by prescribing matters necessary to establish and promote policies related to intelligent informatization."²⁹⁵¹ The Act provides a definition for intelligence information technology and the basis for all regulations that address the development and use of AI, such as the basic principles of the intelligence information society, technical requirements, standardization, and personal data protection. This Framework operationalizes in part the National AI Strategy and its idea of a "future-oriented legal system"²⁹⁵² based on the review and revision of relevant laws and regulations to address the issues pertaining to the use of AI in (1) data, (2) intellectual property, (3) accountability, (4) regulation of algorithms and trade secret, (5) finance, (6) platform, (7) labor, (8) healthcare, and (9) welfare.

Al Safety Summit

In November 2023, the Republic of Korea participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁹⁵³ Korea thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Public participation

The Korea Information Society Development Institute (KISDI) and the Ministry of Science and ICT (MSIT) jointly held an open seminar²⁹⁵⁴ to

²⁹⁵¹ Article 1 of the Framework Act on Intelligent Informatization,

receive a wide range of public comments from the public and private sectors, academia and civil society. The conference was implemented with the mission of changing the direction of AI's implication on Korean society in more benevolent ways, by checking the goodness, fairness as well as validity of "The RoK's AI Utilization Guidelines" and its enforcement as of 2022. Before convening the event, the KISDI actively accepted and reflected a large number of opinions related to Korea's three major AI policy implementation measures: 1. The Self-checklist for practicing AI Ethics Standards²⁹⁵⁵, 2. The Instructions to develop AI Accountability and 3. AI Ethics Education.²⁹⁵⁶

In September 2022, the MSIT and Gyeonggido Business and Science Accelerator (GBSA) jointly held a contest called "2022 Public participation contest on suggesting AI services"²⁹⁵⁷, as an open forum to gather and reflect a variety of public opinions regarding the government's policy implementation. The competition aimed to discover and elaborate human-centered AI services in various areas, ranging from living convenience, and autonomous mobility to crisis response and disaster risk management.

Data Protection

In February 2020, Korea amended the three major data privacy laws to protect personal information and improve the personal data protection and privacy governance system in the era of the 4th industrial revolution.²⁹⁵⁸ The three laws are the Personal Information Protection Act (PIPA), the Act on the Promotion of the Use of the Information Network and Information Projection (the Network Act), and the Credit Information Use and Protection Act (the Credit Information Act). These amendments reflect the outcome of the "Hackathon agreements" held in February and April 2018. In May 2018, relevant ministries, civil society organizations and professionals from the industry, including legal circles, participated in the Presidential Committee on the Fourth Industrial Revolution. The

²⁹⁵⁸ Ministry of Culture, Sports and Tourism, *Data 3 Act* (Mar. 30, 2020), https://www.korea.kr/special/policyCurationView.do?newsId=148867915

Committee discussed the introduction of the use of fictitious names to foster the use of data, reviewing the existing legislation for an increased coherence, and strengthening users' responsibility.

As a result of the amendments to the three major data privacy laws, the mandate of the Personal Information Protection Commission (PIPC) was upgraded in August 2020.²⁹⁵⁹ The PIPC is now an integrated and supervisory authority endowed with the task to protect and supervise the use of personal information. The PIPC, initially created in 2011 under the office of the President, now operates independently. The PIPC centralizes various personal information protection functions previously scattered across ministries.

In 2021, the PIPC published an AI Personal Information Protection Self-checklist to provide guidelines for the protection of personal information gathered and used by artificial intelligence. The checklist presents 16 specific items to check and 54 items to verify the safe handling of personal information during the AI life cycle: design, development, and operation of AI. 2021 marked also the first case in which the PIPC sanctioned the indiscriminate use of personal information by a company using AI technology. The AI startup was fined as a result of a massive personal data breach.²⁹⁶⁰ In June 2022, the PIPC signed self-regulation agreements with ten online shopping platforms for the safe use of personal information.²⁹⁶¹

In December 2021, the PIPC and the European Commission announced the successful conclusion of their negotiations and the adoption of the European Commission's adequacy decision for the transfer of personal data from the European Union to the Republic of Korea under the General Data Protection Regulation. The adequacy decision confirms the shared commitment of the Republic of Korea and the EU to a high level of data protection.²⁹⁶²

shopping ²⁹⁶² European Commission, Joint Press Statement by Didier Reynders, Commissioner for Justice of the European Commission, and Yoon Jong In, Chairperson of the Personal Information Protection Commission of the Republic of Korea (Dec. 17, 2021), https://ec.europa.eu/commission/presscorner/detail/en/statement 21 6915

The Personal Information Protection Commission (PIPC) is a member of the Global Privacy Assembly (GPA) since 2012. So are the Korea Internet & Security Agency, since 2004, and the Korea Communications Commission, since 2018. The PIPC has taken an active role within the GPA in recent years. In 2020, the GPA adopted a resolution on the privacy and data protection challenges arising in the context of the COVID-19 pandemic. The PIPC co-sponsored the resolution and participated in the GPA COVID-19 task force 2020. It also co-sponsored the 2022 GPA Resolution on Facial Recognition Technology²⁹⁶³ and the 2023 GPA Resolution on Generative AI.²⁹⁶⁴ The PIPC also serves as a member of the GPA's Policy Strategy Working Group 1: Global frameworks and standards²⁹⁶⁵ and Digital Education Working Group,²⁹⁶⁶ whose common purpose is to enhance data protection and AI accountability. However, the PIPC did not endorse the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence.²⁹⁶⁷

With regard to AI oversight, the PIPC is not the only competent independent agency. The National Human Rights Commission of Korea²⁹⁶⁸ advocates for the non-discriminatory use of AI and warns against the risk of bias and deep fake technology.²⁹⁶⁹ In a decision of April 11, 2022, the

National Human Rights Commission adopted Human Rights Guidelines on the Development and Use of AI.²⁹⁷⁰

Algorithmic Transparency

At the 9th Public, Financial, and Corporate Information Protection & Privacy Conference (PASCON 2021) in 2021, the PIPC unveiled the proposed amendments to the PIPA²⁹⁷¹, and in March 2023, the Korean legislature passed the PIPA amendment Bill.²⁹⁷² One of the main amendments concerns data subjects' right to request an explanation regarding automated decisions and the right to object to them.²⁹⁷³

The national strategy to build social trust in the era of AI explicitly refers to "Explainability" as a main ethical value.²⁹⁷⁴ The National Human Rights Commission's Human Rights Guidelines on the Development and Use of AI also provides for algorithmic transparency.²⁹⁷⁵

The Framework Act on Intelligence Informatization provides a framework to secure accountability, interoperability, and safety of intelligence information technology.²⁹⁷⁶ In May 2022, the Korean

government enacted the details and level of technical standards²⁹⁷⁷ that are legally required to be open to the public. The technologies subjected to these criteria are, first and foremost, developed, managed, and utilized for military purposes, second, directly utilized for medical purposes and therefore have a tremendous influence on people's lives, and third, likely to cause significant damage to people in case of malfunction."²⁹⁷⁸

Korea also amended its sectoral legislation to reflect new demands for algorithmic transparency. The Credit Information Use and Protection Act introduced the right to challenge decisions based on automated processing.²⁹⁷⁹ The Credit Information Act recognizes the data subject's right to challenge an automated credit assessment. It defines "automated credit assessment" as a "credit information company's or other act of evaluating credit information and other data using an information processing device (such as a computer) without the intervention of a human in the evaluation." The Credit Information Act is the first law that empowers individual users toward AI transparency.

EdTech and Children Tracking

In their report investigating use of EdTech tools endorsed by governments for online learning during the pandemic,²⁹⁸⁰ Human Rights Watch noted that Korea Educational Broadcasting System (EBS), the website of Korea's national educational public broadcaster, with over 2.1 million daily users during the Covid-19 school closure, tracked "a child's every movement and interaction within the virtual classroom" and sent children's data to 15 AdTech companies. Nonetheless, the EBS "does not disclose the use of ad trackers on the site."²⁹⁸¹ "Nor are the AdTech companies detected by Human Rights Watch to receive children's data disclosed in the list of third parties officially recognized as processors of EBS users' personal data."²⁹⁸²

²⁹⁸¹ Ibid.

²⁹⁸² Ibid.

Human Rights Watch urged governments and ministries and departments of education to "adopt child-specific data protection laws that address the significant child rights impacts of the collection, processing, and use of children's personal data" and "allocate funding to pay for services that safely enable online education, rather than allowing the sale and trading of children's data to finance the services."²⁹⁸³

Lethal Autonomous Weapons

The Korean government takes a stance against developing lethal autonomous weapons and rather focus on supporting non-weapon systems such as effective management of military supplies or human decision-making process.²⁹⁸⁴

In October 2022, the Republic of Korea was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²⁹⁸⁵ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."²⁹⁸⁶

In February 2023, Korea co-hosted, together with the Netherlands, an international summit on the responsible application of artificial intelligence in the military domain. The aim of the summit was to define an agenda for developing international agreements on AI applications in the military.²⁹⁸⁷ At the end of the Summit, Korea, together with other

participant countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁹⁸⁸ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."²⁹⁸⁹

Korea also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁹⁹⁰

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.²⁹⁹¹

Human Rights

According to Freedom House, Korea is a "free" country. Its "democratic system features regular rotations of power and robust political pluralism, with the largest parties representing conservative and liberal views. Civil liberties are generally respected, though the country struggles with minority rights and social integration."²⁹⁹³

The Korean government established the National Human Rights Commission of Korea (NHRCK) in 2001 as a national advocacy institution for human rights protection.²⁹⁹⁴ During his congratulatory remark on 2018 Human Rights Day in December, former President Moon Jae-in stated "when human rights are realized in everyday lives, their value is demonstrable (...) Human rights are guaranteed through peace, and peace is secured through human rights." He also extended his gratitude to NHRCK for "fully demonstrating the history and significance of the Universal Declaration of Human Rights."²⁹⁹⁵

In addition, the Korean government has been an active member in the seven core international human rights instruments including the "International Covenant on Civil and Political Rights" and "International Covenant on Economic, Social, and Cultural Rights." Especially since its entry into the United Nations (UN) in 1991 and the Commission of Human Rights (CHR) in 1993, Korea has been engaged in various international cooperation activities for the improvement of human rights, especially the rights of the vulnerable and the North Koreans.²⁹⁹⁶

OECD / G20 AI Principles

development and the use of AI. Korea endorsed the OECD AI Principles in 2019²⁹⁹⁷ as well as the G20 principles. The Korean government is also one of the founding members of the Global Partnership on AI (GPAI), the world's first international AI initiative.²⁹⁹⁸

At the Ministerial Council Meeting of October 2021, the Korean Ministry of Science and ICT presented the "Progress over the past two years in implementing the OECD AI Principles and Future Direction."²⁹⁹⁹ A general director of the AI policy bureau at the Ministry of Science and ICT, Ms. Kyunhee Song, presented Korea's progress in accordance with the OECD AI Principles. As part of the effort to implement the OECD AI Principles, the Korean government also established the 'National Strategy of Artificial Intelligence (2019)' and the 'Digital New Deal Strategy (2020) (Data Dam Projects).

To further its commitment to AI ethics, Korea has joined the Steering Group for OECD's Working Party on Artificial Intelligence Governance.

UNESCO Recommendation on the Ethics of AI

Korea has been playing an active role from the drafting to the implementation of the UNESCO Recommendation on the Ethics of AI.

In July 2020, Korea co-organized the Virtual Regional Consultation for Asia and the Pacific Region on the first draft of the Recommendation on the Ethics of AI with UNESCO. ³⁰⁰⁰ The conference discussed the text of the Recommendation and sought feedback reflecting different cultural values while addressing various regional concerns to achieve a "truly inclusive and pluralist instrument."

In 2021, the Korean government presented the results of ongoing projects supported by various public donors and identified new opportunities for cooperation with UNESCO. The Ministry of Science and ICT informed UNESCO of the support of the Korean government to the drafting of the UNESCO Recommendation on the Ethics of AI. The

Ministry of Science and ICT and the Korean Information Science Development Institute (KISDI) participated in two Intergovernmental Meetings and Intersessional Consultations for intergovernmental negotiations for the Recommendation. The Ministry of Science and ICT provided in-depth comments on the draft to make the Recommendation actionable with regard to future AI policy. In that process, the Korean government consented to the purpose and values of the Recommendation and provided feedback to clarify policy actions for the draft.

Together with the Korean National Commission for UNESCO, Korea Legislation Research Institute (KLRI) hosted a forum themed "UNESCO's Recommendations on AI Ethics and Legal Challenges" in April 2021, which discussed the status of UNESCO's Recommendation and significant legal issues with the advent of AI technologies, urging for collaboration between the two organizations to address ethical and legal challenges posed by AI.³⁰⁰¹

In December 2022, the Ministry of Science and ICT of Korea attended the first UNESCO Global Forum on Artificial Intelligence Ethics online hosted by the Czech Republic in Prague,³⁰⁰² recalling the significance of the Recommendation and discussing its implementation.³⁰⁰³

Evaluation

Korea is one of the leading countries in the field of AI policy. Korea has adopted a comprehensive National Strategy for AI, developed a strong ethical framework, and has promoted a "future-oriented" legal system. Korea has endorsed the OECD / G20 AI principles and played an active role in the drafting and implementation of the UNESCO Recommendation on the Ethics of AI. Korea has updated national privacy laws, established a Personal Information Protection Commission, and maintains a leading role in the defense of human rights. Although Korea's Personal Information Commission endorsed the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial

Recognition Technology, the absence of regulation of the use of facial recognition at national level still needs to be addressed.

Kuwait

National AI Strategy

Kuwait's focus on the diversification of its oil-based economy is the basis of the "Kuwait Vision 2035 – New Kuwait,"³⁰⁰⁴ the country's National Development Plan requiring investment in R&D, propelled by industry, government, and academia. Kuwait does not have a national AI strategy yet. The country's engagement with AI takes place within the context of the New Kuwait Plan focus on the digital economy and Information and Communication Technologies (ICT).³⁰⁰⁵

Launched in 2017, the New Kuwait Development Plan aims to transform the country into a financial and commercial hub for the region. The plan is aligned with the SDG 2030 and more particularly the objective of "consolidating the values of society, preserving its identity, as well as achieving justice, political participation and freedoms."³⁰⁰⁶ The seven pillars of the Kuwait Vision 2035 are:³⁰⁰⁷ (1) public administration (2) economy (3) infrastructure (4) living environment, (5) healthcare, (6) human capital, and (7) global position. The public administration pillar has the objective of "reform[ing] administrative and bureaucratic practices to reinforce transparency, accountability and efficiency in the government."

In 2017 as well, the Kuwaiti government issued the first National Cyber Security Strategy (2017-2020). Notable in the strategy is the declaration of the State of Kuwait to ensure that the strategy "preserves the fundamental rights, freedom and privacy of individuals and institutions."³⁰⁰⁸ The strategy defines three objectives for the creation of a cybersecurity environment that is safe and secure, through the development of legislation that keeps pace with technology and aligns with international standards.³⁰⁰⁹

Kuwait's Communications and Information Technology Regulatory Authority (CITRA) declared the importance of adopting artificial intelligence³⁰¹⁰ and cloud computing techniques to achieve the New Kuwait 2035 strategy's objectives. Another government entity, the Central Agency for Information Technology (CAIT) has also a key role in implementing a roadmap for government in digital transformation, and announced the launch of the Massar strategy during the Smart Government Summit in May 2022.³⁰¹¹

Government entities such as CAIT are making concerted efforts to advance the digital transformation roadmap in Kuwait. In November 2022, CAIT hosted the Digital Transformation Kuwait Conference, to discuss digitization in government services and the pathway to the digital economy. The Deputy Director General of CAIT expressed the need for "cooperation between government and private sector to build, and advanced digital economy coupled with a flexible legislative system that dedicates uniformity to the sector's cybersecurity policies, guidelines and strategies."³⁰¹²

In September 2022, as a member State of the Digital Cooperation Organization (DCO), Kuwait endorsed The Riyadh AI Call for Action (RAICA) Declaration "aimed at advancing the DCO's commitment to identifying and addressing present, emerging and future humanitarian issues in the field of AI."³⁰¹³ RAICA was launched during the Global AI Summit of 2022³⁰¹⁴ and established a commitment to developing AI technology that benefits people, communities, and nations.

CAIT and Digital Transformation Kuwait will host the "Achieving 2035 Vision Through Digital Transformation" Summit in November 2023.³⁰¹⁵ The themes of the conference do not specifically address artificial intelligence but will provide more broadly an overview and some updates on the Kuwait 2035 vision, as well as key aspects of government performance, digital society and economy, digital transformation across sectors, and national digital skills.

Public Participation

The Kuwait Government's online platform is the channel of communication of the government with the society, providing information about laws and regulations and increasing awareness of information technology.³⁰¹⁶ The platform includes a list of government entities using e-services with channels for consultation. Kuwait is yet to have a mechanism to engage civil society in AI policy-making and the formulation of an AI strategy but efforts exist in other spheres.

The Kuwait Vision Engagement Program 2035 (الكويت الكويت) included a mechanism providing an opportunity for the society to provide input in the formulation of the New Kuwait document.³⁰¹⁷ Individuals, government organizations, private companies, NGOs, or volunteers were able to submit their interest in various roles, such as ambassadors, pledgers, enablers, innovators, spreaders, and entrepreneurs.

The Kuwaiti Government produced the Country Engagement Framework (CEF) as part of the Third Kuwait National Development Plan (KNDP-3) within the New Kuwait 2035 Vision. This policy framework, produced in consultation with stakeholders and with the support of the World Bank,³⁰¹⁸ reflected the analysis of issues and challenges regarding the seven pillars of Vision 2035.

On the civil society front, the Kuwait Transparency Society, a nonprofit organization in Kuwait, participated in drafting the executive regulations of the "Right of Access to Information Law" passed in

November 2021.³⁰¹⁹ The focus group included a team of governmental experts to improve the final format of the regulations in line with international experiences.³⁰²⁰ The Society monitors the regulations implementation and trains government agencies in implementing the law in line with transparency and anti-corruption standards.

Kuwait has embraced e-government plans, to enhance transparency and decentralization of public services, to minimize the control of government officials on operations.³⁰²¹ This is still work in progress, as reported by the Bertelsmann Foundation country report,³⁰²² which by 2022 ranked Kuwait #68 out of 137 countries, substantially lower than in previous years, with low scores in "Rule of Law" and "political participation."

Data Protection

The Kuwait's Constitution protects the right to privacy. Article 39 reads: "Freedom of postal, telegraphic, and telephone correspondence is maintained, and secrecy is ensured." Messages may not be monitored unless required by law and only in compliance with established processes." ³⁰²³

Kuwait lacks a dedicated personal data protection legislation and a data protection supervisory entity.³⁰²⁴ Two government entities: CITRA and CAIT, are responsible for the regulation and governance respectively, of information technology services in the country. CITRA³⁰²⁵ is the Communication & Information Regulatory Authority, responsible for regulating, supervising, and monitoring the telecommunication sector of

Kuwait and protecting the interest of users.³⁰²⁶ CAIT is the Central Agency for Information Technology, responsible for IT governance.³⁰²⁷

CITRA has made efforts to provide governance and regulation to the technology sector, through Decision No. 42 of 2021 on Data Privacy Protection Regulation (DPPR)³⁰²⁸ and the Cybersecurity strategy.³⁰²⁹ The DPPR describes data protection obligations on Telecommunication Services Providers and associated industrial sectors in terms of data collection, storage, processing, and transfer.³⁰³⁰ Human-centered values and fairness may be inferred from the DPPR mandate to "respect the rights and freedoms of natural and legal persons" [Article 7],³⁰³¹ setting provisions against the harmful use of personal data by third parties [Clause 26]. Penalties are also established in case of violations of these rights. Complementing DPPR, CITRA issued the Data Classification Policy (DCP) as guidance for data protection for entities dealing with massive amounts of data. The DCP categorizes data in four tiers: Tier 1 Public data, Tier 2 private insensitive data, Tier 3 Private sensitive data, and Tier 4 Highly sensitive data.³⁰³² Missing in both regulations is a specific mention of automated decision-making systems and relevant protections in such cases.

The DPPR governs the collection and processing of personal data via Service Providers of Communication and Information Technology Services (CIT Service) in the public and private sectors. CIT Services include public telecommunications networks, the operation of a website, smart application, or cloud computing services, by any natural or legal person.

The DPPR requires the determination of mechanisms and standards for encryption in line with the Data Classification policy of CITRA. Service

https://www.citra.gov.kw/sites/en/LegalReferences/Data_Classification.pdf

Providers must comply with certain conditions for data processing, such as a) providing users with clear, easy access to their data practices and policies, b) maintaining a clear purpose for data collection (purpose limitation) and c) maintaining appropriate technical and organizational measures to ensure that personal data is protected against unauthorized or illegal processing, accidental loss, destruction or damage, among other conditions. Exempted from the DPPR are natural persons collecting and processing personal or family data, and security agencies processing personal data to prevent, investigate, or detect crimes, or to prosecute criminals, enforce, or prevent threats against public security.

The Law No. 20 of 2014 on Electronic transactions includes privacy safeguards for privacy and data protection of civil, commercial, and administrative transactions, controlling electronic records, signatures, transactions, messages, and documents relating to these activities, but no specific mention to safeguards on interactions with AI-powered systems.³⁰³³

The Law No. 63 of 2015 related to Combating Information Technology Crimes (Cyber Crime Law) regulates acts performed using an "information network" or "information technology."³⁰³⁴ Punishable under this law are hacking computer systems, accessing personal data without authorization, fraud, posting pornography, and engaging in human trafficking over the Internet. Articles 6 and 7 extend bans on print publications to online sharing of information, including online journalism and private use of social media and blogs.³⁰³⁵

The Cyber Crime Law, enforced since 2016, faced criticism for permitting restrictions on Internet-based speech.³⁰³⁶ Nothing in the Cybercrime law precludes police from utilizing these criteria to monitor private communications on Twitter, Facebook, and other social media platforms and mobile phone apps.³⁰³⁷ An analysis by the Council of Europe (CoE) of the Cybercrime Law No 63 and Law No 20 of 2014 on Electronic Transactions found several areas of misalignment with the Budapest Convention.³⁰³⁸ This development contrasts with the original objectives of

the National Cybersecurity Strategy of 2017-2020 that made "fundamental rights, freedom and privacy of individuals and institutions" a priority.³⁰³⁹

In January 2022, the Kuwaiti government announced a Cyber Security Bill to amend Law No. 63 of 2015 and established the National Center of Cybersecurity.³⁰⁴⁰ In a statement to the United Nations General Assembly in October 2022, the Kuwaiti Diplomatic attaché stressed the importance of the Cybersecurity Strategy 2017-2020 to "protect vital national and informational infrastructure and assets."³⁰⁴¹

Algorithmic Transparency

Kuwait has not enacted algorithmic transparency in law but the DPPR³⁰⁴² requires providers to ensure transparency throughout collection and data processing. Yet, the DPPR does not include articles addressing automated decision-making, explainability or AI-related transparency obligations.

Biometric Identification

Kuwait efforts in digital government started in the early 2000s, following the GCC's decision to create electronic ID schemes for residents across the region. Kuwait launched the ID card program and eGovernment services in 2009. By 2012, Kuwait Ministry of Interior set up a biometric system in all land, sea, and airports, to track wanted individuals attempting to enter illegally to the country, and in 2016, launched a new e-passport system to combat forgery in immigration ports.³⁰⁴³

In April 2020, the Kuwaiti government launched the new Digital ID card, entrusting the project's management to the Public Authority for Civil

Information (PACI).³⁰⁴⁴ The new Civil ID card would become the primary way of verifying the digital identity of all Kuwaiti citizens and residents and replace the physical card. The Civil ID was a crucial component in streamlining administrative operations to support Kuwait's comprehensive digital government project, aimed to change the way citizens and residents receive government services.

The new Civil ID card has a microprocessor that can store massive information, including digital certificates in a secure environment, allowing the use of electronic authentication and digital signatures.³⁰⁴⁵ ID verification takes place through mobile and QR codes, with the aid of a bot. A feature of the 'credential wallet' hosts driver's licenses, birth certificates, and other documentation. During COVID-19 the Civil ID app was also used for registration of the status and doses of vaccination.³⁰⁴⁶

In January 2023, the Ministry of Education (MoE) of Kuwait announced the approval by the Audit Bureau of the implementation of a 'fingerprint system' to track the attendance of teachers and school workers in government schools.³⁰⁴⁷ Earlier, in 2019, the MoE had plans for implementing a fingerprint system for attendance in 900 public schools, to include students and teachers, "without any gender discrimination" to strengthen safety measures.³⁰⁴⁸ The compulsory biometric attendance is set to start in the academic year 2023-2024, and is considered by MoE as a necessary action to "end the case of neglect by some teachers and school administration and preventing tampering with records."³⁰⁴⁹ The government

has already selected the contractor for the 2,770 fingerprint devices, worth US\$1.1M to be installed in schools across the country.³⁰⁵⁰

Facial Recognition

Facial recognition mechanisms were in the plans of Kuwait Civil Aviation in 2019, ³⁰⁵¹ but were placed "under revision" by Yousef Al-Fouzan, Director General at Kuwait's Directorate-General for Civil Aviation (DGCA). The system was designed to locate passengers' whereabouts "at all times" to offer "better airport services."

The Ministry of Oil had plans for E-Face printing to track the attendance of its employees in 2020, as part of the digital transformation roadmap and the "Oil Innovate" award competition.³⁰⁵² The Undersecretary of the Ministry of Oil, Sheikh Dr. Nimmer Al-Sabah expressed the significance of E-face printing "to facilitate and accelerate the services provided in the Ministry, raise its efficiency and reduce (the) human factor in transactions". The e-facial print would be stored in databases linked to the human resources system to track check-in and check-out times, for purposes of compliance and audit.

In 2020 the Ministry of Interior of Kuwait rejected categorically allegations of mass surveillance practices in the country, to monitor citizens' accounts on social media. The Minister set up an investigation committee to pursue the fake accounts that published leaked recordings of Kuwait's State Security.³⁰⁵³

A study by Amnesty International in 2020 of 11 countries using data tracing apps for COVID-19, including Kuwait. The study found that the "Shlonik" app was among "the most alarming tools (..) carrying out live or near-live tracking of users' locations by frequently uploading GPS coordinates to a central server (...) far beyond what is justified in efforts to

tackle COVID-19."³⁰⁵⁴ Conversely, a report by Privacy International in 2022, did not find Kuwait to use practices of surveillance in public spaces and use of facial recognition, as did other countries included in the study.³⁰⁵⁵

Smart Cities

The government of Kuwait has announced plans for Smart sustainable cities, in line with the New Kuwait 2035 Vision and the efforts towards the UN SDGs, to make "urban operations and services more efficient (...) improve traffic flow and safety (..) and much more."³⁰⁵⁶ Kuwait's General Secretariat for the Supreme Council for Planning and Development (GSSCPD) and UNDP organized workshops in February 2020 to obtain input from public and private entities and civil society about good practices regarding the creation of eco-cities.³⁰⁵⁷

Lethal Autonomous Weapons

Kuwait has been an active participant of the CCW GGE Group of Governmental Experts on Lethal Autonomous Weapons, yet the country has not banned their use. ³⁰⁵⁸

Kuwait is one of 126 High-Contracting Parties in the Convention of Certain Conventional Weapons (CCW) and endorsed Protocol I (on Certain Conventional Weapons), Amendment II, Protocol III, IV, and V.³⁰⁵⁹

Kuwait, as part of the Non-Aligned Movement (NAM), expressed its position against lethal autonomous weapons systems during the UN General Assembly of 2015, due to its "moral, humanitarian, and legal

challenges for the international community."³⁰⁶⁰ The statement, presented during the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems Meeting in Geneva in 2022, calls for the negotiation of a "legally binding international instrument stipulating prohibitions and regulations on lethal autonomous weapons systems."³⁰⁶¹

In February 2023, Kuwait participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Kuwait, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³⁰⁶² In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."³⁰⁶³

Human Rights

Kuwait is a signatory of the Universal Declaration of Human Rights.³⁰⁶⁴ Kuwait has not ratified the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic Social and Cultural Rights (ICESCR)³⁰⁶⁵ When the ICCPR was first issued, Kuwait had expressed reservations and observations.³⁰⁶⁶ ICCPR's Articles 6, 7, and 13 combined forms an effective barrier to critical political discourse on the Internet, in contrast to the crucial safeguards provided by article 19 of the ICCPR.

The Freedom House rated Kuwait as a "Partially Free" country, (37/100) in 2022; with a score of 14/40 in political rights and 23/60 in civil liberties.³⁰⁶⁷ Amnesty International reported that Kuwait has areas to improve in relation to protecting the rights of certain groups of noncitizens.³⁰⁶⁸ Human Rights Watch in 2022 reported that Kuwaiti authorities limit free speech and punish dissidents using sections in the penal code, national security, and cybercrime legislation, notably for remarks published on social media.³⁰⁶⁹

The Transparency International's 2022 Corruption Perception Index ranks Kuwait in 77th place out of 180 countries with a score of 42/100, signifying some level of corruption.³⁰⁷⁰ Kuwait has taken considerable steps in the past five years to fight corruption and establish key foundational policy instruments to improve the government's role in fighting corruption. Accordingly, the Kuwait Anti-Corruption Authority (NAZAHA) was set up as an independent public authority to combat corruption under Law No. 2 of 2016, including the development of the NAZAHA governance framework.

The Government of Kuwait supports and promotes the right of peoples to self-determination (Guideline # 2), as well as international and regional resolutions that uphold this right, on the understanding that it is a

"fundamental right that cannot be suppressed by any means or under any circumstances."³⁰⁷¹ Kuwait's Public Authority for Anti-Corruption (Nazaha) formulated the Kuwait Integrity and Anti-corruption strategy (KIACS) 2024;³⁰⁷² a comprehensive document that aligns with the new Kuwait Vision 2035. The KIACS has a focus on Sustainable Development Agenda (SDGs) 2030 and The United Nations Convention against Corruption, to promote the rule of law, promote accountability (#5 Assessment and Accountability Obligation).

OECD / G20 AI Principles

Kuwait is not a member of the OECD and has not endorsed³⁰⁷³ the OECD AI Principles of 2019.³⁰⁷⁴ Kuwait has not submitted reports to the OECD AI Policy Observatory in relation to ongoing policies, strategies, or activities associated with AI.³⁰⁷⁵

Kuwait is a member of the MENA-OECD Initiative on Governance and Competitiveness created in 2021 to implement reforms to (...) improve (...) governance structures and cooperation.³⁰⁷⁶ The MENA-OECD Initiative has a focus on welfare, stability, and socio-economic security for all citizens, gender equality, and transparency, but does not address AI specifically.

In a review by OECD about Innovation policies in Kuwait,³⁰⁷⁷ findings point to areas where the country is lagging behind in the region.

Policies to promote science, technology, and innovation policies were either partially implemented or not implemented at all.

UNESCO Recommendation on the Ethics of Artificial Intelligence

Kuwait is a UNESCO member since 1960³⁰⁷⁸ and is one of the 193 member states endorsing the Recommendations on the Ethics of AI.³⁰⁷⁹ Kuwait had a leading position in this process, chairing the UNESCO Intergovernmental committee that approved the AI code of ethics in 2021.³⁰⁸⁰ The committee included 300 experts, 102 countries, and 49 observers. Ambassador Adam Al Mulla, Permanent Representative of Kuwait to UNESCO highlighted the importance of the UNESCO Recommendation as a negotiated effort to reach a framework of international and national policies "to ensure that Artificial Intelligence benefits society as a whole".

In 2021, UNESCO launched the Guidance for Policy Makers in the Gulf States with a forum to discuss AI policy with representatives from Kuwait and other five Arab states.³⁰⁸¹ The UNESCO event was a key engagement in the region that aimed to "initiate the conversation on the possibility of developing national policies in AI." Following this effort, in a 2022 statement, Kuwait University called all university units to activate the UNESCO recommendation in their current and future applications.³⁰⁸²

Kuwait is an example in the Arab region of engagement in the promotion of the UNESCO Recommendations. In October of 2022, Kuwait along with other 8 countries (Cook Islands, Liberia, Libya, Morocco, Netherlands, Oman, Saudi Arabia, and Togo) requested the inclusion of an item to the agenda of the Preparatory Group of the 215th Executive Board on Implementation of the Recommendation on the Ethics of Artificial Intelligence. ³⁰⁸³. Kuwait Ambassador Mr. Al Adam Al Mulla was elected

Chair of The Group of Friends of the Implementation of the Recommendation on the Ethics of Artificial Intelligence. The Group of Friends of the Implementation of the Recommendation on the Ethics of AI seeks to set a program that includes: (1) Elaboration of capacity-building tools and methodologies aligned to the Policy action 1: Ethical Impact Assessment, Monitoring and Evaluation. (2) Global Forum on Ethics of AI Ethics, (4) Assisting Member States in building strong national institutions for promoting AI ethics, (5) Establishment, facilitation, and management of expert networks, such as the AI Ethics Experts without Borders (AIEB), Global Network of Knowledge Centers on Ethics of AI, Women on Ethical AI Network (W4ethicalAI).³⁰⁸⁴

Evaluation

Kuwait's formulation of the New Kuwait Vision 2035 harnesses the efforts to lead in digital transformation. The country is in the nascent stages of policy formulation that supports the adoption of responsible AI. The fairly high position of Kuwait in AI readiness in the region indicates the potential impact that governance of AI could have to propel the country's responsible innovation. Kuwait's active leadership of the UNESCO Group of Friends and the former Chairmanship of the committee that drafted the Recommendations for AI are positive steps that need to be translated at the national level by the formulation of a national AI strategy. Kuwait has a fairly formalized system for public information and consultation, and this could be leveraged to promote participation in trustworthy AI policy formulation. Governance and oversight are areas of opportunity for growth for Kuwait as documented by multiple international governance ranking systems. The modernization of Kuwait's data protection legal regime would also allow to ease concerns with regard to surveillance practices happening in a legal vacuum.

³⁰⁸⁴ UNESCO, *Implementation of the Recommendation on the Ethics of Artificial Intelligence* (2022), https://unesdoc.unesco.org/ark:/48223/pf0000382931

Lithuania

National AI Strategy

In 2019, the Ministry of Economy and Innovation released Lithuania's national AI strategy. "The Lithuanian Artificial Intelligence Strategy: A Vision of the Future seeks to communicate the current position and future strategic vision of the Republic of Lithuania in regard to artificial intelligence." It includes strategic recommendations for government consideration. The AI Strategy outlines four principles for ethical development and the use of AI and associated mechanisms to achieve those goals. The National AI strategy sets an objective of advising the public sector on ethical AI regulation and implementation, by suggesting the creation of an AI ethics committee, in addition to developing mechanisms for obtaining feedback from the public on AI regulations. Other principles include:

- Securing trust in AI regulations
- Encouraging transparency and fairness
- Encouraging ethics by design.

The national strategy also acknowledges the significance of developing new skills suited for societal transformations brought by AI, strengthening AI research and development. The ethical and legal principles for the development of AI strategy implementation methods are outlined in the AI strategy.³⁰⁸⁵

The Strategy acknowledges both the 2018 EU coordinated plan on AI whose goal is "for Europe to become the world-leading region for developing and deploying cutting-edge, ethical and secure AI, promoting a human-centric approach in the global context" and the 2019 AI ethics guidance issued by the EU High Level Expert Group on AI which "should serve as starting point for the discussion for ethical AI." Key topics addressed by the Lithuanian national strategic plan include: "Ethical and legal core principles for the development and use of AI"; "Integration of AI systems across all economic sectors;" "national development of skills and competencies needed for a future with AI"; "Growth of AI research and development" and "a responsible and efficient approach to data."³⁰⁸⁶

The national strategy acknowledges, "Having the capability to generate tremendous benefits for individuals and society, AI also gives rise

 ³⁰⁸⁵ Ministry of The Economy and Innovation, Lithuania Artificial Intelligence Strategy (Apr. 2019), <u>https://eimin.lrv.lt/uploads/eimin/documents/files/DI_strategija_ENG(1).pdf</u>
 ³⁰⁸⁶ Ministry of The Economy and Innovation, Lithuania Artificial Intelligence Strategy (Apr. 2019), <u>https://eimin.lrv.lt/uploads/eimin/documents/files/DI_strategija_ENG(1).pdf</u>

to certain risks that should be properly managed. Given that, on the whole, AI's benefits outweigh its risks, we must ensure to follow the road that maximizes the benefits of AI while minimizing its risks. To ensure that we stay on the right track, a human-centric approach to AI is needed. Trustworthy AI has two components: (1) ethical purpose - it should respect fundamental rights, applicable regulation and core principles and values and (2) it should be technically robust and reliable since, even with good intentions, a lack of technological mastery can cause unintentional harm." Accordingly, the national strategy identifies four key principles:

- To advice the public sector on ethical AI regulation and implementation. For this, the establishment of an AI ethics committee that monitors the impact of AI on fundamental rights is recommended. This committee "should include representatives from academia, government, industry and NGO sector. The Committee should provide (independently created) short and longterm analysis and recommendations" which "should be used to create and update existing ethical standards in Lithuania." The national strategy also suggests to "develop feedback mechanisms for societal input on regulations created by the public administration" and the "Government should recognize citizens' "understanding of AI as a new civic skill.""
- To establish trust in rules, laws and norms that governs AI. Among others, the strategy identifies that "Lithuania needs to develop rules, standards, guidelines, norms and ethics principles in order to guide ethical and sustainable development of AI and use of AI. Lithuania needs to work for Lithuanian, European and international standards and regulations that promote the use of AI and prevent risks." Lithuania also "needs additional investments to advance AI safety and security, including explainability and transparency, trust, verification and validation, security against attacks, and long-term AI safety and value-alignment."
- To encourage transparency and fairness in AI applications. The national strategy states that "AI applications should be ethical, safe, reliable and transparent." Research to minimize bias in AI systems should be supported and the government should facilitate the creation of "a national interdisciplinary center on AI to promote discussions surrounding the ethics of AI." The strategy also notes, "Many algorithms, including those based on deep learning, are opaque to users ; thus; Lithuania needs to establish the safeguarding mechanism that researchers would develop systems that are

transparent, and intrinsically capable of explaining the reasons for their results to users."

- To encourage ethics by design. According to the strategy, this can be achieved by developing educational programmes which discuss the ethical implications of technology and "facilitate society-wide discussion" in this regard.

In 2022, Lithuania issued its AI development activity plan 2023-2026.³⁰⁸⁷ The plan sets three main objectives: improve the conditions for the development of the AI ecosystem, increase the use of AI across both public and private sectors and create the necessary conditions for AI innovation.

Nordic-Baltic Cooperation on AI

As for the international landscape, the Lithuanian minister responsible for digital development signed the 2018 declaration on "AI in the Nordic-Baltic region" establishing a collaborative framework on "developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used" and "on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability."³⁰⁸⁸

The ministerial declaration Digital North 2.0³⁰⁸⁹ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. "In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and reuse of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and

globally in a sustainable and inclusive digital transformation of our societies."³⁰⁹⁰

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Lithuanian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them. ³⁰⁹¹

In September 2022, the Nordic and Baltic ministers for digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this "rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities." The ministers declared that they "have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. (...) Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services."3092

Council of Europe Convention on AI

Lithuania contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to

adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³⁰⁹³

Public Participation

The national strategy was elaborated by the Ministry of Economy in consultation with an advisory group "of expert representatives from the private sector and academia."³⁰⁹⁴ Lithuania's Agency for Science, Innovation and Technology (MITA) outlined that one of the principles in shaping the 2019 Lithuanian AI strategy would be to consult the public with regard to ethical AI regulation and implementation with a view to promote the transparent and fair use of AI.³⁰⁹⁵ Yet, on the centralized public consultation platform run by the Government of Lithuania, no public consultation on AI could be found.³⁰⁹⁶

The MITA has a section on their website on monitoring regulatory developments, yet the page has not been updated since October 2018.³⁰⁹⁷Even if platforms for public participation exist,³⁰⁹⁸ a centralized website dedicated to AI policies and practices has not been created.

The AI development activity plan $2023-2026^{3099}$ provides for an action item dedicated to "activities for setting dialogue with the society on questions of ethical AI and the social implications of the use of AI systems" (action item 1.5.3.). Yet, the action committee in charge of the implementation of the AI development plan is to consult involved parties and NGOs, with the omission of the public at large (action item 1.5.1.).

EU Digital Services Act

As an EU member state, Lithuania shall apply the EU Digital Services Act (DSA).³¹⁰⁰ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.³¹⁰¹ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.³¹⁰²

https://ec.europa.eu/commission/presscorner/detail/en/ip_23_4953

³¹⁰⁰ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

³¹⁰¹ European Commission, *The Commission sends request for information to X under the Digital Services Act* (Oct. 2023),

strategy.ec.europa.eu/en/news/commission-sends-request-information-meta-underdigital-services-act-1

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation³¹⁰³ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.³¹⁰⁴ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force³¹⁰⁵ on the 2024 European elections.

The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force³¹¹¹ on the 2024 European elections.

EU AI Act

As an EU member State, Lituania is bound by the EU AI Act.³¹¹² The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition

overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;

- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.³¹¹³ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing

³¹¹³ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.³¹¹⁴

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or

³¹¹⁴ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.³¹¹⁵ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when

³¹¹⁵ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023),

https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.³¹¹⁶

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office³¹¹⁷ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies,

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

³¹¹⁶ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-deal-raises-concerns-european-telecom-standardisation-elections-launched/;</u> Pascale

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

³¹¹⁷ European Commission, *European AI Office*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-office</u>

depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk

systems, it depends on the characteristics of the authority Lithuania will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact³¹¹⁸ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Lithuania is an EU Member State, the General Data Protection Regulation (GDPR)³¹¹⁹ is directly applicable in Lithuania and to Lithuanians. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."³¹²⁰ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Law on Legal Protection of Personal Data was amended in July 2018 to adapt to the requirements of the GDPR.³¹²¹

Regarding the activities of law enforcement authorities, the Law on Legal Protection of Personal Data, Processed for the Purposes of Prevention, Investigation, Detection or Prosecution of Criminal Offences, or the Execution of Criminal Penalties, or National Security, or Defence³¹²²

³¹²² Law of the Republic of Lithuania on Legal Protection of Personal Data, Processed for the Purposes of Prevention, Investigation, Detection or Prosecution of Criminal

transposed the EU Data Protection Law Enforcement Directive (LED).³¹²³ "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."³¹²⁴ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³¹²⁵ The LED also requires for Member States, including Lithuania, to enable data subjects to exercise their rights via national data protection authorities.³¹²⁶

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Lithuanian data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the Member States apply the LED consistently."³¹²⁷ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.³¹²⁸ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to

³¹²⁸ European Data Protection Board, *Guidelines* 05/2022 on the use of facial recognition technology in the area of law enforcement (May12, 2022), https://edpb.europa.eu/system/files/2022-05/edpb-

processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."³¹²⁹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Lithuania is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.³¹³⁰

The State Data Protection Inspectorate³¹³¹ (Inspectorate) is the main national supervisory authority in Lithuania. When data processing relates to journalistic, academic, artistic or literary expression, the Inspector of Journalist Ethics (Inspector)³¹³² has a similar mission to that of the Inspectorate. The Inspector while on duty cooperates with the Inspectorate to ensure compliance with the GDPR.

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the IMY has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;³¹³³ the 2020 GPA Resolution

Algorithmic Transparency

Lithuania is subject to the GDPR and Convention 108+. Lithuanians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³¹³⁷

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³¹³⁸ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems in decision-making processes that carry high risks to human rights should be

³¹³⁸ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

subject to particularly high standards as regards the explainability of processes and outputs."³¹³⁹

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."³¹⁴⁰

COVID-19 Tracking App

In spring 2020, the DPA started monitoring activities in response to information in the media about the possible improper processing of personal data by application "Karantinas". After an assessment of the initial information, the Inspectorate decided to open an investigation and suspend the processing of personal data by the application. The study revealed that data from 677 individuals had been collected since April 2020 when the application became operational. The App concerned processed personal data subjects in self-isolation. The App also aimed to process large datasets (data subjects throughout Lithuania and abroad). The processing was intended to be continuous and vulnerable data subjects were concerned.

In February 2021, the Inspectorate imposed a EUR 12,000 fine on the National Public Health Centre (NPHC) and the developer of the application UAB *IT sprendimai sėkmei* for infringements of the GDPR. "When deciding on the imposition of the administrative fine and its amount, the DPA took into account the fact that the NHPC and the Company processed personal data intentionally, to a large extent, illegally, systematically, without providing technical and organizational means to

demonstrate compliance with the requirements of the GDPR while processing personal data, and also processed special category personal data. In addition, the Company did not comply with the DPA instructions to stop the processing of personal data collected with the help of the app and deleted part of the personal data.³¹⁴¹

Lethal Autonomous Weapons

Lithuania was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."³¹⁴²

In February 2023, Lithuania participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Lithuania endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³¹⁴³ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in

obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."³¹⁴⁴

Lithuania also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³¹⁴⁵

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.³¹⁴⁶ The second REAIM summit will take place in 2024 in Korea.³¹⁴⁷

At the 78th UN General Assembly First Committee in 2023, Lithuania voted in favour³¹⁴⁸ of resolution $L.56^{3149}$ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address

the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Lithuania adopted the United Nations Declaration on Human Rights in 1998. As a member of the European Union and of the Council of Europe, Lithuania is committed to upholding the EU Charter of Fundamental Rights and the European Convention on Human Rights. According to Freedom House, Lithuania is considered "Free".³¹⁵⁰

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."³¹⁵¹

OECD / G20 AI Principles

Lithuania is a member of the OECD and endorsed the OECD AI Principles in May 2019.³¹⁵² The main principles of the Lithuanian AI strategy overlap with OECD AI principles. Some public sector initiatives

³¹⁵¹ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

and academic sector initiatives can be seen on the OECD AI monitoring platform. $^{\rm 3153}$

Lithuania is not a member of the Global Partnership on AI, a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."³¹⁵⁴

UNESCO Recommendation on the Ethics of AI

Lithuania was among the 193 countries that actively supported UNESCO's efforts in drafting and adopting its Recommendations on AI Ethics.³¹⁵⁵ According to the Ministry of Foreign Affairs of the Republic of Lithuania, Lithuania has been committed to supporting and implementing the UNESCO Recommendation. In addition, the advancement and implementation of ethical principles for AI were among the priorities that Lithuania presented to UNESCO for its candidacy to the Executive Board 2021-2025.³¹⁵⁶

Evaluation

Lithuania has endorsed the OECD AI principles and the UNESCO Recommendation on the Ethics of AI, set a national AI strategy in 2019 and launched its AI Development Action Plan in August 2022. As a Member State of the European Union, Lithuania enforces strong data protection laws while rules for high-risk applications and GPAI are being set as per the EU AI Act. It remains to be seen which measures Lithuania will take to supplement the EU AI Act and the national governance framework which will be put into place.

Even if the role of public participation is acknowledged, Lithuania has room for improvement in expanding public participation beyond NGOs to include the public. Setting centralized websites outlining public participation opportunities and ongoing AI-related legislative process and

legislation is another opportunity for improving public participation and oversight.

Luxembourg

National AI Strategy

The Luxembourg Strategic Vision for Artificial Intelligence (2019) was presented in 2019 by the Prime Minister of Luxembourg, who was also Minister for Digitalisation, together with the Minister of Economy. The strategy has 3 objectives: for Luxembourg (1) to be among the most advanced digital societies in the world, especially in the EU; (2) to become a data-driven and sustainable economy; and (3) to support human-centric AI development.³¹⁵⁷

The Strategic Vision is based on a human-centered approach to AI whereby human intelligence should be "in charge" of AI and individuals should be at the center of all services based on AI. Luxembourg commits to the respect of the 2019 Ethics Guidelines for Trustworthy AI formulated by the EU High-Level Expert Group on Artificial Intelligence.³¹⁵⁸ The Luxembourgish government commits to adopt policies to tackle the difficulties that could be caused by the mainstreaming of AI technologies and underlines that this mainstreaming should be aimed to the improvement of the citizens' daily lives, keeping in mind that AI was not just created by humans, but for humans as well. For this reason, Luxembourg commits to transparent, understandable and trustworthy AI for all the people who live, invest and work in Luxembourg.³¹⁵⁹

The Strategy also underlines the need for a regulation of the use and management of data which is respectful of fundamental ethical principles and confidentiality and which allows for reaching the full potential of the use of data in the economic and social domains.³¹⁶⁰ The Strategy includes key actions to ensure the protection of fundamental rights:

- collaborating with the data protection authority and leveraging its expertise in order to address AI-related questions
- creating a consultative committee specialized in technology and ethics to debate the ethical consequences of technologies and advise the government on potential risks and societal impacts. The Committee was effectively created in 2020.
- collaborating with the private sector to develop a proper corporate governance regarding AI,

³¹⁵⁷ The Government of Luxembourg; Digital Luxembourg, *Artificial Intelligence: a strategic vision for Luxembourg* (May 2019), p. 5, <u>https://digital-</u>

luxembourg.public.lu/sites/default/files/2020-09/AI_EN_0.pdf

³¹⁵⁸ Ibid., p.7.

³¹⁵⁹ Ibid., p. 9.

³¹⁶⁰ Ibid., p. 6.

- working with the Institute of Standardization, Accreditation, Safety and Quality of Products and Services (ILNAS) to actively follow the regulatory processes of products and services in the framework of the ISO system.
- putting in place innovative technologies to reinforce data protection in view of machine learning.³¹⁶¹

The Strategy takes into account how AI can foster investments and strategic partnerships, the efficiency of public services, the need to integrate AI in the context of life-long learning, attraction of talents, education, planning, and how to integrate the efforts of Luxembourg in the context of European integration.

The Strategy foresees 3 main domains of application for AI in Luxembourg:

- The private sphere: daily activities, routine activities in order to gain time, receive high quality assistance and ensure data protection.
- The professional sphere: participation to the diversified economy of Luxembourg in order to increase job opportunities, new revenue streams and skills training.
- The public sphere: access to governmental services and relations with the administration (e-health, education, finance).³¹⁶²

Luxembourg's Strategic Vision for AI has led to the creation of an AI4Gov inter-ministerial committee, whose members represent the Ministry for Digitalisation, the Communications and Media Service (SMC) and the Information and Press Service (SIP). The inter-ministerial coordination group, under the leadership of the Prime Minister, set up a governance mechanism to continuously follow up on strategic initiatives that support Luxembourg's AI development. It is tasked with regularly assessing the strategic vision and setting up a framework for future actions.³¹⁶³

The aim of the AI4Gov Committee is also to encourage ministries and administrations to make use of AI and data science to transform their actions and tasks.³¹⁶⁴ The open data pledge of the national strategy has already been implemented in 2016 at data.public.lu³¹⁶⁵ and has been further filled since

then. This portal enables accessible sourcing of public-sector data, open to public and private producers and reusers of data.

The strategic vision for Luxembourg endorses the Ethics Guidelines for Trustworthy AI of the High-Level Expert Group on AI of the European Commission, as well as the Coordinated Plan on Artificial Intelligence by the European Commission. Further endorsements concerning the risks of AI to Fundamental Human Rights are not addressed in the Strategy.

The Strategic Vision is part of "Digital Luxembourg," a broader policy strategy which aims to coordinate and strengthen Luxembourg's transformation into a solid digital society.³¹⁶⁶

In 2019, the Ministry of Economy adopted the report "Data-Driven Innovation Strategy for the Development of a Trusted and Sustainable Economy in Luxembourg", which is interconnected with the National AI Strategy's provisions.³¹⁶⁷ The Innovation Strategy is based on a vision of a Luxembourg data-driven economy, where AI systems, combined with the Internet of Things components, systems, and networks, HPC, and Big Data analytics are used "to drive future growth". The components of this Strategy include:

- Boosting and assuring digital infrastructure capacity
- Experimenting, innovating, and up-take of new advanced digital technologies into industry
- Ensure a strong regulatory, intellectual property, investment and financing environment.

The priority sectors for such data driven-innovation were defined in the 2018 Luxembourg coalition agreement and include, among others, logistics, financial services, health- and eco-tech.³¹⁶⁸

In October 2020, the government of Luxembourg, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI. This paper sets out two visions for the EU's development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. The countries call for a borderless single market for AI in the EU. They state that "[t]he main aim must be to create a common

framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth, and competitiveness to protect our society, maintain our high-quality public service, and benefit our citizens and businesses. This can help the EU to protect and empower its citizens, stimulate innovation and progress in society, and ensure its values are protected."³¹⁶⁹

Standardization

In a 2021 white paper written in collaboration with the Agency for Standardization and the Knowledge Economy (ANEC), the ILNAS highlighted the importance of standardization for AI adoption.³¹⁷⁰ The ILNAS actively participated in the development of the ISO/IEC JTC1/SC 42, which includes several foundational, data, trustworthiness, use case and applications, as well as governance standards for AI and machine learning. ILNAS and ANEC are also involved in other standardization activities in cooperation with ITU-T, IEEE, ETSI and CEN-CENELEC while acknowledging that "privacy, security, and safety of the end users must be kept in mind by developers and legislators". The white paper explores the advancement and focus on AI from the existing National Standardization Strategy 2020-2030 (Stratégie Normative Luxembourgeoise 2020-2030).³¹⁷¹

Public participation

The National AI Strategy evolved from a project initiated by the Government of the Grand Duchy of Luxembourg and Digital Luxembourg to a "multidisciplinary government initiative working with public, private

and academic players to harness digitalization for positive transformation."³¹⁷²

The Government of Luxembourg committed to a public consultation on AI policy in Q3 of 2020. The public consultation was answered by 20,000 randomly selected participants. Top consultation results include:³¹⁷³

- Over 80% of the public thinks that the state needs a data ethics committee
- When asked which sector they trusted most with data and AI, the public sector won with 77% of respondents voicing a high or very high level of trust
- 70% of respondents believe that AI can help them with tasks in their daily lives
- 73% of people use digital tools for public sector tasks (online payments, MyGuichet.lu, etc.). Coming in second was mobility (Google Maps, Waze, etc.)
- More than 70% of respondents are in favor of full-scale, AI-based trials, such as Luxembourg's digital twin project.³¹⁷⁴

Currently no public consultations are open for submissions. However, Digital Luxembourg supports and powers several initiatives that are open to public participation.

Digital Services Act

As an EU member state, Luxembourg shall apply the EU Digital Services Act (DSA).³¹⁷⁵ The DSA regulates online intermediaries and

³¹⁷³ Digital Luxembourg website, *Results are in: Here's what the public thinks about AI* (2021), <u>https://digital-luxembourg.public.lu/stories/results-are-heres-what-public-thinks-about-ai</u>; Nicolas Poussing, Luxembourg Institute of Socio-Economic Research, *Résultats de la consultation publique relative aux opportunités et aux défis de l'Intelligence Artificielle* (Apr. 2021), https://smc.gouvernement.lu/dam-assets/Rapport-IA6-final.pdf

³¹⁷⁴ Luxembourg Digital Twin initiative was lanched in 2021, see Research Luxembourg, *Meet Luxembourg Digital Twin* (July 22, 2021),

This project is also linked to Luxembourg Metaverse initiative, launched in 2022, and partly funded by the National Research Fund (FNR). See initiative's website: https://www.luxembourgmetaverse.com/

³¹⁷⁵ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.³¹⁷⁶ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.³¹⁷⁷

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

³¹⁷⁶ European Commission, *The Commission sends request for information to X under the Digital Services Act* (Oct. 2023),

strategy.ec.europa.eu/en/news/commission-sends-request-information-meta-underdigital-services-act-1

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation³¹⁷⁸ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.³¹⁷⁹ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force³¹⁸⁰ on the 2024 European elections.

EU AI Act

As an EU member State, Luxembourg is bound by the EU AI Act.³¹⁸¹ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition

(*COM*(2021)0206 - *C*9-0146/2021 - 2021/0106(*COD*)), P9 TA(2024)0138,

Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts

https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;

- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.³¹⁸² However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR.

³¹⁸² EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.³¹⁸³

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their

³¹⁸³ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.³¹⁸⁴ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in

³¹⁸⁴ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.³¹⁸⁵

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office³¹⁸⁶ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies,

³¹⁸⁵ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-deal-raises-concerns-european-telecom-standardisation-elections-launched/;</u> Pascale

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

³¹⁸⁶ European Commission, *European AI Office*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-office</u>

depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk

systems, it depends on the characteristics of the authority Luxembourg will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact³¹⁸⁷ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data protection

Since Luxembourg is an EU Member State, the General Data Protection Regulation (GDPR)³¹⁸⁸ is directly applicable in Luxembourg and to Luxembourgers. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."³¹⁸⁹ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Act of August 1, 2018 on the organization of the National Data Protection Commission and the general data protection framework supplements the GDPR.

Regarding the activities of law enforcement authorities, Luxembourg transposed the EU Data Protection Law Enforcement Directive (LED)³¹⁹⁰ with the Act of August 1, 2018 on the protection of

³¹⁸⁷ European Commission, AI Pact, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

content/summary/general-data-protection-regulation-gdpr.html

³¹⁸⁹ European Commission, Data protection in the EU,

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en

³¹⁹⁰ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504

individuals with regard to the processing of personal data in criminal and national security matters. "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."³¹⁹¹ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³¹⁹² The LED also requires for Member States, including Luxembourg, to enable data subjects to exercise their rights via national data protection authorities.³¹⁹³

The National Data Protection Commission (CNPD) is in charge of enforcing rights related to both the GDPR and the LED. To ensure better compliance with GDPR, in May 2022, the CNPD adopted the GDPR-CARPA certification mechanism for companies, public entities and other organizations established in Luxembourg.³¹⁹⁴ In October 2022, the CNPD accredited a first entity, EY PFS Solutions, in the framework of GDPR-CARPA, giving it the right to issue GDPR certifications.³¹⁹⁵

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Luxembourg is also a member of the Council of Europe. The country signed but has not yet ratified³¹⁹⁶ the Council of Europe's

modernized version of Convention 108 for the protection of individuals with regard to the processing of personal data.³¹⁹⁷

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Luxembourg is subject to the GDPR. Luxembourgish have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³¹⁹⁸

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³¹⁹⁹ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."3200

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well

as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."³²⁰¹

Ban on facial recognition

Luxembourg is highly regarded as one of the few (European) countries to ban facial recognition. While this ban has never been transformed into a policy, Luxembourg Minister of Defense François Bausch pledged in October 2019 that no facial recognition systems would be implemented during his term in the Defense Department.³²⁰²

In May 2022, the European Data Protection Board (EDPB) issued guidelines on the use of facial recognition technologies in the area of law enforcement.³²⁰³ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."³²⁰⁴

Lethal autonomous weapons

Luxembourg has regularly voiced its position on Letham autonomous weapon systems (LAWS), in particular, via the meetings on

autonomous weapons systems of the Convention on Certain Conventional Weapons (CCW). For example, in 2019, Luxembourg mentioned that international norms on LAWS could be strengthened, and spoke in favor of keeping "human control" over the use of force.³²⁰⁵ In September 2021, Luxembourg submitted a joint submission to the Chair of the Group of Governmental Experts (GGE) on LAWS, indicating that "the ceding of human control, agency, responsibility and intent in decisions on the application of force to algorithms and computer-controlled processes poses fundamental ethical concerns."³²⁰⁶ In 2022, Luxembourg together with other delegations submitted a working paper on emerging technologies in the area of LAWS to the Chair of the GGE, acknowledging the responsibility of the GGE to "recognize the urgent need for adequate rules and limits on the development, deployment, and use of autonomous weapon systems to ensure sufficient human involvement and oversight."³²⁰⁷

In October 2022, Luxembourg was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.³²⁰⁸ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International

Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."³²⁰⁹

In February 2023, Luxembourg participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Luxembourg, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³²¹⁰ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain. employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."3211

Luxembourg also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³²¹²

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.³²¹³ The second REAIM summit will take place in 2024 in Korea.³²¹⁴

At the 78th UN General Assembly First Committee in 2023, Luxembourg voted in favour³²¹⁵ of resolution L.56³²¹⁶ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Luxembourg is a signatory to many international human rights treaties and conventions. In 2024, Luxembourg received a rating of 97/100 in the Freedom House Index. Freedom House reported that "Luxembourg is a constitutional monarchy with a democratically elected government. Political rights and civil liberties are generally respected".³²¹⁷

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."³²¹⁸

Council of Europe Convention on AI

Luxembourg contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³²¹⁹

OECD / G20 AI Principles

Luxembourg is a member of the OECD and endorsed the OECD AI Principles. In its national AI strategy, Luxembourg does not directly refer to the OECD AI principles, but rather supports their key principles and suggestions such as human-centered AI, transparency of AI systems, exploring links between ethics and AI, establishing private and public partnerships. OECD also noted several examples of implementation of the AI Principles by Luxembourg.³²²⁰

UNESCO Recommendation on the Ethics of AI

Luxembourg endorsed the UNESCO Recommendation on the Ethics of AI.³²²¹ It remains to be seen which measures it will take to implement the Recommendation in practice.

Evaluation

Host to some of the biggest multinational technology companies, Luxembourg is one of the first countries to have developed a policy in the field of AI that addresses issues of certification and standardization. Luxembourg benefits from a comprehensive data protection legal regime with an independent data protection commission. To be true to its commitment to a human-centered approach to AI and in line with its endorsement of the UNESCO Recommendation on the Ethics of AI, it would be worth for Luxembourg to finally ratify the modernized version of Council of Europe Convention 108. Luxembourg is one of the very few countries to have officially committed for law enforcement authorities not to use facial recognition. With the adoption of the EU AI Act, Luxembourg shall designate a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Malaysia

National AI Strategy

The Government of Malaysia does not have a National AI Strategy. Instead AI-related policies under the umbrella of the National AI Roadmap (AI-Rmap), are addressed as part of the Malaysian whole-of-government strategy, known as the "Twelfth Malaysia Plan, 2021-2025" (12 Plan) introduced in September 2021 with the aim of "a prosperous, inclusive and sustainable Malaysia."³²²²

According to the 12 Plan, "national strategies on artificial intelligence (AI) and blockchain will be developed to guide the growth of every sector in the economy." The 12 Plan mentions that measures will be implemented to strengthen guidelines and regulations on personal data protection and data sharing with the aim of "ensuring data safeguards against cyber-attacks and unethical uses." According to the Plan, "an ethical framework and standards on technology development, deployment, and utilisation will also be introduced to ensure responsible use of technology."

Digitalization and AI objectives are covered under the Malaysian Digital Economy Blueprint, operated in coordination with the Economic Planning Unit (EPU) and various other plans, as illustrated below.

- Malaysian Digital Economy Blueprint (2021-2031): The Malaysian government, via its Economic Planning Unit (EPU), launched its digital economy blueprint. MyDIGITAL is a comprehensive 104-page document that lays the road map to achieve the country's grand vision to become a regional leader in the digital economy and attain inclusive, responsible, and sustainable socio-economic development, nationally. The intent is to "transform Malaysia into a digitally-driven, high-income nation and a regional leader in the digital economy."³²²³
- National Fourth Industrial Revolution (2021): The Malaysian government, via its Economic Planning Unit (EPU), also introduced its National 4IR Policy, designed to "steer strategic socio-economic transformation through the ethical use of 4IR policies." Using a whole-of-nation approach, the plan intends to: support balanced, responsible, and sustainable growth for business; provide socio-environmental well-being for all, and create a fit-for-future

```

government. Notably, the Policy draws on references from the World Economic Forum (WEF), OECD, UN, and the World Bank.³²²⁴

- National Big Data Analytics (BDA) Framework (2016): Introduced by the Malaysia Digital Economy Corporation (MDEC), the BDA has four focus areas: architecting a data-driven culture; identifying roles for a data-driven organization; turning information into action; accessing tools and partners.³²²⁵
- National Policy on Science, Technology & Innovation (NPSTI) (2013 -2020): Advance Malaysia towards a more competitive and competent nation built upon a strong science, technology, and innovation foundations.³²²⁶
- In 2021, the Ministry of Science, Technology, and Innovation (MOSTI) awarded selected researchers grants to formulate National Artificial Intelligence (AI) Roadmap for Malaysia.³²²⁷

In 2017, the Malaysian Government announced plans to develop a National AI Framework complementary to its National Big Data Analytics Framework.³²²⁸ However, it later decided instead to focus on the AI-Rmap and various sectoral initiatives under its umbrella. The AI-Rmap "is an extension of the Malaysia Digital Economy Corporation's (MDEC) still unreleased National AI Framework (NAIF), which is said to set out 20 initiatives within six key building blocks and five goals related to the economy, government, and industry, as well as people and society. NAIF aside, the AI-Rmap also takes into account seven other AI-related documents, including national policies that incorporate the development and implementation of AI. These are the Shared Prosperity Vision (SPV) 2030 (which replaces the earlier Vision 2020); the Ministry of Science,

the National Artificial Intelligence (AI) Roadmap for Malaysia (Dec. 1, 2020), https://news.utm.my/2020/12/utm-experts-entrusted-by-mosti-to-develop-the-nationalartificial-intelligence-ai-roadmap-for-malaysia/

³²²⁸ OpenGOVAsia.com, *Plans for cloud-first strategy and national AI framework revealed at 29th MSC Malaysia Implementation Council Meeting* (Oct. 28, 2017), <u>https://opengovasia.com/plans-for-cloud-first-strategy-and-national-ai-framework-</u> revealed-at-29th-msc-malaysia-implementation-council-meeting/

Technology and Innovation's (MOSTI) National Science, Technology and Innovation Policy (NSTIP) 2021–2030 and 10–10 MySTIE Framework; the Ministry of International Trade and Industry's (MITI) Industry4WRD: National Policy on Industry 4.0; the Academy of Sciences Malaysia's Envisioning Malaysia 2050 Foresight Narrative; Malaysia Digital Economy Blueprint; and Malaysia AI Blueprint 2019." ³²²⁹

The AI-Rmap has six overall strategies to execute: establishing AI governance, advancing AI R&D, escalating a digital infrastructure to enable AI, fostering AI talents, acculturating AI, and kick-starting a national AI innovation ecosystem.³²³⁰ While the roadmap does not explicitly address human rights, it does include "Pursuit of Human Benefits and Happiness" under its list of Principles of Responsible AI.³²³¹

The AI-Rmap has a distinct action plan through 2025, with benchmarks set for horizon 1 (2021-2022), horizon 2 (2023-2024), and horizon 3 (2050 onwards). Within those benchmarks, four strategic initiatives are delineated. For instance, strategic initiative 1.1 "Establishing an AI Coordination and Implementation Unit (AI-CIU) responsible for successful implementation of the AI Roadmap" outlined the appointment of a committee by horizon 1 (2021-2022) to oversee the execution of the AI-Rmap. The AI-CIU was also tasked with implementing an AI code of ethics as part of strategic initiative 1.4 institutionalizing AI principles for AI implementation. However, despite these benchmarks delineated under each horizon, no documentation has been found indicating any progress since the AI-Rmap publication in 2022.³²³²

Nevertheless, in August 2022, the Malaysian Ministry of Science, Technology, and Innovation (MOSTI) launched five complementary technology roadmaps: the "Electricity and Electronics Roadmap: Artificial Intelligence Roadmap 2021-2025", the "Technology Development 2021-2030", the "National Blockchain Technology Roadmap 2021-2025," the

Data Protection

Data protection in Malaysia stems from the Personal Data Protection Act of 2010 (PDPA),³²³⁴ adopted by the Malaysian Parliament on June 2, 2010, and which came into force on November 15, 2013. The PDPA seeks to safeguard personal data and confer certain rights to users regarding personal data. In addition to the PDPA, five pieces of subsidiary legislation were also enforced on November 15, 2013.

Additional legislation passed to date include the Personal Data Protection Regulations 2013 ('the 2013 Regulations'); the Personal Data Protection (Class of Data Users) Order 2013 ('the Order'); the Personal Data Protection (Registration of Data User) Regulations 2013 ('Registration Regulation'); the Personal Data Protection (Fees) Regulations 2013; the Personal Data Protection (Compounding of Offences) Regulations 2016 ('Compounding of Offences Regulations'); the Personal Data Protection (Class of Data Users) (Amendment) Order 2016 ('the Order Amendment'); and the Personal Data Protection (Appeal Tribunal) Regulations 2021.³²³⁵

The PDPA imposes strict requirements on any person who collects or processes personal data (data users) and grants individual rights to data subjects. The PDPA is enforced by the Commissioner of the Department of Personal Data Protection (the Commissioner). The PDPA is similar in a sense to the Data Protection Directive 95/46/EC of the European Union (EU), leading the PDPA to be described as European-style privacy law.³²³⁶

The PDPA does not apply to federal and state governments.³²³⁷ It also exempts the processing of information by a credit reporting agency and it does not constrain government access to data. As part of an ongoing

³²³⁷ Ibid.

review of the PDPA, the Personal Data Protection Commissioner of the Ministry of Communications and Multimedia Malaysia has issued Public Consultation Paper No. 01/2020 – Review of Personal Data Protection Act 2010 (PC01/2020) dated February 14, 2020, to seek the views and comments of the public on 22 issues set out in PC01/2020.

The converging opinion among stakeholders is that although Malaysia is a regional frontrunner in its data protection regime, the country's laws and regulations need to evolve to reflect a more complex digital landscape. The gap between Malaysia's governance capacity and the country's aspirations could stymie its ambitions for a complete digital transformation by undermining trust in both the online and offline spaces. This risk is underscored by several realities: significant data breaches without commensurate penalty or recourse, existing gaps in the PDPA, as well as the inclusion or exclusion of vulnerable communities in Malaysia's data-driven and digitalization agenda.³²³⁸

AI in Healthcare

In 2017, the Ministry of Health launched the Malaysian Health Data Warehouse (MyHDW) as part of a national healthcare informationgathering system. The system is designed to share a patient's healthcare records among all public health institutions, ensuring any doctor had full access to medical records. The Malaysian government also initiated several public-private collaborations, including the signing of a Memorandum of Understanding (MoU) between Microsoft Malaysia and CREST (Collaborative Research in Engineering, Science & Technology) to create a first-of-its-kind digital health hub, and the creation of Malaysia's largest digital health platform, DoctorOnCall, which connects patients with an extensive network of over 1,500 Specialists in private hospitals and more than 100 GP doctors throughout the country.³²³⁹

To combat the spread of COVID-19, the Malaysian government led a multi-agency effort to create the MySejahtera app, which was linked to the MyTrace app (developed by the Malaysian Ministry of Science, Technology, and Innovation (MOSTI)) which "enables the identification of those who have been in close proximity to an infected person using

Bluetooth technology."³²⁴⁰ In December 2020, the Malaysian government mentioned that there were 24.5 million users of Mysejahtera, with a strong push by the government for increased usage.³²⁴¹

MOSTI also endorsed the use of AI-enabled apps to detect those who may have been in close contact with a COVID-19 patient, and a geofencing app to enforce and monitor quarantines." In May 2021, the Malaysian government launched the Hotspot Identification for Dynamic Engagement (HIDE) system, as an early warning system to preemptively identify COVID-19 hotspots using predictive technology, big data analytics, and AI.³²⁴² MOSTI is also planning to add "artificial intelligence and big data analytics into the HIDE system to produce more accurate predictions of coronavirus hotspots based on Bluetooth contact tracing. HIDE currently uses MySejahtera check-in data.³²⁴³

Finally, in August 2021, the Malaysian government introduced a new mobile app, the Vaccine Certificate Verifier app, to combat a rise in the production and selling of fake certificates in the country.³²⁴⁴ While the government has rolled out the use of AI-enabled technology to assist the healthcare industry and COVID-19 response, there has been little communication from the government about human rights, data privacy, and algorithmic transparency.

Facial Recognition

Since launching the Safe City Initiatives in 2004, cities across Malaysia have been installing CCTVs in public areas to monitor crime, traffic surveillance, and flooding.³²⁴⁵ As part of the initiative, the Minister of Federal Territories announced in 2020 their intention to increase up to

5000 cameras in the capital city of Kuala Lumpur and upgrade existing cameras with AI capabilities, facial recognition, and other functions.³²⁴⁶

In 2018, Auxiliary Force Sdn Bhd (AFSB), a member of Royal Malaysia Police Cooperative Bhd., became the first Malaysian security force in the country to integrate body-worn cameras with facial recognition technology.³²⁴⁷ In 2019, the state of Penang launched the first public facial recognition to help police combat crime. The system: uses AI to identify faces captured by the CCTV network operated by Penang Island City Council (MBPP)", with a plan to have hundreds of new cameras installed at major roads, intersections, and hotspots for criminal activity.³²⁴⁸ The Malaysian business sector has also integrated the use of facial recognition across the nation, including facial recognition "check-ins" at events³²⁴⁹, and the Malaysian Ministry of Transport introduced a public-private facial recognition program in 2019, allowing users to take selfies of themselves for recognition.³²⁵⁰ While there is an increase in facial recognition technology in Malaysia, there is no overarching AI Policy focused on human rights and democratic values governing the use of this technology.

In 2021, the Malaysian government began planning the introduction of the Digital Identity (Digital ID) initiative. The initiative is expected to be fully implemented in 2024. The Digital ID will be a form of digital identification and authentication for individuals by using the latest biometric technology such as fingerprints, and facial and iris recognition while conducting matters online. The Home Ministry and National Registration Department (NRD) have been entrusted to lead the implementation of this initiative as the population data, information and

records are under the custody and jurisdiction of the NRD.³²⁵¹ The National Digital ID (ID Digital Nasional, IDN) aims to create a Verifiable Platform of Trust that will be utilized by the public and private sectors to verify the identity of their respective users when conducting digital transactions. The IDN is targeted at every Malaysian citizen and permanent resident aged 5 years and above.³²⁵² There has been criticism on the security and privacy of personal data. Details concerning the digital ID system project are contained in a document called the Twelfth Malaysian Plan, Eurasia Review states, adding that the database will contain citizens' information such as their full names, aliases, as well as face and fingerprint biometrics.³²⁵³

In 2021, AirAsia introduced its revamped FACES, a facial recognition technology that allows passengers to replace their traditional boarding pass with their face, allowing for a seamless and contactless experience throughout several airport touchpoints as passengers do not need to carry around their passports and boarding passes.³²⁵⁴ In 2022, AirAsia announced that it would integrate the facial recognition experience with Malaysia Airports' EZPaz technology at Kuala Lumpur International Airport (KLIA2). The enhanced FACES feature is only available on select domestic travel in the initial phase. In order to use FACES, passengers need to enroll in AirAsia FACES via their mobile app, take a selfie video, and scan their travel documents, such as their IC or passport. Before using FACES, passengers also need to perform a one-time document verification check at the dedicated FACES counters at W15 and W16 at KLIA2 in Malaysia. According to AirAsia, the facial recognition feature helps reduce queuing time and increases operational efficiencies, safety, and security for the airline.³²⁵⁵

Al in Court

Malaysia announced in 2010 its plan to establish an e-judiciary system against the backdrop of a broader initiative to digitalize its government and public services.³²⁵⁶ By 2017, the national judiciary system had been fully digitalised and was integrated with other government agencies, including COPS (Royal Malaysia Police), MySikap (Road Transport Department), INSIST (Malaysian Department of Insolvency), MyIdentity (National Registration Department), SMPP (Malaysian Prison Department), iAGC (Attorney General's Chambers of Malaysia), and MyeTaPP (Department of Lands and Mines).

In February 2020, a court in Sabah, Malaysia, used AI to help mete out a court sentence. This was part of a nationwide pilot program that aimed to determine the efficiency of AI in sentencing recommendations. This was followed by the release of an official guidance for using AI in judiciary sentencing on the peninsula in 2021, which described a three-phase strategy to expand the use of AI sentencing programs across the entire nation.³²⁵⁷ According to Malaysian authorities, using AI in Malaysia's courts will help make sentencing more consistent and improve the quality of judgment while clearing backlogs more quickly and cost-efficiently. However, lawyers and various stakeholder groups have criticized this particular AI use on the grounds that the system has been used before judges, lawyers, and the public can fully understand it and the way it works. The use of AI in the courts has also been criticized as unconstitutional and not envisaged under the country's Criminal Procedure Code. Other critics of the AI-sentencing pilot say AIs are incapable of using their own discretion and that they risk worsening the bias against minorities and marginalized groups by not giving them a fair trial.³²⁵⁸

Autonomous Vehicles

The Government of Malaysia has declared on its official website that AI will be a key technology in developing autonomous or self-driving vehicles. The government of Malaysia mentions that "not only is AI capable of collecting and analysing data through sensors and cameras but it is also capable of adapting to situations and learning through machine learning."³²⁵⁹

In February 2022, the Ministry of Transport in Malaysia updated the Guidelines for Public Road Trials of Autonomous Vehicles. The Guidelines are intended to provide guidance to organizations planning to conduct trials of automated vehicles on designated public roads. Data and information collected from the AV trial may be used in the future by relevant authorities to develop a national policy and regulatory framework for AV adoption and application in Malaysia. The Guidelines provide for safety trial measures for trialing organizations³²⁶⁰ such as ensuring that the AV's software, components, equipment, and instruments are safe and operational as intended. Also, a trialing organization must be aware of abnormal traffic and weather conditions that may cause the AV system to fail.³²⁶¹

According to the Malaysian Investment Development Authority ("MIDA"), Malaysia supports efforts to become a regional leader in manufacturing, engineering, and technological innovation. To this end, the National Automotive Policy 2020 (NAP 2020) aims to develop the Malaysian auto industry "through research and development of new technologies, especially in the areas of Next-Generation Vehicles (NxGV), Industrial Revolution 4.0 (IR 4.0) and mobility -as a service (MaaS)".³²⁶² According to the MIDA, the first autonomous vehicle (AV) testing route of Malaysia, which will allow tech companies to test the capabilities of their vehicles, has been approved by the Ministry of Transport of Malaysia and the Sepang Municipal Council.³²⁶³

Lethal Autonomous Weapons

In February 2023, Malavsia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Malavsia, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³²⁶⁴ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."3265

Human Rights

Malaysia is a member of the United Nations and has endorsed the Universal Declaration of Human Rights. According to the Freedom House, in 2022, Malaysia is "partly free" with a score of 50/100.³²⁶⁶ Freedom House notes, "The Barisan Nasional (BN) political coalition ruled Malaysia from independence in 1957 until 2018, maintaining power by manipulating electoral districts, appealing to ethnic nationalism, and suppressing criticism through restrictive speech laws and politicized prosecutions of opposition leaders. The BN lost to an opposition alliance in the 2018 general elections. However, a period of political turbulence and realignment in early

2020 culminated in a new governing coalition that included parties central to the pre-2018 regime. That government was resistant to governance reforms. Concerns about narrowing freedoms persist." In its report, Freedom House raised concerns that laws, policies, and practices do not guarantee equal treatment of various population segments.

On transparency, Freedom House noted that "efforts towards enacting a freedom of information act and other reforms stalled after the PN [Perikatan Nasional] took power."³²⁶⁷ Government operations were also not transparently carried out while Parliament was suspended for part of 2021.

OECD / G20 AI Principles

Malaysia has not endorsed OECD AI and G20 AI principles. The OECD AI Policy Observatory does not list any AI initiatives from Malaysia.

UNESCO Recommendation on the Ethics of Artificial Intelligence

As a member of UNESCO, Malaysia, along with 192 other member states, has adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021, the first global standard on the ethics of artificial intelligence. However, no measures have been put in place by the country to implement the Recommendation.³²⁶⁸

Evaluation

Malaysia has rapidly introduced technology into its public and private sectors and has constructed numerous digital policies and has taken action to map out and support its digital economy and support business growth. While there is currently no comprehensive national AI framework currently, the AI-Rmap is ongoing and part of the overall 12 Plan. Malaysia endorsed the UNESCO Recommendation on the Ethics of AI however the switch of the government from the drafting of a national AI strategy to the implementation of a more concrete AI Roadmap with various ramifications but without so far any ethical framework, as well as the lack of modernization of Malaysia's data protection legal regime, are cause for concern in view of Malaysia's deployment of AI for surveillance purposes. It remains to be seen whether the new Prime Minister, Anwar Ibrahim, will

³²⁶⁷ Ibid.

Malta

National AI Strategy

In October 2019, Malta's Parliamentary Secretary for Financial Services, Digital Economy and Innovation (PSFS) released the country's AI strategy, which aims to make Malta the "Ultimate AI Launchpad,"³²⁷⁰ by creating a venue where "local and foreign companies and entrepreneurs can develop, prototype, test and scale AI, and ultimately showcase the value of their innovations across an entire nation primed for adoption."³²⁷¹ The National AI Strategy was drafted on the basis of report delivered by the Malta AI Taskforce,³²⁷² a group of experts entrusted with the task to advise the government on AI matters.

The National AI Strategy includes more than 70 actions that are set to be implemented by the end of 2022, together with actions to support a longer-term vision of where the country would like to be in 2030. The Strategy includes three strategic pillars with a focus on boosting investment, start-ups and innovation and adoption across the public and private sectors. These strategic pillars are: 1) Investment, start-ups, and innovation; 2) Public sector adoption; and 3) Private sector adoption. Moreover, each pillar draws on three strategic "enablers:" 1) Education and workforce; 2) Ethical and legal, and 3) Ecosystem and infrastructure. The ethical and legal enabler aims to establish the first national AI certification program for those wishing to create "ethically aligned, transparent and socially responsible AI solutions." Each pillar draws on three strategic enablers that cut across the three areas of education and workforce; legal and ethical considerations; and ecosystem infrastructure. The Strategy, however, does not disclose financial provisions or estimations for its overall implementation.

The goals to be achieved in between 2019 and 2022 are:

- To raise awareness of Maltese citizens on what AI is
- To generate investment with AI related activities
- To support a strong culture of collaboration locally and internatonally to pilot and scale AI solutions

content/uploads/2019/11/Malta_The_Ultimate_AI_Launchpad_vFinal.pdf; Malta Parliamentary Secretary for Financial Services, Digital Economy and Innovation, A Strategy and Vision for Artificial Intelligence in Malta 2030 (Oct. 2019), https://malta.ai/wp-

³²⁷⁰ Malta the ultimate AI Launchpad: a strategy and vision for Artificial Intelligence in Malta 2030 (2019), <u>https://malta.ai/wp-</u>

content/uploads/2019/11/Malta_The_Ultimate_AI_Launchpad_vFinal.pdf ³²⁷¹ Ibid.

³²⁷² https://meae.gov.mt/en/public_consultations/pages/home.aspx

- To launch and implement pilot projects that showcase the benefits that AI can deliver and to build an AI-powered government
- To prepare the workforce for work in an AI-driven world
- To support business community in their efforts to develop foundational knowledge
- To update and align Maltese national law in accordance with changes that may be required to keep pace with disruptive Technologies.
- To quarantee development of AI policy builds upon ethical and trustworthy AI and to adopt and apply national AI certification mechanism to that end
- To support open data for AI development and to ensure high performace compute access and cybersecurity measures. The goals to be achieved by 2030 are:
- To have entrusted AI solutions part of everyday life of Maltese citizens and across all generations.
- To enable AI to be the key driver that propels R&D activities
- Malta to be amongst the top 10 nations with the highest impact national AI programme
- To have AI soultions that will augment public services
- To have companies of all sizes and sectors deployed AI solutions
- Maltese workes to have skill sets needed to thrive in AI-driven working atmosphere
- To have robust, legal, governance and social protection mechanisms in order to ensure that AI systems are safe, ethical, trusted, socially responsiple and human centric
- To have a national AI policy that assists to shape international standards on AI systems
- To ensure better protection of personal data when AI applications are used.

Malta Digital Innovation Authority (MDIA) was established back in 2018 through the Malta Digital Innovation Authority Act as an independent authority and tasked with supervising the execution of Malta's National Artificial Intelligence Strategy.

As of November 2023, the MDIA is engaged in the process of realigning the Strategy and Vision for AI in Malta 2030 with the primary objective of adapting its regulations to align with international frameworks

in the field of AI. The target for realigning the AI Strategy and Vision is estimated to be 2024.³²⁷³

Ethical AI framework and Principles

The National AI Strategy identified four key actions towards trustworthy AI:

- Establish an Ethical AI Framework Towards Trustworthy AI
- Launch the world's first national AI certification framework
- Appoint a Technology Regulation Advisory Committee to advise on legal matters
- Set up a Regulatory Sandbox for AI and a Data Sandbox for AI

The National AI Strategy foresees a strong ethical AI framework as a supplement to the national legal and regulatory system to ensure that AI development is ethically aligned, transparent and socially responsible. To that end, Malta AI Task Force and the Parliamentary Secretary for Financial Services, Digital Economy and Innovation within the Office of the Prime Minister released a document entitled "Malta: Towards Trustworthy AI: Malta Ethical AI Framework for Public Consultation" and invited members of the public, industry and academia to provide feedback.³²⁷⁴

Four objectives are defined: (1)Build on human-centric approach; (2) Respect for all applicable laws and regluations, human rights and democratic values; (3) Maximise the benefits of AI systems while preventing and minimising their risks; (4) align with emerging international standards and norms around AI ethics. The framework outlines Malta's vision for an ethical and trustworthy AI and sets out four ethical AI principles to achieve this: human autonomy; prevent harm; fairness; and explicability.

The framework also recommends the establishment of a National Technology Ethics Committee (NTEC) under the auspices of the MDIA to ensure its monitoring and implementation.³²⁷⁵ However, to date, there is no evidence that the committee has in fact been created.

With regard to the launch of a national AI certification framework, Malta has developed such AI certification framework, issued by the MDIA. The certification serves as a valuable recognition in the marketplace that the

³²⁷³ Malta Digital Innovation Authority, *National AI Strategy and Vision Realignment*, (December 2023), <u>https://www.mdia.gov.mt/malta-ai-strategy/national-ai-strategy-realignment-2024/</u>

³²⁷⁴ AI Strategy and maltaineu.gov.mt, *Malta launches its National Strategy and the fist World AI Certification*, <u>https://maltaineu.gov.mt/en/Pages/Press%20Releases/PR104.aspx</u> ³²⁷⁵ Ibid.

AI systems of successful applicants have been developed in an ethical, transparent and socially responsible manner.

As fort he AI regulatory sandbox, during the past years, the MDIA opened a number of competitive calls which resulted in state-of-the-art research, and innovative projects. The MDIA Technology Assurance Sandbox has been revamped and in March 2023 another project on conversational AI was onboarded.³²⁷⁶

Public Participation

The Parliamentary Secretary for Financial Services, Digital Economy and Innovation within the Office of the Prime Minister released document "Malta towards an AI strategy: High-level document for public consultation" on 21 March 2019 and invited interested stakeholders to provide feedback until 22 April 2019. Subsequently, on August 20, 2019, Malta AI Task Force, including a diverse set of entrepreneurship, academia, public policy, technology strategy, law and data science, and the Parliamentary Secretary for Financial Services, Digital Economy and Innovation within the Office of the Prime Minister released "Malta: Towards Trustworthy AI: Malta Ethical AI Framework for Public Consultation" and invited members of the public, industry and academia to provide feedback until 6 September 2019³²⁷⁷.

With regard to the revision of the Strategy and Vision for AI in Malta 2030, a pre-consultation meeting was held on December 5, 2023, and engaged key stakeholders including startups, public sector, private sector, education, and non-governmental organizations. A call for public participation was opened in November 2023 and remains available to submit comments.³²⁷⁸

The Malta Digital Innovation Authority (MDIA) posted another public consultation for expanding the ITA certification framework to include AI-based solutions.³²⁷⁹ However, like the other two public consultations, this consultation ran for a brief period (one month, until

³²⁷⁶ Gavril Flores and Annalise Seguna, *Unleashing the power of AI: Crafting a roadmap to harness its benefits* (March 28, 2023),

³²⁷⁷ <u>https://meae.gov.mt/en/public_consultations/pages/home.aspx</u>

³²⁷⁸ Malta Digital Innovation Authority, *National AI Strategy and Vision Realignment*, (December 2023), <u>https://www.mdia.gov.mt/malta-ai-strategy/national-ai-strategy-realignment-2024/</u>

³²⁷⁹ MDIA, AI ITA Guidelines, MDIA Circular No. 6 (Oct. 3, 2019), https://mdia.gov.mt/wp-content/uploads/2019/10/AI-ITA-Guidelines-03OCT19.pdf.

November 1, 2019), calling into question whether interested parties would have sufficient time to participate in a meaningful way.

Locating public consultation opportunities among the various government websites is not user friendly. The MDIA, despite its Malta.AI website, is not currently the hub for finding AI-related public consultations. No other opportunities have been listed since 2019. In its annual report however, the MDIA discusses its expanding role with regard to AI.³²⁸⁰

Digital Services Act

As an EU member state, Malta shall apply the EU Digital Services Act (DSA).³²⁸¹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and

³²⁸⁰ MDIA, *Annual Report 2020*, <u>https://mdia.gov.mt/wp-</u>content/uploads/2021/11/MDIA-layout-final.pdf.

³²⁸¹ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

disinformation, in particular the spreading of terrorist and violent content and hate speech.³²⁸² The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.³²⁸³

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation³²⁸⁴ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.³²⁸⁵ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force³²⁸⁶ on the 2024 European elections.

EU AI Act

As an EU member State, Malta is bound by the EU AI Act.³²⁸⁷ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

³²⁸⁷ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.³²⁸⁸ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area

³²⁸⁸ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.³²⁸⁹

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances

³²⁸⁹ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.³²⁹⁰ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems.

³²⁹⁰ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.³²⁹¹

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office³²⁹² established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Malta will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact³²⁹³ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Malta is an EU Member State, the General Data Protection Regulation (GDPR)³²⁹⁴ is directly applicable in Malta and to Maltese. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and

³²⁹³ European Commission, *AI Pact*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

³²⁹⁴ Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, <u>https://eur-lex.europa.eu/EN/legal-</u>content/summary/general-data-protection-regulation-gdpr.html

unnecessary administrative burdens."³²⁹⁵ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.³²⁹⁶ The Maltese Data Protection Act 2018 (Chapter 586 of the Laws of Malta) (DPA) supplements the GDPR and took effect on 28 May 2018.

Regarding the activities of law enforcement authorities, Malta transposed the EU Data Protection Law Enforcement Directive (LED)³²⁹⁷ with Subsidiary Legislation 586.08. "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."³²⁹⁸ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³²⁹⁹ The LED also requires for Member States, including Malta, to enable data subjects to exercise their rights via national data protection authorities.³³⁰⁰

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Maltese data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the

³²⁹⁷ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, <u>https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504</u> ³²⁹⁸ European Commission, Data protection in the EU,

³³⁰⁰ Article 17 of the LED.

Member States apply the LED consistently."³³⁰¹ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.³³⁰² The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."³³⁰³

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Malta is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.³³⁰⁴

Authority (MDIA).³³⁰⁶ The IDPC's task is to enforce the GDPR and Malta's Data Protection Act (DPA), while the MDIA's is to regulate "innovative technologies" while supplementing the action of other national competent authorities and acting as a hub between authorities to enhance communication. The MDIA is required to assist the IDPC in "safeguarding the data protection rights of data subjects." The MDIA was created by the Parliamentary Secretary for Financial Services, Digital Economy and Innovation, Hon Silvio Schembri, on the basis of the Malta Digital Innovation Authority Act (MDIA Act), which defines the MDIA as the lead Authority in the innovation technology sector.

More specifically, the MDIA Act establishes the MDIA as the competent authority to, inter alia:

- exercise regulatory functions regarding Innovative Technology Arrangements and related services;
- support the development and implementation of the guiding principles described in the MDIA Act; and
- establish minimum quality, compliance and security standards for any Innovative Technology Arrangements and related services.³³⁰⁷ The various stated objectives of the MDIA cover the following:
- to harmonize practices and to facilitate the adoption of standards on Innovative Technology Arrangements in Malta in line with international norms, standards, rules and/ or laws;
- to promote, enforce ethical and legitimate criteria in the design and use of Innovative Technology Arrangements and any application, software or derivative product from it;
- to promote transparency and auditability in the use of Innovative Technology Arrangements, and any application software, or derivative product from it;
- to promote legal certainty in the application and cross-border context, and the development of appropriate legal principles for the effective application of law to Innovative Technology Arrangements; and
- to increase protection to users of Innovative Technology Arrangements, through high standards and guidelines.³³⁰⁸

³³⁰⁶ Malta Digital Innovation Authority Act (MDIA Act), Act No. XXXI of 2018, (July 20, 2018), <u>https://mdia.gov.mt/wp-content/uploads/2018/10/MDIA.pdf</u>

³³⁰⁷ MDIA, Frequently Asked Questions, What Is The Purpose of the MDIA and What Functions Will it Have?, <u>https://mdia.gov.mt/faq/#1576660516492-13a4f293-c7c6</u> ³³⁰⁸ MDIA, Frequently Asked Questions, What are the objectives of the MDIA?, https://mdia.gov.mt/faq/#1576660516492-13a4f293-c7c6.

With the enactment of the MDIA Act, Malta's purpose is to establish a "national technology assurance framework."³³⁰⁹ Although the MDIA's initial focus was on distributed ledger technology to regulate and promote blockchain and cryptocurrency technology, in 2020/2021, its mandate broadened to include AI technology.³³¹⁰ With regard to the MDIA's regulatory oversight, there is only very limited evidence to date. Only one regulatory notice can be found on the MDIA's website,³³¹¹ granting a small number (5) of systems auditor certificates.³³¹²

The Office of the Information and Data Protection Commissioner (IDPC) for its part is the national body "responsible for monitoring and enforcing provisions of the GDPR and the [DPA]." The IDPC's objectives are to increase public trust and confidence in the use of personal data, ensure consistent application of the GDPR, enforce data protection rules, increase awareness, and ensure transparency and good governance, among others.³³¹³ The IDPC is an independent body that is granted regulatory authority through Article 11 of the DPA³³¹⁴ and is led by Commissioner Ian Deguara, appointed by Prime Minister Dr. Robert Abela in December 2020 for a five-year term in office.³³¹⁵

The IDPC is organized into three units – legal, technical, and administrative – and employs 13 staff to implement its mandate.³³¹⁶ It also has the authority to impose administrative fines.³³¹⁷ According to its website, the IDPC has issued 87 enforcements decisions since 2020. A high-profile case involved levying a 65,000 Euro fine against C-Planet (IT Solutions) Ltd, which was held responsible for a personal data breach of over 337,000 Maltese voters.³³¹⁸

Although the IDPC is an accredited member of the GPA (formerly ICDPPC) since 2003,³³¹⁹ it did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³³²⁰ the 2020 GPA Resolution on AI Accountability³³²¹ and the 2022 GPA Resolution on Facial Recognition Technology.³³²² However, the IDPC co-sponsored the 2023 GPA Resolution on Generative AI.³³²³

Malta has also several independent oversight bodies for human rights, namely: the National Commission for the Promotion of Equality, the Commission for the Rights of Persons with Disabilities and the Parliamentary Ombudsman. They are competent to oversee the impact of AI policies within their field of competences.

Algorithmic Transparency

Malta is subject to the GDPR and Convention 108+. Maltese have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³³²⁴

Malta's Ethical AI Framework also covers criteria for guaranteeing algorithmic transparency such as the necessity to establish measures to ensure the traceability of outcomes for decisions made based on the use of an algorithm. Users are also to be made aware in clear and easily understandable language that relevant decisions, content, advice or outcomes are the result of an algorithmic decision.

regar/16808b36f1

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³³²⁵ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."3326

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."³³²⁷

Smart Surveillance

Malta's Safe City pilot project in Paceville and then Marsa created using technology developed by Chinese tech giant Huawei, is considered as an

example of mass surveillance technology. Former Prime Minister Joseph Muscat even referred to the potential network as "eyes in the sky".³³²⁸ The project also attracted criticisms from UN Data Protection Rapporteur Joseph Cannataci, who doubted the legal basis on which the project was developed, and EU Commissioner for Justice Vera Jourova. "Concerns about how the data collected by Huawei would be used also contributed to widespread negative responses to the project." In January 2023, it was announced that the project was discontinued after the contract expired and the state-owned company tasked with implementing the system was dissolved.³³²⁹ However, in June 2023, Malta's Ministry of Tourism extended Safe City Malta Board member appointments for an additional year through June 2024.³³³⁰ These conflicting reports would require clarification.

Lethal Autonomous Weapons

Maltese government supports a legally binding instrument on lethal autonomus weapons. Malta has participated in some Convention on Certain Conventional Weapons (CCW) meetings on autonomous weapons. Malta spoke for the first time at the 2021 CCW Group of Governmental Experts on Lethal Autonomous Weapon Systems (GGE on LAWS) meeting, stating that it "remains concerned with the rapid technological advancement especially in AI, where as a result, lethal autonomous weapons systems are today capable of functioning with a lesser degree of human control or none."³³³¹

In October 2022, Malta was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international

framework of rules and constraints.³³³² In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."³³³³

In February 2023. Malta participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Malta, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³³³⁴ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."3335

Malta also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³³³⁶

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.³³³⁷ The second REAIM summit will take place in 2024 in Korea.³³³⁸

At the 78th UN General Assembly First Committee in 2023, Malta voted in favour³³³⁹ of resolution L.56³³⁴⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to the Freedom House, Malta is a "free" country with a score of 89. "Malta is a parliamentary democracy with regular, competitive elections and periodic rotations of power. Civil liberties are generally respected. New and smaller political parties encounter difficulties in challenging the dominance of the two main parties, and official corruption is a serious problem."³³⁴¹

Malta is a Member State of the Council of Europe (CoE) and of the United Nations and thus has human rights obligations at the regional and universal levels.

As a Member of the CoE, Malta is a party to and under obligation to abide by the European Convention on Human Rights and is subject to the jurisdiction of the European Court of Human Rights and the monitoring of the Council of Europe treaty bodies. Its human rights policies and practices are also monitored by the CoE Commissioner for Human Rights.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."

As a UN Member State, Malta is subject to the oversight of various UN human rights bodies, including the Human Rights Council and its Universal Periodic Review and thematic special procedures.

³³⁴¹ Freedom House, *Freedom in the World Report 2023 - Malta*, <u>https://freedomhouse.org/country/malta/freedom-world/2023</u>

OECD / G20 AI Principles

Malta is not a member of the OECD.³³⁴² While Malta has not officially endorsed the OECD AI principles,³³⁴³ Maltese National AI Strategy emphasizes that Malta's Ethical AI Framework, *Towards Trustworthy AI* builds on the OECD AI Principles. The so called AI Framework explicitly states that particular attention was given to ensuring that the Ethical AI Framework was aligned with OECD AI Principles. The OECD AI Policy Observatory also considers, "Inclusive growth, sustainable development and well-being; human-centred values and fairness; robustness, security and safety; accountability; fostering a digital ecosystem for AI; providing an enabling policy environment for AI; international co-operation for trustworthy AI" are the OECD AI principles addressed within these two instruments³³⁴⁴.

UNESCO Recommendation on the Ethics of AI

Malta is a UNESCO member state since 1965 and is amongst the 193 Member States which adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence. It remains to be seen how Malta will implement the Recommendation in practice.

Council of Europe Convention on AI

Malta contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³³⁴⁵

Evaluation

Malta's goal is to become the "ultimate AI launchpad." Malta has developed a national AI strategy with a strong trustworthy AI pillar and the

³³⁴⁵ Council of Europe, *Draft Framework Convention on AI, human rights, democracy and the rule of law* (March 2024),

country benefits from a comprehensive European and national data protection legal regime. Despite all this, it is puzzling that a smart city project with AI-powered surveillance features had been on-going for the last 5 years in total impunity. Although it was announced that the project had been discontinued when it arrived at expiration in January 2023, more recent news reveal that it has been extended for a year. With the adoption of the EU AI Act, Malta shall designate a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Mauritius

National AI Strategy

Mauritius became one of the first African countries to publish a national AI strategy in 2018.³³⁴⁶ The strategy reflects the country's aim to promote and utilize AI in improving growth, productivity, and quality of life, with recommendations for the achievement of these goals. The strategy provides a roadmap for the development of AI in the country with a focus on key areas through the identification of sectors and national projects that can leverage AI, capacity-building and skill development, AI ethics, partnerships for emerging technologies, awareness campaigns, and adoption of AI in public services. The Economic Development Board and the Ministry of Finance and Economic Development³³⁴⁷ are responsible for piloting the strategy.

The AI projects identified for implementation fall in the manufacturing, health, agriculture, and FinTech sectors. As recommended by the Strategy, Mauritius established an AI Council composed of experts whose primary role is to advise the Government on ways to support the country's AI ecosystem. The Strategy also urges the government to create a regulatory environment for AI, consisting of a framework on ethics and data protection, and the provision of grants and tax credits to encourage investment in AI.

According to the Africa Policy Institute (Afripoli), Mauritius' digital strategy focuses on five waves, one of which is the review of the existing legal frameworks to support AI and robotics developments.³³⁴⁸ The UN e-government survey report highlights the efforts of Mauritius to align the Digital Government Transformation Strategy with the Public Sector Business Transformation Strategy, and the appointment of a High-Level Digital Government Task Force for oversight and reporting.³³⁴⁹ Mauritius'

policy efforts align with the commitments it took as a member of the African Union, notably the AU digital transformation strategy³³⁵⁰ and the Continental Data Policy Framework.³³⁵¹

Public Participation

Mauritius includes a framework for public participation in its laws. The country's Constitution³³⁵² makes it mandatory for the legislature to create avenues for public participation in the law-making process. Accordingly, it provides citizens with the right to participation, freedom of association, and expression.³³⁵³

The Digital Government Survey of 2018 reported a significant lack of involvement of citizens in national issues and policy discussions.³³⁵⁴ Recommendations in the Digital Government Transformation Strategy were the "provision of digital platforms for integrating citizens and other stakeholder views in government decision-making processes,"³³⁵⁵ engagement by Ministries / Government departments with the public and dissemination of information to inform decision-making, as well as the release of Open Data, "as a means to achieve transparency in public sector operations."³³⁵⁶ Accordingly, the government established the Citizen Support Portal.³³⁵⁷ The Portal is an e-participation and e-decision-making platform meant to enable government to engage with citizens. The platform is intended to "handle citizen complaints, monitor complaints, and inform citizens on Government policies."³³⁵⁸ The platform is supported by 35 Citizen Advice Bureaus placed across the country, to facilitate access to computers or the Internet to citizens who do not have these means.³³⁵⁹

In the UN E-government survey 2020, Mauritius had moved to first place in Africa, 63rd in the world, and 45th globally in the open data index, and was recognized as a model digital government.³³⁶⁰ The most recent e-Government Survey of 2022, ranked Mauritius as the 2nd top nation in Africa and 75th out of 193 countries in the world, in terms of the e-Government development index (EGDI).³³⁶¹

In January 2023, the Data Protection Office organized a conference "Protecting Personal Data across All Economic Sectors" on the occasion of Data Protection Day³³⁶². Privacy rights, accountability, and protection against government surveillance were part of the agenda.

Data Protection

Mauritius is among the first African countries which enacted a new law, the Data Protection Act, 2017 (DPA)³³⁶³ in line with the European General Data Protection Regulation EU 2016/679 (GDPR)³³⁶⁴ and repealing the previous Data Protection Act 2004. The DPA came into force on January 15, 2018.³³⁶⁵

The DPA aims to enhance data subjects' control over their personal data and individual autonomy.³³⁶⁶ Unlike the GDPR, the DPA does not have any extra-territorial effect. The DPA³³⁶⁷ covers " the processing of personal data, wholly or partly by automated means." Section 21 of the DPA³³⁶⁸

enshrines provisions regarding the lawful, fair, and transparent processing of data, the right to erasure and rectification, and the observance of the rights of data subjects. Section 34 provides for the right to privacy within the "principles of lawfulness, necessity, and proportionality in a democratic society". The DPA requires a Data Protection Impact Assessment ex-ante, to assess if the processing has the potential to result in "high risk to the rights and freedoms of data subjects by virtue of their nature, scope, context, and purpose."³³⁶⁹ The Assessment shall include:

- 1. Purposes and the legitimate interest of the processing
- 2. Necessity and proportionality
- 3. Risks to the rights and freedoms of data subjects
- 4. Measures to address risks; safeguards.

The DPA has been criticized for providing no limitations regarding the use of new technologies, including AI,³³⁷⁰ thus raising privacy and ethical concerns if no impact assessment is conducted.³³⁷¹

The Data Protection Office (DPO)³³⁷² is the supervisory authority responsible for protecting the privacy rights of individuals since 2009. The DPO offers e-services ranging from Data Protection Impact Assessments, compliance audits, certifications, transfer of personal data abroad, and notifications of a personal data breach. One of the functions of the Data Protection Commissioner, as per Article 5 of the DPA, is to examine any proposal for automated decision-making that may result in adverse effects on the privacy of individuals.³³⁷³

Mauritius' Data Protection Commissioner since 2007 is Ms. Drudeisha Madhub. Ms. Madhub contributed to the reform of Mauritius' data protection legislation and in the Southern Mediterranean region, including with regard to the negotiations with the EU to achieve

adequacy.³³⁷⁴ Despite the DPO's action at national and international level, the DPO has not endorsed the Global Privacy Assembly's 2018 Declaration on Ethics and Data Protection in Artificial Intelligence.³³⁷⁵ 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence, ³³⁷⁶ and 2022 Declaration on Facial Recognition Technology.³³⁷⁷

The DPO has issued several Guidelines regarding the DPA,³³⁷⁸ including AI solutions in the context of the COVID-19 pandemic ³³⁷⁹ and a Code of Practice³³⁸⁰ to ensure that the Mauritius Police Force is compliant with the DPA when it operates the Safe City surveillance systems. In a report by the UN Rights Committee of 2021, Mauritius was found in violation of citizens' privacy rights due to the lack of assurance of protection of the biometric data stored in the National Identity Card.³³⁸¹

In 2018, Mauritius ratified³³⁸² the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention)³³⁸³. The collaboration with European Union led the Ministry of Information Technology, Communication, and Innovation (MITCI) to initiate the Cyber Resilience for Development Project (Cyber4D) project in 2018.³³⁸⁴ In April of that year, the country signed the Commonwealth Cyber Declaration on the occasion of the Commonwealth Heads of Government Meeting (CHOGM).³³⁸⁵ The parties to the Declaration acknowledged the importance of agreeing on common standards, strengthening data protection and security, and affirmed that "the same rights that citizens have offline must be also protected online."

In 2021, the MITCI submitted to Parliament and achieved the enactment of the new Cybersecurity and Cybercrime legislation³³⁸⁶, in alignment with the Council of Europe tenets and other international conventions. Mauritius is a *priority country* in the CoE "Global Action on Cybercrime Extended Project (GLACY+)" which seeks to strengthen States' capabilities in the formulation of cybercrime legislation³³⁸⁷. However, the cybercrime legislation does not specifically address personal data protection or algorithm transparency as a fundamental right.

In 2021, the Government proposed to amend the Information and Communication Technologies (ICT) Act seeking to regulate the misuse and abuse of social media. The Information and Communication Technologies

³³⁸² African Union, *List of Countries which have signed, ratified/acceded to the African Union Convention on Cyber Security and Personal Data Protection* (Mar. 25, 2022), <u>https://au.int/sites/default/files/treaties/29560-sl-</u>

³³⁸⁷ Council of Europe, *Global Action on Cybercrime Extended (GLACY)*+ (2023), https://www.coe.int/en/web/cybercrime/glacyplus

Authority launched a public consultation,³³⁸⁸ which generated concerns among free expression advocates locally and internationally.³³⁸⁹ While the proposed amendment largely targeted communications that are protected under Article 12 of Mauritius' Constitution, such an amendment would have allowed the government to set proxy servers with the capability to decrypt social media posts interfering with the provisions of the DPA which affords data privacy and protection. Ultimately, the government retracted the proposed amendment to the ICT Act.

On 22 February 2022, Mauritius signed a Joint Declaration³³⁹⁰ on privacy and the protection of personal data with the European Union, Australia, Comoros, India, Japan, New Zealand, Singapore, South Korea, and Sri Lanka, with the aim to promote core safeguards relating to automated decision-making such as transparency and the possibility to challenge the outcome of an automated decision.

After an eight-day visit to the country in December 2023, the UN Special Rapporteur on the right to privacy stated, "Overall, privacy is taken seriously in Mauritius and the Government has prioritized developing a comprehensive legal framework. However, the challenge, as is the case for all States, is to ensure the implementation of the laws"³³⁹¹

Algorithmic Transparency

On September 4, 2020, Mauritius became the first African country to ratify the Convention 108+ which sets a right to algorithmic transparency.³³⁹² Section 38 of the DPA addresses the rights of an individual not to be subject to automated decision making, including profiling, that

results in legal effects for the subject. This section establishes that automated processing for evaluation 'shall not be based on special categories of personal data', and must include safeguards for the "rights, freedoms, and legitimate interests' of the subject.³³⁹³

Facial Recognition and Smart Cities

Mauritius' National AI Strategy states that AI is essential to help improve public safety, which is also echoed in Mauritius' Vision Strategic Plan 2030³³⁹⁴ and the Digital Government Transformation Strategy.³³⁹⁵ Already underway, the Safe City Project is set to include the installation of a Safe City infrastructure comprised of a total of 4000 surveillance cameras (Intelligent Video Surveillance –IVS) with built-in facial recognition capabilities once it is completed.³³⁹⁶ Huawei Technologies Co, Ltd, the Chinese Information Communication Technology giant with an almost twodecades-old presence in Mauritius in partnership with Mauritius Telecom, provided the AI-powered technology,³³⁹⁷ which has the capability of generating alarms when it detects suspicious personnel.³³⁹⁸ The Carnegie Endowment for Peace study on AI surveillance reported this exclusive surveillance contract for smart policing with Huawei to be the result of a commitment of Mauritius to access long-term financing from China.³³⁹⁹

The Safe City Project was designed to make Mauritius the first African country with integrated safety and intelligence and uses facial recognition technology for mass surveillance on public roads. By 2020 2,761 IVS cameras were installed across more than 1,400 sites in Mauritius. Additionally, the plan includes 300 Intelligent Traffic Surveillance to

monitor illegal offenses using facial images of individuals³⁴⁰⁰ out of which 140 were functional by 2020 in 68 main roads and motorways.³⁴⁰¹

In 2020, members of the Parliament raised concerns about the effectiveness of data protection safeguards because the Prime Minister exempted the Safe City Project from the DPA, under Section 44 of the DPA, evoking national security grounds. As a result, the Government released a Code of Practice³⁴⁰² for the operation of the Safe City Systems by the Mauritius Police Forces in accordance with the provisions of the DPA 2017. Mauritius' Prime Minister stated that no biometric data has been collected because the AI technology is not vet operational and reiterated that the Safe City project is aligned with Section 44 of the DPA 2017.³⁴⁰³

The Safe City pilot falls under the jurisdiction of the Mauritius Police Force, under the Prime Minister's Office, but the responsibilities for the data of this project were opaque from the onset.³⁴⁰⁴ The Hoover Institution warned about the risks for "political control, manipulation, and oppression" resulting from surveillance projects, and calls for checks and balances by the Mauritian Parliament, National Audit Office, and media to ensure that the public interest in projects of this magnitude is a priority.

In May 2023, the German Council on Foreign Relations published a study demonstrating that these concerns still exist in Mauritius, as part of Chinese-planned coastal smart cities, located close to submarine cable landing stations and vital naval channels.3405

Biometrics

Upon reaching the age of 18, all Mauritius citizens must apply for an identity card which they must carry on them.³⁴⁰⁶ Mauritius launched its first identity card scheme under the National Identity Card Act, Act 60 of 1985.³⁴⁰⁷ The Finance (Miscellaneous Provisions) Act 2009 and the 2013 National Identity Card (Miscellaneous Provisions) Act³⁴⁰⁸ later amended the 1985 Act to introduce a new smart biometric ID card scheme which mandates the Government to store data including fingerprints and calls for stiffer penalties against identity fraud³⁴⁰⁹ to deter multiple ID card applications using fake information.

The new 2013 National Identity Card scheme led to a constitutional challenge, *Madhewoo v The State of Mauritius, and another*,³⁴¹⁰ which reached the Supreme Court of Mauritius as citizens of Mauritius feared misuse of their personal data for Government mass surveillance. The Supreme Court held that although the smart ID card scheme interfered with the plaintiff's right to privacy under Section 9(1) of the Constitution, the application of the 2013 Act was permissible under Section 9(2) because the right to privacy is not absolute and interference with that right is permissible in the interest of public order. However, the Court held that the storage of the data was not adequately secured because of the lack of safeguards as provided under the DPA. In response, the Mauritius Government issued the National Identity Card (Amendment, Civil Identity Register) Regulations 2015³⁴¹¹ which erases the biometric data once the ID card has been issued.

In 2016, the Judicial Committee of the Privy Council confirmed the 2015 judgment of the Supreme Court of Mauritius.³⁴¹² Subsequently, the plaintiff filed a UN human rights complaint. On July 21, 2021, the UN

Human Rights Committee shared the views of the Committee according to which the mandatory storing of biometric data interfered with the plaintiff's right to privacy since it relates to data storage and retention contrary to Article 17 of the International Covenant on Civil and Political Rights³⁴¹³ to which Mauritius is a party. The Committee found that the Government failed to set appropriate measures to protect the stored data against the risk of arbitrariness and abuse and must take steps to avoid similar violations. Mauritius was given 180 days to report back to the Committee with the actions taken to give effect to the Committee's views and to publish them broadly in the official language of Mauritius. To date, there are no official reports about any action planned by Mauritius to address the UN report.

A 2021 OHCHR report also pointed to the use of AI for profiling and automated decision-making by Intelligent agencies in Mauritius despite the regulations of Section 9 of the Constitution. The deployment of AI across four areas: (1) public safety video and image analysis, including the use of CCTVE audio recording; (2) DNA Analysis powered by AI; (3) Forensic application of Facial Identification Techniques (FITS) and (4) Crime forecasting through the Intelligent Video Surveillance (IVS).³⁴¹⁴

Lethal Autonomous Weapons

Mauritius ratified the Convention on Certain Conventional Weapons (CCW) in 1993 and has participated in some CCW meetings on autonomous weapons systems. As a member of the Non-Aligned (NAM) and the African Union, Mauritius supports the negotiation of a legally binding instrument on autonomous weapons systems to ensure that the weapons respect human rights and remain accountable.³⁴¹⁵ The African Group in 2021 stressed the "ethical, legal, moral, and technical questions" raised by the use of autonomous weapons systems and urged for concrete

policy recommendations to be adopted including prohibitions and regulations.³⁴¹⁶

Human Rights

The Freedom House's 2023 *Freedom in the World* report ranks Mauritius as a 'free' country in terms of protection of human rights, with a score of 85/100.³⁴¹⁷ The country has a strong ranking for the protection of political rights and civil liberties. However, International IDEA's latest Global State of Democracy 2023 report indicates that Mauritius is part of the countries in Africa which have experienced the greatest democratic recession over the last five years.³⁴¹⁸

Mauritius has a comprehensive framework on human rights, as a member of the United Nations and a signatory of the Universal Declaration of Human Rights. Mauritius has also ratified the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic and Social Cultural Rights (ICESR), and the Convention on Cybercrime (Budapest Convention).³⁴¹⁹ Mauritius enacted the Protection of Human Rights Act 1998 that creates a national framework for the protection of human rights.³⁴²⁰ The Act establishes the National Human Rights Commission whose mandate is to protect human rights and investigate complaints regarding human rights violations.

In 2018, the UN Human Rights Council, Universal Periodic Review of Mauritius, highlighted the country's efforts to develop human rights indicators, which were integrated systematically into national implementation and monitoring plans.³⁴²¹ Mauritius issues periodic reports

OECD / G20 AI Principles

Mauritius is not a member of the OECD or the G20 and has not endorsed the OECD AI Principles³⁴²³ or the G20 AI Guidelines.³⁴²⁴ The OECD AI Observatory reports the strides of the government of Mauritius in the field of AI policy³⁴²⁵ with the release of the AI Strategy and the establishment of an AI Council. The Mauritius AI strategy addresses six OECD AI principles: (1) inclusive growth, sustainable development, and well-being: (2) Human-centered values and fairness. (3) Robustness. security, and safety, (4) Fostering a digital ecosystem for AI, (5) Providing an enabling policy environment for AI, and (6) Building human capacity and preparing for labor market transitions.³⁴²⁶

At the International Conference on Digital Economy & Digital Banking held in Mauritius in October 2022, Mauritius' Prime Minister, Pravind Kumar Jugnauth, reiterated the government's engagement to continue to foster collaboration with international institutions, especially with the OECD, with the aim to promote Mauritius as a "Development Model in Africa."³⁴²⁷ The Prime Minister shared Mauritius's determination to become a member of the OECD. Mauritius will be one of the guest countries invited to attend the G20 summit in Delhi, India in September 2023.3428

UNESCO Recommendation on the Ethics of Artificial Intelligence

Mauritius is a member state of UNESCO since 1968³⁴²⁹ and one of the 193 countries which endorsed the UNESCO Recommendation on the Ethics of AI (UNESCO Recommendations) on November 21, 2021.³⁴³⁰

In 2022, Mauritius attended the UNESCO-Southern Africa Sub-Regional Forum on AI (SARFAI 2022) held in Windhoek, Namibia in September 2022. Discussions concerned the Ethical Impact Assessment and Readiness Assessment Methodologies in the framework of the implementation of the UNESCO Recommendation. Mauritius was not a participant in the session. The co-hosts of SARFAI 2022 (Botswana, Malawi, Mozambique, Namibia, South Africa, Zambia and Zimbabwe) approved the Windhoek Statement on Artificial Intelligence in Southern Africa,³⁴³¹ which calls for the establishment of a Southern African coordination mechanism for the implementation of the UNESCO Recommendation on the Ethics of AI. These state members of the South African Development Community (SADC), including Mauritius, are set to submit the Declaration to the 2023 Joint Meeting of SADC Ministers responsible for Education and Training and Science, Technology, and Innovation, for discussion and adoption. The most recent UNESCO AI Needs Assessment Survey did not include any report or statistic about Mauritius.³⁴³²

Mauritius is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.³⁴³³ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.³⁴³⁴

Evaluation

Undoubtedly, Mauritius is one of the few African countries making significant strides toward the Fourth Industrial Revolution. Mauritius has endorsed the UNESCO Recommendation on the Ethics of AI, developed a national AI strategy, upgraded its data protection legal regime and ratified

 ³⁴²⁹ UNESCO, *Countries: Mauritius*. (n.d.) <u>https://en.unesco.org/countries/mauritius</u>

the Council of Europe's Convention 108+. Yes, concerns remain with regard to widespread AI-powered surveillance practices that Mauritius has now all the tools to address.

Mexico

National AI Strategy

In 2018, Mexico became the first Latin American country to announce a national AI strategy. The Office of the Mexican President under the former Peña Nieto administration together with the United Kingdom's Embassy in Mexico City commissioned a readiness assessment and policy report: Towards an AI Strategy in Mexico: Harnessing the AI Revolution.³⁴³⁵

The report provides a preliminary outline of how Mexico should become a leader in AI. Mexico's manufacturing-centric economy, the report argues, faces grave risks amid growing automation and should take a clear, strategic position in developing AI. The report sets out five thematic areas: governance, government, and public services; research and development; capacity, skills, and education; data infrastructure; and ethics and regulation.

Within the category of ethics and regulation, the report recommends that the Mexican government bring data assets inside the scope of Mexican competition law (COFECE) in recognition of the fact that data is a competitive asset. The report also calls for the creation of an AI Ethics Council which would "set guidelines and limits which reflect Mexican Values" and "award a quality mark for AI companies who abide by the standards." ³⁴³⁶

On this basis, in March 2018, the Office of the President under the former Peña Nieto administration launched Mexico's AI Strategy 2018. The Strategy sets out five key actions for the Mexican government: develop an inclusive governance framework; identify the needs of AI in industry; open the recommendations of the readiness assessment and policy report for public consultation; support Mexico's AI leadership in international forums; and promote continuity through changing administrations, by working with all interested stakeholders towards an official AI National Policy.³⁴³⁷

³⁴³⁵ British Embassy of Mexico City, Oxford Insights, C Minds, *Hacia una Estrategia de IA en México: Aprovechando la Revolución de la IA* (June 2018), <u>https://7da2ca8d-b80d-4593-a0ab-</u>

³⁴³⁶ Ibid.

³⁴³⁷ CAF-Development Bank of Latin America, *Mexico: the story and lessons behind Latin America's first AI strategy* (June 2020), p. 5,

As mentioned in a 2022 report conducted by the OECD in collaboration with the Development Bank of Latin America, "Mexico's 2018 strategy, which was put into effect under a previous administration, is no longer publicized on official government websites. It is unclear whether the current administration considers the strategy to be still in effect."³⁴³⁸

In December 2021, Centro LATAM Digital and Iniciativa Latinoamericana por los Datos Abiertos (ILDA), with the financial support of the International Development Research Centre (IDRC) and the Inter-American Development Bank (IADB), published a report on Mexico's public policy on AI. The purpose of this report is to identify the main challenges and obstacles for the design of public policies on AI that includes a human rights-based approach and that may serve to support and resume Mexico's national AI strategy by the current government.

Key recommendations are (i) to create a national strategy on AI that is multi-stakeholder and multi-disciplinary that could contribute to the development of public policies and mechanism for measurement and assessment; (ii) put a strong emphasis on the protection of personal data related with the development of AI technologies; (iii) implement the OECD principles on AI; (iv) include efficient government coordination mechanisms to implement a national plan on AI that could identify the main actors and stakeholders of different areas; and (v) to work closely with the different commissions and groups of National Congress to make them aware of the benefits and risks of AI that may support the drafting of flexible regulations on AI.³⁴³⁹

In the meantime, in 2020, under the current administration but following a recommendation of the 2018 AI readiness and policy report, a multi-stakeholder national coalition, IA2030.Mx,³⁴⁴⁰ comprising institutions from the government, industry, civil society and academy, and coordinated by C Minds, issued the Mexican National AI Agenda (2018-

2030).³⁴⁴¹ The "objective is to coordinate efforts, build a single voice around AI and promote continued action and support for the topic."³⁴⁴² The Agenda revolves around six thematic axes: 1. Data, Digital Infrastructure and Cybersecurity; 2. Ethics; 3. Research and Development; 4. Governance, Government and Public Services; 5. Skills, Capacities and Education; and 6. Mexicans Abroad.

Under the first axis and with regard to privacy, the Agenda identifies as a key issue: "A constant tension exists between privacy and access to data necessary for the development and improvement of AI systems. If data is the raw material, how to ensure appropriate access? A vision for data governance which allows access to data in a safe, ethical, lawful and privacy-friendly way, as it is currently defined or to be reconsidered in light of recent events such as the SARS 2 COVID-19 pandemic or possible terrorist attacks, is necessary."

Concerning ethics, the Agenda states that "it is of the utmost importance for the development and adoption of AI technology in our country to be based on the protection of, and respect for human rights."³⁴⁴⁴ The Agenda explains that "one of the main merits in using human rights as a pivotal element in the development of AI is that human rights clearly establish the responsibility of the government in protecting human rights and providing mechanisms for the prevention of, and remedy against possible violations."³⁴⁴⁵ The Agenda identifies three rights which may be particularly at risk: freedom of expression, equality and non-discrimination, and privacy.³⁴⁴⁶ These are rights which are part of the case law of the Inter-American Court for Human Rights and also addressed by the Inter-American Commission for Human Rights. These rights are also well defined in various conventions at international level.³⁴⁴⁷

With regard to the public sector, the Mexican government published the General Principles for the Development and Use of Systems based on

³⁴⁴⁷ Ibid., p. 49.

AI in the Federal Public Administration.³⁴⁴⁸ The key principles are: Monitor and evaluate the impacts of AI systems in order to ensure that they achieve the expected results; Promote transparency, by explaining to the users that interact with AI systems the decision process taken by such systems, the expected benefits as well as the potential risks derived from using such systems; Protect privacy, by incorporating mechanisms of control and consent for the use of personal data during the design of AI systems; Foster equality, by reducing risks of discriminatory biases derived from the utilized data; Due process, by allowing individuals to dispute decisions made by AI systems.

However, in 2020, the US Library of Congress noted that "the presidential administration that adopted this strategy and its guiding principles ended on November 30, 2018. No information could be located on whether the current administration (which commenced on December 1, 2018) will continue with this strategy and its principles or initiate a similar effort."³⁴⁴⁹

Council of Europe Convention on AI

Mexico contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³⁴⁵⁰

Public Participation

The Mexican AI National Agenda is the product of a broad public participation exercise. The IA2030Mx coalition stated that "the members of this movement have been working since the beginning of 2018 under a philosophy of co-responsibility of government, academia, industry and civil society, seeking that Mexico does not lag behind in the 4th Industrial

Revolution, strategically take advantage of the benefits of AI and mitigate the possible ethical and social risks."³⁴⁵¹ "What started as the collaboration of 10 institutions grew to the participation of more than 110 on a national scale. One of the first actions of the coalition was launching a national consultation on AI," in which 1.588 people across the different Mexican states participated.³⁴⁵²

Data Protection

The right to data protection³⁴⁵³ is enshrined in Article 16 paragraph 2 of the Mexican Constitution. Mexico has also ratified the 1981 Council of Europe (Convention 108) for the protection of individuals with regard to the processing of personal data but not yet the 2018 Protocol modernizing the Convention.³⁴⁵⁴

For the private sector, the 2010 Federal Law for the Protection of Personal Data Held by Private Parties and its respective Regulations constitute the main legislative framework regarding data protection. The National Institute for Transparency, Access to Information and Personal Data Protection (INAI) is the authority responsible for enforcing the law for the private sector.

For the public sector, the 2017 General Law for the Protection of Personal Data in the Possession of Obligated Subjects as well as the General Guidelines for the Protection of Personal Data regulates the processing of personal information in the possession of any Federal, State or local authority across Mexico. The INAI is responsible for applying these rules at the federal level. Each of the 32 Mexican States has its own legal framework that regulate the collection and processing of personal data by the public sector. A State-level data protection authority is in charge of ensuring compliance with the law.

As pointed by the INAI, "a common basis for the private and the public sector are the principles and duties regarding the protection of personal data that are found in the regulations that apply to them, which

https://home.inai.org.mx/wp-

³⁴⁵⁴ See Council of Europe, *Chart of signatures and ratifications of Treaty 223* (status as of March, 12, 2023), <u>https://www.coe.int/en/web/conventions/full-</u>list?module=signatures-by-treaty&treatynum=223

assure data subjects that the processing of their information is carried out properly."³⁴⁵⁵ Whether the processing of personal data occurs in the private or the public sector, data subjects benefit from the "ARCO rights" which refer to the access, ratification, cancelation and opposition rights of data subjects, with respect to their personal data. In particular, data subjects have the right to oppose to the processing of their data, at any time, by any mechanism, including automated decision-making and profiling. In the public sector, data subjects are also granted the right to data portability.

In May 2022, the INAI issued its Recommendations for the processing of personal data deriving from the use of AI.³⁴⁵⁶ Referring to the OECD, the INAI mentions that "there exists at least five values or principles for responsible AI governance:

- (1) AI should benefit to people and the planet by fostering inclusive growth, sustainable development and well-being.
- (2) AI systems should be designed in compliance with the rule of law, human rights, democratic values and diversity, and they should include adequate mechanisms such as, for example, allowing human intervention when it is necessary to guarantee a just and equitable society.
- (3) Transparency and responsible public disclosure regarding AI systems should exist in order to ensure that people understand its results and can be challenged.
- (4) AI systems should function in a safe and sound manner during its entire lifecycle and potential risks should be continuously assessed and managed.

(5) Organizations and individuals who develop, deploy or operate AI systems should be responsible for its correct functioning, based on the principles described above."³⁴⁵⁷

The INAI then sets "five basic principles which should be respected during the development and implementation of any AI technology. These principles guarantee that technological development has a positive impact on people's life, especially people who use these technologies."³⁴⁵⁸ These are: inclusive growth, sustainable development, and well-being; humancentered values and fairness; transparency and explainability; robustness, security, and safety; and accountability.

The INAI is part of the Ibero-American Data Protection Network (RIPD),³⁴⁵⁹ a group of experts on data protection and access to information, composed of 34 entities, including 14 federal and state access to information and data protection authorities from Latin America and the Caribbean. In 2019, the RIPD adopted "Specific Guidelines for Complying with the Principles and Rights Governing Personal Data Protection in Artificial Intelligence Projects,"³⁴⁶⁰ based on the Standards for Personal Data Protection for the Ibero-American States approved in 2017.³⁴⁶¹ The INAI relied on the RIPD AI Guidelines to formulate its own Recommendations on top of the OECD AI Principles.

The INAI is a member of the Global Privacy Assembly (GPA) since 2010, as well as the Institute for Access to Public Information of Mexico City (2010), the Transparency, Public Information Access and Personal Data Protection for the State of Mexico (2015) and the Institute for Transparency, Access to Information and Data Protection of Michoacan (2022).

The INAI co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence³⁴⁶² and the 2020 GPA Resolution on AI Accountability³⁴⁶³ and the 2023 GPA Resolution on Generative AI.³⁴⁶⁴ However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology.³⁴⁶⁵

Algorithmic Transparency

Although transparency and explainability are not expressly mentioned in the data protection laws of Mexico, the INAI's 2022 Recommendations for the processing of personal data deriving from the use of AI mention transparency and explainability as one of the five basic AI principles that should be respected during the development and implementation of AI systems.³⁴⁶⁶ The INAI explains that: "whoever uses AI systems should be transparent regarding the use of such systems and provide significant information in order for people to be aware that they are interacting with AI systems; to know what part AI systems play in the results obtained; to be granted the opportunity to contest the outcome if they have been negatively impacted by the AI system."³⁴⁶⁷

Data Scraping

In August 2023, the INAI, together with eleven other data protection authorities, all members of the GPA's International Enforcement

Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.³⁴⁶⁸

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Mexico approved the Ibero American Charter on

³⁴⁶⁸ Office of the Australian Information Commissioner, Office of the Privacy Commissioner of Canada, Regulatory Supervision Information Commissioner's Office of the United Kingdom, Office of the Privacy Commissioner for Personal Data of Hong Kong, Federal Data Protection and Information Commissioner of Switzerland, Norwegian Datatilsynet, Office of the Privacy Commissioner of New Zealand, Colombian Superintendencia de industria y Comercio, Jersey Office of the Information Commissioner, Moroccan CNPD, Argentine AAIP, Mexican INAI, Joint statement on data scraping and the protection of privacy (Aug. 24, 2023), https://ico.org.uk/media/about-the-ico/documents/4026232/joint-statement-data-scraping-

^{202308.}pdf.

Artificial Intelligence in Civil Service in November 2023.³⁴⁶⁹ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."³⁴⁷⁰

³⁴⁶⁹ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

³⁴⁷⁰ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."³⁴⁷¹

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

³⁴⁷¹ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.³⁴⁷²

EdTech and Children Tracking

In November 2020, the Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data (Convention 108) issued Guidelines on Children's Data Protection in an Education Setting, also applicable to remote e-learning solutions and services.³⁴⁷³ The Committee recalls that "[t]he UN Convention Committee on the Rights of the Child set out in 2001, that "(...)Education must be provided in a way that respects the inherent dignity of the child and enables the child to express his or her views freely."³⁴⁷⁴

The Committee also states that: "[c]hildren cannot see or understand how large their digital footprint has become or how far it travels to thousands of third parties across or beyond the education landscape, throughout their lifetime. While children's agency is vital and they must be better informed of how their own personal data are collected and processed, there is at the same time a consensus that children cannot be expected to understand a very complex online environment and to take on its responsibilities alone."³⁴⁷⁵

"Processing must not involve more data than necessary to achieve the legitimate purpose. This is particularly important when consent cannot be freely given because the choice is to use a product and receive remote instruction or refuse and receive none."³⁴⁷⁶ "A precautionary approach and

³⁴⁷² Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

³⁴⁷³ Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data (Convention 108), *Guidelines on Children's Data Protection in an Education Setting* (April 2021), <u>https://rm.coe.int/t-pd-2019-6bisrev5-eng-guidelines-education-setting-plenary-clean-2790/1680a07f2b</u>

^{2790/1680}a07f2b ³⁴⁷⁴ Guidelines on Children's Data Protecion in an Education Setting, p. 3.

³⁴⁷⁵ Guidelines on Children's Data Protection in an Education Setting, p. 4.

³⁴⁷⁶ Guidelines on Children's Data Protecion in an Education Setting, p. 5.

a strengthened protection towards sensitive, special categories of data, including genetic and biometric data, and ethnic origin, or relating to sexual orientation, or offences, recognising children's additional vulnerability."³⁴⁷⁷

"Profiling of children should be prohibited by law. In exceptional circumstances, States may lift this restriction when it is in the best interests of the child or if there is an overriding public interest, on the condition that appropriate safeguards are provided for by law"³⁴⁷⁸ "The Guidelines on artificial intelligence and data protection should be followed in educational settings, with regard to the automatic processing of personal data to ensure that AI applications do not undermine the human dignity, the human rights and fundamental freedoms of every child whether as an individual, or as communities, in particular with regard to the right to non-discrimination."³⁴⁷⁹

"Recognising that legislation on educational settings and other domestic and international law have an impact on how the data protection rules are applied, including the rights of data subjects, educational institutions need strong legislative frameworks and Codes of Practice to empower staff, and to give clarity to companies to know what is permitted and what is not, when processing children's data in the context of educational activities, creating a fair playing field for everyone."³⁴⁸⁰

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Mexico, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

EdTech products used in Mexico sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and

³⁴⁷⁷ Guidelines on Children's Data Protection in an Education Setting, p. 8.

³⁴⁸⁰ Guidelines on Children's Data Protection in an Education Setting, p. 4.

ensure that children who want to learn are not compelled to give up their other rights in order to do so. 3481

Use of AI for Criminal Purposes

The use of AI and more concretely, the use of deepfakes for criminal related purposes is on the rise and Mexico has not been exempted. In December 2003, the financial services regulator, the National Commission for the Protection and Defense of Users of Financial Services gave a warning about a deepfake video being widespread mainly through social media purporting to be Mr. Carlos Slim (Mexico's wealthiest man). The video shows a manipulated image of Mr. Carlos Slim taken from an earlier event that his company and foundation Telmex promotes among interns.³⁴⁸² The deepfake video informs about a new application requesting citizens to redirect to a hyperlink, download, fill out and sent a form in exchange of promising to earn up an attractive sum of money per day. The video was a well elaborated scam, and there is evidence that many people in Mexico were affected of this fraud.

Lethal Autonomous Weapons

In October 2022, Mexico endorsed, together with 69 other countries, a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."³⁴⁸³

³⁴⁸¹ Human Rights Watch, *How Dare They Peep into My Private Life* (May 25, 2022), <u>https://www.hrw.org/report/2022/05/25/how-dare-they-peep-my-private-life/childrens-rights-violations-governments</u>

⁹WYcSnnAm en.pdf.

In February 2023, Mexico endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,³⁴⁸⁴ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

At the 78th UN General Assembly First Committee in 2023, Mexico voted in favour³⁴⁸⁵ of resolution L.56³⁴⁸⁶ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Freedom House gives Mexico a "partly free" (60/100) rating for political rights and civil liberties.³⁴⁸⁷ According to Freedom House, "Mexico has been an electoral democracy since 2000, and alternation in power between parties is routine at both the federal and state levels. However, the country suffers from severe rule of law deficits that limit full citizen enjoyment of political rights and civil liberties." ³⁴⁸⁸

In December 2020, celebrating Human Rights Day, the National Institute for Public Health, mentioned that "Mexico signed the Universal Declaration of Human Rights in 1948, however it was not until 1992 that the protection and defense of human rights obtained constitutional ranking. In December 2020 (...) The COVID-19 crisis has been fueled by structural discrimination and racism. (...) In order to recover from the crisis, we have

to tackle the pandemic of inequality. For this, it is necessary to promote and protect economic, social and cultural rights."³⁴⁸⁹

OECD / G20 AI Principles

Mexico has taken an active role in pursuing international cooperation for the ethical development of AI. The Mexican government endorsed the OECD AI Principles in 2019 as well as the G20's and is one of the founding members of the Global Partnership on AI (GPAI), the world's first international AI initiative.³⁴⁹⁰

UNESCO Recommendation on the Ethics of AI

Mexico is represented in UNESCO's World Commission on the Ethics of Scientific Knowledge and Technology (COMEST). COMEST produced a preliminary study on the ethics of AI, which has now become the foundation of the UNESCO Recommendation on the Ethics of AI.³⁴⁹¹ In November 2021, Mexico alongside 192 other states adopted the Recommendation on Ethics of AI.³⁴⁹²

Mexico is among the countries that "have initiated a process to establish institutional infrastructures, such as national steering committees on the ethics of AI, to oversee the piloting of the capacity-building tools under development."³⁴⁹³

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean. They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts. According to

³⁴⁹⁰ OECD, OECD to host Secretariat of new Global Partnership on Artificial Intelligence (June 15, 2020) <u>https://www.oecd.org/going-digital/ai/oecd-to-host-</u> secretariat-of-new-global-partnership-on-artificial-intelligence.htm; Gobierno de México, Declaración Conjunta de los miembros fundadores de la Alianza Global sobre la Inteligencia Artificial (June 5, 2020) <u>https://www.gob.mx/sre/prensa/declaracion-</u> conjunta-de-los-miembros-fundadores-de-la-alianza-global-sobre-la-inteligenciaretificial

Gabriela Ramos, UNESCO Assistant Director-General for Social and Human Sciences, Mexico will be a member of the Regional Council.³⁴⁹⁴

Mexico is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.³⁴⁹⁵ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.³⁴⁹⁶

Mexico also signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.³⁴⁹⁷ It aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.³⁴⁹⁸

Evaluation

Mexico was the first Latin American country to have initiated a national AI strategy in 2018. However, the change in administration at the end of 2018 has put a break on previous AI policy initiatives. The 2022 Recommendations for the processing of personal data deriving from the use of AI issued by the national data protection authority and the first implementation steps taken to implement the UNESCO Recommendation on the Ethics of AI are positive signs although AI remains largely unregulated across the country. There are ever-growing concerns regarding the use of AI for mass surveillance of citizens and for malicious and criminal related purposes.

Myanmar

National AI Strategy

The Government of Myanmar has not developed a national AI strategy. However, Myanmar endorsed the UNESCO Recommendation on the Ethics of AI which could provide a template, should Myanmar take step to implement it, for a human-centered national AI strategy.

Public Participation

The Burmese government does not appear to hold public participation in AI policymaking.

Data Protection

Myanmar does not have a single principal data protection law and does not have a data protection agency. Three legal instruments refer to the concept of privacy or data protection:

- The Constitution of the Republic of the Union of Myanmar (2008)³⁴⁹⁹
- The Law Protecting the Privacy and Security of Citizens (Union Parliament Law 5/2017) of 8 March 2017, as amended by Law 16/2020 of 28 August 2020, and by the State Administration Council Law 4/2021 of 13 February 2021 (Privacy Law)³⁵⁰⁰
- The Electronic Transactions Law of 30 April 2004 (State Peace and Development Council Law No. 5/2004), as amended by the Law amending the Electronic Transactions Law (No. 6/2014) of 25 February 2014, and by the State Administration Council Law No. 7/2021 of 15 February 2021 (ETL)³⁵⁰¹

Section 357 of the Constitution states: "The Union shall protect the privacy and security of home, property, correspondence, and other

³⁴⁹⁹ An unofficial translation is available at

³⁵⁰⁰ An unofficial translation is available at <u>https://www.myanmar-</u>responsiblebusiness.org/pdf/Law-Protecting-Privacy-and-Security-of-

Citizens en unofficial.pdf

³⁵⁰¹ An unofficial translation is available at <u>https://www.myanmar-</u> responsiblebusiness.org/pdf/electronic-transactions-law_consolidated_2014-and-2021_en.pdf

communications of citizens under the law subject to the provisions of this Constitution." 3502

According to its Preamble, the Privacy Law was enacted to protect the privacy and security of citizens as stated in the Constitution. "Privacy" is defined as "the right to freedom of movement, freedom of residence, and freedom of speech of a citizen". Section 3 of the Privacy Law states that every citizen "has the right to enjoy the protection of his/her privacy and security in full, as set out in the Constitution". Section 4 requires the relevant Ministry, and relevant government department, organization, or official (called Responsible Authorities in the Privacy Law) to ensure that the privacy and security of citizens are protected. Before the Privacy Law was amended by the State Administration Council Law 4/2021 of 13 February 2021 ("SACL 4/2021"), Section 8 of the Privacy Law protected citizens from unreasonable searches, seizures, and surveillance. The SACL 4/2021 suspended section 8 on 13 February 2021, thirteen days after Myanmar's military took power in a coup, returning Myanmar to military rule.

Amendments to the ETL by the State Administration Council Law 7/2021 of 15 February 2021 (SACL 7/2021) introduced the concept of personal data and personal data protection. "Personal Data" is defined as "information that identifies or is capable of identifying an individual". A new section 27-A was inserted into the ETL, among other things: (a) setting out the obligations of a Personal Data Management Officer; (b) requiring that an "investigation team" receiving personal data keep it confidential except disclosing it to permitted persons; and (c) excluding the application of the personal data protection obligations from certain scenarios, such as investigations by the government. The term "Personal Data Management Officer" covers both persons authorized by the government and an organization, who are responsible for collecting, retaining, and using personal data. An Officer's obligations include:

- storing, protecting, and processing personal data according to its type and level of security;
- prohibiting the examination, disclosure, transmission, alteration, destruction, and copying of personal data without consent of the individual or as permitted by any law;
- refraining from processing personal data in violation of the ETL; and
- destroying personal data after its retention period has expired.

³⁵⁰² An unofficial translation is available at

https://www.ilo.org/dyn/natlex/docs/ELECTRONIC/79572/117761/F1973500681/MMR 79572%20EngMmr.pdf

The 2022 Cyber Security Bill lays out a set of rules for the protection of personal information, which shows alignment with the General Data Protection Regulation. For example, Article 11 in Chapter (6) stipulates that "the person responsible for managing and keeping the personal information shall –

- (a) systematically keep, protect and manage the personal information based on its types, security levels in accordance with the law
- (b) not allow, disclose, inform, distribute, dispatch, modify, destroy copy and submit as evidence of the personal information of an individual without the consent or the permission in the provision of an existing law to any individual or organization
- (c) not utilize personal information for managing issues that are not in compliance with the objectives
- (d) systematically destroy the personal information that is collected to be used for a period of time after a certain period"³⁵⁰³

Meanwhile, the Cyber Security Bill establishes responsibilities and restrictions for Digital Platform Service Providers, which follows the global trend of holding Big Tech and platform companies accountable. The Bill not only clarifies the definition of a Digital Platform Service Provider but also requires all digital platform service providers to obtain a license from the newly designated Cyber Security Steering Committee in order to operate in Myanmar³⁵⁰⁴.

In particular, Article 36 in Chapter (9) Providing Service designates obligations for "digital platform service provider with more than 100,000 users in Myanmar shall ensure the following:

- (a) Devices holding users' data must be stored in line with data classification rules.
- (b) Internet Service providers must be registered in accordance with Myanmar company law.
- (c) Taxes must be paid in accordance with the provisions set forth in relevant laws if is due to claim any tax relating to the business conducted through internet service or similar profitable business."

³⁵⁰³ The Republic of the Union of Myanmar, State Administration Council, *Cyber Security Law (DRAFT)* (Feb. 2022),

Moreover, the Bill provides that a digital platform service provider in Myanmar "shall retain the following information for up to three years from the first date of use of the service:

- (a) username, Internet Protocol (IP) address, telephone number, identification card number and address of the service users.
- (b) users record of the service user.
- (c) other information as directed by the Department."³⁵⁰⁵

Algorithmic Transparency

In Myanmar, algorithmic transparency is neither protected nor provided as a legal right. The report Human Rights Impact Assessments for AI: Learning from Facebook's Failure in Myanmar by the Carr Center for Human Rights Policy at Harvard Kennedy School investigates the identification of discrimination as an algorithmic harm and the assessment of algorithmic decision-making under the UN Guiding Principles through the case of Facebook.³⁵⁰⁶

Facial Recognition

In December 2020, Myanmar authorities started using a system of 335 surveillance cameras in the capital, Napyidaw.³⁵⁰⁷ This was done as part of the government's "Safe City" project to curb crime. Made by the technology company Huawei, the cameras were spread between eight townships and reportedly equipped with facial recognition as well as license plate recognition capabilities. An advisor for the Naypyitaw Safe City project, said that "anyone with a criminal history entering Naypyitaw will be recognized".³⁵⁰⁸

Similar systems have been installed in Mandalay and the commercial capital Yangon.³⁵⁰⁹ Myanmar's regional minister for Electrical

³⁵⁰⁵ The Republic of the Union of Myanmar, State Administration Council, *Cyber Security Law (DRAFT)* (February 2022),

³⁵⁰⁷ MyanmarNow, *Hundreds of Huawei CCTV cameras with facial recognition go live in Naypyitaw*, (Dec. 19, 2020), <u>https://www.myanmar-now.org/en/news/hundreds-of-huawei-cctv-cameras-with-facial-recognition-go-live-in-naypyitaw</u>

³⁵⁰⁸ Ibid.

³⁵⁰⁹ Reuters, *Fears of "digital dictatorship" as Myanmar deploys AI*, (March 19, 2021), <u>https://www.reuters.com/world/china/fears-digital-dictatorship-myanmar-deploys-ai-2021-03-18/</u>

Power and Construction confirmed by way of comments to the media, that the system in Mandalay would use AI to detect any abnormal activity such as crime and accidents. Such activity would be recorded and followed by the cameras, which would send information to one another as well as to the police.

Human Rights Watch raised concerns that the use of this technology was approved without public consultation or transparency, making it unclear how the Myanmar authorities would mitigate any potential impact on human rights and the right to privacy.³⁵¹⁰

Protesters protesting the ousting of Aung San Suu Kyi in a coup in 2021 have cited fears regarding the deployment and use of facial recognition technology by the military junta.³⁵¹¹ In a few weeks after the coup, the military leadership successfully pushed for amendments³⁵¹² suspending Sections 5, 7, and 8 of the Law Protecting the Privacy and Security of Citizens (2017). The ramifications of the suspension of these sections, particularly Section 8(b) of the Privacy Law which previously provided that the State "shall not surveil, spy upon, or investigate any citizen in a manner which could disturb their privacy and security or affect their dignity" when it comes to the potential of privacy breaching AI surveillance, is immense.

The deployment of facial recognition technology by the Tatmadaw against protesters has drawn concern from the international community including a call by the Indonesian President for a high-level ASEAN meeting in 2021.³⁵¹³

A report by the Reuters news agency in July 2022 revealed that Myanmar's military government is now expanding camera surveillance systems for cities in all 14 states and divisions in the country.³⁵¹⁴

Biometric Identification

In 2019, Myanmar's Ministry of Transport and Communications announced its intention to make biometric data collection mandatory when mobile phone services are purchased, this being part of a strategy to create a "national database to store and manage biometric mobile subscriber registration information from all mobile network operators in Myanmar."³⁵¹⁵

Lethal Autonomous Weapons

At the United Nations General Assembly (UNGA) in October 2017, Myanmar said that lethal autonomous weapons systems were a security issue that warranted serious consideration.³⁵¹⁶ At the 74th Session of the UNGA in October 2019, Myanmar's Ministry of Foreign Affairs noted that there were "growing concerns on new types of weapons such as lethal autonomous weapon systems and their destructive power", and there was a risk of new arms race growing with worldwide military expenditures increasing at an "alarming level".³⁵¹⁷

Based on Human Rights Watch as of August 2020, Myanmar had not commented on calls to ban fully autonomous weapons.³⁵¹⁸ Myanmar is not a state party to the Convention on Certain Conventional Weapons

Human Rights

Though the country is a signatory to the UN Declaration of Human Rights, according to Freedom House, Myanmar is "not free" with a score of 9 out of 100 in 2022,³⁵²¹ down from its score of 28 out of 100 in 2021³⁵²² and 30 out of 100³⁵²³ in 2020 where it was last classified "partly free."

According to the 2021 Democracy Index, Myanmar is ranked 166th out of 167 countries with a score of 1.02 out of 10.3524 Under the Voice and Accountability Value which measures perceptions of the extent to which a country's citizens are able to participate in selecting their government, as well as freedom of expression, freedom of association, and a free media, Myanmar achieved a score of -0.94 in 2020, well below the world median of 0.³⁵²⁵ In addition, the 2021 World Justice and Peace Index, Myanmar, six places down from its previous rank scored 0.39 overall and was ranked 128th of the 139 countries and jurisdictions surveilled.³⁵²⁶

According to Freedom House, "Myanmar's already-stalled democratic transition was completely derailed in February 2021, when the military, known as the Tatmadaw, seized control of the government, arresting dozens of senior government officials and preventing the newly elected parliament from convening. The National League for Democracy (NLD), which won a sweeping victory in the November 2020 elections, led

a broad-based opposition to the takeover, organizing a country-wide Civil Disobedience Movement (CDM) that continued throughout the year. Protesters were met with indiscriminate violence from military forces, and journalists, activists, and ordinary people risked criminal charges and detention for voicing dissent. Armed conflict between the military and ethnic rebel groups continued, as did the forced displacement of hundreds of thousands of Rohingya, a mostly Muslim ethnic minority."

The use of AI has been implicated in what has been described as ethnic genocide and ethnic cleansing in Myanmar, in the wake of several reports regarding the complicity of Meta, formerly known as Facebook.³⁵²⁷ The social media platform was reported as unable or unwilling to moderate hate speech calls for violence against Rohingya Muslims in Myanmar, and in some cases amplified them. Relying on a small Burmese-speaking team who were not based in Myanmar, the company depended heavily on Natural Language Processing systems which struggled to provide accurate translations of content in Burmese. In the aftermath of the crisis which has seen over 1 million Rohingya Muslims in refugee camps in Bangladesh, a class action has been launched against Meta seeking 150 billion pounds in compensation for the company's complicity in the genocide.³⁵²⁸

The Law Amending the Electronic Transactions Law of 2004³⁵²⁹ has been enacted last February 2021. This permits government confiscation of personal data and the criminalization of content deemed to be untruthful or fake or created to incite public panic. The 2022 Cyber Security Bill³⁵³⁰ not only addresses the protection and governance of personal information, critical information infrastructure, and electronic communication but also establishes mechanisms and responsibilities to tackle risks, crimes, and attacks in the cyberspace³⁵³¹. Meanwhile, the new Bill faces criticisms and

calls for withdrawal³⁵³² due to its potential impacts on fundamental rights. In particular, the Bill prohibits the use of virtual private networks (VPNs) without the Ministry's permission. Moreover, the Bill grants authorities the power to order Digital Platform Service Providers to "block or remove content" when a "legitimate complaint" is made that the content "damages a person's social standing and livelihood." ³⁵³³

OECD / G20 AI Principles

Myanmar has not endorsed OECD AI and G20 AI principles.

UNESCO Recommendation on the Ethics of Artificial Intelligence

Myanmar has adopted the UNESCO Recommendation on the Ethics of AI together with all the 193 Member States at UNESCO.³⁵³⁴ It remains to be seen how Myanmar will implement it in practice.

Evaluation

Myanmar does not have a national AI strategy and has not established a process for meaningful public participation to this end. Meanwhile, AI is being used for surveillance purposes in a country in which the unregulated use of new technologies has already had devastating consequences in the framework of the Rohingya genocide. It remains to be seen whether Myanmar's endorsement of the UNESCO Recommendation on the Ethics of Artificial Intelligence could have a positive impact on the future of AI in the country.

Netherlands

National AI strategy

In September 2019, the Dutch government set out The Strategic Action Plan for Artificial Intelligence.³⁵³⁵ The Plan sets out three broad themes – "Capitalising on societal and economic opportunities," "Creating the right conditions," and "Strengthening the Foundations." The key goals are public-private partnerships, international cooperation, an "inclusive approach that puts people first," and "a country that is at the forefront of AI applications which serve the interests of people and society." Under this plan, the Dutch government commits to protecting public values and human rights. It emphasizes prohibition of discrimination, protection of privacy, freedom of speech, human dignity and autonomy, as well as the right to a fair trial.

The Dutch AI strategy follows the 2018 Dutch Digitalization Strategy, the first Cabinet-wide effort to formulate key priorities for digitalization, data and AI. As part of the Digitalization Strategy, the government "supports and endorses the guidelines established in the EU's recent communication on the 'Ethics guidelines for trustworthy AI.'"³⁵³⁶ The government also commits to creating a "responsible innovation toolbox (including impact assessments, handbooks and guidelines)" and making knowledge available in the areas of transparency, explainability and accountability. Through the Transparency Lab initiative, the "government is working with businesses and supervisory bodies to assess how algorithms and their practical applications can be made more transparent and verifiable."

In 2021, the government published an updated Dutch Digitalization Strategy. The ministries that coordinate the efforts are advised by the Digital Netherlands Council, which joins the deliberation process on digitalization policy and consists of domain experts. The Strategy commits the Netherlands to European and international cooperation within appropriate ethical and legal frameworks. The Strategy devotes particular attention to fairness (especially in relation to the GDPR), rule of law, accountability, transparency, and fundamental rights (with explicit reference to privacy, non-discrimination, and autonomy).

³⁵³⁵ Government of the Netherlands, *The Strategic Action Plan for Artificial Intelligence* (2019), <u>https://oecd.ai/en/wonk/documents/netherlands-strategic-action-plan-for-ai-2019</u> ³⁵³⁶ Nederland Digitaal, *Dutch Digitalization Strategy 2.0* (2018),

https://www.nederlanddigitaal.nl/documenten/publicaties/2019/11/13/english-version-of-the-dutch-digitalisation-strategy-2.0

Despite the actions already taken by the Dutch government, some concerns have been raised as to how the government proceeds towards its policy objectives. The findings in the 2020 report of the Temporary Committee on the Digital Future (TCDT) of the Dutch House of Representatives concludes that the House of Representatives has only discussed digitization in a fragmented way; that not all of the risks, opportunities and public values have been addressed; and that many laws and rules in the field of digitization are determined in the European Union.³⁵³⁷ The TCDT proposed to establish a standing committee for Digital Affairs in the House of Representatives, which was effectively formed in 2021 and addressed themes like digital fundamental rights, digital citizenship, and data ethics.³⁵³⁸

The Dutch Research Council (NWO) and the Ministry of Economic Affairs & Climate Policy jointly developed a public-private research program that funds research on explainable, socially aware and responsible AI.³⁵³⁹ The NWO funds several other AI-related programs, such as 'SPRONG - Responsible Applied AI'. SPRONG aims to find ways to responsibly implement AI in practice, which resulted in several AI projects on sustainability and reducing socio-economic inequality.³⁵⁴⁰ In 2023, the NWO announced funding for the ten-year AI research program ROBUST, which in part focuses on "accuracy, reliability, repeatability, resilience and security" and taking "AI out of the black box".³⁵⁴¹ The Special Interest Group of AI, SIGAI, representing all computing science academic institutes and researchers in the Netherlands that perform AI research also published

Dutch Artificial Intelligence Manifesto highlighting the importance of socially aware, explainable and responsible AI.³⁵⁴²

The public administration within the Kingdom is layered and sometimes disconnected. However, the government organizations and the Association of the Netherlands Municipalities (VNG), the Ministry of the Interior and Kingdom Relations commit to focusing on "ethics in, by and for design and the transparency of algorithms when government experiments with AI for public tasks." A study commissioned by Ministry of Interior proposed AI guidelines that apply to the public and private sectors. The guideline, prepared by researcher at VUB, Tilburg University, Eindhoven University of Technology and the National Human Rights Institute of the Netherlands, is a result of Dutch parliament stating that "racism must be ended as soon as possible, not least by stopping the use of discriminatory algorithms."³⁵⁴³

In 2020, the Dutch Data Protection Authority (Dutch DPA) approved the first 'code of conduct' in the Netherlands, the Data Pro Code³⁵⁴⁴ drafted by NL Digital, the Dutch industry association for organizations in the ICT sector. In 2021, researchers from VUB, Tilburg University, Eindhoven University of Technology and the National Human Rights Institute of the Netherlands developed AI guidelines that apply to the public and private sectors. The Guideline is a result of Dutch parliament stating that "racism must be ended as soon as possible, not least by stopping the use of discriminatory algorithms" and was funded by the Ministry of the Interior.³⁵⁴⁵

Public Participation

Participation in the development of the Dutch Digitalization Plan and the Strategic Action Plan for Artificial Intelligence is geared more towards public agencies, private companies, universities and research institutes than the citizens directly. Taskforce AI, which created the initial

AI report, is a public-private partnership, and its Dutch AI Coalition (NL AIC) is a cooperation between different research centers.³⁵⁴⁶ The national Innovation Centre for AI (ICAI) is also a national network between knowledge institutions, industry and government.³⁵⁴⁷

The NL AIC launched 'AI Parade', an eighteen-month public engagement project on AI that kicked off in early 2022,³⁵⁴⁸ focused in part on education and citizen participation.³⁵⁴⁹ The Dutch Ministry of Foreign Affairs also set up the REAIM conference in 2023, with the intent to "mobilise and activate a wide group of stakeholders" in the responsible military deployment of AI.³⁵⁵⁰

The Dutch AI Coalition (NL AIC), a public-private consortium, offers (paid or time-limited trial) membership for interested stakeholders in the field of AI, which would grant access to AI projects and working groups.³⁵⁵¹ The Human-Centric AI working group has developed two key projects. The Ethical, Legal and Societal Aspects (ELSA) Labs aims "to ensure that companies, governmental authorities, centres of expertise, civil society organisations and the general public develop responsible applications of AI jointly. This involves solutions for both social and business problems, focusing on honesty, fairness, security and (above all) trustworthiness. The approach addresses human values as well as public values."³⁵⁵² The Participative and Constructive Ethics (PACE) platform for its part is meant to be a "learning community of practice" which "focuses on AI, its social and application environment, and on participatory and constructive ethics. Four themes are examined: (inter)national environment, methodology development. practical wisdom and ethics in organisations."3553

While not equivalent to public participation in AI policy as such, the Dutch government has made efforts towards document accessibility and

knowledge-building, which are often the building blocks for adequate public participation in AI policies. The Electronic Announcement Act requires national governments to publish official publications on the internet rather than on paper.³⁵⁵⁴ All AI policies are accessible by the public via the websites of the Dutch Parliament and the Digital Government.³⁵⁵⁵

EU Digital Services Act

As an EU member state, the Netherlands shall apply the EU Digital Services Act (DSA).³⁵⁵⁶ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

³⁵⁵⁶ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.³⁵⁵⁷ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.³⁵⁵⁸

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation³⁵⁵⁹ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.³⁵⁶⁰ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital

Media Observatory (EDMO) Task Force³⁵⁶¹ on the 2024 European elections.

EU AI Act

As an EU member State, the Netherlands is bound by the EU AI Act.³⁵⁶² The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

• unacceptable risks, prohibited;

³⁵⁶¹ European Digital Media Observatory, *EDMO Taskforce on 2024 European Elections*, <u>https://edmo.eu/thematic-areas/european-elections/edmo-taskforce-on-2024-european-</u> elections/

 ³⁵⁶² European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

of:

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.³⁵⁶³ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the

³⁵⁶³ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.³⁵⁶⁴

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;

³⁵⁶⁴ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

• emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.³⁵⁶⁵ The academics called for a transversal FRIA, applicable to both

³⁵⁶⁵ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.³⁵⁶⁶

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European

³⁵⁶⁶ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-</u>deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale

Davies, 'Furious': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

Commission. The Commission, including the European AI Office³⁵⁶⁷ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the

³⁵⁶⁷ European Commission, *European AI Office*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-office</u>

market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority the Netherlands will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact³⁵⁶⁸ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since the Netherlands are an EU Member State, the General Data Protection Regulation is directly applicable. In alignment with GDPR

³⁵⁶⁸ European Commission, *AI Pact*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

requirements, the Dutch Data Protection Authority (DPA) was established. It is an independent supervisory body in charge of promoting and enforcing personal data protection rights. It is tasked with the supervision of national and international businesses and organizations, the central government (including the police and the criminal justice authorities), as well as associations, schools, foundations and individual citizens.

The DPA is a member of the European Data Protection Body (EDPB). Established by the GDPR, the EPDB is "an independent European body, which contributes to the consistent application of data protection rules throughout the European Union, and promotes cooperation between the EU's data protection authorities."³⁵⁶⁹

The Dutch DPA is also a member of the Global Privacy Assembly (GPA) since 2002. The DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁵⁷⁰ the 2020 GPA Resolution on AI Accountability³⁵⁷¹ or the 2023 GPA Resolution on Generative AI.³⁵⁷² However, the DPA did co-sponsor the 2022 GPA Resolution on Facial Recognition Technology.³⁵⁷³

In January 2023, the Dutch government launched a supervisory body for algorithms (the 'algoritmetoezichthouder' or algorithm watchdog).³⁵⁷⁴ A new dedicated unit, the Department for the Coordination of Algorithmic Oversight has been created within the DPA. The main mission of the algorithm supervisor is to coordinate all algorithm-related cooperation between Dutch regulators. Its focus will be mainly on monitoring the use of algorithms in the public sector. The objective is to better protect citizens'

fundamental rights (such as privacy and non-discrimination) and reduce the risks of serious incidents. This development responds to a series of issues identified with the use of AI in the public sector and some initiatives of several Dutch regulators.

In January 2024, the Department released its second AI & Algorithmic Risks Report. In the Report, the DPA highlights the urgent need for better risk management and incident monitoring. The DPA also stresses that "the advance of generative AI puts additional pressure on the development of effective safeguards." The report recommends a comprehensive strategy that includes human control and oversight, secure applications and systems, and strict rules to ensure that organisations are in control.³⁵⁷⁵ This shows the Dutch DPA's commitment to apply data protection law as a way to fill some of the loopholes in the EU AI Act.

In January 2021, the Dutch Court of Audit, following an investigation on the Dutch government's use of algorithms, concluded that "government interests are central to algorithms, not private citizens' interests; that the government recognizes the importance of privacy but takes little account of ethical aspects; and warns against the government's use of algorithms becoming dependent on external suppliers."³⁵⁷⁶ In another report issued in 2022, the Dutch Court of Audit concluded that 6 out of 9 algorithms used by the Dutch government did not meet the basic requirements of Dutch law and exposed the government to various risks: from inadequate control over the algorithm's performance and impact to bias, data leaks and unauthorized access.³⁵⁷⁷

In October 2021, several Dutch regulators (the Netherlands Authority for Consumers and Markets, the Dutch DPA, the Dutch Authority for the Financial Markets, and the Dutch Media Authority) intensified their cooperation via the Digital Regulation Cooperation Platform (DST) to better coordinate their oversight activities, not least oversight on the use of algorithms and AI.³⁵⁷⁸ They also pushed for more transparency in how the

personal data of users is processed and used.³⁵⁷⁹ This stronger coordination follows a 2021 audit of Google's teaching tools for schools³⁵⁸⁰ which found the software's privacy protections to be lacking, as well as regulatory pushback against other Big Tech firms.³⁵⁸¹

Algorithmic transparency

The Netherlands is subject to both the EU GDPR and Council of Europe Convention 108+. Algorithmic transparency is therefore a legal right. The DPA has expressed concerns with regard to the lack of transparency and poor data security practices in the public sector, policing, criminal justice. It has also mentioned that digital government will be one of its three core focus areas for 2020-23.³⁵⁸²

Fraud detection algorithm

In early 2020, a Dutch court ruled that the System Risk Indication algorithm (SyRI), used to combat fraud in government programs, violated Article 8 of the European Convention on Human Rights.³⁵⁸³ In the landmark decision, the Court ruled that the principle of transparency was not observed, because there is no insight into the risk indicators and the operation of the risk model. The Court also warned that there is a risk of bias, in that inadvertent links could be established through SyRI on the basis of lower socio-economic status or an immigration background.

The UN Special Rapporteur on Extreme Poverty and Human Rights explained that the decision challenged the "systematic, legislatively sanctioned, used of digital technologies in welfare state on human rights ground."³⁵⁸⁴ In a filing with the court, the Special Rapporteur voiced

concern that "SyRI has consistently been rolled out in poorer and more vulnerable areas of municipalities", and that the Dutch government has denied access to information about the data and 'risk models' used in the algorithm." The Special Rapporteur called the decision, "a clear victory for all those who are justifiably concerned about the serious threats digital welfare systems pose for human rights."³⁵⁸⁵

In April 2020, the Data Processing by Partnerships Act was introduced by the government. Where SyRI was related to public data sharing, this bill expands the data surveillance and sharing to all data stored in public and private storage.³⁵⁸⁶

In January 2021, the Dutch government resigned after it became clear that thousands of families, disproportionately of ethnic minority backgrounds, were wrongly accused of child welfare fraud by a discriminatory algorithm and ordered to pay money back, which drove many victims into deep poverty.³⁵⁸⁷ This scandal would later lead to several policy shifts: a mandatory AI registry, a new algorithmic supervisory body, and mandatory human rights risk assessments for public sector AI systems.³⁵⁸⁸ Alexandra van Huffelen, Minister of Digitalization at the time, later declared that high-risk AI systems should require certification before use, that "impact assessments should be meaningful and address fundamental rights in the complete AI lifecycle," that AI should respect and protect people and their rights, and human-centric AI requires more human oversight - especially when systems have a big influence on people."³⁵⁸⁹ Van Huffelen also makes clear that the government's experiences with the

fraud detection algorithm have urged the Netherlands not just to implement new algorithmic oversight policies, but also to proactively implement components of the EU AI Act, and sometimes even go beyond its requirements: she states that the high-risk impact assessment should be expanded to more cases via "a broader Impact Assessment tool on Human Rights and algorithms" and that Big Tech platform governance is inadequate, suggesting that stricter rules should include content labelling policies.³⁵⁹⁰

In a similar scandal, journalists revealed that five Dutch municipalities (Nieuwegein, Houten, IJsselstein, Lopik and Veenendaal) used a discriminatory risk scoring system for fraud up to June 2022 – even after the SyRi scandal – and the Dutch labor union FNV filed a complaint with the Dutch DPA in January 2023.³⁵⁹¹

AI Registries

In September 2020, Amsterdam launched an AI registry in beta version to detail how city government uses algorithms to deliver services. "Each algorithm cited in the registry lists datasets used to train a model, a description of how an algorithm is used, how humans utilize the prediction, and how algorithms were assessed for potential bias or risks. The registry also provides citizens a way to give feedback on algorithms their local government uses and the name, city department, and contact information for the person responsible for the responsible deployment of a particular algorithm."³⁵⁹²

³⁵⁹² Khari Johnson, *Amsterdam and Helsinki launch algorithm registries to bring transparency to public deployments of AI*(Sept. 28, 2020),

The city of Amsterdam's system was used as a blueprint for a nationwide mandatory registry for algorithms deployed in the public sector.³⁵⁹³ The registry, available online starting December 2022, is freely accessible for citizens and shows information on the purpose, legal background, application, human rights impact assessments, and oversight of public sector algorithms.³⁵⁹⁴ Contribution to the registry is currently voluntary but the aim is to make it compulsory by the end of 2025.³⁵⁹⁵ The Dutch government's Fundamental Rights and Algorithms Impact Assessment (FRAIA), launched in 2021, dovetails with the algorithm registry: the registry specifies whether a Human Rights Impact Assessment was performed.

The Dutch cities of Rotterdam and Eindhoven are among 7 European cities to participate in a public AI algorithm registry experiment, The Algorithmic Transparency Standard, led by Eurocities Digital Forum Lab. Building on the Amsterdam and Helsinki experiment, the aim is to provide cities with a common data schema for algorithm registries that is validated, open-source, publicly available, and ready for use in local algorithm registries.³⁵⁹⁶

Predictive Policing

The Dutch police force, in collaboration with Utrecht University and the University of Amsterdam, established the National Police Lab AI to develop "AI techniques to improve the safety in the Netherlands in a socially, legally and ethically responsible way."³⁵⁹⁷ In alignment with the government's commitment to experiment with technology to solve social issues, the Dutch police has launched pilot projects with predictive policing to anticipate and prevent crime that might be committed by a certain person or at a certain location.

The first was the Sensing Project in Roermond, where police used cameras and other sensors to reduce pickpocketing. The system monitored all people driving in and around Roermond and created a risk score,

³⁵⁹³ Luca Bertuzzi, *Once bitten, Netherlands wants to move early on algorithm supervision* (Nov. 14, 2022), <u>https://www.euractiv.com/section/digital/news/once-bitten-</u>netherlands-wants-to-move-early-on-algorithm-supervision/

³⁵⁹⁷ Innovation Center for Artificial Intelligence, *Police Lab AI*, <u>https://icai.ai/police-lab-</u>ai/

effectively transforming the "city into a living lab where every person travelling by car is subjected to mass surveillance and other human rights violations".³⁵⁹⁸ The project violated the principles of human rights, informed consent, right to privacy and data protection, right to due process and non-discrimination. Amnesty International called on the Dutch government to "halt the Sensing project and comparable 'experimental' predictive policing projects" and to "implement a mandatory and binding human rights impact assessment requirement applicable to the public sector." ⁸ The experiment was halted in 2022, with its "results unclear" and without leading to structural policy shifts.³⁵⁹⁹

The second predictive policing project is "Criminaliteits Anticipatie Systeem" (Crime Anticipation System or CAS) implemented nationwide in 2017. The use of CAS to predict crime locations makes the Netherlands the first country in the world to deploy predictive policing on a national scale.³⁶⁰⁰ The Dutch Court of Auditors critized the CAS for its lack of oversight, privacy, and transparency, deeming the system "high-risk," "worrying," and "prejudiced," but Dutch police has not made significant changes in response.³⁶⁰¹

Lethal Autonomous Weapons

In 2016, the Dutch government agreed with the conclusions of the Joint Committee of the Advisory Council on International Affairs (AIV) and the Advisory Committee on Issues of Public International Law (CAVV) advisory report that meaningful human control is required in the deployment of autonomous weapon systems and responsibility and accountability attribution needs to be taken into account in the design stage of weapon systems.³⁶⁰² The government also views a moratorium on fully autonomous weapon systems to be currently unfeasible. In a 2022 letter from the Government to the House of Representatives regarding

advisory report no. 97, Autonomous weapon systems: the need for meaningful human control (Mar. 2, 2016), <u>https://perma.cc/J37M-UQ33</u>

Autonomous Lethal Weapons, the Minister of Foreign Affairs stated that the Dutch government agreed that the underlying mathematical models and the data underlying those models – must be traceable and explainable at all times and further that it must be clear throughout the decision-making process where and how meaningful human control is assigned and who is responsible for what.³⁶⁰³ In the same year, the Royal Netherlands Army became the first military in the West to deploy armed unmanned ground vehicles (UGVs) "for experimental use in an operational unit in a militaryrelevant environment."3604 Also in 2022, the Netherlands endorsed the UN's Joint Statement on Lethal Autonomous Weapons Systems,³⁶⁰⁵ which underlines "the need to maintain human responsibility and accountability in the use of force."3606 In furtherance of regulating the use of AI in the military, the Minister of Foreign Affairs Worke Hoekstra announced that in February 2023 the Netherlands will host an international summit on the responsible application of artificial intelligence in the military domain. The aim of the summit is to define an agenda for developing international agreements on AI applications in the military.³⁶⁰⁷ At the end of the Summit, Government representatives, including the Netherlands, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence (AI) in the military domain.³⁶⁰⁸

In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine

international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."³⁶⁰⁹ The Netherlands has also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy.³⁶¹⁰

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.³⁶¹¹ The second REAIM summit will take place in 2024 in Korea.³⁶¹²

³⁶¹² Government of the Netherlands, *Speech by Minister Hanke Bruins Slot at the High Level Segment of the Conference on Disarmament* (Feb. 27, 2024),

https://www.government.nl/documents/speeches/2024/02/27/speech-by-minister-hanke-bruins-slot-at-the-conference-on-disarmament

At the 78th UN General Assembly First Committee in 2023, the Netherlands voted in favour³⁶¹³ of resolution L.56³⁶¹⁴ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

In February 2024, at the High Level Segment of the Conference on Disarmament held in Geneva, the Minister of Foreign Affairs Hanke Bruins Slot announced that, as the current chair of the Government Group of Experts on Lethal Autonomous Weapons Systems, the Netherlands will preside over the discussions on the regulation of lethal autonomous weapons systems. The Minister stated, "One big challenge we face is the rapid evolution of emerging technologies. (...) we believe that the responsible development and use of emerging technologies in weapons systems are indispensable for modern armed forces. But those technologies also entail real and imminent risks to security, human rights and fundamental freedoms. (...) We must develop clear standards for responsible behaviour in this area. And we must strengthen the existing norms. The urgency is clear. (...) The risks and legal implications of weapons systems that take decisions fully outside the scope of human control are obvious."

He also clearly expressed the Dutch national position. "Autonomous weapons systems that can't be used in accordance with international law, including international humanitarian law, should be explicitly prohibited. And those that can be used in accordance with international law should be regulated. We must ensure human judgement and control with the development of new weapon systems. That should be the main objective of regulation."³⁶¹⁵

Human Rights

The Netherlands has endorsed the Universal Declaration of Human Rights, The European Union (EU) Charter of Fundamental Rights and The European Convention on Human Rights (ECHR).³⁶¹⁶ The Dutch government has set up an 'AI, public values and human rights' knowledge platform where ministries exchange knowledge and develop policy on public values and human rights in AI applications.³⁶¹⁷

OECD / G20 AI Principles

The Netherlands endorsed the OECD AI Principles. In December 2020, the Netherlands joined the Global Partnership for AI,³⁶¹⁸ a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."³⁶¹⁹

UNESCO Recommendation on the Ethics of AI

In November 2021, the Netherlands, alongside 192 other states, adopted the UNESCO Recommendation on the Ethics of AI.³⁶²⁰ In October 2022, the Netherlands, together with 8 other states, recalled the efforts made by the members of the Group of friends for the implementation of the Recommendation and called on Member States to be "actively involved throughout the implementation process of the Recommendation."³⁶²¹

Al Safety Summit

In November 2023, the Netherlands participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³⁶²² The Netherlands thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

The Netherlands contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³⁶²³

Evaluation

The Netherlands has taken positive steps towards the rights-based deployment of AI with endorsement of UNESCO Recommendation on the Ethics of AI and related implementing efforts, OECD AI Principles, GDPR, and creation of an AI watchdog within its DPA. The country has expanded algorithmic transparency with its AI public registry. The Netherlands has played a leading role in building international consensus towards the need to regulate the use of autonomous weapons. The Dutch judiciary should be credited with a landmark decision concerning the use of secret algorithms in government services. Still the rise of predictive policing and biometric

databases, as well as risk-based systems that may adversely impact minority and vulnerable groups remains a concern.

New Zealand

National AI Strategy

The process for developing a National AI strategy started in May 2021 and is still ongoing. The "working vision of the AI strategy [is for] Aotearoa New Zealand's people centered, inclusive and ethical AI benefits our economy and people and makes us a trusted partner in the global AI landscape".

The cornerstones for the proposed national AI strategy are:

"1) Human-centered and trusted AI;

2) Preparing the workforce;

3) Our place in the world;

4) Investment in AI economy;

5) Uniquely New Zealand; and,

6) All supported by enabling foundations."³⁶²⁴

The draft AI Strategy situates itself in a series of policy initiatives.

In 2018, the Ministry for Social Development published its Privacy, Human Rights and Ethics (PHRaE) framework. This set of tools started with a focus on predictive models and has been broadened to all initiatives where client data is used. It helps those who design services question whether it is 'right' to use information just because there is access to it and was designed to ensure that privacy, human rights and ethics are considered from the design and development stage of an initiative.³⁶²⁵

In 2020, Stats NZ released the Algorithm Charter for Aotearoa and signed by a number of New Zealand government departments. The Algorithm Charter is a commitment by government agencies to carefully manage how algorithms that use government data are developed and used. The Algorithm Charter includes commitments to transparency by clearly explaining how decisions are informed by algorithms; to the incorporation of *Te Ao Māori* perspective³⁶²⁶ in the development and use of algorithms consistent with the principles of the Treaty of Waitangi; to keeping a focus on people through active engagement with stakeholders and affected people, communities and groups; to understanding the limitations in data and managing bias; to retaining human oversight by providing a channel to

appeal decisions informed by algorithms; and to ensuring that privacy, ethics and human rights are safeguarded by regularly peer-reviewing algorithms to assess for unintended consequences and act on this information.

In September 2022, New Zealand launched its Te Rautaki Matihiko $m\bar{o}$ Aotearoa, the Digital Strategy for Aotearoa (Digital Strategy)³⁶²⁷ with the aim to "[e]nabl[e] Aotearoa New Zealand's people, communities, economy, and environment to flourish and prosper in the digital era."3628 David Clark, the Minister for the Digital Economy and Communications, introduced the digital strategy by stating that: "New Zealand stands on the precipice of a huge opportunity to design, build and use digital technologies in world-leading, ethical, equitable ways that reflect the culture and uniqueness of our country. To get there, we need to ask ourselves hard questions like: How can we build on New Zealand's inherently high levels of trust to benefit society, and the economy? What would it mean to be the first country to embrace the ethical deployment of Artificial Intelligence? Are we courageous enough to unlock the benefits of widespread digital thinking?" The Strategy is framed around 3 connected themes: Mahi Tika -Trust; Mahi Tahi - Inclusion; and Mahi Aka - Growth, supported by goals and measures.3629

The 2022/2023 Action Plan for the Digital Strategy was also published in September 2022 and provides a roadmap to 2027 and measures of success. Artificial Intelligence is included as a future issue, where there are not yet dedicated resources but where groundwork is required. The establishment of a Data Ethics and AI Center in scheduled for 2025.³⁶³⁰

Public Participation

The New Zealand Government processes have consistently included periods of public participation in policy and law development. Public participation opportunities for AI are across the government sector in a variety of industries - from policy and instrument development, like the

³⁶²⁷ Digital.govt.nz and Department of Internal Affairs, *The Digital Strategy for Aotearoa* (Sept., 2022), <u>https://www.digital.govt.nz/dmsdocument/237~the-digital-strategy-for-aotearoa/html#ministers-foreword</u>.

Algorithm Charter,³⁶³¹ to application and end use, like consultation on the use of AI in conservation efforts.³⁶³²

Consultation opportunities on the development of AI and digital policy include the 2019 public consultation on its draft Algorithm Charter for the use of algorithms in the public sector with government data. The consultation period ran from 17 October to 31 December 2019, and submissions were solicited from a range of key stakeholders including central government agencies, academics, non-government organizations, civil society representatives, and regulators.³⁶³³ Thirty-four written submissions were received in relation to the charter and related issues.³⁶³⁴

From August to September in 2022, the Ministry of Justice held public consultations on reforming the disclosure aspect of the Privacy Act to increase transparency regarding the collection, use, and disclosure of personal information is fundamental to protecting individuals' privacy rights and their dignity and autonomy. ³⁶³⁵ Based on public feedback, the Ministry of Justice is considering reforms but have not yet released final decisions. ³⁶³⁶

New Zealand's Digital Technologies Industry Draft Transformation Plan 2022-2032 was open for public consultations until 31st March 2022.³⁶³⁷ The draft plan included a workstream tasked with the responsibility of delivering the AI Strategy for New Zealand including defining New Zealand's approach to supporting the ethical adoption of AI and helping grow a thriving AI ecosystem, ensuring the safe adoption and use of AI in New Zealand.

New Zealand does not have a single written constitution, rather several documents of constitutional importance. One of these, *Te Tiriti o Waitangi*/The Treaty of Waitangi, is a founding agreement between the English Crown and the Maori iwi (tribes). Through much jurisprudence *Te Tiriti* is applied in New Zealand through a series of core principles that can be applied in a circumstance; partnership, active protection,³⁶³⁸ and participation. These principles in this AI framework have specific mention in the AI Charter as a commitment to embed a *Te Ao Māori* perspective in the development and use of algorithms consistent with the Treat of Waitangi.³⁶³⁹

Data Protection

The Privacy Act 2020 came into force on 1 December 2020, replacing the Privacy Act of 1993.³⁶⁴⁰ Separately, to the Privacy Act, the courts of New Zealand have developed a series of privacy torts recognizing the right of an individual to sue another for breach of privacy.³⁶⁴¹ The New Zealand Bill of Rights Act contains many rights founded on the right to privacy, such as the freedom from unreasonable search and seizure.³⁶⁴²

The Privacy Act is intended to protect individual privacy by providing a framework for protecting an individual's right to privacy of personal information, including the right of an individual to access their personal information, and giving effect to internationally recognized privacy obligations and standards in relation to the privacy of personal information, including the OECD Guidelines and the International Covenant on Civil and Political Rights.

The Privacy Act set down 13 privacy principles that require an individual to be informed of the fact and purpose of data collection, that require that collection not to be through unfair or overly intrusive means, that require the information to be protected by the agency and not used or shared outside the purposes for which it was collected, held only as long as needed for the purpose, and may not transfer the information offshore

except under particular circumstances that continue comparable protection of the information.³⁶⁴³ The individual has some rights to access and correct the information collected.³⁶⁴⁴ These principles were largely unchanged from the 1993 Act that was replaced, with the only addition being requirements around offshore transfers. A breach of the privacy principles may lead to fine or a claim of interference under the Act, but these are minimal when compared to the European fines under the General Data Protection Regulation, or those proposed in the Australian Privacy Reforms. Notably, there are no rights for individuals being subject to algorithmic decisioning, though elements of them can be read into existing legislation as set out below.

The Privacy Commissioner has the power under the Privacy Act to issue codes of practice that become part of the law. These codes apply the Privacy Act to specific scenarios, for example credit reporting or situations of national security. There are currently six codes of practice.

In May 2018, the New Zealand Privacy Commissioner and the Chief Government Data Steward jointly developed the "Principles for the safe and effective use of data and analytics"³⁶⁴⁵ aimed at government agencies. The New Zealand Office of the Privacy Commissioner has also been active in the Global Privacy Assembly, co-sponsoring the 2020 resolution on facial recognition technology³⁶⁴⁶ and the 2018 Resolution on Accountability in the Development and Use of Artificial Intelligence.³⁶⁴⁷

Algorithmic Transparency

The Privacy Act does not contain a right for an individual to understand how the AI decision was made. However, in New Zealand, where an automated decision is being made by a government agency, section 23 of the Official Information Act 1982 provides an individual with

³⁶⁴³ Privacy Act 2020, section 22, information privacy principles 1, 2, 3,4, 5, 10, 11 and 12.

a right to obtain reasons for a government decision. These reasons are to be supplied in a written statement that includes any findings on material issues of fact and a reference to the information on which the findings were based to allow anybody with the power of review to understand the process of thought before a conclusion was reached.³⁶⁴⁸

The Algorithm Charter³⁶⁴⁹ commits its public sector signatories to transparency - clearly explaining how decisions are informed by algorithms. This transparency may include a plain English document, making information about data and processes available, and publishing information about how data are collected, secured and stored.³⁶⁵⁰ Where algorithms are being employed by government agencies in a way that can significantly impact on the wellbeing of people, or there is a high likelihood many people will suffer an unintended adverse impact, the Charter signatories will make an assessment of their algorithm decisions using a risk matrix.³⁶⁵¹

There is no corresponding right to reasons for automated decisions made by private-sector agencies, but there is a right to access personal information,³⁶⁵² which could be argued to cover how the information has been the subject of processing by an algorithm. The Court has required that information provided to individuals under this access right is in a "form which can be comprehended", including "the key" which unlocks the information in a "meaningful way".³⁶⁵³ In other words, the standard appears to require an explanation: evidence, support or reasoning for a decision.

The New Zealand Privacy Commissioner's submission on the Privacy Bill 2018 included a recommendation to add a new privacy principle to address automated decision-making and algorithmic transparency.³⁶⁵⁴ While the Departmental Report on the Bill recognized the issues needed further consideration, no change was recommended to the then Privacy Bill.³⁶⁵⁵

Data Scraping

In August 2023, the Office of the Privacy Commissioner, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.³⁶⁵⁶

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

^{202308.}pdf.

Use of AI in the Public Sector

The Algorithm assessment report, published in 2018, recommended that consideration be given to ways in which agencies ensure human rights, privacy and ethics are considered when developing algorithms, and that agencies embed a *Te Ao Māori* perspective where appropriate. The Data Ethics Advisory Group (DEAG) was created to assist in meeting those recommendations. The DEAG is convened by the Government Chief Data Steward (GCDS) to assist the New Zealand Government to maximize the opportunities and benefits from new and emerging uses of data, while responsibly managing potential risks and harms. The Group provides advice, comments, views and recommendations to the GCDS and State Sector agencies.³⁶⁵⁷ It has provided advice on a number of matters including on population density assessment and a framework to work more collaboratively with *iwi* (tribes).³⁶⁵⁸

The Algorithm Charter³⁶⁵⁹ finalized in July 2020 is considered a "commitment by government agencies to carefully manage how algorithms will be used to strike the right balance between privacy and transparency, prevent unintended bias and reflect the principles of the Treaty of Waitangi."³⁶⁶⁰ The Algorithm Charter stipulates that a review of it will be conducted to ensure that it is meeting its intended purpose of improving government transparency and accountability without stifling innovation or causing undue compliance burden. An independent review of the Charter - which involved interviewing signatories, non-signatories, and subject matter experts, was completed in December 2021.³⁶⁶¹ This report found almost universal support for the charter, but a lot of implementation work still to do to ensure compliance with all charter commitments. The report also noted there is little opportunity for New Zealanders to get individual recourse on decisions made about them that have been informed by an

algorithm. It also noted that greater enforcement of the charter might be necessary to keep social license, as there is a lack of a clear oversight body. The report also noted that capability and capacity within agencies and the expert community is limited. Stats NZ is working to consider and implement the findings of the review.

Facial recognition

In October 2022, the New Zealand Office of the Privacy Commissioner co-sponsored a GPA resolution on the Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.

The Office of the Privacy Commissioner launched a consultation paper on Privacy Regulation of Biometrics in Aotearoa New Zealand, in August 2022, and requested public feedback until 30 September 2022. This consultation aimed to hear from New Zealanders amid growing concern over the issue of biometrics, including stores using Facial Recognition Technology as part of their CCTV systems. These public submissions will help inform the potential drafting of further guidance or rules, enabling organizations to innovate and benefit from emerging technologies while protecting people from harm under the Privacy Act. The consultation document featured a set of specific questions aimed at building on information first presented in an OPC position paper on biometrics released last year.³⁶⁶² After analyzing the 100 submissions received, the Office of the Privacy Commissioner has published its intention to explore a code to regulate biometric technologies in 2023, which will involve a public consultation period. .³⁶⁶³

Lethal Autonomous Weapons

In 2021, the Minister of Disarmament and Arms Control announced that New Zealand will push for a new international law to ban and regulate autonomous weapons systems (LAWS).³⁶⁶⁴

In October 2022, New Zealand endorsed, together with 69 other countries participating in the UN General Assembly, a joint statement on

Weapons-Systems-Cabinet-paper.pdf

³⁶⁶² Privacy Commissioner New Zealand, *Public input is sought to inform privacy rules for biometrics* (Aug., 2022), <u>https://www.privacy.org.nz/publications/statements-media-releases/public-input-sought-to-inform-privacy-rules-for-biometrics/</u>

autonomous weapons systems. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."³⁶⁶⁵

In February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.³⁶⁶⁶ New Zealand endorsed endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁶⁶⁷

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.³⁶⁶⁸

Human Rights

Freedom House ranked New Zealand very highly (99/100) in 2023 and reported that New Zealand has "a long record of free and fair elections and of guaranteeing political rights and civil liberties."³⁶⁷⁰ The total consists of a score of 40/40 on political rights and a score of 59/60 on civil liberties.

The Bill of Rights Act of 1990 (NZBORA), the Human Rights Act of 1993 (HRA) and the Privacy Act of 2020 are the primary legislative instruments that recognize and safeguard human rights in New Zealand.

The Preamble of the NZBORA describes its purpose as the affirmation and promotion of human rights and fundamental freedoms and the expression of New Zealand's commitments to the International Convention on Civil and Political Rights. The rights in NZBORA qualifies the exercise of rights through section 5 "reasonable limits prescribed by laws as can be demonstrably justified in a free and democratic society". NZ BORA is not supreme law and cannot be used by the Courts as a basis to strike down legislation.³⁶⁷¹ A statutory meaning consistent with the rights protected in NZBORA is preferred, however a statute that has direct conflict with NZBORA will remain in force.³⁶⁷² This situation has been criticized by the United Nations Human Rights Committee, which has called on New Zealand to strengthen the NZBORA.³⁶⁷³

The HRA protects people in New Zealand from discrimination on a number of grounds including ethnic or national origins, race, sex, political opinion, amongst others.³⁶⁷⁴ It applies to the public sector (with some

limitations for national security) and the private sector in matters such as employment, education, provision of services and membership of organizations.

New Zealand has endorsed the Universal Declaration of Human Rights and was one of the 48 nations that voted in favor of the UDHR in General 1948 under the UN Assembly Resolution No. A/RES/217(III)[A].³⁶⁷⁵ In addition to the UDHR. New Zealand is a signatory to various international human rights treaties, including but not limited to the following core instruments: the International Covenant on Civil and Political Rights (ICCPR); the International Covenant on Economic, Social and Cultural Rights (ICESCR); the International Convention on the Elimination of All Forms of Racial Discrimination (CERD): the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW); the Convention on the Rights of the Child (CRC); the Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (CAT): the Convention on the Rights of Persons with Disabilities (CRPD).³⁶⁷⁶

OECD AI Principles / G20 AI Guidelines

In May 2019, New Zealand endorsed the OECD AI Principles.³⁶⁷⁷

In June 2020, New Zealand also joined the Global partnership on AI to "support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms and our shared democratic values"³⁶⁷⁸ New Zealand is one of 29 member states in GPAI, and participates in the four working groups Responsible AI, Data Governance, Future of Work, and Innovation and Commercialization.³⁶⁷⁹

UNESCO Recommendation on the Ethics of Artificial Intelligence

As a member state since 1946, New Zealand has endorsed the UNESCO Recommendation on the Ethics of AI.³⁶⁸⁰ It remains to be seen

³⁶⁷⁵ United Nations, International Bill of Human Rights: Universal Declaration of Human Rights: resolution/adopted by the General Assembly (1948),

https://digitallibrary.un.org/record/670964.

³⁶⁷⁹ Our Work, <u>https://gpai.ai/projects/</u>

³⁶⁸⁰ United Nations, *193 countries adopt first-ever global agreement on the Ethics of Artificial Intelligence*, (Nov. 25, 2021), <u>https://news.un.org/en/story/2021/11/1106612</u>

which steps New Zealand will take to implement the Recommendation in practice.

Evaluation

New Zealand is on its path to adopt a national AI strategy but has not done so yet. New Zealand endorsed the UNESCO Recommendation on the Ethics of AI but it remains to be seen which steps it will take to implement the Recommendation. New Zealand has however already released its Algorithm Charter for Aotearoa. Thus New Zealand has a unique opportunity to draft a national AI strategy in line with both the UNESCO Recommendation on the Ethics of AI and the Algorithm Charter. This would allow the country to carve its own approach to trustworthy AI and protect human rights, and the rights and culture of indigenous people against encroachment by the new technology that is AI.

Nigeria

National AI Strategy

"For Nigeria to responsibly steer the AI revolution towards achieving national goals around job creation, social inclusion, and sustainable development becomes imperative. With collaborative leadership, Nigeria seeks to pioneer ethical and inclusive AI innovation that improves welfare and expands opportunities for all its citizens." It is with these words that the Minister of Communications, Innovation and Digital Economy of Nigeria, Dr Bosun Tijani, launched a public call for the drafting of a National AI Strategy in August 2023. Nigeria is currently in the process of consultation for the National AI Strategy. On 27th March 2024, the Minister of Communications, Innovation and Digital Economy of Nigeria, held the first session on the National AI Strategy workshop with Nigerians across the globe. The workshop will hold again from April 15-18th 2024.³⁶⁸¹

According to the Minister, the objective of the National AI Strategy is to build on the existing work done by the National Information Technology Department (NITDA) to develop a National AI Strategy. However, the Minister adopted an expanded co-creation approach to include top AI researchers of Nigerian descent globally in the process of crafting a National AI Strategy.³⁶⁸²

Pillar 7 of the National Digital Economy Policy and Strategy 2020 $-2030 (NDEPS)^{3683}$ issued by the Federal Ministry of Communications and Digital Economy (the Ministry), considers AI as an emerging technology that must be harnessed for the development of Nigeria's digital economy to attain 7 of the sustainable development goals (SDGs) as prescribed by the United Nations. These SDGs are; poverty eradication; good health and wellbeing; quality education; decent work and economic growth; industry, innovation, and infrastructure; reducing inequality; and sustainable cities and communities.

Economy Policy and Strategy (2020 – 2030), (Nov. 2019),

tijani?utm_source=share&utm_medium=member_ios&utm_campaign=share_via ³⁶⁸³ Federal Ministry of Communications and Digital Economy, *National Digital*

To give effect to this, the National Information Technology Development Agency (NITDA), the IT standards regulator for Nigeria in August 2022 made an open call³⁶⁸⁴ for both contributors and volunteer experts to help develop Nigeria's national AI policy. The volunteer expert group (VEG) serves as an external working group to NITDA and will provide strategic advice, support, research, drafting, collating, and review on all aspects related to the formulation and implementation of the National AI policy for Nigeria. The formal inauguration of the VEG by NITDA occurred on 19 October 2022. Initial discussions at this inauguration indicate that Nigeria's national AI policy would be framed along different clusters/sectoral applications which are education, healthcare, security, finance, employment, agriculture and supply chain, transportation, and telecommunications with a generalist cluster of application.

In November 2020, the Nigerian government launched³⁶⁸⁵ the country's first Artificial Intelligence and Robotics Centre in a bid to position the country for the Fourth Industrial Revolution that is anchored on emerging technologies. The Centre's focus is to serve as the digital laboratory for advancing skills development and innovation in emerging technologies with an emphasis on AI and the Internet of Things (IoT).

Earlier, Nigeria announced that it was working with the United Arab Emirates on Solar Energy and Artificial Intelligence³⁶⁸⁶ after a meeting held in Nigeria between Nigeria's Minister of Science and Technology, and the Ambassador of the United Arab Emirates to Nigeria. The government announced that the National Agency for Science and Engineering Infrastructure would be responsible to develop AI in Nigeria. The government also established Nigeria's Robotics and Artificial Intelligence Centre.

Nigeria Communications Commission (NCC), the telecoms regulator, also announced the establishment of a new department on digital economy under the Office of the Executive Vice Chairman/CEO. The focus of the office is on implementing programs and policies aimed at fully supporting and promoting the national digital economy agenda of Nigeria's Federal Government. The department is domiciled under the office of the Chief Executive Officer to indicate the criticality of the objectives. Nigeria

³⁶⁸⁶ O Shogbola Nigeria and UAE to cooperate on Artificial Intelligence and Solar Energy '(Oct. 24, 2018), <u>https://perma.cc/GN67-8M8R</u>

Ministry of Science and Technology announced the goal of ensuring that Nigeria is well suited to the AI economy as critical to driving knowledge and Innovation and creating more job opportunities for Nigeria.³⁶⁸⁷

Al Safety Summit

In November 2023, Nigeria participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³⁶⁸⁸ Nigeria thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Public Participation

The Nigerian government has made efforts to involve the public in the development of the National Artificial Intelligence Policy (NAIP). This was evident in the NITDA August call for the contribution of stakeholders in the information technology sector to the development of the AI Policy.³⁶⁸⁹

Al Oversight & Data Protection

Section 37 of the Nigerian Constitution provides for the right to privacy. Nigeria is yet to enact a data protection law to address data privacy issues in the digital age. Currently, there is a National Data Protection

Regulation (NDPR)³⁶⁹⁰ and a Data Protection Bill has been drafted.³⁶⁹¹ The scope of the NDPR covers all transactions intended for the processing of personal data of natural persons residing in Nigeria or Nigerian citizens residing in foreign jurisdictions. Data processing under the NDPR includes the collection, recording, storage, retrieval, use, disclosure, transmission, erasure, and destruction of personal data. The stated objective of the NDPR includes;

- 1) Safeguarding the rights of natural persons to data privacy.
- 2) Fostering safe conduct for transactions involving the exchange of Personal Data.
- 3) To prevent manipulation of Personal Data.
- 4) To ensure that Nigerian businesses remain competitive in international trade through the safeguard, afforded by a sound data protection regulation.

On the other hand, the Data Protection Bill³⁶⁹² proposes to establish and provide an efficient regulatory framework to protect personal data, regulate the processing of information relating to data subjects, and safeguard their fundamental rights and freedoms as guaranteed under the Nigerian Constitution. The Bill provides for the establishment of an impartial, independent, and effective regulatory authority that will coordinate data protection and privacy issues. The regulatory authority is expected to superintend over data controllers and data processors within the private and public sectors, and ensure that personal data is processed in accordance with the data protection principles. The Bill seeks to promote a code of practice that ensures the privacy and protection of data subjects' data without unduly undermining the legitimate interests of commercial organizations and government security agencies for such personal data. It also seeks to minimize the harmful effect of personal data misuse or abuse on data subjects and other victims.

The Nigerian Data Protection Regulations 2019 (NDPR) issued by the National Information Technology Development Agency (NITDA) is the applicable data protection law in Nigeria. The NDPR applies to all transactions intended for the processing of personal data and to the actual processing of personal data.

³⁶⁹⁰HA Kurth, *Nigeria Issues New Data Protection Regulation*, (Apr 25, 2019), <u>https://www.huntonprivacyblog.com/2019/04/05/nigeria-issues-new-data-protection-</u> regulation/

³⁶⁹¹ ITedge, *Nigerian Government Seeks Your Input On Draft Bill On Data Protection*, (Aug 26, 2021), <u>https://itedgenews.ng/2020/08/26/nigerian-government-seeks-your-input-on-draft-bill-on-data-protection/</u>

³⁶⁹² Nigerian Communications Commission (NCC), *Draft Data Protection Bill 2020* (*Clause 1*), (2020), <u>https://ncc.gov.ng/documents/911-data-protection-bill-draft-2020/file</u>

The NDPR is enforced by NITDA and recently the Nigeria Data Protection Bureau (NDPB). The possible sanction for an infringement of the NDPR is:

- a) in the case of a data controller dealing with more than 10,000 data subjects, payment of the fine of 2% of the Annual Gross Revenue of the preceding year or payment of the sum of 10 million nairas whichever is greater;
- b) in the case of a data controller dealing with less than 10,000 Data Subjects, payment of the fine of 1% of the Annual Gross Revenue of the preceding year or payment of the sum of 2 million nairas whichever is greater.

The Nigeria Data Protection Bureau (NDPB) was not a sponsor of the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁶⁹³ the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence,³⁶⁹⁴ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology³⁶⁹⁵ or the 2023 GPA Resolution on Generative AI.³⁶⁹⁶

Algorithmic transparency

Nigeria established the right to algorithmic transparency provided in art. 3.1 (7) (1) of the NDPR 2020, which requires data controllers to explain the existence of automated decision-making and the logic involved. Such explanation must also meet the standard for transparency prescribed by the NDPR and the data subject must have a right of access to all aspects of the

automated decision-making.³⁶⁹⁷ The data controller before collecting personal data from the data subject shall provide the data subject with inter alia, information explaining the existence of automated decision-making, including profiling and, at least, in those cases, meaningful information about the logic involved, as well as the significance and the envisaged consequences of such processing for the data subjects.

Under the NDPR this obligation is satisfied by the data controller if such information is provided in a concise, transparent, intelligible, and easily accessible form, using clear and plain language, and for any information relating to a child. The information shall be provided in writing or by other means, including, where appropriate, electronic means. When requested by the data subject, the information may be provided orally, provided that the identity of the data subject is established by other means. This transparency obligation in the use of algorithmic decision-making in the NDPR is also complemented by the right of the data subject to request the data controller to provide access to both the information processed through automated decision-making and the logic involved in the automated decision-making.

AI Research & Development

According to the Director-general of Nigeria's National Information Technology Development Agency (NITDA), the National Centre for Artificial Intelligence and Robotics (NCAIR) is also expected to be a research development center.³⁶⁹⁸ The Communications Commission requested a study to assess the ethical and societal impact of AI to achieve economic diversification inclusively and sustainably.³⁶⁹⁹ The study concluded that regulators must govern artificial power while it is also the responsibility of programmers and engineers to ensure that ethical and security concerns are addressed during the initial design of these systems. The conclusions of the study urge the NCC to step move forward and develop frameworks for AI in Nigeria.

The private sector and the tech ecosystem are leading in AI initiatives in Nigeria, mostly in the private sector, with some participation from the Nigerian government. A government project was EagleScan, a

homegrown plagiarism detection software,³⁷⁰⁰ with an AI-driven data analytics and visualization engine.³⁷⁰¹

The NASS-AI project uses AI to classify parliamentary bills from the national assembly, to make them more accessible. Based on the principle of open data the system ensures that legislative-related documents are complete, accessible, and machine-processable, amongst other requirements.³⁷⁰²

In December 2020, the Ministry of Science and Technology announced plans to deploy AI for mining safety and efficiency. The Minister of Science and Technology stated that this deployment would enhance economic diversification inclusively and sustainably, to increase wealth and create more jobs for citizens.³⁷⁰³

Facial Recognition

Nigeria plans to use facial recognition technology as an essential part of its digital identification scheme. According to the Director-General of the Nigerian Identity Management Commission (NIMC), the agency has plans to capture the iris of prospective enrollees, and the agency already has the capacity for capturing the iris at its backend.³⁷⁰⁴ Also, Access Bank, one of Nigeria's leading financial institutions announced plans to launch a facial recognition payment system that will enable it to verify its customers and to perform transactions without a password.³⁷⁰⁵ In addition to this, one of NIMC's licensees for Identity verification in Nigeria says it offers "AIrecognition technology powered facial for e-commerce ID authentication".3706

³⁷⁰⁶ VerifyMe <u>https://verifyme.ng/</u>.

In 2022, Nigeria added facial recognition for voter verification. The Independent National Electoral Commission (INEC) used an Automated Biometric Identification System (ABIS) that deduplicated fingerprints and also used facial recognition to verify voters before issuing permanent voter registration cards.³⁷⁰⁷ This was adopted in response to the issues identified with nullified registrations voters who were already registered and incomplete data. In 2023, the Federal Government indicated plans to install facial recognition technology at major airports across the federation..³⁷⁰⁸

Biometrics

Nigeria has been keen open to adopt biometric technology, yet the same has the implementation has posed risks for been seen to violation ofe human rights, due withto registrations of certain citizens being invalidated, which may result in discrimination and limitation of the exercise of their political rights.

The Nigerian government through the Independent National Electoral Commission (INEC) set a plan to use biometrics (fingerprint and face) matching systems (Automatic Biometric Identification System ABIS and Biometric Voter Accountability System BVAS) in the February 2023 presidential elections. This is despite the systems having invalidated around 2.78 million Nigerians.³⁷⁰⁹ In 2021 during the governorship poll in Anambra State the failure of the BVAS system resulted in several votes deemed inconclusive.³⁷¹⁰ Elections for Ekiti State's governorship were held successfully with these systems.³⁷¹¹ Reports from Oyo state showed that 42% of voter registrations were rendered invalid due to duplications.³⁷¹²

The Nigerian Governors forum announced a collaboration with MTN,³⁷¹³ the leading telecommunications company, "to mitigate the effect of the COVID-19 pandemic by mining its users' data to profile the states' vulnerability to the spread of the coronavirus³⁷¹⁴." The outcome of that collaboration is not public and MTN Nigeria denied sharing identifiable user data.

The World Bank issued recommendations to the Nigerian government to invest in AI-enabled Geospatial data to support the response to the COVID-19 crisis and build back better.³⁷¹⁵ Nigeria has multiple data sets, captured across multiple platforms such as Bank Verification Number (BVN), Voter's card, International passport, Road Safety, and National Identification Number (NIN). Reports suggest that the country loses up to US\$2 billion annually on biometric data collection duplication.³⁷¹⁶

Lethal Autonomous Weapons

Nigeria is not a signatory of the Joint Statement on Lethal Autonomous Weapons of 2022³⁷¹⁷ and has not acceded to the Convention. However, the country has participated in several meetings of the Convention on Certain Conventional Weapons (CCW). In 2021, Nigeria issued a joint statement with ten other states, at the CCW Group of Governmental Experts on Lethal Autonomous Weapons Systems (GGE on LAWS) meeting, calling to "adopt a legally binding instrument to ensure the prohibition of autonomous weapons systems."³⁷¹⁸

 <u>9WYcSnnAm_en.pdf</u>

³⁷¹⁸ Automated Decision Research, *Nigeria. State Positions*, (n.d.) https://automatedresearch.org/news/state_position/nigeria/

At the 78th UN General Assembly First Committee in 2023, Nigeria voted in favour³⁷¹⁹ of resolution L.56³⁷²⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Nigeria is a signatory to the Universal Declaration of Human Rights (UDHR),³⁷²¹ and a member of the African Union (AU) and has ratified the African Charter on Human and People's Rights.³⁷²² The rights and freedoms in the treaties signed have been envisaged in Chapter IV of the Nigerian Constitution.³⁷²³ In 2006 the government of Nigeria developed a National Action Plan for the Promotion and Protection of Human Rights (NAP) which was a response to the Recommendation of the Vienna Declaration and Program Action, adopted at the World Conference on Human Rights. NAP was an integrated and systematic national strategy to help realize the advancement of human rights in the country. There have been considerable improvements in the enforcement, promotion, and protection of human rights and freedoms in the country since the transition to democratic rule in 1999.

According to Freedom House 2023, Nigeria is partly free and has a rating of $43/100^{3724}$ This has been attributed to the fact that the country has

been facing security challenges, military and law enforcement officers engaging in extra-judicial killings, torture, and abuses. Further, civil liberties are undermined by religious and ethnic bias, women, and LGBT+ people face discrimination, and the media is constantly facing harassment and arrests over political issues.

In 2016, Nigeria joined the United States, Canada, Australia, the United Kingdom, and some European Union states to sponsor a United Nations Resolution that affirms that rights that apply offline must also apply online.³⁷²⁵

Section 37 of the Nigerian Constitution provides for the right to privacy while section 37 makes provision for the right to freedom of expression.

Nigeria is a party to the African Charter on Human and Peoples' rights³⁷²⁶ and the International Covenant on Civil and Political rights.

In 2019, the Nigerian parliament passed a Digital Rights and Freedom Bill³⁷²⁷ into law but the president declined assent to the Bill, citing possible duplication with other proposed bills and that the Bill was too technical.³⁷²⁸

OECD/G20 Principles

Nigeria is not a member of the OECD and has not endorsed the OECD AI Principles.³⁷²⁹ Nigeria submitted only one report to the OECD AI Policy Observatory in relation to policies, strategies, or activities associated with AI. The National AI Policy call for contributions is mapped to two OECD principles: Fostering a digital ecosystem for AI and Providing an enabling policy environment for AI. There is no evidence of the implementation of the OECD AI principles in the country.

UNESCO Recommendation on the Ethics of AI

Nigeria is a member of UNESCO and endorsed the UNESCO Recommendation on the Ethics of AI.³⁷³⁰ Nigeria also participates in The African Forum for Ethics and Governance of Artificial Intelligence (AFEGAI), which was created in 2019 following UNESCO's and African Member States' recommendation to establish an African Forum of Association of Artificial Intelligence (AI).³⁷³¹ AFEGAI brings together AI constituencies in Africa to support the ethical development of Artificial Intelligence. AFEGAI coordinates AI Governance Forums in Africa.³⁷³²

The country is partially implementing the recommendations due to the provision on Regulation 3.1 (7) (1) the NDPR³⁷³³ that requires transparency of data controllers to data subjects where they use automated decision making. Further, there is the Nigerian Data Protection Regulation (2019) and the Data Protection Bill (2022) currently being considered by Parliament³⁷³⁴.

Evaluation

Nigeria is in the process of elaborating its national strategy based on public participation in the development of AI policy, although this process is not systematic or consistent.³⁷³⁵ In terms of data protection, opportunities exist to add to the current legislation the right to algorithmic transparency. Nigeria is a signatory of the UDHR and the African Union Charter but is a 'partially free' country and its record of human rights protection could be further improved. Nigeria's fulfillment of the commitment it has taken by endorsing the UNESCO Recommendation on the Ethics of AI could provide

a perfect opportunity to accomplish the reform necessary at national level to turn trustworthy AI into reality for the benefit of all.

Norway

National AI Strategy

The Norwegian Government presented its national artificial intelligence (AI) strategy in January 2020.³⁷³⁶

The objective of the strategy is to outline the policy actions for the coming years in order to maximize the opportunities that AI can bring along for Norwegian individuals, for businesses and industry, and for the public sector. ³⁷³⁷ To achieve this outcome, the national AI strategy highlights the following policy initiatives:

- Expanding the offer of education programs and workplace trainings in the field of AI in order to create a solid basis of digital skills and capabilities;
- Strengthening the Norwegian research in AI;
- Enhancing the innovation capacity in AI in both the private and public sector;
- Outlining ethical principles for AI in order to allow fair, reliable and trustworthy AI-related developments;
- Establishing digitalization-friendly regulations as to define the legislative framework in which AI developments take place;
- Constructing a strong data infrastructure ensuring open data and data sharing across sectors and business areas. Dedicated opportunities for language data resources are established through the Norwegian language bank at the National library;
- Deploying a telecommunication infrastructure that provides highcapacity connectivity and computing power, and that ensures security in AI-based systems.

In a section dedicated to ethics, the strategy highlights the adoption of the EU ethics guidelines for trustworthy AI³⁷³⁸ and the OECD AI principles.³⁷³⁹

With regards to the public sector, the national strategy aims to support value creation and use of AI in the public sector; facilitate the

³⁷³⁶ The Government of Norward, Ministry of Local Government and Modernization, *The National Strategy for Artificial Intelligence* (Jan. 14, 2020),

³⁷³⁹ OECD, AI Principles (2019), https://www.oecd.org/going-digital/ai/principles/

sharing of public sector data among public sector agencies; review and update legal barriers to public sector AI, in particular issues regarding data protection and statutory authority; ensure that AI systems used by the government are transparent and explainable; issue guidelines to help public administrations overcome uncertainties.³⁷⁴⁰

Norway has developed centralized, accessible repositories of open public data. In Norway, the Brønnøysund Register Centre and the Norwegian Digitalization Agency have established a national directory of data held by different public agencies, their relationships, what they mean and whether data can be shared and on what terms.³⁷⁴¹.

In 2021, Norway was the only European Free Trade Association (EFTA) country that performed activities to assess the political impact of open data. They launched "data as a resource", which aims to develop a common methodology for measuring and demonstrating the benefits and effects of public data, based on the work done in the EU and the OECD in this area.³⁷⁴²

In November 2020, the Supreme Audit Institutions of Norway, Finland, Germany, the Netherlands and the UK jointly published a whitepaper called "Auditing machine learning algorithms for public auditors."³⁷⁴³ This paper discussed in detail audits of machine learning (ML) algorithms by the Supreme Audit Institution with project management, data, model development, model in production and evaluation. The project auditingalgorithms.net is maintained by The Office of the Auditor General of Norway (*Riksrevisjonen*).

Norway developed its strategy after it signed a Declaration of cooperation on Artificial Intelligence together with 24 other European countries in May 2018.³⁷⁴⁴ Several other initiatives in 2018 paved the way for the drafting of the national strategy. For example, the Norwegian Data

Protection Authority (DPA) published a report on artificial intelligence and privacy.³⁷⁴⁵ Another report Digital21 focused on national collaboration and encouraged engagement from industry, academia and government.³⁷⁴⁶ The Norwegian Board of Technology also published a report, "Artificial Intelligence: Opportunities, Challenges and a Plan for Norway."³⁷⁴⁷

The national AI strategy emphasizes that implementation and progress will be closely reviewed and, if necessary, changed with further AI policies. The frequency with which revised strategy reports will be provided is not specified in the plan.

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Norwegian Minister for digitalization signed the declaration on "AI in the Nordic-Baltic region" establishing a collaborative framework on "developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used" and "on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability."³⁷⁴⁸

The ministerial declaration Digital North 2.0³⁷⁴⁹ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. "In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and reuse of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and

globally in a sustainable and inclusive digital transformation of our societies."³⁷⁵⁰

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Norwegian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them. ³⁷⁵¹

In September 2022, the Nordic and Baltic ministers for digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this "rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities." The ministers declared that they "have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. (...) Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services."3752

As part of its action plan for Vision 2030 (2021-2024), the Nordic Council of Ministers identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.³⁷⁵³ The Nordic Council of Ministers also

³⁷⁵³ Nordic Council of Ministers, *The Nordic Region – toward being the most sustainable and integrated region in the world, Action Plan for 2021-2024* (Dec. 14, 2020), https://www.norden.org/en/publication/nordic-region-towards-being-most-sustainable-and-integrated-region-world

emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to "a Nordic civil society network and public consultations."³⁷⁵⁴

Council of Europe Convention on AI

Norway contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³⁷⁵⁵

Public Participation

The Norwegian Ministry of Local Government and Modernization published the National Strategy for Artificial Intelligence on January 14th, 2020.³⁷⁵⁶ Throughout 2019, the Minister of Digitalization travelled around Norway to listen to suggestions from different communities in order to inform the national strategy. Additionally, a variety of businesses and government agencies provided comments on the content of the through written statements. Close to 50 statements were received by the Ministry.

Norway has worked to strengthen national funding for research and innovation in artificial intelligence, and also to substantially increase their research collaborations. With the Norwegian Artificial Intelligence Research Consortium (NORA.ai), Norway has taken important steps to support the European ambition of increased cross-border co-operation in AI research.³⁷⁵⁷

Data Protection

The European Economic Area (EEA) Agreement is an international agreement which enables three European Free Trade Area (EFTA) States, among which Norway, to participate in the EU Single Market. All relevant EU legislation in the field of the Single Market is integrated into the EEA

Agreement so that it applies throughout the whole EEA. The GDPR was incorporated in the EEA Agreement by a 2018 Joint Committee Decision. The new Norwegian Personal Data Act (PDA) implements the GDPR and became effective as of July 2018.³⁷⁵⁸ Norway also updated several sector-specific regulations, such as in the healthcare sector, to ensure compliance with the GDPR.

Norway is also a member of the Council of Europe. It ratified the Convention 108 for the protection of individuals with regard to the processing of personal data however it has not ratified its modernized version yet.

The Norwegian Data Inspectorate (*Datatilsynet*) is the national supervisory authority for Norway. The Datatilsynet is in charge of enforcing the GDPR in Norway. Together with the national supervisory authorities of two other EEA countries (Iceland and Liechtenstein), the Datatilsynet became member of the European Data Protection Board (EDPB), however without voting rights and without the right to be elected as chair and vice-chair, for GDPR-related matters.³⁷⁵⁹

In June 2018, the Data Inspectorate released a report on AI and privacy. The report showed how imperative further knowledge about the privacy implications of artificial intelligence is, "not only in order to safeguard the right to privacy of the individual, but also to meet the requirements of society at large."³⁷⁶⁰ In this report, the Datatilsynet provides greater technical detail in describing artificial intelligence, including "the black box", while also taking a closer look at four relevant AI challenges associated with the data protection principles enshrined in the GDPR: fairness and discrimination; purpose limitation; data minimization; and transparency and the right to information. A strong emphasis lays on bringing awareness to the ethical and privacy consequences of AI systems, as well as ensuring that the deployed systems respect privacy by design and meet the legislative requirements.³⁷⁶¹

The Data Inspectorate is a member of the Global Privacy Assembly (GPA) since 2002. It did not endorse the 2018 GPA Declaration on Ethics

and Data Protection in Artificial Intelligence³⁷⁶² or the 2023 GPA Resolution on Generative AI.³⁷⁶³ However it did co-sponsor the 2020 GPA Resolution on AI Accountability³⁷⁶⁴ and the 2022 GPA Resolution on Facial Recognition Technology.³⁷⁶⁵

The Datatilsynet has been very active in both enforcement and publication of guidelines on a wide range of significant data protection concerns, including CCTV surveillance and codes of conduct. The Norwegian data protection authority has made a list of processing activities that they believe are likely to pose a significant risk to data subjects' rights and as such will always necessitate a data protection impact assessment. These include: processing of biometric data for identification purposes on a large scale; collecting and combining personal data from third parties in order to decide whether the data subject shall be offered, continue to receive, or shall be denied a product, service or offer; monitoring employees' internet activity, electronic communication or camera surveillance for the purposes of employee monitoring; systematic monitoring, including camera surveillance, on a large scale, in areas accessible by the public³⁷⁶⁶

Following a data protection impact assessment of Facebook, the Data Inspectorate announced that it will no longer communicate via the social media network. "We believe the risks to the users' rights and freedoms associated with the processing of personal data through a Page on Facebook are too high" stated by Datatilsynet Director-General Bjorn Erik Thon.³⁷⁶⁷ This is not the first time the Data Inspectorate is opposing

³⁷⁶⁷ Datasylnet, Norwegian Data Protection Authority choose not to use Facebook (2021),

Facebook. Back to 2012, the Datatilsynet raised important concerns regarding Facebook's facial recognition tool. Bjorn Erik Thon stated that "It's a very powerful tool Facebook has and it's not vet clear how it all really works," and "They have pictures of hundreds of millions of people. What material Facebook has in its databases is something we need to discuss with them."3768

In December 2021, the Datatilsvnet issued its highest fine so far -65 million NOK (around 6.5 million euros) - against Grindr for failing to comply with the consent requirements under the GDPR.³⁷⁶⁹. Grindr has appealed the fine and the Norwegian Data Protection Authority will now assess the relevant appeal and consider whether there is grounds to rescind or alter the decision. By application of the the Norwegian Public Administration Act, the Norwegian Consumer Council will also issue an opinion on the subject matter. If the decision is not rescinded/altered, the case may be assessed by the Privacy Appeals Board.³⁷⁷⁰

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Norway is subject to the PDA, implementing the GDPR. Norwegians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³⁷⁷¹

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³⁷⁷² specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and

(Feb. 2022), retrieved by: https://www.datatilsynet.no/en/news/aktuelle-nyheter-2022/datatilsynet-har-mottatt-klage-pa-overtredelsesgebyr-i-grindr-saken/ ³⁷⁷¹ See Recital 63 and Article 22 of the GDPR.

³⁷⁷² Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."³⁷⁷³

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."³⁷⁷⁴

Data Scraping

In August 2023, the Datatilsynet, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.³⁷⁷⁵

data scraping and the protection of privacy (Aug. 24, 2023),

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154 3775 Office of the Australian Information Commissioner, Office of the Privacy

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

Facial Recognition

In September 2022, the Norwegian Consumer Council urged "the Governement to take³⁷⁷⁶ a more active role to ensure Norwegian consumers' privacy and turn words into action." Drawing on a report from the Privacy Commission report,³⁷⁷⁷ the Consumer Council noted that the use of remote biometric identification, including facial recognition, puts

great pressure on privacy. The Consumer asks the Government to support the proposal for a general ban on the use of facial recognition in public spaces.

Regulatory Sandbox

Pursuant to the national AI strategy, the Datatilsynet has created a regulatory sandbox for responsible AI. The goal is to promote the development of innovative artificial intelligence solutions that, from a data protection perspective, are both ethical and responsible. The sandbox provides free guidance to a handful of companies, of varying types and sizes, across different sectors, selected through regular calls for application issued by the Data Inspectorate, in exchange for full openness about the assessments that are made.³⁷⁷⁸

As illustrated in the proposed Norwegian state budget for 2023, the regulatory sandbox is now to be financed as a permanent initiative, not as a temporary pilot project as it was the previous two years.³⁷⁷⁹

Lethal Autonomous Weapons

Norway has regularly participated in the Convention on Certain Conventional Weapons meetings.³⁷⁸⁰ In June 2020, the ethics committee of the Norwegian Government Pension Fund Global³⁷⁸¹ recommended in June 2020 that the Fund add lethal autonomous weapons systems to the exclusion list of weapons that it will not invest in.³⁷⁸² In June 2021, Norway's

parliament voted in favor of a proposal to add new criteria to the fund's policy, following endorsement by the Ministry of Finance. The proposal was aimed at breaking ties the fund may have with companies that sell weapons to parties that use them to violate international humanitarian law.³⁷⁸³

Norway was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."³⁷⁸⁴

Norway also submitted a working paper together with Sweden, Finland, France, Germany, the Netherlands, and Spain to the 2022 Chair of the Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems.³⁷⁸⁵ This working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy in order to ensure compliance with the rules and principles of international humanitarian law, by preserving human responsibility and accountability, ensuring appropriate human control and implementing risk mitigation measures.

In February 2023, Norway participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Norway endorsed a joint call for action on the responsible development, deployment

and use of artificial intelligence in the military domain.³⁷⁸⁶ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national. regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."3787

OECD / G20 AI Principles

Norway is a member of the OECD and endorsed the OECD AI Principles.³⁷⁸⁸ In terms of ethical principles, the Norwegian government seeks to encourage responsible, accountable, transparent, and trustworthy AI while protecting integrity and privacy.³⁷⁸⁹

Norway is supporting the OECD AI principles by fostering a digital ecosystem for AI with the National Data Catalogue.³⁷⁹⁰ This is a public website providing an overview of descriptions of datasets, concepts, APIs and information models. Both the public and private sectors are involved in this project. This project was established by the Brønnøysund Register Centre and the Norwegian Digitalization Agency. To further the outreach of the overall project to the private sector the government funded the

³⁷⁹⁰ Norge.no, *National Data Catalogue*, https://www.norge.no/en/service/national-datacatalog

creation of the Data Factory, a new interface of the catalogue to make navigation easier for the public and companies.³⁷⁹¹ Within the Data Factory, a community named "Data Village" has also been built as a community of practice in various dataset categories. "NORA.ai" also created the Norwegian AI Directory to map out all the activities within the field of AI in Norway³⁷⁹². In addition, "NORA.startup" has been established as an ecosystem of new companies in the field of AI that has gone through a quality assurance process to ensure the startups are active in research-based innovation. These startups are registered as part of a larger ecosystem that Norway is part of called "the European AI Startup Landscape" together with France, Germany and Sweden. NORA.ai, the Norwegian Open AI Lab (NAIL) and Cluster for Applied AI in Halden jointly contribute to this digital ecosystem.

In March 2022, Norway announced the launch of another initiative, outlined in its national strategy, that supports OECD's international cooperation for trustworthy AI principles.³⁷⁹³ The Norwegian Ministry of Research and Education has signed an agreement with the US Department of Energy to cooperate more closely on research, innovation, education and ethical issues in the field of AI. The goal of the agreement is to develop methods and technologies to solve challenges in areas such as climate, energy and health. The agreement facilitates cooperation in the form of joint research and innovation projects, exchange of researchers and students, sharing of technology and equipment, joint educational programs and further development of ethical and responsible use of technology. Examples of research include: Carbon capture and storage, smarter energy systems, better climate modeling, and enhanced personalized medicine.

In September 2022, Norwegian Research Council announced a 10year financial support for Integreat, a purely AI focused Center of Excellence (CoE) that will offer groundbreaking research, and develop theories, methods, models, and algorithms from a sociological perspective that integrate general and domain-specific knowledge with data, laying the foundations of the next generation of machine learning. This initiative

supports OECD's principle of shaping an enabling policy environment for AI, and corresponds to the policy goal identified in the Norway's AI strategy to strengthen research in AI, and enhance the innovation capacity in AI in both the private and public sector.³⁷⁹⁴

However, Norway is not a member of the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."³⁷⁹⁵

UNESCO Recommendation on the Ethics of Artificial Intelligence

Norway has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.³⁷⁹⁶ It remains to be seen how this endorsement will translate in practice.

Human Rights

Norway is a signatory to many international human rights treaties and conventions, among which the Universal Declaration of Human Rights and the Council of Europe's European Convention on Human Rights.³⁷⁹⁷ However, it has not yet ratified the modernized version of the Council of Europe Convention 108 for the protection of individuals with regard to the processing of personal data.³⁷⁹⁸

According to Freedom House, Norway typically ranks among the top nations in the world for the protection of human rights and transparency. "Norway is one of the most robust democracies in the world. Elections are free and fair, and power regularly rotates between parties. Civil liberties are

respected, with independent media and civil society actors holding the government to account."³⁷⁹⁹ It consequently earns a perfect 100/100 score.

Diversity in AI is valued in Norway through prioritizing the development of language technology systems that support communications in Norwegian, Sámi and other dialects. The aim is to protect the indigenous rights of the Sámi people, a Finno-Ugric-speaking people inhabiting the region of Sápmi that Norway is part of. This focus on the Sámi language is also included in the Norwegian National AI Strategy.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."³⁸⁰⁰

Evaluation

Norway has a full-fledged national AI strategy and AI ethics is a central topic. Norway endorsed the OECD AI Principles and is committed to developing trustworthy AI. Norway benefits from a strong AI oversight framework with an active Privacy Commission, Consumer Council and Data Inspectorate. Norway should make sure to allocate sufficient resources to ensure effective enforcement of existing rules, and soon enough, of the EU AI Act once incorporated in the EEA Agreement. Concerns exist with regard to facial recognition in public places and would need to be addressed by the government. Although Norway ranks high in the protection of civil liberties, the ratification of the protocol modernizing the Convention 108 could only strengthen human rights protection in the digital age. It also remains to be seen how Norway's endorsement of the UNESCO

1018

Recommendation on the Ethics of Artificial Intelligence will translate in practice.

Pakistan

National AI Strategy

Pakistan is a socially conservative country, where an overwhelming majority of the population is Sunni Muslim. The extended family system still prevails, even in large urban areas. Ethnic, clan and tribal affiliations continue to dominate personal, social, economic and political life. The introduction of internet connectivity in such a context has caused a ripple effect in societies universally, and Pakistan is no exception. As such, concepts of individual rights and privacy as understood in advanced economies differ greatly from values currently in practice in Pakistan – and both the policy and legal landscape and social practices clearly demonstrate these deeply held values.

For instance, as detailed later in the report, Pakistan's legal system, based on British common law from the colonial era, discriminates openly against women – treating them as second class citizens and stripping them of their fundamental human rights, including the right to privacy, autonomy, legal personage and presumption of innocence. Similarly, the interpretation of fundamental human rights is largely rejected by a society more comfortable with organizing itself based on the leadership of an allpowerful clan, tribal or community leader – almost always male. This has led to a series of popular military coups staged by benevolent dictators in this 75-year-old fledgling democracy. It also explains the overarching and interventionist authority of the armed forces in matters of the state.

This political, legal and human rights context is mirrored accurately by existing policy with regard to information technology, and by extension, the absence of any mention of ethical and trustworthy AI and algorithmic decision-making.

In December 2021, the Federal Minister of Information Technology & Telecommunication (MoITT), Syed Aminul Haque, announced that the Pakistani government plans to introduce a national AI policy.³⁸⁰¹ A draft was finally released to the public in May 2023³⁸⁰². Focused on AI

³⁸⁰¹ The News, *Centre to introduce national AI policy soon, says Amin* (Dec. 5, 2021), <u>https://www.thenews.com.pk/print/914203-centre-to-introduce-national-ai-policy-soon-says-amin</u>

³⁸⁰² No official Pakistan government websites are available online. The original text of the draft national AI policy can therefore not be hyperlinked. Instead, this information is reconstructed from other reporting. Pakistan's Draft National AI Policy: fostering responsible adoption and economic transformation, https://www.ibanet.org/Pakistandraft-national-ai-policy-fostering-responsible-

adoption#:~:text=Abstract,the%20responsible%20adoption%20of%20AI.

investment, production and talent development,e.³⁸⁰³ this policy made no mention of responsible AI.

Since then however, no noticeable progress has been made on the substantial groundwork already laid towards AI and Digital Policy in Pakistan due to a series of crises related to political instability between April 2022 and March 2024.

The concept of "Digital Pakistan" was first introduced at the state level after a record year of revenues from software exports in 2016-2017³⁸⁰⁴. Official language focused on getting more citizens digitally connected, literate and brought under the government's data collection umbrella. It also mentioned the need for both digital skills training and the support of entrepreneurship in this area.³⁸⁰⁵

A year later, the MoITT issued the 2018 Digital Pakistan Policy. This policy includes the need to develop necessary policy frameworks. laws, and rules to enable the creation of a sustainable IT environment, including the enactment of a data protection and privacy law.³⁸⁰⁶ In December 2019, former Prime Minister Imran Khan launched the Digital Pakistan Vision. This initiative set out Pakistan's digital ambition and was designed for the government and the private sector to work towards a digitally progressive and inclusive Pakistan.³⁸⁰⁷ The five strategic pillars that upheld the Vision were access and connectivity, digital infrastructure, digital and literacy. e-government. skill and innovation and entrepreneurship.3808 The vision focused heavily on human-centered development. Official language around the launch of the vision referred to

the development of the inherent potential of the demographic youth bulge, and their existing tech-savviness and innovative mindset. It lauded the potential of widespread access and connectivity to transform the lives of all Pakistanis across all domains, and promised to provide investment opportunities from diaspora communities to support in the human and social development of the country. There was however no reference made to human-centered AI.

In 2021, the MoITT announced a new "Digital Pakistan Policy" 3809 with the aim to "improve citizens' quality of life and economic well-being by ensuring the availability of modern, affordable, and reliable digital services."³⁸¹⁰ The release of the Digital Pakistan Policy was initially planned for August 2021 but has been delayed.³⁸¹¹ Since then, may changes have taken place in emerging technologies, making it necessary to cover them in a New Digital Pakistan Policy. The Ministry of IT and Telecom began working on Digital Pakistan Policy 2022 keeping in view current emerging technologies and Digital Pakistan Policy 2018, National Broadband Policy 2021, and National Freelancing Facilitation Policy. According to MoITT officials,³⁸¹² the government wants targets to be set under the New Digital Pakistan Policy, defining tasks and the institutions that will carry out these tasks, and incentives to be given to the IT sector. The ministry had prepared an initial draft of the new Digital Pakistan Policy in February 2022, but presumably due to recent and continuing political instability in the country,³⁸¹³ it has not been processed.

A few other initiatives also aim for Pakistan to bridge the digital divide. In 2018, the Presidential Initiative for AI and Computing (PIAIC)

sought to reshape Pakistan by revolutionizing education, research, and business by adopting the latest technologies. The PIAIC envisioned Pakistan becoming a global hub for AI, data science, cloud-native computing, edge computing, Blockchain, augmented reality, and the internet-of-things.³⁸¹⁴ Also in 2018, the National Center of Artificial Intelligence was created.³⁸¹⁵ The mission of the National Center is to "establish and grow AI industry following international trends and seek solutions to the indigenous problems of Pakistan through AI to reinvent our knowledge-based economies."³⁸¹⁶ The National Center "recognize[s] the challenging ethical issues involved in a society pervaded by AI applications. We must: Maintain the highest standards of ethical behavior with a deep respect for human and civil rights guarantee, complete transparency of our operations and take into account the moral and ethical concerns of society. Treatment of data sets, and particularly those containing personal data, must always meet the principles of data protection by design and by default."³⁸¹⁷ Since 2019, the annual Pakistan Artificial Intelligence Summit³⁸¹⁸ brings academic, industry and government representatives together to discuss the most pressing issues confronting artificial intelligence and ICT in general in Pakistan.

Pakistan was one of the 11 countries which signed the Riyadh AI Call for Action Declaration (RAICA) launched during the 2022 Global AI Summit.³⁸¹⁹ This declaration was signed by all members of the Digital Cooperation Organization (DCO) and is a commitment to identify and address present, emerging, and future humanitarian issues in the field of AI. The declaration highlights seven key pillars through which AI can be used as a tool to benefit lives around the world – bridging the digital divide, empowering underprivileged communities, promoting digital development, ensuring fairness and non-discrimination, driving innovation in AI, combatting climate change in AI, and engaging in international collaboration and cooperation in AI. With a stong human-centered AI, focus, the Declaration refers repeatedly to the promise and potential of AI to transform societies, economies, and humanity's most pressing global issues, including climate change. The Declaration calls explicitly for the

creation, adoption and promotion of comprehensive AI ethical guidelines and appeals to signatory countries to work with various stakeholders, from humanitarian organizations to innovative companies, to employ AI to advance universal human rights.³⁸²⁰

In October 2022, the Government of Pakistan announced the China-Pakistan Digital Corridor, with a component of AI collaboration, building on the Sino-Pak strategic relationship through the China-Pakistan Economic Corridor.³⁸²¹ The former Additional Director-General of the Federal Investigation Agency and founder of Digital Pakistan expressed that Pakistan must collaborate with China to develop AI capabilities. specifically naming cybersecurity as a primary collaborative area. This corridor is intended to use AI to improve areas like food security, agricultural development and green development. As a first step towards the establishment of this corridor, an international AI Conference was being planned for 2023 where the private sector, government, and international donors would participate and engage to inform the implementation of the corridor.³⁸²² When asked about the status of this conference, the Director for the National Centers for AI in Pakistan, Dr. Yasar Ayaz, pointed instead to the Third International Conference on Artificial Intelligence held in February 2023,³⁸²³ proceedings of which are yet to be made publicly available.3824

Public Participation

In keeping with a culture of regional and neighborhood-based political decision-making, the government of Pakistan does not offer centralized public participation opportunities to citizens per se. However, in an unprecedented first, in 2021 the Ministry of Information Technology and Telecommunications launched an online survey form which provided citizens the opportunity to weigh in on the Digital Pakistan Policy.³⁸²⁵ The Ministry then issued a consultation draft of the 2021 Personal Data

³⁸²⁵ The link to this website has since been taken down and is no longer accessible.

Protection Bill³⁸²⁶ Accompanying this, the Ministry conducted a road show in the large Pakistani cities and issued press statements to publicize the drafting of the Policy and the accompanying bill. ³⁸²⁷

In addition, since 2018, citizens have had access to the Prime Minister's *Performance Delivery Unit* (PDU) – an online platform offering direct connection between the Government and citizens. One of PDU's initiatives is the *Citizen's Portal* - an app where citizens can submit and track complaints and make requests directly to the relevant government body. To date, the portal—which is available as a mobile phone app as well, registered over 4.9 million complaints, of which over 4.8 million have been resolved. The portal has a participation rate of over 4 million Pakistani citizens. Further, success stories and testimonies aree published on the website and promoted through social media. The portal continues to serve as a direct conduit for information flowing between the government and Pakistani citizens.

The government also provides information and instruments through which members of the public may express opinions, communicate complaints, or make recommendations on draft and existing policy.³⁸²⁸ Published policies typically include either a specific email address for feedback/queries, and/or general contact information—such as the Ministry's email address, phone number and resource person.³⁸²⁹

Language is a primary obstacle regarding the accessibility of most of these tools. While government websites are bilingual, policy documents within the websites are published exclusively in English, with no translation available. As more than 50% of Pakistan's population cannot read or write English, this serves as a major impediment to meaningful public participation from all levels of society.³⁸³⁰

Data Protection

The Pakistan Personal Data Protection Bill³⁸³¹ and the E-Safety Authority Bill 2023³⁸³² were approved by the cabinet in July 2023. The MoITT Minister stated that the objective of the new legislation is to protect individuals and business communities' data and to provide them with a safe environment.³⁸³³

The PDPB governs the collection, processing, use, and disclosure of personal data and sanctions against violations of data subjects' rights.³⁸³⁴ The PDPB provides for rights regarding automated processing, including profiling: A data subject shall have the right not to be subject to a decision based solely on automated processing, including profiling.³⁸³⁵ The PDPB also provides for data subject rights with regard to the processing of personal data in clause 29 in the following words: "a data controller shall not process any sensitive personal data of a data subject except in accordance with the following conditions: a) the data subject has given his explicit consent to the processing of the personal data provided that this consent is not restricted by any other applicable law"3836 However, immediately after this text, the draft mentions a list of caveats including legal compulsions, employment law, inability of data subject to provide consent, medical purposes, even "in order to protect the vital interests of the data subject or another person." This provides great leeway in the interpretation of these proposed rules, and raises concerns as to their potential interpretation in Pakistan.

The PDPB also provides for the establishment of a "National Commission for Personal Data Protection of Pakistan", variously referred to as the Personal Data Protection Authority of Pakistan, within six months

after the entry into force of the legislation. The authority is purported to have the same independent status as the Civil Courts: "The Authority shall be competent to decide complaints and pass any order. To decide complaints the Authority shall be deemed to be Civil Court and shall have the same powers as are vested in the Civil Court."³⁸³⁷ However, due to government and especially military interference and undue pressure on the existing judiciary, concerns arise about the potential lack of independence of this authority, once it does come into existence. As of March 2023, however, this national Commission has not been formed. There is also no indication, as a matter of public record, as to when and whether it will come into existence in the Official Gazette of Pakistan.³⁸³⁸

In February 2022, the Federal Cabinet also approved the Cloud First Policy and the Social Media Rules. The Cloud First Policy provides a governance instrument towards cloud infrastructure and internal and crossborder data flows.³⁸³⁹ Its purpose is to facilitate cloud adoption and to ease the provision of public services. The Policy references the need for cloud service providers to safeguard data privacy though this is not explicitly listed as one of its twelve objectives.³⁸⁴⁰ Instead, the Policy states the following: "CSP (cloud service providers) implement technical and administrative controls to protect data - both stored and in transit. Furthermore, formal engagements with CSP generally define data protection standards and establish SLA (service level agreements) that outline security and privacy measures. These measures including but not limited to adequate technical controls, such as end-to-end encryption or tokenization as well as data loss prevention tools." The policy also provides data classification guidelines for public sector data, ranging from 'open', 'public', 'restricted', 'sensitive/confidential' to 'secret'. It defines 'sensitive/confidential' data as the following: "Information not intended to

be published, which shall be accessed only by certain people having proper authorization and which justifies moderate protective measures.

• Phone numbers, registration numbers (BVN, vehicle, etc.), passport, etc.

• Information that contains at least one personally identifiable information (PII) like name (first and last), address, biometrics, etc.

• Data classified as "confidential" and, perhaps, certain categories of "secret" data (e.g. Obsolete or archived "secret" information).

• Information accessible through Intranet only, but available to broadly defined categories of authorized officials and public servants. Drafts of laws and regulations that are not yet in the public domain."

The policy further states that "Information on data security guidelines and compliance with national legislation and international standards on data privacy and cybersecurity...will be considered when procuring cloud services."³⁸⁴¹

Article 14 of Pakistan's 1973 Constitution protects the right to privacy in the home. This right has been interpreted to extend to digital communications as well. However, more recent laws allow for this right, and its extension to digital communications to be circumvented and called into question. The 2016 Prevention of Electronic Crimes Act (PECA) includes various data protection- and privacy-related provisions to reduce cyber blackmailing, defamation, and bringing disrepute to natural persons with the use of photoshopped images. Violations of these provisions carry monetary penalties and/or imprisonment of up to 5 years.

Concerns arise with regard to the PECA provisions which grant government agencies access to citizen's private data and restrict citizens' from accessing their government data. Section 31 of the PECA allows an authorized agent to require a person to hand over data without producing a court warrant if reasonably required for a criminal investigation. The PECA also encroaches on privacy rights as certain provisions are intended to grant the Pakistan Telecommunications Authority (PTA) and other law enforcement agencies access to the private data of citizens, along with restricting citizens from gaining access to government data. Section 32 of the PECA requires internet service providers to retain specified traffic data for a minimum of one year and subject to the PTA's demands outlined in

³⁸⁴¹ Ministry of Information Technology & Telecommunication, *Pakistan Cloud First Policy* (Feb. 2022),

https://moitt.gov.pk/SiteImage/Misc/files/Pakistan%20Cloud%20First%20Policy-Final-25-02-2022.pdf

Section 31. Section 42 outlined that powers are delegated to the government when it comes to sharing information with foreign entities. ³⁸⁴²

In February 2022, PECA's Ordinance (a series of proposed amendments) passed³⁸⁴³. One of the passed amendments seek to make the online defamation of authorities, including the military and judiciary, a criminal offense with harsh penalties. Both Human Rights Watch³⁸⁴⁴ and Amnesty International³⁸⁴⁵ termed it as the latest in a concerted campaign to restrict freedom of expression and stifle dissent. While the PECA already contained broad provisions around the criminalization of the defamation of natural persons, the amendment expanded those provisions to include the government, military, and judiciary redefining what a "person" is considered. Other passed amendments include making defamation a nonbailable offense and increasing its prison term to five years, expanding the definition of those who can initiate criminal proceedings for defamation, among other passed amendments. The amendment made no mention of AI or its use in online or other forms of disinformation.

On February 23, 2022, the Islamabad High Court restrained the Federal Investigation Agency (FIA) - the primary investigative body for PECA - from making any arrests under the newly passed Ordinance.³⁸⁴⁶ Alongside this investigative restraint, the major opposition parties moved resolutions in the National Assembly to repeal the Ordinance³⁸⁴⁷ and the National Commission for Human Rights (NCHR) issued a statement³⁸⁴⁸ demanding the Ordinance's immediate repeal, expressing serious reservations on the promulgation of the Ordinance, stating it breached the

right to freedom of speech and expression enshrined under Article 19 of the Constitution of Pakistan³⁸⁴⁹ and protected under various international agreements to which Pakistan is a signatory, and violates the democratic process. In April 2022, PECA's Ordinance was struck down by the Islamabad High Court,³⁸⁵⁰ a verdict lauded by the media³⁸⁵¹ and human rights organizations³⁸⁵², as by doing so the Court upheld Pakistan's constitutional right to freedom of speech.

In 2023, Pakistan issued the Pakistan Electronic Media Regulatory Authority (PEMRA) Ordinance, the Official Secrets Amendment Act, 2023, and the E-Safety Authority Bill 2023.

The PEMRA amendment lays out the procedures to register and monitor ratings of TV channels as well as elaborating on the definitions of disinformation and misinformation. It was first presented in the National Assembly on July 20, 2023, passed without deliberation or comment on August 2, 2023, and signed into law on August 15, 2023³⁸⁵³. This law and the way in which it was adopted has garnered criticisms and protests from many parties – not least of which have been the media, civil society and human rights bodies.

Only five days after the promulgation of the PEMRA Ordinance, the Official Secrets Amendment Act, 2023 was signed into law on August 20, 2023³⁸⁵⁴. The President denied having signed this bill into law. This law makes a person guilty of an offense if he/she 'intentionally creates a problem of public order or acts against the state'. In addition, if a person 'attacks or damages a prohibited place and the purpose of this is to directly or indirectly benefit the enemy', this is also punishable.

https://tribune.com.pk/story/2431501/official-secrets-army-act-amendment-bills-become-law

The Social Media Rules were adopted in October 2020.³⁸⁵⁵ The spirit of these rules bears proximity to the 2016 Prevention of Electronic Crimes Act's (PECA) Section 20 on the defamation of public institutions.³⁸⁵⁶ The rules compel social media companies to establish offices within the country, localizing their database servers. They specify a new position of 'National Coordinator' to liaise with these companies and seem to indicate the aspiration of greater control over Pakistani users. AI was not featured in these rules explicitly, though online disinformation was. They were updated and released again a year later³⁸⁵⁷. As a result, Twitter came under intense state scrutiny when the government at the time was subject to vitriol from an unhappy public, which led to the PECA Amendment Ordinance 2022, referenced above.³⁸⁵⁸

Algorithmic Transparency

Algorithmic transparency is not yet established as a legal right in Pakistan. The Personal Data Protection Bill (PDPB) provides for the "right not to be subject to a decision based solely on automated processing, including profiling"³⁸⁵⁹ without any further details. The definition of processing in the bill is as follows: "any operation or set of operations which is performed on personal data or on sets of personal data, whether or not by automated means, such as collection, recording, organization, structuring, storage, adaptation or alteration, retrieval, consultation, use, disclosure by transmission, dissemination or otherwise making available, alignment or combination, restriction, erasure or destruction". Anonymized data is defined as "information which does not relate to an identified or identifiable natural person or to personal data rendered anonymous in such a manner that the data subject is not or no longer identifiable." Furthermore, the Bill defines vital interests as "matters relating to life, fundamental rights, security of a data subject(s), humanitarian emergencies, in particular in

situations of natural and man-made disasters, monitoring and management of epidemics."3860

Smart Surveillance

Two Acts contain concerning provisions with regard to surveillance in Pakistan. The 1996 Act providing for the reorganization of the Pakistan Telecommunications Authority PTA permits the Government of Pakistan to authorize any person(s) to intercept calls and messages, or to trace calls through any telecommunication system in the interest of national security or in the apprehension of any offense.³⁸⁶¹ Under the 2013 Investigation for Fair Trial Act, a judge has the power to issue a warrant of surveillance or interception, upon the fulfillment of certain conditions.³⁸⁶²

Aside from statutory provisions, some Pakistani software exhibits surveillance state aspects. "Hotel Eye" is a software that combines surveillance technologies and government databases to track various hotels and their customers. The software also collects citizens' data without their consent. Hotel Eye is now mandatory for hotel and private rest house operators throughout Pakistan³⁸⁶³. Various provinces in Pakistan including Punjab, Balochistan³⁸⁶⁴ and Gilgit-Baltistan have reported on the deployment of HotelEye for purposes of crime prevention, lauding its efficacy in helping trace, track and surveil suspected criminals³⁸⁶⁵. This gives rise to concerns regarding surveillance of private citizens, in particular

This system is integrated with NADRA, PSRMS and CRO. Police action can be taken by fully monitoring the proclaimed offenders, wanted accused and persons included in the Fourth Schedule." <u>https://gbp.gov.pk/hotel-eye/</u>

with regard to gender interactions and in view of discriminatory laws against women still in effect in the country.³⁸⁶⁶

In the case of the Balochistan province, technical, operational and training support on the use of Hotel Eye (among other specialized softwares) was provided very recently by the United Nations Office on Drugs and Crime³⁸⁶⁷ under the European Union-funded Rule of Law Roadmap (RoLR) Balochistan project.³⁸⁶⁸

The Government of Pakistan deployed several tech-related measures during COVID-19 that threaten the right to privacy, such as a track-and-trace system originally developed to track-and-trace possible terrorist activities. The system is opaque and lacks judicial oversight and reportedly combines personal call-monitoring mechanisms and geofence tracking to identify when a person leaves a given geographic location.³⁸⁶⁹

Practices of surveillance in public space and use of facial recognition are of concern. A report by Privacy International identified such practices in Pakistan during the COVID-19 pandemic.³⁸⁷⁰ Privacy International found that the government of Pakistan retrofitted systems, originally designed for counter-terrorism purposes by the Inter-Services Intelligence directorate, for COVID-19 surveillance. The absence of explanation of how the system operates, raised grave concerns among digital rights privacy activists, about tracking and tracing, monitoring and tracking suspected patients through VPN³⁸⁷¹.

One of China's Belt and Road Initiative's flagship project is the \$63 billion USD China-Pakistan Economic Corridor. China is supporting numerous Safe City projects to allegedly improve security within Pakistan's major urban centers by providing low interest rate loans and urging the involvement of Chinese state-owned enterprises. Safe City projects have effectively installed much of the Xinjiang digital security system across numerous Pakistani cities, including Islamabad, Peshawar, Lahore, Ouetta, Karachi, and Gwadar. An example is Lahore's Huawei-built Safe City which uses approximately 8000 high-grade CCTV cameras, 4G wireless connectivity. facial recognition, automated vehicle number plate recognition. multiple tracking options, integrated communication platforms, geographic information systems, and specialized apps for security personnel use. These systems are controlled through a large 10,000square-meter integrated command, control, and communication center that uses AI, big data, and cloud computing technology.³⁸⁷²

By January 2023, the National Database Registration Authority (NADRA), a government body reporting directly to the Ministry of Interior Affairs and responsible for all identification documents, shared data and images of 4,000 wanted people to a Safe City Islamabad for biometric matching, to lead to their arrest.³⁸⁷³ According to the report, Safe City Islamabad placed a request to NADRA in October 2021 for data on people suspected for serious crimes, including a category of "proclaimed offenders" (referring to individuals who avoided court warrants). By mid-January, Safe City Islamabad announced the arrest of three people and 887 alerts through the use of facial recognition across the 106 cameras installed in the capital city.³⁸⁷⁴ The Safe City Islamabad project continues to be featured in the country's annual budgetary appropriations for its Public Sector Development Program 2022-2023.³⁸⁷⁵

³⁸⁷⁵ https://www.pc.gov.pk/uploads/archives/PSDP_2022-23_Final.pdf

In January 2023, the NADRA announced the use of an AI-based solution to verify fingerprints/records of senior citizens.³⁸⁷⁶ The solution aims to supplement the physical, biometric verification of fingerprints³⁸⁷⁷. This project, approved by the Planning Commission of Pakistan in 2018³⁸⁷⁸ and allocated funding in the Public Sector Development Program 2020-2021,³⁸⁷⁹ is being developed under the supervision of the National Center of AI at the National University of Science & Technology.³⁸⁸⁰

EdTech and Children Tracking

Pakistan is one of 49 countries subject of a 2022 study by Human Rights Watch about the use of government-endorsed Ed Tech tools for online learning during the COVID-19 pandemic.³⁸⁸¹ Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online, such as the Muse App developed for K-5 students in Pakistan. As of April 2020, over 120,000 students in Pakistan used Muse across 1,000 schools, with plans in motion to expand the reach to all primary school students. The government of Pakistan endorsed Apps with the capability to collect AAID (Android Advertising ID) and identify, tag and track billions of users, including children (Muse App), collected the WiFi MAC address of children (Muse App), collected aggregate IMEI numbers (International Mobile Equipment Identity

numbers that are used to trace mobile devices) (Taleemabad App), engaged in ID bridging (to bypass privacy controls) (Muse and Taleemabad) and collected WI-Fi SSID which can be used to infer information about a child habits and relationships (Taleemabad). Other websites and Apps shared their users' data to Facebook Pixel, which could track every moment of a kid across their platforms (Khan Academy, Learn Smart Pakistan, Sabaq Foundation).³⁸⁸²

According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.³⁸⁸³

Use of AI by Courts

In April 2023, a judge in a Pakistani court used GPT-4³⁸⁸⁴, Open AI's most advanced chatbot, to help render a judgment in a case³⁸⁸⁵. This decision sparked widespread debate regarding AI's capabilities and the possibility of it replacing legal professionals, including judges. This seems to have been a one-off incident, though, and has not led to a formalization of the use of AI by courts in Pakistan.

Already in 2022, an academic study reported the planned use of artificial intelligence to aid judicial decision-making ³⁸⁸⁶. Plans to establish

this project by the Deep Learning Lab of the National Centers for AI for this purpose were reported on in 2020.³⁸⁸⁷ However, no further detail is available about this project.³⁸⁸⁸

Lethal Autonomous Weapons

Pakistan was one of the first nations to call for a ban on lethal autonomous weapons systems. Since 2013, Pakistan and 30 other countries have called for a ban on fully autonomous weapon systems, which will prohibit weapons systems that lack human control.³⁸⁸⁹ The Human Rights Council of Pakistan argued that lethal autonomous weapons systems raise complex moral, ethical, and legal dilemmas. Pakistan delivered a statement on behalf of the Organization of the Islamic Conference, representing more than 50 states, alerting about the negative impact of removing human control from the use of force, as this "fundamentally changes the nature of war" and raises the potential for an "accountability gap."³⁸⁹⁰ Pakistan has presented multiple calls for a new international ban treaty of LAWS and denounced them as "illegal, unethical, inhumane, and unaccountable as well as destabilizing for international peace and security."³⁸⁹¹

Despite its active participation in every meeting of the Convention on Certain Conventional Weapons from 2014-2019,³⁸⁹² Pakistan has not acceded to the Convention.

Human Rights

Freedom House's 2023 annual report rates Pakistan as "Partly Free" (35 out of 100). The report points out that, despite the competitive multiparty political system in the country, Pakistan's military exerts substantial influence over security and other policy issues, intimidation of

media outlets, and use of indiscriminate or extralegal use of force to manage religious militancy and attacks on religious minorities and opponents.³⁸⁹³

Pakistan is rated "Not Free" in Freedom House's 2022 report on global internet freedom. Pakistan frequently blocks content critical of Islam, the military, pornography or nudity websites, and other political and social content. There are also allegations that the Pakistani government uses censorship equipment to block and regulate its citizens' internet access.³⁸⁹⁴ In addition, the report claims: "People are frequently prosecuted for their online activities, often receiving harsh sentences. The death penalty was imposed in a case of online blasphemy during the coverage period, and previous cases in which the death penalty was imposed are under appeal."

Pakistan is signatory of several human rights conventions.³⁸⁹⁵ Pakistan is one of the original signatories of the Universal Declaration of Human Rights and signed the International Covenant on Civil and Political Rights (ICCPR) in 2008, which also upholds the right to privacy. In 1989, Pakistan adopted the Convention on the Rights of the Child, which include the right to privacy. In 1990, Pakistan signed the Cairo Declaration on Human Rights in Islam.³⁸⁹⁶ In 2004, the country signed the International Covenant on Economic, Social and Cultural Rights (ICESR).³⁸⁹⁷.

The UN Office of the High Commissioner for Human Rights, in its 2022 Universal Periodic Review of Pakistan,³⁸⁹⁸ made extensive

Evaluation

Pakistan is still in the early days of taking concrete measures to endorsement AL. Pakistan's of the 2021 UNESCO regulate Recommendation on the Ethics of AI and the 2022 Rivadh AI Call for Action Declaration on ethics of AI gives the country an opportunity to adopt a human-centered approach to AI. The Personal Data Protection Bill is also a positive step towards protecting data subjects' rights, although the right to algorithmic transparency is not provided for. The future establishment of a national data protection authority, although its status is still uncertain, is a positive sign and might help address in part some of the issues related to the use of AI systems for surveillance purposes. However, the widespread use of AI technology for surveillance purposes, coupled with political instability and endemic problems of discrimination against women, minorities and disadvantaged groups, are serious causes for concern. With the country benefitting from burgeoning and tech-savvy young, predominantly urban and rapidly-urbanizing population, strengthening civic participation, promoting democratic values, facilitating the development of literacy (including digital literacy) and enabling digital access could go a long way in fostering the adoption of ethical, trustworthy and humane AI and digital policies.

Peru

National AI Strategy

In 2021, the Government and the Digital Transformation Secretariat of the Presidency of the Council of Ministers, issued Peru's draft National Artificial Intelligence Strategy (ENIA) for the period of 2021-2026. As a leader in research, development and deployment of AI in Latin America, Peru's vision is to accelerate national development while promoting digital inclusion and ensuring the reduction of social gaps. ENIA aims to foster the necessary conditions to take advantage of the opportunities presented by developments in AI, and create value for the private and public sector, while mitigating potential risks.³⁹⁰⁶ However, after the consultation period ended in June 2021, Peru's efforts to establish and implement a formal National Strategy have stalled.

The key objectives of ENIA are:

- (1) Training and Talent Attraction: To enhance Peru's human talent in the research and development of AI, with focus on reducing the gap of participation of women and minorities and enhance the country's capacity as a leader in AI in key sectors of the country.
- (2) Economic Model: Promote the development of AI and its adoption as a tool to boost the country's development and welfare, including to minimize the effect of job displacement due to adoption of AI.
- (3) Technological Infrastructure: Facilitate the creation and strengthening of digital and telecommunications infrastructure to support the development of AI.
- (4) Data: Facilitate the development of a data infrastructure to make high quality public data available in an open, reusable, and accessible format.
- (5) Ethics: Adopt ethical guidelines for sustainable, transparent, and replicable use of AI with clear definitions of responsibilities and data protection. As a signatory of the OECD AI Principles, Peru aims to adapt these recommendations to fit the country's realities and prioritize research and development that stimulates the innovation of a reliable and accessible AI. Additionally, Peru aims to create a unit to monitor and promote the responsible and ethical use of AI, create an observatory to monitor and report on rankings indicators for the responsible use of AI such as the Oxford Insight

³⁹⁰⁶ First Draft of Peru's National Artificial Intelligence Strategy (2021), <u>https://cdn.www.gob.pe/uploads/document/file/1909267/National%20Artificial%20Intell</u> <u>igence%20Strategy%20-%20Peru.pdf</u>

Responsible AI ranking, and implement a registry platform for AI algorithms to be used in the public sector.

(6) Collaboration: Facilitate a collaborative AI ecosystem at the national and international level. Through a National Center for Innovation and AI, Peru seeks to promote collaboration in training, research, development, and innovation of AI between the public and private sectors, academic and alliances with prestigious foreign institutions.³⁹⁰⁷

Council of Europe Convention on AI

Peru contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³⁹⁰⁸

Public Participation

In 2020, The Digital Government Secretariat of the Presidency of the Council of Ministers requested consultation from the public and private sectors, civil society, academia, and citizens to participate in the co-design of the National AI Strategy with the purpose of driving the digital transformation of the country for the benefit of all people. Registration was open to all, and consultation took place from August 5 to August 12, 2020 via Zoom.³⁹⁰⁹ In 2021, the government presented a draft of the National Strategy and requested additional consultation from the public. No further public participation has been requested after the collection and analysis of the contributions in June 2021. ³⁹¹⁰

The Peruvian Government and Digital Transformation Lab launched the platform "Participate Peru", to obtain suggestions and comments from citizens regarding current and potential regulations. Citizens can also send policy proposals on issues that interest them, and make complaints regarding corruption in the public sector. To report the latter, citizens must provide an email address, where they will receive a report number, which they can then use to inform themselves about the status of their complaint.³⁹¹¹

Data Protection

The Personal Data Protection Law, passed in 2011, guarantees the fundamental right to personal data protection provided in Article 2, paragraph 6 of the Peruvian Constitution.³⁹¹² The law was amended in 2017 to provide Peruvians with an updated level of data protection.³⁹¹³ The law covers personal data, automated or not, regardless of the medium, regardless of the form or modality of their creation, formation, storage, organization and access.³⁹¹⁴ The law has established various principles that data controllers and processors who process the personal data.³⁹¹⁵ These principles include the following:

• Legality- All collection and processing of personal data must be carried out in accordance with the Protection of Personal Data. The collection or processing of personal data that is conducted via unfair, unlawful, or illegal means is strictly prohibited.

- Purpose- The collection and processing of personal data must be done for purposes that are explicit, specific, and legitimate. "The processing of personal data should not be extended to other purposes than those established at the time of collection, except in cases of historical, statistical or scientific activities, where dissociation or anonymization processes are applied".
- Proportionality- The collection and processing of personal data must be done in a manner that is relevant, adequate, and non-excessive with respect to the purposes for which it was collected.
- Quality- Personal data must be collected and processed in a manner consistent with the principles of truthfulness and accuracy. Personal data must also be updated, when possible, as well as kept appropriate and relevant in relation to the purposes for which said personal data was collected and processed.
- Security– Data controllers and processors are responsible for implementing technical, physical, and organizational measures for the purposes of protecting personal data.
- An adequate level of protection- In terms of cross-border transfers of personal data, the person who is responsible for the processing of said personal data must ensure that the data is protected sufficiently. This level of protection must be comparable or on par with either the law or international standards.

In 2011, The National Personal Data Protection Authority (ANPD) was established within the Ministry of Justice to enforce and impose sanctions for violations of the law. Sanctions include administrative and monetary penalties against parties who are found to have violated the provisions of the law.³⁹¹⁶ The ANPD hears, investigates, and resolves complaints lodged by the data subjects for the violation of the rights granted to them and issues provisional and/or corrective measures, as established in the regulation. The ANPD is also responsible for recommending any minor or major amendments to the data protection law to ensure it keeps up with both technological advancements and potential legal challenges. The ANPD established a National Register of Personal Data Protection, which keeps a public record of all the data processors and the type of data being collected on Peruvian residents. The ANPD is also required to publish a yearly report on the state of data protection within the country as well as

³⁹¹⁶ Dataguadiance.com, *Peru - Data Protection Overview* (July, 2022), <u>https://www.dataguidance.com/notes/peru-data-protection-overview</u>

recommendations for organizations on how to better adhere to the Peruvian legislation related to data protection.³⁹¹⁷

As a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, the ANPD endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence³⁹¹⁸ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.³⁹¹⁹ Both have been framed in accordance with the RED Standards for Personal Data Protection for Ibero-American States.³⁹²⁰ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in

which would incorporate the current authorities in the field, namely the National Personal Data Protection Authority and the National Authority for Transparency and Access to Information, as well as the administrative court of transparency.

Algorithmic Transparency

Peru's Data Protection Law does not contain a general right of algorithmic transparency and does not explicitly state the right to receive information about automated-decision systems or to object to a decision based solely on automatic data processing methods.³⁹²⁸ However, Article 23 of the Law on the rights of the data subject states that the data subject has the right not to be subjected to a decision with legal effects on him or affecting him significantly, supported only by a processing of personal data intended to evaluate certain aspects of his personality, unless it occurs within the negotiation, execution or performance of a contract or in cases of evaluation with purposes of incorporation into a public entity, pursuant to the law, without prejudice to the possibility of defending his point of view for the protection of his legitimate interest. The data subject also has the right to obtain information processed about him in publicly or privately administered databases, the way his data were compiled, the reasons for their compiling and at whose request the compiling was done, as well as the transfers made or planned to be made of such data.³⁹²⁹

With regard to the transparency principle, the RED Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects provide, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."³⁹³⁰

While Peru's draft National AI Strategy highlights the development of a registry of AI algorithms in the public sector, and datasets used in use cases under its strategic objective of ethics, it remains unclear whether the registry will be publicly available.³⁹³¹

Use of AI in Public Administration

The National Strategy proposal highlights not only the value creation for the private sector, but also for the public sector which must meet the new demands of a digital citizenship.³⁹³² However, large economic groups have been the main driver of adoption of AI in Peru with fewer attempts made by the public sector.³⁹³³ The Peruvian Public Sector AI Status Survey conducted in January 2021 revealed that only 39 out of 488 public institutions use AI. Common uses include prediction of criminal acts, facial recognition, risk management and virtual assistants with most of this use attributed to local governments.

As a member of the Latin American Centre for Development Administration (CLAD), Peru approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.³⁹³⁴ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their

³⁹³⁴ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."³⁹³⁵

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."³⁹³⁶

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality

³⁹³⁵ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/up.content/uploads/2024/03/CILA_EN_02_2024.pdf

and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.³⁹³⁷

Facial Recognition

Peru has deployed facial recognition technology across various sectors. On July 14, 2022, Peru's Victoria Municipality was sanctioned by the Personal Data Protection Authority (ANPD) for not complying with

³⁹³⁷ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

security measures in the use of surveillance cameras.³⁹³⁸ The sanction followed an investigation instituted as a result of a complaint filed by civil society organizations Access Now and Hiperderecho in 2019 regarding the existence of facial recognition cameras in Victoria, which the organizations alleged were processing biometric data in contravention of Peru's Personal Data Protection Law. Although the investigation concluded that facial recognition software was not in use, and the cameras were only used to record and store images and videos to identify criminal activity reported to the National Police of Peru, the Authority sought to put corrective measures in place to address dangers that may arise in future because of the storing of personal data captured in the municipality's biometric system.³⁹³⁹

Additionally, the director of APDP administered a fine to the municipality for failing to add safeguards in place to secure the images captured and for failing to provide information on how the images would be stored, and which entities could access them. The resolution also found that the municipality's conduct fell short of provisions in the Personal Data Protection Law relating to verification and management procedures for personal information. The municipality had 55 days to put in place appropriate documentation concerning the management of privileges and periodic verification of those privileges for the processing of personal data carried out within the video surveillance system.³⁹⁴⁰

On October 5, 2020, the APDP announced that it had launched an investigation into the National University of San Marcos, following a complaint alleging that the personal data of applicants was inadequately processed, and biometric data was collected. In the event that facial recognition technology was used in the university's admissions process, ADPD would administer a fine in accordance with the Personal Data Protection law.³⁹⁴¹ At the time of publishing, ADPD has yet to release a final report on this investigation.

Disinformation

In January, 2023, Peru signed together with 32 other countries of the Community of Latin American and Caribbean States (CELAC), the "Buenos Aires Declaration," through which they pledged to deepen integration, climate action, democratic institutions, and multilateralism.³⁹⁴² The signatories to the Declaration recognized disinformation and the visible increase in cyber-attacks, including those through artificial intelligence and the use of algorithms, as generating risks to the stability of the essential infrastructure of States and companies and to the well-being of individuals. Furthermore, the signatories agreed that disinformation on social networks can create parallel realities and induce political radicalization, creating a threat to democratic values and the rule of law, all leading to the need to expand cooperation and coordination among States to advance in the fight against disinformation and illegal content on the Internet.³⁹⁴³

The COVID-19 epidemic and the fake news "infodemic" that it created presented a real challenge for Peru as it was among the top 15 countries in the world in reported COVID-19 cases and second in Latin America, only after Brazil.³⁹⁴⁴ The excessive and unfounded disinformation that spread on social media in Peru and other countries hindered an appropriate public health response. The American Journal of Tropical Medicine and Hygiene highlighted the Peruvian government's response to the spread of disinformation and stated that disinformation about COVID-19 that occurred at the beginning of the pandemic became almost nonexistent after the Ministry of Justice and Human Rights (MJDH) of Peru announced on April 8, 2020 via Twitter that "persons who share fake news and misinform others to obtain a benefit or to perturb the public tranquility can be sanctioned with a prison sentence". The Ministry urged people to share only official information, accompanied by the hashtag "Don't Spread #FakeNews." It further indicated that those who create and/or share false information to benefit themselves or cause perjury to others will receive a 2- to 4-year prison sentence, and if the fake news causes panic and perturbs the public tranquility, the sentence may be 3-6 years. Peru became the first

country in Latin America to implement prison sentences for creating and disseminating fake news.

To evaluate the legitimacy of MJDH's statement, the organization Enfoque Derecho interviewed Peruvian lawyers. In conversation with César Landa, professor of Constitutional Law of the Catholic University of Peru and former President of the Constitutional Court, he concluded: "In this sense, in the context of COVID-19 pandemic, given that we are facing a situation of danger and threat, the dissemination of untruthful information is not a legitimate exercise of the right to freedom of expression or information. César Landa stated that such "news" seek to generate distress and disrupt public order. Thus, this type of information, which is practically inciting crime rather than protest, is obviously condemned by our constitutional legal system." ³⁹⁴⁵ This approach was widely applauded, as it appeared to result in a dramatic drop in fake news accounts.³⁹⁴⁶

Lethal Autonomous Weapons

At the 77th UN General Assembly First Committee meeting in October 2022, Peru joined 69 other countries to endorse a joint statement on autonomous weapons systems. Peru stated that "Progress in military technology towards increasing autonomy has led us to a scenario where machines have the power and discretion to put an end to human life. This is morally unacceptable, but still uncertain in legal terms. LAWS are of great concern to humanity; they call for a legal and political response, which is urgent, from the international community. For Peru there is no other way than establishing legally binding prohibitions. Regulation through a new treaty is the most effective way of dealing with the increasing uncertainty about what is or is not acceptable for the increasingly complex systems of autonomous weapons."³⁹⁴⁷

The joint statement addressed the need for "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations, and constraints." "We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through

https://automatedresearch.org/news/state_position/peru/

maintaining human responsibility and accountability in the use of force,"³⁹⁴⁸ declared the States in the joint statement.

In February 2023, Peru endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,³⁹⁴⁹ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force. On this occasion, Peru issued a statement affirming the country's commitment to multilateralism, disarmament and non-proliferation, with the defense of international law - including international human rights law - as well as with the purposes and principles of the Charter of the United Nations.³⁹⁵⁰

Human Rights

Peru ratified the Universal Declaration of Human Rights in 1979.³⁹⁵¹ In 2022, the Freedom House scored Peru at 72/100 with 30/40 for political rights and 42/60 for civil liberties. Peru's status improved from partially free at 71/100 in 2021 to free because of the country's successful election of a new president despite allegations of electoral fraud made by the opposition party's right-wing candidate.³⁹⁵²

In 2022, Transparency International scored Peru at 36/100 on the Corruption Perceptions Index (CPI) and ranked the country at 105 out of 180 countries scored for being able to stop corruption.³⁹⁵³ The CPI is the most widely used global corruption ranking in the world. It measures how corrupt each country's public sector is perceived to be, according to experts and businesspeople.

OECD / G20 AI Principles

In 2019, Peru, alongside 41 other countries, adopted the OECD Principles on Artificial Intelligence, and agreed to uphold international standards that aim to ensure AI systems are designed to be robust, safe, fair and trustworthy.³⁹⁵⁴ According to OECD AI Principle 2.5 regarding international co-operation for trustworthy AI, "Governments, including developing countries and with stakeholders, should actively cooperate to advance these principles and to progress on responsible stewardship of trustworthy AI. Governments should work together in the OECD and other global and regional fora to foster the sharing of AI knowledge, as appropriate."

The OECD acknowledges the work of the Inter-American Development and its "fAIr LAC" initiative to promote the responsible and ethical use of AI and improve the public services e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries."³⁹⁵⁵ In 2022, the OECD, in partnership with the Development Bank of Latin America (CAF) also published a report on "The Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean" The report examined the strategic approach to AI adopted by LAC governments including assessment of Peru's National AI Strategy draft submitted in May 2021.³⁹⁵⁶

UNESCO Recommendation on the Ethics of Artificial Intelligence

In November 2021, Peru, alongside 192 other states, adopted the Recommendation on Ethics of AI.³⁹⁵⁷ The CAF-Development Bank of Latin America and UNESCO signed a letter of intent to work together on the implementation of the Recommendation on the Ethics of Artificial Intelligence in Latin America and the Caribbean. They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts. There is currently no indication with regard to Peru's participation in the Regional Council.

³⁹⁵⁷ UNESCO, *Recommendation on the Ethics of Artificial Intelligence* (Nov. 23, 2021), https://unesdoc.unesco.org/ark:/48223/pf0000381137

Peru signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.³⁹⁵⁸ It aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.³⁹⁵⁹

Evaluation

Peru endorsed the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. Peru has a fully fledge data protection legal regime that it modernized a few year ago. However, the lack of national AI strategy is of concern in a context marked by surveillance practices and the multiplication of fake news, often amplified by AI. There is a need for Peru to adopt a national AI strategy that protects the rights of the Peruvian citizens.

milestone-regional-lac-forum-ethics-ai?hub=387.

Philippines

National AI Strategy

In May 2021, the Philippines' Department of Trade and Industry (DTI) launched the country's national AI roadmap.³⁹⁶⁰ which aims to make the Philippines a regional AI "powerhouse", accelerating "the adoption and utilization of AI in the country to advance industrial development, generate better quality entrepreneurship, and higher-paying opportunities for Filipinos."³⁹⁶¹ The roadmap was developed by the Philippines Council for Industry, Energy and Emerging Technology Research and Development (DOST-PCIEERD) under the country's Department of Science and Technology.³⁹⁶² The roadmap identifies various intended applications of AI, including its use in "real estate, banking and financial services, surveillance, retail and e-commerce, education, space exploration, agribusiness, urban planning, manufacturing, healthcare, and logistics and transportation."³⁹⁶³The national AI roadmap describes the four important dimensions for AI readiness for implementation, infrastructure and investment, namely:

- 1) Digitization and Infrastructure;
- 2) Research and Development;
- 3) Workforce Development; and
- 4) Regulation.³⁹⁶⁴

Central to the DTI's roadmap is the establishment of the National Center for AI Research (NCAIR), whose full-time scientists and research engineers will assist micro, small, and medium enterprises (MSMEs) interested in using AI technology — an element of the country's approach to inclusive AI development. The roadmap also includes plans to build a national data center (NDC).³⁹⁶⁵

In November 2021, an AI bill was filed under House Bill No. 10457 "Artificial Intelligence Development Act" ³⁹⁶⁶ establishing a National Strategy for the Development of Artificial Intelligence and Related Technologies, Creating for this Purpose the National Center for Artificial Intelligence Research, and for Other Purposes. The bill seeks to support and institutionalize the DTI's Artificial Intelligence roadmap to help realize the potential of Al in the Philippines.

Furthermore, in February 2020, the DOST launched the Smarter Philippines through Data Analytics, Research and Development, Training and Adoption (SPARTA) initiative to retool and upgrade the skills of an initial 30,000 workers by 2022.³⁹⁶⁷ In a press release dated November 2, 2022, the Development Academy of the Philippines shared that more than 40,000 scholarships have been awarded.³⁹⁶⁸

Al Safety Summit

In November 2023, the Philippines participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³⁹⁶⁹ The Philippines thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Public Participation

There is some evidence of a public consultation process in the development and implementation of the country's national AI policy. The roadmap mandates the establishment of a "committee of experts in data and

³⁹⁶⁶ House of Representatives, *HB 10457* (Nov. 9, 2021), <u>https://hrep-website.s3.ap-southeast-1.amazonaws.com/legisdocs/basic_18/HB10457.pdf</u>

AI ethics who will guard against abuse/misuse of data and AI algorithms." but it is unclear whether this committee has been formed and if it will have a mechanism for public consultation.³⁹⁷⁰ On October 28th, 2021, pursuant to the DTI's Inclusive Innovation Strategy, the DTI hosted "Artificial Intelligence: Opportunities and Challenges for Philippine Industries," a virtual session open to the public intended to "bring together participants from the government, industries, and academe not only to deliberate on matters of common interest concerning AI but more so to bring everyone into the fold as we embrace and adapt to our new economic realities."³⁹⁷¹ The National Privacy Commission's website includes opportunities for the public to vocalize data-related concerns through its "AskPRIVA" tool and includes contact information to file complaints or to contact relevant authorities.³⁹⁷² It includes contact information to file complaints or to contact relevant authorities.¹²⁷³ DOST and other government agencies will launch programs to help formulate AI policies, laws, and standards to create transparency, accountability, and fairness through its DOST Artificial Intelligence Programs and Technologies of June 2021.³⁹⁷³

DTI which is the primary government agency that developed the Philippines' National AI strategy is working on a white paper for a "Philippine AI Governance Framework" led by Mr. Peter A. Sy from the University of the Philippines. A live version of the white paper is open for stakeholder consultation, review, comments, and suggestions.³⁹⁷⁴

Data Protection

The Philippines the Data Privacy Act of 2012 (DPA) "to protect the fundamental human right of privacy, of communication while ensuring free flow of information to promote innovation and growth." The Act also ensures that "personal information in information and communications

³⁹⁷⁴ Department of Trade and Industry, *Developing an AI Governance Framework for the Philippines: a Report of Preliminary Stakeholder Consultations* and *Review of the Literature* (Sept. 4, 2022), <u>https://innovate.dti.gov.ph/resources/roadmaps/artificial-intelligence/</u>,

systems in the government and in the private sector are secured and protected."³⁹⁷⁵ Penalties are imposed for violations of the Data Privacy Act under Rule XIII of the DPA IRR with imprisonment and fine.³⁹⁷⁶

The Act mandated the creation of the National Privacy Commission, an independent body, "To administer and implement the provisions of [the Data Privacy Act of 2012], and to monitor and ensure compliance of the country with international standards set for data protection."³⁹⁷⁷ It was established in March 2016 and is required to rule-make, provide advice and guidance, and public education, in addition to its compliance, monitoring, and enforcement duties.³⁹⁷⁸ Its mission is to:

- 1) Be the authority on data privacy and protection, providing knowledge, know-how, and relevant technology.
- 2) Establish a regulatory environment that ensures accountability in the processing of personal data and promotes global standards for data privacy and protection.
- 3) Build a culture of privacy, through people empowerment, that enables and upholds the right to privacy and supports the free flow of information.

The Commission appears to be active. According to the Commission, by 2018, it had "a total of 23,081 registered Data Protection Officers (DPOs). The number of privacy-related cases the agency received so far, [in 2018] has also increased by 145% from 2017. Of the 542 cases in 2018, 35.52% involved unauthorized processing while 36.44% were on data breaches."³⁹⁷⁹

The National Privacy Commission, the Philippines' independent data protection enforcement agency, is a cosponsor to the Global Privacy Assembly (GPA)'s 2018 Resolution on AI and Ethics, its 2020 GPA Resolution on AI and Accountability and its 2022 GPA Resolution on

Facial Recognition. However, the National Privacy Commission did not endorse the 2023 GPA Resolution on Generative AI.³⁹⁸⁰

A proposal to amend the Data Privacy Act under House Bill No. 5612³⁹⁸¹ was issued last November 2019. It intends to redefine the categories of "sensitive personal information" to include biometric and genetic data, and political affiliation, considering the innate sensitivity of these classes of personal data. Generally, the DPA amendment proposal seeks to improve the Data Privacy Act's implementation and alignment with international standards for data privacy and security. It also aims to address current data privacy challenges as concerns about privacy and other aspects of cross-border data processing are impediments to the country's digital transformation strategy and the creation of a knowledge-based economy.

Meanwhile, the NPC also issued in August 2022 the Advisory on the Adoption of International Data Protection Standard³⁹⁸² based on ISO/IEC standards recommending its adoption for information and communication technology (ICT) systems or services where privacy controls are required for personal data processing. This framework is a representation of international privacy principles which include:

- 1. Consent and choice;
- 2. Purpose legitimacy and specification;
- 3. Collection limitation;
- 4. Data minimization;
- 5. Use, retention, and disclosure;
- 6. Accuracy and quality;
- 7. Openness, transparency, and notice;
- 8. Individual participation and access;
- 9. Accountability;
- 10. Information security;
- 11. Privacy compliance.

The National Privacy Commission issued NPC Circular No. 2022-04³⁹⁸³ as of December 2022 updating the requirement on registration of

³⁹⁸³ National Privacy Commission, NPC Circular 2022-04: Registration of Data Processing Systems and Notifications Regarding Automated Decision-Making

"Automated Decision-Making Systems". The Circular establishes the framework for the registration of data processing systems in the Philippines and imposes other requirements to achieve the following objectives:

- Ensure that personal information controllers (PICs) and personal information processors (PIPs) keep a record of their data processing activities;
- Make information about data processing systems operating in the country accessible to both the Commission, for compliance monitoring, and data subjects, to facilitate the exercise of their rights under the DPA; and
- Promote transparency and public accountability in the processing of personal data.

Algorithmic Transparency

The Philippines' national AI policies do not explicitly promulgate any commitments to transparency, but its Data Privacy Act mandates "adherence to the principles of transparency, legitimate purpose, and proportionality."³⁹⁸⁴ It also includes provisions related to transparent automated processing. Notably, Section 16 furnishes citizens have the right to be informed whether their personal information pertaining is being or has been processed, with the right to information regarding the "[m]ethods utilized for automated access, if the same is allowed by the data subject, and the extent to which such access is authorized," and the right "to access, correction, as well as the right to complain to the Commission."³⁹⁸⁵ These are all elements of transparency, which the National Privacy Commission has formally endorsed through its co-sponsorship of the 2020 and 2018 Global Privacy Assembly resolutions³⁹⁸⁶ noted above.

Biometric Identification

The government is in the process of registering 105 million citizens, including infants, in its biometric national ID system, PhilSys, which is to

include facial, iris, and thumbprint biometrics.³⁹⁸⁷ Law enforcement in the Philippines has also implemented and encouraged the use of real-time facial recognition software to identify "persons with Warrants of Arrest, High-Value Targets, and members of communist terror groups evading law enforcers."³⁹⁸⁸ According to Crizaldo Nieves, the regional director of the Cagayan Valley Police, all police will eventually have smartphones that enable real-time tracking, and "appropriate awards [will be given] to the first 10 police stations that will affect an arrest through this technology."³⁹⁸⁹

Lethal Autonomous Weapons

Last July 2022, the Philippines along with 10 other countries submitted a draft treaty³⁹⁹⁰ that would ban autonomous weapon systems incapable of being controlled by humans to the UN Group of Government Experts (GGE) under the framework of the UN Convention on Conventional Weapons (CCW). Together with countries like Argentina, Costa Rica, Ecuador, El Salvador, Kazakhstan, Nigeria, Panama, Sierra Leone, and Uruguay, the Philippines collaborated in drafting and submitting the draft treaty to the Group of Government Experts (GGE) tasked with discussing proposals to address the issue of autonomous weapon systems under the framework of the UN Convention on Conventional Weapons (CCW). The proposed ban also includes autonomous weapon systems that violate international humanitarian law. It requires countries to regulate other autonomous weapon systems to ensure "meaningful human control is retained" throughout their entire life cycle.

Human Rights

The Philippines has adopted the Universal Declaration of Human Rights, having taken part in its formulation in 2008.³⁹⁹¹ However, its human rights implementation record is highly contested. The country is ranked "Partly Free" on the Freedom House Global Freedom Scores Index, earning

a middling score of $56/100.^{3992}$ The Index explains that the "rule of law and application of justice is haphazard and heavily favor political and economic elites" in the country.³⁹⁹³

Moreover, a 2020 Amnesty International report found instances of harassment, detention, unjust charges, and extrajudicial executions of human rights defenders and political activists, as well as other human rights violations, and "severe" curtailing of media freedom.³⁹⁹⁴

Additionally, Republic Act (RA) 11934, or the "SIM Registration Act" was signed into law by President Ferdinand Marcos Jr. last October 10, 2022, wherein users register all mobile subscriber identity module (SIM) cards with respective public telecommunications entities within 180 days from December 2022. Privacy advocates raised concerns about the potential for abuse of the massive data collection mandated by the new regulation.³⁹⁹⁵

OECD / G20 Principles

The Philippines is not a member of the OECD or the G20, and its roadmap makes little direct mention of the OECD or G20 AI principles. Despite having no explicit endorsement of these international principles, comments from leaders and provisions from the roadmap embody a commitment to OECD principles for human rights, inclusive growth, and transparency. In a keynote speech, DTI Secretary Ramon Lopez remarked how regulation "will protect human rights and put into place equitable AI-activating opportunities into place."³⁹⁹⁶

In the same speech, Lopez noted that the roadmap itself is the "manifestation"³⁹⁹⁷ of the Philippine Innovation Act, which articulates and mandates commitments to "innovation efforts to help the poor and the marginalized, enable micro, small and medium enterprises (MSMEs) to be a part of the domestic and global supply chain, and catalyze the growth of

Philippine industries and local economies."³⁹⁹⁸ To this end, the roadmap itself includes plans to:³⁹⁹⁹

- Build a national data center (NDC) with reliable and robust data infrastructure and data management system;
- Encourage government agencies, research institutions, top universities, and big state universities to main their own data centers linked to the NDC;
- Make internet accessible and affordable and improve its quality
- Promote data literacy for all; and
- Identify jobs that are vulnerable to automation and other Industry 4.0 technologies and map the skills that need upgrading or retooling.

UNESCO Recommendation on the Ethics of Artificial Intelligence

As a member of UNESCO, the Philippines along with 192 other member states have adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021, the first global standard on the ethics of artificial intelligence. However, no measures have been put in place by the country to implement the Recommendation.⁴⁰⁰⁰

Evaluation

The Philippines continues to make strides in national AI policy, being among the 193 countries to endorse the UNESCO Recommendation on the Ethics of AI.⁴⁰⁰¹ AI is in use across several initiatives in the country,

Poland

National AI Strategy

In September 2020, the Polish Council of Ministers Committee for Digital Affairs⁴⁰⁰⁵ adopted the Policy for the Development of Artificial Intelligence in Poland.⁴⁰⁰⁶ The Policy was then adopted by the Council of Ministers as a whole in December 2020.⁴⁰⁰⁷

The Policy is designed to support and complement the work of the EU and the OECD in AI. Strategic documents the Policy takes into account include: the EU Communication's Coordinated Plan on Artificial Intelligence;⁴⁰⁰⁸ the High-Level Expert Group on AI's Ethics Guidelines for Trustworthy Artificial Intelligence;⁴⁰⁰⁹ the High-Level Expert Group on AI's Policy and Investment Recommendations for Trustworthy Artificial Intelligence;⁴⁰¹⁰ and the OECD Council Recommendation on Artificial Intelligence.⁴⁰¹¹

The Policy establishes goals and actions for Poland in the field of AI in the short-term (until 2023), medium-term (until 2027), and long-term (after 2027).⁴⁰¹² Six key thematic areas are identified: AI and society; AI

⁴⁰⁰⁵ Komitet Rady Ministrów do Spraw Cyfryzacjisss (KRMC). The KRMC is an auxiliary body of the Council of Ministers and the Prime Minister. and innovative companies; AI and science; AI and education; AI and international cooperation; and AI and the public sector

The Polish strategy is providing strategic guidance and identifies some key policy initiatives to develop a holistic AI ecosystem. The main objectives are: Reforming the educational system and providing lifelong learning opportunities in AI-related fields; Encouraging growth and innovation of AI companies through dedicated support in AI research, including the provision of sufficient financial resources; Increasing national and international partnerships in AI; Creating a data ecosystem with trustworthy and high-quality data and increased data exchange mechanisms.

In response to the invitation to comment on the draft Policy, the Virtual Chair of Ethics and Law criticized the draft Policy document and recommended significant changes.⁴⁰¹³ In addition to criticizing the structure of the Draft Policy, the Virtual Chair of Ethics and Law called for increased detail regarding strategic goals and objectives and the legal acts required to implement policy.

The Polish Council of Ministers Committee for Digital Affairs is in charge of steering the implementation of the strategy and evaluating its implementation on a yearly basis.

The Polish strategy was drafted on the basis of the 2018 "Assumptions to AI Strategy in Poland" ⁴⁰¹⁴ released by the Minister for Digital Affairs. The Assumptions states that Poland's approach to ethical and legal issues with AI should: be proactive in creating ethical standards and legislation; be inclusive and cooperative; take into account the specific circumstances in Poland; be flexible; instate consistent supportive measures; engage in discussion and consultation; and be firm in response to violations of ethical and legal standards.

The primary goals to be achieved listed in the Assumptions include: developing transparent and effective mechanisms ensuring the protection of fundamental rights, gaining understanding of the social effects of AI, setting ethical standards, and creating high-quality legislation. The Assumptions identify key fundamental rights and values for the development of a legal and ethical approach to AI in Poland: dignity; freedom (described as

^{%2}C%202020).&text=Reinforcing%20the%20digital%20infrastructure%2C%20regulato ry,the%20development%20of%20AI%20innovations

⁴⁰¹³ The Council of the Virtual Chair of Ethics and Law, *Comments on the Policy for the Development of Artificial Intelligence in Poland for the years 2019 - 2027* (Nov. 11, 2019), <u>http://cpptint.wpia.uni.opole.pl/rada-wirtualnej-katedry-etyki-i-prawa-zabiera-glos-w-sprawie-ai/</u>

⁴⁰¹⁴ Ministry for Digital Affairs, *Assumptions for the AI Strategy in Poland* (Nov, 9, 2018), <u>https://www.gov.pl/attachment/1a3fba75-c9f9-4aff-96d8-aa65ce612eab</u>

including freedom to understand processes with which individuals interact and the making of free and independent decisions); privacy and data protection; equality; and justice. The Assumptions call for the development of an ethical impact assessment mechanism. Where AI projects are supported by public funds, ethical impact assessments should take place at various stages of a project's implementation, not just at the application stage. The Assumptions also propose the establishment of an entity designed to, amongst other things: monitor the social impact of AI; recommend regulatory actions; participate in the development of regulations and ethical standards; and perform ethical impact assessments on publicly funded projects. It is envisioned that such an entity would include representatives from science, government, business, and NGOs.

To that end, in January 2022, an inter ministerial task force was established for the implementation of the AI Policy. The tasks of the Team included: giving opinions on implementation plans submitted by each minister, conducting ongoing monitoring and evaluation of the implementation work of the AI Policy and Preparing proposals for recommendations for the Committee of the Council of Ministers for Digitization.⁴⁰¹⁵ In January 2024, the Committee of the Council of Ministers for Digitization ministry has set an advisory council for AI development with representatives from different stakeholders, to organize regular consultations with social partners and experts on AI issues, and to report on the progress and outcomes of the strategy.⁴⁰¹⁶

Article 30 of the Polish Constitution – which protects the inherent and inalienable dignity of the person – forms the basis of the Policy approach. While Poland recognizes the importance of the Charter of Fundamental Rights and international human rights treaties in providing a foundation for ethical principles, the Policy suggests that Article 30 of the Polish Constitution provides broader protection.

In response to the EU Commission's White Paper on Artificial Intelligence, Poland professed to sharing the Commission's view on the need to define a clear European regulatory framework that would contribute to building confidence in the AI among consumers and businesses, thereby accelerating the spread of this technology, while ensuring socially, environmentally, and economically optimal results and compliance with EU's laws, principles, and values. However, Poland suggests limiting

regulatory action "to the areas of intervention that are only necessary and that promote legal certainty and relations, ensure coordination within the EU, and limit any negative social impact."⁴⁰¹⁷ Poland states that regulation "should be sufficiently effective to achieve their objectives, but should not be overly prescriptive, as this could lead to disproportionate burdens, especially for SMEs and MSMEs." Poland endorsed incentives for voluntary ex ante control rather than mandatory control. In particular, Poland cautioned against the imposition of mandatory certification regimes.

Council of Europe Convention on Al

Poland contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁴⁰¹⁸

Public Participation

Documents relating to Poland's development of its AI policy are accessible on the internet. The process that led to the drafting of the Assumptions to AI Strategy in Poland involved the participation of a broad range of stakeholders, from science, business, social organizations and public administration.⁴⁰¹⁹ The subsequent draft Policy document was released for public consultation in August 2019 until September 2019.⁴⁰²⁰ According to the government website, 46 entities took part in the consultation.

EU Digital Services Act

As an EU member state, Poland shall apply the EU Digital Services Act (DSA).⁴⁰²¹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.⁴⁰²² The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.⁴⁰²³

https://ec.europa.eu/commission/presscorner/detail/en/ip_23_4953

⁴⁰²¹ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

⁴⁰²² European Commission, The Commission sends request for information to X under the Digital Services Act (Oct. 2023),

⁴⁰²³ European Commission, Commission sends request for information to Meta under the Digital Services Act (March 1, 2024), <u>https://digital-</u>

strategy.ec.europa.eu/en/news/commission-sends-request-information-meta-underdigital-services-act-1

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation⁴⁰²⁴ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.⁴⁰²⁵ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force⁴⁰²⁶ on the 2024 European elections.

EU AI Act

As an EU member State, Poland is bound by the EU AI Act.⁴⁰²⁷ The EU AI Act is a risk-based market regulation which supports the objective

3-13/0138/P9_TA(2024)0138_EN.pdf

⁴⁰²⁷ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance pleniere/textes adoptes/definitif/2024/0

of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;

of:

- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.⁴⁰²⁸ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not

⁴⁰²⁸ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.⁴⁰²⁹

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category,

⁴⁰²⁹ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.⁴⁰³⁰ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

⁴⁰³⁰ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.⁴⁰³¹

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office⁴⁰³² established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing

⁴⁰³¹ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale</u>

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

⁴⁰³² European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no

longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Poland will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact⁴⁰³³ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Poland is an EU Member State, the General Data Protection Regulation (GDPR)⁴⁰³⁴ is directly applicable in Poland and to Poles. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."⁴⁰³⁵ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Polish Personal Data Protection Act (PDPA) of 10 May 2018 also entered into force on 25 May 2018. It aims to help implement the GDPR in Poland. The old Personal Data Protection Act of 29 August 1997 has been repealed. The PDPA is accompanied by the 2019 GDPR Implementation Act. The Implementation

⁴⁰³⁵ European Commission, *Data protection in the EU*,

Act amended Polish sectoral laws, such as labor, consumer protection, insurance, banking or telecommunication laws, in order to ensure compliance with the GDPR.

Regarding the activities of law enforcement authorities, Poland transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁰³⁶. "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."4037 The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.4038 The LED also requires for Member States, including Poland, to enable data subjects to exercise their rights via national data protection authorities.⁴⁰³⁹

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Polish data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the Member States apply the LED consistently."⁴⁰⁴⁰ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.⁴⁰⁴¹ The EDPB Chair said: "While modern technologies offer

⁴⁰⁴⁰ Communication from the Commission to the European Parliament and the Council, First report on application and functioning of the Data Protection Law Enforcement Directive (EU) 2016/680 ('LED'), COM/2022/364 final, https://eur-lex.europa.eu/legalcontent/EN/TXT/?uri=CELEX%3A52022DC0364&gid=1658824345764#footnote136

⁴⁰⁴¹ European Data Protection Board, *Guidelines* 05/2022 on the use of facial recognition technology in the area of law enforcement (May12, 2022), https://edpb.europa.eu/system/files/2022-05/edpb-

guidelines 202205 frtlawenforcement en 1.pdf

benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."⁴⁰⁴²

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Poland is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴⁰⁴³

The Polish data protection authority (DPA) is called the Office of Personal Data Protection.⁴⁰⁴⁴ In December 2022, President of the Personal Data Protection Office approved the first Polish code of conduct compliant with the GDPR. The code of conduct, developed by the Federation of Healthcare Employers' Unions (FZPOZ), concerns the protection of personal data processed in small medical facilities. The Polish supervisory authority has also granted accreditation to RS Jamano, which will act as a monitoring body for the application of the code. The Polish DPA stated, "the purpose of the code of conduct is to ensure the protection of the personal data of patients and other persons in healthcare facilities. Certainly, the adopted code of conduct will not only help medical facilities to comply with the requirements of the GDPR, but also raise awareness of data protection among patients. Raising awareness and broadening of knowledge of the role of personal data protection and building appropriate attitudes

⁴⁰⁴⁴ President of the Office of Personal Date Protection, <u>https://uodo.gov.pl/en</u>

among both controllers and citizens is a process in which the Personal Data Protection Office is actively involved."⁴⁰⁴⁵

The Polish DPA is a member of the Global Privacy Assembly (GPA) since 2002. The DPA co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁴⁰⁴⁶ and the 2020 GPA Resolution on AI Accountability.⁴⁰⁴⁷ However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology⁴⁰⁴⁸ or the 2023 GPA Resolution on Generative AI.⁴⁰⁴⁹

Regarding data retention, the Polish DPA took the position that a controller should delete the data, right after a relationship with a data subject ends. As a result, the controller cannot claim it has a legitimate interest to keep the data for the purpose of potential future legal claims. Polish courts overturned such decisions, stating a controller cannot predict if and when a data subject may raise a claim. But this does not exclude such claims being raised in the future, and the controller has a right to store data to defend itself or exercise its claims.⁴⁰⁵⁰

In March 2019, the Polish DPA fined Bisnode, a digital marketing company, €220,000 for not notifying data subjects it had acquired their personal data through data scraping methods. The data protection authority ordered the company to reach out directly to these individuals, stating that a notice on its website would not be sufficient notification. It is to be noted that the company had reached out to 679,000 persons whose email addresses it had access to, but did not reach out directly to the data subjects in relation

Algorithmic Transparency

Poland is subject to the GDPR and Convention 108+. Poles have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴⁰⁵²

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴⁰⁵³ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."4054

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity

to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."⁴⁰⁵⁵

In 2019, while taking steps to implement the GDPR, Poland provided all banking customers with the right to an explanation regarding their creditworthiness assessment when applying for a loan.⁴⁰⁵⁶ STIR – *System Teleinformatyczny Izby Rozliczeniowej* – is a government tool that analyses information collected by financial institutions to detect illegal activity. If suspicion arises, the financial institution can block a flagged account for 72 hours at the request of the tax authorities.⁴⁰⁵⁷

Unemployment Scoring System

In 2014, an unemployment scoring system was introduced in Poland. The profiling system was dividing unemployed people into three categories based on their responses to a series of questions asked during a computer-based interview.⁴⁰⁵⁸ In a report on the issue, the NGO, Panoptykon, described the process as the computer system calculating the "employment potential" of a given person on the basis of the provided answers.⁴⁰⁵⁹ The amount of assistance the individual received was determined by their categorization. The Polish data protection supervisory authority expressed reservations regarding the use of profiling in this

context.⁴⁰⁶⁰ In particular, concerns were raised regarding the protection of personal data and the absence of a transparent procedure to facilitate appeals.⁴⁰⁶¹ In addition, concerns were raised by the Polish Supreme Audit Office (Najwyższa Izba Kontroli) and the Human Rights Commissioner. Eventually, Poland's Constitutional Court found the system to be in breach of the Polish Constitution. The system was abolished by the end of 2019.⁴⁰⁶²

Ultima Ratio

Poland has begun an online arbitration court which incorporates AI techniques. Ultimately, according to *Polish Science*, "artificial intelligence will automatically prepare a ready draft judgment together with justification, processing for this purpose the data and positions of the parties collected in the course of the proceedings."⁴⁰⁶³ The first modules began in 2020. Ultimately, artificial intelligence will automatically prepare a ready draft judgment together with justification, processing for this purpose the data and positions of the parties collected in the course of the proceedings. The Ultima Ratio judgment has the same legal force as a decision before a common court.⁴⁰⁶⁴ The main legal issue raised by the use of Ultima Ratio is whether it is compatible with Article 47 of the EU Charter on Fundamental Rights which guarantees the right to a fair trial before an independent and impartial court.

Lethal Autonomous Weapons

Poland was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to

further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."⁴⁰⁶⁵

In February 2023, Poland participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Government representatives, including Poland, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁴⁰⁶⁶ In this joint call. States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."4067

Poland also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November $2023.^{4068}$

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁴⁰⁶⁹ The second REAIM summit will take place in 2024 in Korea.⁴⁰⁷⁰

At the 78th UN General Assembly First Committee in 2023, Poland voted in favour⁴⁰⁷¹ of resolution L.56⁴⁰⁷² on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Poland is a member of the European Union and Council of Europe and is, accordingly, committed to the upholding of the Charter of Fundamental Rights and the European Convention on Human Rights. In addition, Poland has acceded to international human rights treaties and has signed the Universal Declaration of Human Rights. The Polish Constitution also grants basic rights to citizens and includes prohibitions against discrimination.⁴⁰⁷³ While Poland is considered as "free", credited with a score of 81/100 in the Freedom House 2023 Country Report, concerns were raised about the fairness of parliamentary elections, media freedom, judicial reforms, and LGBT+ rights.⁴⁰⁷⁴ "Since taking power in 2015, a coalition led by the populist, socially conservative Law and Justice (PiS) party has exerted significant political influence over state institutions and damaged Poland's democratic progress. Recent years have seen an increase in nationalist and discriminatory rhetoric." Poland's ranking on the World Press Freedom Index has dropped from 18th to 66th place since 2015.⁴⁰⁷⁵

In 2020, the Presidency of the Council of the EU failed to secure unanimous support from the Member States for its conclusions on the application of the Charter of Fundamental Rights in the AI context.⁴⁰⁷⁶ Poland objected to the inclusion of "gender equality." Poland was the only member state in the European Union to oppose the resolution on AI and fundamental rights.⁴⁰⁷⁷ Although Ambassador Andrzej Saros said that Poland will work to support the conclusions in the future, he also stated that: "The Treaties refer to equality between women and men, similar to the Charter of Fundamental Rights. The meaning of 'gender' is unclear; the lack of definition and unambiguous understanding for all member states may

⁴⁰⁷⁷ Warsaw Business Journal, *Poland rejects artificial intelligence because of gender* (Oct. 29, 2020), <u>https://wbj.pl/poland-rejects-artificial-intelligence-because-of-gender/post/128788</u>

cause semantic problems. Neither the Treaties nor the Charter of Fundamental Rights use the term 'gender'."⁴⁰⁷⁸

The position occurs in the context of the Polish government opposition to the Convention on Preventing and Combating Violence against Women and Domestic Violence.⁴⁰⁷⁹ While consensus was not reached as regards the Presidency's conclusions, the Presidency stressed that the core elements of the conclusions, anchoring the Union's fundamental rights and values in the age of digitalization, fostering the EU's digital sovereignty and actively participating in the global debate on the use of artificial intelligence with a view to shaping the international framework, were shared by all delegations.⁴⁰⁸⁰

OECD / G20 AI Principles

As a member of the OECD, Poland is committed to the OECD Principles on Artificial Intelligence and references the OECD principles in its AI Policy document.

In December 2020, Poland joined the Global Partnership on AI (GPAI), a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁴⁰⁸¹

UNESCO Recommendation on the Ethics of AI

Poland is a member of the UNESCO and has endorsed the 2021 UNESCO Recommendation on AI Ethics,⁴⁰⁸² the first ever global agreement on the ethics of AI

Evaluation

Though Poland has adopted a national policy for the development of Artificial Intelligence, it still needs to take more concrete steps to

⁴⁰⁷⁸ Samuel Stolton, *Poland rejects Presidency conclusions on Artificial Intelligence, rights*, Euroactiv (Oct. 26, 2020), <u>https://www.euractiv.com/section/digital/news/poland-rejects-presidency-conclusions-on-artificial-intelligence-rights/</u>

⁴⁰⁸¹ Digital Affairs – Chancellery of the Minister, *Poland joins the Global Partnership on Artificial Intelligence* (Dec. 8, 2020), <u>https://www.gov.pl/web/digitalization/poland-joins-the-global-partnership-on-artificial-intelligence</u>

⁴⁰⁸² UNESCO, *Recommendation on the Ethics of Artificial Intelligence* (Nov. 23, 2021), https://unesdoc.unesco.org/ark:/48223/pf0000381137

implement it. The adoption of the EU AI Act might constitute an incentive to do so. Poland shall also establish a national supervisory mechanism for the implementation and enforcement of the EU AI Act which, it is to be hoped, will be an independent one and will take the protection of human rights seriously. As a member of the EU, the Council of Europe, and the OECD, Poland has made commitments to upholding human rights and ethics in and endorsed the OECD AI Principles. Concerns also exist with regard to the administration of justice by opaque AI techniques.

Portugal

National AI Strategy

In February 2019, Portugal released its national artificial intelligence (AI) strategy under the name "AI Portugal 2030".⁴⁰⁸³ The strategy is promoted by the technical coordination of the National Initiative Digital Competencies e.2030 program,⁴⁰⁸⁴ in cooperation with the Portuguese Science and Technology Foundation, the National Innovation Agency, the Living Science Academy and the Agency for Administrative Modernization (AMA). The implementation of the national strategy is supposed to be monitored by a committee coordinated by the FCT and reviewed annually.⁴⁰⁸⁵ To date, there is no sign of such monitoring mechanism.

AI Portugal 2030 is considered an important milestone for AI in Portugal. The aim is to promote research and innovation in AI for its development and application in the public and private sectors. One of the main goals of AI Portugal 2030 is to "foster a strong investment in AI at national and European levels, mobilise key actors, identify key areas for development and mitigate risks for the citizens and society."⁴⁰⁸⁶

The general objectives to reach by 2030 are: (1) Added economic growth;⁴⁰⁸⁷ (2) Scientific excellence;⁴⁰⁸⁸ (3) Human development, which includes increasing "the qualifications of the labour force, in particular the technological qualifications, while promoting inclusion and awareness at all levels of education"⁴⁰⁸⁹ and taking into account the need for "societal robustness by building a clear vision of the impacts of AI on democracy, privacy, security, fairness, the labour market, governmental and commercial transparency and equity. Although AI is highly disruptive in all these

⁴⁰⁸³ Portugal INCoDe.2030, AI Portugal 2030 (Feb. 2019),

https://www.portugal.gov.pt/pt/gc21/comunicacao/documento?i=estrategia-inteligenciaartificial-2030.

⁴⁰⁸⁴ Portugal INCoDe.2030 is an integrated public policy initiative dedicated to strengthening digital skills. It aims to increase the knowledge, qualifications and skills of the population, as well as to improve Portugal's positioning and competitiveness in the international context. In order to achieve these goals five lines of action have been defined: inclusion, education, qualification, specialization, and research. INCoDe.2030, https://www.incode2030.gov.pt/.

⁴⁰⁸⁵ AI Portugal 2030, p. 35.

⁴⁰⁸⁶ AI Portugal 2030), p. 14.

⁴⁰⁸⁷ AI Portugal 2030, p. 24.

⁴⁰⁸⁸ AI Portugal 2030, p. 24.

⁴⁰⁸⁹ AI Portugal 2030, p. 24.

dimensions it also provides, if made ethical-by-design, a set of powerful tools to actually improve society and democracy."⁴⁰⁹⁰

The defined action lines to achieve these objectives comprise:

- Inclusion and education. These are considered essential to provide the Portuguese population with minimum knowledge and skills to use the tools available, understand the benefits thereof and also "the risks and threats they have to face, from being screened and targeted with false information to being driven to options that are not necessarily in their benefit."⁴⁰⁹¹ It is further stated that "safety and privacy are critical issues where an acute sense of risk and responsibility should be achieved."⁴⁰⁹² "Young students should understand the risks and threats that they face in the same way as the rest of the community aggravated with the fact that they spend most of their time immersed in cyberspace with the false feeling that since they are "digital natives", so at ease with technology and devices, their – frail and superficial - expertise protects them from hazards and attacks."⁴⁰⁹³
- Qualification and specialisation: AI brings enormous potential for productivity growth in several sectors, but it requires a qualified workforce trained to identify AI opportunities, develop engineering solutions, adapt working environments, and deploy solutions following safe and ethical standards.⁴⁰⁹⁴
- Research, which should also address the challenges involved in "building trust through data curation in order to avoid biases assuring transparency in the way judgements are made promoting accountability and explainability."⁴⁰⁹⁵

AI Portugal 2030 features a human-centered approach. "Portugal's AI Strategy will be based on the fundamental principle of not compromising the dignity of citizens, strongly anchored by the promotion of wellbeing, fairness and quality of life."⁴⁰⁹⁶ "People are the central element of research, innovation, deployment and usage of any AI manifestation."⁴⁰⁹⁷ According with the vision set forth in the AI Portugal 2030, "AI will improve the quality of services and the efficiency of processes while guarantying

⁴⁰⁹⁰ AI Portugal 2030, p. 9.

⁴⁰⁹⁶ AI Portugal 2030, p. 15.

⁴⁰⁹⁷ AI Portugal 2030, p. 16.

fairness, wellbeing and quality of life."⁴⁰⁹⁸ The promotion of a better society should be encompassed by "strong ethical guidelines" protecting "the fundamental rights of citizens and core values."⁴⁰⁹⁹

AI Portugal 2030 also establishes specific steps to uphold its core values, such as human-centered AI, and to understand its impact on society. These steps are to:

- 1. "Define regulatory frameworks (also through the creation of regulatory sandboxes);"
- 2. "Define and deploy guidelines for ethical-by-design AI through an ethical committee for AI and automation;"
- 3. "Spread awareness on AI and technology in the entire population to promote inclusion;" and
- 4. "Study the impacts of AI on society (i.e., employment, democracy, and fairness) through focused observations and by promoting research in the respective scientific areas."⁴¹⁰⁰

In order to face "societal challenges brought by AI" in terms of "Ethics and safety", the AI Portugal 2030 mentions that it will be necessary to apply "best practices to assess AI projects in terms of risks to safety and ethics and mechanisms to detect and prevent misuse of advanced AI techniques. The legal framework will have to be adjusted to determine liability in conflicts with the involvement of AI decision making".⁴¹⁰¹

At European and international levels, AI Portugal 2030 also lists some related objectives such as "Guarantee[ing] that AI is safely and ethically applied to the various domains;" "Help[ing] companies and regulators find appropriate legal frameworks;" "Further promot[ing] the participation in the European effort for developing regulation and protocols for an Ethical and Secure AI;" and "Develop[ing] regulatory sandboxes articulated with the EU."⁴¹⁰²

In October of 2020, the Portuguese government, along with thirteen other EU Member States published a position paper on innovative and trustworthy AI.⁴¹⁰³ This paper sets out two visions for the EU's

⁴¹⁰³ Denmark, Belgium, the Czech Republic, Finland, France Estonia, Ireland, Latvia, Luxembourg, the Netherlands, Poland, Portugal, Spain and Sweden. <u>Innovative and trustworthy AI: two sides of the same coin</u>

^{(2020),} https://eportugal.gov.pt/noticias/portugal-no-grupo-de-paises-europeus-maisdigitais_and

development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. The countries call for a borderless single market for AI in the EU. They state that "[t]he main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth, and competitiveness in order to protect our society, maintain our high-quality public service, and benefit our citizens and businesses. This can help the EU to protect and empower its citizens, stimulate innovation and progress in society, and ensure its values are protected."

Regarding public administration and its modernization, AI Portugal 2030 also recalls the objective of ensuring the ethical use of AI.⁴¹⁰⁴ Portugal further implemented such objective by means of the Guide for an Ethical, Transparent and Accountable AI in Public Administration developed by AMA and published in February 2022.⁴¹⁰⁵

The AI Guide sets out the main guidelines for implementing AI solutions in the Public Administration. The Guide outlines a set of values and principles in line with human rights protection, and addresses the themes of inclusion, equality, sustainable development and well-being. Harmful effects associated to the use of AI systems are also tackled, along with the importance of implementing rigorous monitoring, auditing, security and safety mechanisms in such cases. Although it was developed for the public sector, the AI Guide is also intended to serve as a reference for the private sector: "[F]rom a reflection that considers both discussions, it is intended to ensure the protection of democracy, the rule of law and fundamental rights, with the operationalization of these concepts in the way AI services are thought, designed, and provided, both in the public and private sectors."⁴¹⁰⁶ Relatedly, a risk assessment app has been developed based on two aspects: identification and mitigation, thus allowing support to public policies related to Data Science, Big Data, Machine Learning ("ML"), and AI, namely, to disseminate best practices and to establish

Ética, Transparente e Responsável na Administração Pública, p. 6 (unofficial translation).

assessment criteria that may support prior opinions and funding applications.⁴¹⁰⁷

The AI Guide provides an extensive list of safeguards that the government must establish concerning the implementation of AI. These are:

- The respect for privacy, the inviolability of human rights and the principle of social equity;
- The planning of security mechanisms to protect systems from errors, such as distortions, discrimination, manipulation and misuse of data;
- The mitigation of risks associated with its implementation and change;
- The regulation of data use;
- Compliance with a code of ethics;
- The efficiency and sustainability of technologies while enabling them to create benefits for the citizen, society, the environment, the economy and the country;
- Individual participation, social inclusion, freedom of action and selfdetermination of each citizen in relation to AI;
- Encouraging investment in AI research and development;
- Promoting the potential of emerging technologies;
- The growth of the business fabric, including small and medium enterprises;
- The creation of value in public administration and society; and
- The integration of an employment policy that facilitates the transition.⁴¹⁰⁸

The AI Guide further highlights concerns about the impact of AI programs and applications on human rights, and the importance of regulation to address them. The Guide specifies that "the values and principles should be respected by all actors during the life cycle of AI systems, should be promoted through continuous evaluation and evolution of existing laws, regulations, and various international guidelines, notably in relation to human rights, and be aligned with the goals of social, political, environmental, educational, scientific, and economic sustainability."⁴¹⁰⁹

Ética, Transparente e Responsável na Administração Pública, p. 40 (unofficial translation).

One of the key pillars of the 2020 Action Plan for Digital Transition⁴¹¹⁰ consists in the "Digitalization of the State." The Action Plan refers to the need to define and implement a "National Smart Cities Strategy." A working group was established to present a proposal for a national strategy. The working group has defined some guidance,⁴¹¹¹ however, no further development has taken place to date.

Council of Europe Convention on AI

Portugal contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁴¹¹²

Public Participation

AI Portugal 2030 clearly acknowledges that "[T]he opacity often seen around the implications of AI may be an obstacle for the wider society to make sense of it and take part in the dialogue. AI needs to integrate cognitive diversity to foster social inclusion and transformation. Therefore, we need a diversity of specialists that will foster different perspectives to better solve complex problems. But we also need the whole population to take part in the debate and to get involved in designing AI by voicing priorities of what AI should address in a human-centered approach."⁴¹¹³

The definition and adoption of AI Portugal 2030 was preceded by several public discussions,⁴¹¹⁴ notably:

- The First National Forum on Digital Skills - INCoDe.2030, including specific sessions on AI (7 December 2017);

- The preparatory meetings and consultations for AI Portugal 2030 strategy (November 2018);
- Consultations with different entities and business enterprises (January to February 2019);
- Presentation and public discussion of the AI Portugal 2030 strategy at FCUP, Porto, with representatives of research centers working on AI (February 15th, 2019);
- Presentation and public discussion of a draft version of AI Portugal 2030 in the second National Forum on Digital Skills - INCoDe.2030 (December 12th, 2018);
- Launch of a call within the System to Support the Modernisation and Capacitation of Public Administration (SAMA2020) to finance Data Science and Artificial Intelligence projects within Public Administration (January 14th, 2019);
- Presentation and public discussion of the AI Portugal 2030 strategy at INL, Braga, with EC's Deputy DG Connect (February 12th, 2019);
- Presentation and public discussion of the AI Portugal 2030 strategy in Porto, together with the presentation of OECD 2018 S&T Outlook (February 25th, 2019); and
- Presentation and public discussion about the implications of AI Portugal 2030 strategy in "Fórum de Governação da Internet 2022" in Lisboa, with multiple stakeholders.

The strategy adopted by Portugal involves a multisectoral approach that brings together many representatives from research, academia, companies, and public administration.⁴¹¹⁵ Some sectoral initiatives are also worth mentioning.

The AI Guide mentions the goal of bringing "into public discussion the need to establish the pillars of regulation, supervision, leadership, and governance, develop a code of ethics, and foster regulation and laws that provide guidance and support for technological developments."⁴¹¹⁶ Additionally, recognizing that the risk assessment app is an "evolving platform" and should gather contributions from its users, AMA allows users

⁴¹¹⁵ AI Portugal 2030, p. 10.

to report, at any time, any errors or elements that may benefit its development, e.g. regarding assessment dimensions or issues crucial for the risk assessment of intelligent systems.⁴¹¹⁷ After the AI Guide was first announced in late January 2022, AMA launched a public consultation on the text of the document in February 2022, with the goal of enriching the AI Guide with the contributions of experts and society as a whole.⁴¹¹⁸

In 2019, the Shared Services of the Ministry of Health⁴¹¹⁹ launched a public consultation on a strategic document entitled "From big data to smart health: putting data to work for the public's health" ("Health Data Strategy")⁴¹²⁰ for the use of National Health Service ("NHS") data. The purpose of the consultation was inter alia to "encourage participation of citizens, professionals, associations, companies, as well as National Health Service institutions and Ministry of Health agencies, in the secondary use of health data and AI in Portugal" and "ensure an articulated and aligned strategy, highlighting constrains, concerns and solutions in the secondary use of health data in Portugal."⁴¹²¹

In 2021, the Office for Strategy and Planning of the Ministry of Labor, Solidarity and Social Security and the Institute of Employment and Vocational Training launched a public consultation on a Green Paper on the Future of Work. ⁴¹²² The goal was to move towards a broad and comprehensive discussion of the Green Paper with the "engagement of academics, thinkers, civil society, and social partners, creating guidelines to

prepare the country for the challenges of the future of work, transform uncertainties into opportunities, respond to the challenges posed by the digital revolution."⁴¹²³ The final version of the Green Paper mentions that "the entire Paper, from the beginning to the final stages, was based on a process of participatory consultation – of social partners, experts, research centers, international organizations, companies, other stakeholders, different areas of government - culminating in the public consultation it underwent."⁴¹²⁴

Between June and July of 2022, the Portuguese Securities and Exchange Commission (CMVM) launched a public consultation on AI in the financial sector, more precisely regarding capital markets, inviting all interested parties to contribute to the public discussion.⁴¹²⁵ The objective was to "deepen knowledge on implementing this technology in the Portuguese market and identify AI tools that may be used in areas under CMVM supervision."⁴¹²⁶ It was also CMVM's goal to "foster the use of responsible AI and improve the services and tools that investors can access to have more efficiency gains and create new business models."⁴¹²⁷

The opening of the consultation was accompanied by the launch of a consultation and reflection document, in which the CMVM presented a possible definition of AI and listed the economic developments it enables and the laws that frame it. It clarified that, in the specific case of capital markets, AI has a "transformative potential", namely with the implementation of applications that offer advice to the general public or make automated decisions "based on the analysis of large amounts of data

" or "on the interpretation of information."⁴¹²⁸ It further acknowledged risks relating to the use of AI in capital markets: "alongside the potential benefits there are risks that may arise or be enhanced by the use of AI. At the investor level, if AI systems are not properly implemented and monitored, they can lead to potentially discriminatory outcomes, unfairly rewarding certain groups at detrimental to others. Additionally, the collection, storage and extensive use of data may raise privacy and data protection issues, for example if exploited inappropriately."⁴¹²⁹

EU Digital Services Act

As an EU member state, Portugal shall apply the EU Digital Services Act (DSA).⁴¹³⁰ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission

⁴¹²⁸ Comissão do Mercado de Valores Mobiliários (CMVM), *Artificial Intelligence and Capital Markets: Consultation and Reflection Document (Inteligência Artificial e o Mercado de Capitais: Documento de Reflexão e Consulta)* (Jun. 2022), p. 3,

https://www.cmvm.pt/pt/Comunicados/Comunicados/Documents/Documento%20de%20 Reflex%C3%A30%20e%20Consulta%20sobre%20Intelig%C3%AAncia%20Artificial% 20e%200%20Mercado%20de%20Capitais.pdf, (unofficial translation).

⁴¹²⁹ Artificial Intelligence and Capital Markets: Consultation and Reflection Document, p. 6 (unofficial translation).

⁴¹³⁰ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.⁴¹³¹ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.⁴¹³²

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation⁴¹³³ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.⁴¹³⁴ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The

Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force⁴¹³⁵ on the 2024 European elections.

EU AI Act

As an EU member State, Portugal is bound by the EU AI Act.⁴¹³⁶ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

⁴¹³⁵ European Digital Media Observatory, *EDMO Taskforce on 2024 European Elections*, <u>https://edmo.eu/thematic-areas/european-elections/edmo-taskforce-on-2024-european-elections/</u>

⁴¹³⁶ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

of:

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.⁴¹³⁷ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or

⁴¹³⁷ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.⁴¹³⁸

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;

⁴¹³⁸ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

• emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.⁴¹³⁹ The academics called for a transversal FRIA, applicable to both

⁴¹³⁹ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.⁴¹⁴⁰

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European

⁴¹⁴⁰ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-</u>deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

Commission. The Commission, including the European AI Office⁴¹⁴¹ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools. methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the

⁴¹⁴¹ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Portugal will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact⁴¹⁴² a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

⁴¹⁴² European Commission, *AI Pact*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

Data Protection

Since Portugal is an EU Member State, the General Data Protection Regulation (GDPR)⁴¹⁴³ is directly applicable in Portugal and to Portuguese. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."⁴¹⁴⁴ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. Law no. 58/2019 of 8 August 2019 ("Portuguese Data Protection Law" - PDPL) adapts Portuguese law to the GDPR. The Portuguese Data Protection Law revoked the 1998 data protection law, Law no. 67/98, of 26 October 1998. In September 2019, the National Commission for Data Protection (CNPD) issued a resolution stating that it will disregard the parts of the PDPL which do not comply with the GDPR.⁴¹⁴⁵

Regarding the activities of law enforcement authorities, Portugal transposed the EU Data Protection Law Enforcement Directive (LED)⁴¹⁴⁶ in 2019.⁴¹⁴⁷ "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."⁴¹⁴⁸ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of

⁴¹⁴⁶ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504

⁴¹⁴⁷ Law no. 59/2019 of 8 August 2019 on the protection of natural persons regarding processing of personal data connected with criminal offences or the execution of criminal penalties, and on the free movement of such data.

⁴¹⁴⁸ European Commission, Data protection in the EU,

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en

⁴¹⁴³ Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, <u>https://eur-lex.europa.eu/EN/legal-</u>content/summary/general-data-protection-regulation-gdpr.html

profiling that results in discrimination.⁴¹⁴⁹ The LED also requires for Member States, including Portugal, to enable data subjects to exercise their rights via national data protection authorities.⁴¹⁵⁰

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Portuguese data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the Member States apply the LED consistently."⁴¹⁵¹ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.⁴¹⁵² The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."4153

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Portugal is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴¹⁵⁴

Al Oversight

Portugal does not have an exclusive and mandatory agency responsible for AI oversight. For the time being, multiple lateral bodies are competent such as the CNPD, the National Communications Authority, the Portuguese Commission for Human Rights, and the National Cyber Security Centre. However, the CNPD is considered the main responsible body when it comes to the control and supervision of AI, given the powers conferred to it by data protection law⁴¹⁵⁵ in order to safeguard data subjects' rights with regard to the processing of their personal data.⁴¹⁵⁶

As a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, the CNPD endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁴¹⁵⁷ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁴¹⁵⁸ Both have been framed in accordance with the RED Standards for Personal Data Protection for Ibero-American States.⁴¹⁵⁹ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and

https://www.coe.int/en/web/data-protection/convention108-and-protocol

⁴¹⁵⁵ Notably under the Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC ("General Data Protection Regulation" or "GDPR").

⁴¹⁵⁹ Ibero-American Network for the Protection of Personal Data (RED), *Standards for Personal Data Protection for Ibero-American States* (2017), https://www.redipd.org/sites/default/files/2022-04/standars-for-personal-data.pdf.

developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."⁴¹⁶⁰

The CNPD is a member of the Global Privacy Assembly (GPA) since 2002. The CNPD co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴¹⁶¹ as well as the 2020 GPA Resolution on AI Accountability.⁴¹⁶² However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology⁴¹⁶³ or the 2023 GPA Resolution on Generative AI.⁴¹⁶⁴

Algorithmic Transparency

Portugal is subject to the GDPR and Convention 108+. Portuguese have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴¹⁶⁵

AI Portugal 2030 also considers that AI-based systems must be able to explain their decisions, on top of promoting a high level of adaptability and accountability of their decision-making, advancing accountability and fairness. In order to face "societal challenges brought by AI" in terms of "Ethics and safety", it is clearly recognized in AI Portugal 2030 that "AI systems will make important and critical decisions autonomously" and that "(...) society will demand transparency (the ability to explain the decisions) and audibility (the ability to trace the flow of decisions and actions from humans to algorithm) in order to promote safety and ethical principles, including privacy protection and fairness."⁴¹⁶⁶

Regarding policies involving algorithmic transparency, Portugal has proposed an Open Data Strategy in the scope of Portugal INCoDe.2030 to create knowledge in the scientific area and promote the efficient use of public resources as well as transparency within public administration. The strategy takes a pragmatic approach to "build social and technical bridges that enable the sharing and reuse of data."⁴¹⁶⁷ The view is that the multisectoral and transversal strategy can bring together academia, so that it can propose practical principles and limits to the implementation of the open data policy; the economic agents that will be able to exploit such data; the public administration that will use such data in its accountability and transparency mechanisms; and society that has the right to be informed and participate in the decision-making processes that involve its data.⁴¹⁶⁸

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴¹⁶⁹ specifically emphasizes requirements on transparency, accountability and effective

⁴¹⁶⁸ Open Data Strategy, p. 3.

⁴¹⁶⁹ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (April 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."⁴¹⁷⁰

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."⁴¹⁷¹

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Portugal approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁴¹⁷² The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

⁴¹⁷² Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

⁴¹⁷⁰ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (April 8, 2020),

⁴¹⁷¹ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (April 8, 2020),

implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."⁴¹⁷³

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on

⁴¹⁷³ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."⁴¹⁷⁴

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups

⁴¹⁷⁴ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

(children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.⁴¹⁷⁵

Use of AI in Covid-19 Response

In 2020, the Portuguese government intended to deploy a system called "Smart Crowd", which sought to help control the occupation rates of the Portuguese beaches in the context of the Covid-19 pandemic. The system involved using cameras that collected images and processed them on the basis of machine learning (ML) technology in order to inform users regarding the occupancy level of a particular beach was. The Portuguese Agency for Environment (APA) requested the CNPD to analyze the Smart Crowd system.

In June 2020, the CNPD issued a deliberation in response to APA's request.⁴¹⁷⁶ The CNPD acknowledged that "people on beaches are particularly exposed, and therefore the capture of images is likely to lead to improper use with direct repercussions on their private lives."⁴¹⁷⁷

With regards to the ML technology used by the system, the CNPD noted, "The documentation provided refers in this respect to "an ML (and others) algorithm", which run internally in the computer without recourse to external libraries or functions. However, it is neither explained which algorithm is to be applied, nor what the others are. The use of AI, in particular when it involves self-learning techniques, requires an effort of transparency precisely to create indispensable trust in its use, especially in the context of the processing of personal data. Even if one may admit that the algorithm has only the purpose of adapting the characteristics of the photograph to the external environmental conditions (e.g., luminosity, wind), as it is alleged, it is up to those who develop the system and use it to demonstrate that these technologies are not able to generate discriminatory treatments to people. Moreover, in this context, it is incomprehensible how one can refer to 'others', without specifying what is at stake."⁴¹⁷⁸

The CNPD continues explaining that: "[I]n the same way, the processing carried out on the server - which only accepts invocations from

certain IP addresses - also applies a Machine Learning algorithm, "trained through the variables it collects, namely identifying the effective areas of sand and taking into account the useful variations of the same throughout the day due to the tidal effect, so that the result returned is as reliable as possible. The machine learning algorithm is trained to learn over time with different occupation patterns." Now, this explanation of the rationality of the algorithm, although relevant, does not demonstrate the existence of guarantees that it is sufficiently shielded against the possible application of other factors that may generate discrimination. And this is a question that is not and cannot be ignored by those who use self-learning technologies. Furthermore, nothing is made clear as to how the learning is carried out over time, and it seems essential, in order for this to occur, to confirm the acuity of the learning (by the quality of the conclusions) and change the algorithm accordingly, which, unless otherwise demonstrated, will always require human intervention."⁴¹⁷⁹

The CNPD then concluded that it "believes that the responsible party should be able to demonstrate that the machine learning algorithms are sufficiently shielded against the possible application of other factors that may generate discrimination."⁴¹⁸⁰

Facial Recognition

In September 2021, a legislative proposal aimed at regulating the use of video surveillance for security purposes was submitted to the Portuguese Parliament.⁴¹⁸¹ The draft Article 18 allowed for the use of an "analytical management system for the data captured, by application of technical criteria under the purposes for which the systems are intended"; authorized the collection of biometric data for such purposes; and established that the analytical management system "may not allow the

https://app.parlamento.pt/webutils/docs/doc.pdf?path=6148523063484d364c793968636d 356c6443397a6158526c6379395953565a4d5a5763765247396a6457316c626e52766330 6c7561574e7059585270646d4576596d46695a4751324d5451744d7a4a6a4e693030596d 4d344c57466a4d4451745a444531597a686c4e546b314f4463354c6d52765933673d&fich =babdd614-32c6-4bc8-ac04-d15c8e595879.docx&Inline=true

reversal, decoding and digitalized reproduction of the image of the biometric characteristic."⁴¹⁸²

Upon consultation by the Committee on Constitutional Affairs, Rights, Freedoms and Guarantees of the Portuguese Parliament, the CNPD issued an opinion on the Proposal on November 4, 2021.⁴¹⁸³ The CNPD concluded that Article 18 contains a covert provision for the use of facial recognition and criticized such provision."The circumstance that the national legislator, in the present Proposal, incorporates in the same article the permission to use data analytics technology and the permission to use facial recognition technology, is certainly surprising, when in a democratic State governed by the rule of law the restrictions to rights, freedoms and guarantees must be clearly and exhaustively determined by law."⁴¹⁸⁴

The CNPD continues, "it is, in fact, about giving a green light to mass surveillance by security forces and services, denying any dimension of privacy that might still remain in public space (and in private space open to the public). It allows the tracking of citizens enhanced by the possibility of relating the information available in the video-surveillance systems of public and private establishments and other private spaces open to the public, to which is added the use in the daily activity of the security forces and services of portable cameras also with drones. The impact that such control can have on any democratic society is clear, due to the ease with which this tool can be used as a means of repression of freedom of expression, demonstration and assembly, as recent examples from other parts of the world have shown".⁴¹⁸⁵ The CNPD further considered that the error rates associated with facial recognition technologies, "and especially with the relevance that ethnic or racial origin assumes in its promotion, the risk of discrimination is too great to be taken lightly in our legislation."⁴¹⁸⁶

The CNPD concluded: "In short, Article 18 of the Proposal provides for a mass surveillance system through the generic use of data analytics and facial recognition technologies, which represents a restriction of citizens' fundamental rights, without complying with the rule of law, even as regards the essential clarity and transparency regarding the provision of these restrictions, and without providing any guarantees of these rights, and therefore proves to be in breach of the requirements set out in paragraphs 2

⁴¹⁸² Law Proposal 111/XIV/2, Article 18 (unofficial translation).

and 3 of Article 18 of the CRP [Portuguese Constitution]. This is contrary to the requirements laid down in Article 18(2) and (3) of the Charter of Fundamental Rights of the European Union and is liable to affect the essential content of the right to respect for private life, manifestly infringing the principle of proportionality."⁴¹⁸⁷

The Proposal also suffered criticism from civil society organizations. On 15 November 2021, European Digital Rights (EDRi) released a statement⁴¹⁸⁸ in which it mentioned that the Proposal put "(...) forward sweeping measures which would permit the constant video and biometric mass surveillance of each and every person" and that such law was "likely to be incompatible with the essence of Portugal's constitutional obligations to ensure that restrictions on fundamental rights are necessary and proportionate (Article 18(2) CRP); with Portugal's obligations under the Charter of Fundamental Rights of the European Union (including but not limited to articles 1, 7, 8, 11, 12, 20, 21, 41, 47, 48 and 49); and the European Convention on Human Rights."⁴¹⁸⁹

The following aspects of the Proposal were especially criticized by EDRi: (i) the removal of "current legal safeguards limiting the use of invasive video surveillance"; (ii) the possibility of "video surveillance by aerial drones without limits"; and (iii) the possibility of combining the video surveillance networks "with facial recognition and other AI-based systems in public spaces."⁴¹⁹⁰ EDRi maintained that the combination of these measures "would be highly likely to unduly restrict the rights and freedoms of large parts of the Portuguese population and to constitute unjustified biometric mass surveillance practices."⁴¹⁹¹

After all the public scrutiny and intense discussion in Parliament,⁴¹⁹² the Proposal was sent to the Committee for final drafting and on December 29, 2021, Law 95/2021 was passed with several significant changes to the

initial wording. The installation of these systems now follows several additional principles of use and general obligations, namely:

- The video surveillance systems can only be used for the purposes provided in the Internal Security Law, approved by Law No. 53/2008 of August 29, and only for specific cases established in Article 3(1);
- The use of video cameras should be regulated by the principle of proportionality (Article 4(1));
- When considering, on a case-by-case basis, the specific purpose for which the video-surveillance system is intended, the possibility and degree of affectation of personal rights arising from the use of video cameras should be considered (Article 4(3));
- The capturing of images and sounds is forbidden when such capturing directly and immediately affects the sphere of the privacy of intimate and private life (Article 4(6));
- The installation of video surveillance systems using fixed cameras is subject to authorization by the member of the government that exercises control over the requesting security force or service or the National Authority for Emergency and Civil Protection (Article 5(1));
- The application for authorization to install video surveillance systems must be accompanied by the following elements Article 6(1):
 - Justification of the need and convenience of installing the surveillance system by video cameras;
 - Identification of the location and area covered by the capture;
 - Identification of the camera installation points;
 - Technical characteristics of the equipment used;
 - Identification of the security force service responsible for the conservation and treatment of the data;
 - Procedures for informing the public about the existence of the system;
 - Description of the criteria used in the analytic management system of the captured data;
 - Mechanisms to ensure the correct use of the recorded data;
 - Proof of approval, capacity or guarantee of financing for the installation of the equipment used and the respective maintenance costs;

- Assessment of the impact of data processing on personal data protection;
- The authorization decision is preceded by an opinion from the CNPD on the request regarding compliance with the rules on the security of the processing of the data collected and those foreseen in cases involving sensitive data (Article 5(3)); and,
- For the purposes set out in Article 3, the data processing may be underpinned by an analytical management system for the data captured, by applying technical criteria in accordance with the purposes for which the systems are intended. In this context, the capture and processing of biometric data is not permitted (Article 16 (1) and (2)).

In 2022, the Legislative Assembly of the Azores Region requested the CNPD to issue an opinion on Law Proposal 15/XII, on the first amendment to Law 95/2021, of December 29 ("Regional Proposal").⁴¹⁹³ This proposal was aimed exclusively at extending the purposes of Article 3 of the proposed legislation to allow for the installation and use of systems for the protection and conservation of marine environments and the conservation and recovery of marine living resources. The CNPD recommended that the capture be prohibited as required and that a specific regime be established for the use of drones for this specific purpose, with the exclusion of the coastal zone. The Regional Proposal has not yet been voted by the Legislative Assembly of the Azores Region.⁴¹⁹⁴

Use of AI in Education

In April 2020, in the context of the Covid-19 pandemic and the restrictive measures that followed, the CNPD issued guidance for the use of technologies supporting distance learning.⁴¹⁹⁵ The CNPD considered that distance learning could enhance "the automated collection of information and the subsequent analysis and prediction of aspects related, namely, to intellectual skills, professional skills, personality traits, professional

performance and even the users' health. This is especially evident in platforms that provide educational content specifically tailored to each user, which results in automated decision-making based on artificial intelligence systems that analyze student behaviour and performance (learning analytics)".⁴¹⁹⁶

The CNPD further noted that the use of such technologies could pose "risks for the fundamental rights of users, in particular, the right to respect for private and family life and the right to equality, in terms of nondiscrimination."⁴¹⁹⁷ The guidance document intends to address such risks, framing the use of technology to "a set of legal obligations and good practices that mitigate the risks to privacy and prevent discrimination against students and professionals."⁴¹⁹⁸

The guidance was especially aimed at data controllers and processors, as well as public bodies taking decisions involving the use of technologies that encompass automated decision-making. In this context, it encompasses a set of specific recommendations aimed at minimizing the impact on the privacy of students and teachers. Regarding the use of automated decisionmaking technologies, "the use of any performance analysis algorithms (learning analytics) should always be judicious and done in a fair and transparent way to the data subjects and only if any of the conditions for the lawfulness of this treatment are met. It is important to reinforce here that no educational establishment can impose the use of this specific artificial intelligence technology on its students, as such use depends on the informed, free, specific and explicit will of the student or, when minor, of the person representing them. Clear information should be given to the bearers regarding how the analysis algorithms work, namely when automated decisions are involved. And the data subject's right to obtain human intervention in the process should always be guaranteed."4199

In November 2020, the Council of Europe Consultative Committee of Convention 108 issued Guidelines on Children's Data Protection in an Education Setting, also applicable to remote e-learning solutions and services.⁴²⁰⁰ The Committee recalls that "[t]he UN Convention Committee

⁴²⁰⁰ Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data Convention 108,

on the Rights of the Child set out in 2001, that "Education must be provided in a way that respects the inherent dignity of the child and enables the child to express his or her views freely."⁴²⁰¹

The Committee also states that: "Stakeholders should collaborate to create a rights-respecting environment, to uphold Article 8 of the European Convention on Human Rights and protect the human dignity and fundamental freedoms of every individual, in respect of data protection.

"Children cannot see or understand how large their digital footprint has become or how far it travels to thousands of third parties across or beyond the education landscape, throughout their lifetime. While children's agency is vital and they must be better informed of how their own personal data are collected and processed, there is at the same time a consensus that children cannot be expected to understand a very complex online environment and to take on its responsibilities alone."⁴²⁰²

"Processing must not involve more data than necessary to achieve the legitimate purpose. This is particularly important when consent cannot be freely given because the choice is to use a product and receive remote instruction or refuse and receive none."⁴²⁰³ Identified as a key principle of data processing is: "A precautionary approach and a strengthened protection towards sensitive, special categories of data, including genetic and biometric data, and ethnic origin, or relating to sexual orientation, or offences, recognising children's additional vulnerability."⁴²⁰⁴

Guidelines on Children's Data Protection in an Education Setting (Nov. 20, 2020), <u>https://rm.coe.int/t-pd-2019-6bisrev5-eng-guidelines-education-setting-plenary-clean-</u>2790/1680a07f2b

 ⁴²⁰³ Council of Europe Consultative Committee of the Convention for the Protection of the Protection of

⁴²⁰⁴ Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data Convention 108, *Guidelines on Children's Data Protection in an Education Setting* (Nov. 20, 2020), p. 8,

"Profiling of children should be prohibited by law. In exceptional circumstances, States may lift this restriction when it is in the best interests of the child or if there is an overriding public interest, on the condition that appropriate safeguards are provided for by law"⁴²⁰⁵ "The Guidelines on artificial intelligence and data protection should be followed in educational settings, with regard to the automatic processing of personal data to ensure that AI applications do not undermine the human dignity, the human rights and fundamental freedoms of every child whether as an individual, or as communities, in particular with regard to the right to non-discrimination."⁴²⁰⁶

"Recognising that legislation on educational settings and other domestic and international law have an impact on how the data protection rules are applied, including the rights of data subjects, educational institutions need strong legislative frameworks and Codes of Practice to empower staff, and to give clarity to companies to know what is permitted and what is not, when processing children's data in the context of educational activities, creating a fair playing field for everyone. Policy makers and practitioners, including legislators, supervisory authorities in accordance with Article 15 (2)(e) of the Convention 108+, educational authorities and industry should follow and promote these Guidelines and implement measures to meet data protection and privacy obligations."⁴²⁰⁷

In September 2022, the United Nations Educational, Scientific and Cultural Organization (UNESCO) released the Report "K-12 AI curricula: A mapping of government-endorsed AI curricula", which sought to investigate "current practices of developing and implementing AI curricula

⁴²⁰⁷ Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data Convention 108, *Guidelines on Children's Data Protection in an Education Setting* (Nov. 20, 2020), p. 4, <u>https://rm.coe.int/t-pd-2019-6bisrev5-eng-guidelines-education-setting-plenary-clean-2790/1680a07f2b</u>

in primary and secondary school education from a global perspective."⁴²⁰⁸ Portugal was among the countries identified as having developed specific AI curricula for the purpose of enabling citizens to "recognize AI in their environments, understand its benefits and potential challenges, and be empowered to advocate for safe, beneficial and transparent AI technologies."⁴²⁰⁹ In this regard, the representative for Portugal stated, "We have a clear vision of the impact of technology in the future, and the need for a workforce and citizens who relate to technology in a healthy way on a daily basis. This includes the concepts, awareness, and skills to improve these areas, work with machines, and see robotics as complementary to society. This is the big picture."⁴²¹⁰

Use of AI in the Health Sector

The 2019 Health Data Strategy "sets out the vision, key areas and principles for secondary use of data, advanced analytics and artificial intelligence to improve the Portuguese population's health."⁴²¹¹ One of the key areas identified in the Strategy concerns the legal and ethical framework that should apply to the use of a data-driven national health service. "To ensure the best possible ethical framework for secondary use of data and sustainable AI, our strategy endorses strong commitment to the foundational values of the NHS and the rule of law, as well as to the ethical principles set out in the European Commission "Ethics Guidelines for trustworthy AI.""⁴²¹²

"The positive impact that big data and AI systems already have and will continue having, both in public health and healthcare must ensure that the risks and other adverse impacts with which these technologies are associated are properly and proportionately handled. Citizens and health professionals will only have confidence in information and technology

⁴²⁰⁸ United Nations Educational, Scientific and Cultural Organization (UNESCO), *K-12 AI curricula: a mapping of government-endorsed AI curricula* (Sep. 2022), p. 6, <u>https://unesdoc.unesco.org/ark:/48223/pf0000380602</u>,

⁴²¹² Shared Services of the Ministry of Health (SPMS), Advanced Analytics and Intelligence Unit Information Systems Department, *From Big Data To Smart Heatlh*, *Putting Data To Work For The Public's Health*, p. 18.

development and its applications if a clear and comprehensive framework for achieving trustworthiness is in place."⁴²¹³ It is further stressed that: "Trustworthy secondary use of data and AI must ensure compliance with all applicable laws and regulations, ethical principles and values and robustness both from a technical and social perspective. Development, deployment and use of health information technologies and AI systems must be made in a way that adheres to ethical principles (respect for human autonomy, prevention of harm, fairness and explicability); pays attention to situations involving more vulnerable groups such as children, persons with disabilities and others at risk of exclusion; and acknowledges that these systems pose risks that may be difficult to measure or anticipate".⁴²¹⁴

The Strategy also foresees the creation of an internal Health Information and Technology Ethics Board to ensure accountability with these principles and frameworks.⁴²¹⁵ The Strategy provides that "accountability frameworks, including disclaimers as well as review and redress mechanisms should be facilitated by traceability and auditability procedures, particularly when dealing with AI systems in critical contexts or situations."⁴²¹⁶ Such a Board however has not yet been created.

Use of AI in Labor Relations

The 2022 Green Paper points out ways "to use artificial intelligence to minimize new risks, ensuring privacy and data protection, and also to take advantage of new technologies as a way of eliminating bureaucracy and ensuring greater effectiveness in the relationship between the State and citizens and businesses."⁴²¹⁷

The document comments on risks involved in the use of AI in the labour market, noting, for instance, that "AI is also expected to impact more

⁴²¹⁷ Gabinete de Estratégia e Planejamento (GEP) and Instituto do Emprego e Formação Profissional (IEFP), *Green Paper on the future of work 2021* (Mar. 2022), p. 10, <u>http://www.gep.mtsss.gov.pt/documents/10182/79392/livro_verde_do_trabalho_2021_E</u> <u>N.pdf/7e63e982-8a4e-45a1-bc0c-ad707fbbe1b2</u>

strongly on social groups such as young people and women, since the risk of automation is higher among jobs performed by these groups. Moreover, women are under-represented in the STEM professional fields and AI can reinforce algorithmic gender bias and discrimination, especially if the machine learning teams that define how the algorithm works are not more diverse in terms of socio-economics, gender and ethnicity."⁴²¹⁸

"The lack of transparency and explanation about how the algorithms' decisions and predictions work can lead to the exclusion of jobseekers due to factors unrelated to the profile of the job to be filled. This can also lead to workers' insecurity. AI, by enabling the monitoring of workers' performance, can increase pressure on workers and increase stress regarding productivity and how bosses interpret information."⁴²¹⁹

The Green Paper further acknowledges risks relating to automated management. "The use of algorithmic management has been on the rise and was strongly boosted with the COVID-19 pandemic through the use of remote working software that enables the collection and monitoring of work performance data. Although this type of algorithmic management has essentially emerged in the collaborative economy for work on digital platforms, as Adams-Prassl (2020) points out, it is now commonplace in various industries, and is used to support management in information gathering, information processing and worker control based on that gathered information, often in a non-transparent manner."⁴²²⁰

The Green Paper contains a section with guidelines for reflection on public policies for the future of work in Portugal. The guidelines concerning technological diversity, AI and algorithms include a recommendation to "regulate the use of algorithms in their different dimensions, so as to promote transparency and responsibility in their use, particularly in the context of employment relations."⁴²²¹ This is followed by a recommendation to "encourage, in particular, regulation of the use of algorithms in collective bargaining, involving social partners and ensuring that the issue is dealt with at the level of collective bargaining agreements,

so as to ensure the appropriate adequacy of AI and to reflect the specific needs of each sector."⁴²²²

The Green Paper also includes a recommendation to "introduce provisions in legislation that minimise the new risks associated with autonomous AI behaviour by setting requirements to ensure the protection of privacy and personal data, equality and non-discrimination (see specific points for further details), ethics, transparency and the explainability of algorithm-based systems, both in the selection of job applicants and in the performance of the work contract and the monitoring of the worker's professional activity."⁴²²³

Another recommendation seeks to "promote trusted AI by investing in infrastructure development, the integrated and regulated progress of the algorithmic bases of AI, improved use of public and industry data and the creation of data repositories."⁴²²⁴

Finally, the Green Paper recommends that Portugal "invest, in coordination with universities, research centers and other agents, in building the skills of the State and Public Administration in the use of AI and its potential, so as to ensure the existence of public competence centers and the capacity for adequate regulation and supervision of the use of AI in different domains, including the labour market; encourage the use of AI in the public sector, with full respect for the ethical principles that should underlie it (see point on Public Administration)."⁴²²⁵

Lethal Autonomous Weapons

During the 2019 Group of Governmental Experts ("GGE") meeting, Portugal's statement reaffirmed the need for human oversight of such weapons: "The development, use and/or transfer of this specific type of military or security technologies must always safeguard human control and supervision during the entire Lethal Autonomous Weapon Systems ("LAWS") life cycle. The human-machine interaction must be designed and programmed in such a way that ensures that the persons responsible for supervising the use of LAWS are fully accountable for the effects of that use and are able to immediately interrupt an initiated attack should they

⁴²²⁵ Gabinete de Estratégia e Planejamento (GEP) and Instituto do Emprego e Formação Profissional (IEFP), *Green Paper on the future of work 2021*, p. 170.

decide to do so. Therefore, in the autonomy spectrum, the degree of independence of weapons systems has to be limited."⁴²²⁶

Portugal proposed for the GGE to confer a mandate "to produce a reference document compiling existing norms and principles of International Law applicable to LAWS and identifying related good practices for producers, commanders and operators".⁴²²⁷ This reference document "would be a useful and practical tool with a clarifying effect"⁴²²⁸ for the purpose of future negotiations regarding a convention on LAWS.

In August 2020, at the request of the Chair of the 2020 GGE on Emerging Technologies in the Area of LAWS within the Convention on Certain Conventional Weapons ("CCW"), Portugal released commentaries on the operationalization of the 11 guiding principles on LAWS adopted at the 2019 Meeting of the High Contracting Parties to the CCW.⁴²²⁹ Portugal's commentaries emphasize the need for a human-centred approach to LAWS. "Automation and artificial intelligence should be tools in assisting the human actors (enhancing human perception and human action) rather than being the (non-human) actors themselves - see our comment to Guiding Principle (i). The will and decision to use force must therefore always remain with a human being. Especially during the deployment phase, considering that no weapon is developed without defect or possibility of malfunction, its human users must be trained and able to quickly act in order to avoid or minimize the negative consequences of a malfunctioning LAWS. The use of force must be planned and executed in such a way that it can always be retraceable to the human being operating the machine, in order to prevent any accountability gaps for violations of international law - see our comment to Guiding Principle (d)."4230

Portugal was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General

⁴²³⁰ Portugal, *Commentaries on "Operationalising all eleven guiding principles at a national level"*, pp. 2-3.

Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."⁴²³¹

In February 2023, Portugal participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Portugal endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁴²³² In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."4233

Portugal also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴²³⁴

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁴²³⁵ The second REAIM summit will take place in in 2024 Korea.⁴²³⁶

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour⁴²³⁷ of resolution L.56⁴²³⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to Freedom House, Portugal is classified as "free", with a score of 95/100. Freedom House defines Portugal as "a stable parliamentary democracy with a multiparty political system and regular transfers of power between rival parties" in which "civil liberties are generally protected."⁴²³⁹

Portugal is party to the most important international legal instruments for the protection and defence of human rights.⁴²⁴⁰

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."⁴²⁴¹

In May 2021, the Portuguese Parliament adopted the Portuguese Charter of Human Rights in the Digital Age ("Charter") with the aim of promoting the free exercise of human rights and social inclusion in the digital environment.⁴²⁴² Article 9 of the Charter concerns the use of AI and establishes that it "must be guided by respect to fundamental rights, ensuring a fair balance between the principles of explainability, security, transparency and accountability, taking into account the circumstances of each specific case and establishing procedures to avoid bias and

discrimination."⁴²⁴³ The Charter further establishes that "decisions with a significant impact on recipients that are taken by the use of algorithms must be communicated to interested parties, be appealable and appealable and auditable, as provided by law."⁴²⁴⁴

OECD / G20 AI Principles

Portugal is a member of the Organisation for Economic Cooperation and Development (OECD) and endorsed the OECD AI Principles.⁴²⁴⁵ In 2021, the OECD Survey on the implementation of the OECD AI Principles also took note of the Portuguese policy approach to AI.⁴²⁴⁶

Various Portuguese policy initiatives are inspired by and acknowledge the OECD AI Principles. This is the case of AI Portugal 2030, the AI Guide,⁴²⁴⁷ or the SPMS Health Data Strategy.⁴²⁴⁸

Portugal is not a member of the Global Partnership on AI, a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁴²⁴⁹

UNESCO Recommendation on the Ethics of AI

Portugal has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.⁴²⁵⁰

Evaluation

Portugal's has adopted a policy approach to AI based on respect for human rights, democratic values and the rule of law. The AI Portugal 2030, as well as documents released by different government entities, acknowledge the risks posed by AI and the need for AI technologies to take fairness, transparency and accountability into account. The Portuguese data protection has been taking an active role in identifying and intervening in situations in which the use of AI brings a risk to human rights. With the adoption of the EU AI Act, Portugal shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously. Portugal is not a member of the Global Partnership on AI and it remains to be seen how its endorsement of the UNESCO Recommendation on the Ethics of AI will translate in practice.

⁴²⁵⁰ United Nations Educational, Scientific and Cultural Organization (UNESCO), UNESCO member states adopt the first ever global agreement on the Ethics of Artificial Intelligence (Nov. 2021), <u>https://www.unesco.org/en/articles/unesco-member-states-</u> adopt-first-ever-global-agreement-ethics-artificial-intelligence.

Puerto Rico

National AI Strategy

Puerto Rico does not have a specific national AI strategy.

Puerto Rico (or officially the Commonwealth of Puerto Rico) is relatively self-governed but is an unincorporated territory of the United States. Even though new laws are proposed and ratified without U.S. approval, Puerto Ricans are U.S. citizens subject to most US federal laws without representation by voting members of Congress and unable to vote in federal elections. Puerto Rico is a sub-national administrative division overseen by the U.S. government.

At the federal level, Puerto Rico follows the U.S. position on AI, composed of a 2020 Presidential Executive Order, a 2019 Executive Order, OMB Guidance for Regulation of AI Applications, the recommendations of a National Security Commission on AI, and various initiatives and programs established by the National AI Initiative Act (NAIIA)⁴²⁵¹, explained further in the U.S. section of this report.

Data Protection

The right to privacy is a fundamental constitutional right enshrined in Section 8 of Puerto Rico's Bill of Rights.

There is currently neither a comprehensive data protection legislation in Puerto Rico, nor a data protection authority. However, "the Privacy Act of 2012 does require every person or entity that does business through the Internet, including government entities or organizations, to clearly and conspicuously disclose their Privacy Policies in order to adequately inform users how their information is protected and what is being done with it."⁴²⁵²

The existing legislation was created as an instrument of customer protection, in terms of establishing obligations and procedures when data breaches are detected and providing consumers with common privacy rights including the right to know, opt-out rights, and increased control over the sharing of personal information.⁴²⁵³ Puerto Rico has also passed the Citizen

jurisdiction, https://www.dataguidance.com/jurisdiction/puerto-rico

Information of Data Banks Security Act, a breach notification and data disposal law.⁴²⁵⁴

Various legislative initiatives regarding consumer data privacy bills are currently under consideration by the legislature such as:

House of Representatives Bill 129 establishing the Charter of Digital Rights of Puerto Rico to safeguard human rights in the digital sphere;

House of Representatives Bill 1548 on the law for the protection of data and information of the consumer, in order for consumers to give their informed consent on the collection, use and access of the information they provides, by virtue of a request by any resident individual of Puerto Rico who establishes a business, legal entity incorporated or organized under the laws of Puerto Rico or of any jurisdiction of the United States, or a foreign corporation that has an office or other fixed location and that operates.

House of Representatives Bill 262 on the Law for the Protection of Cyber Privacy of Our Children and Young People whose purpose is to prohibit any operator, employee or agent of an internet page classified as a social network from publishing and or disclosing personal information of underage users residing in Puerto Rico, beyond the name and city where they reside, without children's express consent and that of the person with parental authority;

House of Representatives Bill 655 on the Electronic Information Privacy Law⁴²⁵⁵ which aims to protect the right to privacy of individuals regarding information stored on an electronic device or transmitted to a remote computer service provider.

Senate Bill 882 relates to law for the protection of digital privacy. Its purpose is to protect the personal information of consumers and guarantee the right to privacy in the digital age.⁴²⁵⁶ The Bill draws inspiration from the California Consumer Privacy Act.⁴²⁵⁷

Algorithmic Transparency

There is no legislation, currently in force or pending, addressing algorithmic transparency.

Digitization of Public Administration

In July 2017, Law 75 established the Puerto Rico Innovation and Technology Service (PRITS) that promotes public policy on the preparation, management, development, coordination and effective interagency integration of innovation and the technological and information infrastructure of the Government of Puerto Rico.⁴²⁵⁸ PRITS has been contributing to digitally transform Puerto Rico through several platforms such as CESCO Digital⁴²⁵⁹ enabling vehicle and license renewal, payment of fines; VACU ID⁴²⁶⁰ a smart health card capturing COVID vaccines; or IDEAL⁴²⁶¹ a platform that digitizes documents ,certificates and information held by the state on citizens, citizen information portal provides government data to citizens to promote transparency.^{*4262}

Smart Port

In February 2023, a California-based artificial-intelligence company announced that it would invest in the Port of Ponce, which serves Puerto Rico's second city, in order to transform it into a "smart port of the future." The company plans to "develop autonomous inspection systems, computerassisted surveillance systems, and digital receipt registries that will track and monitor container movement."⁴²⁶³

Facial Recognition

Since Puerto Rico is an unincorporated territory of the USA, the U.S. Customs and Border Protection announced the implementation of the Simplified Arrival process at the Luis Muñoz Marin International Airport,

Puerto Rico. This process uses facial biometrics to automate the manual document checks that are required for admission into the United States.⁴²⁶⁴

Livescan systems are also in use at 130 USCIS Application Support Centers across America, as well as Puerto Rico. In November 2022, "Idemia Identity & Security North America has had its biometrics contract with U. S. Citizenship and Immigration Services (USCIS) extended through 2027. The extension means Idemia I&S NA will provide biometric identity verification and criminal background screening as part of the immigration application process. Idemia Livescan will be used to capture fingerprint biometrics from applicants and submit them to the Federal Bureau of Investigation (FBI) and Office of Biometric Identity Management (OBIM). USCIS then carries out the checks and makes a decision on the application."⁴²⁶⁵

Lethal Autonomous Weapons

In July 2015, an open letter signed by several Puerto Rican researchers called for a ban on autonomous weapons. The open letter was released at a Joint Conference on Artificial Intelligence in Buenos Aires.⁴²⁶⁶. Nevertheless, there are no official comments on this topic.

In October 2022, 70 countries, included the United States endorsed a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."⁴²⁶⁷ Puerto Rico itself did not endorse this joint statement.

Human Rights

As an unincorporated territory of the United States, Puerto Rico does not receive a separate ranking from Freedom House. Even though the United States scored 83/100 in 2022,⁴²⁶⁸ with wide civil liberties including a robust freedom of expression, the Freedom House report claims that in recent years its democratic institutions have gradually weakened, with "bias and dysfunction in the criminal justice system, harmful policies on immigration and asylum seekers, and growing disparities in wealth, economic opportunity, and political influence". This affects Puerto Rico as an unincorporated territory. According to Freedom House report in 2016, access to justice is difficult for those who lack resources to pay legal fees and speak Spanish as their primary language, with federal court proceedings being conducted in English.⁴²⁶⁹

UNESCO Recommendations on Ethics of AI

The United States left UNESCO on 31 December 2018 (including the separate National Organizing Committee for Puerto Rico).⁴²⁷⁰ Puerto Rico has not endorsed or implemented the UNESCO recommendation on the ethics of AI.

Evaluation

The example of the Smart Port of Ponce might point to Puerto Rico, an unincorporated territory of the United States, becoming a test-bed for AI. However, with no AI national strategy, no comprehensive data protection law and no data protection authority in place, concerns exist regarding the protection of Puerto Ricans' fundamental rights in the age of AI. In a recent column, Roberto Lopez Davila, a member of the Puerto Rican judiciary, asked: "When will Puerto Rico join other countries and begin its journey towards the elaboration of its own national AI strategy for these technologies not only to provide economic and industrial benefits but also to contribute to the improvement of the daily life and well-being of the whole Puerto Rican society? It should be a strategy which put fundamental rights, respect for the rule of law and democratic institutions at its core, considering the risks that AI entails. In a context in which AI applications are gradually being deployed in the country, some of them for uses that are

Qatar

National AI Strategy

The Government of Qatar released a National Strategy for AI on October 2019. The aim of the strategy is to provide a realistic view of AI technologies and their potential in the 21st century. The strategy was developed from a blueprint produced by Qatar Computing Research Institute (QCRI), part of Hamad Bin Khalifa University (HBKU).⁴²⁷²

The AI strategy sets two roles for Qatar:⁴²⁷³

(1) Qatar must become capable of producing world-class AI applications in areas of national interest and have a business environment enabling the use of AI as a driver for innovation.

(2) Qatar must be an efficient consumer of AI, with a properly educated citizenry, sound laws, and ethical guidelines.

Actions for the government to perform these two roles include reforms in the academic and experiential K-12 curriculum, as the foundation for the development of AI in the future. Proposed actions include the design of apprenticeship pathways (e.g. AI-based medicine), the promotion of start-ups for innovative AI applications, the formulation of policies to develop local AI solutions, and the formulation of strategies to attract international talent.

The AI strategy is divided into six pillars:⁴²⁷⁴

- Pillar 1: Race for Talent in the AI+x era
- Pillar 2: Data Access is Paramount (Data and Computing Infrastructure)
- Pillar 3: The Changing Landscape of Employment (AI Augmented Jobs)
- Pillar 4: New Business and Economic Opportunities (Knowledge Economy)
- Pillar 5: Qatar AI + X Focus areas
- Pillar 6: Ethics and Public Policy.

⁴²⁷⁴ Ashraf Aboulnaga et al., 64(4) *Communications of the ACM* 59-61 (2021); See also *an AI-Enabled Future for Qatar and the Region*, CACM (Apr. 2021),

https://cacm.acm.org/magazines/2021/4/251345-an-ai-enabled-future-for-qatar-and-theregion/fulltext

 ⁴²⁷² HBKU, Minister of Transport and Communications Announces Qatar's National Artificial Intelligence Strategy Developed by HBKU's Qatar Computing Research Institute (Oct 19, 2019), <u>https://www.hbku.edu.qa/en/news/qitcom-qcri-hbku</u>
 ⁴²⁷³ Ministry of Communications and Information Technology, National Artificial Intelligence Strategy for Qatar, (2019). https://hukoomi.gov.qa/assets/documents/AI%20Strategy EN.pdf

Each pillar features components to build an inclusive AI framework. Pillar 6 on Ethics and Public Policy includes recommendations for the introduction of guidelines for Explainability and interpretability of decisions made by AI algorithms, the formulation of an AI Ethics and Governance framework, and enhancing the guidelines on privacy and data sharing. Critical to this pillar is the consistency of the framework with "Qatari social, cultural and religious norms and international guidelines."⁴²⁷⁵

Qatar announced the creation of an artificial intelligence (AI) committee⁴²⁷⁶ to ensure that the National AI Strategy is implemented with proper mechanisms and oversight. The country's Cabinet approved the draft decision on March 3, 2019 and set a committee to be under Transport & Communications Ministry (MoTC). Members of the Committee include MoTC representatives, representatives from Ministry of Interior, Ministry of Education & Higher Education, Ministry of Commerce and Industry, Hamad bin Khalifa University, Qatar National Research Fund, and Qatar Development Bank.

The task of the AI committee is to supervise all the State-led AIcentric programs and initiatives and act as a connecting bridge between the ministries and relevant authorities in developing plans and programs "for preparing human cadres in the field of artificial intelligence applications." The first AI committee meeting took place in November 2022⁴²⁷⁷ to evaluate best practice cases and discuss aspects of AI ethics. The Committee agreed to develop an implementation plan at the national level, including a roadmap that involves all relevant country authorities.

The national AI strategy is aligned with the four pillars of the Qatar National Vision (QNV) 2030: economic, social, human, and environmental development.⁴²⁷⁸

- 1. Economic growth through the emergence of new fields and industries
- 2. Social progress through efficient governance, effective management of resources, improved discourse, and better understanding

- 4. Protection and promotion of cultural heritage through initiatives such as Arabic-language translation

Public Participation

Qatar's National Development Strategy has set goals of developing modern public sector institutions, efficient and transparent delivery of services and larger space for civil society.⁴²⁷⁹ Relatedly, the national Digital Government 2020 strategy identifies open government as a key strategic objective, and recognizes Open Data, e-Participation, and related policies as key initiatives.⁴²⁸⁰ The Open Data Policy of 2014 requires government agencies to ensure that their data is published using an open format both technically and legally.

Qatar has enhanced the GaaS (Government as a service) initiatives, with an array of citizen Digital Government services such as Metrash, Hukoomi, Baladiya/Oun. These applications aim to facilitate Inter/Intra Government Departmental transfer of data to create a modern and efficient public sector. There are 1,400 Hukoomi Services, with 650 services that aim to show higher efficiency, transparency, and openness of the government.⁴²⁸¹ This degree of interaction garnered Qatar the 2018 United Nations e-Gov benchmark as a 'high level of interaction index.'⁴²⁸²

Data Protection

The Ministry of Transport and Communications (MOTC) is the authority designated in Article 20 of Decree-Law No 8 of 2016 to propose legislation, policies, and standards necessary to regulate government information technology systems, transactions, and services to enable government agencies to achieve their digital transformation objectives.

Qatar adopted the Law No. (13) of 2016 Concerning Personal Data Protection ("the Data Protection Law").⁴²⁸³ Qatar became the first Gulf Cooperation Council (GCC) member state to issue an applicable Data Protection Law, supplemented with a set of regulatory guidelines issued by the Compliance and Data Protection Department. The guidelines incorporate concepts from EU data protection legal frameworks providing further clarity for compliance purposes. As of 2022, the MOTC has released 14 guidelines, which have effectively updated the initial Law.

The Data Protection Law (DPL) defines the rights of individuals to the processing of their data within "the framework of transparency, honesty, and respect of human dignity?"⁴²⁸⁴ Chapter 4 establishes special permissions required to process Personal Data of Special Nature, namely ethnic origin, children, health, physical or psychological condition, religious creeds marital relations, and criminal offenses.

The latest guidelines of the DPL include provisions about automated decision-making processes, and the need to perform Data Protection Impact Assessments (DPIA) to identify risks associated with the processing of personal data. Fines of US\$ 275,000 are levied if data controllers do not comply with the DPIA.⁴²⁸⁵ Data Protection Regulations aligned with the GDPR were issued by Qatar Financial Center, Qatar Minister of Commerce and Industry, upon a public consultation in 2021.⁴²⁸⁶ The regulations address the right of individuals "not to be subjected to a decision that is based solely on automated processing."

Algorithmic Transparency

The Technical Office of the Ministry of Labour of Qatar announced on February 6, 2023, the use of data algorithms in job localizations, as an initiative supported by United Nations Economic and Social Commission for Western Asia (UN ESCWA),⁴²⁸⁷ and two corporate partners. The

algorithm "automatically recommends Qatari employee percentage given the firms' absorptive capacity,"⁴²⁸⁸ tailoring the nationalization % based on the capital, number of employees, average salaries, and the entity's activity. The algorithm provides recommendations of up-skilling suggestions for candidates and develops statistics. The support of ESCWA to the Ministry of Labor and the Digital Transformation Unit includes creating the model, based on ESCWA's Skills Monitor.⁴²⁸⁹ There is no disclosure about the specifics of the model and the extent of the complexity, accuracy or reliability of the algorithm.

AI Research & Development

Qatar has one of highest per capita GDP in the world, the thirdlargest reserves of natural gas, and is the largest exporter of liquefied natural gas.⁴²⁹⁰ The Qatari government has set a national vision to transform the country into a knowledge economy by 2030, engaging in projects, partnerships, and initiatives to diversify the economy beyond oil & gas.

The Qatar Center for Artificial Intelligence (QCAI) is an enabler of the Qatar National Vision 2030 and the National AI Strategy with QCAI has a mission to "create and promote cutting-edge AI innovation for the betterment of human society."⁴²⁹¹ QCAI's role is to advise Qatar's leadership on the potential of AI to secure the State's economic and strategic future. One key objective of QCAI is to establish a policy center to coordinate programs and initiatives.

The country has taken steps to become a worldwide innovation center by 2030 and a technical hub for business, transitioning to a digital economy centered on cloud services and data processing. The Qatar Computing Research Institute (QCRI) is engaged in discussions with experts from United Nations Development Program (UNDP), UN International Children's Emergency (Unicef), and the UN Economic and Social Commission for Western Asia (UN-ESCWA) surrounding the use of AI in monitoring and achieving sustainable development goals (SDGs).

The Government of Qatar has set a focus on Sustainability and conducted a Voluntary National Review in 2021.⁴²⁹² Highlighted in the report as achievement of the country is Qatar's National Artificial Intelligence Strategy, alongside Qatar Science & Technology Park (QSTP), Qatar National Research Fund (QNRF), Qatar Research, Development and Innovation Strategy (2030), Qatar University Research, and Hamad Medical Corporation Research.

Facial Recognition

Qatar used AI to manage aspects of the FIFA World Cup such as crowds and control stadium conditions (i.e. temperature).⁴²⁹³ The "connected stadium" concept implemented during the event⁴²⁹⁴ included facial recognition receiving input from 22,000 security cameras installed at FIFA World Cup stadiums. Data was set to predict crowd patterns based on the movement of people. All people attending the FIFA World Cup in Qatar were required to download the Hayya app⁴²⁹⁵ to enter stadiums and use public transportation. The system was complemented by experts in cybersecurity, counterterrorism, and transportation, to guarantee a seamless flow of crowds.

Biometric Identification

In 2007, Qatar rolled out biometric-enabled national ID cards and developed an ambitious digital government program.⁴²⁹⁶ In 2011, the

Ministry of Interior introduced smart card services for expatriates⁴²⁹⁷. These smart cards are of compulsory use as e-gate cards, storing biometric data (e.g. fingerprints and eye scan) on a chip. Residents can also use the smart cards for immigration control. Relevant information is protected under the Data Protection Law.

Human Rights

Qatar has endorsed the Universal Declaration of Human Rights (UDHR). Qatar is signatory to the International Covenant on Civil and Political Rights (ICCPR) and International Covenant on Economic, Social and Cultural Rights (ICESCR) (2018).⁴²⁹⁸

According to Freedom House Qatar is rated "Not Free.", with a score of 25/100. The report highlights "While Qatari citizens are among the wealthiest in the world, the vast majority of the population consists of noncitizens with no political rights, few civil liberties, and limited access to economic opportunity."⁴²⁹⁹

The Qatar Constitution is based on the Sharia Law. The substantive list of rights (or protections) reside in Part 3: Public Rights and Duties, including equality of citizens in rights and duties (Art. 34); equality of "all persons" before the law and without discrimination "whatsoever" on "grounds of sex, race, language or religion" (Art. 35); protection against unlawful arrest or detention (Art. 36); protection of privacy (Art. 37); the right to elect and be elected (Art. 42); the right of assembly (Art. 44) and of association (Art. 45); freedom of expression (Art. 48); freedom of religion (Art. 50).⁴³⁰⁰

Media reports cite issues with human rights in Qatar, associated with deaths of migrant workers in the 10 years since Qatar was awarded World Cup hosting rights.⁴³⁰¹ Qatar has taken steps in passing laws to protect migrant

workers, including adjustments in their minimum wage and living conditions. $^{\rm 4302}$

The World Bank's Doing Business project, which also makes projections on the Strength of legal rights index (0=weak to 12=strong), scored Qatar as 1.⁴³⁰³ Qatar's international cooperation with multilateral entities (i.e. UNESCO, UN Development Programmes, World Bank, and others) are set to support the country in "measur[ing] progress towards the national and international development goals, human rights protection, transparency and the fight against corruption.⁴³⁰⁴

OECD / G20 AI Principles

Qatar is not a member of the OECD and did not endorse the OECD AI principles.⁴³⁰⁵ The country has not submitted reports to OECD AI Observatory on AI initiatives.⁴³⁰⁶

UNESCO Recommendation on the Ethics of AI

Qatar is a member state of UNESCO since 1972,⁴³⁰⁷ and was one of the 193 countries that endorsed the UNESCO recommendation on the Ethics of AI.⁴³⁰⁸ It remains to be seen which steps Qatar will take to honor its commitments.

Evaluation

Qatar is a forward-looking nation with a digital transformation agenda, to propel economic development and sustainability and build a path toward a knowledge-based economy. The formulation of the national AI strategy positions Qatar in a leading space in the Gulf region. Qatar's endorsement of the UNESCO Recommendation on the Ethics of AI might provide the country with an opportunity to develop a trustworthy AI

⁴³⁰² Amnesty International, *Qatar: New laws to protect migrant workers are a step in the right direction* (2022), <u>https://www.amnesty.org/en/latest/news/2020/08/qatar-annoucement-kafala-reforms/</u>

approach to policy developments in the field. The recent establishment of the AI Committee is a promising step in the efforts of Qatar to include civil society in policy decisions, yet there still needs to be an established process for meaningful public participation in the formulation of AI policy. The enactment of the Data Protection Law (DPL) of 2016 signals the commitment of the country to develop data governance rules which needs to be furthered by a commitment to algorithmic transparency sustained by an independent supervisory authority. This is of particular relevance in view of the use of AI for surveillance purposes.

Russia

National AI Strategy

Russian president Vladimir Putin famously said, in a 2017 address to students in Moscow, "Artificial intelligence is the future not only of Russia but of all of mankind. There are huge opportunities, but also threats that are difficult to foresee today. Whoever becomes the leader in this sphere will become the ruler of the world."⁴³⁰⁹ Putin then stated that it is better to avoid a monopoly on the sector and promised that if Russia became the leader in developing AI, then Russia will share their technology with the rest of the world, just as they share their atomic and nuclear technology today.

Russia's national strategy for Artificial Intelligence (AI) was announced in October 2019.⁴³¹⁰ This strategy defines the goals and primary objectives of the development of artificial intelligence in the Russian Federation, as well as the measures aimed at its use for the purpose of protecting national interests and implementing strategic national priorities, including those in the field of scientific and technological development.

The goals of the development of AI in the Russian Federation include the improvement of the well-being and quality of life of its population, national security and rule of law, and sustainable competitiveness of the Russian economy, including leading positions the world over in the field of AI. The primary objectives of the Russian development of AI are to support scientific AI research, engineering AI software development, data quality, hardware availability, qualified personnel and integrated system to extend Russian artificial intelligence technology market.⁴³¹¹

In the strategy, the basic principles of the development and use of artificial intelligence technologies include the protection of human rights and liberties, security, transparency, technological sovereignty, innovation cycle integrity, reasonable thrift, and support for competition in the field of artificial intelligence.

The use of AI technologies in sectors of the economy supports the efficiency of planning, forecasting, and management decision-making

⁴³¹¹ *Ibid*

processes; the automation of routine production operations; the use of selfcontained intelligent equipment, robotic systems, and intelligent logistic management systems; the improvement of employee safety during the performance of business processes; an increase in the loyalty and satisfaction of customers, and; the optimization of the personnel selection and training processes.⁴³¹²

The use of AI technologies in the social sphere facilitates the creation of conditions that favor the improvement of the standard of living of the population including an increase in the quality of healthcare services; the improvement of the quality of education services, and; the improvement of the quality of the provision of public and municipal services, as well as the reduction of the cost of their provision.⁴³¹³

In 2020, the Government of the Russian Federation adopted Decree No. 2129-r on the Development of Regulatory Relations in the Field of Artificial Intelligence and Robotic Technologies by 2024.⁴³¹⁴ The main purpose of the Decree is to set forth basic approaches to transforming the regulatory framework in the Russian Federation to enable the development and use of such technologies across various economic sectors while upholding citizens' rights and protecting the security of individuals, the public and the state. The Decree also enshrines some important principles. It clearly defines the need for accountability for possible negative consequences of using AI. The Decree also defined a human-centric approach, which asserts that the ultimate goal of the development of artificial intelligence and robotics technologies, guided by regulatory influence, is to ensure the protection of human rights and freedoms guaranteed by Russian and international law and to improve the well-being and quality of life of citizens.

Digital Economy in Russia

Russian government has put high priority and already achieved some remarkable accomplishments in the Digital Transformation. A key strategic objective formulated by its leadership in the May 2018 Presidential Decree (The Decree on the National Goals and Strategic National

Unofficial English translation: <u>Microsoft Word - 2020.08.19</u>. Russian Concept of AI and robotics regulation ENG.docx (intgovforum.org)

Development Tasks of the Russian Federation until 2024)⁴³¹⁵ is that policymakers must build on the country's traditional industrial strengths, develop new technology processes for fast implementation in all the main competitive domains and continuously tackle any obstacles.⁴³¹⁶

Due to limitations on funding related to COVID-19 and sanctions, the funding available for development of AI projects continues to be reduced. Moreover, the findings of 2021 research suggest that Russia's AI strategy has in many ways been stifled by the country's poor climate for innovation and investment, as well as budget cuts due to COVID-19.⁴³¹⁷ Furthermore, as announced by IntelliNews in 2023 military invasion of Ukraine caused Russia to slash its support for the development of AI technologies more than 10-fold.⁴³¹⁸

Al Strategy for Russian start-up

Russia aims to increase the start-up ecosystem and many companies have been helped by the traditional hard science education in the country.⁴³¹⁹ This report breaks down the importance of Artificial Intelligence in Russian startups, with a large number of startups active in AI. At the same time, the war with Ukraine has had a dramatic effect on the Russian IT industry. It has led to many IT professionals to leave the country, thus impacting the AI industry in the country.⁴³²⁰

AI Policy in Russia

In January 2019, Russian President Vladimir Putin had approved a list of instructions⁴³²¹ following the meeting of the supervisory board of the Agency for Strategic Initiatives, which included the instruction to the Russian government to create a national AI strategy. A draft version of a national AI strategy, developed by the country's largest bank – Sberbank, was announced September 2019.⁴³²²

According to the Future of Life Institute,⁴³²³ several projects helped pave the way for a domestic approach throughout 2018. In March 2018, for example, a conference was organised by the Russian Defense Ministry, Education and Science Ministry and the Academy for Science on AI issues and alternatives and a 10-point AI development plan in Russia was subsequently published. The plan involves the establishment of an AI and Big Data Consortium among academic and industrial organisations; The development of a fund to assist provide knowledge on automated systems; Increased state aid to AI education and training; The establishment of an AI laboratory at the leading technological university; The establishment of a national AI R&D center.

On April 1, 2020, Russia adopted new law - No. 123-FZ⁴³²⁴, that was meant to regulate the conditions for developing and implementing AI technologies, though an amendment to the bill disallows foreign firms from applying to participate in the experimental regime, in addition to Russian firms whose share of participating in foreign legal entities registered in offshore zones amounts to 50 percent or more.⁴³²⁵

Russia is developing AI regulation in the fields of autonomous vehicles and healthcare. In the area of autonomous vehicles, the Russian Government issued a regulation on highly automated vehicles on public

roads in 2018 to allow the testing of autonomous vehicles.⁴³²⁶ In 2020, Russia adopted the concept of road safety with autonomous vehicles on public roads and in 2021, the Russian government issued a set of measures for the testing of highly automated vehicles on public roads.⁴³²⁷ In the area of healthcare, Russia established Rules for registering AI systems as medical software devices to simplify AI system registration procedures.⁴³²⁸

Russian Government supports the initiative on autonomous vehicle development. In October 2022 Russian Government adopted regulation No. 1849⁴³²⁹ on "On establishing an experimental legal regime in the field of digital innovation and approval of the Program of experimental legal regime in the field of digital innovation for the operation of highly automated vehicles for the implementation of the initiative "Unmanned logistics corridors" on the public highway of federal importance M-11 "Neva"". The regulation provides definition of Automatic driven system, Automatic control mode and Unmanned Cargo Transportation; establishes procedures and requirements for operators of vehicles, describes risks.⁴³³⁰

Digital Rights Law and AI Regulation

According to the OECD, Russia's Digital Rights Law, which came into force in October 2019 and introduced several new legal concepts, including digital rights, e-transactions, smart contracts, and big data.⁴³³¹ The law aimed to enable the development of an efficient legal framework of digital economy in Russia, reflecting current digital technologies and challenges including big data and AI.

Russia's draft legal framework AI Technologies and Robotics aims to establish a legal framework for the development of AI technologies and robotics in Russia and eliminate excessive legal barriers. The initiative aims to give guidance for regulators and is under the responsibility of the Ministry of Economic Development.⁴³³²

Considering that AI technology is mainly used by state authority in Russia as a means of digital authoritarianism, the new initiative on the development of AI technology for the public authority needs to be drafted. Thus, in October 2022 the Russian State Duma passed a bill regulating the development of artificial intelligence and information technologies by means of concession agreements and agreements on public-private and municipal-private partnership.⁴³³³

Data Protection

There are many laws in Russia that regulate the processing of personal data, including the Constitution of the Russian Federation, The Council of Europe Convention 108, and federal law.⁴³³⁴ The Law on Personal Data of 2006 is the most comprehensive federal law and sets out broad rights and responsibilities associated with the collection and use of personal data.⁴³³⁵ The Roskomnadzor, Russia's data protection agency, interprets the federal law and brings enforcement actions.⁴³³⁶

Russia is also moving to update and expand its national data protection law.⁴³³⁷ A draft law on the Protection of Consumer Rights would limit the ability of companies to collect personal data from consumers, unless there is a legal basis or the data is necessary for the transaction. A proposed law in the Duma would expand penalties for breach of personal data confidentiality and infringement of personal data anonymization rules.

And the Supreme Court of Russia ruled⁴³³⁸ in 2020 that the personal data of a Russian citizen posted by the Whois Privacy Corporation, based in the Bahamas, without consent is subject to legal action under the Russian Civil Procedure Code.

Algorithmic Transparency

On March 15th, 2022 the Parliamentary Assembly unanimously adopted an Opinion which considered the cessation of the membership of the Russian Federation to the Council of Europe, under Article 8 of the Statute.4339 However, ratification of Convention 108 is valid as a nonmember state.⁴³⁴⁰ Russian data protection law does broadly provide rights of access and transparency to the data subject.4341

Facial Recognition Controversy

Russia is moving rapidly to deploy AI-based face surveillance across the country, often with government funding that goes to business associates of President Putin. According to the Moscow Times, more than 43,000 Russian schools will be equipped with facial recognition cameras ominously named "Orwell."4342 The system will be integrated with face recognition developed by NTechLab, a subsidiary of Russian President Vladimir Putin's associate Sergei Chemezov's Rostec conglomerate. NTechLab has already deployed facial recognition technology in Moscow to identify criminal suspects across a network of almost 200,000 surveillance cameras. "Critics have accused the technology of violating citizens' privacy and have staged protests against the system by painting their faces," reported Moscow Times.

In September 2020, Kommersant daily reported that CCTV cameras with facial recognition software, already used in Moscow, will be installed

⁴³⁴² Moscow Times, Russia to Install 'Orwell' Facial Recognition Tech in Every School – Vedomosti (June 16, 2020), https://www.themoscowtimes.com/2020/06/16/russia-toinstall-orwell-facial-recognition-tech-in-every-school-vedomosti-a70585

by the regional authorities in public spaces and at the entryway of apartment buildings in 10 pilot cities across Russia with the purported aim of protecting public safety.⁴³⁴³ Moscow authorities are also planning to expand the use of this technology, installing CCTV cameras with facial recognition software in trams and underground trains.⁴³⁴⁴

Human Rights Watch said "The authorities' intention to expand the use of invasive technology across the country causes serious concern over the potential threat to privacy. Russia's track record of rights violations means that the authorities should be prepared to answer tough questions to prove they are not are undermining people's rights by pretending to protect public safety."⁴³⁴⁵ HRW also stated that Russian national security laws and surveillance practices enable law enforcement agencies to access practically any data in the name of protecting public safety.

Earlier in the year, Amnesty International criticized Russia's plans to broaden the use of widespread facial-recognition systems, saying their expected deployment during public gatherings will "inevitably have a chilling effect" on protesters.⁴³⁴⁶

The face detection system starts to be used for tracking conscripts in Moscow as stated on BBC in October 2022. According to a recent study by the information and analytical agency <u>TelecomDaily</u>, more than 13 million CCTV cameras in Russia in 2020. The face detection systems are spread over the Russian regions. When it came to the number of cameras per 1,000 people, Russia also ranked third, after the United States and China.⁴³⁴⁷ As BBC noted, the Moscow "Unified Data Center" (UDChD), which is

connected to the facial recognition system, is planning to transfer data from other regions of Russia to collect and systematize personal data.⁴³⁴⁸

OECD / G20 AI Principles

Russia, a member of the G20, endorsed the G20 AI Principles at the G20 Ministerial in 2019.⁴³⁴⁹ According to the OECD, many of the G20 AI Principles are addressed in the Russia AI Strategy.

UNESCO Recommendation on the Ethics of AI

Russia has voted for the UNESCO Recommendation on the Ethics of AI, although it has not implemented it entirety due to several reasons. Russia's online censorship agency Roskomnadzor has been monitoring online protest activities since 2020. In every Russian region, local branches of Roskomnadzor trace "points of tension," or events that could cause public discontent. Their primary goal is to identify local troublemakers, whose names they then share with the Federal Security Services (FSB) and the Interior Ministry to ensure they are punished. Roskmnadzor was created with the aim of looking at licensing requirements of telecom companies, which soon developed into a censorship agency.⁴³⁵⁰ As per BBC, a facial recognition system has been in operation in the Moscow metro since 2020. In 2022, police detained at least 43 people in the Moscow metro, clearly fearing protests. Among them were journalists and activists, whose photos were clearly marked in the system in a special way. In this case, as soon as the right person enters the station, the system reports this to law enforcement agencies.4351

Human Rights

Russia is a signatory to the Universal Declaration of Human Rights. Russia ceases to be a Party to the European Convention on Human Rights

⁴³⁴⁹ OECD, 2020 G20 Digital Economy Ministers Meeting (Jul.22, 2020), http://www.oecd.org/digital/g20-digital-economy-ministers-meeting-july-2020.htm

⁴³⁵¹ BBC, Anger, fear and silhouettes. Moscow Mayor's Office reveals what algorithms recognize people by their faces (Aug. 22, 2022), <u>https://www.bbc.com/russian/features-62658404</u>

on 16th of September, 2022.⁴³⁵² Also, as noted, since March 15th, 2022 Russia is no longer a member of the Council of Europe, but ratification of the original Convention 108 is still valid. And a recent decision from the European Court of Human Rights, *Zakharov v. Russia*, found that Russia's legislation on surveillance "does not provide for adequate and effective guarantees against arbitrariness and the risk of abuse."⁴³⁵³

Freedom House gives Russia 19 out of 100 marks for political rights and civil liberties and marks as "not free" country.⁴³⁵⁴ According to Freedom House, "Power in Russia's authoritarian political system is concentrated in the hands of President Vladimir Putin. With loyalist security forces, a subservient judiciary, a controlled media environment, and a legislature consisting of a ruling party and pliable opposition factions, the Kremlin is able to manipulate elections and suppress genuine dissent. Rampant corruption facilitates shifting links among bureaucrats and organized crime groups."

Moreover, as Human Rights Watch reports, the Russian Supreme Court ordered the closure of Memorial, Russia's most prominent human rights organizations: International Memorial Society and Memorial Human Rights Center for violations of the "foreign agents" law. The liquidation was finalized in February 2022, when the Supreme Court rejected their respective appeals. Moreover, in late December 2021, Russian authorities blocked the website of OVD-Info, a human rights watchdog focusing on freedom of assembly In April 2022, Russian authorities revoked the registration of 15 foreign NGOs and foundations, forcing them to shut their offices in Russia, including Human Rights Watch and Amnesty International.⁴³⁵⁵

Meanwhile, United Nations Human Rights Office of the High Commissioner (OHCHR) documented violations of international human rights law and international humanitarian law (IHL) by the belligerent

parties in relation to the treatment of prisoners of war and persons hors de combat. $^{\scriptscriptstyle 4356}$

Lethal Autonomous Weapons

In the international debate about Lethal Autonomous Weapons Systems (LAWS), Russia officially opposes a ban on LAWS and limitations on the development of weaponized AI. In 2019 the Russian delegation at the United Nations' Group of Governmental Experts on LAWS stated that human control over the operation of [LAWS] is "an important limiting factor", but that "specific forms and methods of human control should remain at the discretion of States".⁴³⁵⁷

Defense Minister Sergei Shoigu said that Russia has already begun producing "weapons of the future" such as combat robots that are "capable of fighting on their own", just like those shown in science-fiction movies.⁴³⁵⁸

Moreover, Russia has actively used LAWs in Ukraine since February 2022. As Stop Killer Robot stated, Russia has used "one-way attack drone which carries an explosive payload of approximately 36kg/80lb, has a flight range of approximately 2500km, and possesses autonomous flight capabilities."

Russia has also publicised the use of loitering munitions, particularly the KUB-BLA and the Lancet. The use of the KUB-BLA raised concerns about the deployment of an "AI-based autonomous weapon" because the system was reportedly capable of "real-time recognition and classification of detected objects" using AI, or as some have put it, identify targets using AI.⁴³⁵⁹"

Evaluation

Russia's development of a National AI Strategy, endorsement of the G20 AI Principles, its efforts to develop laws for digital rights and regulation for AI, as well as initiatives to involve the public in the development of AI policy count favorably. But beyond data protection legislation, the absence of robust measures to limit surveillance and protect human rights, the use of LAWS in the war in Ukraine, coupled with the rapid adoption of facial recognition in public places raise concerns about the future impact of Russia's AI program.

Rwanda

National AI Strategy

Rwanda, with Vision 2050, aspires to increase the quality of life and develop modern infrastructure ⁴³⁶⁰by strengthening capacity, service delivery, and accountability of public institutions; increasing citizens' participation and engagement in development; and strengthening justice and rule of law. National Strategy for Transformation (NST1) is the vehicle for achieving Vision 2050.⁴³⁶¹ The government pledges to establish legal frameworks that spur economic development and instill fairness, transparency, and accountability across institutions. The Emerging Technologies Strategy and Action Plan aim to position Rwanda as an emerging technology test bed, solution, and export hub; propel the social and economic application of new technologies; prepare the foundations for new technologies and protect citizens and institutions from the negative consequences.⁴³⁶²

As a member of the African Union, Rwanda is taking concrete steps to align the country's efforts to the vision of the Union to build a continental digital transformation strategy.⁴³⁶³ The Government of Rwanda has published a draft of national AI strategy⁴³⁶⁴ to equip government agencies and other stakeholders in the country to empower AI developers, citizens, and users, and support the beneficial and ethical adoption of AI. A report by the Africa Policy Institute (Afripoli) highlights Rwanda's National AI Strategy with an emphasis on data policies and access to public data. Critical to Rwanda's progress is the adoption of the Continental Data Policy

Framework, under the recommendation of the African Union's Digital Transformation strategy⁴³⁶⁵

In 2020, the Ministry of ICT and Innovation (MINICT)engaged in National AI Policy Stakeholders Workshops with The Future Society (TFS) and GIZ FAIR Forward⁴³⁶⁶. The Future Society supports the development of Rwanda's national artificial intelligence framework and development plans, along with the development of AI ethical guidelines, and a practical implementation strategy fit for the local context.⁴³⁶⁷ For implementation, Rwanda has the support of GIZ FAIR Forward – 'Artificial Intelligence for All⁴³⁶⁸. "FAIR Forward – Artificial Intelligence for All" is a global initiative of German Development Cooperation, working together with Rwanda and four other countries to lay the foundations for developing local AI, to strengthen local skills and knowledge in AI; remove barriers of entry to developing AI and to develop AI policy frameworks on ethical AI, data protection and privacy.⁴³⁶⁹ FAIR Forward advocates for ethical AI that is rooted in human rights, international norms such as accountability, transparency of decision-making, and privacy and draws on European experiences such as the EU General Data Protection Regulation (GDPR).

The result of this partnership is the National AI Policy framework, currently under validation by the Government of Rwanda. The Rwanda National AI Policy encompasses six priority areas for effective AI policy in Rwanda.

- 1) 21st-century skills and high AI literacy.
- 2) Reliable infrastructure and compute capacity.
- 3) Robust Data Strategy
- 4) Trustworthy AI adoption in the public sector
- 5) Widely beneficial AI adoption in the private sector, and
- 6) Practical Ethical Guidelines.

⁴³⁶⁹FAIR Forward, *Artificial Intelligence for All*, <u>https://toolkit-digitalisierung.de/en/fair-forward/</u>

The cooperation with GIZ FAIR Forward includes an AI Policy Maker network with Ministries of ICT and regulatory authorities from our African countries and India, to exchange knowledge and skills and AI policy experiences.⁴³⁷⁰ The FAIR Forward project also supports the formulation of ethical guidelines for the use of AI, under the responsibility of Rwanda Utilities Regulatory Authority (RURA). The guidelines aim to support AI AI developers in Rwanda on risk management to protect against harms and threats of these systems.

Other institutions contributing to the development of human-centric AI initiatives are: The Center for the Fourth Industrial Revolution C4IR Rwanda, as responsible for the formulation of policy frameworks "to maximize the social benefits and minimize the risks of advanced science and technology.⁴³⁷¹ The Centre of Excellence in the areas of Digitalization and AI (CoE), for R&D investment and building human capacity and preparation for transition into future of work.⁴³⁷²

Al Safety Summit

In November 2023, Rwanda participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴³⁷³ Rwanda thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Public Participation

Rwanda has yet to develop a systematic process for public consultation on matters of AI policy. The Ministry of ICT and Innovation (MINICT), in partnership with Rwanda Utilities and Regulatory Authority, the Rwanda Information Society Authority, engaged relevant stakeholders from the public and private sectors and civil society in the development of the AI policy framework under validation.⁴³⁷⁴ The first workshop in September 2020 had the participation of civil society, private sector leaders, academics, and government representatives, focused on identifying and prioritizing AI opportunities, risks, and socio-ethical implications. A Second Collective Intelligence Workshop took place in 2021 (online due to COVID-19) to discuss seven categories of AI policy.⁴³⁷⁵ However, there are no recent reports of the outcomes of the 2nd session or information about new public consultation since then.

Rwanda has been absent from other consultative meetings, like the APET African Union High-Level Panel on Emerging Technologies (APET) in 2022. These sessions with representatives of African nations focused on the review of policy implementation frameworks governing AI and demystification of the concept of AI in Africa⁴³⁷⁶.

Data Protection

In 2019 Rwanda signed⁴³⁷⁷and ratified the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).⁴³⁷⁸ In June of that same year Rwanda adopted the Child Online Protection Policy ("the COP Policy") designed to mitigate against risks and harms and to deliver a framework that meets children's needs and fulfills their rights. This enactment makes Rwanda one of the first countries

to adopt such protections.⁴³⁷⁹ The country had also been part of an initiative of UNICEF that aligned to policy guidance of AI for children.⁴³⁸⁰

In 2021, pursuant to the Malabo Convention, the Ministry of Justice published Law No. 058/2021 of 13/10/2021 Relating to the Protection of Personal Data and Privacy. ⁴³⁸¹The Law established principles of lawfulness, fairness and transparency, purpose limitation, and accuracy, requiring personal data protection impact assessments. Article 3 of the Privacy Law establishes privacy as a "fundamental right".⁴³⁸²

While the legislation did not establish an independent data protection agency, there were provisions for a supervisory authority, defined as a public authority in charge of cyber security. The National Cyber Security Authority (NCSA) was established in 2017, under Law No. 26/2017⁴³⁸³ but was only operational in 2020.⁴³⁸⁴ In 2018, the Law No. 60/2018 addressed prevention and punishment of cybercrimes⁴³⁸⁵.

Following the GDPR, the Privacy Law seeks to safeguard fundamental rights to privacy by regulating the processing of data and providing the individual with rights over their data.⁴³⁸⁶ The law establishes systems of accountability and clear obligations for those who control the processing of personal data. According to One Trust, "The Bill is relatively

⁴³⁸⁶ Julius Bizimungu, *Rwanda moves to tighten data protection, privacy*, the New Times (Nov. 6, 2020), <u>https://www.newtimes.co.rw/news/rwanda-moves-tighten-data-protection-privacy</u>

comprehensive and would introduce obligations related to data subject rights, data processing notifications, pseudonymization, sensitive data, data transfers, and data breach notifications."⁴³⁸⁷

On March 31, 2022, the National Cyber Security Authority launched the Data Protection Office (DPO).⁴³⁸⁸ The role of the DPO is to generate awareness of the Data Protection and Privacy Law and lead activities to ensure the law is followed. Those activities include registering processors and controllers, conducting audits, conducting investigations, and refining best practices to uphold the law. The office is also tasked with ongoing learning and research to keep pace with developments and advancements in the data protection ecosystem of control.

The DPO began an important national awareness campaign to help citizens understand the data protection and privacy afforded to them by the new Data Protection Law. The campaign covered basic data literacy topics (e.g., terms and definitions), risk mitigation topics (e.g., misinformation, helping seniors stay safe online, children's data protections), and a series of topics on individual data rights (e.g., portability, rectification, erasure). The office has developed several partnerships to expand the reach of its messaging within schools, public transportation areas, and local townships. The first Data Privacy Day took place on January 28, 2023⁴³⁸⁹ and Safer Internet Day on February 7, 2023.⁴³⁹⁰ The Safer Internet Day event focused on the discussion of children's privacy in the age of social media, with the participation of parents and community organizations.⁴³⁹¹

Despite these initiatives, Rwanda has not sponsored any of the Global Privacy Assembly (GPA) resolutions and declarations. The DPO had not been established at the time the Declaration on Ethics and Data

Protection in Artificial Intelligence (2018),⁴³⁹² and the Resolution on Accountability in the Development and Use of Artificial Intelligence $(2020)^{4393}$ were passed. The DPO was functional in March 2022, when the GPA 2022 Declaration on Facial Recognition Technology⁴³⁹⁴ was issued. but it did not endorse it. Neither did it cosponsor the 2023 GPA Resolution on Generative AI.4395

Human Rights

Freedom House scores Rwanda as "Not Free" 22/100 in 2022, with a slight increase compared to 20214396 The Ibrahim Index of African Governance scores Rwanda's 2021 record on Participation, Rights, and Inclusion at 28.1 out of 100, and ranks Rwanda at 59.1/100. for overall governance, placing the country 12 out of 45 African countries.⁴³⁹⁷

After the genocide of 1994, Rwanda had to rebuild its infrastructure and relations from the ground up. A unity and reconciliation process was followed by a combination of traditional systems of justice and international tribunals.⁴³⁹⁸ The National Commission for Human Rights was created in 1999 as an independent institution responsible for the promotion and protection of human rights in Rwanda.⁴³⁹⁹ In 2017 Rwanda withdrew from

Protocol to the African Charter on Human and Peoples' Rights which allows individuals and NGOs to bring cases directly to the African Court on Human and Peoples' Rights came into effect.⁴⁴⁰⁰ The European Union concluded in its 2018 human rights report that the "area with the most significant restrictions of human rights were the politically related rights and freedoms such as the freedom of expression/freedom of media, freedom of association and freedom of assembly."⁴⁴⁰¹

Ahead of the 2021 UN Universal Periodic Review of Rwanda, the government announced National Action Plan for Human Rights (NHRAP) 2017-2020, formulated through a participatory process. This is the first of its kind in Rwanda and builds on extensive work by the Rwandan government to create an inclusive society where all are valued and have equal opportunities. The government commits that the Universal Declaration of Human Rights should guide all future programs and policies in all sectors and all phases of the programming process including monitoring and evaluation. The Rwandan judiciary lacks independence from the executive. Top judicial officials are appointed by the president and confirmed by the Senate⁴⁴⁰² dominated by the governing party.

Smart Cities

Established in 2000 and revised in 2012, the aim of Rwanda Vision 2020 was to "transform Rwanda from an agrarian economy to a knowledgebased society by 2020." Under this vision, Smart Rwanda Master Plan had three goals: economic transformation, job creation, and accountable governance. In 2015, Rwanda adopted a National Urbanization Policy to demonstrate how urban development can drive economic transformation. One of the focuses is to "promote quality of life, mitigation of disaster risks, social inclusion and cultural preservation" through "digital service points for rural settlements, smart urban agriculture projects, sensor-based environmental data, and smart and green building labs.⁴⁴⁰³ The policy

⁴⁴⁰² Freedom House, Global Freedom Scores: Rwanda,

requires public engagement and open data as building blocks. The Rwanda smart city model is centered around 3 main pillars, 9 strategic building blocks, and 27 action initiatives. The three pillars are smart governance and planning; smart and efficient services and utilities; and localized innovation for social and economic development.

Kigali Innovation City (KIC) is the government's flagship program to create a hi-tech ecosystem, modeling itself on the southeast Asian citystate of Singapore. The City of Innovation is to be built as part of Africa50. It is a 62-hectare development located in Kigali's special economic zone (SEZ). The main goal is to create an innovative business hub in the heart of Africa that will include four first-rate universities, innovative agriculture, healthcare, technology, financial services, biotech firms, and both commercial and residential space.⁴⁴⁰⁴

The Smart City Masterplan was developed in 2017, with the participation of various stakeholders in Rwanda, including regulatory bodies, local authorities, academia, civil society, and the private sector. The development was aligned with the Smart Africa Alliance Smart Sustainable Cities Blueprint for Africa.⁴⁴⁰⁵

Biometric Identification

Rwanda used biometric identification for its census in 2007 to unify all identity information under a single authority, the National Identification Agency (NIDA), and a unique National Identity Number (NIN). This number is now used for health, education, telecom, banking, electoral lists, social protection programs, and border crossings.⁴⁴⁰⁶ Rwanda's authorities also proposed to create a country-wide DNA database to crack down on crime, raising concerns that the data could be misused by the government and violate international human rights laws.⁴⁴⁰⁷ Rwandan regulations require mandatory SIM card registration and a limit of three cards per national ID per operator. Service providers are required to maintain databases and share information with law enforcement if necessary.

In a country that has bitter memories of genocide along ethnic identity lines, the right to data privacy becomes a crucial issue. The national social protection program, Ubudehe, database, was created in 2001⁴⁴⁰⁸to classify wealth and identify the poorest households using community assessments. The database is interlinked with the national ID number. The lack of transparency on who makes the determination of wealth category and how this impacts an individual's access to opportunities and resources and the extent of stigmatization remains questionable.

A study by the World Health Organization (WHO) on the use of digital technologies to identify vulnerable populations, included Rwanda's CBHI (Community-based health insurance scheme) as a case study. ⁴⁴⁰⁹ WHO concluded that the use of a sophisticated data infrastructure (3MS system) to connect the Ubudehe system to the IREMBO-Rwanda online portal resulted in ease of tracking payments to households, cost savings, and fraud control. In a contrasting study, Algorithm Watch analyzed the Ubudehe case as a prime example of Rwanda's 'centralized, unified and biometric repository of the population."⁴⁴¹⁰ The process of collection, analysis, and interpretation and the source of decision-makers of such categorization lack transparency.

Lethal Autonomous Weapons

In 2019 Rwanda entered into a partnership with World Economic Forum⁴⁴¹¹ to draft a framework for governing drones at scale and foster an ecosystem of unmanned aircraft systems. This decision followed the successful partnership with a startup, *Zipline*, to deliver blood, vaccines, and other medical supplies to rural hospitals in Rwanda, the country decided to

regulate the use of drones. The Rwandan government was the first in the world creating a performance-based regulation focused on safety standards for all drones.⁴⁴¹²

This partnership also resulted in The Advanced Drone Operations Toolkit which provides a modular approach for governments to enable societally important and safe drone projects.⁴⁴¹³ The country is looking to use these technologies to promote agricultural resilience and food security in Rwanda. It has not called for a prohibition on fully autonomous weapons.⁴⁴¹⁴Rwanda is working on another proof-of-concept with the World Economic Forum to apply a framework of ten principles selected from AI ethics and healthcare ethics and interpreted within the context of the use of chatbots in healthcare.⁴⁴¹⁵

In February 2023, Rwanda participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Rwanda, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁴⁴¹⁶ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and

comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."⁴⁴¹⁷

OECD / G20 AI Principles

Rwanda is not a member of the OECD and has not endorsed the OECD AI Principles.⁴⁴¹⁸ The OECD AI Observatory reports the progress of the collaborative work of the Rwanda Ministry of ICT and Innovation (MINICT), and the Rwanda Utilities Regulatory Agency (RURA), The Future Society and GIZ FAIR Forward.⁴⁴¹⁹ According to the Observatory, the national AI policy framework is set to address three OECD AI principles: (1) Investing in AI R&d, (2) Fostering a digital ecosystem for AI, and (3) Providing an enabling policy environment for AI.

UNESCO Recommendation on the Ethics of AI

Rwanda is a member state of UNESCO since November 1962⁴⁴²⁰ and is one of the 193 countries endorsing the Recommendation on the Ethics of AI⁴⁴²¹. According to UNESCO's Artificial Intelligence Needs Assessment Survey, Rwanda has ongoing initiatives to guide the development of AI at national level⁴⁴²². Rwanda is one of 24 countries in Africa that have requested support in the development of policies on AI and one of 21 countries that have requested UNESCO for help in setting standards.⁴⁴²³ The UNESCO report highlights Rwanda's policies and

centers of excellence on AI as policy initiatives completed as of 2022. Strategies, legislation, and ethical guidelines are yet to be implemented.

Rwanda is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.⁴⁴²⁴ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁴⁴²⁵

Evaluation

Rwanda's Vision 2050, the African Union Digital Transformation Strategy, and the SmartAfrica Blueprint, set the framework for the formulation of a national AI strategy. The draft strategy achieved in cooperation with the MINICT, FAIR Forward AI for All and The Future Society set the intent of the country in aligning with the UNESCO Recommendation on the Ethics of AI. An independent AI oversight mechanism could also be a positive step in addressing AI-powered surveillance practices.

Saudi Arabia

National AI Strategy

The Kingdom of Saudi Arabia (KSA)'s AI initiatives are led by the Saudi Data and AI Authority (SDAIA), which reports directly to the Prime Minister and consists of members chosen by the Prime Minister.⁴⁴²⁶ A Royal Decree established the Saudi Data and Artificial Intelligence Authority (SDAIA) in 2019,⁴⁴²⁷ governed by a Board of Directors chaired by the Deputy Prime Minister. The SDAIA has the aim of fostering "the digital ecosystem while also supporting the suite of values-based G20 AI Principles."⁴⁴²⁸

The role of SDAIA is to lead the national trend for data and artificial intelligence to achieve its vision to elevate the Kingdom to leadership within the data-driven economies.⁴⁴²⁹ "Data is the single most important driver of our growth and reform and we have a clear roadmap for transforming KSA into a leading AI and data-driven economy," said Dr. Abdullah bin Sharaf Al Ghamdi, president of SDAIA.⁴⁴³⁰

The SDAIA oversees three organizations: The National Data Management Office (NDMO), the National Information Center (NIC), and the National Center for AI (NCAI). The NDMO is responsible for the regulation of data which includes standardization and regulation of artificial intelligence as well as ensuring compliance. The NIC oversees the operation of government data infrastructure and government analytics. The implementation of the national AI strategy is the main responsibility of the NCAI. This includes facilitating capacity-building, AI innovation, and raising awareness of AI as well as expanding education on AI.^{4431,4432}

The SDAIA developed the National Strategy for Data and Artificial Intelligence (NSDAI), approved by the Saudi High Commissioner on July

7th, 2020⁴⁴³³ and published in August 2020.⁴⁴³⁴ The National Strategy aims to advance the KSA Vision 2030.^{4435,4436} The AI Strategy, also called 'ASPIRE" includes a roadmap includes a multi-phase approach to addressing national priority "a multi-phased approach focused on addressing the national priorities by 2025, building foundations for competitive advantage in key niche areas by 2030, and becoming one of the leading economies utilizing and exporting Data & AI after 2030."⁴⁴³⁷

By 2021, the strategy aims to support national priorities by addressing the urgent needs to enable the transformation of the Kingdom in accordance with the priorities of Vision 2030.⁴⁴³⁸ By 2025, the strategy will focus on building specialized capabilities as the foundation for competitive advantage by specializing in specific areas.⁴⁴³⁹ And by 2030, the strategy will be directed at developing entrepreneurial competition by competing at the international level and joining the leading economies that benefit from data and artificial intelligence.

The NSDAI, also called ASPIRE, has 6 pillars:⁴⁴⁴⁰

- 1. Ambition: Position KSA as the global hub where the best of Data & AI is made a reality, to be amongst the top 15 nations in development and application of AI by 2030.
- 2. Skills: Transform KSA's workforce with a steady local supply of Data & AI-empowered talents. Train and host more than 20,000 data and AI specialists and experts by 2030.
- 3. Policies & Regulations: Enact the most welcoming legislation for Data & AI businesses and talents. Partner with leading AI nations, international organizations and private sector.
- 4. Investment: Attract efficient, stable funding for qualified Data & AI investment opportunities, of over US\$20B in data and AI.

- 5. Research & Innovation: Empower top Data & AI institutions to spearhead innovation and impact creation
- 6. Ecosystem: Stimulate Data & AI adoption with the most collaborative, and forward-thinking ecosystem, of more than 300 active data and AI start-ups, world-class regulatory sandboxes for the development and deployment of AI powered technology

The goals focus on fostering an enabling business and regulatory environment, including education schemes that promote the development of a workforce that fits the industry's new needs. Major educational reforms aim to foster the development of digital skills for jobs in emerging technology including AI.⁴⁴⁴¹

As part of the National Strategy, the Kingdom aimed at the creation of a framework to promote and support the ethical development of Data & AI research and solutions. The framework includes guidelines for the development of data protection and privacy standards."⁴⁴⁴² The National Data management Office (NDMO) worked on the development of policies and regulations related todata privacy and freedom of information, with e Open Data platforms as a priority topic. The regulatory framework will include specifications on data collection, classification, sharing, open data policy, and freedom of information."⁴⁴⁴³

KSA's Deputy Minister Dr. Ahmed AL Theneyan emphasized the importance of regulation in the Kingdom's AI Strategy. This includes education plans that promote the development of a workforce that fits the industry's new needs. The government is undertaking major educational reform to foster the development of digital skills for jobs in emerging technology including AI.⁴⁴⁴⁴

The SDAIA website provides information about the Kingdom's roadmap for AI,⁴⁴⁴⁵ current activities, achievements, and general information about the authority and its work.⁴⁴⁴⁶ Further, the SDAIA

⁴⁴⁴⁶ SDAIA (SDAIA), https://sdaia.gov.sa/?Lang=en

provides a digitized version of the strategy report.⁴⁴⁴⁷ The Vision 2030 Strategy was developed by the Council of Ministers and the Council of Economic Affairs.⁴⁴⁴⁸ The Vision 2030 website sets out broad policy objectives.⁴⁴⁴⁹ There are indicators and targets for every Theme as well as information on the respective initiatives. Vision 2030, however, encompasses many different objectives, AI is only one of many.

Public Participation

The Saudi AI initiatives are led by the Saudi Data and AI Authority, which reports directly to the Prime Minister and consists of members chosen by the Prime Minister.⁴⁴⁵⁰

In the most recent UN e-Government Survey of 2022, Saudi Arabia ranked in Cluster II as *top of the class* in the E-Government Development Index (EGDI), and is placed in position # 31 out of 193 countries in the world in EGDI and 2nd in the GCC.⁴⁴⁵¹ The UN report highlighted the e-participation initiatives at the national and local level and the integration of these programs through the Balady portal. The Balady (Arabic for 'My country') includes information on e-participation functions, including e-consultation, e-information and e-decision making. An interactive platform includes an option of 'your voice is heard', 'self-evaluation' and 'your decision' ⁴⁴⁵²

The Bertelsmann Foundation country report 2022,⁴⁴⁵³ ranked Saudi Arabia #96 out of 137 in the governance index, with low scores in Rule of Law and "political participation. The report indicates that public debate about political issues is minimal.

The Saudi Data & Artificial Intelligence Authority (SDAIA) announced on 17 August 2022 that it had launched a consultation and is seeking public comments on its project entitled Principles of Ethics of

Artificial Intelligence.⁴⁴⁵⁴ In particular, SDAIA explained that artificial intelligence ('AI') ethics principles have been developed with the aim to enhance data governance and AI in order to reduce the negative effects of AI systems and their potential threats. The survey ended on 1 September 2022.

Last 2021, the KSA Communications and Information Technology Commission (CITC) sought public comment on the Digital Content Platform Regulations Document." According to the Commission, "The initiative is aimed to regulate, govern, activate, and motivate digital content platforms to expand and grow. In addition to engage the private sector, empower entrepreneurs as well as attract investments and protect users of digital content platforms." They stated: "The commission calls on interested parties from the Kingdom and abroad as well as the public to submit their views on the consultations document before November 30, 2021. The Digital Content Council and CITC value the importance of engaging interested parties, investors and entrepreneurs in the regulations drafting process."4455

Data Protection

The KSAPersonal Data Protection Law (PDPL) was created by Roval Decree M/19 of September 2021 and Cabinet Resolution No. 98 of September 2021. The Law entered into effect in 2022. In 2023, the Executive Regulations to the PDPL are set to be released.

The PDPL aims "to protect individuals' personal data privacy and regulate organizations' collection, processing, disclosure, or retention of personal data." The law goes into effect on March 17, 2023.4456 The PDPL includes provisions that cover: "the rights of the owner of personal data, the processing of personal data or changing the purpose of processing it, the choice of the processing party, specifying periods for exercising the right to access data, data collection, data content, data destruction, data privacy policy adoption, data collection methods and elements, data disclosure, data modification and update, data retention, data preservation, data leakage or

corruption, evaluation of the effects of data processing, health and credit data processing, personal means of communication, photocopying of official documents, data transfer, system application supervision authority, data records, creating an electronic portal, complaints, violations and penalties, violations review committee, controlling violations, maintaining data secrets."

The PDPL, modeled after the EU's General Data Protection Regulation (GDPR), aims to prevent the misuse of personal data and specifically implements principles such as "purpose limitation and data minimization, controller obligations, including registration and maintenance of data processing records, data subject rights, and penalties for breach of provisions."⁴⁴⁵⁷ The law also aims to align the Kingdom with other countries in the region and with international standards.⁴⁴⁵⁸ In the meantime, the National Data Governance Interim Regulations will remain in place.

The Kingdom issued the E-Commerce Law of 2019 focuses on increased transparency and consumer protection to enhance trust in online transactions, and includes provisions for the protection of personal data of customers ⁴⁴⁵⁹ The Law sets obligations to service providers to protect the personal data of customers in their possession or 'under their control.⁴⁴⁶⁰ The KSA E-Commerce Law prohibits service providers from using customers' personal data for 'unlicensed or unauthorized' purposes and disclosing personal data to third parties without the customer's consent.

The Saudi Arabia National AI Strategy proposed strong rules for data protection and in October 2020, the SDAIA published the National Data Governance Interim Regulations. The regulations cover five topics: "data classification by public entities, protection of personal data, data sharing between public entities, freedom of information requests, and open data. Much of the document, including the regulation on the protection of

⁴⁴⁶⁰ Ibid.

personal data, draws significantly from international regulations such as the European Union's GDPR."⁴⁴⁶¹

For example, individuals will have the "right to be informed of the legal basis and purpose for the collection and processing of their personal data. Personal data cannot be collected or processed without the Data Subject's express consent." Data subjects will also have the "right to access personal data in possession of the Data Controller, including the right to correct, delete, or update personal data, destroy unnecessary data, and obtain a copy of the data in a clear format."

In 2021, the SDAIA initiated the Open Data Strategy 2022-2024 with the aim to "Provide high-value and re-usable Open Data for the nation to increase transparency and foster innovation through collaboration, enabling a data-driven economy."

- With this initiative, the SDAIA also hopes to:⁴⁴⁶²empower governance and regulatory clarity and enable economic growth
- Prioritize and publish accessible, quality, and demanded data sets; and
- Create impact through awareness, innovation as well as international and local partnerships.

Last November 2022, the Saudi Data and Artificial Intelligence Authority (SDAIA) launched⁴⁴⁶³ a public consultation on proposed amendments to the Personal Data Protection Law, promulgated by Royal Decree No. M/19, dated 09/02/1443H (PDPL), which was originally published 24th of September 2021. The public consultation lasted until the 20th of December 2022 and all organizations were invited to submit their comments.

The proposed amendments seek to address a number of critical issues in the current version of the PDPL, including

• The regulatory framework for cross-border personal data transfers and in particular the introduction of the concept of adequacy.

consultation launched on proposed amendments to Personal Data Protection Law (Dec 2, 2022) <u>https://www.globalcompliancenews.com/2022/12/02/https-insightplus-</u>

- The introduction of a further legal basis on which organizations can rely for the processing of personal data (i.e., a similar concept to the controller's legitimate interest in the processing is introduced).
- The introduction of a right for data subjects to data portability.
- Clarification of the statutory threshold that must be met to trigger the need to notify a data breach to the Saudi regulator.

The Saudi Data and AI Authority, was welcomed as a new Observer to the Global Privacy Assembly (GPA) in 2021 until 2025.⁴⁴⁶⁴ The Authority did not endorse the Global Privacy Assembly's Declaration on Ethics and Data Protection (2018);⁴⁴⁶⁵ the Resolution on Accountability in the Development and Use of AI (2020),⁴⁴⁶⁶ the Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology (2022)⁴⁴⁶⁷ or the 2023 GPA Resolution on Generative AI.⁴⁴⁶⁸

Algorithmic Transparency

Saudi Arabia has not yet established regulations to ensure Algorithmic Transparency. The existing Personal Data Protection Law (PDPL) does not include specific provisions on automated decisionmaking. The draft Executive Regulations set to enter into effect in March 2023 do include the right to be informed and right to object to automated decision-making, in addition to the right to be "informed of certain details with respect to the processing of the data subjects' personal data'.⁴⁴⁶⁹

Example of a KSA public entity adopting a culture of protection of personal data, is the Saudi Tourism Authority. In the website privacy statements, the Authority explicitly informs users that no automated decision, including profiling is carried out, and the obligation to notify users "how [they] use automated decision making and/or profiling- when and why."⁴⁴⁷⁰

Human Rights Watch conducted a global investigation of EdTech products that were endorsed by 49 governments for children's online education learning during the Covid-19 pandemic. Indonesia was one of the 49 countries analyzed.⁴⁴⁷¹ Notably, the Saudi Arabian government is among the nine governments included in the study pool that directly built and offered 11 learning apps that had the potential to collect AAID from childre for advertising and monetization. Saudi Arabia iEN was one of the only 12 websites (Out of the 124 websites analyzed) that did not collect and transmit data about children through third-party trackers and preserved their privacy. The iEN app was among the reported 56 government-built EdTech products that sent children's data to AdTech companies, that had the potential to give a third-party company access to a user's 'persistent identifiers (Android Advertising ID), camera.'

Digital Government

Saudi Arabia has been ranked the best in the region and third globally for its digital government transformation by the World Bank's GovTech Maturity Index for 2022.⁴⁴⁷² The Kingdom scored 96.29 percent in its core government systems, 97.69 percent in fostering enablers, 97.93 percent in service delivery, and 96.62 percent in citizen engagement. The Kingdom has excelled with very high performance in its digital government transformation, putting it in the group of "very developed countries", according to the index report. The GTMI was developed as part of the World Bank's GovTech Initiative to measure digital government maturity in four focus areas; supporting core government systems, enhancing service delivery, mainstreaming citizen engagement, and fostering GovTech enablers. Consisting of 198 countries, the average GTMI score increased

from 0.519 in 2020 to 0.552 in 2022 showing a clear overall improvement in economies.

The Kingdom initiated in 2020 a national data bank to consolidate more than 80 government datasets, the equivalent to 30 per cent of the government's digital assets. It is also planning to build one of the largest clouds in the region by merging 83 data centers owned by more than 40 government bodies.⁴⁴⁷³

In 2017 KSA granted the robot, Sophia, citizenship. This is a first worldwide and was met with mixed reactions.⁴⁴⁷⁴ CNBC said, "Sophia has been touted as the future of AI, but it may be more of a social experiment masquerading as a PR stunt."⁴⁴⁷⁵ Bloomberg noted that "Migrant laborers can't become citizens; android Sophia can."⁴⁴⁷⁶

Global AI Summits

The Global AI Summit, held in October 2020, is described as the "world's premier platform for dialogue that brings together stakeholders from the public sector, academia, and private sector, to shape the future of Artificial Intelligence (AI)."⁴⁴⁷⁷ Speakers from across sectors explored the themes of "AI for the Good of Humanity." "AI for good," AI for all:⁴⁴⁷⁸

The President of SDAIA emphasized the importance of working together internationally to ensure the sustainable development of AI^{4479} (...) to accelerate AI for sustainable development in low and middle-income countries and to enable the sharing of AI best practices globally to ensure a more inclusive future powered by AI where no one is left behind."

The World Bank Group and SDAIA set out a new partnership to "help finance, stimulate, and accelerate the development and adoption of artificial intelligence technologies to serve people and development,

initially in Africa, and globally at a later stage" and "to strengthen Saudi Arabia's role as a key contributor in supporting developing countries."⁴⁴⁸⁰ KSA and the International Telecommunications Union (ITU) signed a Memorandum of Understanding to "support global cooperation in the field of artificial intelligence". ITU announced the development of an internationally-recognized system for countries to mobilize resources, providing assistance for official agencies that want to adopt AI technologies, and accreditation to meet economic requirements." Dr. Abdullah bin Sharaf Alghamdi, President of the SDAIA, stated: "The International Telecommunication Union will share the best practices in the field of artificial intelligence with the Kingdom. This will help in shedding light on how to sponsor and support emerging companies and new incubators in the national space, especially as there is no official framework that currently exists to support the AI readiness of countries and international cooperation."⁴⁴⁸¹

The 2nd Global AI Summit, was held from 13 to 15 September 2022 under the theme "Artificial Intelligence for the Good of Humanity."⁴⁴⁸² The Summit examined eight pillars: smart cities, capacity building, healthcare, transportation, energy, culture, environment, and economic mobility. More than 40 memoranda of understanding, declarations, and partnerships were signed between the public and private sectors towards investing in AI technologies, underlining the Kingdom's aspirations to become a global AI hub as part of its development program, Vision 2030.

During the summit, the State Members of the Digital Cooperation Organization (DCO)⁴⁴⁸³ adopted the Riyadh AI Call for Action Declaration (RAICA). The declaration was signed by all members of DCO including Bahrain, Cyprus, Djibouti, Kuwait, Morocco, Nigeria, Oman, Pakistan, Jordan, Rwanda, and Saudi Arabia.⁴⁴⁸⁴ The declaration promotes the use AI technology to benefit transnational and transcontinental communities, advancing the DCO's commitment to identify and address present,

emerging, and future humanitarian issues. The declaration highlights seven key pillars:

- 1. Closing the digital divide,
- 2. Empowering underprivileged communities,
- 3. Promoting digital development,
- 4. Ensuring fairness and non-discrimination,
- 5. Driving AI innovation,
- 6. Combating climate change through AI, and
- 7. Engaging in international collaboration and cooperation.

The International Telecommunication Union (ITU) signed a new agreement with SDAIA, this time to formulate a Global AI Readiness Framework for key socio-economic domains, such as health and smart mobility. The agreement aims to establish best practices for AI regulatory frameworks, and institutional reforms, allowing a variety of tools and activities to explore national AI best practices and countries' readiness.

SDAIA and IBM signed a strategic agreement to drive the adoption of AI across the Kingdom's carbon capture and industrial domains. Riyadh has also committed to achieving net zero emissions by 2060 and supporting multinational action to cut emissions.

The Kingdom announced the "AI Centre for Environment, Water and Agriculture" the first-of-its-kind AI Center for sustainability research and development in the Kingdom of Saudi Arabia and the Middle East . The "AI Centre for Environment, Water and Agriculture" brings together SDAIA and the Ministry of Environment, Water and Agriculture (MEWA) with Google Cloud and partner Climate Engine.

Google Cloud and SDAIA also launched the "Elevate" global program, which aims to reduce the gender gap in the technological sector, especially within AI. The program provides a four-month training program to women in tech and science, empowering them to pursue growing job opportunities in the fields of cloud architecture, data engineering, machine learning engineering, and AI.

SDAIA announced the decision to join the World Bank's Digital Development Partnership (DDP) to help developing countries leverage digital innovations to tackle some of their most challenging issues. By joining the DDP, Riyadh aims to contribute to the overall digital development agenda, ensuring sustainable development for less privileged countries.

AI Safety Summit

In November 2023, Saudi Arabia participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴⁴⁸⁵ Saudi Arabia thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Biometric Identification

Digital Identity initiatives are on the agenda of the Kingdom. In 2021, Saudi Telecom Company (STC) signed an MoU with Thales on ample cooperation that also encompassed Smart Cities, SIMs, IoT and 5G Satellites.⁴⁴⁸⁶ The Ministry of Interior of KSA announced the introduction of a biometric passport with advanced securities, including an electronic processor chip with biometric information for authentication. ⁴⁴⁸⁷ The Jawazat in 2021 released a Digital ID (Muqeem- Iqama) for Expats, within the new electronic application ABsher Individuals. Carrying the Iqama card was compulsory for ex-pats, and subject to fines for not adhering. However, later in the year, the Jawazat clarified that Expats could use the alternate plastic Muqeem version as well.⁴⁴⁸⁸ The Muqeem card is under the Ministry of Interior in cooperation with the National Information Center.

Mass Surveillance

The Kingdom of Saudi Arabia was among the countries studied by the Carnegie Endowment for Peace in 2019 on the use of AI technology for mass surveillance.⁴⁴⁸⁹ According to the research, the Saudi government cooperates with several global technology firms to solidify the digital infrastructure: Huawei to set up Safe cities, Google with cloud servers, BAE with mass surveillance systems, NEC with facial recognition technology, Amazon and Alibaba with cloud computing centers within the smart city project. U.S. and Chinese technology firms also included Briefcam. Gatekeeper, Hikvision, Huawei, Hugslock, IBM, according to the study.⁴⁴⁹⁰

The Saudi Arabia's Makkah Region Development Authority (MRDA) implemented a crowd-control system to protect pilgrims during Hajj, and increase security and safety. The system includes a wristband with digital ID information, special healthcare requirements and location via GPS, and surveillance cameras in real-time to monitor the holy sites.

During the fight against COVID-19, the SDAIA launched two apps: the Tawakkalna⁴⁴⁹¹ app to manage movement permits for government and private sector employees and Tabaud⁴⁴⁹² to notify citizens when they have come in contact with someone who was infected with the virus., MIT Technology Review reported that Tabaud is transparent, voluntary, and minimizes data collection.4493

Smart Cities

The Kingdom initiated a smart city project called Neom. Neom "is an international project that will be led, populated and funded by people from all over the world." Neom will be a "semi-autonomous region with its own government and laws" in northwest Saudi Arabia on the Red Sea and home to one million people by 2030.4494 Neom is envisioned to become a city that "will introduce a new model for urbanization and sustainability," built on five principles: sustainability, community, technology, nature, and livability.4495

In 2022, the head of the Saudi Data and Artificial Intelligence Authority announced the plans of the Kingdom to build 200 smart cities. The plan will involve the Ministry of Municipal and Rural Affairs and Housing, SDAIA, and the Royal Commission for Riyadh City.⁴⁴⁹⁶

Lethal Autonomous Weapons

KSA is not a signatory of the Joint Statement In Lethal Autonomous Weapons of 2022⁴⁴⁹⁷ and has not acceded to the Convention. The country does support the negotiation of a legally-binding instrument on autonomous weapons systems. The country is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁴⁴⁹⁸. The country has participated in some meetings of the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons since 2014.⁴⁴⁹⁹

Saudi Arabia is a member of two groups that support the negotiation of a legally-binding instrument on autonomous weapons systems: The Arab Group within the United Nations and the Non-Aligned Movement (NAM). The NAM issued a statement during the 2020 UN General Assembly on the "need to pursue a legally binding instrument on autonomous weapons systems." The Kingdom has not issued any individual statement in this regard.

Saudi Arabia was a signatory ⁴⁵⁰⁰ of the Call for Action at REAIM (Responsible AI in the Military Domain) on February 2023 in The Hague⁴⁵⁰¹.

Human Rights

Freedom House scored Saudi Arabia as a "Not Free" country (7/100),⁴⁵⁰² With low marks on civil liberties and political rights. Freedom House reports, "Saudi Arabia's absolute monarchy restricts almost all political rights and civil liberties. No officials at the national level are elected. The regime relies on pervasive surveillance, the criminalization of dissent appeals to sectarianism and ethnicity, and public spending supported by oil revenues to maintain power." Internet freedoms in Saudi Arabia remained highly restricted, despite the plans of the authority to digitize and expand internet connectivity across the country, as well as to regulate the online sphere increasingly. ⁴⁵⁰³

Saudi Arabia is a member of the United Nations and hence is bound to commit to uphold human rights standards, including those laid out in the (UDHR).⁴⁵⁰⁴ Saudi Arabia was one of the eight countries⁴⁵⁰⁵ and sole abstainer on the Declaration among Muslim nations, stating that it violated Sharia law.⁴⁵⁰⁶ The Kingdom is not a Party to the International Convention on Civil and Political Rights (ICCPR) and has not acceded or ratified the International Covenant on Economic, Social and Cultural Rights (ICSECR)⁴⁵⁰⁷

The Kingdom of Saudi Arabia is one of the 47 members of the Human Rights Council,⁴⁵⁰⁸ a position that the country lost in 2020, amid the reports of human rights violations in the country.⁴⁵⁰⁹ The monitoring of KSA human rights activities and reports, are under the OHCHR Regional

Office of the Middle East and North Africa (MENA) created in 2002.⁴⁵¹⁰ The Human Rights Commission in KSA was founded in 2005 with " full independence in the exercise of its tasks for which it was established and stipulated in its organization." The Commission states that it "aims to protect and promote human rights in accordance with international human rights in all fields, raising awareness of them and contributing to ensuring that this is implemented in light of the provisions of Islamic Sharia."⁴⁵¹¹

OECD / G20 AI Principles

The Kingdom of Saudi Arabia is a member of the G20, and endorsed the OECD/G20 AI Principles. The country has demonstrated efforts for the implementation of the Principles, through submission of reports to the OECD AI Observatory about implementation, including the National Data and AI Strategy, National Centre of AI, Personal Data Protection Law, Saudi Data and AI Authority.⁴⁵¹² The OECD also makes note of KSA's National Center for AI (NCAI) and highlights SDAIA's work towards trustworthy AI in health.⁴⁵¹³

In 2020, Saudi Arabia hosted the Meeting of the G-20 Digital Economy Ministers in Riyadh, where AI policy was a focal point of discussion. The KSA Digital Economy Task Force released a new report on the implementation of AI cases that mapped to the OECD AI Principles during this meeting.⁴⁵¹⁴ The key agenda set by the Saudi government comprised: "Empowering People, by creating the conditions in which all people – especially women and youth – can live, work and thrive"; "Safeguarding the Planet, by fostering collective efforts to protect our global commons"; and "Shaping New Frontiers, by adopting long-term and bold strategies to share benefits of innovation and technological advancement."^{4515,4516}

We welcome both the G20 Smart Mobility Practices, as a contribution to the well-being and resilience of smart cities and communities, and the G20 Roadmap toward a Common Framework for Measuring the Digital Economy."⁴⁵¹⁷

UNESCO Recommendation on the Ethics of Artificial Intelligence

As a UNESCO member-State since 1946,⁴⁵¹⁸ Saudi Arabia was one of 193 that endorsed the UNESCO Recommendation on AI Ethics in November 2021. The country was one of the States cooperating in the initial draft with experts of Saudi data and Artificial Intelligence Authority (SDAIA).⁴⁵¹⁹

Saudi Arabia is a member of the Groups of Friends of UNESCO, created in February 2022 as an open initiative to support the implementation of the recommendations and to exchange good practices. On October 2022, UNESCO published titled, "Implementation of the Recommendation on Ethics of AI" ⁴⁵²⁰ proposed by the Group of Friends: Cook Islands, Kuwait (chair of the Group of Friends), Liberia, Libya, Morocco, Netherlands, Oman, Saudi Arabia, and Togo.

On October 2022, KSA announced a public consultation for the AI Ethics Principles. The code of ethics was launched during the 2nd World Summit on AI in Riyadh by the Saudi Data and Artificial Intelligence Authority (SDAIA) to be a practical guide to incorporating AI ethics throughout the AI system development life cycle. The release of these principles demonstrates the commitment of KSA to the implementation of the recommendations. Saudi Arabia and the Arab States are part of

after the Summit concluded, including the Leaders Declaration, were no longer available at the G20 website. Fortunately, copies of these documents are archived and available at the Internet Archive, <u>https://web.archive.org</u>]

UNESCO activities in the region to achieve a unified view of Artificial intelligence.⁴⁵²¹

Evaluation

Saudi Arabia has emerged as an influential leader among the G20 countries, the Arab region, and a powerful AI economic force globally. As a member of the Digital Cooperation Organization (DCO), the Kingdom achieved the endorsement of the RAICA Call for Action at the Global AI Summit in 2022 and announced a public consultation for AI Ethics Principles.

The publication of the National Data and AI Strategy, the public consultation for the AI Ethics Principles, and the readily available documentation about related policies and strategies for AI show a positive intent of the country to involve the constituents in this process. The Kingdom is keen to achieve its national vision and strategies related to adopting artificial intelligence technologies, encouraging research, development and innovation, raising awareness and promoting economic growth to achieve the desired prosperity and development.

Areas of opportunity exist in the endorsement of international agreements in the area of Data Protection. The enactment of the new Personal Data Protection Law and Regulations addresses the rights related to automated decision-making, however, specific algorithmic transparency laws are yet to be formulated. While Saudi Arabia was accepted as an Observer member of the Global Privacy Assembly, the absence of endorsement of the Global Privacy Assembly (GPA) resolutions is still an area of attention. Independent oversight of AI policy is another necessary next step. Reports about the use of mass surveillance mechanisms are areas of concern.

⁴⁵²¹ UNESCO, *Towards a common Artificial Intelligence strategy for Arab States: Digital Inclusion Week 2021*, (Dec 11, 2021), https://www.unesco.org/en/articles/towards-common-artificial-intelligence-strategy-arab-states-digital-inclusion-week-2021

Singapore

National AI Strategy

Singapore launched its first National AI Strategy in 2019, with the objective for Singapore to be a leader in developing and deploying scalable, impactful AI solutions, in key sectors of high value and relevant to its citizens and businesses, by 2030. An updated Strategy (NAIS 2.0) was launched in 2023 to address new challenges and uplift Singapore's collective economic and social potential over the next three to five years.⁴⁵²² The Strategy is part of Singapore's Smart Nation plan, which aims to "transform Singapore through technology".⁴⁵²³ The "vision is that a digitalfirst Singapore is one where a Digital Government, Digital Economy and Digital Society harness technology to effect transformation in health, transport, urban living, government services and businesses."

NAIS 2.0 outlines Singapore's ambition and commitment to building a trusted and responsible AI ecosystem, driving innovation and growth through AI, and empowering its people and businesses to understand and engage with AI.⁴⁵²⁴ In summary, Singapore's strategy over the next few years is:⁴⁵²⁵

- (1) To orchestrate Industry, Government, and public research performers around meaningful use cases and problem statements to transform Singapore's economy and society, steering efforts toward developing select peaks of excellence that can deliver outsized impact to Singapore and the lives of Singaporeans.
- (2) To attract more top-tier researchers and engineers to work with and from Singapore, grow the pool of tech workforce charged with scaling novel AI solutions, and nuture a confident AI user base of enterprises and workers.

⁴⁵²² Smart Nation Singapore, *National Artificial Intelligence Strategy 2 to uplift Singapore's social and economic potential*, https://www.smartnation.gov.sg/media-hub/press-releases/04122023/

⁴⁵²³ Smart Nation Singapore, *National Artificial Intelligence Strategy* (2019), https://www.smartnation.gov.sg/initiatives/artificial-intelligence/

⁴⁵²⁴ Smart Nation Singapore, *National Artificial Intelligence Strategy 2 to uplift Singapore's social and economic potential*, https://www.smartnation.gov.sg/media-hub/press-releases/04122023/

⁴⁵²⁵ Smart Nation Singapore, *National Artificial Intelligence Strategy 2 to uplift Singapore's social and economic potential*, https://www.smartnation.gov.sg/media-hub/press-releases/04122023/

(3) To avail compute and data for AI innovation, provide a trusted environment where people can engage with AI with confidence and contribute to international AI developments.

In terms of ethics, NAIS 2.0 says that Singapore advocates for the responsible and ethical use of AI. Singapore had established an Advisory Council on the Ethical Use of AI and Data in 2018,⁴⁵²⁶ one year before releasing the first National AI Strategy. The Council is chaired by the former Attorney-General of Singapore V.K. Rajah SC, and its members comprise "international leaders in AI such as Google, Microsoft and Alibaba; advocates of social and consumer interests; and leaders of local companies who are keen to make use of AI."⁴⁵²⁷ The Council advises the Government on issues arising from the commercial deployment of AI that may require policy or regulatory attention, and industry on the responsible development and deployment of AI.⁴⁵²⁸ The Council also assists the Government in developing voluntary codes of practice to guide corporate decision-makers, monitoring consumers' acceptance of such data use, and making recommendations on ethical and legal issues that may require policy or regulatory changes.⁴⁵²⁹

AI Governance Regulation

Singapore appears to be taking a sectoral approach towards AI governance regulation, with regulatory agencies adopting soft-law approaches, preferring to issue non-binding guidelines and

⁴⁵²⁷ Infocomm Media Development Authority, Composition of the Advisory Council on the Ethical use of Artificial Intelligence ("AI") and Data,

⁴⁵²⁸ Smart Nation Singapore, *National Artificial Intelligence Strategy* (2019), p. 64 https://www.smartnation.gov.sg/initiatives/artificial-intelligence/

recommendations.⁴⁵³⁰ NAIS 2.0 says that it will establish a common platform for regulatory agencies to coordinate on AI developments in their sectors, and share best practices in governing AI.

The Info-communications Media Development Authority (IMDA) and Personal Data Protection Commission (PDPC) have been the most active in respect of AI governance regulation.⁴⁵³¹ In 2019, the Personal Data Protection Commission Singapore (PDPC) released the Model AI Governance Framework at the World Economic Forum.⁴⁵³² The Model Framework was the first in Asia to provide details and readily implementable guidance to private sector organizations to address key ethical and governance issues when deploying AI solutions. In the foreword to the second edition of the Framework, in 2020, S. Iswaran, the Minister for Communications and Information then, noted that "[o]ver the last two years, governments and international organisations have begun issuing principles, frameworks and recommendations on AI ethics and governance. (...) The Model Framework's unique contribution to the global discourse on AI ethics lies in translating ethical principles into practical recommendations that organisations could readily adopt to deploy AI responsibly. (...) This edition incorporates the experiences of organisations that have adopted AI, and feedback from our participation in leading international platforms, such as the European Commission's High-Level Expert Group and the OECD Expert Group on AI. Such input has enabled us to provide clearer and effective guidance for organisations to implement AI responsibly."4533

The Model Framework is based on two guiding principles: "Decisions made by AI should be explainable, transparent and fair"; "AI systems should be human-centric." These principles are operationalized through recommendations grouped into four clusters:

(1) "Internal governance structures and measures", with "clear roles and responsibilities in your organization"; "SOPs to monitor and manage risks"; and "staff training."

⁴⁵³⁰ Darren Grayson Chng & Joe Jones, *Global AI Governance Law and Policy:*

Singapore, IAPP, (Feb, 2024), https://iapp.org/resources/article/global-ai-governance-singapore/

⁴⁵³¹ Darren Grayson Chng & Joe Jones, *Global AI Governance Law and Policy: Singapore*, IAPP, (Feb, 2024), https://iapp.org/resources/article/global-ai-governancesingapore/

⁴⁵³² IMDA and PDPC Singapore, *Model AI Governance Framework, 2nd Edition* (2020), <u>https://www.pdpc.gov.sg/-/media/files/pdpc/pdf-files/resource-for-</u>organisation/ai/sgmodelaigovframework2.pdf

⁴⁵³³ Ibid., p. 8.

(2) "Determining the level of human involvement in AI-augmented decision-making" with an "appropriate degree of human involvement" and "minimi[zation of] the risk of harm to individuals."

(3) "Operations management", which includes "minimi[zing] bias in data and model" and a "risk-based approach to measures such as explainability, robustness and regular tuning."

(4) "Stakeholder interaction and communication" which consists in "mak[ing] AI policies known to users" and "allow[ing] users to provide feedback, if possible."

Regarding its scope of application, the Model Framework Preamble clarifies that the "Model Framework is:

a. Algorithm-agnostic. It does not focus on specific AI or data analytics methodology. It applies to the design, application and use of AI in general. b. Technology-agnostic. It does not focus on specific systems, software or technology, and will apply regardless of development language and data storage method.

c. Sector-agnostic. It serves as a baseline set of considerations and measures for organisations [whether public or private] operating in any sector to adopt. (...)

d. Scale- and Business-model-agnostic. It does not focus on organisations of a particular scale or size. It can also be used by organisations engaging in business-to-business or business-to-consumer activities and operations. or any other business model."4534

In January 2020, the IMDA and the PDPC, in partnership with the World Economic Forum Centre for the Fourth Industrial Revolution. released an "Implementation and Self-Assessment Guide for Organisations" (ISAGO). The ISAGO complements the Model Framework by allowing organizations to assess the alignment of their AI governance practices with the Model Framework, while providing industry examples and practices.4535

In October 2020, the Singapore Computer Society (SCS), supported by IMDA, launched the AI Ethics and Governance Body of Knowledge (AI E&G BoK). The AI E&G BoK is expected to "guide the development of curricula on AI ethics and governance and form the basis of future training and certification for professionals." The document underlines that "accountability, transparency, explainability, and audibility must become

⁴⁵³⁴ Ibid., p. 10.

Organisation/AI/SGIsago.pdf

the hallmark of all AI solutions" and that "ethical guidelines should not be an afterthought but integrated as part of standards and expectations from the onset of any AI-related effort."⁴⁵³⁶

On 25 May 2022, at the World Economic Forum's Annual Meeting in Davos, "Singapore's Minister for Communications and Information, Josephine Teo, announced the launch of A.I. Verify, a voluntary Artificial Intelligence (AI) governance testing framework and toolkit that verifies the performance of an AI system against the developer's claims and with respect to internationally accepted AI ethics principles."4537 A.I. Verify is currently available as a Minimum Viable Product (MVP). The aim of A.I. Verify is to build trust in AI through transparency.⁴⁵³⁸ With the MVP, Singapore hopes to achieve three objectives. First, to enable trust-building between businesses and their stakeholders. A.I. Verify helps companies be more transparent about what their AI systems can or cannot do and keeps stakeholders better informed of what the AI systems they interact with are capable of. Developers and owners can verify the claimed performance of their AI systems against a set of principles through standardized tests. A.I. Verify packages a set of open-source testing solutions together, including a set of process checks into a Toolkit for self-assessment. Areas covered include: (1)Transparency: On the use of AI to achieve what stated outcome; Understanding how the AI model reaches a decision; Whether the decisions predicted by the AI show unintended bias; (2) Safety and resilience of AI systems; (3) Accountability and oversight of AI systems. Second, to facilitate the interoperability of AI governance frameworks. This is helpful for businesses that offer AI-enabled products and services in multiple markets. Lastly, to contribute to the development of international AI standards.⁴⁵³⁹ Singapore participates as a member of ISO/IECJTC1/SC42 on artificial intelligence.4540

⁴⁵³⁹ OECD.AI Policy Observatory, *Singapore's A.I. Verify builds trust through transparency*, <u>https://oecd.ai/en/wonk/singapore-ai-verify</u>

⁴⁵³⁷ OECD.AI Policy Observatory, *Singapore's A.I. Verify builds trust through transparency*, https://oecd.ai/en/wonk/singapore-ai-verify

⁴⁵³⁸ IMDA Singapore, Singapore launches world's first AI testing framework and toolkit to promote transparency; Invites companies to pilot and contribute to international standards development (May 25, 2022), <u>https://www.imda.gov.sg/Content-and-News/Press-Releases-and-Speeches/Press-Releases/2022/Singapore-launches-worldsfirst-AI-testing-framework-and-toolkit-to-promote-transparency-Invites-companies-topilot-and-contribute-to-international-standards-development</u>

⁴⁵⁴⁰ https://www.iso.org/committee/6794475.html

The Pilot Testing Framework and Toolkit does not define ethical standards, and validates AI system developer's/owner's claims about the approach, use, and verified performance of their AI systems. It does not guarantee that any AI system tested under the Pilot Framework will be free from risks or biases or is completely safe.

In June 2023, at the ATxAI conference in Singapore, Minister Teo announced the launch of the AI Verify Foundation (AIVF) to "harness the collective power and contributions of the global open source community to develop AI testing tools for the responsible use of AI".⁴⁵⁴¹

On October 31, 2023, the IMDA and AI Verify Foundation unveiled the "first of its kind" Generative AI Evaluation Sandbox.⁴⁵⁴² The sandbox is intended to aid model developers, app developers and third party testers. Companies such as Google, Microsoft, Anthropic, IBM, Deloitte and EY joined the sandbox.

In January 2024, the IMDA issued for public consultation a draft Model AI Governance Framework for Generative AI.⁴⁵⁴³ It was developed with the AIVF. It identifies nine dimensions to support a comprehensive and trusted AI ecosystem: accountability, data, trusted development and deployment, incident reporting, testing and assurance, security, content provenance, safety and aligning research & development, and AI for public good.

In February 2024, IMDA and Enterprise Singapore launched the GenAI Sandbox for small and medium-sized enterprises (SMEs), to enable local SMEs greater access to GenAI.⁴⁵⁴⁴

On 1 March 2024, the PDPC published the Advisory Guidelines on use of Personal Data in AI Recommendation and Decision Systems.⁴⁵⁴⁵ It aims to (1) provide certainty by clarifying how the Personal Data Protection Act (PDPA) applies when organisations use personal data to develop and train AI systems, and (2) to provide assurance to consumers by setting out baseline guidance and best practices for organisations on how to be transparent about whether and how their AI systems use personal data to make recommendations, predictions, or decisions.

In the financial services sector, in 2018, the Monetary Authority of Singapore (MAS) and the financial industry co-created a set of principles to guide the responsible use of AI, focusing on Fairness, Ethics, Accountability, and Transparency (FEAT).⁴⁵⁴⁶ The principles have established a standard across the financial sector in Singapore. Subsequently in November 2019, the MAS announced that it had partnered the financial industry to create a framework for the responsible use of AI and Data Analytics (AIDA), known as Veritas.⁴⁵⁴⁷ Veritas aims to provide financial institutions with a verifiable way to incorporate the FEAT principles into their AIDA solutions, and will comprise open source tools that can be applied to different business lines.⁴⁵⁴⁸ The FEAT principles and Veritas are part of Singapore's National AI Strategy.⁴⁵⁴⁹ In May 2020, MAS

announced the scope of Veritas Phase 1 and the consortium members, and in January 2021, the Phase 2 consortium members.⁴⁵⁵⁰

In the health sector, in October 2021, the Ministry of Health (MOH) published the Artificial Intelligence in Healthcare Guidelines (AIHGle), which it co-developed together with the Health Sciences Authority (HSA) and the Integrated Health Information Systems (IHiS), now known as Synapxe. AIHGle aims to share good practices with AI developers (e.g., manufacturers, companies) and AI implementors (e.g., healthcare institutions – hospitals, clinics, laboratories), and complements the existing HSA regulatory requirements of AI Medical Devices.⁴⁵⁵¹

Public Participation

"The formation of the Advisory Council [on the Ethical Use of AI and Data] is one of three structured, interlinked initiatives to support the engagement of stakeholders to collaboratively develop a trusted and vibrant AI ecosystem and position Singapore as a leading hub for AI."⁴⁵⁵² The Council assists the IMDA in engaging stakeholders on issues that support the development of AI governance capabilities and frameworks, including engaging ethics boards of commercial enterprises on ethical and related issues arising from private sector use of AI and data, consumer representatives on consumer expectations and acceptance of the use of AI, and members of the private capital community on the need to incorporate ethical considerations in their investment decisions into businesses which develop or adopt AI.⁴⁵⁵³

Public consultations were also held for the initial version of Singapore's Model AI Governance Framework⁴⁵⁵⁴, AI Verify, the draft

Similarly, ISAGO and its Compendium of Use Cases were developed in close consultation with the industry, with contributions from over 60 organizations, as well as input from the Council.⁴⁵⁵⁵

The AI E&G BoK, which contains 25 case studies /use-cases, was contributed to by 30 authors from both the public and private sectors.⁴⁵⁵⁶

The Smart Nation and Digital Government Office (SNDGO), under the Prime Minister's Office (PMO), provides publicizes information about key Smart Nation projects and government digital transformation on its website.⁴⁵⁵⁷

Data Protection and Algorithmic Transparency

The Personal Data Protection Act (PDPA) was enacted in 2012. It entered into force in stages, with the main data protection rules coming into force in July 2012. A suite of amendments to the PDPA was passed in November 2020. They started taking effect in phases, from February 2021.

The PDPA governs the collection, use, disclosure, and care of personal data in Singapore. It provides a baseline standard of protection for personal data.⁴⁵⁵⁸ It complements sectoral laws and regulations such as the Banking Act and Insurance Act. The PDPA recognizes both the right of individuals to protect their personal data, and the need of organizations to collect, use, or disclose personal data for "legitimate and reasonable

purposes".⁴⁵⁵⁹ It aims to strengthen Singapore's position as a trusted hub for businesses, by regulating the flow of personal data among organizations.⁴⁵⁶⁰

The PDPA applies to private sector organizations. ⁴⁵⁶¹ Data management in the public sector is governed by the Public Sector (Governance) Act and the Government Instruction Manual on Infocomm Technology & Smart Systems Management.⁴⁵⁶²

The PDPC was established in January 2013 to administer and enforce the PDPA.⁴⁵⁶³ The PDPC is currently part of the IMDA.⁴⁵⁶⁴

The functions of the Commission include: "to administer and enforce" the PDPA; "to promote awareness of data protection in Singapore"; "to provide consultancy, technical, managerial or other specialist services relating to data protection"; "to conduct research and studies and promote educational activities relating to data protection"; "to represent the Government internationally on matters relating to data protection"; and "to manage technical cooperation and exchange in the area of data protection with other organisations, including foreign data protection authorities and international or inter-governmental organisations, on its own behalf or on behalf of the Government."

In its 2018 "Discussion Paper on Artificial Intelligence (AI) and Personal Data – Fostering Responsible Development and Adoption of AI", the PDPC noted that "[t]he benefits and risks of AI have been the subject of great public debate. On the one hand, AI has the ability to boost productivity, transform businesses, grow the economy and enhance people's lives. On the other hand, AI may displace jobs and pose ethical challenges such as social profiling." The PDPC recommended for AI

systems to be human-centric, and for decisions to be made by or with the assistance of AI should be explainable, transparent, and fair.⁴⁵⁶⁵

Singapore shares publicly available datasets⁴⁵⁶⁶ from 70 public agencies, API libraries, and resources for application developers using these data sets. On the commercial side, the IMDA introduced a "Trusted Data Sharing Framework" ⁴⁵⁶⁷ as a guide to establishing safeguards and baseline "common data sharing language" and a systematic approach to understanding the broad considerations for establishing trusted data sharing partnerships. A Data Regulatory Sandbox⁴⁵⁶⁸ is offered to businesses to pilot innovative use of data in a safe environment, in consultation with the IMDA and the PDPC. The IMDA also provides a Data Protection Trustmark (DPTM), a voluntary enterprise-wide certification for organizations to demonstrate accountable data protection practices.⁴⁵⁶⁹

AI-assisted Surveillance

Certain statutes in Singapore deal with aspects of privacy, but there is no discrete right to privacy that is protected under Singapore's Constitution.⁴⁵⁷⁰ Singapore has not ratified the International Covenant on Civil and Political Rights⁴⁵⁷¹ which protects against arbitrary or unlawful interference with privacy, family, home, or correspondence. Government agencies are not able to access data held by the private sector except where the access has been authorised by law or by a court order.⁴⁵⁷² If a person believes that their personal data has been accessed unlawfully by any

⁴⁵⁷² See for example section 20 of the Criminal Procedure Code 2010.

government agency, they can apply to the court for a judicial review of the agency's decisions or actions.⁴⁵⁷³ The court may make a Mandatory Order obliging the government agency to exercise its duties, perform specific acts, or consider exercising a discretionary power as required by law; or a Prohibiting Order, an injunctive order directed at a prospective act or decision that would be unlawful; or a Quashing Order that quashes or sets aside illegal decisions or acts.⁴⁵⁷⁴ The Public Order Act⁴⁵⁷⁵'s definition of assembly and its requirements for a permit for such assembly has recently extended to online conferences. The government's use of online surveillance tools and power to act without the need for legal authorization is a matter of concern with regard to citizens' ability to exercise their rights of freedom of speech, expression, and assembly.

In 2003, Singapore launched SingPass. The National Digital Identity initiative⁴⁵⁷⁶ is a personal authentication system that allows users to access various Government services. It is a move to digitalize all transactions in public and private spaces and share data. The app does provide the users with the option to use a 6-digit passcode if users do not want to utilize biometrics such as fingerprint or face recognition.

In 2020, Singapore introduced TraceTogether,⁴⁵⁷⁷ a Covid-19 contact tracing application, advising that data would "never be accessed unless the user tests positive" for the virus.⁴⁵⁷⁸ In January 2021, the Minister of State for Home Affairs clarified that under the Criminal Procedure Code, the Singapore Police Force can order anyone to produce data for the purpose of a criminal investigation, including TraceTogether data.⁴⁵⁷⁹ In February

⁴⁵⁷⁹ Smart Nation Singapore, *Clarification on the Usage of TraceTogether* Data, https://www.smartnation.gov.sg/media-hub/parliament/20210105/

2021, the Covid-19 (Temporary Measures) (Amendment) Bill, restricted the use of personal contact tracing data in criminal investigations to only serious crimes, such as murder and terrorism, was passed in Parliament.⁴⁵⁸⁰

According to the Singapore government, TraceTogether's technical design precludes its use as a surveillance tool.⁴⁵⁸¹ The Singapore government has explained that the data is always stored in a person's device in an encrypted form, and is automatically deleted after 25 days.⁴⁵⁸² It is only extracted when the person tests positive for Covid-19 and upon request by the health authorities to upload the data for contact tracing purposes.⁴⁵⁸³

On 9 February 2023, the Ministry of Health announced that the use of contact tracing systems including TraceTogether, were being stepped down due to Covid-19 measures being eased.⁴⁵⁸⁴

Facial Recognition

In August 2021, the Minister of State for Home Affairs advised that Singapore aims to have more than 200,000 police cameras by at least 2030, more than doubling its current use.⁴⁵⁸⁵

In September 2021, Singapore police started trialing patrol robots for surveillance, to detect "undesirable social behaviors" and displaying messages to educate the public on proper behavior.⁴⁵⁸⁶

In May 2022, the PDPC issued the "Guide on Responsible Use of Biometric Data in Security Applications" to help organizations such as Management Corporation Strata Title (MCST), building/premise owners, and security services companies, to ensure the responsible use of security cameras and biometric recognition systems to safeguard individuals' biometric data where it is collected, used or disclosed.⁴⁵⁸⁷

Singapore utilizes ABBSS (Automated Biometrics & Behavioral Screening Suite) at immigration and border checkpoints. The system is a network of cameras with facial recognition capabilities that can also be deployed as a body-worn cameras for officers. It is used both to build a biometrics database of travelers and detect travelers wanted for various offenses.⁴⁵⁸⁸ By 2025, Singapore plans to establish a fully automated immigration clearance system for all travelers, including first-time social visitors.⁴⁵⁸⁹ This includes using AI for retinal and face-recognition procedures which could potentially remove the need for passports. Towards this, Singapore has passed the Immigration (Amendment) Bill in September 2023 authorising the disclosure of passenger information to airport operators to facilitate end-to-end biometric clearance.⁴⁵⁹⁰

Online Disinformation

The Protection from Online Falsehoods and Manipulation Act⁴⁵⁹¹ was introduced in 2019. Its aim is "to prevent the electronic communication in Singapore of false statements of fact, to suppress support for and counteract the effects of such communication, to safeguard against the use of online accounts for such communication and for information manipulation, to enable measures to be taken to enhance transparency of online political advertisements, and for related matters."⁴⁵⁹² The law applies

⁴⁵⁹² Ibid., Introductory section.

to digital content that is accessible in Singapore, whether it is an online post, text, or chat message by a person or a bot. The law does not clearly define what is meant by "falsehood" and gives power to any government minister to declare that information posted online is "false" and instruct the correction or removal of such content if she thinks it is in the public interest to remove it.¹¹ A person found guilty of the offense can be fined or imprisoned.

In October 2021, Singapore Parliament passed the Foreign Interference (Countermeasures) Bill (FICA).⁴⁵⁹³ "The legislation provides measures to prevent, detect and disrupt foreign interference in our domestic politics conducted through (i) hostile information campaigns (HICs) and (ii) the use of local proxies." Among the tools and tactics used by these "hostile foreign actors" "to interfere in domestic political discourse, incite social tensions and undermine our sovereignty", are mentioned: "Using bots on social media platforms or taking out advertisements to artificially boost the reach of these messages;" "Using inauthentic accounts and bots in combination to engineer an artificial sense that there is strong public support or opposition to a certain position or sentiment;" "Inciting other users to "troll", harass or intimidate a particular target."⁴⁵⁹⁴

The Bill was adopted after a 10-hour debate and concerns were raised over the lack of public consultation.⁴⁵⁹⁵ Under the new law, the Minister for Home Affairs is granted powers to issue directions to the Internet, social media service providers, and website operators to provide user information, block content, and remove applications. Authorities can also require politically significant persons to declare foreign affiliations. Recipients of directions or declarations may apply to the Minister for Home Affairs to vary or cancel the direction or declaration. If their application is refused, they may appeal to an independent Reviewing Tribunal which is chaired by a sitting Supreme Court Judge, and which has the authority to overrule the Minister.⁴⁵⁹⁶

Harmful Content

The Ministry of Communications and Information tabled the Online Safety (Miscellaneous Amendments) Bill for its first reading in Parliament on 3 October 2022. The Singapore Parliament passed the Online Safety Bill on 9 November 2022⁴⁵⁹⁷, and the Act came into effect on 1 February 2023.⁴⁵⁹⁸

The aim of the Act is to enhance online users' safety, particularly children, and to curb the spread of harmful content on Online Communication Services accessible to users in Singapore.⁴⁵⁹⁹ The Act covers online communication services "generated by a machine."⁴⁶⁰⁰ Harmful content includes: sexual content, violent content, suicide and self-harm content; cyberbullying content; content endangering public health; content facilitating vice and organized crime⁴⁶⁰¹ Designated providers of such Online Communication Services will have to comply with Codes of Practice issued by the IMDA. On July 17, 2023 the IMDA issued the "Code of Practice for Online Safety" mean to enhance online safety and "curb the spread of harmful content" with "additional protection for children". The "Online Safety Code" establishes processes for managing harmful content, provides tools for users, applies age-based policies, and puts forth a plan for annual online safety reporting. The first annual report is expected to be published on IMDA's website in 2024⁴⁶⁰².

The Online Criminal Harms Act (OCHA) was passed in July 2023 and came into effect on 1 February 2024.⁴⁶⁰³ It enables the Singapore government to deal more effectively with online activities that are criminal in nature, for example scams and online child sexual exploitation.⁴⁶⁰⁴

Lethal Autonomous Weapons

On February 16-17, 2023, the Dutch Government organized the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM) in The Hague. Singapore endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁶⁰⁵

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁴⁶⁰⁶ The Republic of Korea will host the second REAIM summit in 2024.⁴⁶⁰⁷

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour⁴⁶⁰⁸ of resolution L.56⁴⁶⁰⁹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Singapore has endorsed the Universal Declaration of Human Rights. However, it has not adopted several international human rights conventions such as the International Covenant on Civil and Political Rights,⁴⁶¹⁰ reasoning that it is not in a position to fully implement the obligations contained in these international treaties.

Singapore has an Inter-Ministerial Committee on Human Rights but no national human rights institution. In March 2021, the Minister for Home Affairs K Shanmugam said in Parliament that "regardless of which community, what your social, religious or sexual beliefs are, everyone will be protected here and I have said so categorically."⁴⁶¹¹ He said that action could be taken under the Maintenance of Religious Harmony Act "if a religious group, using religion, attacks a non-religious group such as LGBT groups or individuals".⁴⁶¹² In November 2022, the parliament voted to repeal a decades-old law criminalizing same-sex sexual relations, however, lawmakers also voted to amend the constitution aimed at preempting any changes to the legal definition of marriage as exclusively between a man

and a woman.⁴⁶¹³ Apart from this, there are no legal protections against discrimination based on sexual orientation or gender identity.⁴⁶¹⁴

With a score of 47 out of 100, the Freedom House defines Singapore as partly free. In the context of political rights (electoral process, political pluralism and participation, functioning of government) Singapore scores 19 out of 40. When it comes to civil liberties (freedom of expression and belief, associational and organizational rights, rule of law, personal autonomy and individual rights) it reaches 28 out of 60⁴⁶¹⁵. According to Freedom House, "Singapore's parliamentary political system has been dominated by the ruling People's Action Party (PAP) and the family of current prime minister Lee Hsien Loong since 1959. The electoral and legal framework that the PAP has constructed allows for some political pluralism, but it constrains the growth of credible opposition parties and limits freedoms of expression, assembly, and association."

OECD / G20 AI Principles

Singapore is not a member of the OECD or the G20. However, the country is well aware of the OECD/G20 AI Principles. The OECD noted several significant examples of positive AI practices in Singapore.⁴⁶¹⁶ There is, for example, the Advisory Council on the Ethical Use of AI and Data, described above. The OECD also notes that the AI Governance Framework incorporates all of the OECD AI Principles.

Singapore is a founding member of the Global Partnership on AI (GPAI), built around a shared commitment to the OECD AI Principles.⁴⁶¹⁷ The Centre for AI & Data Governance in Singapore was established to develop international thought leadership and advance scholarship and discourse on legal, ethical, regulatory, and policy issues arising from the use of AI and data and inform the implementation of the G20 AI Principles.

UNESCO Recommendation on the Ethics of AI

Singapore was one of the 193 member states that adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence at the General Conference in November 2021.⁴⁶¹⁸ Since the adoption, Singapore has yet to make official announcements concerning the implementation of the UNESCO Recommendation on the Ethics of AI.

Other International Cooperation on AI

NAIS 2.0 says that Singapore is committed to being a serious and reliable international partner on AI, and that Singapore will continue to contribute to international AI developments by:

- (1) anchoring key bilateral relationships with selected partners from government and industry,
- (2) demonstrating alignment with key international fora and supporting worthwhile platforms, and
- (3) sharing Singapore's experience and curating meaningful partnerships for capacity building.

The PDPC is not a member of the Global Privacy Assembly (GPA), but IMDA and the PDPC have previously participated in the GPA as nonmembers.⁴⁶¹⁹ Singapore did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁶²⁰ the 2020 GPA Resolution

Framework on Digital Data Governance to facilitate the harmonization of data regulations.⁴⁶²⁸

In February 2024 during the 4th ASEAN Digital Ministers' Meeting (ADGMIN), ASEAN issued the ASEAN Guide on AI Governance and Ethics, which seeks to establish common principles for trustworthy AI and suggests bests practices for how to implement trustworthy AI in ASEAN.⁴⁶²⁹

Singapore has entered into bilateral and multilateral treaties with other economies, called Digital Economy Agreements (DEAs), which establish digital trade rules and digital economy collaborations between the participating economies.4630 So far, various DEAs have been signed with Chile, New Zealand, Korea, Australia, and the UK. Some of these DEAS contain AI modules promoting the adoption of ethical governance frameworks for AI and, where appropriate, the alignment of governance and regulatory frameworks.4631 For example, the Korea-Singapore Digital Partnership Agreement (KSDPA) contains a module requiring both countries to promote the adoption of AI governance and ethics frameworks that support the trusted, safe, and responsible use of AI-based technologies.4632

Evaluation

Singapore is one of the leaders in providing guidance for the ethical development of AI, providing regulatory sandboxes for testing responsible practices, and developing risk-based governance frameworks. It is focused on the voluntary adoption of these methods for both public and private use cases and did not pass any legislation to regulate artificial intelligence. Concerns exist regarding the use of AI technologies for surveillance purposes. In recent years, the Singapore Parliament enacted laws to regulate online content due to risks associated with harmful content and

disinformation. Concerns exist however with regard to the extent of the powers confer to public authorities without proper oversight or accountability, apart from judicial review. Singapore's data protection agency has significant responsibilities for data protection and a growing role in AI policy. Questions do remain about independent oversight of government AI systems. While Singapore has adopted the UNESCO Recommendation on the Ethics of AI, it has yet to make public announcements concerning the implementation of the UNESCO Recommendation.

Slovenia

National AI Strategy

In May 2021, the Slovenian Government adopted the National program promoting the deployment of AI in the Republic of Slovenia by 2025 (NpAI).⁴⁶³³ The NpAI lays out a detailed workplan for social and economic development, which includes specific indicators, guidance on measuring progress, and instruments for implementation and financing.⁴⁶³⁴ The NpAI is part of the Slovenian Development Strategy 2030,⁴⁶³⁵ which takes into account the digital transformation of society. "The fourth industrial revolution, which is characterised by the digital economy and the development of sensors, robotics and artificial intelligence, is creating new models of business, work and jobs, which demands the development of new knowledge and skills and adaptation in numerous areas of economy, society and the environment."⁴⁶³⁶

The overarching strategy document for the development of the information society is the Digital Slovenia Strategy. "The strategy envisages actions aimed at eliminating the greatest development gaps in order to accelerate the digital transformation in all areas, increase the competitiveness of the country and the ICT industry, achieve the digitalisation of society, develop and build the digital infrastructure, improve cybersecurity, and promote the development of an inclusive information society."⁴⁶³⁷ The objectives of the NpAI include the establishment of efficient support to research and deployment of artificial intelligence by enhanced and systematic networking of relevant stakeholders; the strengthening of technological and industrial capabilities in the field of artificial intelligence; answering to socio-economic changes such as changes in the labour market and education system; providing an

appropriate ethical and legal framework and increasing citizens' trust in $\mathrm{AI.}^{4638}$

The Digital Slovenia Strategy is in the process of being renewed. The 2030 Strategy is expected to focus on digital inclusion, digital public services, smart digital transformation to achieve Society 5.0 (data, artificial intelligence...). "In addition, the strategy will also cover related content, such as a supportive environment, digital rights, better regulation, innovation, and a proposal for a Slovenian governance model for this area."⁴⁶³⁹

In her speech at the 2022 Ministerial Council of the Global Partnership on AI, the Minister Stojmenova Duh stated, "In Slovenia, we believe in human rights and a responsible approach to the development, deployment and use of artificial intelligence."⁴⁶⁴⁰ With the NpAI, Slovenia commits to high quality, transparent and ethical AI in which citizens have confidence. The National programme mentions that a legal and ethical framework will be established in cooperation with European partners, based on existing European guidelines governing the ethical and legal aspects of the development and use of AI. It will be based on the universal values of the European Union and on human rights and fundamental freedoms, with an emphasis on privacy, dignity, the right to a fair trial, the protection of consumer rights and non-discrimination. The National programme also refers to the principles of human action and control, technical robustness and security, privacy and data management, transparency, diversity, fairness, social and environmental well-being, and accountability-

The NpAI was elaborated following Slovenia's commitment to work with other EU Member States "on the most important issues raised by Artificial Intelligence, from ensuring Europe's competitiveness in the research and deployment of AI, to dealing with social, economic, ethical and legal questions." Slovenia signed the 2018 EU Declaration on Cooperation on Artificial Intelligence.⁴⁶⁴¹ The NpAI is also consistent with

EU Digital Services Act

As an EU member state, Slovenia shall apply the EU Digital Services Act (DSA).⁴⁶⁵² The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.⁴⁶⁵³ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.⁴⁶⁵⁴

https://ec.europa.eu/commission/presscorner/detail/en/ip_23_4953

⁴⁶⁵² Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

⁴⁶⁵⁴ European Commission, Commission sends request for information to Meta under the Digital Services Act (March 1, 2024), <u>https://digital-</u>

strategy.ec.europa.eu/en/news/commission-sends-request-information-meta-underdigital-services-act-1

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation⁴⁶⁵⁵ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.⁴⁶⁵⁶ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force⁴⁶⁵⁷ on the 2024 European elections.

EU AI Act

In the second half of 2021, Slovenia assumed the Presidency of the Council of the EU.⁴⁶⁵⁸ In July 2021, discussing about the EU AI Act, the Minister of Justice, Marjan Dikaucic "said that the existing rules cannot provide answers to all the challenges brought by artificial intelligence, which is why it is necessary to take further steps in the creation of a legal

framework."⁴⁶⁵⁹ After the first debate on the European Parliament's proposed AI Act, the Slovenian Digital Minister Boštjan Koritnik affirmed that the EU AI act should "serve as a model across the globe, in the same vein as the general data protection regulation, GDPR, in the area of protection of personal data."⁴⁶⁶⁰ The final text of the EU AI Act⁴⁶⁶¹ might tell a slightly different story.

The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the final version of the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI

⁴⁶⁶¹ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

⁴⁶⁶⁰ Euronews, *EU's artificial intelligence law should serve as 'model across the globe'* <u>https://www.euronews.com/2021/10/14/eu-s-artificial-intelligence-law-should-serve-as-</u> model-across-the-globe

systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
 - using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
 - exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
 - social scoring systems;
 - predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
 - facial recognition databases based on untargeted scraping;
 - inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
 - biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
 - real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.⁴⁶⁶² However, the ban concerns only real-time

⁴⁶⁶² EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.⁴⁶⁶³

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

⁴⁶⁶³ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and

beyond.⁴⁶⁶⁴ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.⁴⁶⁶⁵

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies,

⁴⁶⁶⁴ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023),

https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office⁴⁶⁶⁶ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

⁴⁶⁶⁶ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Slovenia will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact⁴⁶⁶⁷ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond

⁴⁶⁶⁷ European Commission, *AI Pact*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

The protection of personal data is guaranteed by the Slovenian Constitution.⁴⁶⁶⁸ Article 38 of the Constitution ensures purpose limitation and includes the right of access to the collected personal data and the right to judicial protection.⁴⁶⁶⁹

Since Slovenia is an EU Member State, the General Data Protection Regulation (GDPR)⁴⁶⁷⁰ is directly applicable in Slovenia and to Slovenians. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."⁴⁶⁷¹ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. In July 2022, the European Commission sent a reasoned opinion to Slovenia for failing to implement important obligations under the GDPR, as well as for not making it possible for the Slovenian Information Commissioner to use all the corrective powers under the GDPR.⁴⁶⁷²

In December 2022, Slovenia adopted a new Personal Data Protection Act (PDPA), adapting the national legislation to the GDPR. The new legislation entered into force in January 2023 and replaces the 2004 Data Protection Act. Under the PDPA, the Slovenian Information Commissioner has now the authority to impose fines pursuant to the GDPR. The PDPA also introduces rules on the age limit for a child's consent (15

years old), use of CCTV and biometric data as well as an obligation to keep processing logs. 4673

Regarding the activities of law enforcement authorities, Slovenia transposed the EU Data Protection Law Enforcement Directive (LED).⁴⁶⁷⁴ "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."⁴⁶⁷⁵ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁴⁶⁷⁶ The LED also requires for Member States, including Slovenia, to enable data subjects to exercise their rights via national data protection authorities.⁴⁶⁷⁷

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

⁴⁶⁷⁷ Article 17 of the LED.

Slovenia is also a member of the Council of Europe. It signed but has not yet ratified⁴⁶⁷⁸ the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴⁶⁷⁹

The Slovenian Human Rights Ombudsman (since 2002) and the Information Commissioner (since 2007) are both members of the Global Privacy Assembly. However they have not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁶⁸⁰ the 2020 GPA Resolution on AI Accountability,⁴⁶⁸¹ the 2022 GPA Resolution on Facial Recognition Technology⁴⁶⁸² or the 2023 GPA Resolution on Generative AI.⁴⁶⁸³

Algorithmic Transparency

Slovenia is subject to the GDPR. Slovenians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴⁶⁸⁴ Furthermore, in June 2023, Slovenia ratified Convention 108+ which also provides for algorithmic transparency.⁴⁶⁸⁵

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴⁶⁸⁶ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."4687

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."⁴⁶⁸⁸

Facial Recognition

A report by the Greens/EFA of the European Parliament,⁴⁶⁸⁹ revealed that Slovenia uses facial recognition technologies for 'ex-post identification' in its criminal investigations.⁴⁶⁹⁰ In Slovenia, the use of facial recognition technology by the police was legalized five years after they had started using it.⁴⁶⁹¹ The Slovenian police confirmed to the Slovenian Information Commissioner that they had used Face Trace (a facial recognition software⁴⁶⁹²) back in 2014.⁴⁶⁹³ The Commissioner's office raised the issue several times in the years 2015-2019.⁴⁶⁹⁴

Subsequent to the enactment of the 2017 Police Tasks and Powers Act, which permits the use of biometric and facial recognition tools by law enforcement authorities,⁴⁶⁹⁵ the Human Rights Ombudsman and the Information Commissioner brought a formal complaint against the Act before the constitutional court of Slovenia.⁴⁶⁹⁶ The complaint mentioned the excessive data gathering powers granted to the police through the use of drones and automated systems to recognize license plates, the uncontrolled use of passenger name records at airports, and the lack of sufficient

⁴⁶⁹⁶ Annual Report of the Human Rights Ombudsman of The Republic of Slovenia 2019 (n 52)

protection for citizens with no criminal record.⁴⁶⁹⁷ However, the complaint did not include the use of facial recognition by law enforcement authorities. The reasoning of the Slovenian Human Rights Ombudsman for the exclusion of facial recognition from the complaint was that this was an exceptional measure which would not justify recourse to the constitutional court.⁴⁶⁹⁸

In 2021, the Information Commissioner announced the completion of its investigation regarding the police's use of the Face Trace system.⁴⁶⁹⁹ The investigation concluded that even though Face Trace is a biometric data processing-based system, it does not yield identification. Accordingly, the Information Commissioner deemed the use of Face Trace in compliance with data protection law.

As a consequence, the 2017 Police Tasks and Powers Act is still in force and the Slovenian police still uses facial recognition systems in the framework of their activities.

The Slovenian Information Commissioner is a member of the European Data Protection Board (EDPB), in charge of issuing "guidelines, recommendations and best practices in order to ensure that the Member States apply the LED consistently."⁴⁷⁰⁰ In 2022, the EDPB produced guidelines on the use of facial recognition technologies in the area of law enforcement.⁴⁷⁰¹ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law

Enforcement Directive. Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."⁴⁷⁰²

Lethal Autonomous Weapons

According to Human Rights Watch, Slovenia has expressed its concerns with regard to "the growth of new weapon technologies" and stressed the "necessity for human control over all autonomous weapons". However, Slovenia has not commented on calls to ban fully autonomous weapons.⁴⁷⁰³

In October 2022, Slovenia was one of the 70 states which endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.⁴⁷⁰⁴ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."⁴⁷⁰⁵

In February 2023, Slovenia participated in the international summit on the responsible application of artificial intelligence in the military domain. At the end of the Summit, Slovenia endorsed a joint call for action on the responsible development, deployment and use of artificial

intelligence in the military domain.⁴⁷⁰⁶ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."4707

Slovenia also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November $2023.^{4708}$

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-

stakeholder community.⁴⁷⁰⁹ The Republic of Korea will host the second REAIM summit in 2024.⁴⁷¹⁰

At the 78th UN General Assembly First Committee in 2023, Slovenia voted in favour⁴⁷¹¹ of resolution L.56⁴⁷¹² on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to Freedom House, Slovenia receives high scores for Political Rights and Civil Liberties for a combined score of 95/100 in 2023. The report notes that the government "generally operates with openness and transparency."⁴⁷¹³ Slovenia is a signatory to major human rights treaties.⁴⁷¹⁴

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and

Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."⁴⁷¹⁵

Council of Europe Convention on AI

Slovenia contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁴⁷¹⁶

OECD / G20 AI Principles

Slovenia is a member of the OECD and has endorsed the OECD AI Principles.⁴⁷¹⁷ The Slovenian AI National Program expressly refers to the OECD AI Principles on Artificial Intelligence, which promote artificial intelligence that is innovative and trustworthy and respects human rights and democratic values.⁴⁷¹⁸

The OECD has mentioned Slovenia's Digital Coalition and AI4Slovenia as an example of national AI polices that are shaping an enabling environment for AI.⁴⁷¹⁹ Slovenia is also a founding member of the Global Partnership on AI.⁴⁷²⁰

⁴⁷²⁰ GPAI: Community, https://gpai.ai/community/

In January 2023, the Government of the Republic of Slovenia adopted the Strategy for the Cooperation of the Republic of Slovenia with the OECD until the end of 2025. The aim of the Strategy is to use benchmarking and good practices from OECD Member countries to support domestic reform processes to achieve the digital and green transformation and realise Slovenia's development potential. With the Strategy, "Slovenia pursues the objective of digital transformation based on the protection of human rights and fundamental freedoms, paying attention to gender equality and respect for the rights of older persons, and responding effectively to demographic changes. Slovenia will continue to strengthen its role in the regulation and ethical use of artificial intelligence. It continues to support the work of the OECD Artificial Intelligence Observatory based on the signed Memorandum of Cooperation. It will participate in the OECD Trust Survey and work with OECD experts to develop a sustainable public administration strategy to 2030 and to implement the digital transformation of the public administration."4721

UNESCO Recommendation on the Ethics of AI

As a UNESCO member state, Slovenia has endorsed the UNESCO Recommendation on the Ethics of AI.

In March 2021, Borut Pahor, President of the Republic of Slovenia, and Audrey Azoulay, Director-General of UNESCO, inaugurated the International Research Centre on Artificial Intelligence (IRCAI), as a Category 2 centre under the auspices of UNESCO in Ljubljana, Slovenia.⁴⁷²² The IRCAI is designed to be a communication platform for the collection and dissemination of good practices and case studies on the use and deployment of AI in society.⁴⁷²³ The IRCAI focuses on advancing research on the use of AI in order to help achieve the UN Sustainable

Development Goals.⁴⁷²⁴ The core research functions of the Centre will be guided by its four international scientific committees on: AI and Climate; AI and Education that will focus on AI algorithms that can make Open Educational Resources more accessible and easier to use; AI and Assistive Technologies that will highlight the potential of using AI technologies to assist persons with disabilities; and AI and Healthcare that will focus on the use of AI in vaccine development processes.⁴⁷²⁵

In February 2024, Slovenia hosted the Global Forum on the Ethics of AI. The Global Forum was organized by the Ministry of Digital Transformation under the patronage of UNESCO. This shows Slovenia's clear commitment to the implementation of the UNESCO Recommendation and to human-centric AI.⁴⁷²⁶

Evaluation

In recent years, Slovenia has had a significant influence over the development of AI policy in Europe due to its Presidency of the Council of the European Union during the second half of 2021, its AI collaboration with UNESCO, and its work in support of the Council of Europe AI expert group, the CAHAI.⁴⁷²⁷ Slovenia has also recently ratified Council of Europe Convention on AI. While the national AI strategy and other technologyrelated workplans pledge to implement a legislative and regulatory regime that also protects fundamental rights, Slovenia has been slower than most of its European counterparts in updating its data protection regime. The entry into force in January 2023 of the new Data Protection Act, and with it the possibility for the Slovenian Information Commissioner to impose fines provided for the GDPR is a positive step. With the adoption of the EU AI Act, Slovenia shall designate a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously. Concerns remain with regard to surveillance practices, especially by law enforcement authorities.

South Africa

National AI Strategy

There is currently no dedicated national artificial intelligence (AI) strategy in South Africa. Rather, AI, conceived as "the bedrock of the Fourth Industrial Revolution (4IR)",⁴⁷²⁸ is addressed within the framework of an integrated Fourth Industrial Revolution (4IR) strategy currently in the making.

In 2019, President Cyril Ramaphosa established the Presidential Commission on the Fourth Industrial Revolution. In January 2020, the 4IR Commission released a diagnostic report which "sets out a vision for chartering the way forward for South Africa in the Fourth Industrial Revolution."⁴⁷²⁹

The diagnostic report explains that "[t]he task of contemplating a 4IR strategy and related institutional arrangements is principally about contemplating solutions to South Africa's development challenges." "South Africa's vision for development is premised on resolving the nation's historical scars, expressed as the 'triple scourge': Poverty, Unemployment and Inequality."⁴⁷³⁰ The 4IR Commission has thus "adopted an amended definition of the 4IR that ensures a human-centric approach."⁴⁷³¹ "The quest of the Commission is thus related to two key questions: South Africa's economic competitiveness and the wellbeing of her people."⁴⁷³²

The 4IR Commission is "a lever, activated by the State, to provide leadership for all society in understanding and navigating what will be a

⁴⁷³² The Presidency of the Republic of South Africa, *Diagnostic report of the Presidential Commission on the 4th Industrial Revolution* (Oct. 23, 2020), p. 14, https://www.ellipsis.co.za/wp-content/uploads/2020/10/201023-Report-of-the-

fundamentally altered future (...) The role of the 4IR Commission is thus to clearly articulate the role of the State as well as all institutional actors and citizens in their capacity as equal protagonists in the story of our future."⁴⁷³³

The 4IR Commission conducted a comparative analysis of some national strategies which address "the nature and implication of the 4IR for their societies."⁴⁷³⁴ Most of these strategies focus on AI. On this basis, the 4IR Commission identified "8 Dimensions of Strategy": "Preparation Through Experimentation"; "Regulation & Ethics"; "Human Capital Development"; "Global Leadership"; Technological Clarity & Commitment"; "Private Sector Capabilities"; "Service Delivery."⁴⁷³⁵

As for Ethics & Regulation, the 4IR Commission clarifies that "a focus on Regulation, Ethics, and Cultural aspects of the internet is key, not only to create an enabling policy environment to support private and non-governmental organisations as well as the state but to ensure ethical and transparent use of these new technologies."⁴⁷³⁶

Regarding service delivery, the 4IR Commission notes that "4IR strategies are typically based on and respond to service delivery challenges as well as a social and human development / wellbeing priorities. Particularly with respect to the government, there is a strong emphasis on e-government; using technology to improve mobility around cities and to enhance the quality and deployment of health services."⁴⁷³⁷

Key implementing projects include "government digitisation" and "clustered proposed programmes" such as a National Integrated Social Protection Information System, Smart ID, use of vernacular languages in technologies, a drone unit in the police; digital court solutions, and digital visa integrated platform force.⁴⁷³⁸

https://www.dpme.gov.za/keyfocusareas/Provincial%20Performance%20Publication/Doc uments/PC4IR%20SIP%20Presentation_National%20Departments%20Consultation%20 2021.pdf

The 4IR Commission mentions in its diagnostic report that "the State is central to planning and coordination in the 4IR. A high-level interdepartmental multi-stakeholder governance and coordination structure is understood to be the institutional custodian of the 4IR strategy."⁴⁷³⁹ This task is currently being carried out by the Department of Communications and Digital Technologies (DCDT).⁴⁷⁴⁰ The DCDT came into operation on 1st April 2020.⁴⁷⁴¹

One of the DCDT's key missions is to develop the "PC4IR Strategic implementations Plans (PC4IR SIP) to realise the recommendations of the 4IR Commission Report."⁴⁷⁴² To this end, the 4IR Project Management Office (4IR PMO) was established within the DCDT.⁴⁷⁴³ The 4IR PMO is operational since April 2020. The 4IR SIP is currently under consideration by Ministers and needs to be approved by the Cabinet.

The PC4IR SIP is based on three principles which will inform 4IR programs:

- (1) "Human centred: Develop People and Skills for a 4IR ecosystem; Promotion of Human Rights; Cybersecurity (human security, which reinforces human rights); Environmental protection
- (2) Economic focus (Economic development and inclusivity); International competitiveness
- (3) Technological advancement (Technological transformation, invention and innovation); Build sustainable infrastructure"⁴⁷⁴⁴

https://www.dpme.gov.za/keyfocusareas/Provincial%20Performance%20Publication/Doc

Key objectives include the establishment of a 4IR Strategic Implementation Coordination Council and of an artificial intelligence institute, as well as the review and amendment of relevant policy and legislation.⁴⁷⁴⁵

On 30 November 2022, the former DCDT Minister, Khumbudzo Ntshavheni, launched the Artificial Intelligence institute of South Africa and AI hubs at the University of Johannesburg and at the Tshwane University of Technology.⁴⁷⁴⁶ In December 2022, the DCDT Minister, together with representatives of these two universities and the incoming United Nations (UN) Under-Secretary General and Rector of the UN University, explained in an opinion article the pivotal role of the AI institute in the 4IR strategy. The AI institute is meant as "an innovation engine for public and private sectors in line with the PC4IR." "The institute will focus on research and development, as well as implementation capabilities in AI" in order to "develop solutions to South African and African challenges."⁴⁷⁴⁷

"The institute will also deal with arising legal and ethical issues. This is important. Failure to reflect on and provide possible solutions to legal and ethical questions will render the advances in AI capacities and applications meaningless and futile." The AI institute will scientifically "support the development, review and amendment of legislation as envisaged by the PC4IR."⁴⁷⁴⁸ In this regard, Letlhokwa George Mpedi, the

Vice-Chancellor and Principal of the University of Johannesburg, has been calling for "legislation that specifically speaks to AI."4749

The 4IR SIP is to be aligned with existing key strategic development plans, primarily the National Development Plan and the Medium Term Strategic Framework 2019-2024 which is the implementation plan and monitoring framework for achieving the National Development Plan 2030 priorities. One of these priorities consists in achieving improved information and communication technologies (ICTs) by 2030.4750 Part of the strategy is to enhance ICTs through a national e-strategy that places South Africa on the international stage with international governance agencies such as the International Telecommunications Union (ITU) and the World Trade Organization (WTO).⁴⁷⁵¹ The aim is to bridge the digital divide, boost economic activity, and improve the education, health, transport and labor sectors, fostering growth in digital technologies as part of the growth in ICTs.⁴⁷⁵²

The aim is also for the South Africa's 4IR strategy to contribute in the development of a similar strategy at regional level. The African Union (AU) Commission has developed a comprehensive Digital Transformation Strategy for Africa.⁴⁷⁵³ Its purpose is to foster an "integrated and inclusive digital society and economy in Africa that improves the quality of life of Africa's citizens", "breaks the digital divide", and ensures "continental ownership with Africa as a producer and not only a consumer in the global economy."4754 The AUC strategy envisions harmonization of policies, legislations and regulations as key. The strategy also includes the design of "policies based on a human-centred and holistic approach that takes into account the local context and cross-cutting issues relevant to all stages of policy design and implementation. Special attention should be given to

minorities and vulnerable groups."⁴⁷⁵⁵ The AU Commission also expresses its support to the ratification of the Convention on Cyber Security and Personal Data Protection, also known as the Malabo Convention,⁴⁷⁵⁶ the African Union Convention of Cyber Security and Personal Data Protection, as well as making it "consistent with standards such as the modernized convention 108, the General Data Protection Regulation."⁴⁷⁵⁷

When South Africa assumed the position of AU Chairperson for the year 2020, President Ramaphosa called for the creation of an AI Forum within the African Union to discuss how to address AI "in uniformity."⁴⁷⁵⁸

In 2021, in line with the objectives of the 4IR SIP,⁴⁷⁵⁹ South Africa led the development of Smart Africa's Artificial Intelligence Blueprint for Africa,⁴⁷⁶⁰ which is "a precursor for the African continent to become a global player within the digital technology state affairs and a huge contribution to positioning Africa within the 4th Industrial Revolution." The aim is for the AI Blueprint "to set-up the African member states towards developing policies, strategies and plans that would ensure growth and prosperity within the digital revolution space."⁴⁷⁶¹

A key chapter in the AI Blueprint is dedicated to AI and ethics. It acknowledges that "there is a need to ensure that ethics are integrated into AI systems to minimize structural discrimination and bias that can emerge from biased training data. Repercussions can lead to discrimination and impairment of rights in a myriad of circumstances including housing, medical care, education, and human rights. (...) In designing their national AI Strategy, countries should clearly elaborate the AI ethical framework. Among key aspects are safe and trustworthy use and development of AI"; "autonomous intelligent systems should be designed in ways that enable their decisions to be explained and humans to be accountable for their use." "Audits and certification schemes should monitor compliance of artificial

intelligence systems with engineering and ethical standards, which should be developed using multi-stakeholder and multilateral approaches. Life and death decisions should not be delegated to machines. AI systems should be designed taking into account such key concepts as people, the planet, prosperity and peace. According to a recent study of 84 sets of AI ethics guidelines, the most common principles included are transparency, justice & fairness, responsibility, non-maleficence, privacy, beneficence, freedom & autonomy, sustainability, dignity, and solidarity." After noticing that current AI ethics initiatives have been led by Western efforts, the AI Blueprint emphasizes that "participation from African nations is crucial and should be further encouraged."⁴⁷⁶²

In February 2022, the AU Executive Council, requested the AU Commission to pursue the development of a continental AI strategy. And in May 2022, the AU High-Level Panel on Emerging Technologies (APET) reiterated the need for a continental AI strategy that "would enable African countries to enhance policymaking and implementation and improve stakeholder engagement on AI-related challenges and opportunities."⁴⁷⁶³ The APET already organized two expert consultative meetings and is due to release an "AI for Africa report."⁴⁷⁶⁴

Public Participation

After the publication of the PC4IR Report in October 2020, a draft consultative process took place with regard to the 4IR SIP in October-November 2020, followed by stakeholder consultations from February 2021 until July 2021. The PMO finalized its feedback analysis in August 2021 and submitted the final draft of the 4IR SIP in October 2021.⁴⁷⁶⁵

In 2018, South Africa's Department of Cooperative Governance and Traditional Affairs, in partnership with a private company, launched GovChat, an online citizen engagement AI-powered application which

promotes accountable local governance⁴⁷⁶⁶ and allows citizens to engage with their local councilors.⁴⁷⁶⁷

Data Protection

The right to privacy is guaranteed under section 14 of the 1996 Constitution of South Africa.

South Africa's data protection law, the Protection of Personal Information Act (POPIA) got the Parliament's assent in 2013. However, it is following the COVID-19 outbreak and the proliferation of the use of personal data in relation to digital services, that POPIA took effect on 1 July 2020, and became fully enforceable one year later.⁴⁷⁶⁸ Of relevance is also the Cybercrimes Act which entered into force on 1 December 2021. Criminal offences include hacking; unlawful interception, interference or acquisition of data; malicious or harmful communications.

Not only does the preamble of POPIA recall the constitutional nature of the right to privacy but it mentions that the right to privacy includes "a right to protection against the unlawful collection, retention, dissemination and use of personal information."⁴⁷⁶⁹

POPIA provides that "a data subject may not be subject to a decision which results in legal consequences for him (...), or which affects him (...) to a substantial degree, which is based solely on the basis of the automated processing of personal information intended to provide a profile of such person including his (...) performance at work, on his (...) credit worthiness, reliability, location, health, personal preferences or conduct."⁴⁷⁷⁰ Exceptions to this principle apply based on a law or code of conduct which provides for appropriate measures to safeguard "the legitimate interests of data subjects" or based on an authorization granted by the South African Information Regulator when the public interest is at stake such as the "interests of national security", "the prevention, detection and prosecution of offences" or "important economic and financial interests of a public body"⁴⁷⁷¹

⁴⁷⁶⁸ Protection of Personal Information Act No.4 of 2013,

⁴⁷⁶⁹ Ibid.

⁴⁷⁷⁰ Section 71(1) of POPIA, <u>https://popia.co.za</u>

⁴⁷⁷¹ See Section 37 of POPIA, <u>https://popia.co.za</u>

Unless a code of conduct has been issued,⁴⁷⁷² POPIA requires a responsible party to "obtain prior authorisation from the Information Regulator if that responsible party intends to process any unique identifiers of data subjects (i) for another purpose than intended at collection, and (ii) with the aim of linking the information with information processed by other responsible parties". "Unique identifier" can refer for instance to an identity number or employee number.⁴⁷⁷³

Such is also the case if that responsible party plans to "(b) process information on criminal behaviour or on unlawful or objectionable conduct on behalf of third parties; (c) process information for the purposes of credit reporting; or (d) transfer special personal information (...) or the personal information of children (...) to a third party in a foreign country that does not provide an adequate level of protection for the processing of personal information"⁴⁷⁷⁴

POPIA also established the South African Information Regulator.⁴⁷⁷⁵ The Information Regulator is an independent body responsible for monitoring and enforcing compliance with POPIA by public and private bodies. The Regulator is subject to the law and is accountable to the national assembly.⁴⁷⁷⁶

In October 2022, the Information Regulator, responsible for approving industry codes of conduct,⁴⁷⁷⁷ approved the Banking Association of South Africa's Code of Conduct for the Processing of Personal Information by the Banking Industry.⁴⁷⁷⁸ The Code regulates the use of automated decision-making in "profiling, work performance, credit worthiness, location, health, reliability, personal preferences, or conduct."⁴⁷⁷⁹ The Code requires banks to adopt measures and safeguards for automated decision-making processes, such as identification, lawfulness, transparency, privacy notices/statements, and the ability of

users to raise complaints in case of dissatisfaction with the result of an automated decision. 4780

The Information Regulator is a member of the Global Privacy Assembly (GPA) since 2017. The Information Regulator has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁷⁸¹ the 2020 GPA Resolution on AI Accountability,⁴⁷⁸² the 2022 GPA Resolution on Facial Recognition Technology⁴⁷⁸³ or the 2023 GPA Resolution on Generative AI.⁴⁷⁸⁴

A specific issue identified in the 2022 AU Data Policy Framework⁴⁷⁸⁵ and pointed out by some renown researchers such as Emma Ruttkamp-Bloem and Christiaan Viljoen in the South African context is the absence of representation of a large part of the South African society in terms of data sets. In a 2022 study,⁴⁷⁸⁶ these researchers reported that the digital divide is primarily a data divide which is fostered by, and increases the social divide, thus resulting in potential bias and discrimination. Emma Ruttkamp-Bloem and Christiaan Viljoen noted that the fact that at least 50% of South Africans do not have a digital footprint is worrying in this context.⁴⁷⁸⁷ The practice of data-driven AI in a country like South Africa cannot be extracted from relations of social power. Policymakers should not

underestimate the inherent South African threat to fairness practices in machine learning both in terms of existing bias in training data and modelling practices and the socially powered situations in which predictions are interpreted and implemented or acted upon.

Algorithmic Transparency

According to POPIA, algorithmic transparency is ensured to the extent that "appropriate measures must (a) provide an opportunity for a data subject to make representations about a decision" regarding the sole use of automated decision making and "(b) require a responsible party to provide a data subject with sufficient information about the underlying logic of the automated processing of the information relating to him or her to enable him or her to make representations in terms of paragraph (a)."⁴⁷⁸⁸

The 2022 Code of Conduct for the Processing of Personal Information by the Banking Industry also provides for algorithmic transparency.⁴⁷⁸⁹

EdTech and Tracking Children

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including South Africa, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

Some EdTech products, such as Extramarks, apparently exclusively designed for children's use and with an estimated 100.000 users in South Africa, targeted children with behavioral advertising. Extramarks sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce

modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.⁴⁷⁹⁰

Lethal Autonomous Weapons

South Africa is a signatory to the United Nations Convention on Certain Conventional Weapons.⁴⁷⁹¹ At the 2018 Convention on Certain Conventional Weapons (CCW) meeting, South called for a ban on Lethal Autonomous Weapons Systems (LAWS) on behalf of the African Group.⁴⁷⁹² At the 2021 CCW meeting , South Africa advocated for the adoption of a legally binding instrument on LAWS: "It is high time for further work on LAWS, to move towards concrete negotiations and more active diplomatic efforts. Should the GGE's further work result in the adoption of an instrument on LAWS that is of a political nature only and as a final product, with no prospect of elevating further work to the level of a legally binding instrument, South Africa would regard the process as having been a failure."⁴⁷⁹³

South Africa was not among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force." ⁴⁷⁹⁴.

Human Rights

South Africa maintains a score of 79/100 and a status of "Free" according to the Freedom House Freedom in the World 2022 rating system.⁴⁷⁹⁵

South Africa is a party to the African Charter on Human and Peoples' Rights. In its 2019 Declaration of Principles on Freedom of Expression and Access to Information in Africa, the African Commission on Human and Peoples' Rights (ACHPR), in charge of interpreting the Charter,⁴⁷⁹⁶ called on states to ensure that the "development, use and application of AI, algorithms and other similar technologies by internet intermediaries are compatible with international human rights law and standards, and do not infringe on the rights to freedom of expression, access to information and other human rights."⁴⁷⁹⁷

In February 2021, the ACHPR adopted Resolution 473 having recognized that emerging technologies such as AI have a bearing on the enjoyment of human rights under the African Charter on Human and Peoples' Rights (the African Charter).⁴⁷⁹⁸ The ACHPR called on state parties to the African Charter, South Africa included, to:

- Ensure that the development and use of AI, robotics and other new and emerging technologies is compatible with the rights and duties in the African Charter and other regional and international human rights instruments, in order to uphold human dignity, privacy, equality, non-discrimination, inclusion, diversity, safety, fairness, transparency, accountability and economic development as underlying principles that guide the development and use of AI, robotics and other new and emerging technologies.

https://www.achpr.org/sessions/resolutions?id=504; See University of Pretoria, Centre for Human Rights welcomes African Commission resolution on emerging technologies, https://www.chr.up.ac.za/tech4rights-news/2451-press-statement-centre-for-humanrights-welcomes-african-commission-resolution-on-emerging-technologies; see also,

CAIDP, African Commission on Human and People's Rights Resolution 473 Statement of The Center for AI and Digital Policy (CAIDP) (Apr. 5, 2021),

- Ensure transparency in the use of AI technologies, robotics and other new and emerging technologies and that decisions made in the use of AI technologies, robotics and other new and emerging technologies are easily understandable to those affected by such decisions.
- Work towards a comprehensive legal and ethical governance framework for AI technologies, robotics and other new and emerging technologies so as to ensure compliance with the African Charter and other regional treaties.

In September 2022, the Special Rapporteur on Freedom of Expression and Access to Information in Africa, Ourveena Geereesha Topsy-Sonoo, recalled that, with Resolution 473, the Commission, "recognizing the need to better understand the legal, ethical, safety and security opportunities and challenges raised by AI, robotics and other new and emerging technologies in Africa, observed in its Resolution (...) that new and emerging technologies present both opportunities and perils for the promotion and protection of human and peoples' rights in Africa. The Commission further observed that whilst making government services and information digital enhances transparency and accessibility and artificial intelligence allows for a number of benefits in the society, it has to be accompanied by human rights considerations and a bridging of the digital divide." The Special Rapporteur also declared that "State Parties are encouraged to develop domestic legal frameworks regulating AI and egovernance; ensure these technologies are developed and used transparently; and ensure that imported AI and e-governance systems align with the African Charter."4799

OECD / G20 AI Principles

Although South Africa is not a member of the Organization for Economic Co-operation and Development (OECD), as a member of the G20, it has endorsed the G20 human-centered AI principles⁴⁸⁰⁰ that draw from the OECD AI Principles. The G20 AI principles highlight challenges in the use of AI including privacy, security, ethical issues, new digital divides and the need for AI capacity building.

As a Key Partner of the OECD, South Africa contributes to the OECD's work in a sustained and comprehensive manner, including in the field of technology and innovation.⁴⁸⁰¹

UNESCO Recommendation on the Ethics of Artificial Intelligence

South Africa endorsed the 2021 UNESCO Recommendations on the Ethics of AI.⁴⁸⁰² In September 2022, South Africa's Minister of Communications and Digital Technologies, Minister Khumbudzo Ntshavheni, expressed commitment to regulating AI in an address at the UNESCO-Southern Africa sub-Regional Forum on Artificial Intelligence (SARFAI) which took place in Windhoek, Namibia. The SARFAI provided a platform for the discussion of the sustainable development-oriented and ethical use of artificial intelligence, as steps for implementation of the UNESCO Recommendation in the region.

South Africa endorsed the resulting 2022 Windhoek Statement on Artificial Intelligence in Southern Africa.⁴⁸⁰³ The Windhoek Statement calls for the establishment of a Southern African coordination mechanism for the implementation of the UNESCO Recommendation. The proposal is set to be submitted to the 2023 Joint Meeting of SADC Ministers responsible for Education and Training and Science, Technology and Innovation, for discussion and adoption, with a clear action plan, timelines, and a monitoring and evaluation framework.⁴⁸⁰⁴

South Africa is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.⁴⁸⁰⁵ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁴⁸⁰⁶

Evaluation

South Africa is a leading figure in the development of a humancentered approach at regional and international level. South Africa has been

⁴⁸⁰¹OECD, South Africa and OECD, <u>https://www.oecd.org/southafrica/south-africa-and-oecd.htm#:~:text=In%202007%20the%20OECD%20Council,%2C%20China%2C%20In dia%20and%20Indonesia</u>.

a key player in the development of Smart Africa's Artificial Intelligence Blueprint for Africa which calls for ensuring that ethics are integrated into AI systems to minimize structural discrimination and bias. The 2021 AI Blueprint is a first step towards the adoption of a continental AI strategy. By endorsing the 2022 Windhoek Statement on Artificial Intelligence in Southern Africa, South Africa is among the pioneering countries that are committed to take concrete steps to implement the UNESCO Recommendation on the Ethics of AI. At national level, South Africa 4IR Strategy is human-centered and does envisage artificial intelligence but has yet to be adopted. A dedicated national AI strategy would also provide a stronger basis for developing a coherent approach to AI and addressing the ethical and social challenges it raises. South Africa's data protection law does tackle automated decision making and algorithmic transparency is among the rights provided for by the legislation. However, the South African Information Regulator has not really addressed so far issues pertaining to the use of AI systems. Concerns exist with regard to the use of AI for surveillance purposes and its potential impact on the digital divide. There is also an urgent need to tackle structural bias induced by the absence of digital footprint and representation of a significant part of the South African society.

Spain

National AI Strategy

Spain has identified artificial intelligence (AI) as "one of the disciplines most likely to influence the rapid transition to a new society and economy."⁴⁸⁰⁷ On December 2, 2020, Spain unveiled the National Strategy for Artificial Intelligence (ENIA).⁴⁸⁰⁸ The Spanish government stated it will allocate €600 million for the implementation of the strategy from 2021 to 2023.⁴⁸⁰⁹ The objective of the ENIA is to generate trust in the development of inclusive and sustainable AI which focuses on the needs of the citizens. Six main goals are identified:

- 1) invigorating scientific research, technical development, and innovation of AI;
- 2) promoting the development of digital capabilities, encouraging national talent and attracting global talent in AI;
- 3) developing data platforms and infrastructure technology to provide support to AI;
- 4) integrating AI in value chains to transform the economy;
- 5) encouraging the use of AI in public administration and in strategic national missions;
- and establishing an ethical and normative framework to strengthen the protection of individual and collective rights and to guarantee inclusion and social wellbeing.⁴⁸¹⁰

The ENIA also sets out five measures for a successful ethical and regulatory framework:

1) the development of a national seal of quality for AI;

⁴⁸⁰⁷ Government of Spain & Ministry of Science, Innovation, and Universities, *Spanish RDI Strategy in Artificial Intelligence* (2019),

⁴⁸⁰⁹ Government of Spain, Pedro Sánchez presenta la Estrategia Nacional de Inteligencia Artificial con una inversión pública de 600 millones en el periodo 2021-2023 (Dec. 2, 2020), <u>https://www.lamoncloa.gob.es/presidente/actividades/Paginas/2020/021220sanchezenia.aspx</u>

⁴⁸¹⁰ Government of Spain, ENIA, *National Artificial Intelligence Estrategy* (Nov. 2, 2020), pp. 72 – 73,

https://portal.mineco.gob.es/RecursosArticulo/mineco/ministerio/ficheros/National-Strategy-on-AI.pdf

- 2) the creation of observatories for ethical and legal evaluation of AI systems;
- 3) the development and release of a Digital Rights Charter;
- 4) the implementation of a national governance model for ethics in AI through the AI Advisory Council;
- 5) and the promotion of multisectoral national and international fora for dialogue, awareness, and participation.⁴⁸¹¹

The ENIA is part of several overlapping policy initiatives launched by the Spanish government. The 2025 Digital Agenda enumerates 50 measures for the Spanish government to take between 2020 and 2025 across 10 thematic axes in order to propel the country's digital transformation. The ninth axis is "Data Economy and Artificial Intelligence" and one of the measures contained therein is the accomplishment of the goals set out by the Strategy.⁴⁸¹²

The ENIA is also part of the Plan for Recovery, Transformation, and Resilience for the Spanish economy launched in April 2021. The ENIA inscribes itself in the framework of the pact for science and innovation, with the aim to reinforce the National Health System's capacities.⁴⁸¹³ The Plan describes Spain's ambition to become a global leader in AI integration into a digitalized economy. The Plan refers to Spain's aspiration to a "humanist digitalization", with the development of AI in a human-centric way, thanks to the elaboration of a Charter of Digital Rights.⁴⁸¹⁴

The ENIA intersects with the Spanish government's 2015 Plan for the Advancement of Language Technologies (HTL).⁴⁸¹⁵ Within the HTL framework, the Spanish government, in collaboration with the Barcelona

Supercomputing Center, created in 2021 the world's first massive Spanishlanguage AI system, which can generate and analyze texts in Spanish. This is part of Spain's strategic objective to promote the development of AI systems in Spanish, instead of relying on English-language systems.

The ENIA follows from the Spanish Research, Development and Innovation (RDI) Strategy for AI, published in 2019.⁴⁸¹⁶ The RDI Strategy for AI set out Priorities and Recommendations "to be developed in initiatives and activities defined and financed through the Science, Technology and Innovation Stares Plans, mobilizing the synergies between the different levels of public administration and through the codevelopment of the public and private sectors."⁴⁸¹⁷ The Spanish RDI Strategy included plans to create a National AI Strategy, a Spanish AI Observatory, and a strategic framework for the development of AI in compliance with the Spain's "ethical, legal, and social commitments" and the European ecosystem.⁴⁸¹⁸

The ENIA has also a European dimension. Spain supports the 2018 AI ethical Guidelines of the EU High Level Expert Group.⁴⁸¹⁹ In this framework, "Trustworthy AI" "(1) should respect fundamental rights, applicable regulation and core principles and values, ensuring an "ethical purpose" and (2) should be technically robust and reliable since, even with good intentions, a lack of technological mastery can cause unintentional harm."⁴⁸²⁰ In October 2020, the Spanish government, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI.⁴⁸²¹ This paper delineates a two-fold vision of AI

development in the EU which consists in (1) seeking to promote innovation while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. "The main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth and competitiveness in order to protect our society, maintain our high-quality public service and benefit our citizens and businesses. This can help the EU to protect and empower their citizens, underpin innovation and progress in society and ensure that their values are protected."⁴⁸²²

Artificial Intelligence Advisory Council

In July of 2020, the Ministry of Economic Affairs and Digital Transformation established the Artificial Intelligence Advisory Council. The Advisory Council was created to analyze, assess, and support the government on matters of AI. The Advisory Council is intended to provide recommendations to the government on measures for the safe and ethical use of AI. It is composed of Spanish experts in science, economics, education, and other relevant fields, responsible for analyzing the implications of AI in different areas, such as industry, the future of work, protection of fundamental rights, data management, the fight against discrimination, and the elimination of social disparities.⁴⁸²³

Charter of Digital Rights

In July 2021, the Spanish Government released the Charter of Digital Rights. The Spanish Prime Minister Pedro Sanchez declared, "With the publication of the Digital Rights Charter, Spain is moving forwards in the promotion of humanistic digital transformation that seeks to continue placing our country in a position of international leadership in protecting citizens' rights and to actively contribute to the different initiatives and debates that are being developed at European and global levels. This consolidates Spain's leadership in the development of a free, open and inclusive digital society, defining "fair rules" for common development and

inteligencia.aspx#:~:text=El%20Gobierno%20ha%20presentado%20el,%C3%A9tico%2 0de%20la%20Inteligencia%20Artificial

coexistence in the new digital reality, and guaranteeing the social nature of technological transformation."⁴⁸²⁴

The Charter contains a set of principles and rights to guide future regulatory projects and the development of public policies in order to guarantee the protection of individual and collective rights in new digital scenarios. The Charter "recognizes the challenges posed by the adaptation of existing rights to the virtual environment, and proposes a frame of reference for their protection in that context."4825 The Charter seeks to update existing rights enshrined in various legal texts such as the Declaration of Human Rights or the Spanish Constitution. The Charter includes six main categories of rights: (1) rights pertaining to freedom such as the right not to be traced or profiled; (2) equality rights such as the right to equality and non-discrimination in the digital environment; (3) participatory rights in the public sphere; (4) rights related to the working and business environment, including impact assessment in the use of algorithms; (5) rights in specific settings such as AI. The Charter provides that AI should ensure a people-centered approach and the right to nondiscrimination should be guaranteed in the development of AI systems. The Charter also proclaims the inalienable dignity of human beings. (6) guarantees such as the right to administrative and judicial protection in the digital environment.

Public Participation

The Spanish Government opened the proposed Digital Rights Charter for public comment⁴⁸²⁶ in November 2020. This participatory process generated contributions from experts in the field and advocacy associations, as well as from citizens, together with input from the private sector, service providers, and the public sector with relevant competences.

⁴⁸²⁴ La Moncloa, *The Government adopts the Digital Rights Charter to articulate a reference framework to guarantee citizens' rights in the new digital age* (July 7, 2014), <u>https://www.lamoncloa.gob.es/lang/en/gobierno/news/Paginas/2021/20210713_rights-charter.aspx</u>

gitales.aspx

Following this period of public consultation, the final Digital Rights Charter was unveiled in July 2021.⁴⁸²⁷

According to a report of the European consumer organization ("BEUC"), 83% of those in Spain think that consumers should be well informed when they deal with an automatic decision system and 80% believe they should have the right to say "no" to automated decision-making.⁴⁸²⁸ The BEUC report also found high levels of concern in Spain about the potential failure of AI machines, the privacy of voice assistants, manipulation of consumer decisions, and unfair discrimination. More than half of those from Spain surveyed in the BEUC poll "disagree or strongly disagree that current regulation is adequate to efficiently regulate AI."⁴⁸²⁹

EU Digital Services Act

As an EU member state, Spain shall apply the EU Digital Services Act (DSA).⁴⁸³⁰ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

⁴⁸²⁷ Government of Spain, *Digital Rights Charter*,

https://www.lamoncloa.gob.es/presidente/actividades/Documents/2021/140721-Carta Derechos Digitales RedEs.pdf

⁴⁸²⁸ The European Consumer Organisation (BEUC), *Artificial Intelligence What Consumers Say: Findings and Policy Recommendations of a Multi-Country Survey of AI* (Sept. 2020), <u>https://www.beuc.eu/publications/beuc-x-2020-</u>

<u>078_artificial_intelligence_what_consumers_say_report.pdf</u> ⁴⁸²⁹ Ibid., p. 9.

⁴⁸³⁰ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legalcontent/EN/TXT/?uri=celex%3A32022R2065</u>

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.⁴⁸³¹ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.⁴⁸³²

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation⁴⁸³³ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.⁴⁸³⁴ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure

that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force⁴⁸³⁵ on the 2024 European elections.

EU AI Act

Spain was holding the Presidency of the Council of the EU during the second part of 2023 and played a key role in securing a compromise between member states and with the European Parliament, regarding in particular General purpose AI.⁴⁸³⁶ The EU AI Act is now its final version.⁴⁸³⁷ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also

⁴⁸³⁷ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

⁴⁸³⁶ Luca Bertuzzi, *AI Acr : Spanish presidency makes last mediation attempt on foundation models* (Nov. 29, 2023), <u>https://www.euractiv.com/section/artificial-intelligence/news/ai-act-spanish-presidency-makes-last-mediation-attempt-on-foundation-models/</u>

excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

of:

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric

mass surveillance practices.⁴⁸³⁸ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.⁴⁸³⁹

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control

⁴⁸³⁸ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

⁴⁸³⁹ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and

beyond.⁴⁸⁴⁰ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.⁴⁸⁴¹

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies,

⁴⁸⁴⁰ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023),

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office⁴⁸⁴² established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives designated national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

⁴⁸⁴² European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Spain will designate as market surveillance authority. In this regard, already in August 2023, Spain created an AI regulator to enforce the EU AI Ac: the Spanish Agency for Artificial Intelligence Oversight.⁴⁸⁴³ It is the first dedicated AI oversight agency created in the European Union. Serious concerns exist however that the agency is not independent. The presidency of the agency is assumed by the head of the Secretariat of State for Digitalization and AI. The Governing Council is a collective governing body composed of representatives of the ministries of Economy, Finance and Industry.

⁴⁸⁴³ Espana Digital, *National Agency for Artificial Intelligence Oversight*, <u>https://espanadigital.gob.es/en/lines-action/national-agency-artificial-intelligence-oversight</u>

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact⁴⁸⁴⁴ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Spain is an EU Member State, the GDPR⁴⁸⁴⁵ is directly applicable in Spain and to Spaniards. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."⁴⁸⁴⁶ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. In December 2018, the Spanish Parliament approved the new Spanish Fundamental Law on Data Protection and digital rights (NLOPD) which supplements the GDPR.

Regarding the activities of law enforcement authorities, after some delays, Spain transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁸⁴⁷ through the Spanish Act on Data Protection in the Area of Police and Criminal Justice.⁴⁸⁴⁸ The LED "protects citizens' fundamental

⁴⁸⁴⁷ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, <u>https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504</u> ⁴⁸⁴⁸ Organic Law 7/2021 (May 26, 2021),

right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."⁴⁸⁴⁹ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁴⁸⁵⁰ The LED also requires for Member States, including Spain, to enable data subjects to exercise their rights via national data protection authorities.⁴⁸⁵¹

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Spanish data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the Member States apply the LED consistently."⁴⁸⁵² The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.⁴⁸⁵³ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."4854

⁴⁸⁵⁴ European Data Protection Board, *EDPB adopts Guidelines on calculation of fines & Guidelines on the use of facial recognition technology in the area of law enforcement*,

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Spain is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.

Al Oversight

Until the National Agency for AI Oversight becomes fully operational and the national regime is fully defined, the Spanish Data Protection Agency (AEPD) is the main national supervisory authority in Spain. The AEPD ensures compliance with the GDPR. In September 2022, the AEPD published a Joint Paper with the EDPS on "10 misunderstandings about Machine Learning."⁴⁸⁵⁵

As a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, the AEPD endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁴⁸⁵⁶ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁴⁸⁵⁷ Both have been framed in accordance with the RED Standards for Personal Data Protection for Ibero-American States.⁴⁸⁵⁸ With the adoption of the Standards, a series of guiding principles and rights for the

protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."⁴⁸⁵⁹

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the AEPD has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;⁴⁸⁶⁰ the 2020 GPA Resolution on AI Accountability;⁴⁸⁶¹ the 2022 GPA Resolution on Facial Recognition Technology⁴⁸⁶² or the 2023 GPA Resolution on Generative AI.⁴⁸⁶³ The regional data protection agencies of Catalonia (since 2004), the Basque

Country (since 2005), and Andalusia (since 2022) are also GPA members.⁴⁸⁶⁴

The Law 22/2021 of December 28, 2021 provides for the creation of the Spanish Agency for the Supervision of Artificial Intelligence (AESIA).⁴⁸⁶⁵ The creation of AESIA anticipates the entry into force of the EU AI Act which is expected to provide for EU Member States to either set up a new authority to supervise compliance with the AI Act, or to extend the mandate of an existing authority for that purpose. The Spanish Law provides for AESIA to act in an independent, transparent, objective and impartial manner. The Agency shall carry out measures aimed at minimizing significant risks to people's safety, health and fundamental rights, which may arise from the use of AI systems. AESIA will have the capacity to act on its own, in coordination with other competent authorities, and in support to private entities. ⁴⁸⁶⁶

AESIA is to be attached to the Secretary of State for Digitalization and Artificial Intelligence. The Agency will benefit from full organic and functional independence from the public administrations. It will be endowed with public legal personality, its own assets, autonomy in its management and administrative powers.⁴⁸⁶⁷ In December 2022, the Government published the decision to locate the seat of the new agency in La Coruña.⁴⁸⁶⁸ While the AESIA is expected to start working in Autumn 2023, with a budget of 5 million euros and a staff of 40 employees, details of its plans and powers are still being discussed between Ministries.

The Ministry of Economic Affairs and Digital Transformation, leading this project, has announced that the AESIA will include a "regulatory sandbox" open for companies that wish to test the compliance of their AI systems with the new rules on AI and more particularly those of the proposed EU AI Act. "The Government of Spain will deploy an AI Sandbox to put the proposed requirements for high-risk AI systems into practice. (...) The Spanish AI Sandbox will provide practical experience

⁴⁸⁶⁸ Orden PCM/1203/2022, de 5 de diciembre, por la que se publica el Acuerdo del Consejo de Ministros de 5 de diciembre de 2022, por el que se determina la sede física de la futura Agencia Española de Supervisión de Inteligencia Artificial, https://www.boe.es/diario_boe/txt.php?id=BOE-A-2022-20639

through applying the various features of the [EU AI Act] proposal to specific AI projects (e.g. requirements, conformity assessments and certain post-market activities) and making guidelines, toolkits and good-practice materials accessible to all. Such actions are expected to be useful for the development of harmonised European standards and the other preparatory work at national and EU level."⁴⁸⁶⁹ The Ministry has issued a public tender "for the procurement of services that develop impact assessments of AI, a national AI certificate and research studies on the use of controlled experimentation activities to test AI systems."⁴⁸⁷⁰

Algorithmic Transparency

Spain is subject to the GDPR and Convention 108+. Spaniards have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴⁸⁷¹

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴⁸⁷² specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems in decision-making processes that carry high risks to human rights should be

subject to particularly high standards as regards the explainability of processes and outputs."⁴⁸⁷³

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."⁴⁸⁷⁴

The AEPD has published a detailed guide on "GDPR compliance of processings that embed AI."⁴⁸⁷⁵ In this guide, the AEPD explains that "complying with this obligation by making a technical reference to the algorithm implementation may be obscure, confuse or excessive and leading to information fatigue. However, sufficient information must be provided to understand the behaviour of the relevant processing."⁴⁸⁷⁶ The AEPD provides many examples of the information that "must be provided" to understand the behavior of the relevant processing, with regard for example the relative importance or weight of each data category in the decision making, the quality of training data and the type of patterns used, and any reference to audits, "especially on the possible deviation of inference results, as well as certification or certifications performed on the AI system."⁴⁸⁷⁷ The AEDP also published audit requirements for personal

data processing activities involving AI in January 2021⁴⁸⁷⁸ and a reference map of personal data processing incorporating AI in November 2022.⁴⁸⁷⁹

The Charter of Digital Rights strengthens principles of Algorithmic Transparency. The Charter guarantees that no citizen is discriminated against for decisions based on algorithms and maintains that "transparency, auditability, explicability and traceability" of the same will be ensured. People have the right not to be the subject of a decision based solely on automated decision making, thus recognizing the right to "request human supervision and intervention and challenge automated or algorithmic decisions." The Charter recognizes that citizens must be explicitly informed when they are talking to an artificial intelligence system and that assistance by a human being must be guaranteed if the person concerned requests it.⁴⁸⁸⁰

In July 2022, a new Law on equal treatment and non-discrimination entered into force. Article 23 of this Law establishes rules on AI and automated decision-making mechanisms, creating special obligations for public administration entities in relation to the AI algorithms they use for decision-making.⁴⁸⁸¹ This Law establish that, within the framework of the ENIA and the Charter of Digital Rights in Spain, public administrations shall favor algorithms that take into account "criteria of minimization of bias, transparency and accountability, whenever technically feasible." Such mechanisms shall "include their design and training data, and will address their potential discriminatory impact," through impact evaluations to determine potential discriminatory bias. "Public administrations, within the framework of their competencies in the field of algorithms involved in decision-making processes, shall prioritize transparency in the design and implementation and the interpretability of the decisions adopted by them." Additionally, public administrations and companies "shall promote the use of an artificial intelligence that is ethical, reliable and respectful of fundamental rights, following especially the recommendations of the

European Union in this regard.". A quality seal for algorithms is also to be created. $^{\rm 4882}$

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Spain approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁴⁸⁸³ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

⁴⁸⁸² Ibid., Article 23 of the Law 15/2022, of July 12, 2002.

⁴⁸⁸³ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."⁴⁸⁸⁴

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."⁴⁸⁸⁵

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of – at least – a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric

⁴⁸⁸⁵ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.⁴⁸⁸⁶

Lethal Autonomous Weapons

Spain has responded to the threat of Lethal Autonomous Weapons Systems (LAWS) by affirming that the Spanish military does not have and will not develop such technology and emphasizing the need for meaningful human control for weapons systems to be compliant with international humanitarian law. Spain has consented as well to the 11 Principles on LAWS launched by France in 2019.⁴⁸⁸⁷ The Spanish government, however, does not endorse the creation of a preemptive treaty prohibiting LAWS.⁴⁸⁸⁸

Spain was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International

Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."⁴⁸⁸⁹

Spain also submitted a working paper with Sweden, Finland, France, Germany, the Netherlands and Norway to the 2022 Chair of the Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems.⁴⁸⁹⁰ This working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy in order to ensure compliance with the rules and principles of international humanitarian law, by preserving human responsibility and accountability, ensuring appropriate human control and implementing risk mitigation measures.

In February 2023, Spain participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Spain endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁴⁸⁹¹ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to

collaborate and exchange information on responsible AI in the military domain."⁴⁸⁹²

Spain also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁸⁹³

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁴⁸⁹⁴ The Republic of Korea will host the second REAIM summit in 2024.⁴⁸⁹⁵

At the 78th UN General Assembly First Committee in 2023, Spain voted in favour⁴⁸⁹⁶ of resolution L.56⁴⁸⁹⁷ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns

autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Spain ranks highly for political rights and civil liberties, with a score of 90/100 based on Freedom House analysis.⁴⁸⁹⁸ According to Freedom House, "Spain's parliamentary system features competitive multiparty elections and peaceful transfers of power between rival parties. The rule of law prevails, and civil liberties are generally respected. (...) Restrictive legislation adopted or enforced in recent years poses a threat to otherwise robust freedoms of expression and assembly."⁴⁸⁹⁹

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."

OECD / G20 AI Principles

Spain has endorsed the OECD AI Principles and incorporated many of them into the ENIA and the Digital Rights Charter.⁴⁹⁰⁰ Spain is also a member of the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁴⁹⁰¹

UNESCO Recommendation on the Ethics of Artificial Intelligence

Spain has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.⁴⁹⁰²

Al Safety Summit

In November 2023, Spain participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴⁹⁰³ Spain thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

Spain also contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁴⁹⁰⁴

Evaluation

Spain has developed a strong ethics-focused national AI strategy, created an independent Advisory Council, enacted a Charter for Digital

^{4, 2020), &}lt;u>https://www.globalprivacyblog.com/legislative-regulatory-developments/uae-publishes-first-federal-data-protection-law/</u>

⁴⁹⁰² United Nations Educational, Scientific and Cultural Organization (UNESCO), UNESCO member states adopt the first ever global agreement on the Ethics of Artificial Intelligence (Nov. 2021), <u>https://www.unesco.org/en/articles/unesco-member-states-</u> adopt-first-ever-global-agreement-ethics-artificial-intelligence.

https://search.coe.int/cm/pages/result_details.aspx?objectid=0900001680aee411

Rights, and has played a key role in the final negotiations of the EU AI Act. Spain is already anticipating the entry into force of the EU AI Act by the creation of a national regulatory sandbox to test high-risk AI systems and a new supervisory agency in charge of AI. The main concern however is that the agency is not independent and will thus not be in a position to provide independent AI oversight. Spain benefits from a strong data protection legal framework with an active data protection agency. It is to be hoped that it will be closely associated in AI oversight in order to foster a better protection of citizens' rights.

Sweden

National AI Strategy

In May 2018, Sweden issued the National Approach to Artificial Intelligence. The National Approach reflects the government's goal "to make Sweden a leader in harnessing the opportunities that the use of AI can offer, with the aim of strengthening Sweden's welfare and competitiveness."⁴⁹⁰⁵

Sweden emphasized that a "cross-cutting theme should be sustainable AI, meaning that AI applications should be ethical, safe, secure, reliable and transparent" more specifically regarding "the use of AI algorithms." When referring to potential threats, the Government mentions "challenges related to rule of law procedures and the automation of agency decisions," "the risks to both society and individuals," "fundamental needs for privacy", "discrimination, loss of trust," and the consequences for the functioning of democracy.

Accountability is not mentioned. The emphasis is on responsible design and use of AI. For example, "it is important that AI systems are carefully designed to prevent them from doing harm. It is therefore important that companies and public institutions collaborate with relevant academics, for example through joint projects or staff exchanges."

The Swedish National Approach to AI should also be read against the background of a 2020 joint response to the European Commission's White Paper on AI.⁴⁹⁰⁶ In this "non-paper," Sweden and 13 other EU member states, describe human-centric and trustworthy AI "as a competitive advantage." According to the non-paper, Sweden supports the use of hard law tools for "creating a genuinely single market for AI." Sweden also favors the use of "soft law solutions such as self-regulation, voluntary labelling and other voluntary practices as well as robust standardisation process." As for risks to individuals or to society stemming from the use of AI, Sweden advocates for an evidence-based and "wellcalibrated and proportionate approach."

The Government defines the "key conditions for realising the potential of AI as (1) Education and training, (2) Research, (3) Innovation,

⁴⁹⁰⁵ Government Offices of Sweden, *National Approach to Artificial Intelligence* (May 2018),

https://www.government.se/4a7451/contentassets/fe2ba005fb49433587574c513a837fac/ national-approach-to-artificial-intelligence.pdf

⁴⁹⁰⁶ Non-paper - Innovative and trustworthy AI: two sides of the same coin (Aug. 10, 2020), <u>https://em.dk/media/13914/non-paper-innovative-and-trustworthy-ai-two-side-of-the-same-coin.pdf</u>

and (4) Framework and infrastructure. Three Ministries – Ministry of Infrastructure; Ministry of Enterprise and Innovation; and Ministry of Education and Research – are responsible for AI policies and independent agencies under these Ministries implement these policies.

In relation to innovation, the Government's assessment is that

- Sweden needs pilot projects, testbeds and environments for development of AI applications in the public and private sectors, that can contribute to the use of AI evolving in a safe, secure and responsible manner.

- Sweden needs to develop partnerships and collaborations on the use of AI applications with other countries, especially within the EU.

In relation to framework and infrastructure, the Government's assessment is that

- Sweden needs to develop rules, standards, norms and ethical principles to guide ethical and sustainable AI and the use of AI.
- Sweden needs to push for Swedish and international standards and regulations that promote the use of AI and prevent risks.
- Sweden needs to continuously review the need for digital infrastructure to harness the opportunities that AI can provide.
- Sweden needs to continue to work on making data available to serve as infrastructure for AI use in areas where it adds value.
- Sweden needs to continue to play an active role in the EU's efforts to promote digitization and reap the benefits that the use of AI can bring.⁴⁹⁰⁷

The National Approach to Artificial Intelligence states, "The goal is closely linked to the digital transformation goal adopted by the Riksdag [the Swedish Parliament] and complements the Government's Digital Strategy."

The Swedish Government acknowledged the General Data Protection Regulation (GDPR) as "an important part of the AI framework."⁴⁹⁰⁸

In September 2020, the International Bar Association released a report which stated, "there is currently no AI laws in Sweden. Historically, the legislative approach in Sweden has been to pass technology-agnostic legislation that does not need to be changed with every advance in

⁴⁹⁰⁷ Government Offices of Sweden, *National Approach to Artificial Intelligence*, (May 2018),

https://www.government.se/4a7451/contentassets/fe2ba005fb49433587574c513a837fac/ national-approach-to-artificial-intelligence.pdf6

⁴⁹⁰⁸ Government Offices of Sweden, *National Approach to Artificial Intelligence* (May 2018),

https://www.government.se/4a7451/contentassets/fe2ba005fb49433587574c513a837fac/ national-approach-to-artificial-intelligence.pdf6

technology."⁴⁹⁰⁹ Thus, "it is of central priority for the Swedish legislator to assess current legislation from an AI perspective and implement necessary changes. Furthermore, support in the interpretation of legislation is required from courts and public authorities. Access to data, information security and robustness, together with the ethical use of AI, are principles of central importance in the future regulatory approach."

In a 2020 report, Sweden's Agency for Digital Administration (DIGG) recommended that the Government establish a center with expertise in AI: develop a platform for collaboration, co-development and innovation; develop an AI guide; create legal conditions to facilitate experimental activities; develop vocational and role-specific training in AI; and develop a national data strategy for public administrations.⁴⁹¹⁰ DIGG also set up an expert group on AI for public administration, mainly composed of academics, which aims to provide advises to DIGG in the fulfilment of its mission.4911

AI Sweden also established a Legal Expert Group, which consists of legal experts from its partners. The Group discusses legal questions related to AI and data and they "collaborate in trying to create, for example, white papers, guidelines and/or common interpretations and solutions for legal issues that could benefit all partners within AI Sweden."4912 In 2021, the Legal Expert Group met numerous times and discussed matters such as the practical use of applied AI, the concept of Federated Learning, questions regarding anonymization and pseudonymization, the EU Proposal for an AI Act, intellectual property rights, and standardized agreements for sharing data. AI Sweden and the Legal Expert Group also initiated a collaboration with the Swedish Authority for Privacy Protection (IMY). Future discussions will concentrate on using AI in a legal context, such as using natural language processing (NLP) as a tool in legal work. ⁴⁹¹³

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, Peter Eriksson, the Swedish Minister for Housing and Digital development, signed the declaration on "AI in the Nordic-Baltic region" establishing a collaborative framework on "developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used" and "on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability."⁴⁹¹⁴

The ministerial declaration Digital North 2.0⁴⁹¹⁵ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. "In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and reuse of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies."⁴⁹¹⁶

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Swedish inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.⁴⁹¹⁷

In September 2022, the Nordic and Baltic ministers of digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that

this "rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities." The ministers declared that they "have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services."⁴⁹¹⁸

As part of its action plan for Vision 2030 (2021-2024), the Nordic Council of Ministers also identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.⁴⁹¹⁹ The Nordic Council of Ministers also emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to "a Nordic civil society network and public consultations."⁴⁹²⁰

Public Participation

As for public participation, the Government states in the National Approach that "For Sweden to reap the benefits of AI, all sectors of society must be involved." It is, however, debatable to what extent different groups in society are actually involved. According to AlgorithmWatch, most of the funding and strategic development takes place in the universities and as support for business environments."⁴⁹²¹ Nevertheless, AlgorithmWatch also describes the "addAI initiative" which "is a collaboration between experts

in academia, government and companies to discuss and explore the impact of smart algorithms and AI on society through the organisation of workshops and participation in public events."

In October 2021, the "Future of Democracy Summit" hosted stakeholders from business, civil society, academia, and government to discuss sustainable AI and democracy.⁴⁹²²

EU Digital Services Act

As an EU member state, Sweden shall apply the EU Digital Services Act (DSA).⁴⁹²³ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content

⁴⁹²² Future of Democracy, *Sustainable citizenship in a digital age – Future of Democracy Summit* <u>https://www.futureofdemocracy.se/summit</u>

⁴⁹²³ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legalcontent/EN/TXT/?uri=celex%3A32022R2065</u>

and hate speech.⁴⁹²⁴ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.⁴⁹²⁵

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation⁴⁹²⁶ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.⁴⁹²⁷ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force⁴⁹²⁸ on the 2024 European elections.

EU AI Act

Sweden held the Presidency of the Council of the European Union in the first half of 2023. Ann Christin Linde, Minister for Foreign Affairs of Sweden, while addressing the 77th Session of the General Assembly of the UN in September 2022 stated that Sweden would work to "protect, promote and defend democratic principles, human rights and the rule of law."⁴⁹²⁹ It remains to be seen how Sweden will implement the EU AI Act in practice. The EU AI Act⁴⁹³⁰ is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

⁴⁹³⁰ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

⁴⁹²⁹ United Nations, *Sweden Minister for Foreign Affairs Addresses General Debate*, 77th Session (Sept. 24, 2022), <u>https://media.un.org/en/asset/k10/k104bnnzx4</u>

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

of:

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.⁴⁹³¹ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or

⁴⁹³¹ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.⁴⁹³²

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;

⁴⁹³² Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

• emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.⁴⁹³³ The academics called for a transversal FRIA, applicable to both

⁴⁹³³ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.⁴⁹³⁴

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European

⁴⁹³⁴ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-</u>deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale

Davies, 'Furious': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

Commission. The Commission, including the European AI Office⁴⁹³⁵ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the

⁴⁹³⁵ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Sweden will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact⁴⁹³⁶ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

⁴⁹³⁶ European Commission, *AI Pact*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

Data Protection

Since Sweden is an EU Member State, the GDPR⁴⁹³⁷ is directly applicable in Sweden and to Swedes. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."⁴⁹³⁸ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. In April 2018, the Swedish parliament adopted the Data Protection Act (DPA), with complementary provisions to the GDPR. The DPA replaced the old Personal Data Act as of 25 May 2018. The Swedish Camera Surveillance Act supplements the GDPR and applies to processing of personal data in connection with camera surveillance. The Swedish Patient Data Act for its part enshrines requirements for public and private healthcare providers' personal data processing in relation to healthcare activities, including the obligation to keep medical records.

Regarding the activities of law enforcement authorities, Sweden transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁹³⁹ through the Swedish Criminal Data Act. It applies to personal data processing within law enforcement activities such as the Swedish Police Authority and hospitals if someone is sentenced to compulsory psychiatric care. The Swedish Police Data Act supplements the Swedish Criminal Data Act in relation to personal data processing carried out by the Swedish Police Authority, the Swedish Economic Crime Authority, and the Swedish Security Service. The LED "protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and

⁴⁹³⁸ European Commission, Data protection in the EU,

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en

⁴⁹³⁷ Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, <u>https://eur-lex.europa.eu/EN/legal-</u>content/summary/general-data-protection-regulation-gdpr.html

⁴⁹³⁹ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504

terrorism."⁴⁹⁴⁰ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁴⁹⁴¹ The LED also requires for Member States, including Sweden, to enable data subjects to exercise their rights via national data protection authorities.⁴⁹⁴²

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Sweden is also a member of the Council of Europe. It signed but has not yet ratified⁴⁹⁴³ the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴⁹⁴⁴

The Swedish Government acknowledged the GDPR as "an important part of the AI framework."⁴⁹⁴⁵ Sweden's Authority for Privacy Protection (IMY)'s "role is to uphold the protection of personal data, monitoring that they are handled correctly and do not fall into the wrong hands."⁴⁹⁴⁶ In 2019, the IMY issued its first fine in a case involving facial recognition. The IMY concluded that a school that conducted a pilot using facial recognition to keep track of students' attendance in school violated the GDPR and imposed a fine on the municipality of approximately 20,000 euros.⁴⁹⁴⁷ The IMY has also held the police accountable for its unlawful use

of facial recognition technology, which is detailed further in the facial recognition section below.⁴⁹⁴⁸

In August 2022, the IMY, in conjunction with Sahlgrenska University Hospital, Region Halland and AI Sweden, launched a pilot program for decentralized AI. Working with the three organizations on the potential privacy and data protection pitfalls that may arise using AI, the data watchdog will provide legal guidance and supervision for the project.⁴⁹⁴⁹

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the IMY has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;⁴⁹⁵⁰ the 2020 GPA Resolution on AI Accountability;⁴⁹⁵¹ or the 2022 GPA Resolution on Facial Recognition Technology.⁴⁹⁵²

The independent Equality Ombudsman (DO) also plays a role in ensuring the absence of discrimination which could result from a biased algorithm.⁴⁹⁵³

Sweden is also a member of the Council of Europe and ratified the Council of Europe's Convention 108 for the protection of individuals with

regard to the processing of personal data. Sweden also signed its modernized version⁴⁹⁵⁴ in 2018 but has not ratified it yet.

In May 2019, the Ministry of Infrastructure launched three assignments to strengthen the country's open access efforts.⁴⁹⁵⁵ It assigned Sweden's Lantmäteriet to analyze the consequences of free access to valuable amounts of data, a special investigator to analyze "the need for constitutional amendments and ensure appropriate national regulation", and Sweden's Agency for Digital Administration (DIGG) to "increase the public administration's ability to make open data available and to conduct open and data-driven innovation."⁴⁹⁵⁶ This has resulted in the launch of Sweden's data portal with new functionality for APIs, and the establishment of principles, guidelines, and recommendations "in order to increase the public administration's ability to make open data available."⁴⁹⁵⁷ Much of this work was based on DIGG's piloted projects with business, academia, and civil society at challengesgov.se.

Algorithmic Transparency

Sweden is subject to the GDPR which established rights to "meaningful information about the logic involved" as well as about "the significance and the envisaged consequences."⁴⁹⁵⁸ The Swedish Data Protection Authority is competent to handle complaints in this regard.⁴⁹⁵⁹ In 2019, the Equality Ombudsman Agneta Broberg warned that the sanctions available under the Discrimination Act are not effective to tackle the challenges of AI and discriminatory algorithms.⁴⁹⁶⁰

Following the Trelleborg episode concerning automated decisions by municipalities, the Union for Professionals called for the creation of an algorithm ombudsman.⁴⁹⁶¹ "The Union has, among other things, conducted a survey that shows that the requirement for an Algorithm Ombudsman has broad support among the public - and that transparency and openness are absolutely crucial for there to be trust in algorithms and automation." In this regard, a 2020 survey organized by BEUC, the European Consumer Organization, which involved the Swedish Consumer Organization, revealed that "more than half of Sweden's consumers feel that artificial intelligence (AI) is used to manipulate them. And over 60 percent wish they could say no to automated decision making."⁴⁹⁶²

The Equality Ombudsman (DO), may also play a part in ensuring the absence of discrimination which could result from a biased algorithm.⁴⁹⁶³ The case of Freddi Ramel v. the Trelleborg municipality which will be further detailed makes clear that the principle of public access does cover the source code of the software used for automated decisions and can be vindicated before the relevant administrative court.

The Trellborg Controversy

The automation of government services has been underway in Sweden since the 1970s. By 2019, "more than 80% of all government decisions that the National Audit has reviewed were automated. This involves 121 million decisions by 13 authorities."⁴⁹⁶⁴ Various benefits, such as Welfare payments, from parental benefits to dental care subsidies, are allocated without any human intervention.

As for municipalities, who are in charge of social services, a 2019 report published by the Union for Professionals, found that "only 16 out of a total of 290 municipalities have implemented RPA [Robotic Processing

Automation] in their administration of social benefits."⁴⁹⁶⁵ The Trellborg Municipality was the only one to implement solely automated decision-making.

In 2019 the journalist Freddi Ramel, and Simon Vinge, chief economist at the Union for Professionals, challenged the Trelleborg automated decision system. According to AlgorithmWatch, the Swedish Parliamentary Ombudsman has so far failed to determine whether the municipality provided "meaningful information" as required by Article 15 of the GDPR.⁴⁹⁶⁶ However, Ramel obtained access to the source code after a court ruled that the code was a public record under the Swedish Freedom of Information Act. The Trelleborg municipality subsequently undertook an investigation.

Facial recognition

In 2019, the Swedish DPA issued its first fine in a case involving facial recognition. A school in northern Sweden conducted a pilot using facial recognition to keep track of students' attendance in school. The Swedish DPA concluded that the test violates the GDPR and imposed a fine on the municipality of approximately 20,000 euros. The school processed sensitive biometric data unlawfully and failed to do an adequate impact assessment including seeking prior consultation with the Swedish DPA. The school based the processing on consent but the Swedish DPA considers that consent was not a valid legal basis given the clear imbalance between the data subject and the controller.⁴⁹⁶⁷

In March 2020, the data protection officer for the Swedish police undertook an investigation to determine whether the police may have used ClearView AI, an AI product for mass surveillance enabled by facial recognition.⁴⁹⁶⁸ The Swedish police confirmed that they have used Clearview AI, after previously denying use of the face surveillance tool.⁴⁹⁶⁹

Subsequently, the IMY "initiated an inspection to find out whether Swedish authorities use the face recognition technology provided by the US company Clearview AI."4970 The IMY noted that the European Data Protection Board (EDPB) "will produce guidance on how law enforcement authorities should approach facial recognition technology. Sweden is one of the driving countries in the world." The EDPB indeed issued guidelines on the use of facial recognition technologies in the area of law enforcement in May 2022.⁴⁹⁷¹ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stressed that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.4972

Before the release of the EDPB guidelines, in 2021, the IMY found that the Swedish Police Authority had processed personal data in breach of the Swedish Criminal Data Act when using Clearview AI to identify individuals.⁴⁹⁷³ The investigation concluded that Cleaview AI had been used by the Police on several occasions and sometimes without any prior authorisation. The Police had failed to implement sufficient organisational measures to ensure and be able to demonstrate that the processing of personal data in this case had been carried out in compliance with the

⁴⁹⁷³ European Data Protection Board, *Swedish DPA: Police unlawfully used facial recognition app* (Feb. 11, 2021), <u>https://edpb.europa.eu/news/national-news/2021/swedish-dpa-police-unlawfully-used-facial-recognition-app_en_</u>

Criminal Data Act. No impact assessment had been concluded. As a result, the IMY imposed a 250,000 Euros fine.

In 2019, the Swedish DPA did approve the use of facial recognition technology by the police to help identify criminal suspects. However, such an authorization relates to the use of biometric templates in databases under the control of public authorities and established under Union or Member States law.⁴⁹⁷⁴ As the Chair of the European Data Protection Board subsequently emphasized, "[t]he possible use of a service such as offered by Clearview AI by law enforcement authorities would, however, be fundamentally different, in that it would imply, as part of a police or criminal investigation, the sharing of personal data with a private party outside the Union and the biometric matching of such data against the latter's mass and arbitrarily populated database of photographs and facial pictures accessible online."⁴⁹⁷⁵ She also clearly questioned the legality of the use of Clearview AI by public authorities.

In October 2023, Sweden's Ministry of Justice published a press release announcing a proposal to expand the use and increase access by Swedish Police to video surveillance, facial recognition and automatic number plate recognition tools to enhance crime prevention. According to the press release, "the Government appointed an inquiry on video surveillance. The inquiry's task consists of two parts. The first is to investigate the need for simplified rules on video surveillance for municipalities and regions" [...] aiming to "abolish permit requirements for municipalities and regions that want to use video surveillance in public places. The second part is a broadly formulated assignment to investigate expanding the video surveillance powers of the Swedish Police", e.g. through the use of drones.⁴⁹⁷⁶

Lethal Autonomous Weapons

Beginning in 2013, Swedish NGOs called for Sweden to endorse an official ban of LAWS.⁴⁹⁷⁷ As one NGO coalition stated recently, "A future where machines themselves decide over life and death, what and who is to be attacked in an armed conflict, is not the future we want. But the fact is that we are on our way there - and development is fast."⁴⁹⁷⁸ Previously, leaders in the Swedish government declared that "Sweden must take a leading role in the work for a ban on deadly autonomous weapon systems." However, the position adopted by Sweden so far seems to be more nuanced.

The Swedish government has emphasized human control and said "that multilateralism remains our only chance to address our many common challenges and to ensure international peace and security."⁴⁹⁷⁹ At the 75th UN General Assembly meeting in October 2020, Sweden's Ambassador stated "Sweden is of the strong conviction that human control over the use of force always must be upheld." She also expressed Sweden's support to the 11 LAWS Guiding Principles.⁴⁹⁸⁰ Earlier, Sweden also explained that the "specific measures required for human control will thus need to be context dependent and assessed on a case-by-case basis" and referred to a report, supported by Sweden, together with Germany, Switzerland and the Netherlands.⁴⁹⁸¹ The Swedish government has also set up a working group on autonomous weapons. According to the NGO the Swedish Peace and Arbitration Society, this "working group is defense-oriented, with a

majority of its members coming from defense-related authorities and institutions." $^{\!\!\!\!\!\!^{4982}}$

Sweden was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."⁴⁹⁸³

Sweden also submitted a working paper with Finland, France, Germany, the Netherlands, Norway, and Spain to the 2022 Chair of the Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems.⁴⁹⁸⁴ This working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy in order to ensure compliance with the rules and principles of international humanitarian law, by preserving human responsibility and accountability, ensuring appropriate human control and implementing risk mitigation measures.

In February 2023, Sweden participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Sweden endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁴⁹⁸⁵ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal

obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."⁴⁹⁸⁶

Sweden also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁹⁸⁷

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁴⁹⁸⁸ The Republic of Korea will host the second REAIM summit in 2024.⁴⁹⁸⁹

At the 78th UN General Assembly First Committee in 2023, Spain voted in favour⁴⁹⁹⁰ of resolution L.56⁴⁹⁹¹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Sweden is a signatory to many international human rights treaties and conventions, among which the Universal Declaration of Human Rights and the Council of Europe's European Convention on Human Rights. However, it has not yet ratified the modernized version of the Council of Europe Convention 108 for the protection of individuals with regard to the processing of personal data.⁴⁹⁹²

According to Freedom House, Sweden typically ranks among the top nations in the world for the protection of human rights and transparency. "Civil liberties and political rights are legally guaranteed and respected in practice, and the rule of law prevails."⁴⁹⁹³ It consequently earns a perfect 100/100 score.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are

experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."⁴⁹⁹⁴

OECD / G20 AI Principles

Sweden endorsed the OECD AI Principles. In 2021, the OECD noted that Sweden published a document outlining its national approach to AI in 2019. "The purpose of this document was to identify an overall direction for AI-related work in Sweden and lay the foundation for future priorities." Sweden also described an AI governance structure with "three Ministries – Ministry of Infrastructure; Ministry of Enterprise and Innovation; and Ministry of Education and Research – are responsible for AI policies and independent agencies under these Ministries implement these policies,"⁴⁹⁹⁵ which are considered by the OECD has positive steps regarding the implementation of the OECD AI Principles.

Sweden is a member of the Global Partnership on AI, a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁴⁹⁹⁶

UNESCO Recommendation on the Ethics of AI

Sweden has endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.⁴⁹⁹⁷ It remains to be seen how this endorsement will translate in practice.

⁴⁹⁹⁴ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

Council of Europe Convention on AI

Sweden contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁴⁹⁹⁸

Evaluation

Sweden endorsed the OECD AI Principles and has been committed to developing trustworthy AI. Sweden ranks at the top among nations for the protection of political rights and civil liberties and has proactive ombudsman institutions and an active data protection agency. However, Sweden's opposition, along with other Nordic and Baltic countries, to a strong regulatory framework for AI raises concern about Sweden's commitment to take the necessary measures to prevent and mitigate ethical risks. With the adoption of the EU AI Act, Sweden shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously. Despite its excellent human rights record, the absence of ratification of the modernized version of the Council of Europe Convention 108 for the protection of individuals with regard to the processing of personal data raise questions and it remains to be seen how Sweden's endorsement of the UNESCO Recommendation on the Ethics of Artificial Intelligence will translate in practice.

⁴⁹⁹⁸ Council of Europe, *Draft Framework Convention on AI, human rights, democracy and the rule of law* (March 2024),

Switzerland

National AI Strategy

The Swiss government recently announced AI Guidelines for the Federal Government.⁴⁹⁹⁹ The AI Guidelines are intended to ensure a coherent government policy for AI. The AI Guidelines emphasize putting people at the center; Framework conditions for the development and use of AI, Transparency, traceability and Explainability; Accountability; Safety; Active participation in shaping the governance of AI; and Involvement of all affected national and international actors. Specific AI guidelines will be formulated for education and science. Future AI work will be undertaken by the Federal Office of Communications OFCOM together with the federal agencies concerned.⁵⁰⁰⁰

The AI Guidelines follow from the Digital Switzerland Strategies. These strategies encompass the Swiss governments principles and key objectives for the digital transformation across all sectors.⁵⁰⁰¹⁵⁰⁰²⁵⁰⁰³ Although these reports do not have the sole focus of AI, the federal government has taken further action to focus on AI. Following the Digital Switzerland Strategy 2018, the federal government identified several areas for further enquiry:

- International law and the use of AI in public opinion and decision making
- How the use of AI in the federal administration can be improved

- The Department of Education, Research and Innovation (SBFI) was given the task of preparing stakeholders for the digital transformation through their policy work.
- An Interdepartmental Working Group on Artificial Intelligence was established to pursue strategic objectives for the federal government.⁵⁰⁰⁴

These areas of further enquiry resulted in three reports prepared by the federal government with the following focuses:

- Artificial Intelligence in Cyber Security and Security Policy⁵⁰⁰⁵
- International Committees and Artificial Intelligence⁵⁰⁰⁶
- Artificial Intelligence, the Media and the Public⁵⁰⁰⁷

The report on "Artificial Intelligence in Cyber Security and Security Policy" gives an overview of how AI is influencing national security and how the military and government are dealing with this. It further lists considerations that need to be made in this regard. This includes how fundamental and human rights are affected, how legal and ethical considerations can be integrated and what new regulatory measures need to be implemented.⁵⁰⁰⁸

The report on International Committees and Artificial Intelligence also gives an overview of different international organizations and their efforts in AI policy. It further goes on to give recommendations of concrete action in Swiss foreign policy. The report mentions the importance of the

Swiss governments taking a position that upholds existing Swiss values like the respect of human rights, the rule of law, democracy and liberal values.⁵⁰⁰⁹

The report on Artificial Intelligence, the Media and the Public outlines the challenges associated with AI and mass media. It describes current regulations and areas that could be improved. The report mentions the importance of ensuring transparency, accountability and traceability/comprehensibility when AI is deployed in journalism, in the media or in social media.⁵⁰¹⁰

The 2019 Report of the Interdepartmental Working Group on Artificial Intelligence summarizes three reports by the federal government. The report attempts to give an overview of AI, the current legal situation and then considers AI in 17 different policy areas. The report emphasizes the need for transparency, fairness or non-discrimination, accountability and compliance with fundamental and human rights. The group points out that the more human or fundamental rights are involved in a topic, the more transparency and comprehensibility is required. They came to the conclusion that no fundamental change to the Swiss regulatory framework is necessary due to the fact that the legal principles of Swiss technology policy are formulated in a technology-neutral manner which allows them to be applied to AI systems. However, made several recommendations:

- AI should be monitored continuously as the report is only a snapshot of the current situation and respective legal action need to be taken when new developments are identified
- The Swiss government should engage in more international information and knowledge sharing on AI governance
- AI policy should be integrated into the "Digital Switzerland" Strategy
- Clarification of the 17 policy areas are necessary.⁵⁰¹¹

⁵⁰⁰⁹ Schweizerischer Eidgenossenschaft, *International Gremien und Künstliche Intelligenz* (Aug. 2019), <u>https://www.sbfi.admin.ch/dam/sbfi/de/dokumente/2019/12/i-g_k-i.pdf.download.pdf/i-g_ki_d.pdf</u>.

These recommendations were then integrated in the Digital Switzerland Strategy 2020.⁵⁰¹² The Strategy 2020 emphasizes: Putting people at the forefront, providing room for development, facilitating structural change, and networking the shaping of transformation processes. ⁵⁰¹³ And the following key objectives:

- Enabling equal participation for all and strengthening solidarity
- Guaranteeing security, trust and transparency
- Continuing to strengthen people's digital empowerment and selfdetermination
- Ensuring value creation, growth and prosperity
- Reducing the environmental footprint and energy consumption

In comparison to the 2018-2020 Strategy, the 2020-2022 Strategy emphasizes "the aspects of data and environment."⁵⁰¹⁴ Transparency, sustainable development and equal opportunities and participation have been key objectives encompassed in these reports since the first version was released in 2016.⁵⁰¹⁵⁵⁰¹⁶

Swiss Foreign Policy and AI

One of the thematic focus areas of the Swiss Foreign Policy Strategy 2020-2023 is "digitalization." The Federal Department of Foreign Affairs writes, "The focus is on people's needs. The rule of law and universal human rights – such as freedom of expression and information and the right to privacy – must also be guaranteed online. It is important to defend liberties such as press freedom." Furthermore, the Department seeks to "position Geneva as the location for global digitalisation and technology

debate" and to promote sustainable development using digital technologies, digital self-determination and cyber diplomacy.⁵⁰¹⁷

In 2018 an expert group on the future of data processing and data security published 51 recommendations for the federal government. The federal government and its ministries adopted 31 of them. These included:

- "The Confederation and the cantons adapt the powers and resources of the data protection authorities to enable them to perform their statutory tasks of sensitization, consultation and supervision comprehensively and effectively.
- "In cooperation with the cantons, the Confederation creates forms of cooperation between data protection supervisory authorities (e.g., competence center)."
- "In implementing the e-government strategy for Switzerland, the Confederation and the cantons will ensure that the "offline" population group is not socially excluded by digitization."
- "The Confederation, cantons and municipalities promote open and participatory systems and processes (...) in order to achieve social goals such as digital transformation, resilience and sustainability more quickly."
- "The Confederation and the cantons ensure that students at upper secondary schools and all students develop the basic skills and competencies necessary for handling and shaping digital technologies and transformation."
- "The Confederation and the cantons are committed to ensuring that the protection of fundamental values, human rights and human dignity is also secured in the digital age and that informational selfdetermination is promoted."
- "The Confederation will ensure sufficient transparency, traceability, comprehensibility and accountability of digital processes and algorithms to create a trust-based digital economy and society."

Many of these recommendations coincide with ongoing activities. For example, an association of the cantonal data protection authorities is in place, the federal government is working with the cantons and universities to integrate digital skills and knowledge into their respective curriculums and the revision of the Data Protection Act which was approved by the

⁵⁰¹⁷Schweizerische Eidgenossenschaft: Federal Department of Foreign Affairs FDFA, *Foreign Policy Strategy 2020-2023* (Jan. 2020),

Swiss parliament in 2020.⁵⁰¹⁸ If it is not challenged in a referendum then it is set to come into force in 2021.⁵⁰¹⁹ The revision improves transparency for citizens, gives the Swiss Federal Data Protection and Information Commissioner more competencies and resources and aligns Swiss data protection law with the European Data Protection Regulation.⁵⁰²⁰

Switzerland is a hub for international policy as many international organizations are based in Geneva. The United Nations hosted the first annual AI for Good Global Summit in 2017.

One of the thematic focus areas of the Swiss Foreign Policy Strategy 2020-2023 is "digitalization." The Federal Department of Foreign Affairs seeks to "position Geneva as the location for global digitalisation and technology debate" and to promote sustainable development using digital technologies, digital self-determination and cyber diplomacy."

Switzerland's ambition to strengthen international Geneva's role with regard to digital topics and AI is further demonstrated by the conference "AI and Trust" on overlaps between legislation, standardization and conformity assessment for AI co-organized by the Federal Department of Foreign Affairs in Geneva in May 2022⁵⁰²¹.

Public Participation

Switzerland is a direct democracy which means that citizens have the right to decide on policy directly, either by referendums or citizeninitiated referendums.⁵⁰²²⁵⁰²³ Further, policy revisions or proposals of importance go through a consultation procedure with relevant stakeholders

to include their opinions and needs and therefore to minimize the chance of a referendum.⁵⁰²⁴

Further specifically in technology policy, the website for the "Digital Switzerland" Strategy (<u>www.digitaldialog.swiss</u>) provides a summary of the Strategy and lists related initiatives and committees. Updates on how the Strategy is being implemented are also published on this website.⁵⁰²⁵ Through the digital dialogue website, organisations, companies, municipalities and cantons can propose measures for a Digital Switzerland in the action plan. You can directly upload a proposal on this website and it will be reviewed in the context of the "Digital Switzerland" action plan.⁵⁰²⁶

In 2018, the Federal Council established the opendata.swiss website, "the Swiss public administration's central portal for open government data."⁵⁰²⁷ The website, managed by the Federal Statistical Office, "supports organisations in publishing their open data" and "continuously monitors the quality of the catalogue."

Finally, the "Plateforme Tripartite Suisse" is an information hub and platform to exchange dialogue. It was founded in light of the "World Summit on the Information Society" in 2003 to prepare for this conference. It now "serves as a national forum for the informal exchange of information and experience on WSIS implementation and follow-up activities. It is open to all interested representatives from the administration, the business sector, civil society and the internet community at the national level and meets on an ad-hoc basis."⁵⁰²⁸

With the creation of a Competence Network for Artificial Intelligence (CNAI, https://cnai.swiss/), the use of and confidence in AI and other mew technologies is expected to be fostered quickly and sustainably both with and beyond the Federal Administration. The CNAI also contributes to informing the public. Its project overview enables it to help ensure the transparency of ongoing AI projects both within and outside the Federal Administration. The CNAI serves as an enabler and facilitator. Mutual gives and takes is at the heart of the CNAI, which is why the

competence network has two communities, the community of practice (CoP^{5029}) and the community of expertise (CoE^{5030}) . The CoP is open to everyone. People interested in AI come together to learn from each other and exchange information, for example, about best practices in using AI or sharing concrete projects experiences. The CoP is an organized group of people who have a common interest in AI. It is open to anyone with an affinity for AI or who has expertise and interest in AI.

Data Protection

Art. 13 of the Federal Constitution states fundamentally that every person has the right to respect for his or her private and family life, his or her home, and his or her correspondence, post and telecommunications, and to protection against misuse of his or her personal data.⁵⁰³¹ In order to enshrine this protection in law, the Federal Law on Data Protection (FADP⁵⁰³²) was adopted and has been in force since July 1, 1993. The corresponding ordinance (VDSG⁵⁰³³) regulates the details. In addition, numerous provisions on the protection of personality also exist in other laws and areas. Articles 28-281 of the Civil Code (ZGB⁵⁰³⁴) specify how legal action is taken in the event of personality violations.

The Data Protection Act is currently being revised. The new Data Protection Act (nFADP) and the new Data Protection Ordinance (nDPA) as well as the new Ordinance on Data Protection Certifications (VDSZ) will enter into force on September 1, 2023. With the total revision, the DPA will be adapted to the changed technological and social conditions. In particular, the transparency of data processing will be improved and the selfdetermination of data subjects over their data will be strengthened. At the same time, the total revision should allow Switzerland to ratify the Council of Europe's revised data protection convention ETS 108 and to implement the Schengen-relevant Directive (EU) 2016/680 on data protection in criminal matters. In addition, the revision should bring Swiss data

protection legislation as a whole closer to the requirements of Regulation (EU) 2016/679.⁵⁰³⁵

Al oversight

The Federal Data Protection and Information Commissioner (FDPIC) is the "competent authority for data processing by federal bodies and private persons, including enterprises." Furthermore, data processing by cantonal or communal authorities is supervised by cantonal and communal data protection commissioners.⁵⁰³⁶ The revision of Swiss Data Protection Act ascribed more competencies and resources to the FDPIC which should allow for more comprehensive oversight over the regulation of the data protection laws. The revision improves transparency for citizens, gives the Swiss Federal Data Protection and Information Commissioner more competencies and resources and aligns Swiss data protection law with the European Data Protection Regulation.⁵⁰³⁷

Further, in 2019 the Federal Council approved the proposal to establish a national human rights institution (NHRI). The NHRI is the result of a pilot project called the Swiss Centre of Expertise in Human Rights (SCHR). According to the Federal Council "The NHRI will be independent, include members from across society and receive an annual financial support from the Confederation."⁵⁰³⁸

In 2021 the SCHR presented a report on digitalization and privacy at the workplace discussing a range of topics including AI.⁵⁰³⁹ On the cantonal level, Zurich was the first canton to establish a regulatory sandbox for AI in 2022, aiming to foster responsible innovation by having the administration and participating organizations work closely on regulatory issues.⁵⁰⁴⁰

Algorithmic Transparency

Switzerland is outside the European Union and is therefore not directly subject to the GDPR. The Federal Act on Data Protection (FADP) was revised as of September 2020 to comply with the modernized Council of Europe Convention 108.⁵⁰⁴¹ Switzerland ratified the Council of Europe Convention in 2019.⁵⁰⁴² Article 9(1)(c) of the Convention gives every individual the right "to obtain, on request, knowledge of the reasoning underlying data processing where the results of such processing are applied to him or her."⁵⁰⁴³ The Swiss Data Protection Act establishes a Data Protection and Information Commissioner (FDPIC) with independent supervisory authorities. The Act creates obligations to undertake privacy impact assessments in certain circumstances. A key amendment increased transparency in data processing.⁵⁰⁴⁴

Article 21 of the new FADP introduces the "Duty to inform in the case of an automated individual decision."⁵⁰⁴⁵ This introduces the general concept of automated individual decisions in Swiss law.

The FADP states that: (1) "The person responsible shall inform the person concerned of a decision that is based exclusively on automated processing that is associated with a legal consequence for them or significantly affects them (automated individual decision) and (2) "On request, it shall give the data subject the opportunity to state his or her position. The data subject may request that the automated individual decision be reviewed by a natural person."

Finally, there is a specific labeling requirement for an automated individual decision if it is issued by a federal body: 21(4) If the automated individual decision is issued by a federal body, it must label the decision accordingly. This particular requirement shows that higher demands are

⁵⁰⁴⁵ Swiss Parliament, *Vorlage der Redaktionskommission für die Schlussabstimmung, Bundesgesetz über den Datenschutz (DSG)* (Sept. 25, 2020) ("Presentation by the editorial board for the final vote on the Data Protection Act") [DT]ra, <u>https://www.parlament.ch/centers/eparl/curia/2017/20170059/Schluzssabstimmungstext</u> %203%20NS%20D.pdf.

placed on government action in general, and in particular with regard to transparency.

Furthermore, the calls for transparency in civil society as well as at the political level are becoming louder and louder. Civil society organizations are calling for an ADM register for public administration.⁵⁰⁴⁶ These demands have been taken up at the federal level⁵⁰⁴⁷ as well as at the cantonal level⁵⁰⁴⁸. Developments in the canton of Zurich are the most advanced: As part of the revision of the Information and Data Protection Act, the government council of the canton of Zurich is proposing to establish a registry for automated decision-making systems (ADM systems).⁵⁰⁴⁹ Both parliamentary motions do not deal with all algorithmic systems, but with those that appear to be particularly problematic from the point of view of the comprehensibility of the decision-making process.

Further, article 25(g) establishes a data subject's right to algorithmic transparency in the case of an automated individual decision: "In any case, the following information will be communicated to the data subject: g. if applicable, the existence of an automated individual decision and the logic on which the decision is based."

Data Scraping

In August 2023, the Federal Data Protection and Information Commissioner, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.⁵⁰⁵⁰

⁵⁰⁴⁹ <u>https://algorithmwatch.ch/de/adm-register-kt-zh/</u>.

⁵⁰⁵⁰ Office of the Australian Information Commissioner, Office of the Privacy Commissioner of Canada, Regulatory Supervision Information Commissioner's Office of the United Kingdom, Office of the Privacy Commissioner for Personal Data of Hong Kong, Federal Data Protection and Information Commissioner of Switzerland, Norwegian Datatilsynet, Office of the Privacy Commissioner of New Zealand, Colombian Superintendencia de industria y Comercio, Jersey Office of the Information

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

AI and Criminal Justice

According to AlgorithmWatch, the Swiss government is using AI in the penal system. The application helps to triage inmates, which is the first of several steps to develop the inmate's release plan. Further, the Federal government uses a system for automatic vehicle detection and traffic monitoring at state borders. Finally, the Federal Customs Administration uses a different system, like a data processing system, to help assess goods coming into the country. Some cantons use a police software to predict domestic burglaries. According to AlgorithmWatch, "it should be noted that

Commissioner, Moroccan CNPD, Argentine AAIP, Mexican INAI, Joint statement on data scraping and the protection of privacy (Aug. 24, 2023),

https://ico.org.uk/media/about-the-ico/documents/4026232/joint-statement-data-scraping-202308.pdf.

the use of predictive policing in Switzerland is currently limited to a relatively small and clearly defined area of preventive police work."5051

Facial recognition

Machine facial recognition is hardly outlined in Switzerland in regulatory terms. The police occasionally use facial recognition to compare mug shots, whereby a cantonal police database of known criminals is compared with another, e.g., a cross-cantonal database. The mugshots often come from surveillance cameras of injured parties, such as a clothing store that has been robbed. The concrete identification of the suspected person is still the responsibility of a police officer and not of a software.⁵⁰⁵²

Civil society organizations are campaigning hard for a ban on facial recognition in public spaces. An alliance of Amnesty International, AlgorithmWatch CH and the Digital Society is calling for a ban on automatic facial recognition and biometric mass surveillance in Switzerland.⁵⁰⁵³ Together, the organizations launched a petition for such a ban.⁵⁰⁵⁴ The petition was signed by more than 10,000 people and has also led to effects at the political level.⁵⁰⁵⁵

Currently, especially in eastern Switzerland, in the city of St. Gallen, the topic of facial recognition is being discussed in parliament. As the first city in Switzerland, the St. Gallen parliament wants to ban automatic facial recognition in public spaces.⁵⁰⁵⁶ However, political initiatives have also been submitted in the cities of Basel⁵⁰⁵⁷, Zurich⁵⁰⁵⁸ and Lausanne⁵⁰⁵⁹ and are currently being examined by the respective cantonal executive.

Human Rights

Switzerland is a signatory to many international human rights treaties and conventions. Switzerland typically ranks among the top nations in the world for the protection of human rights and transparency.⁵⁰⁶⁰ In 2021, Freedom House gave Switzerland the score of 96/100, unchanged from 2021, and noted that "the government is generally transparent in its operations. In recent years, an increasing number of cantonal governments have passed transparency laws that make government data more accessible to citizens." Guaranteeing human rights is also one of Switzerland's key goals for the Council of Europe's upcoming AI framework.⁵⁰⁶¹

OECD / G20 AI Principles

Switzerland endorsed the G20 AI Principles. Regarding implementation of the AI Principles, the OECD notes Switzerland's active involvement in relevant international organisations and processes.

"Particularly important for Switzerland is to ensure that fundamental and established values and norms such as human rights are respected and that all relevant stakeholders are involved in decision-making."5062

UNESCO Recommendation on the Ethics of AI

Switzerland is a member of UNESCO and as such supported the adoption of the UNESCO Recommendation of the Ethics of AI. In his speech before the 41st session of the General Conference of UNESCO in November 2021, Federal Councillor Ignazio Cassis emphasized "Switzerland's unwavering commitment to encouraging respect for fundamental rights" and its "support for the recommendation on the ethics of artificial intelligence."5063

AI Safety Summit

In November 2023, Switzerland participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁵⁰⁶⁴ Switzerland thus

https://www.gov.uk/government/publications/ai-safety-summit-2023-the-bletchley-

⁵⁰⁶⁴ UK Department for Science, Innovation & Technology, Foreign, Commonwealth & Development Office, Prime Minister's Office, The Bletchley Declaration by Countries Attending the AI Safety Summit, (Nov. 2023),

committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on Al

Switzerland contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. Switzerland chaired the Council of Europe Committee on AI. Its neutrality was questioned. According to an article published in the Swiss press, Switzerland favoured the potential global reach of the Convention at the expense of the Council of Europe's human rights standards.⁵⁰⁶⁵ The Committee on AI approved the Draft Framework Convention at its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁵⁰⁶⁶

Evaluation

Switzerland has newly established a national set of guidelines on ethics that are aimed at the public administration. Further, across most reports and initiatives, ethics have been considered, integrated and implemented in the governments work on AI policy. So far, it appears that Switzerland does not want to enact a specific AI-Act, but rather wants to address the new technology on a sector-specific basis. In recent years, initiatives on the federal as well as the cantonal level demonstrate, that the topic of AI policy is picking up speed in Switzerland. With the Federal Department of foreign Affairs' 2022 report and Switzerland's contribution

declaration/the-bletchley-declaration-by-countries-attending-the-ai-safety-summit-1-2november-2023

⁵⁰⁶⁵ Adrienne Fichter, AI regulation: is the Swiss negotiator a US stooge? Watered down and US-friendly: the Council of Europe's Convention on AI has little to do with European values. https://search.coe.int/cm/pages/result_details.aspx?objectid=0900001680aee411

to the Council of Europe's upcoming AI framework, the country's ambitions for AI policy have become clearer, attesting to its commitment to technological development that is compatible with human rights. However, there is no clear regulatory strategy for the private sector.

Taiwan

National AI Strategy

"Beyond sparking a scientific and technological revolution, artificial intelligence (AI) will fundamentally transform human life and industry and create boundless business opportunities." This sentence officially introduces the 2018 Taiwan Government's four-year AI Action Plan⁵⁰⁶⁷ which aims to propel Taiwan "into the ranks of the world's leading smart nations." "Guided by the principles of deregulation, open access and technology investment," the AI Action Plan is designed to "sharpen Taiwan's advantages, prioritize innovation and real-world implementation, and develop software and hardware in tandem, thereby injecting greater momentum into Taiwan's industries."

To this end, the Action Plan focuses on five action areas: i) developing AI talent; ii) promoting Taiwan's lead role in AI by expanding its world-leading position in the semiconductor chip industry; iii) building Taiwan into an AI innovation; iv) liberalizing laws and opening test grounds to ease restrictions on innovative technologies; and v) Transforming industry with AI.

The AI Action Plan follows on the five-year AI strategy developed by the Ministry of Science and Technology (MOST)⁵⁰⁶⁸ to "cultivate AI technology specialists and create an environment for AI scientific research." This "Grand Strategy for a Small Country⁵⁰⁶⁹" builds on Taiwan's "strengths and potential advantages, such as semiconductors and information and communications technology."

The AI Strategy aims to "develop select fields for the future, including the internet of things, security solutions and driverless vehicles" and has five "key facets": i) R&D services with the creation of an AI cloud service and high-speed computing platform; ii) Value-added

<u>e77208481667</u>. The Executive Yuan is an executive branch of the Taiwan Government. innovation with the establishment of four AI innovation research centers; iii) Creativity and practice with an AI Robot Makerspace; iv) Industrial pilot program with an AI semiconductor "moonshot" project; and v) Social participation with three "Formosa Grand Challenge" technology competitions to uncover talent, develop technology and stimulate creativity. Ethical questions are also targeted in Taiwan – as one of the many aspects related to AI.⁵⁰⁷⁰

AI Core Values

MOST announced in September 2019 the AI Technology R&D Guidelines "in a bid to create a reliable environment conforming to international trends of AI R&D and to provide directions for Taiwan AI researchers to follow."⁵⁰⁷¹ When presenting the Guidelines, Science, and Technology Minister Chen Liang-gee said that his ministry "has the responsibility of helping humans be able to trust" AI⁵⁰⁷² and that "those who provide digital tools must be ethical."⁵⁰⁷³ He also explained that the whole world is still watching the evolution of artificial intelligence and that it is right now "more appropriate to adopt guidelines than sanctions."

The AI R&D Guidelines are based on three core values⁵⁰⁷⁴:

(1) Human-centered (the human being should be at the heart of research, an AI-based society should respect human dignity, rights and freedom, and application of AI is to prompt human welfare and hike human living standards);

(2) Sustainable development (AI R&D should seek balance among economic growth, social progress and environmental protection to reach coexistence and common prosperity among human being, society and environment);

(3) Diversity and inclusion (AI R&D is to create an AI-based human society of diverse value concepts and backgrounds via interdisciplinary dialog mechanisms).

⁵⁰⁷⁴ Bryan Chuang, Adam Hwang, *MOST announces AI R&D guidelines*, DigiTIMES (Sept. 24, 2019), <u>https://www.digitimes.com/news/a20190923PD209.html</u>

AI R&D Guidelines

"AI research and development must be people-oriented," the Minister said, asking that research teams retain the source codes and AI training materials so that the work can be traced. The complexity of AI means that it is vulnerable to misuse, which countries are seeking to mitigate by establishing standards for its development, he said. In particular, because AI technology systems learn from data, they can perpetuate and amplify human biases, he said.⁵⁰⁷⁵ "After an artificial intelligence program is written, it evolves based on the data provided to it. If the data is discriminatory, the program will be discriminatory. If the data is deviant, it will be deviant."

More precisely, eight guidelines derive from Taiwan's AI core values, including i) Common good and well-being; ii) Fairness and nondiscrimination; iii) Autonomy and control; iv) Safety; v) Privacy and data governance; vi) Transparency and traceability; vii) Explainability; and viii) Accountability and communication.⁵⁰⁷⁶

The official press release points to the fact that the core of AI technology is its people-oriented nature, so researchers must safeguard human rights and preserve human dignity and that the guidelines' eight criteria emphasize promoting shared benefits and common well-being, with researchers who should aim to develop systems that are free of discrimination. Likewise, AI tools should support human policies, and people using the tool.⁵⁰⁷⁷

"Human-centered AI" for Taiwan AI start-up iKala means the involvement of people in AI development and applications, as well as the creation of ethical, humane AI. As an illustration, iKala Co-founder and CEO Cheng cites the example of an innovative picture-as-a-service (PicaaS) technology which automatically edits product pictures to allow companies to circulate clean photos of their products. However, following complaints that it could potentially be used to infringe on image owners' intellectual property rights, Cheng and his team re-trained the software to recognize and reject copyrighted images. "That's the kind of responsible AI

we want to be working on," says Cheng. "Putting humans in the equation – not just stealing and not just replacing people."⁵⁰⁷⁸

Digi+

Taiwan's AI Action Plan's was developed in coherence with the 2017, broader, "DIGI+: Digital Nation and Innovative Economic Development Program." DIGI is an acronym reflecting Taiwan's commitment to development, innovation, governance, and inclusion, with the "+" reflecting the government's intention to apply the strategy toward promoting innovation at every level of society and the economy.⁵⁰⁷⁹

The DIGI+ Program highlights are:

- "Enhance soft infrastructure to create an environment conducive to digital innovation: DIGI+ calls for the construction of an innovation-friendly legal framework and the cultivation of interdisciplinary technical talent, matched to the research and development of advanced digital technologies.

- Promote development of the digital economy

- Create a service-oriented digital government and promote open governance: This includes the development of an open application programming interface (Open API) for government data, and the establishment of demand-oriented, one-stop smart government cloud services.

- Develop a vibrant online society with equality of access: The DIGI+ program aims to ensure broadband internet access for the disadvantaged, implement participatory democracy, promote digital infrastructure in remote regions and outlying islands, build a comprehensive legal foundation for digital human rights, and provide citizens with equal opportunities for digital development.

- Build sustainable, smart cities and townships"⁵⁰⁸⁰

In August 2022, Taiwan inaugurated its new Ministry of Digital Affairs (MoDA). According to the new Minister, Audrey Tang, MoDA "is aimed to build digital resilience for all, connect the digital technologies with civil affairs, strengthen industrial competitiveness and cybersecurity

practices, accelerate social digital development and realize the vision of a smart country."⁵⁰⁸¹

Public participation and Use of AI for Public Participation

One of the key goals of DIGI+ is to further participatory democracy.⁵⁰⁸² The 2021Taiwan Open Government National Action Plan goes goes in the same direction and aims at "deepening democratic values and strengthening international ties," applying technology toward furthering government transparency and increasing public participation in government policies.⁵⁰⁸³

For the last few years, Taiwan has organized public debates via the citizen-run vTaiwan platform.⁵⁰⁸⁴ vTaiwan's (for Virtual Taiwan) algorithms highlight where there is consensus in a debate while minimizing the voices at the most extreme ends.⁵⁰⁸⁵ This system is officially and routinely part of the law-making process of Taiwanese institutions, involving thousands of citizens in varying degrees.⁵⁰⁸⁶ The outcomes of vTaiwan have been put in front of Parliament, by government, to form the core of 11 pieces of laws and regulation, with eight more waiting to go on everything from revenge porn to fintech regulation.

The vTaiwan process is giving weight to the citizen voice and has led to regulatory innovations at four stages: (1) informing the public; (2) collecting the strategic approaches through Pol.is,⁵⁰⁸⁷ an open-

source self-learning algorithm; (3) deliberating; and (4) observing decision-making. 5088

"When people started using Polis, we found that it became a consensus-generating mechanism," Megill said to Wired.⁵⁰⁸⁹ To bring the groups closer together, Polis has reengineered many of the features we take for granted on social media. No reply button – hence no trolling. No echochambers, replaced by an attitudes map showing you where you are in relation to everyone else. The statements that get attention are those that find support not only in one cluster, but across other groups, too.

However, in a joint statement regarding the establishment of the new Ministry of Digital Affairs (MoDA), leaders from Taiwan's human rights and technology sectors emphasized that the establishment of the MoDA itself shows the progress that still needs to be made with regard to public participation. "There has been a notable lack of transparency surrounding the establishment of MoDA. Although the mist is slowly starting to fade in the weeks before its launch, information surrounding the operation, organization, and structure of MoDA was notably slow to appear. News of MoDA's establishment first emerged two years ago, and yet still little is known (...) no official explanation exists. With information only appearing at the 11th hour before MoDA's launch, it has been hard for civil society groups to monitor and give feedback on its establishment. The fact that the joint statement was published only about a month before MoDA is to be established reflects the lack of opportunities for dialogue and feedback. There is no quick fix to promoting procedural transparency and cooperation, but it is essential to ensure great public participation. Indeed, international success stories of rules-based, transparent digital governance should provide one key lesson for MoDA: instituting strong digital governance is slow and difficult. This is a lesson that Taiwan's government has thus far been unreceptive to learning."5090

Data Protection

Article 22 of the Taiwanese Constitution protects individuals' information privacy rights.

https://thediplomat.com/2022/08/hopes-and-concerns-for-taiwans-new-ministry-ofdigital-affairs/; For the joint statement (in original language only): https://ocf.tw/p/issues/2022/

⁵⁰⁸⁹ Wired, *Taiwan is making democracy work again. It's time we paid attention* (Nov. 26, 2019), <u>https://www.wired.co.uk/article/taiwan-democracy-social-media</u>

⁵⁰⁹⁰ Sam Robbins and Chia-Shuo Tang, *Hopes and Concerns for Taiwan's New Ministry of Digital Affairs*, The Diplomat (Aug. 22, 2022),

Personal data protection in Taiwan is essentially subject to the 2015 Personal Information Protection Act (PDPA) which applies to the public and the private sectors.⁵⁰⁹¹ It is supplemented by the 2016 Enforcement Rules of the Personal Data Protection Act.⁵⁰⁹² Local and national government authorities enforce this Act.

The Taiwan Government considers amending the PDPA to meet GDPR standards to obtain an adequacy decision from the EU⁵⁰⁹³ and held several public hearings in 2019 to solicit public comments. Among the various topics discussed during the public hearings, the government was contemplating the adoption of data breach notification obligations and cross-border data transfer restrictions similar to those under the GDPR. Taiwan continues to dialogue with the EU in this regard.

According to the National Development Council's website, "The Personal Data Protection Office under the National Development Council was established on July 4, 2018 in response to the implementation of the GDPR and to ensure a coherent enforcement of the PDPA. On July 25, 2018, the National Development Council replaced the Ministry of Justice to become the governing authority of the PDPA, so that all matters relating to the PDPA may be handled and coordinated by the Council in a coherent matter."

In July 2020, Taiwan's Digital Minister said that she supported the idea of establishing a dedicated agency for personal data protection before the electronic identification cards (eID) are rolled out next year.⁵⁰⁹⁴ However, as of March 2023, this does not seem to have happened.

In August 2022, in a landmark case concerning the secondary use of the National Health Insurance Research Database, the Taiwanese constitutional court ruled that since the PDPA and other related laws in Taiwan lack an independement surpervision mechanism for personal data protection, such protection is inadequate and potentially unconstitutional.

1338

The Court gave three years for an appropriate legal regime to be set.⁵⁰⁹⁵ In February 2023, the Executive Yuan confirmed that the government will create, no later than August 2024, an independent data protection commission.⁵⁰⁹⁶

In November 2022, the MoDA announced the issuance of the draft Regulations Governing the Personal Data Files Security Maintenance Plan and Disposal Methods for Digital Economy Related Industries. The Regulations will require for some industries to establish a personal data protection policy and a personal data files security maintenance plan.⁵⁰⁹⁷

Algorithmic Transparency

The PDPA regulates "the collection, processing and use of personal data so as to prevent harm on personality rights, and to facilitate the proper use of personal data."⁵⁰⁹⁸ The PDPA covers "data retrieval and management by automated and non-automated means. However, the PDPA does not provide for algorithmic transparency.⁵⁰⁹⁹

However, the 2019 AI Technology R&D Guidelines identify "transparency and traceability," as well as "explainability" as "core AI values."

Medical Data and AI Ethics

Two research projects on AI Ethics in the medical and biomedical areas are ongoing. One examines the Ethical, Legal, and Societal Issues

Surrounding Artificial Intelligence-Assisted Medical Care (ELSI-AIM)⁵¹⁰⁰ and is in its second year. Another one (NCKU AI Biomedical Research Center on AI Ethics) focuses on AI for biomedical research with a multidisciplinary team of clinicians, biomedical, AI experts, legal and ethical advisors. ⁵¹⁰¹The Taiwan Biobank created in 2012 is a repository of tissues/ information but is not allowed to directly carry out research. Information on the participants, all voluntary, whose samples are included in the biobank will link several sources of data: national identification number, National Health Insurance system, cancer registry, and cause of death registry.⁵¹⁰² Its operations are regulated by detailed legislation.

Current discussions focus on how the Taiwan Biobank can be transformed by leveraging digital technologies. For some, greater participant engagement and the uptake of Information Technology and AI applications can be used in partnership with vertical and horizontal integration as part of a four-pronged approach to promote biobank sustainability, and facilitate the biobank's transformation.⁵¹⁰³ Others seem more cautious,⁵¹⁰⁴ pointing to key issues raised by the current ethical governance⁵¹⁰⁵ of the Taiwan Biobank, namely i) the handling of ethnicity,

⁵¹⁰⁰ Joint Research Center for AI Technology and All Vista Healthcare sponsored by: Ministry of Science and Technology -

http://mahc.ntu.edu.tw/en/research_view.php?id=13

This project includes four subprojects: (1) The deliberation of ethical issues on artificial intelligence-assisted medicine; (2) legal and policy implications of artificial intelligence in medicine; (3) the implications of societal issues on artificial intelligence-assisted end-of-life physician-patient communication: opportunities and challenges; and (4) artificial intelligence-based medicine assisted system from analytical design to practical application.

⁵¹⁰¹ NCKU - MoST AI Biomedical Research Center The MoST AI Biomedical Research Center is located at the National Cheng Kung University (NCKU). The research center focuses on AI for biomedical research. Currently there are fourteen projects ongoing with a focus in four areas: smart medicine, smart healthcare, smart biotechnology and ethics and humanities.

including the special requirements that it imposes with respect to obtaining participant consent, and ii) transparency (and accountability) around the undertaking's governance.

COVID-19 and Big Data Analytics

In January 2020, Taiwan integrated its national health insurance database with its immigration and customs database to begin the creation of big data for analytics and allow case identification by generating real-time alerts during a clinical visit based on travel history and clinical symptoms.⁵¹⁰⁶

"The combination of these two sets of data allows us to generate alerts to tell healthcare staff when a patient returns from a risk area," said Yu-Lun Liu, doctor in the intelligence department of the Taiwan Center for disease control (CDC). The identified patients are then treated through a separate circuit, limiting contact with other patients.⁵¹⁰⁷ To strengthen this new data set, the authorities are "working with telephone providers, on the basis of roaming data, to identify people whose last stopover is not necessarily an area at risk, but who have made trips with stops in areas affected by the epidemic." "The authorities are developing a model for processing public video surveillance images to estimate the proportion of masked people. "This artificial intelligence-based model has allowed us to see a rapid increase in the number of people wearing masks. We have chosen to stop their export and increase local production," recalls Yu-Lun Liu."

In March 2020, the BBC reported that when the phone belonging to an American University student in Taiwan, who was subject to 14 days' quarantine after returning from Europe, ran out of battery power, in less than an hour he had received phone calls from four different local administrative units, a text message notifying him he would be arrested if he had broken quarantine, and a visit from two police officers. The phone tracking system uses phone signals to triangulate locations of the more than

6,000 people subject to home quarantine; an alert is sent to the authorities if the phone is turned off for more than 15 minutes.⁵¹⁰⁸

Autonomous Vehicles

In November 2018, the Legislative Yuan passed the Act for Unmanned Vehicle Technology Innovative Experiments, which was enacted by the President in December 2018. Entered into force in May 2019, the Act frees autonomous vehicles and drones from limits by some traffic regulations in their test runs.⁵¹⁰⁹ Moreover, the regulations specifically call for AI-boosted algorithmic unmanned platforms.⁵¹¹⁰ Taiwan CAR (Connected, Autonomous, Road-test) Lab,⁵¹¹¹ the nation's first closed field for testing self-driving cars, also opened for use in 2019.

Facial Recognition

Facial recognition has been implemented in Taiwan across various sectors, including banks,⁵¹¹² retail stores,⁵¹¹³ airports,⁵¹¹⁴ and law enforcement.⁵¹¹⁵ In June 2019, the Taiwan Railways Administration announced that, due to privacy concerns, its surveillance system trial would no longer apply facial recognition technology.⁵¹¹⁶ Artificial intelligence–

based surveillance will still be capable of monitoring railway passenger behavior, including trespassing, loitering in restricted areas, and prohibited acts.⁵¹¹⁷

In 2019, Liao Wei-min, an associate professor at Taiwan National Chung Hsing University's Department of Law called for legislation limiting facial recognition and similar private data collection. "What is essentially a beneficial technology is deeply problematic given the lack of precise and targeted legislation, and this is the fault not of civil servants, but their politically appointed masters. Something needs to be done to address this."⁵¹¹⁸ As yet, however, there have been no formal proposals by Taiwan's government to protect citizens from the risks of facial recognition used for surveillance.

EdTech and Children Tracking

A recent report from Human Rights Watch⁵¹¹⁹ highlighted a practice, exacerbated by the need for virtual learning during the COVID-19 pandemic, for governments to require young students to use educational technology that shared the children's personal data with advertising technology companies. Taiwan-based technology companies produce several of the educational technology and advertising technology products implicated by the report. Additionally, Taiwan's government produced three of its own, proprietary educational technology products that transmitted personal data about children to advertising technology companies. As the report notes, by making it compulsory for children to use this technology in order to access public education, these governments not only subjected children to potential exploitation of their data but also left no alternative for children and families to opt out of this privacy infringement.⁵¹²⁰

Lethal Autonomous Weapons

Taiwan is not a member of the United Nations and thus was not a party to the UN's October 2022 Joint Statement on Lethal Autonomous.

⁵¹¹⁷ IAPP, *Taiwan Railways Administration excludes facial recognition from surveillance trial* (Nov. 7, 2019), <u>https://iapp.org/news/a/taiwan-railways-administration-excludes-facial-recognition-from-surveillance-trial/</u>

The Taiwan government has not taken a formal policy position on the application of these lethal technologies.

Human Rights

Taiwan is ranked by Freedom House as a global leader in its protection of human rights and transparency, with a combined score for political and civil liberties of 94 out of 100, the highest score for any nation in Asia.⁵¹²¹ Freedom House additionally awarded Taiwan top marks for internet freedom, characterizing the nation as, "one of the freest online environments in Asia. An independent judiciary protects free expression. Civil society, the technology sector, and the government have taken innovative action to counteract the impact of disinformation campaigns originating from China."⁵¹²² Freedom House notes that a prominent concern threatening the continuation of these liberties relates to "the Chinese government's efforts to influence policy-making, the media, and democratic infrastructure in Taiwan."⁵¹²³

In April 2022, the Executive Yuan authorized the establishment of the Department of Human Rights and Transitional Justice under its authority on April 22, and in May 2022 it approved the first national action plan on human rights. "The premier pointed out that, to date, Taiwan has created its own laws to implement five of the United Nations' nine core international human rights instruments-the International Covenant on Civil and Political Rights; International Covenant on Economic, Social and Cultural Rights; Convention on the Elimination of All Forms of Discrimination against Women; Convention on the Rights of the Child; and Convention on the Rights of Persons with Disabilities." "To reconcile and align the nation's policies to human rights values, the plan lays out open and transparent procedures and involves widespread participation by government, civic groups, and scholars and experts from all sectors. Aside from striving for equality and nondiscrimination against vulnerable groups such as children and youth, the elderly, mentally or physically disabled people, indigenous peoples, migrant workers and the LGBTI community, the plan presents concrete actions and performance indicators for new and emerging human rights issues, such as" digital human rights. Such concrete

⁵¹²³ Freedom House Report, Taiwan (2022),

https://freedomhouse.org/country/taiwan/freedom-net/2022

actions include "efforts to prevent digital technologies from violating human rights."⁵¹²⁴

OECD / G20 AI Principles

Although Taiwan is not an OECD member country, many of its AI policies align with the OECD AI Principles. The Ministry of Science and Technology noted in its announcement of the AI Technology R&D Guidelines that "many countries and organizations have established ethical standards for AI R&D, such as the EU's Ethics Guidelines for Trustworthy AI, OECD's Principles on Artificial Intelligence and IEEE's Ethically Aligned Design-Version II."⁵¹²⁵

Taiwan AI Labs and Taiwan Federated Learning Alliance have been invited to participate in the 2021 Global Partnership on AI Annual Meetings. "Members and participants of GPAI are brought together first and foremost by a shared commitment to the values expressed in the OECD Recommendation on Artificial Intelligence. All GPAI activities are intended to foster responsible development of AI grounded in these principles of human rights, inclusion, diversity, innovation and economic growth."⁵¹²⁶

UNESCO Recommendation on the Ethics of Artificial Intelligence

Taiwan has not been a member of the United Nations since 1971, when the country was expelled via United Nations Resolution 2758, in deference to the People's Republic of China which was henceforth recognized as "the only legitimate representative of China to the United Nations."⁵¹²⁷ Taiwan is not a party to the UNESCO Recommendation on the Ethics of AI.

Evaluation

Although Taiwan is not an OECD member country, many of its AI policies align with the OECD AI Principles. There is also a robust public debate about the use of AI for facial recognition, medical data, and autonomous vehicles. But concerns arise with the integration of government

data sets while there is currently no independent data protection agency that could oversee AI applications. The PDPA would also benefit from being revised and including algorithmic transparency. The lack of regulation regarding facial recognition is also of concern. The Government's commitment to create an independent data protection commission by August 2024 is a positive step. So is the 2022 first national human rights action plan which covers digital human rights. Thailand

National AI Strategy

Thailand's national AI strategy and action plan (2022 - 2027) was approved by the Prime Minister's Cabinet Office on July 26, 2022. The vision of the strategy is for Thailand to have an effective ecosystem for developing and applying AI, that will be proven to enhance the economy and improve the quality of life of Thais by 2027.⁵¹²⁸

Thailand's National AI Strategy has the following 5 sub-strategies and 15 work plans:⁵¹²⁹

- 1. Preparing Thailand's readiness in social, ethics, law, and regulation for AI application
 - At least 600,000 Thai population have awareness of AI law and ethics
 - An AI Law & Regulation is enforced
 - 1.1 Policy and standard for AI Ethics
 - 1.2 Driving awareness and education for AI Ethics
- 2. Developing Infrastructure for Sustainable AI Development
 - Increase Thailand's Government AI Readiness index to rank among the top 50 globally
 - Increasing digital infrastructure investment by 10% per year to support AI development in both public & private sectors
 - 2.1 Creating AI expert networks
 - 2.2 Creating a national platform for
 - advanced data analytics and management
 - 2.3 Creating a national AI service platform
 - 2.4 Developing High-Performance

Computing (HPC) infrastructure

- 3. Increasing human capability and improving AI education
 - Creating more than 30,000 AI talents within 6 years

⁵¹²⁹ AI Thailand, *Connect the dots of AI: driving Thailand future* (July 26, 2022), <u>https://www.ai.in.th/en/about-ai-thailand/</u>

Artificial Intelligence and Democratic Values 2023

Center for AI and Digital Policy

3.1 Improving AI education and knowledge creation

3.2 AI Scholarship programs

3.3 Cooperation mechanism development with researchers & experts from abroad

- 4. Driving AI technology and innovation development
 - Strengthen AI technology by developing at least 100 R&D prototypes within 6 years
 - Wide adoption of AI research, development, and innovation helps create business & social impact of at least 48 billion Baht by 2027

4.1 Applying AI technology and innovation for strategic sectors

4.2 Developing AI core technology and platform

- 5. Promoting the use of AI in public and private sectors
 - Number of agencies (government, business & new entrepreneurs) using AI innovation is increased to at least 600 agencies in 6 years
 - Thailand's AI competitiveness is increased by AI applications

5.1 Promoting AI use in the government sector

5.2 Promoting AI use in key industries

5.3 Promoting the system integrator industry with AI capability

5.4 Developing mechanisms & sandboxes

for business innovation and AI startup

Thailand's National AI Strategy targets development in the following 10 sectors:⁵¹³⁰

- 1. Manufacturing: Smart manufacturing, Industry assessment and testbed
- 2. Energy and Environment: Energy management, Environmental geospatial analytics
- 3. Medical and Wellness: AI in self-care, Chronic disease, Medical assistant
- 4. Food and Agriculture: Digital farm, Food quality

⁵¹³⁰ AI Thailand, *Connect the dots of AI: driving Thailand future* (July 26, 2022), <u>https://www.ai.in.th/en/about-ai-thailand/</u>

- 5. Education: Smart education, Geography of educational opportunities
- 6. Tourism and Creative Economy: Smart guidance and planning, Tourism service quality, Smart tourism area
- 7. Security: Public surveillance platform, Crime response system, Cyber security
- 8. Logistics and Transportation: Intelligent transportation, Transport map
- 9. Finance and Commerce: Credit scoring, CRM
- 10. Government Service: Government administration, Government services

The national policy and plans are formulated with an emphasis on digital technologies empowering people to increase their 'citizen well-being and quality of life.' Increasing the transparency and accountability of public agencies is mentioned several times in these plans. However, it is not clear how the goals will be adopted by the agencies and how the actions will be coordinated across different levels of government.

There is no explicit mention of concepts such as fundamental rights, human rights, rule of law, and fairness with respect to AI in the plans. 12th National Economic and Social Development Plan acknowledges that Thailand "has high inequality and a lack of fairness"⁵¹³¹ across society. The only mention of any AI ethics guidelines is acknowledging the existence of EU Ethics Guidelines for Trustworthy AI, and the World Government Summit's Ethical AI Systems Design through a reference within a Thailand Digital Government Development (TDG)Plan summary document⁵¹³². Electronic Government Agency (EGA), as the agency responsible to implement standards, models, measures, principles, and approaches in the form of digital technology, only mentions openness, integrity, and collaboration under its eight core values.⁵¹³³

In 2019, the Ministry of a Digital Economy and Society, academics and experts from Mahidol University and Microsoft Thailand joined together to draft Digital Thailand – Draft AI Ethics Guidelines, to serve as a manual and provide ethical codes for AI development in government agencies, private firms, regulatory bodies, researchers, designers,

⁵¹³¹ The Twelfth National Economic and Social Development Plan (2017-2021), https://www.nesdc.go.th/nesdb_en/ewt_dl_link.php?nid=4345

developers, and users. The draft guidelines cover six aspects of development: competitiveness and sustainable development; legal regulations and international ethical standards; operational codes and duties; security and privacy; equality, diversity, and fairness; and credibility.⁵¹³⁴ Digital Thailand – AI Ethics Guideline was published in November 2019⁵¹³⁵ and taken up by the Cabinet of Thailand in December 2020.⁵¹³⁶ This was approved by the Cabinet in February 2021 and is freely available and accessible online however the document is currently only in the Thai language.⁵¹³⁷

The Office of National Higher Education Science Research and Innovation Policy Council (NXPO) established five technical working groups to explore ethical issues in genetic engineering and technology; artificial intelligence, robotics, and big data; climate change and environment; research ethics; and communications and youth engagement in science and technology policy development.⁵¹³⁸ One of the recent outcomes is the Bangkok Statement on the Ethics of Science and Technology and Sustainable Development⁵¹³⁹, a statement calling for the concerted efforts of all stakeholders to take action on the ethics of science and technology so that new technologies can be progressed and fully developed to benefit mankind.

While Thailand's National AI Strategy seeks to enhance the development of AI across multiple sectors of the economy, there is research that has also highlighted the risk of job disruption due to AI.⁵¹⁴⁰ The

⁵¹⁴⁰ Elina Noor and Mark Bryan Manantan, *Raising Standards: Data and Artificial Intelligence in Southeast Asia*, Asia Society Policy Institute (July 2022),

Thailand Development Research Institute (TDRI) estimated that 8.3 million Thais work in high-risk occupations where there is an over 70 percent likelihood that they will be replaced by AI.⁵¹⁴¹ The International Labor Organization (ILO) furthermore warned that women in Thailand face a higher risk of job disruption from AI as they currently lack access to STEM education and training opportunities.⁵¹⁴²

On the other hand, a study commissioned by Microsoft-IDC, found that while 30 percent of jobs in Thailand will be outsourced, automated, or made obsolete by AI, an equal number of new roles in the workforce will also be created.⁵¹⁴³ Whether AI adoption in Thailand will result in job disruption or job transformation will be determined by the overall readiness and AI-preparedness of both younger and older Thais.⁵¹⁴⁴ Hence the significance of Thailand's National AI Strategy also envisioning the increase of human capability and the improvement of AI education.⁵¹⁴⁵

Public Participation

Under the Digital Government Plan (2017-21), "Creating Government Data that Easily Accessed and Improve Government Transparency and Public Participation" is defined as one of the four goals.⁵¹⁴⁶ Two of the indicators that the plan commits to measuring itself against are "Promoting Country's Open Data Index to place in the World's top 25" and "Creating e-Gov Act". However, all the plans and the majority of initiatives relating to AI have been developed by the central government rather than any meaningful public participation.

In August 2020, UNESCO organized a virtual national consultation with youth in Thailand to gather their feedback on the first draft of the UNESCO Recommendation on the Ethics of AI.⁵¹⁴⁷

Data Protection

Thailand's Personal Data Protection Act (PDPA) is the country's first consolidated law on data protection, framing the collection, use, and disclosure of personal data, drawing key concepts and principles from the EU General Data Protection Regulation (GDPR), and establishing a Personal Data Protection Committee.⁵¹⁴⁸ Enforcement of the PDPA began on June 1, 2022.⁵¹⁴⁹ The PDPA defines personal data as "any information relating to a person that enables that person to be identified, whether directly or indirectly."⁵¹⁵⁰ The PDPA mandates that Data protection officers (DPO) must be appointed for government agencies and firms with large-scale data processing. DPOs will be responsible for helping organizations ensure that personal data is processed in compliance with the PDPA. DPOs will also serve as contact points on PDPA issues with the authorities and data subjects.⁵¹⁵¹ Research on the PDPA highlights certain gaps in data protection, such as some provisions that grant the Thai government certain preferential exemptions, and allow it to exercise a relative degree of flexibility to expand its powers should it deem necessary.⁵¹⁵² For example, the PDPA currently mandates the outright exclusion of public authorities involved in national security, law enforcement, and the National Credit Bureau from its' ambit.⁵¹⁵³ The definition of personal data in the PDPA also lacks clarity as to whether it covers IP addresses and cookie identifiers.⁵¹⁵⁴

⁵¹⁵⁴ Ibid.

Moreover, the PDPA does not currently provide a definition of anonymized or pseudonymized data.⁵¹⁵⁵

The Digitalization of Public Administration and Services Delivery Act requires the establishment of a government data exchange center that acts as a sharing center for digital data and digital registration between State Agencies to support their operations in the provision of services to the people via digital means.⁵¹⁵⁶ The data exchange center shall also determine policies and standards in relation to interconnectivity and sharing of digital data and present them for the approval of the Digital Government Development Commission.⁵¹⁵⁷ The Act mandates that the public shall have free access to the digital data from state agencies, and be able to distribute or utilize the data or use it as a means to develop services and innovation in various ways.⁵¹⁵⁸ As per the Act, the Digital Government Development Commission will prescribe standards and rules on the disclosure of such data.⁵¹⁵⁹ The Electronic Transactions Development Agency (ETDA), under the Ministry of Digital Economy and Society, builds confidence in innovation with the ETDA Sandbox testing field. The ETDA cooperates with the Bank of Thailand to expand the scope of innovation testing, which covers innovations in health tech, and AI. The ETDA and Bank of Thailand also cooperate in driving operations corresponding to the government policy of the Face Verification System (FVS). ⁵¹⁶⁰

Thailand did not co-sponsor the 2018, the 2020 Global Privacy Assembly (GPA) resolutions on AI, the 2022 GPA resolution on facial recognition technology⁵¹⁶¹ or the 2023 GPA Resolution on Generative AI.⁵¹⁶²

AI System for Surveillance

The AI System for Surveillance and Criminal Analysis in Public is piloted in east Bangkok. The pilot project links with security cameras at crime hotspots under Huai Kwang police jurisdiction. Its facial recognition compares faces against photos in a database of arrest warrants, while its behavior analysis aims to prevent petty crime.⁵¹⁶³ The Thai government positions the pilot program as a public safety tool under its wider Thailand 4.0 and Smart Cities initiatives. The government also plans to build five Smart Cities within 3 years.

The Interim report of the United Nations (UN) Special Rapporteur on freedom of religion or belief to the 75th session of the UN General Assembly in 2020 found that Thai authorities reportedly used AI-enabled closed-circuit television system, biometric data, and frequent police checks to surveil minority Muslim groups.⁵¹⁶⁴ The Thai military denied using AI to surveil Muslims in Thailand's restive southern provinces where an armed insurgency since 2004 has killed more than 7000 people.⁵¹⁶⁵

Anti-fake News Centre

In November 2019, Thailand launched its "Anti-fake News Centre." The Ministry of Digital Economy and Society defines "fake news" as any viral online content that misleads people or damages the country's image. The Centre is staffed by around 30 officers at a time, who review online content, gathered through "social listening" tools. Coupled with a law prohibiting criticism of the monarchy, the Centre allows the government to potentially censor or suppress any news it finds broadly affecting "peace and order, good morals, and national security"⁵¹⁶⁶ without the need for evidence.

In February 2022, the Cabinet of Thailand approved a regulation to set up centers at three different levels to coordinate efforts to tackle fake news on social media. A central coordination center would be set up at the permanent secretary's office of the Ministry of Digital Economy and

Society (MDES). Furthermore, each ministry will also set up its own center to deal with fake news. The Provincial Administration Department of the Interior Ministry would also set up similar centers in all provinces under the leadership of provincial governors or their deputies.⁵¹⁶⁷ According to the regulation, officials must alert the public immediately in the event of the spread of fake news and inform the Public Relations Department within one hour to correct the news and take action against those spreading it. Officials must also promptly notify the MDES to remove the fake news from the computer system.⁵¹⁶⁸

Digital ID

Thailand is currently working on legislation that would replace physical ID cards with the Digi-ID which will be the backbone of the ecommerce transactions in the country. It is planned to use blockchain to securely exchange user data but also requires facial recognition verification in an effort towards a "self-sovereign" digital identity management system.⁵¹⁶⁹ It remains unclear how the government conducted the risk or impact assessment on the mandatory use of biometric data.

The use of digital ID cards through a mobile application started in Thailand in January 2023 for people who use public services provided by government agencies under the Internal Affairs Ministry. The digital ID will eventually be expanded to other government and private agencies such as commercial banks. The use of digital IDs is regulated by Section 14 of the Digital Public Service Act. People who want to get access to D.Dopa, the digital ID mobile application, have to register with their district office's registry division using their actual ID cards. From the perspective of the Ministry of Digital Economy and Society (DES), the digital ID will be safer than the smart ID card as it will be more difficult to steal data.⁵¹⁷⁰

EdTech and Children Tracking

According to this report by Human Rights Watch (HRW), Thailand's Digital Education Excellence Platform (DEEP) is one of 56 EdTech products built or financed by governments that transmitted

children's data to AdTech companies.⁵¹⁷¹ This represents a violation of children's privacy. In addition, HRW found that Edmodo, an online learning platform used by Thailand and several other countries, may have granted access to their users' contact data to third-party companies.⁵¹⁷² Furthermore, HRW found that Edmodo has the capability to collect Android Advertising ID (AAID) for those using an Android device, which enables advertisers to track a person, over time and across different apps installed on their device, for advertising purposes.⁵¹⁷³ HRW highlighted that an AAID is neither necessary nor relevant for an app to function.⁵¹⁷⁴ Thailand's usage of Edmodo for children's learning during the COVID-19 pandemic, therefore, compromised their privacy.

Lethal Autonomous Weapons

Thailand expressed concern at the "wide and understudied implications" of lethal autonomous weapons systems and affirmed "the importance of respecting and evolving international humanitarian law." It has not commented on calls to ban such weapons and retain meaningful human control over the use of force. Thailand is not a Convention on Conventional Weapons (CCW) state party.⁵¹⁷⁵ Thailand is not a part of the group of 70 states that delivered a joint statement on autonomous weapons systems at the United Nations General Assembly (UNGA) in October 2022.⁵¹⁷⁶

Human Rights

Thailand has experienced 19 constitutional changes in less than a century. The government acknowledges that Thailand is both a destination and transit country for human trafficking linked to illegal immigration, child

labor, and prostitution.⁵¹⁷⁷ However, most of the plans put the responsibility of respecting human rights on the citizens and not the government. The ongoing 2020 protests are citizens criticizing the government and requesting reform of the monarchy. In response, the Thai government has extended emergency powers of the existing emergency decree. Under the 2017 Constitution, members of the NCPO are protected from prosecution for human rights violations committed during NCPO rule.⁵¹⁷⁸ This protection is concerning given the reports of torture, extrajudicial executions, and enforced disappearances against, human rights defenders.

The recent Thailand Cybersecurity Act gives the government the authority to monitor and seize data and equipment without a court order in the name of cybersecurity risk and denies anyone targeted by the law in the cases of a crisis or critical threat the right to any appeal.⁵¹⁷⁹ Despite continuous promises of reform, Thai authorities continue to suppress and prosecute citizens criticizing the monarchy or the military. The combination of AI policing, Fake-News monitoring, and the Cybersecurity Act creates further concerns about fundamental rights. A group of international public and private experts and NGOs launched the study Thailand's Cybersecurity Act: Towards a Human-Centered Act Protecting Online Freedom and Privacy, While Tackling Cyber Threat to help build the discourse on the necessity of applying a human rights-based approach to cybersecurity legislation.⁵¹⁸⁰

Freedom House gives Thailand low marks for political and civil liberties in its Freedom in the World 2022 report (29/100).⁵¹⁸¹ Freedom House highlighted that in 2021 the combination of democratic deterioration and frustrations over the role of the monarchy in Thailand's governance triggered large and regular anti-government protests. The government responded with authoritarian tactics, such as arbitrary arrests, intimidation,

lèse-majesté charges, and harassment of activists.⁵¹⁸² Freedom House also noted that "press freedom is constrained, due process is not guaranteed, and there is impunity for crimes committed against activists."⁵¹⁸³ Thailand passed Gender Equality Act in 2015. However, the legislation still allows for exceptions to gender discrimination on grounds of religion and national security.⁵¹⁸⁴

Thailand has endorsed the Universal Declaration of Human Rights in 1948.

OECD / G20 AI Principles

Thailand has not endorsed the OECD AI Principles. However, Thailand is also the only country from Southeast Asia to benefit from an OECD Country Program which comprises 15 projects drawing from four key strategic pillars: good governance and transparency, business climate and competitiveness, "Thailand 4.0" and inclusive growth. It includes peer reviews, capacity-building activities, inclusion in the OECD's statistical tools, participation in eight OECD Committees or their subsidiary bodies, and adherence to nine OECD legal instruments.⁵¹⁸⁵

UNESCO Recommendation on the Ethics of Artificial Intelligence

Thailand has adopted the UNESCO Recommendation on the Ethics of AI.⁵¹⁸⁶ Since the adoption of the UNESCO Recommendation, Thailand has yet to make public announcements concerning implementation.

The UNESCO Bangkok Office however invited youth in the Asia Pacific region working in the field of ethics of AI to apply for project

⁵¹⁸⁴ United National, *Human Rights Treaties*,

funding in June 2021.⁵¹⁸⁷ UNESCO was interested in funding projects in the following areas:⁵¹⁸⁸

- Research work exploring the legal and public policy implications of the rise in AI technology
- Research projects exploring the intersection of AI, the social sciences, and the humanities including but not limited to art, culture and philosophy
- Development of knowledge products that contribute to increased understanding of AI technologies, its relevance and associated ethical challenges
- Awareness-raising and advocacy work related to ethical usage of AI technologies
- Projects using AI technologies for socially beneficial outcomes
- Any other youth-led projects that contribute to increased understanding of AI technologies and AI ethics issues among young people, AI ethics stakeholders and the general public

Evaluation

Thailand has taken steps to govern AI and protect personal data with the release of its National AI Strategy, Digital Thailand – AI Ethics Guideline, enforcement of the Personal Data Protection Act (PDPA), and adoption of the UNESCO Recommendation on the Ethics of AI. However, concerns exist with regard AI-powered surveillance practices.

⁵¹⁸⁷ UNESCO, Invitation to Apply for Funding for "Youth-led Projects in AI Ethics" (June 7, 2021), <u>https://bangkok.unesco.org/content/invitation-apply-funding-youth-led-projects-ai-ethics</u>

Trinidad and Tobago

National AI Strategy

Trinidad and Tobago has not developed a national AI strategy so far. However there are other relevant policy initiatives.

In August 2022, the Ministry of Digital Transformation,⁵¹⁸⁹ in charge of the digitalization of Trinidad and Tobago, released a draft national digital transformation strategy.⁵¹⁹⁰ The strategy identifies three pillars of digital transformation: Digital Society, described as "people centered and knowledge based – access, skills, participation (inclusion), connected communities"; Digital Government focusing on "Public value – efficiency in service delivery, citizen-centric, no-wrong door"; and Digital Economy.⁵¹⁹¹ The strategy includes guidelines for developing policies, such as inclusion (digital, social, financial), access, safety and security (protection of fundamental rights).

The national digital transformation strategy is part of the National Development Strategy (NDS) 2016-2030, "Vision 2030." The Vision is "intended to provide for an orderly long-term development process, inclusive of the United Nations (UN) Sustainable Development Goals (SDGs)."⁵¹⁹² Keith Rowley, Trinidad and Tobago's Prime Minister stated, "I am committed to rebuilding our country and economy, restoring confidence, equity and social justice, and improving every area of national life. We recognise that, as a nation, we face several challenges— some triggered by global events beyond our control, with consequential ripple effects at the national level."⁵¹⁹³

<u>%20The%20National%20Development%20Strategy%20of%20Trinidad%20and%20Tob</u> ago%202016-2030.pdf.

⁵¹⁹³ Government of the Republic of Trinidad and Tobago, *Vision 2030* (2016), Preface, https://www.planning.gov.tt/sites/default/files/Vision%202030-

The Ministry of Digital Transformation aims to turn Trinidad and Tobago into a digital society.⁵¹⁹⁴ The objective is "to create a new way to address the end-to-end consumption and delivery of goods & services to customers using appropriate digital technology"⁵¹⁹⁵ and to "ensure that all citizens and residents are able to participate in a digital society and to have access to digital resources".⁵¹⁹⁶

The "implementation arm" of the Ministry for Digital Transformation is the National Information and Technology Company, IgovTT.⁵¹⁹⁷ It has been tasked with the procurement, project management and implementation of IT solutions for the Government of Trinidad and Tobago.⁵¹⁹⁸ Its CEO, Kirk Henry, pointed out in an interview in March 2021 that the objective is to "create a culture of innovation and accelerate digitalized public services".⁵¹⁹⁹

Trinidad and Tobago also developed a Cloud Computing Consideration Policy advancing the adoption of cloud services and procurement from the public sector together with a National Hybrid Cloud (GovNeTT NG) enabling public sector entities to acquire greater information security controls.⁵²⁰⁰

Trinidad and Tobago's digital policy will be supported by the Inter-American Development Bank (IDB). In March 2022, the IDB approved a New Country Strategy for Trinidad and Tobago on Digital Transformation. The strategy aims to help the country implement its digital transformation agenda to achieve more sustainable and inclusive growth, which is the first pillar of the country's medium and long-term post-pandemic development

plan. The strategy focuses on three areas: improving the business environment to enable digital transformation; expanding the use of digital tools to improve educational outcomes and digital skills; and enhancing the delivery of services.⁵²⁰¹

Trinidad and Tobago has also been part of the Caribbean Artificial Intelligence Initiative led by the UNESCO Cluster Office for the Caribbean and the Broadcasting Commission of Jamaica (BCJ), with the support of UNESCO Information for all Program (IFAP) National Committee of Jamaica.⁵²⁰² The Initiative "aims to develop a sub-regional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States".⁵²⁰³ The Caribbean AI Policy Roadmap was released in June 2021,⁵²⁰⁴ following a period of stakeholder consultation.⁵²⁰⁵

On February 18-19, 2021, a two-day "Artificial Intelligence Forum: Opportunities to Accelerate Human Progress for Sustainable Development in Caribbean Small Islands Developing States"⁵²⁰⁶ as organized to collect input from diverse stakeholders regarding AI policy topics. About 8-9% of the stakeholder participants were from Trinidad and Tobago.⁵²⁰⁷ In April 2021, three additional workshops addressing the AI Policy Roadmap principles were held with stakeholders from the private sector, academia, civil society and youth.⁵²⁰⁸

⁵²⁰⁸ UNESCO, *Pioneering Artificial Intelligence Policy in the Caribbean* (Apr. 14, 2021), https://en.unesco.org/news/pioneering-artificial-intelligence-policy-caribbean

The Caribbean AI Policy Roadmap acknowledges that "AI systems raise new types of ethical issues that include, but are not limited to, their impact on decision-making in employment and labour, social interaction, health care, education, media, freedom of expression, access to information, privacy, democracy, discrimination, and weaponization. Furthermore, new ethical challenges are created by the potential of AI algorithms to reproduce biases, for instance regarding gender, ethnicity, and age, and thus to exacerbate already existing forms of discrimination, identity prejudice and stereotyping. As Caribbean nations expand their adoption of AI tools and other exponential technologies, stakeholders (policymakers, citizens, private sector, academia, and NGOs) must proactively collaborate to create strategies for the humanistic development of guidelines, regulations and laws. Boundaries should be defined to regulate the AI decision-making, AI rights, inclusion of manual overrides and AI accountability protocols."

The Policy Roadmap has been developed based on a series of "assumptions" about the Caribbean and Artificial Intelligence. These include: "Human creativity is inextricably linked to Caribbean identify, economic viability and sustainable development"; "AI is a product of human creativity"; "AI is in service of humanity"; "AI must be inclusive, fair, transparent, accountable"; "AI must be regulated"; "Human rights supersede AI rights"; "Bias is everywhere in AI"; "We Are Our Data"; "Data rights will be the civil rights movement of the 21st century."⁵²⁰⁹

The Policy Roadmap is based on six principles: Resiliency, Governance, Transformation, Upskilling, Preservation and Sustainability.⁵²¹⁰ With regard to governance, actions to be taken include:

"Develop Responsible AI Governance, Oversight, Principles & Policies to Do No Harm and to enhance safety, security and accountability of AI.

Promote AI as a tool for service to humanity.

Establish common values and principles to ensure fairness, transparency and accountability in digital transformation and increased integration of AI algorithms.

Develop policy and legislation to enable the establishment of national and regional AI Governance Committees / Oversight Boards as well as national and regional licensing regime to manage and monitor the

Intelligence-Policy-Roadmap.pdf

⁵²¹⁰ Caribbean Artificial Intelligence Initiative, *Caribbean Artificial Intelligence Roadmap* (2021), p. 11, <u>https://ai4caribbean.com/wp-</u>content/uploads/2021/07/Caribbean-Artificial-Intelligence-Policy-Roadmap.pdf

development of standards that govern the industry including technical code of conduct for developers, procurement guidelines for buyers, design and use principles and ethically aligned design standards.

Regulate AI industry to provide redress and punishment for individuals & companies that violate citizen rights and wellbeing including banning cyberbullying, hate crimes, discriminatory algorithms, disinformation and graphically violent images inclusive of penalties and fines.

Develop an AI Appeal Court and Online Dispute Resolution System.

Increase advocacy for AI ethics by targeting software developers at global forums and hosting a global software conference to network, lobby, share research and initiate collaborations with big tech.

Develop AI software to test AI for biases and identify AI applications in most need of governance. Protect citizen privacy and instill trust."⁵²¹¹

Public Participation

Following the release of the draft national digital transformation strategy, the Ministry of Digital Transformation sought public and stakeholder engagement. According to the Ministry, "co-creation and stakeholder engagement are key elements of the development of the National Digital Transformation Strategy. Contributions will be curated by four Technical Working Groups under the categories of Digital Society; Digital Economy; Digital Government; and Regional Integration and Global Linkages."⁵²¹²

Vision 2030 has also been the object of public consultation.⁵²¹³

Data Protection

Trinidad and Tobago's Data Protection Act (DPA)⁵²¹⁴ was enacted in 2011 to protect personal data of citizens in the private and public sector

⁵²¹¹ Caribbean Artificial Intelligence Initiative, *Caribbean Artificial Intelligence Roadmap* (2021), p. 41, <u>https://ai4caribbean.com/wp-</u>

content/uploads/2021/07/Caribbean-Artificial-Intelligence-Policy-Roadmap.pdf

⁵²¹⁴ Data Protection Act 2011,

https://rgd.legalaffairs.gov.tt/laws2/Alphabetical_List/lawspdfs/22.04.pdf

but is only partly proclaimed. In January 2012, the following sections were proclaimed with Legal Notice: Preliminary Provisions; general objective of the Act; as well as the provisions concerning the Office of the Information Commissioner. ⁵²¹⁵ In August 2021, two additional sections regarding the Protection of Personal Data by Public Bodies were proclaimed with Legal Notice. ⁵²¹⁶ Most of the other provisions covering the protection of personal data by public and by private bodies of the Act are not yet in force. The Data Protection Act is also notably missing the right to erasure, the right to object or opt out of a consent, the right to data portability, and the right not to be subject to data processing decisions based solely on automated decision making. ⁵²¹⁷

In February 2023, the parliamentary opposition introduced a motion calling for the Government to fully proclaim the Data Protection Act. The Trinidad and Tobago Guardian reported that Senator Jearlean John stressed that "the PNM Government is keeping T&T in the Stone Age, failing to protect citizens' information by not fully proclaiming the Data Protection Act 2011. This is the situation at a time when people's lives are stored on phones, there's ChatGPT technology and the US Government has banned TikTok on government-issued devices following security concerns."⁵²¹⁸

A draft bill, inspired by the GDPR "to be in greater compliance with more recent legislation in Jamaica and Barbados," was expected to be read in Parliament in 2022.⁵²¹⁹ This has however not yet happened.

Implementation of the DPA has also been delayed. Despite the Attorney General of Trinidad and Tobago announcing in the press in December 2020 that the position of the Information Commissioner "is

expected to be filled with immediacy,"⁵²²⁰ as of March 2023, there is "no office. There is no Information Commissioner."⁵²²¹ The Office of the Information Commissioner will be responsible for the oversight, interpretation and enforcement of the DPA.⁵²²²

Algorithmic Transparency

Although, transparency and explainability are mentioned in the Caribbean AI Policy Roadmap, as of March 2023, there is no right to algorithmic transparency provided by law in Trinidad and Tobago.

Online Disinformation

In January 2023, on the occasion its seventh summit, the Community of Latin American and Caribbean States (CELA), released the "Buenos Aires Declaration." Trinidad and Tobago endorsed the Declaration. The Declaration strengthens the signatories' commitment to safeguard the rights and interests of citizens, fostering greater regional integration and collaboration.⁵²²³ The signatories also recognized the need for further integration and collaboration to fight against disinformation through the use of AI and algorithms, and their impact on state infrastructures, firms and people's well-being.⁵²²⁴

Digital ID Initiative

In its post-COVID recovery plan, the government of Trinidad and Tobago stresses the importance of a digital society.⁵²²⁵ The plan includes the goal of a cashless society and the creation of an e-identity for every citizen. The e-identity will be mandatory for using governmental services

⁵²²⁰Clint Chan Tack, *AG: Changes coming to data protection laws*, Trinidad and Tobago Newsday (Dec. 1, 2020), <u>https://newsday.co.tt/2020/12/01/ag-changes-coming-to-data-protection-laws/</u>

and aims at integrating existing identifiers. In effect, the e-identity will be used for government services as well as digital commerce. The e-identity should also address the digital divide between different social groups.⁵²²⁶

In March 2021, the CEO of IGovTT pointed out that the introduction of a digital identity is high on the agenda of the Trinidad and Tobago government. He stated, "[t]he digital ID initiative will take us further – and faster – along the digital transformation journey, and it will really support this whole notion of autonomous citizen services."⁵²²⁷

Facial Recognition

In November 2022, the Prime Minister of Trinidad and Tobago, Keith Rowley, stated that "the Government was spending \$80Million to acquire and install 2500 CCTV cameras across the country." A few days later, the Acting Police Commissioner announced that facial recognition software to detect and prevent crime will soon be used. There is currently no legal framework in Trinidad and Tobago regarding the use of facial recognition no guidelines made public to prevent racial profiling/biases, algorithmic transparency, or for opportunity for public comments.⁵²²⁸

Lethal Autonomous Weapons

In October 2022, 70 countries endorsed a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."⁵²²⁹ Trinidad and Tobago was not one of these states.

⁵²²⁹ United Nations (UN) General Assembly, First Committee, Joint Statement on Lethal Autonomous Weapons Systems First Committee, 77th United Nations General Assembly Thematic Debate – Conventional Weapons (Oct. 21, 2022),

In February 2023, Trinidad and Tobago endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,⁵²³⁰ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force. On this occasion, Trinidad and Tobago issued a statement acknowledging "that new and emerging technologies hold great promise for the advancement of human welfare, yet it is becoming increasingly evident that the introduction of new technological applications, such as those related to autonomy in weapon systems, raise serious concerns from humanitarian, legal, security, technological and ethical perspectives. The risk is real. It has not yet been demonstrated that any algorithm can reliably make the humanlike decisions and judgments required to comply with international law."⁵²³¹

Human Rights

Trinidad and Tobago receives a score of 82/100 by Freedom House and is thus classified as "Free."⁵²³² The country has a functioning parliamentary democracy, with an active and free civil society. At the same time, corruption and criminal violence remain an issue.⁵²³³

OECD / G20 AI Principles

Trinidad and Tobago has not endorsed the OECD AI principles.⁵²³⁴ According to OECD AI Principle 2.5 regarding international co-operation for trustworthy AI, "Governments, including developing countries and with stakeholders, should actively cooperate to advance these principles and to progress on responsible stewardship of trustworthy AI. Governments should work together in the OECD and other global and regional fora to foster the sharing of AI knowledge, as appropriate." The OECD

acknowledges the work of the Inter-American Development and its ""fAIr LAC" initiative to promote the responsible and ethical use of AI and improve the public services e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries,"⁵²³⁵ which includes Trinidad and Tobago.

In 2022, the OECD, in partnership with the Development Bank of Latin America (CAF) also published a report on "The Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean" including Trinidad and Tobago.

UNESCO Recommendation on the Ethics of Artificial Intelligence

Trinidad and Tobago is a member state of UNESCO.⁵²³⁶ Trinidad and Tobago endorsed the UNESCO Recommendations on AI Ethics⁵²³⁷. The CAF and UNESCO signed a letter of intent to implement the Recommendation in Latin America and the Caribbean and support the establishment of a Regional Council which incorporates all governments of the region.⁵²³⁸ There is so far no official announcement regarding the involvement of Trinidad and Tobago.

Evaluation

Trinidad and Tobago has endorsed the UNESCO Recommendation on the ethics of AI and regional cooperation with other Caribbean or Latin American might help foster its implementation in the future. At national level, Trinidad and Tobago has developed a national digital tragedy, however it has not turned its attention to artificial intelligence yet. Likewise, its 2012 Data Protection Act has not fully been enacted – most importantly regarding data subjects' rights –, it would need to be updated – rights such as algorithmic transparency are not provided for –, and even some enacted provisions have not been implemented – there is currently no Information Commissioner Office in Trinidad and Tobago. Concerns exist regarding Trinidad and Tobago's ability to protect fundamental rights in the AI era. Initiatives such as the development of an e-identity or the use of facial

recognition technology for crime prevention and detection are, without proper legal framework and oversight mechanism, of particular concern.

Tunisia

National AI Strategy

Tunisia's path towards the establishment of a National AI Strategy started in 2018 when the Minister of Higher Education in partnership with the National Agency for the Promotion of Scientific Research (ANPR) produced a five-year AI development plan for Tunisia (2016-2020). The ANPR set up a Task Force to provide oversight of the project and a Steering Committee to define a methodology and action plan.⁵²³⁹ This was further discussed during workshops organized by the UNESCO Chair on Science, Technology and Innovation Policy.⁵²⁴⁰

Tunisian's political instability curtailed the plans to move the initiative forward.⁵²⁴¹ In 2019, the Ministry of Industry led the development of new 5-year AI roadmap with the following aims:⁵²⁴²

- Raise awareness of the real challenges and possibilities of AI
- Strengthen the ecosystem to develop AI by addressing the main pillars of AI
- Implement AI pilot projects in public and private sectors, and
- Adopt a national AI action plan 2021-2025.

The Ministry of Industry, Mines and Energy (MIEM) and the National Institute of Normalization and Intellectual Property also drafted a bill to protect the Intellectual Property of Algorithms.⁵²⁴³

In February 2022, the Ministries of Communication Technologies, Energy and Mines, Economics & Planning, and Higher Education & Scientific Research signed a memorandum aiming to define the general orientations of the national artificial intelligence strategy and to follow up on the results of a study planned for this purpose.⁵²⁴⁴

As a member of the African Union, Tunisia is committed to working towards the alignment of the country's efforts with the vision of

the Union to build a continental digital transformation strategy⁵²⁴⁵ and a continental AI strategy.5246

Public Participation

The Tunisian government does not have a systematic public participation process to develop policies, in general, or AI policies in particular. Discussions took place among the task forces and steering committees designated by the Tunisian government. Since September 2021. The Future Society (TFS) and GIZ Digital Transformation Center Tunisia have also supported a multi-stakeholder process to develop Tunisia's National AI Strategy with the Tunisian government, more specifically the Ministry of Communication Technologies, the Ministry of Economy and Planning, the Ministry of Higher Education and Scientific Research, and the Ministry of Industry, Mines, and Energy. According to TSF, «The project's goal is to capitalize on Tunisia's strengths in AI in order to support economic growth, promote social inclusion, and ensure better service to citizens.» This project emphasizes the Tunisia Government's efforts to consult with civil society and different stakeholders in the drafting process.5247

Notwithstanding the various initiatives put forth by the Tunisian government to establish a national AI policy, not all the documents are available on the government's official websites. Only the Organic Act No. 2004-63 for Personal Data Protection is available online.⁵²⁴⁸

The first ever political consultation took place in January 2022 on the matter of the referendum to revise the constitution. The government set the website E-Istichara (e-consultation) as the repository of public input.⁵²⁴⁹The initiative had mixed reviews, due to the requirement of a national identity number and a validation code sent to mobile phones. While

E-Istichara is presented as a portal for citizens to express their opinions, under the motto "your opinion, our decision," reservations were evident about the degree of inclusiveness and privacy of the platform.⁵²⁵⁰ The operation of E-Istichara is under the National Center for Informatics, the Ministry of Communication Technologies, and the Ministry of Youth and Sports.⁵²⁵¹

The OECD offered guidance and technical assistance to support the Tunisian government in improving public participation and creating citizen charters for public projects in three municipalities.⁵²⁵² Earlier in 2016, the OECD worked with Tunisia to create a citizen dialogue platform, activating working groups to promote stakeholder participation. The enactment of the Access to Information (ATI) Law of 2016, led to the publication of the Access to Information Guide for public officials, adopted by over 600 public institutions in Tunisia, to promote the participation of civil society, government, and ATI stakeholders in matters of public governance.

In August 2020, the UNESCO Maghreb office, the Ministry of Industry and SMEs organized a reflection workshop entitled "Inclusive Dialogue on the Ethics of AI" to draft international recommendations and establish a normative instrument on the ethics of AI.⁵²⁵³ The event was attended by Tunisian AI experts, such as start-ups, university researchers, and public officials. The Ministry of Communication Technology launched a platform for citizen participation, including submission of complaints, ideation forum, and access to open data and government documents.⁵²⁵⁴

In 2021, the Ministry of Interior called for a public consultation on a new national ID and biometric database, yet the results of the process are not public. In the most recent UN e-Government Survey of 2022, Tunisia ranked 88th out of 193 countries in the world in e-participation, and among

the top 5 African countries, in terms of the e-Government development index (EGDI).⁵²⁵⁵

Data Protection

The protection of personal data was included in the review of the Tunisian constitution of 1959 in 2002, with Article 9, mentioning: "protection of personal data shall be guaranteed, save in exceptional cases prescribed by law."⁵²⁵⁶ The Constitution of 2014 expanded the rights to data protection by including Article 24 about Privacy and Personal Data⁵²⁵⁷ which provides that "the state protects the right to privacy and the inviolability of the home, and the confidentiality of correspondence, communications, and personal information." Following a referendum, Tunisia created a new Constitution of 2022 that maintains protection of the right to privacy (Art 30), endorsing Law No. 2004-63, to protect the rights and freedoms of Tunisians.

In 2004, the Ministry of Justice established a legal framework for data protection rights that later led to the enactment of the Organic Act no. 2004-63 of July 27th 2004 on the Protection of Personal Data.⁵²⁵⁸ The National Authority for Protection of Personal Data (INPDP) was created that same year, later renamed National Personal Data Authority. This entity is deemed an independent oversight body for data protection. The Data Protection Authority was accredited to join the Global Privacy Assembly (GPA) during the 34th Session of the GPA held in 2012 in Uruguay.⁵²⁵⁹ Tunisia has not endorsed the GPA 2018 Declaration on Ethics and Data Protection,⁵²⁶⁰ the GPA 2020 Resolution on Accountability in the

Development and Use of AI,⁵²⁶¹ the GPA 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology⁵²⁶² or the 2023 GPA Resolution on Generative AI.⁵²⁶³

Under the authoritarian regime of Ben Ali, the National Agency for Data Protection (INPDP) did not operate as an independent body. After the Tunisian Jasmine Revolution of 2011, and under the Organic Act No. 2004-63, processors began to regularly declare their personal data processing activities.⁵²⁶⁴

The Data Protection Law of 2004 includes only certain provisions on transparency, related to notifications that data is being processed but it does not include provisions to notify the authority or data subjects in case of a data breach. In terms of accountability, there is no explicit provision for civil liability, but the Data Protection Authority is designated to investigate cases and a subpoena or require evidence, and impose penalties.⁵²⁶⁵ While the 2004 Organic Act is based on principles of lawfulness, processing, and accountability, the multiple exemptions to law enforcement, tribunals and universities, public entities, and employers weaken the protection of personal data.⁵²⁶⁶

The Ministry of Justice⁵²⁶⁷ was expected to propose a review of the framework for the protection of personal data. The review project of the Law was under parliamentary scrutiny since 2017. However, in March

⁵²⁶⁷ Ministry of Justice, *Site*, https://www.justice.gov.tn/index.php?id=2

2018, a new legislative project has been introduced before the Tunisian Parliament. The new draft law on the Protection of Personal Data is aligned with the GDPR.⁵²⁶⁸Tunisia's general data protection regime strongly seeks to align with that of the EU. Negotiations in 2015 between Tunisia and the EU in the framework of the Deep and Comprehensive Free Trade Area, increased Tunisia government's awareness of the need for alignment.

Tunisia ratified the Council of Europe Convention 108 "Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data" in 2015.⁵²⁶⁹ Basic Law No. 2017/33 on the Approval of the Accession of the Republic of Tunisia to Convention 108 and its additional protocol was passed by the Parliament on 16 May 2017,⁵²⁷⁰ and published in the Official Gazette of the Republic of Tunisia on 6 June 2017.

Tunisia has signed the Protocol amending the Convention for the Protection of Individuals about Automatic Processing of Personal Data (Convention 108+) but has not ratified it yet.

In 2019, Tunisia also signed the African Union (AU) Convention on Cyber Security (Malabo Convention).⁵²⁷¹ However, the country has not ratified the Convention yet.⁵²⁷² The Convention emphasizes that each country is to develop its legislative framework, observing the African Charter on Human and People's Rights. Tunisia is yet to take the necessary steps to create cybersecurity laws in the country in line with the Convention.⁵²⁷³

Algorithmic Transparency

Since Tunisia has not ratified Convention 108+ yet, there is currently no right to algorithmic transparency in Tunisia. The Law of Protection of Personal Data does not include articles that address the right not to be subject to automated decision-making or algorithmic transparency more particularly.⁵²⁷⁴

The Ministry of Finance of Tunisia has plans to apply AI in several applications, including fraud analysis and risk management.⁵²⁷⁵ The goal of the ministry is to use algorithms to sort through data that supports a more open government, including making the algorithms available for public review.

Al Projects in the Public Sector

The ecosystem of AI innovation is in the nascent stages in Tunisia. A report by UNESCO mapping the AI ecosystem of the Maghreb countries (Tunisia, Morocco, and Algeria), included government initiatives to support AI startups.⁵²⁷⁶ The Smart Tunisia Program was launched through a Public-Private-Partnership to create 50,000 jobs in the digital sector.⁵²⁷⁷ The Program offers multiple opportunities for the promotion of entrepreneurship and investment in digital start-ups, though cooperation with different Tunisian bodies.

As of 2020, the government has launched AI public projects in the public sector, through the Directorate of Innovation and Technology Development::

- Project 1 | Fraud detection: set to establish a model predictive for fraud detection electricity in the STEG network
- Project 2 | Voice transcription: intended to transcribe the deliberations of the members of parliament
- Project 3 | Image recognition: set to identify the degree of respect for wearing "masks" in public spaces
- Project 4 | Industry chatbot: a chatbot set to inform the citizen and companies on the procedures and funding

- Project 6 | Covid-19 screening: intended to diagnose instantly the coronavirus from X-rays of the lungs

International cooperation supports the Tunisian initiatives in the AI landscape. The FIRST program (Fiscal Reform for a Strong Tunisia) is an initiative of the United States Agency for International Development (USAID) to support the government of Tunisia through the Ministry of Finance, in matters of tax policy and fiscal reforms. The project relies on an AI algorithm and general algebraic modeling system (GAMS) software to analyze data as input to policy decisions.⁵²⁷⁸

Tunisia received a score of B (or 'high') for its digital government transformation by the World Bank's GovTech Maturity Index (GTMI) for 2022.⁵²⁷⁹ The index evaluates core government system indexes, public service delivery, digital citizen engagement, and gov tech enablers in the country.

Biometric ID

Tunisia is the only country in Africa without a biometric database, amid the enactment of the 2004 Organic Act on Personal Data Protection.⁵²⁸⁰ One such attempt took place in 2016 when the Ministry of Interior presented a draft Bill that included plans for national IDs and centralized biometric databases. Debates in the parliament and pressure from civil society in the media forced the Minister to withdraw the proposed

bill in 2018. Elections in Tunisia do not rely on biometric voter databases.⁵²⁸¹

In January 2022, the Ministry of Interior announced the resubmission of the biometric ID bill, making it compulsory for all citizens over the age 18. The Ministry has justified the requirement as necessary to avoid replication or forgery, but has failed to present the safeguards to protect the privacy of individuals.⁵²⁸² In this new cycle, the Ministry of Interior plans to also roll out a biometric passport to meet the requirements of the International Civil Aviation Organization. The implementation of the biometric ID bill has been deemed a threat to privacy and a step back in the plans to comply and align with the commitments made by Tunisia at the CoE Convention 108.

Facial Recognition

Reports of practices of mass surveillance in Tunisia are closely linked to the history of authoritarian regimes and the suppression of political opposition.⁵²⁸³ Following the Jasmine Revolution of 2011, the new government dismantled intelligence services and created new ones. In 2015, the Tunisian government declared a state of emergency as the result of a terrorist attack and in 2016 announced the installation of more than 1,000 surveillance cameras in 30 electronic checkpoints in Tunis and at least four cities.

Practices of surveillance in public spaces and the use of facial recognition are of concern in Tunisia. A report by Privacy International identified practices of surveillance in public spaces, under the pretense of enforcement of the COVID lockdown.⁵²⁸⁴ The Ministry of Interior of Tunisia operated a robot to patrol the streets and require to show ID documentation to the camera. The PGuard robot was equipped with infrared and thermal imaging cameras to question 'suspected violators' of the lockdown.⁵²⁸⁵ These robots were donated to the Ministry and were valued at US\$100-140K.

Smart Cities

The concept of Smart Cities is in the early stages in Tunisia, promoted by the Tunisian Smart Cities Association (TSC) in cooperation with the General Public-Private Partnership Authority (IGPPP) and the Fund Deposits and Consignment (CDC).⁵²⁸⁶ The initiative has the participation of more than 260 partners from the public, private sector, and civil society, discussing in working groups to build a three-year plan. No reports exist about the progress of this initiative or the cooperation with multi-lateral entities, such as UNDP.

Lethal Autonomous Weapons

Tunisia is a UN Member State and High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁵²⁸⁷ and has participated in several meetings since 2015.⁵²⁸⁸ Tunisia is not part of the 30 states of the Africa Group that have called for a ban on lethal autonomous weapons.⁵²⁸⁹

Tunisia support the negotiation of e legally-binding instrument on autonomous weapons systems. In 2018, Tunisia made an individual statement and stated, "faced with the development of new autonomous weapons systems, Tunisia calls for the regulation of the use of artificial intelligence for military purposes."⁵²⁹⁰ Tunisia is a member of three groups that support the negotiation of a legally-binding instrument on autonomous weapons systems: The African Group and the Arab Group within the United Nations and the Non-Aligned Movement. The African Group called on a reflection on the "ethical, legal, moral and technical questions" raised by the use of autonomous weapons systems and urged for concrete policy recommendations, including prohibitions and regulations to be adopted.⁵²⁹¹

In February 2023, Tunisia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Tunisia, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁵²⁹² In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."5293

Human Rights

Freedom House scored Tunisia as a partly-free country (64/100) in 2022.⁵²⁹⁴ Freedom House reported, "Tunisia's social and economic crisis continued to worsen during the year, with food insecurity linked to the Russian invasion of Ukraine adding to the hardships faced by much of the population." Tunisia scored 61/100 for net freedom and 19/40 on violations of users' rights. ⁵²⁹⁵ The Ibrahim Index of African Governance in 2021 scored Tunisia at 70.9/100 for overall governance, and 70.2/100 in Participation Rights & Inclusion, placing the country in position 3 out of 45 African countries, with an increasing trend since 2012.⁵²⁹⁶

Tunisia endorsed the Universal Declaration of Human Rights (UDHR) and ratified the African Charter on Human and Peoples' Rights (African Charter). Tunisia is a member of the Arab League but has not ratified the Arab Charter on Human Rights.⁵²⁹⁷ The country ratified various covenants including the International Convention on Civil and Political Rights (ICCPR) and the International Covenant on Economic, Social and Cultural Rights (ICSECR).⁵²⁹⁸ Other agreements Tunisia is a Party to are: The African Charter on the Rights and Welfare of the Child; the Convention on the Rights of the Child; the United Nations Convention Against Transnational Organized Crime and the United Nations Convention Against Corruption.⁵²⁹⁹

Tunisia's transition to a democratic system was an imperative to guarantee human rights and respect for fundamental freedoms. The road to restore democracy has not been smooth, and required the drafting of a Tunisian constitution as a "social contract between state and citizens." ⁵³⁰⁰ The government promoted the new constitution as the foundation for a modern and democratic society that respects human freedom and aligns to the commitment to the international human rights system.

Nevertheless, human right organizations have continued to warn about the risks facing the future of human rights and democracy in Tunisia.⁵³⁰¹ The new 2014 Constitution shifted power from the parliament to the presidency, and won approval in a referendum later that month, with a voter turnout of roughly 31 percent.⁵³⁰² In July 2021, the government banned the Assembly of People's Representatives (ARP) from meeting and dismissed the Head of Government. Increasing travel bans affecting several segments of the population, house arrests, use of military courts to try civilians and hate speech spreading in the country were rising concerns. Restrictions to freedom of the press escalated with the announcement of the

state of exception.⁵³⁰³ The President of Tunisia issued a new electoral law by presidential decree, and the first round of elections for a new parliament was held in late December 2021. Amid an opposition boycott, voter turnout was extremely low at 11 percent. A second round of voting took place in January 2023 with a low turnout.⁵³⁰⁴

OECD / G20 AI Principles

Tunisia is not a member of the OECD or the G20 and has not endorsed the G20 or the OECD AI principles.⁵³⁰⁵ The country has submitted reports to OECD AI Observatory, on AI use cases in the public sector, the law on the protection of personal data. and a draft bill on intellectual property policy for AI to protect algorithms. This initiative addresses three OECD AI principles of human-centered values and fairness, robustness, security, and safety and provides an enabling policy environment for AI.⁵³⁰⁶

UNESCO Recommendation on the Ethics of Artificial Intelligence

Tunisia is a member state of UNESCO since 1956,⁵³⁰⁷ and is one of 193 countries that endorsed the UNESCO Recommendation on AI Ethics in November 2021.⁵³⁰⁸ Tunisia was also one of only five African nations that offered comments on the first draft of the Recommendation.⁵³⁰⁹ However, the 2021 UNESCO AI Needs Assessment Survey did not include responses from Tunisia.⁵³¹⁰

Evaluation

Although Tunisia has yet to formulate a National AI policy, the 2019 5-year AI roadmap is a starting point. Now that Tunisia has endorsed the UNESCO Recommendation on the Ethics of AI, the ratification of Council of Europe Convention 108+, together with a comprehensive modernization of the country's data protection legal regime, would further contribute to strengthen the protection of human rights in the digital age as concerns regarding AI-powered mass surveillance persist.

Türkiye

National AI Strategy

In 2020, the Digital Transformation Office (DTO) of the Turkish government outlined a National Artificial Intelligence Strategy.⁵³¹¹ The goal is to "promote the effective use of big data and artificial intelligence in public sector, through a human-centered approach (...) in collaboration with universities, the private sector and NGOs. The strategy is meant to address fundamental principles such as human-centered development, fairness, transparency, trustworthiness, accountability, and commitment to ethical values. An intended output of the Strategy is also to increase nationwide awareness on data sharing and privacy and AI applications. The Strategy will contribute to implementing the G20 AI Principles, especially on human-centered values and fairness. In 2020, during the preparation of the national AI strategy, Ali Taha Koc, the President of the DTO, acknowledged the importance of transparency, security, and accountability for AI. He stated that "[t]o eliminate the concerns that may arise, this system must first be human-centered, it must be fair, it must increase social welfare, it must be transparent, reliable, accountable, value-based, and dependent on national and ethical values."5312

In August 2021, the Turkish government published the National Artificial Intelligence Strategy 2021-2025.⁵³¹³ The Strategy was prepared, in accordance with the Eleventh Development Plan⁵³¹⁴ and Presidential Annual Programs,⁵³¹⁵ and in line with the Digital Türkiye vision and the National Technology Initiative.⁵³¹⁶ The Strategy is based on six strategic priorities:

- 1) Training AI Experts and Increasing Employment in the Domain
- 2) Supporting Research, Entrepreneurship and Innovation

⁵³¹⁶ Digital Transformation Office of the Presidency of the Republic of Türkiye, *National Artificial Intelligence Strategy 2021-2025* (Aug. 20, 2021), <u>https://cbddo.gov.tr/en/nais</u>

- 3) Facilitating Access to Quality Data and Technical Infrastructure
- 4) Regulating to Accelerate Socioeconomic Adaptation
- 5) Strengthening International Cooperation
- 6) Accelerating Structural and Labor Transformation.

The National Strategy sets out the following AI values and principles to guide implementation:

• Respect for Human Rights, Democracy and Rule of Law

"Human dignity, human rights and fundamental freedoms must be essential throughout the lifecycle of AI systems. (...) No human should be harmed physically, economically, socially, politically or psychologically at any stage in the lifecycle of AI systems. In interactions with AI systems throughout their lifecycle, people should never be objectified, their dignity should never be harmed, and human rights should never be violated or abused."⁵³¹⁷

- Flourishing the Environment and Biological Ecosystem
- Ensuring Diversity and Inclusiveness

"Respect, protection and promotion for diversity and inclusiveness must be ensured throughout the lifecycle of AI systems, in a manner consistent with demographic, cultural, social diversity and inclusiveness, as well as international human rights law, standards and principles. (...) The scope of lifestyle choices, beliefs, ideas, expressions, or personal experiences, including the discretionary use and design of AI systems, should in no way be restricted at any stage of the lifecycle of AI systems. The production, development and implementation of AI technologies should not result in discrimination in any way, and datasets should be audited in this regard."⁵³¹⁸

• Living in Peaceful, Just and Interconnected Societies

The Digital Transformation Office has committed to pursuing projects including, Federated Learning and Differential Privacy technologies "with the purpose of ensuring the privacy and security of data," ⁵³¹⁹ making Black Box algorithms explainable, and preventing misleading artificial intelligence algorithms. These objectives still have to be concretely fleshed out.

In January 2022, the newly established National Artificial Intelligence Strategy Steering Committee, which is responsible⁵³²⁰ for the

appointment of the ministries that will prepare and coordinate the implementation of the detailed action plans regarding the measures in the Strategy, the preparation of said action plans in harmony with each other, and the coordination between institutions, held its first meeting under the presidency of Fuat Oktay, the Vice-President of the Republic of Türkiye.⁵³²¹ The Steering Committee is in charge of the implementation of the National Strategy and its coordination with the relevant Ministries. The Steering Committee held its second meeting in April 2022.⁵³²² In a statement before the meeting, Mr Oktay stated that a draft of the Action Plan for the National AI Strategy consisted of 120 actions and 451 execution steps had been prepared. Among these actions, Mr Oktay emphasized the preparation of a "Data Governance Guidance" along with the establishment of an "AI Ecosystem Advisory Committee" and the "Türkiye AI Portal".⁵³²³ The Action Plan has still to be released.

Public Participation

In January 2020, to develop the AI Technology Roadmap, Türkiye established a stakeholder Working Group, comprised of academia, private sector and major umbrella NGOs.⁵³²⁴ The Working Group operates under the Science, Technology and Innovation Policy Council of the Turkish Presidency, via the technical contribution of the Scientific and Technological Research Council of Türkiye. The purpose of the Working Group is to help ensure effective intergovernmental coordination and to identify frontier scientific themes and priority sectoral applications of AI technologies. The views from this multistakeholder group were used towards establishing priorities and development of the National AI Strategy.

⁵³²³ Anadolu Ajans, Cumhurbaşkani Yardımcısı Oktay: Yapay zeka konusunda oluşturduğumuz büyük verinin işlenerek değer üretmesi sağlanacak (Apr. 21, 2022), https://www.aa.com.tr/tr/gundem/cumhurbaskani-yardimcisi-oktay-yapay-zekakonusunda-olusturdugumuz-buyuk-verinin-islenerek-deger-uretilmesisaglanacak/2569443

⁵³²⁴ OECD G20 Digital Economy Task Force, *Examples of AI National Policies* (2020), https://www.mcit.gov.sa/sites/default/files/examples-of-ai-national-policies.pdf

Further, workshops were held and domain experts were asked to provide their evaluations.⁵³²⁵

Public participation is still being ensured after the entry into force of the National Strategy. The Steering Committee for the National AI Strategy will be supported in its work by an AI Ecosystem Advisory Group and various working groups, in which all relevant stakeholders will be represented.

The National Strategy is publicly available on the official website of the Digital Transformation Office of the Presidency of Türkiye, both in English and in Turkish.⁵³²⁶

In 2019, Türkiye's Ministry of Industry and Technology published the 2023 Industry and Technology Strategy, taking a holistic approach to the fields of industry and technology, and aiming to ensure wide participation and to mobilize society.⁵³²⁷ The Industry and Technology Strategy 2023 includes sectoral and R&D competency mapping on AI technology and AI and machine learning, with a view to strengthening Türkiye's capacity of scientific research and product development.

In January 2020, to develop the AI Technology Roadmap, which aims to identify scientific themes, sub-technology areas and sectoral applications on which Türkiye will focus its research, technological development and innovation in the coming years, Türkiye established a stakeholder Working Group, comprised of academia, private sector and major umbrella NGOs.⁵³²⁸ The Working Group operates under the Science, Technology and Innovation Policy Council of the Presidency of the Republic of Türkiye, via the technical contribution of the Scientific and Technological Research Council of Türkiye. The purpose of the Working Group is to help ensure effective intergovernmental coordination and to identify frontier scientific themes and priority sectoral applications of AI technologies.

The National Strategy mentioned that the Artificial Intelligence Technology Roadmap, which was at the time in drafting process, would be

taken as a basis in determining the status and number of competence areas for the workforce, projecting needs and determining how to prioritize public support for technology development, commercialization and entrepreneurship.⁵³²⁹ Accordingly, the AI Technology Roadmap of Türkiye was published in December 2021.⁵³³⁰

In the light of recent developments in the field of AI, Defence Industry Agency of the Presidency of the Republic of Türkiye organized the Defense Industry Artificial Intelligence Workshop in order to discuss all aspects of AI in the defense industry with the participation of more than 80 experts from academia, public authorities, and companies.⁵³³¹ It was stated that the outputs formed at the end of the Charrette will constitute an input for the "Defense Industry Artificial Intelligence Strategy."⁵³³²

Data Protection

The Turkish Constitution establishes rights for privacy and for data protection.⁵³³³

The Turkish Law on the Protection of Personal Data was published in April 2016.⁵³³⁴ Türkiye ratified Convention 108 of the Council of Europe and its data protection law originates from European Union Directive 95/46/EC.

The data protection legislation ensures:

• That data is processed lawfully and fairly; accurate and where necessary, kept up to date; processed for specified, explicit and legitimate purposes; relevant, limited and proportionate to the purposes for which they are processed; and stored for the period of time determined by the relevant legislation or the period deemed necessary for the purpose of the processing.⁵³³⁵

⁵³³⁴ Turkish Data Protection Authority, *Data Protection in Türkiye*, https://www.kvkk.gov.tr/Icerik/6634/History

⁵³³⁵ Personal Data Protection Law, Law No. 6698, (March 24, 2016), Article 4(2), https://www.kvkk.gov.tr/Icerik/6649/Personal-Data-Protection-Law

- That explicit consent is required by an individual for data collection and data transfer. Further, data transfer outside of Türkiye is strictly regulated.⁵³³⁶
- That individuals have the right to access and complain regarding data collection.⁵³³⁷

The Law on the Protection of Personal Data adopts a broad definition of the processing of personal data which encompasses both "automated means and non-automated means" ⁵³³⁸

The Law on the Protection of Personal Data established the Turkish Data Protection Authority (DPA), an independent regulatory authority. The DPA is composed of the Personal Data Protection Board and the Presidency. The Personal Data Protection Board is in charge of implementing and interpreting the data protection law in line with the GDPR. Currently, efforts are also underway to adopt a new data protection law, based on the GDPR.⁵³³⁹

The mission of the DPA is to provide personal data protection and to develop public awareness in line with the fundamental rights related to privacy and freedom stated in the Constitution. Concerning personal data processing in relation to AI, the DPA issued its Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence in September 2021.⁵³⁴⁰ The DPA specifies that: "In the process of developing and adopting AI applications, the fundamental rights and freedoms of data subjects should be respected and there should be no violation of any right. (...) An approach, that focuses on avoiding and mitigating the potential risks and considers human rights, functioning of democracy, social and ethical values, should be adopted in processing of personal data. (...) Data subjects should be able to have control over the processing activities, considering the effect of processing activities on individuals and society."⁵³⁴¹ "The role of human intervention in decision-making processes

⁵³⁴¹ Ibid., p. 17.

should be ensured."⁵³⁴² The DPA makes clear that the principles enshrined in the Protection of Personal Data Law and applicable in general to the processing of personal data are applicable when AI is involved. These are among others: lawfulness, fairness, proportionality, accountability, transparency.

The DPA is a member of the Global Privacy Assembly (GPA) since 2017. The DPA hosted the 2022 GPA in Türkiye. However, the DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵³⁴³ the 2020 GPA Resolution on AI Accountability,⁵³⁴⁴ the 2022 GPA Resolution on Facial Recognition Technology,⁵³⁴⁵ or the 2023 GPA Resolution on Generative AI.⁵³⁴⁶

The Human Rights and Equality Institution of Türkiye, affiliated with the Ministry of Justice, could also provide independent oversight of AI practices. Established by Law No. 6701 in 2016, ⁵³⁴⁷ the Human Rights Institution is a public body endowed with an independent legal status and administrative and financial autonomy. The mission of the Human Rights Institution is to ensure the protection and promotion of human rights, to guarantee individuals' right to equal treatment, and to prevent discrimination in the exercise of rights and freedoms.

The Ombudsman Institution of the Republic of Türkiye could also provide independent oversight. The Ombudsman was established in 2012⁵³⁴⁸ as a constitutional public entity affiliated with the Grand National Assembly of Türkiye.⁵³⁴⁹ The Ombudsman has its own private budget, headquarters in Ankara and an office in Istanbul. According to the

Ombudsman Law, the Ombudsman shall be responsible for examining, investigating, and submitting recommendations to the Administration with regard to all sorts of acts and actions as well as attitudes and behaviors of the Administration upon complaint on the functioning of the Administration. The Ombudsman Institution aims to increase the service quality of the administration, contribute to the administration internalizing principles of good administration, foster transparent and accountable administration, improve human rights standards and strengthen a culture of seeking legal remedies among citizens.⁵³⁵⁰

Algorithmic Transparency

In 2020, during the preparation of the national AI strategy, Dr. Ali Taha Koç, the President of the DTO, acknowledged the importance of transparency, security, and accountability for AI. He stated that "[t]o eliminate the concerns that may arise, this system must first be human-centered, it must be fair, it must increase social welfare, it must be transparent, reliable, accountable, value-based, and dependent on national and ethical values."⁵³⁵¹

Transparency and explainability are among the AI values and principles enshrined in the National AI Strategy. The Strategy provides that: "Person(s) and organizations involved in the lifecycle of AI systems should ensure that the AI system is transparent and explainable in accordance with its context. People have the right to be informed of a decision that was made based on AI algorithms and to request explanatory information from public institutions and private sector organizations in such cases. It should be possible to explain to the end user and other stakeholders in non-technical terms and in plain language, why, how, where and for what purpose the decisions made based on automatic and algorithmic decisions, the data leading to said decisions and the information obtained from that data are used."⁵³⁵²

Türkyie has not signed yet the protocol modernizing Convention 108 which enshrines the right to algorithmic transparency.⁵³⁵³ The Law on the Protection of Personal Data provides for the obligation of data controller

to inform the data subjects about "the method and legal basis of collection of personal data".⁵³⁵⁴ Data subjects are also entitled "to object to the occurrence of a result against the person himself/herself by analyzing the data processed solely through automated systems".⁵³⁵⁵ However, the principle of transparency, algorithmic transparency or explainability are not enshrined per se in the Law on the Protection of Personal Data.

As for the DPA's Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence, they provide that "the Artificial intelligence and data collection works that rely on processing of personal data should be based on the principles of (...) transparency and accountability." ⁵³⁵⁶

With the amendment to the Law No. 5651 on the Regulating Broadcasting in the Internet and Fighting Against Crimes Committed through Internet Broadcasting (Internet Law), which entered into force in October 2022, a new obligation has been imposed on the foreign and local social network providers that receive over one million daily visits from Türkiye.⁵³⁵⁷ Additional Article 4/5 states that the said social network providers shall submit biannual reports containing information on their "algorithms", advertising policies and "transparency policies" regarding title tags, featured or reduced access content, to the Information Technologies and Communication Authority of Türkiye.

The following statements are included in the same article: "social network provider shall include on its website in a clear, understandable and easily accessible manner which 'parameters' it uses when providing suggestions to users. Social network provider shall take the necessary measures to update users' preferences regarding the content it recommends and to offer the option to limit the use of their personal data, and shall include these measures in its report."⁵³⁵⁸

⁵³⁵⁴ *Personal Data Protection Law*, Law No. 6698, (March 24, 2016), Article 10 (ç), https://www.kvkk.gov.tr/Icerik/6649/Personal-Data-Protection-Law

⁵³⁵⁸ Mehmet Bedii Kaya, *The Turkish Internet Law - Full Translation*, <u>https://mbkaya.com/turkish-internet-law/</u>

In addition, with the 18th paragraph added to Additional Article 4 on the date above, the Information Technologies and Communication Authority of Türkiye is authorized to request all kinds of "explanations" from the social network provider regarding the social network, provider's compliance with this Law, including organizational structure, "information systems," "algorithms," "data processing mechanisms" and "commercial attitudes." ⁵³⁵⁹

The DTO Big Data and Artificial Intelligence Department has carried out the "COVID-19 Detection with Artificial Intelligence" project,⁵³⁶⁰ in which the predictions made by the developed AI models using the X-Ray and Computed Tomography images and the reasoning for these predictions can be presented to the relevant doctors.⁵³⁶¹

Open Data Project

Türkiye's Open Data Project, which was launched under the coordination of the Digital Transformation Office of the Presidency of the Republic of Türkiye, aims to establish an open data portal to make public data available as open data under privacy principles in order to increase transparency, accountability and participation and to enable production of new value-added services."⁵³⁶² As a platform for the datasets needed for developing AI technologies and applications, the initiative will contribute to fostering a digital ecosystem for AI.

The Project includes managing the regulatory and legislative area of open data which are necessary steps for participation in the Open

Government Partnership.⁵³⁶³ The initiative also aims to provide effective coordination in preparing the labor market for digital transformation.⁵³⁶⁴

Some municipalities, including Istanbul and İzmir, the 1st and the 3rd biggest cities in Türkiye respectively, have already launched their own open data portals.⁵³⁶⁵ Furthermore, Ankara Metropolitan Municipality implemented the "Transparent Ankara"⁵³⁶⁶ project, the first and only mapbased open data platform in the world.⁵³⁶⁷ Turkish citizens from all over the world can easily access many data such as transportation boarding data, social benefits, green areas, level of dams, population and demographic information, weather conditions, WiFi hotspots, bicycle paths and trekking routes in Ankara from the open data on this platform 24/7.⁵³⁶⁸

Freedom of Expression

In October 2020, a law entered into force requiring all domestic and foreign social network providers that serve more than one million users in Türkiye to have local representation in Türkiye. The law gives authority to the Information and Communication Technologies Authority to order social network providers the removal or blocking of content within 48 hours if related to violation of personality and privacy rights, listed crimes, threats to public order or security, or other pressing and immediate dangers.⁵³⁶⁹

In October 2022, the Turkish Criminal Code was amended. Article 217/A entitled "Openly Disseminating Misleading Information" now provides that "publicly disseminating false information about the internal and external security, public order and general health of the country, in a way that is suitable for disturbing the public peace, solely for the purpose

of creating anxiety, fear or panic among the people" constitutes a crime that is to be punished by imprisonment.⁵³⁷⁰

EdTech and Children Tracking

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Türkyie, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, among which some built and offered by the Turkish Government, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. In its study, Human Rights Watch gives the example of 9-year old "Rodin," student in Ankara.

"By 9 a.m., he logs into class and waves hello to his teacher and to his classmates. (...) During breaks between classes, Rodin reads chat messages from his classmates and idly doodles on the virtual whiteboard that his teacher leaves open. He watches his best friend draw a cat; he thinks his friend is much better at drawing than he is. Later in the afternoon, Rodin opens up a website to watch the nationally televised math class for that day. At the end of each day, he posts a picture of his homework to his teacher's social media page. Unbeknownst to him, an invisible swarm of tracking technologies surveil Rodin's online interactions throughout his day. Within milliseconds of Rodin logging into class in the morning, his school's online learning platform begins tracking Rodin's physical location—at home in his family's living room, where he has spent most of his days during the pandemic lockdown. The virtual whiteboard passes along information about his doodling habits to advertising technology (AdTech) and other companies; when Rodin's math class is over, trackers follow him outside of his virtual classroom and to the different apps and sites he visits across the internet. The social media platform Rodin uses to post his homework silently accesses his phone's contact list and downloads personal details about his family and friends. Sophisticated algorithms review this trove of data, enough to piece together an intimate portrait of Rodin in order to figure out how he might be easily influenced. Neither Rodin nor his mother were aware that this was going on. They were only told by his teacher that he had

⁵³⁷⁰ The Turkish Criminal Code No.5237, Article 217/A

https://www.mevzuat.gov.tr/mevzuat?MevzuatNo=5237&MevzuatTur=1&MevzuatTertip=5

to use these platforms every day to be marked as attending school during the Covid-19 pandemic."

According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.5371

Diaital ID

Türkiye is currently working on a project that citizens can log into e-Government⁵³⁷² with their digital IDs created in the blockchain network via the e-wallet mobile application.⁵³⁷³ As Dr. Koc stated, with the e-Wallet Application to be offered by the DTO, citizens will be able to securely store their digital identities and log into the e-Government Gateway with their digital identities.⁵³⁷⁴

Digital Government

DTO initiated the preparation of the Digital Government Strategy to set out Türkiye's road map during the transition from e-Government to Digital Government in 2022 with the participation of all stakeholders.⁵³⁷⁵ It is stated that OECD Digital Government Review for Türkiye is also being

⁵³⁷¹ Human Rights Watch, How Dare They Peep into My Private Life (May 25, 2022), https://www.hrw.org/report/2022/05/25/how-dare-they-peep-my-private-life/childrensrights-violations-governments

⁵³⁷⁵Digital Transformation Office of the Presidency of the Republic of Türkiye, Digital Government Strategy https://cbddo.gov.tr/en/digital-government-strategy/

conducted under the coordination of the DTO that will serve as a foundation for the Digital Government Strategy.⁵³⁷⁶

DTO firstly submitted a survey to public institutions and organizations to analyze the current status of Türkiye in terms of the OECD's recent Digital Government Policy Framework, and conducted peer review studies with representatives from public institutions and peer countries. It has been committed by the DTO to produce policy recommendations in line with the needs and opportunities identified by the OECD and finally prepare and publish the Digital Government Review Report for Türkiye. It is explicitly stated that "the findings and recommendations of the OECD Digital Government Review will also serve as a foundation for the Digital Government Strategy" which is expected to be released in 2023.⁵³⁷⁷

The first focus group meeting was held in January 2023 with 137 representatives from the government, universities, NGOs and private sector to carry out solution development studies on six main pillars, especially data management of the private sector in the public sector and digital inclusion and participation.⁵³⁷⁸

Lethal Autonomous Weapons

Türkiye is one of the most important lethal autonomous weapon systems (LAWS) developer and exporter in the world. "Thought Turkey's defense sector remains small compared with giants like China, it has outsized influence because of the impact of its drones in recent conflicts. The country's Bayraktar TB-2 drones have been used in at least four different conflicts – Ukraine, Syria, Libya⁵³⁷⁹ and in Azerbaijan's conflict with Armenia."⁵³⁸⁰

⁵³⁸⁰ J. Malsin, Drones, Unmanned Boats and Killer Robots Have Made Turkey an Arms-Industry Powerhouse, The Wall Street Journal (July 21, 2022),

Türkiye has participated in every Convention on Certain Conventional Weapons (CCW) meeting on lethal autonomous weapons systems between 2014 and 2023. At the 2022 meeting of the CCW Meeting High Contracting Parties, Türkiye stated that "[w]e believe that the development and use of autonomous weapons systems which does not have meaningful human control are undesirable and risk compliance with our obligations steaming from the International Humanitarian Law. Humans (commanders and operators) have to be involved in the decision loop and bear the ultimate responsibility when dealing with the decision of life and death in order to ensure compliance with International Law, in particular International Humanitarian Law.⁵³⁸¹ Türkiye also repeated its commitment to fully implement the CCW and its annexed Protocols.

On February 16-17, 2023, the Dutch Government organized the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM) in The Hague. On this occasion, government representatives agreed a joint call to action on the responsible development, deployment and use of artificial intelligence in the military domain.⁵³⁸² Türkiye endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁵³⁸³

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁵³⁸⁴

Human Rights

According to Freedom House, Türkiye is "not free.⁵³⁸⁶ Türkiye receives low scores for political rights and civil liberties (32/100) in 2023. According to the 2022 Freedom House report, "President Recep Tayyip Erdoğan's Justice and Development Party (AKP) has ruled Turkey since 2002. After initially passing some liberalizing reforms, the AKP government showed growing contempt for political rights and civil liberties and has pursued a wide-ranging crackdown on critics and opponents since 2016. Constitutional changes in 2017 concentrated power in the hands of the president, removing key checks and balances. While Erdoğan continues to dominate Turkish politics, a deepening economic crisis and opportunities to further consolidate political power have given the government new incentives to suppress dissent and limit public discourse."⁵³⁸⁷

Regarding transparency, Freedom House reports that "[a]lthough Türkiye has an access to information law on the books, in practice the government lacks transparency and arbitrarily withholds information on the activities of state officials and institutions."

The DTO has served as the national coordinator and secretariat for the Council of Europe Ad Hoc Committee on Artificial Intelligence (CAHAI) and represented⁵³⁸⁸ Türkiye⁵³⁸⁹ as one of the lead co-ordinators of

two subworking⁵³⁹⁰ groups⁵³⁹¹ and took part in the work of all the other subworking groups. After CAHAI's mandate elapsed, the Council of Europe Committee on Artificial Intelligence (CAI) took over, where the DTO serves as the national coordinator and secretariat for the CAI. Türkiye is represented at the plenary meetings by the observers and governmentappointed representatives.

OECD / G20 AI Principles

As a founding member of the OECD, a NATO ally and a G20 member, Türkiye adopted the OECD AI Principles. According to the OECD, Türkiye's AI Technology Roadmap is a multistakeholder effort that supports implementation of the G20 AI Principles on inclusive growth, robustness and accountability.⁵³⁹² The National AI Strategy explicitly acknowledges that Türkiye is a stakeholder of human- centric AI principles determined by OECD (...) and adopts "trustworthy and responsible AI" values and principles.⁵³⁹³

Türkiye is an active member of the OECD Network of Experts on Artificial Intelligence with representatives at ministerial and presidential level⁵³⁹⁴ and contributes to the OECD Committee on Digital Economy Policy (CDEP) Working Party on Artificial Intelligence Governance (WPAIGO) meetings and policy documents both at the technical and at the bureau membership level.⁵³⁹⁵

The application of Türkiye for membership to the Global Partnership for Artificial Intelligence (GPAI) was approved⁵³⁹⁶ by consensus at the GPAI Ministerial Council Meeting in Tokyo on 22 November 2022. With its membership in GPAI, Türkiye will be able to partake in the ongoing international cooperation on the responsible

development and use of AI on this platform and benefit from the multistakeholder cooperation within GPAI to adopt trustworthy AI, share multidisciplinary research, identify knowledge gaps, maximize coordination, and identify and mitigate potential challenges on the other.

Al Mirror Committee

Technical committee activities of the International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), The European Committee for Standardization (CEN) and the European Committee for Electrotechnical Standardization (CENELEC) are followed by Mirror Committees (MTC-Mirror Technical Committees) formed by Turkish Standards Institution (TSE).⁵³⁹⁷ MTC 195 Artificial Intelligence National Technical Committee (AI Mirror Committee)⁵³⁹⁸ was established in November 2022 to follow and contribute to ISO/IEC JTC 1/SC 42 "Artificial Intelligence" and CEN/CLC JTC 21 "Artificial Intelligence" technical committees.⁵³⁹⁹

UNESCO Recommendation on the Ethics of Artificial Intelligence

Türkiye has endorsed the 2021 UNESCO Recommendations on the Ethics of AI. The Turkish National AI Strategy mentions that the "country is a stakeholder of human-centric AI principles determined by (...) UNESCO, and adopts "trustworthy and responsible AI" values and principles"⁵⁴⁰⁰, although it does not refer specifically to the UNESCO Recommendation.

Türkiye carried out its membership in the Executive Board of UNESCO for the period of 2017-2021. In addition, in the election of Members to the Executive Board held at the 41st General Conference of UNESCO on 17 November 2021, Turkey was re-elected as a member state for the 2021-2025 period.⁵⁴⁰¹ The Ministry of Foreign Affairs of the

Turkey's Election as a Member to the UNESCO Executive Board (17 November 2021) https://www.mfa.gov.tr/no_-384_-unesco-yurutme-kurulu-uyeligine-secilmemizhk.en.mfa

Republic of Türkiye states that Türkiye "embraces the purpose and ideals of UNESCO", believes "in the significance of maintaining active support to all levels of the Organization" and "will continue to contribute strengthening UNESCO's activities and values as a member of the Executive Board."⁵⁴⁰² Following the adoption of the UNESCO Recommendation on the Ethics of Artificial Intelligence, Türkiye started to participate and contribute to the "Group of Friends of the implementation of the Recommendation on the Ethics of Artificial Intelligence" meetings.⁵⁴⁰³

It is worth underlining that the Executive Board, of which Türkiye is a member, adopted a decision containing a section on the Implementation of the Recommendation on the Ethics of Artificial Intelligence at its 215th session held on 5-19 October 2022.⁵⁴⁰⁴

Türkiye also expressed interest in engaging with the list of activities and deliverables linked to the implementation of the Recommendation for Member States. In this regard, to ensure the effective implementation of the Recommendation, as the public authority responsible for AI governance, the Digital Transformation Office (DTO) of the Presidency of the Republic of Türkiye filled the survey in detail by UNESCO composed of 127 questions, seeking the views of expert authorities in Member States to ensure that the "Readiness Assessment Methodology" and "Ethical Impact Assessment" tools being developed under the Recommendation reflect the situation in Member States as best as possible and respond to their needs.⁵⁴⁰⁵

Al Safety Summit

In November 2023, Türkiye participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁵⁴⁰⁶ Türkiye thus committed to participate in international cooperation efforts on AI "to promote

inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

Türkiye contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁵⁴⁰⁷

Evaluation

Türkiye is an emerging market for AI, and a regional leader in AI. Türkiye has adopted a National AI Strategy with a clear human-centered approach. In the absence of any AI legislation and despite the lack of provisions in the Law on the Protection of Personal Data regarding algorithmic transparency, the Turkish Data Protection Authority has issued ambitious Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence. It remains to be seen how the National Strategy will be concretely operationalize and the DPA has yet to adopt any AIrelated decisions. Concerns exist in relation to the development of Lethal Autonomous Weapons and restrictions on freedom of expression.

Uganda

National AI Strategy

Uganda is yet to issue a national AI strategy. According to the OECD AI observatory, the country has a national task force to advise the government on the localization of fourth industrial revolution technologies to propel economic development.⁵⁴⁰⁸ The Taskforce led the process of development of Uganda's "National 4IR Strategy: A continental 4IR HUB that enables a smart and connected Uganda society," published in 2019⁵⁴⁰⁹. The Taskforce analyzed global trends in emerging technologies, with a focus on Uganda and the East African region's development goals and aspirations.⁵⁴¹⁰

Under the coordination of the Office of the Prime Minister, Uganda's National Fourth Industrial Strategy (National 41R) aims to transform the country into a continental 4IR hub with a view to transform and accelerate Uganda's development into an innovative, productive and competitive society using 4IR technologies by 2040.⁵⁴¹¹ The four pillars of the strategy are: Agriculture, Industry, Service, and ICTs.

The 4IR Strategy outlines 7 objectives:

- 1. To enhance the deployment and use of 4IR technologies in Uganda's key economic sectors to drive productivity ,value addition and commercialization.
- 2. To build a strong healthy, knowledgeable and productive population by leveraging emerging technologies.
- 3. To generate jobs through digitally traded exported services, automated financial services, and digitally augmented logistics and trade.
- 4. To leverage 41R technologies in the establishment of smart cities and the management of critical resources.
- 5. To transform government performance and service delivery of improved standards of living, quality of life, and well-being.
- 6. To strengthen and stimulate research and innovation in 4IR.
- 7. Supporting national security in the physical and digital world.

⁵⁴⁰⁸ OECD.AI, *Expert National Task Force on Fourth Industrial Revolution* (2019), <u>https://oecd.ai/en/dashboards/policy-initiatives/http:%2F%2Faipo.oecd.org%2F2021-data-policyInitiatives-27387</u>

⁵⁴¹¹ Ibid.

Critical enablers of the 4IR strategy include: 4IR connectivity, regulatory agility, upskilled population, e-Government, and resource mobilization. The enabler of regulatory agility will require improving governance, closing gaps between regulation, legislation, and strategy, and enacting a data protection legal frameworks to facilitate data sharing, meet global standards for data protection and harmonize with emerging technologies. The implementation of the strategy requires the coordination of the 4IR initiatives through the Prime Minister's office, the facilitation of an ecosystem of centers of excellence, and the coordination of funding through the ICT Sector Working Group (SWG). In December 2022, the Task Force presented the first 4IR strategy report to the Prime Minister of Uganda.⁵⁴¹²

The National Vision 2040 frames the National 4IR in Uganda. The Vision identifies Science, Technology Engineering, and Innovation (STEI) as key drivers for development.. Uganda's National Vision 2040 aspires to transform the country from a predominantly peasant and low income country to a competitive upper-middle-income country.⁵⁴¹³ The Vision 2040 is in line with the East African Vision 2050,⁵⁴¹⁴ which affirms that Science Technology, and Innovations (STI), whether embodied in human skills, capital goods, or practices and organizations, is one of the key drivers of economic growth and sustainable development. Uganda's policy aims to strengthen: infrastructure (energy, transport, water, oil and gas, and ICT); Science, Technology, Engineering, and Innovation (STEI); land use and management; urbanization; human resource; and peace, security and defense.

The National Development Plan (NDPIII) sets the aspirations articulated in Uganda Vision $2040.^{5415}$ Within the theme of sustainable industrialization for inclusive growth and sustainable wealth creation, the goals of the (NDPIII) 2020/21 - 2024/25 are: increased household incomes and improved quality of life of Ugandans. The NDPIII plan includes a Digital transformation Program aiming to realize 18 projects to increase

http://repository.eac.int/bitstream/handle/11671/567/EAC%20Vision%202050%20FINA L%20DRAFT%20OCT-%202015.pdf?sequence=1&isAllowed=y

⁵⁴¹⁴ East African Community (EAC), Vision 2050 (Aug. 2015),

ICT penetration and use of ICT services for social and economic development, ICT incubation and increasing e-government services. The focus of the Digital Transformation Program for Artificial Intelligence is on capacity-building but not on policy or regulatory framework, or strategic intent in the field of AI. Notable in the NDPIII however is the commitment to a Human-Rights Based Approach (HRBA) for sustainable economic development, expressed as follows:⁵⁴¹⁶ "Ensure inclusive sustainable development (...) with particular attention to human rights principles of equality and non-discrimination, empowerment and participation and attention to vulnerable groups. (...) All sectors, ministries, departments, agencies, and local governments are expected to adopt HRBA in their respective policies, programs, legislation, and plans."

In line with both the Vision 2040 and NDPIII, the National Science, Technology and Innovation (STI) Policy of 2009⁵⁴¹⁷guides innovations in these fields.⁵⁴¹⁸ The Ugandan government established the Ministry of Science, Technology and Innovation to coordinate STI efforts in the country, creating linkages with all actors, and providing clear policy direction and supervision of STI initiatives.⁵⁴¹⁹

Other supportive policies for the creation of an STI ecosystem is the National Science, Technology and Innovation Plan (NSTP) 2012/2013–2017/2018 and the Science, Technology, and Innovation Sector Development Plan (SDP) 2019/2020-2024/2025.⁵⁴²⁰ The seven strategic objectives of the SDP include the enhancement of policies, planning, and coordination in the sector, development of infrastructure, transfer of technologies, R&D capacities and, the development and implementation of a legal-regulatory framework to guide the safe and appropriate use of new technologies.

At the regional level, Uganda has been actively participating in several relevant policy initiatives. As a member of the African Union (AU), Uganda is committed to take specific measures to formulate and implement human-centered policies, in alignment with the goals of the AU digital transformation strategy⁵⁴²¹ and the AU Continental Data Policy Framework.⁵⁴²² Ugandan representatives from government, academia and private sectors form part of the committees and AI working groups that hold discussions around AI and ICT for social-economic development in Smart Africa and the African Union. The Smart Africa initiative is a new commitment of more than 36 African Heads of State and Government to accelerate sustainable social-economic transformation using ICTs and affordable broadband access.⁵⁴²³ Uganda has been actively participating in the drafting of the recently published "AI For Africa" Blueprint strategy report⁵⁴²⁴ by Smart Africa. Uganda has also contributed to the work of the African Union High-Level Panel on Emerging Technologies (APET),5425 mandated to advise the AU on harnessing emerging technology innovations for Africa's social-economic transformation. In February 2022, APET announced the future issuance of its report on "AI for Africa" which will pave the way towards the drafting of an AU AI continental strategy.⁵⁴²⁶ Uganda is also represented in the continental AI team leading the development of a Continental AI Strategy expected to be completed by January 2024.5427

Public Participation

The Republic of Uganda set a Guide to Policy Development & Management for the country in 2013⁵⁴²⁸ to address the lack of a formalized process for policy management. The government set forth a commitment to public consultations to promote democratization and empowerment. Modes of public consultation range from information consultations to one-time meetings with stakeholders to discussion papers and draft legislation. Recommendations included reasonable periods for consultation and participation in the early stages of policy formulation.

The e-citizen Portal, an initiative of the National Information Technology Authority of Uganda (NITA-U) is a channel to enable egovernment services to citizens and non-residents. The site includes links to all government agencies but does not include a portal for public participation.⁵⁴²⁹

The government of Uganda in collaboration with UN Global Pulse, organized the Expert National Task Force on Fourth Industrial Revolution, under the leadership of the Ministry of ICT & National Guidance.⁵⁴³⁰ The process involved 23 experts from academia, engineering, science, and policy-makers.⁵⁴³¹ The first meeting took place on December 17, 2019, in Kampala. The draft strategy validated in October 2020⁵⁴³² guides the Ugandan government in harnessing emerging technologies.

In the most recent UN e-Government Survey of 2022, Uganda ranked 144th out of 193 countries in the world and in the bottom ten among African countries, in terms of the e-Government development index (EGDI).⁵⁴³³

Uganda has yet to establish a systematic process to engage stakeholders in meaningful participation in policy-making.

Data Protection

The Data Protection and Privacy Act (DPPA) was enacted in 2019 and ancillary regulations, the Data Protection and Privacy Regulations published in 2021.⁵⁴³⁴ The DPPA took the European Union GDPR as a model and seeks to "protect the privacy of individual and personal data by regulating the collection and processing of personal information; to provide for the rights of the persons whose data is collected (data subjects) and the obligations of data collectors, data processors and data controllers; and to regulate the use or disclosure of personal information; and for related matters."

The DPPA provides also that all personal data must be handled in accordance with the principles of accountability, lawfulness, minimization, retention, quality, transparency, and security.5435

The Law establishes the Personal Data Protection Office under the National Information Technology Authority, Uganda (NITA-U) to oversee the implementation of and be responsible for the enforcement of the Act.⁵⁴³⁶ The Personal Data Protection Officer is not a member of the Global Privacy Assembly (GPA) and has not endorsed the 2018 GPA Declaration on Ethics and Data Protection,⁵⁴³⁷ the 2020 GPA Resolution on Accountability in the Development and Use of AI,⁵⁴³⁸ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial

Biometric Identification

Uganda's National Identification (ID) program was launched in 2014, and further expanded after the passage of the Registration of Persons Act in 2015, making it mandatory for purchasing a SIM card, making registration essentially a pre-requisite for getting online.⁵⁴⁴⁵ Registration for the National ID is also required for a range of other vital services, including accessing public education or healthcare services, obtaining a passport, or opening a bank account, voting, and public service verification which has led to the weeding out of many 'ghost' workers, citizen verification for passport issuance, and tax identification.⁵⁴⁴⁶

Under the National ID system citizens' biometric data is captured and validated for adults, and children, birth registration is used so that they can be issued a National Identification Number (NIN) or an ID card. The National ID system managed by the National Identification & Registration Authority (NIRA) is moving towards the development of its digital ID ecosystem that will be put in place by 2024, including a new biometrics registration drive.⁵⁴⁴⁷ The process will expand the system to forms of biometrics other than fingerprints including iris and face biometrics. However, the system has also been plagued by technical challenges since its inception, including allegations of a major data breach in June 2017. Though the government denied these reports, it admitted that citizens' biometric data had been shared with telecommunications companies, as part of the process of verifying SIM cards.⁵⁴⁴⁸

In 2022, a coalition of civil society organizations filed a lawsuit in the High Court of Kampala for digital exclusion.⁵⁴⁴⁹ The case Initiative for Social and Economic Rights [ISER], the Health Equity and Policy Initiative

[HEAPI], & Unwanted Witness v. Attorney General and National Identification and Registration Authority (NIRA) alleges that the digital ID system, also known as Ndaga Muntu, poses an exclusionary barrier that violates women's rights to health care, and the right to social security benefits.⁵⁴⁵⁰ The case was first heard by the court on October 6, 2022.⁵⁴⁵¹ The alleged exclusion has been fatal, especially among the elderly and pregnant women who have been barred from healthcare and welfare services. Research conducted by the plaintiffs estimates that up to 33% of adults in Uganda have yet to receive the biometric ID card launched in 2015, limiting their access to a range of public services, from welfare benefits and maternity care to college enrolment, formal employment, and opening bank accounts.⁵⁴⁵²

Facial Recognition

The government of Uganda has actively used AI and new technologies for purposes of mass surveillance, policing, and crime prevention. In 2018, the government rushed the procurement of 24-hour CCTV cameras in crime-prone areas in Kampala and surrounding areas following a wave of murders. These crimes included high-profile Ugandan citizens, Muslim clerics, military and police officers, Cabinet Ministers, among others. The first phase of the plan included the installation of 1,940 cameras in 2018 in the capital city area.⁵⁴⁵³ The second phase cost the Ugandan public over USD 104 million, in a procurement deal hastened through Parliament under vague loan terms.⁵⁴⁵⁴

The Ugandan Parliament endorsed the deployment of the technology for policing functions without legislating a corresponding legal framework

fostering issues of the legality of such actions.⁵⁴⁵⁵ Human rights concerns emerged over the fact that the system was operated on a centralized database, with the potential of negatively affecting citizens' right to privacy, and freedom of peaceful assembly.

The CCTV project was not well received due to the lack of openness, and transparency in the procurement process and in the management of the system, hindering public trust. Reports of unexplainable leaked footage from CCTV cameras⁵⁴⁵⁶ raised further questions on the ethical standards and requirements to manage the retrieval, sharing and elimination of public CCTV footage.⁵⁴⁵⁷Additionally, concerns exist about how the infrastructural deficiencies (poor or no street lighting, limited connectivity, low standards of maintenance) have undermined the benefits of the use of CCTV in several instances of application of the system. Despite these reservations, the Ugandan police proceeded with the plans to integrate their CCTV camera and forensic system with other key agencies' data such as Uganda Revenue Authority (URA), NITA-U, NIRA, and the immigration office. In the second phase of this plan, started in 2020, 20 facial recognition cameras were installed and connected to 107 monitoring centers at different police stations within 2.319 mapped countryside municipalities and major towns 5458

Key concerns around transparency and accountability of both resources and personal data remain unanswered, in particular the use of AI facial recognition technologies to indiscriminately deal with persons of interest, including dissidents.⁵⁴⁵⁹ In a report regarding concerns in the use of AI in Africa, AfriPoli found the use of facial recognition systems in the 2020 Ugandan elections, to monitor, track and arrest 836 supporters of the

opposition.⁵⁴⁶⁰ The participation of Huawei AI in 16 African countries, including Uganda has led to the use of mass surveillance data to local law enforcement.⁵⁴⁶¹

Tracking

In 2020, the government adopted a measure that linked the RECS system to the efforts to combat the spread of COVID-19.⁵⁴⁶² A task force that included the Uganda Revenue Administration Commissioner General and the Uganda Trade Minister, set up to discuss how the RECS could trace the movement of trucks (and their drivers) in real-time across trade routes. The plans came about after a COVID-positive truck driver was intercepted at the border upon mandatory testing, a condition to clear Customs.

In 2021 the Ugandan government announced the plan to install GPS trackers on every vehicle in the country.⁵⁴⁶³ The project would require the registration of all number plates for every public and private vehicle, water vessel, motorcycles (commonly known as 'Boda Bodas.'). This plan posed an evident risk to freedom of mobility as the government would potentially be able to track the whereabouts of a particular person at all times. In the original plan, the Ugandan government signed a Memorandum of Understanding and a 10-year agreement with the Russian firm Joint-stock Company Global Security, under a project dubbed "Intelligent Transport Monitoring System (ITMS).⁵⁴⁶⁴ While the government presented these plans as an effort to curb the rampant transport kidnappings and robberies to aid during investigations, legal groups sued the government over these plans, and pleaded to the High Court to halt and restrain the implementation

of the compulsory digital surveillance, due to privacy concerns.⁵⁴⁶⁵ The lawsuit includes a request for explanations to the government regarding the adjudication of the contract to a foreign entity without due diligence. The government plans to deploy the systems in March 2023.

Lethal Autonomous Weapons

The governance and control of Unmanned Aerial Systems (UAS), Remotely Piloted Aircraft Systems (RPAS), or drones, have been a concern of the Uganda authorities. In a report of 2019, the Uganda Civil Aviation Authority and Customs officials started awareness sessions about the threats that non-registered drones pose to national security.⁵⁴⁶⁶ Uganda developed laws to regulate Remotely Piloted Aircraft Systems (RPAS) drones under the Civil Aviation Authority (CAA) (remotely piloted aircraft systems) Regulations, 2020 but is lacking a unified legal framework.⁵⁴⁶⁷ Such a framework is in the draft stage in consultation with the Civil Aviation Safety and Security Oversight Agency (CASSOA). In 2021, the Uganda Communications Commission issued guidelines for the operation of remotely piloted aircraft (RPAS)/drones in Uganda.⁵⁴⁶⁸

In 2021, Uganda was part of the African Group which issued a joint statement calling for an international discussion on the "ethical, legal, moral and technical questions" raised by the use of autonomous weapons systems and urging concrete policy recommendations, including prohibitions and regulations.⁵⁴⁶⁹

Human Rights

According to the 2022 Freedom in the World Report, Uganda is not a free country in terms of human rights protection, with only a score of

34/100.⁵⁴⁷⁰ Uganda's civil society and independent media sectors suffered from legal and extra-legal harassment and state violence. Increasing accusations of the overreach of the Executive over Judicial independence, as well as an increase in systemic corruption are the most salient conclusions of the Freedom House report.

The Ibrahim Index of African Governance in 2021 scores Uganda at 47.5/100 for overall governance, and 38.9/100 in Participation Rights & Inclusion, placing the country in position 31 out of 45 African countries, with a decreasing trend since $2012.^{5471}$

Uganda is a signatory of the Universal Declaration of Human Rights and has ratified various covenants including the International Convention on Civil and Political Rights (ICCPR) and International Covenant on Economic, Social and Cultural Rights (ICSECR).⁵⁴⁷² Uganda ratified the African Charter on Human and People's Rights in 1986.⁵⁴⁷³ Chapter four (4) of the Constitution of Uganda of 1995 provides for the protection of fundamental rights and freedoms which include civic, economic, social, and political. Article 20 (1) of the Constitution stipulates that the fundamental rights and freedoms of individuals are inherent and not granted by the State.

In line with the Ugandan Constitution, the country has a Uganda Human Rights Commission, that monitors human rights violations.⁵⁴⁷⁴ There is a Human Rights Committee in Parliament scrutinizing the work of the government, making recommendations aimed to improve human rights protection, and overseeing the National Action Plan on Human Rights.⁵⁴⁷⁵

Despite being a multiparty democracy, Uganda has had the same party(National Resistance Movement) and President for the last 35 years

with fast-rising opposition to the incumbency.⁵⁴⁷⁶ In the 2021 elections, media reports indicate that the political campaign was marred by killings, arrests, beatings, and disappearances by security forces, as well as harassment and intimidation of journalists.

The Human Rights Foundation's universal periodic review (UPR) report of Uganda in 2021⁵⁴⁷⁷ found actions by the Uganda government such as ordering internet blackouts on the evening of elections of 2018. A fiveday internet shutdown and blockage of social media, compounded by a government decision to replace a 200 shilling (\$0.05) social media tax, with a 12 percent tax on internet data. In 2020, further regulations were adopted to restrict freedom of expression by levying fees on the use of online communication. In 2021, a new shutdown of social media services occurred close to the date of the elections. The UPR report exhorts the Ugandan government to ensure the protection of all individuals and cooperate with international human rights organizations and generate an internal dialogue toward peace.

Amnesty International highlighted in a 2022 report that freedom of expression has increasingly become constrained and civic space significantly narrowed as Human Rights defenders (HRDs) and organizations working on electoral accountability were particularly targeted for their work.⁵⁴⁷⁸

OECD / G20 AI Principles

Uganda is not a member of the OECD and is not a signatory to OECD AI Principles.⁵⁴⁷⁹ The OECD AI Observatory reports that the 4IR strategy is aligned with two OECD AI principles: (1) Fostering a digital ecosystem for AI and (2) Providing and enabling policy environment for AI. However, no reports are available for implementation.⁵⁴⁸⁰

UNESCO Recommendation on the Ethics of Artificial Intelligence

Uganda is a member of UNESCO since 1962⁵⁴⁸¹ and is among the 193 member states that adopted the UNESCO Recommendation on the Ethics of AI.⁵⁴⁸²

According to the UNESCO AI Needs Assessment Survey in Africa, Uganda is one of the countries in Africa that had established AI as a priority in their national development plans. Initiatives of strategies and policies are underway, but legislation and ethical guidelines as well as the operation of Centers of Excellence are yet to be implemented. Uganda reported work in progress in the establishment of a legal framework and plans for education programs to introduce government officials to AI skills. Uganda has requested support from UNESCO to guide the development of AI at the national level.⁵⁴⁸³

Evaluation

Uganda's engagement at regional and international level as well as Uganda's 4IR strategy, 2019 Data Protection and Privacy Act, Vision 2040, and NDP III indicate the intent of the country to spearhead the digital transformation of the country. The 4IR strategy is a first step in the formulation of a dedicated AI policy and the 2019 Data Protection and Privacy Act provides for protection of data subjects' rights. However, the absence of a national AI strategy with a human-centered approach at its core and of data subjects' right to algorithmic transparency, as well as the lack of independence of the data protection authority create additional hurdles in tackling the widespread use of AI for surveillance purposes. Should Uganda take its commitment to the UNESCO Recommendation on the Ethics of AI seriously, the Recommendation could provide a template for regulating the deployment of AI in way that respects human rights.

Ukraine

National AI Strategy

Ukraine's government approach to AI is set out in two Orders, issued by the Cabinet of Ministers of Ukraine. In December 2020, the Cabinet published its first Order,⁵⁴⁸⁴ which approved the "Concept for the Development of Artificial Intelligence in Ukraine". It recognised that deployment of AI systems must include compliance with fundamental principles, such as those enshrined in personal data protection legislation, and respect the constitutional rights to privacy, and private and family life.

In May 2021, the Ukrainian government published a second Order, approving the Action Plan for implementing the Concept between 2021-2024.⁵⁴⁸⁵ The Order comprises a list of initial, specific tasks assigned to the relevant ministries. The Action Plan was lastly updated in July 2023, elaborating on priorities in AI sphere in line with the wartime needs. The Cabinet of Ministers of Ukraine is charged with the responsibility for the overall management and oversight of the Plan implementation. An Expert Committee on the Development of Artificial Intelligence – an independent expert body established under the Ministry of Digital Transformation of Ukraine is assisting it in strategic planning of the activities, advises on the thematic issues and facilitates cooperation between key stakeholders.⁵⁴⁸⁶

The Ministry of Education and Science of Ukraine has also published its proposed, much more detailed, National Strategy for the Development of Artificial Intelligence for 2021- 2030.⁵⁴⁸⁷ In particular, the strategy notes that as a member of the Council of Europe Ad Hoc Committee on Artificial Intelligence, Ukraine should focus primarily on the standards of the EU, the Council of Europe and other pan-European institutions that work on AI-related matters. The strategy also acknowledges the need to ensure alignment with the OECD AI Principles and the

measures for the implementation of the Concept of the development of artificial intelligence in Ukraine for 2021-2024 (May 12, 2021),

⁵⁴⁸⁶ The Expert Committee on the Development of Artificial Intelligence in Ukraine, <u>https://ai.org.ua/</u>

⁵⁴⁸⁷ Ministry of Education and Science of Ukraine, National Academy of Sciences of Ukraine, Institute of Artificial Intelligence Problems, *National Strategy for the Development of Artificial Intelligence in Ukraine* (June 11, 2021), https://www.naiau.kiev.ua/images/news/img/2021/06/strategiya-110621.pdf

principles enshrined in the EU Charter of Fundamental Rights including human dignity, non-discrimination and consumer protection. The strategy has not been formally approved by the Ukrainian government since the priorities have changed following the Russian full-scale invasion.⁵⁴⁸⁸ Instead, the government decided to develop a regulatory roadmap.

On 7 October 2023, the Expert Committee on the Development of Artificial Intelligence in Ukraine in cooperation with the Ministry of Digital Transformation presented the Roadmap for the regulation of AI in Ukraine.⁵⁴⁸⁹ The Roadmap proposes a bottom-up approach to AI regulation, which involves a gradual "moving from less to more", starting from self-regulatory initiatives and ending up with the legislative acts. The document proposes two phases for AI regulation.

Phase one, which is estimated to take 2-3 years, prioritises self- and co-regulation by providing businesses with tools for future compliance. This involves developing capabilities of both the state to regulate and enforce and the industry to comply with future legislative requirements by introducing regulatory sandboxes, AI and human rights impact assessments (including Council of Europe HUDERIA methodology), AI labelling tools, voluntary codes of conduct, guidelines and recommendations. Ukraine also intends to establish an AI Transparency Centre, which will serve as a one-stop shop for all information on AI regulation, general and thematic guidelines. One of the thematic recommendations was released in January 2024, addressing responsible AI use in the media.⁵⁴⁹⁰

The second phase reaffirms Ukraine's commitment to adopt a law similar to the EU AI Act in the framework of its accession plan to the European Union. The Roadmap notes that implementation may be a gradual process that commences with the implementation of the most important or demanding provisions. Meanwhile, the Roadmap emphasizes the importance of protecting Ukrainians' fundamental rights in the digital space and their personal data. One of the expected follow-up documents is the

⁵⁴⁹⁰ How to use artificial intelligence responsibly: guidelines for the media have been developed (Jan. 24, 2024), <u>https://thedigital.gov.ua/news/yak-vidpovidalno-vikoristovuvati-shtuchniy-intelekt-rozrobili-rekomendatsii-dlya-media</u>

White Book of AI regulation, the first draft of which was presented in December 2023, expanding the regulatory plan from the Roadmap.⁵⁴⁹¹

In November 2023, the Ukraine Parliamentary Commissioner for Human Rights also announced the initiation of a project with EU4DigitalUA concerning AI regulation. It will focus on the protection of personal data and human rights.⁵⁴⁹² The project will result in a set of recommendations produced by experts. The Commissioner stated that this would be a first step to regulating AI in the country.

Lastly, in December 2023, the government released the Strategy of Innovation with three key projects in the AI sphere, *i.e.* regulatory sandbox, Government BI and GovTech AI Center of Excellence (which had to be opened in January 2024).⁵⁴⁹³

Public Participation

In 2021, the Institute of Artificial Intelligence Problems of the Ministry of Education and the National Academy of Sciences of Ukraine sent letters of inquiry to more than 300 different organisations in order for them to provide their views that would inform the development and implementation of the National Strategy for the Development of Artificial Intelligence for 2022- 2030. These included most ministries in Ukraine, scientific institutions, public and private institutions of higher education and commercial entities.⁵⁴⁹⁴

The Roadmap for the regulation of AI in Ukraine was developed following a series of meetings with representatives of business, education, science, NGOs, and the parliament, as well as the Expert Committee.⁵⁴⁹⁵

Interested individuals can also engage by applying to join the Expert Committee on the Development of Artificial Intelligence under the Ministry of Digital Transformation.

On 20 February 2024, the Ministry of Strategy and Industry of Ukraine also published a public consultation on the draft Act regarding the State targeted scientific and technical program for the use of AI technologies in priority sectors of the economy of the period until 2026. The electronic consultation will enable individuals, legal entities and their associations to comment on proposals to create favourable conditions for the development and deployment of innovative AI technologies in priority sectors of the economy, to strengthen Ukraine's position in the world market.⁵⁴⁹⁶

The Law on Access to Public Information allows Ukrainians to submit requests for information, including on AI policies and state decisions in this area.⁵⁴⁹⁷ Another platform for citizens input consists in electronic petitions on the President's website. These petitions must garner 25,000 supporters within 90 days to be reviewed by the President.⁵⁴⁹⁸ There is an ongoing petition with almost 1500 supporters on the creation of a national program for the introduction of artificial intelligence technologies to ensure the security and economic development of Ukraine.⁵⁴⁹⁹

Data Protection

The primary legislation governing data protection in Ukraine is the Law of Ukraine on Personal Data Protection (PDP), enacted in 2010. The legislation has been amended several times. The law outlines fundamental requirements and obligations concerning the collection, processing, and use of personal data by both private entities and the Ukrainian government.

The Constitution of Ukraine, the Council of Europe Convention 108 for the Protection of Individuals with regard to Automatic Processing of Personal Data, the Civil Code of Ukraine, and various by-law documents and recommendations approved by the Ukrainian Parliament Commissioner for Human Rights⁵⁵⁰⁰ constitute sources of personal data protection standards in Ukraine.

Ukraine is in the process of modernizing its data protection laws in order to align with the GPDR. The Association Agreement between the European Union and Ukraine underscores cooperation to ensure an adequate level of personal data protection in line with European and international standards. Several drafts, including Draft Law No 8153 on Protection of Personal Data and the Draft Law on the National Commission on Personal Data Protection and Access to Public Information, reflect ongoing efforts to align Ukrainian legislation with EU requirements. The aim is to establish a comprehensive framework for personal data protection in both public and private sectors.⁵⁵⁰¹

An expert discussion on the Draft Law on Personal Data Protection was held on June 14, 2023, involving MPs, government representatives, NGOs, and experts. The Draft Law was anticipated to be approved by the Parliament in 2023 and take effect on January 1, 2024. However, the Parliament failed to reach consensus regarding the proposed bills and there are currently undergoing another round of review processes.

The Draft Law incorporates key GDPR principles but introduces some variations, regarding for example the certification of Data Protection Officers, adherence to EU guidelines and case law, CCTV recording retention periods, extraterritoriality, posthumous personal data processing, cross-border transfer, data breach notification or reasonable fees for data subject requests.

Articles 18(15), 19 and 25 would, subject to certain exceptions, provide data subjects with a right not to be subject to a decision based solely on automated processing, including profiling, which produces legal effects concerning individuals or similarly significantly affects such individuals.

⁵⁵⁰¹ Council of Europe, *Opinion on the draft law of Ukraine "On Personal Data Protection" (No. 8153 as of 25 October 2022)*, (Apr. 24, 2023),

Oversight of the data protection legislation falls under the purview of the Ukrainian Parliament Commissioner for Human Rights.⁵⁵⁰² The Parliament Commissioner publishes, on an annual basis, a report on the state of protection of citizens' rights and freedoms in Ukraine. The latest report relating to 2022, notes that the number of reported breaches relating to processing of personal data has significantly decreased when compared to 2021.⁵⁵⁰³ Out of 844 complaints received in 2022, only 66 investigations were opened indicating a low enforcement rate. The 2022 report also encouraged the Parliament to accelerate the adoption of new laws on data protection and emphasised new challenges arising from the ongoing war with Russia. The report also noted new threats to personal safety arising from leaks of personal data of Ukrainian servicemen and an increase in the number of cyber-attacks targeting Ukraine's civil service and public authorities.

The Draft Law on the DPA proposes to establish an independent government agency that would be responsible for both policymaking (adopting mandatory regulations) and enforcement (prosecuting infringers) in the sphere of data privacy and access to public information.

Algorithmic Transparency

Ukraine has not yet signed and ratified the modernized version of Council of Europe Convention 108 which provides for algorithmic transparency.⁵⁵⁰⁴

Articles 8(12) and 8(13) of the Ukrainian Data Protection Law does provide data subjects with the right to: (i) be made aware of the automatic processing of personal data; and (ii) be protected from automated decisions that have legal consequences,5505 i.e. request the provision of public services by humans as an alternative to algorithmic processing.5506

Use of AI in the Media

Ministrv of Digital Transformation published The Recommendations for Responsible Use of Artificial Intelligence in the Media.⁵⁵⁰⁷ "The purpose of the recommendations is to implement and use the Guidelines for the Responsible Use of Artificial Intelligence Systems in Journalism, as well as to disseminate current international practices, principles and approaches to the responsible use of AI systems in the media to respect human rights and professional ethical standards." The recommendations can be applied in particular for content creation using generative AI systems, analyzing large amounts of data, administration and automation of work processes, content management such as searching and verifying content, translating material.

The basic principles of using AI in the media include: responsible editorial decision (implementation of AI systems based on a conscious decision of the editorial staff taking into account the understanding of the mission of media outlets), legality, regular assessment of risks associated with the use of AI systems, transparency and clarity (disclosure of information on the use of AI systems), confidentiality and data protection (preventing leakage of personal data or other confidential information through the AI systems used), diversity and non-discrimination (ensuring audience access to diverse content when using personalization tools), human oversight, responsibility and adaptability (improvement in line with technological development of AI systems and changes in legal regulation). Significant attention is paid to the labelling requirement and content curation mechanisms.

Use of Facial Recognition

Meanwhile, it has been reported that the Ukrainian government is using Clearview AI's facial recognition technology for a range of potential purposes related to its wartime efforts including uncovering Russian soldiers, combating misinformation and identifying personnel at checkpoints, abducted children as well as deceased servicemen.⁵⁵⁰⁸ As of November 2023, it has been reported that more than 1,500 officials across

⁵⁵⁰⁷ Ministry for the Digital Transformation, Ukrainian text,

⁵⁵⁰⁸ Paresh Dave and Jeffrey Dastin, *Exclusive: Ukraine has started using Clearview AI's facial recognition during warReuters* (March 14, 2022),

https://www.reuters.com/technology/exclusive-ukraine-has-started-using-clearview-ais-facial-recognition-during-war-2022-03-13/

18 Ukrainian government agencies are using the facial-recognition tool.⁵⁵⁰⁹ The use of this type of surveillance technology is unprecedented in a war context and remains controversial as Clearview AI faces several legal challenges including infringement of privacy rights.

Facial recognition is also used in street surveillance cameras. In 2021, the then-Minister for Internal Affairs even threatened to use facial recognition to identify protesters.⁵⁵¹⁰ Journalistic investigation also revealed that some systems used by the municipal authorities were based on Russian software TRASSIR.⁵⁵¹¹ In February 2024, a Draft Law on video surveillance was introduced in Parliament. Ukrainian civil society finds it to be particularly overbroad and lacking safeguards against abusive practices since it allows law enforcement to access both private and public surveillance infrastructure without a court order.⁵⁵¹²

Lethal Autonomous Weapons

The Concept of AI development in Ukraine prioritises the development of AI capacities for command-and-control tasks and AI use in weapons and military equipment. Russia's invasion of Ukraine has intensified work on applying AI in the military industry. According to media reports, to strengthen defence capabilities in Ukraine, Ukraine is becoming a testing field for weapons using AI components. Particularly, Ukraine uses "AI to analyze satellite imagery, open-source data, drone footage, and reports from the ground to present commanders with military options."⁵⁵¹³

Fully autonomous drones are already being used to defend Ukrainian energy facilities from other drones, thus being anti-vehicle weapon systems. Mykhailo Fedorov, Deputy Prime Minister, Minister of Digital Transformation of Ukraine, stated "so far, six systems to counter enemy drones have been purchased. These are the most advanced defensive technologies that are used to protect strategic facilities in the US. Radar jamming and deception systems help detect and block enemy UAVs, then the system releases its own drones. For example, the Fortem DroneHunter

F700 is an autonomous drone with radar control and artificial intelligence that flies at speeds of over 100 km/h, and intercepts and lands enemy drones. The operators have already been trained and the systems have been installed at energy plants."⁵⁵¹⁴

In September 2023, Ukraine deployed the world's first drones that are capable of both detecting and attacking targets autonomously.⁵⁵¹⁵ The Ukrainian government stresses that a key challenge implies an active use of autonomous weapons by Russia and a need to counterbalance it and gain a military advantage, which is currently impossible to achieve with the conventional means.⁵⁵¹⁶ Ukraine is also using multiple situation awareness systems, which assist in planning operations, conducting intelligence and predicting threats, e.g. Delta and Palantir systems.⁵⁵¹⁷ Ukraine is also using Clearview AI facial recognition systems for a number of military purposes, most notably to identify Russian army soldiers, conduct intelligence operations or find kidnapped Ukrainian children.⁵⁵¹⁸

The efforts around research and development of AI miltech are currently coordinated by the defense state-governed cluster Brave1, which unites industry representatives and the relevant state authorities.⁵⁵¹⁹

In February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military

⁵⁵¹⁹ https://brave1.gov.ua/en/

domain.⁵⁵²⁰ Ukraine has endorsed the resulting Political Declaration issued in November 2023.⁵⁵²¹

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short- and long-term recommendations for governments and the wider multi-stakeholder community.⁵⁵²²

The second REAIM summit will take in 2024 in Korea.⁵⁵²³

Ukraine signed the Convention on Certain Conventional Weapons.⁵⁵²⁴ At the 78th UN General Assembly First Committee in 2023, Ukraine voted in favour of resolution L.56 on autonomous weapons systems, along with 163 other states. Resolution L.56 stressed the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems", and mandated the UN Secretary-General to prepare a report, reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.⁵⁵²⁵

Human Rights

According to Freedom House 2024 report on Ukraine, the country is partly free.⁵⁵²⁶ This was already the case before the Russian invasion in February 2022 but the situation has deteriorated since then. According to the report, "the Russian armed forces has inflicted massive civilian and military casualties and destroyed civilian infrastructure. Millions of Ukrainians have been displaced from their homes, and Russian troops have engaged in extrajudicial executions, torture, and sexual violence against local residents. In areas subjected to longer periods of occupation, Russian authorities have used intimidation, arbitrary detention, and torture to assert control over political expression, the education system, and many other aspects of civilian life."

A number of civil liberties and freedoms have been curtailed as a result of the martial law in force on the territory of Ukraine.⁵⁵²⁷ In February 2024, martial law was extended for the tenth time until May 2024.⁵⁵²⁸

As a result of Russia's invasion of Ukraine, an essential part of the Ukrainian Parliament Commissioner for Human Rights work in Ukraine is to assist citizens on a daily basis.⁵⁵²⁹

The Freedom House report identifies deliberate Russian interference with online communication, indirect loss of access to online communications arising from the current conflict, and new domestic laws aimed at tackling online disinformation and the sharing of sensitive data as possible threats to online freedoms.

 ⁵⁵²⁹ Ukrainian Parliament Commissioner for Human Rights,

https://www.ombudsman.gov.ua/uk/prava-civilnih-osib-yaki-postrazhdali-vid-zbrojnogo-konfliktu/rozyasnennya-ta-infografiki

Reports from Human Rights Watch⁵⁵³⁰ and Amnesty International⁵⁵³¹ voice similar concerns with regard to the current humanitarian crisis in Ukraine. Amnesty International highlights the degradation of workers' rights and the disproportionate impact of the war on older people. The new Law 'About Electronic Communications'⁵⁵³² requires service providers to retain data relating to their users and to share that data with state authorities in order to facilitate the investigation and prosecution of offences.

Ukraine's commitment to human rights is enshrined in its constitution. Article 9 incorporates international treaties as part of domestic legislation.

In June 2021, the government approved an action plan for its National Human Rights Strategy 2021-23.⁵⁵³³ The action plan re-asserts Ukraine's commitment to the principles of international human rights law, their implementation in domestic law and public institutions, and engagement with international human rights bodies. Ukraine also commited to an annual internal review by a new Interagency Working Group.

Ukraine became a member of the United Nations on 24th October 1945 and ratified the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights. Collectively those three instruments constitute the UN 'International Bill of Human Rights'. The UN reports that Ukraine has ratified 16 out of 18 key international human rights treaties.⁵⁵³⁴ Following the full-scale invasion, Ukraine submitted a declaration with derogation from international obligations under the European Convention on Human Rights and the ICCPR.

In 2018, the UN Human Rights Council published the results of a periodic review of Ukraine's peace-time human rights position that remarked positively on the country's efforts in the field of judicial reform, discrimination, prevention of torture, gender equality and the treatment of

people with disabilities.⁵⁵³⁵ The UN Human Rights Council also noted the work being done to reform policing and tackle corruption. 190 recommendations were made to Ukraine and the government accepted 163 of those.

In 2022, the UN Human Rights Council created an Independent International Commission of Inquiry on Ukraine to investigate all alleged violations and abuses of human rights and violations of international humanitarian law, and related crimes in the context of the Russian Federation's aggression against Ukraine. The Commission published a report in March 2024 and expressed its concerns regarding "continuing patterns of violations of human rights and international humanitarian law" by Russia.⁵⁵³⁶

OECD/G20 AI Principles

The OECD has been working in close partnership with Ukraine for more than 30 years to support its reform agenda.⁵⁵³⁷ Ukraine is not a member of the OECD but has endorsed the OECD AI Principles on 30 October 2019.⁵⁵³⁸ The 2020 Order of the Cabinet of Ministers of Ukraine expressed commitment to implement the OECD AI Principles.⁵⁵³⁹

In October 2022, the OECD Council recognized Ukraine as a prospective Member of the Organization and opened an initial accession dialogue, following a request from the Government.⁵⁵⁴⁰ In June 2023, the OECD and the Government of Ukraine have begun implementing a fouryear OECD-Ukraine Country Programme that supports Ukraine's agenda

for reform, recovery, and reconstruction, and helps the country advance its ambitions to join the OECD and European Union.⁵⁵⁴¹

Ukraine is not a member of the Global Partnership on AI,⁵⁵⁴² a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities, and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁵⁵⁴³

The 2023 OECD report on the state of implementation of the OECD AI Principles does not considers the progress made by Ukraine towards the implementation of those principles as it pre-dates the most recent developments to Ukraine's approach to AI development.⁵⁵⁴⁴

UNESCO Recommendation on the Ethics of AI

Ukraine has been a member of UNESCO since 19545545 and along with 192 other member states it adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence in November 2021.5546 The UNESCO Recommendation is not explicitly referenced in Ukraine's current AI policy framework even though Ukraine's emerging policy framework reflects many of the concerns and priorities in the UNESCO recommendation.

Council of Europe Convention on AI

Ukraine contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024, which will then be opened for signature and ratification by any country in the world.⁵⁵⁴⁷

https://search.coe.int/cm/pages/result_details.aspx?objectid=0900001680aee411

Ukrainian civil society with Observer status also actively participated in these processes.

Evaluation

The Russian invasion of Ukraine has caused severe human rights violations, especially on the territories which are currently under Russian occupation. In response to the invasion, Ukraine has imposed martial law and derogated from its obligations under certain human rights treaties. Reacting to the rapid digitalization of warfare, Ukraine has become a field for the development and use of autonomous weapons, which raises serious concerns among both Ukrainian and international civil society.

As Ukraine obtained the status of EU candidate country, the AI policy landscape will likely be strengthened by reforms designed to align Ukrainian legal frameworks with the corresponding EU laws, including the GDPR, the EU AI Act or the Digital Services Act.

United Arab Emirates

National AI Strategy

In 2017, the UAE became the first country in the world to appoint a Minister of State for Artificial Intelligence. H.E. Omar Al Olama was later appointed as Minister of State for Artificial Intelligence, Digital Economy and Remote Work Applications in July 2020.⁵⁵⁴⁸ The responsibilities of the Ministry included enhancing the government performance levels by investing in the latest technologies of artificial intelligence and applying them in various sectors.

The UAE Cabinet formed the UAE Council for Artificial Intelligence (AI) and Blockchain to facilitate the implementation of AI policies, and oversee AI integration in government departments and the education sector.⁵⁵⁴⁹ The Council is tasked with proposing policies to create an AI-friendly ecosystem, encourage advanced research in the sector and promote collaboration between the public and private sectors, including international institutions to accelerate the adoption of AI.⁵⁵⁵⁰

In October of this same year, the UAE Government launched the UAE Strategy for Artificial Intelligence (AI).⁵⁵⁵¹ The strategy aligned with UAE Centennial 2071,⁵⁵⁵² which has an ambitious goal to make the UAE the best country in the world by 2071. In the plan, AI will play a significant role in education, economy, government development, and community happiness through applications in various sectors, including energy, tourism, and education to name a few.

The National AI Strategy outlines eight strategic objectives: 5553

1) Build a reputation as an AI destination.

 ⁵⁵⁴⁸ UAE Artificial Intelligence Office, Omar Sultan Al Olama has been appointed as Minister of State for Artificial Intelligence (Oct. 20, 2017), <u>https://ai.gov.ae/about/</u>
 ⁵⁵⁴⁹ UAE Artificial Intelligence Office, UAE adopts formation of Council for Artificial Intelligence (Mar. 5, 2018), https://ai.gov.ae/ai council/

⁵⁵⁵³ Artificial Intelligence Office, UAE National Strategy for AI 2031, https://ai.gov.ae/strategy/

- 2) Increase the UAE's competitive assets in priority sectors through the deployment of AI.
- 3) Develop a fertile ecosystem for AI.
- 4) Adopt AI across customer services to improve lives and government.
- 5) Attract and train talent for future jobs enabled by AI.
- 6) Bring world-leading research capability to work with target industries.
- 7) Provide the data and supporting infrastructure essential to become a test bed for AI.
- 8) Ensure strong governance and effective regulation."

The focus of the UAE AI guidelines is AI governance, Data governance, cybersecurity, and bias.

Government entities, such as the Digital Dubai Authority (DDA) followed the plans of the National AI Strategy, with specific strategies and guidance on AI. The Dubai Digital Authority published an AI Ethical impact assessment framework and established a governing AI ethics board, comprised of government policy, academic, legal, and industry experts to oversee and guide the strategic development of the AI Ethics Guidelines. The Dubai AI Ethics Guidelines describe the key principles of a fair, transparent, accountable, and explainable AI system.⁵⁵⁵⁴ Launched in January 2019, the AI Principles and Guidelines for the Emirate of Dubai demonstrate Dubai's broader approach to ethical AI. Accompanying the Principles and Guidelines is an Ethical AI Self-Assessment Tool built to enable AI developers or operator organizations to evaluate the ethics level of an AI system.

The AI Ethics Guidelines provide an assessment (from proof of concept to production) of the ethical issues that may arise throughout the development process and how specific AI applications could be improved to ensure fairness, transparency, accountability, and explainability. The Ethical Toolkit also aims to ensure adoption of AI that optimizes the innovation potential, and delivers economic and social value. The Executive Council of Dubai directed government entities to use the principles and guidelines when considering AI development, and entities including the Road and Transport Authority and the Dubai Police have formally acknowledged their adoption of the self-assessment tool when developing AI.⁵⁵⁵⁵

⁵⁵⁵⁴ Digital Dubai Authority, *AI Principles & Ethics*, (2022), https://www.digitaldubai.ae/initiatives/ai-principles-ethics

⁵⁵⁵⁵ Ibid

The Federal government has set up The UAE National Program for Artificial Intelligence⁵⁵⁵⁶ which is a comprehensive set of resources on advances in AI and Robotics. The program encompasses free courses for UAE residents to raise awareness and understanding of AI technologies.⁵⁵⁵⁷ The government has endeavored to upskill the student population and government employees by providing relevant trainings to them.⁵⁵⁵⁸

Preceding the publication of the National AI Strategy, the UAE launched the Fourth Industrial Revolution (4IR) Strategy⁵⁵⁵⁹. The strategy encompasses six pillars:

- 1. The Human of the Future
- 2. The Security of the Future
- 3. The Experience of the Future
- 4. The Productivity of the Future
- 5. The Frontiers of the Future
- 6. The Foundations of the Future.

Innovations in robotics for healthcare are included in Pillar 1. Innovations in intelligent government services, intelligent cities, and nextgen mobility are in Pillar 2. 4IR policies and regulations to maintain the privacy and well-being of citizens, 4IR Values and Ethics are part of Pillar 6.

Public Participation

The UAE has a robust system of information and services for the public. The UAE Strategy for Government Services, Unified Digital Platform Policy, the Digital Participation Policy, and the Digital Customer and Digital Government Service Policy, aim to provide access to digital services.

The UAE Digital Participation Policy⁵⁵⁶⁰ establishes what can be posted on the public platforms, the conditions to facilitate a healthy environment for sharing information, and enabling meaningful discussion on topics concerning the services of the UAE Digital Government and life in the UAE in general. The Sharik.AE platform set in 2022, is an interactive interface to keep the UAE public informed and seek consultations on

matters of interest, related to government activities⁵⁵⁶¹. Sharik.AE includes an interface for input for the co-creation of public services, community engagement, and participatory budget.

The UAE, through the Ministry of Artificial Intelligence, launched the "Think AI" initiative to develop legislation, policies, and initiatives for a responsible and efficient adoption of artificial intelligence (AI) within the private sector. "Think AI" established to facilitate a series of roundtables, workshops, and panel discussions with the participation of more than 100 government officials, representatives from the private sector, and experts from local and international organizations. The dialogue aimed to support the UAE's efforts to accelerate the adoption of artificial intelligence in key sectors such as infrastructure, governance and legislation to strengthen the position as a global hub for artificial intelligence.⁵⁵⁶²

The Ministry of AI of the UAE ensures public awareness and digital participation through a variety of initiatives. In 2022, the Fourth UAE AI Camp offered 7,750 participants training, workshop, and seminars in cooperation with the National Program of AI. The AI Summer Camp 5.0 scheduled for July 2023, will involve the largest gathering of webinars, workshops, training, and talks about Artificial Intelligence in the region.⁵⁵⁶³

At the emirate level, Digital Dubai has set a vision to make Dubai the happiest city on earth, through initiatives of government effectiveness, in G2C Government to Consumer and Government to Government (G2G) services⁵⁵⁶⁴. Dubai has a website with information about AI principles and ethics for public access. Dubai's Ethical AI Toolkit is particularly helpful for three main types of users: Government Entities, Private Sector Entities, and Individuals.⁵⁵⁶⁵ The Digital Dubai Authority (DDA), introduced new methods of e-participation for the public on various issues including AI Ethics work.⁵⁵⁶⁶

Data Protection

In November 2021, the UAE adopted sweeping legislative reforms, including the Personal Data Protection Law, and Federal Decree-Law No. 45/2021 on the Protection of Personal Data, modeled after the GDPR. The Personal Data Protection (PDD) Law has extraterritorial geographical effect and applies to data controllers and data processors within UAE or located outside of the UAE, processing personal data of UAE residents.⁵⁵⁶⁷. The draft of the PDD Law had the participation of 30 major technology companies and came into force in January 2022.⁵⁵⁶⁸ Four principles underpin the Law:⁵⁵⁶⁹

- 1. Single Data Authority
- 2. Right for Consent
- 3. Incentivizing SMEs
- 4. Allows Cross Border Data Flow

Introduced by the Minister of AI as "the law with the lowest cost of compliance", the PDD Law is an integrated framework to ensure the confidentiality of information, protect the privacy of individuals, achieve proper governance for data management and data protection, in addition to defining the rights and duties of all concerned parties.⁵⁵⁷⁰ The rights established in the PDD Law are the right of access to information, the right to request personal data portability, the right to rectification or erasure of personal data, right of processing and automated processing. The PDD Law also addresses Cross Border Data Transfer.⁵⁵⁷¹ The oversight is the responsibility of the UAE Data Office (DO), as the federal data regulator, overseeing policies, standards, and legislation, and responding to inquiries and complaints in regard to the PDD Law. The DO, affiliated with the Cabinet, is responsible for a wide range of tasks that include:⁵⁵⁷²

(1) Preparing policies and legislations related to data protection,

⁵⁵⁶⁷ Minister of State for Artificial Intelligence, Digital Economy & Remote work applications, *Federal Decree Law No. 45/2021 on the Protection of Personal Data*, (Nov. 2021), https://ai.gov.ae/personal-data-protection-law/

⁵⁵⁶⁸ UAE Government, *Data Protection Laws*, (n.d.), <u>https://u.ae/en/about-the-uae/digital-uae/data/data-protection-laws</u>

⁵⁵⁷¹ Minister of State for Artificial Intelligence, Digital Economy & Remote work applications. *Federal Decree Law No. 45/2021 on the Protection of Personal Data*. (Nov. 2021). <u>https://ai.gov.ae/personal-data-protection-law/</u>

⁵⁵⁷² U.AE Portal. UAE Data Office, (Mar, 2, 2023), <u>https://u.ae/en/about-the-uae/digital-uae/data/data-protection-laws</u>

(2) Proposing and approving the standards for monitoring the application of federal legislation regulating this field,

(3) Preparing and approving systems for complaints and grievances, and

(4) Issuing the necessary guidelines and instructions for the implementation of data protection legislation.

Provisions of the law include the prohibition of processing of personal data without the consent of its owner, with noted exceptions of protection of public interest, legal procedures and rights and previous knowledge by the data owner. The law defines the controls for the processing of personal data and sets the obligations of security, confidentiality, and privacy.

The law does not apply to government data, government authorities that control or process personal data, or personal data processed by the security and judicial authorities.⁵⁵⁷³ The law also does not cover the processing of health, banking, and credit data which is subject to sector-specific legislation, and companies and institutions located in free zones which have specific data protection laws, such as the Dubai International Finance Centre (DIFC) and the Abu Dhabi Global Market (ADGM). Significant divergences with the GDPR, include the limited legal basis, with a focus on consent as the primary legal basis, and less comprehensive transparency requirements.⁵⁵⁷⁴ Less onerous transparency requirements (only certain limited information will be required before processing) and no specific privacy notice requirement.

Other UAE laws that provide general rights to privacy include:

1. The UAE Constitution: Addresses privacy in that freedom of communication by post or other means of communication and the secrecy thereof is guaranteed in accordance with the law;⁵⁵⁷⁵

⁵⁵⁷³ Al Tamini, *UAE's New Federal Data Protection Law*, (Dec. 6, 2021), https://www.tamimi.com/news/uaes-new-federal-data-protection-law/

https://www.constituteproject.org/constitution/United_Arab_Emirates_2004.pdf

- 2. The UAE Penal Code: Prohibits those who have access to an individual's personal data from disclosing or publicizing that information;⁵⁵⁷⁶
- 3. The Cyber Crimes Law: (Federal Law No. 5 of 2012 relating to Combating Information Technology Crimes, as amended by Federal No. 12 of 2016 and Decree No. 2 of 2018) prohibits invading the privacy of another person via technological means, without their consent.⁵⁵⁷⁷
- 4. The Federal Decree-Law No.34 of 2021 on Combatting Rumors and Cybercrime. Article (6) of Law 34, criminalizes the misuse of the personal data of others.⁵⁵⁷⁸

The DO has not yet sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁵⁷⁹ the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,⁵⁵⁸⁰ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology⁵⁵⁸¹ or the 2023 GPA Resolution on Generative AI.⁵⁵⁸²

Algorithmic Transparency

While the UAE regulations do not include a specific law on algorithmic transparency, notable in the PDD Law is Article 18, which

⁵⁵⁷⁷ U.AE, *Cyber Laws*, <u>https://u.ae/en/resources/laws</u>

⁵⁵⁷⁶ The Penal Code of UAE, *Federal Law No. 3 of 1987*, DataGuidance, (Jan 4, 2018), https://www.dataguidance.com/legal-research/federal-law-no-3-1987-penal-code

addresses automated decision,⁵⁵⁸³ giving data subjects the right to object automated decision-making that may impact them, including profiling, with some exceptions given other laws of the UAE.⁵⁵⁸⁴

The UAE's Artificial Intelligence Guide⁵⁵⁸⁵ issued by the Ministry of AI in 2020, addresses the subject of AI transparency in several sections of the document. Section 3.4 describes the principles established in the Ethical AI Toolkit of the Smart Dubai Office, by which systems should be ethical, fair, accountable, transparent, explainable, safe, secure, and 'serve to protect humanity. The AI Guide highlights the Smart Dubai ethical selfassessment tool for government companies, private firms, and individuals.

The UAE AI Guide includes a restatement of the focused efforts of the UAE in removing Bias in the algorithms of AI systems. Section 3.5 of the AI guide includes examples and case studies to avoid the perpetuation of racial and gender bias. The recommendations include the implementation of evaluations of the decision-making process based on AI for fairness and posing the question "Should we build AI." ⁵⁵⁸⁶

Facial Recognition

The UAE's digital transformation has led to the adoption of an AIpowered facial recognition system. In 2021, the UAE Government announced the enhancement of the UAE Pass, by adding biometric face recognition systems (Facial ID) to register users into the application.⁵⁵⁸⁷ The integration of facial recognition was set to reduce the transaction time from 20 minutes to 5 minutes.

In November 2022, Abu Dhabi Airports replaced passport checks with facial recognition technology.⁵⁵⁸⁸ Biometric data is used to check in

travelers, clear immigration, access lounges, and board their flights. The first phase of the project took place at one of the terminals at Abu Dhabi International Airport at the United States Customs and Border Protection (CBP) facility. The Managing Director and CEO of Abu Dhabi Airports presented this innovation as the "first of its kind in the UAE and the world, to further enhance our passenger journey."⁵⁵⁸⁹

The Railway Transport Agency (RTA) commenced the use of emotional AI for tram drivers. Drivers wear armbands to detect heart rate, speech patterns, and reaction times to determine driving style, and deviations, based on drivers' profiles.⁵⁵⁹⁰ Dubai Police introduced Giath vehicles, equipped with a 360-degree camera backed with facial and plate recognition technology. The system includes drones to extend surveillance outreach.⁵⁵⁹¹

Plans are underway for the use of face biometric payments by Carrefour, the hypermarket chain operating in the UAE, in a partnership with the US-based biometric PopID.⁵⁵⁹² The Face Pay biometric system is set to be piloted in selected stores in Dubai. PopID presents this payment method as an innovation for "superior customer experience and (...) robust security protocols. Carrefour faced legal pushback in the EU amid the use of biometric data collection systems for payments at the register without user consent in 2020.⁵⁵⁹³

Biometric Identification

The UAE Pass, launched in 2018, is the first digital national ID for citizens and residents, to access 6,000 government services and to sign

documents digitally.⁵⁵⁹⁴ The App was developed in cooperation between Digital Dubai, Telecommunications and Digital Government Regulatory Authority (TDRA), and Abu Dhabi Digital Authority. By 2022 the number of people registered on the UAE Pass app is over 1.38 million, including 628,000 individuals with verified accounts. The system includes a Digital vault that stores digital documentation and enhances the seamless completion of government transactions. The system has Blockchain technology to improve traceability and security.

The UAE Pass aligns with the protection of privacy and digital identity provisions outlined in the Federal Decree Law No 34 of 2021 on Combatting Rumors and Cybercrime,⁵⁵⁹⁵ and in the Electronic Transactions and Trust Services Law.⁵⁵⁹⁶

Mass Surveillance

In 2017 the Dubai Police released the 2018-31 strategic plan for artificial intelligence.⁵⁵⁹⁷ The plan includes the use of AI techniques in criminal forensic investigation, and in police operations to predict crimes. AI techniques were set to forecast crime, crowd management, to enhance traffic safety and road security, and crisis and disaster management.

In 2018, Dubai Police announced the launch of Oyoon, an artificial intelligence surveillance program,⁵⁵⁹⁸ that had the support of the government, semi-government, and private sector entities, intended to "provide a safer living experience." ⁵⁵⁹⁹ The system operates through tens

⁵⁶¹⁰ OECD, *The United Arab Emirates becomes the first Participant in the OECD Development Assistance Committee (DAC)*, (1 July 2014), https://www.oecd.org/development/dac-global-relations/uae-participant-dac.htm

The OECD.AI Observatory reports on the efforts of the UAE in governance, through the enactment of the UAE National AI Strategy. The strategy addresses the OECD AI principles of (1) inclusive growth, sustainable development, and well-being; (2) fostering a digital ecosystem for AI, and (3) building human capacity and preparing for labor market transition.⁵⁶¹¹ The OECD also acknowledges the AI principles and ethics for the Emirates of Dubai⁵⁶¹², and the Data Protection Law, as two specific actions of guidance and regulation of AI mapping to OECD AI principles.

UNESCO Recommendation on the Ethics of Artificial Intelligence

The UAE is a UNESCO member since 1972, only one year after their foundation as a country. UAE was among the 193 member states that endorsed the UNESCO Recommendations on the Ethics of AI.⁵⁶¹³ The pact promotes human rights and contributes to the accomplishment of the Sustainable Development Goals, encompassing chapters on data governance, education, culture, employment, health, and the economy, addressing issues of transparency, accountability, and privacy.⁵⁶¹⁴

Progress in the implementation of the UNESCO Recommendations is evident in the 2020 report of UAE about the National Strategy for AI.⁵⁶¹⁵ The report highlighted the impact of the strategy on the increasing number of initiatives for AI start-ups in Abu Dhabi, Dubai, and Sharjah. The AI oversight through is under two entities: (1) the Digital Dubai Authority (DDA) ensuring the adoption of the Dubai AI Ethics Guidelines and the accompanying Ethical AI Self-Assessment Tool. . (2)The UAE Artificial Intelligence and Blockchain Council, overseeing the implementation of AI technology in society and across government.⁵⁶¹⁶

The Dubai AI Ethics Guidelines, though not explicitly, maps the UNESCO recommendations, as follows:⁵⁶¹⁷

Policy Area 1: Ethical Impact Assessment –covered by the Dubai AI Ethics Guidelines (DAEG) and the accompanying Ethical AI Self-Assessment Tool by the DDA.

Policy Area 2: Ethical Governance and Stewardship & Principles – accountable, explainable and transparent. All three are set out in the DAEG.

AI Oversight Board – AI Ethics Advisory Board created by the Dubai Digital Authority.

AI Safety Summit

In November 2023, the UAE participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁵⁶¹⁸ The UAE thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Evaluation

The UAE stands out as the first country with a Ministry of AI, signaling the foresight of the country regarding the impact of artificial intelligence in the lives of its citizens. The release of the National Strategy of AI in 2017, and the establishment of an AI Council, are concrete efforts toward AI governance. The Dubai AI Ethics Guidelines and the accompanying Ethical AI Self-Assessment Tool are pioneering tools, aligned with the UNESCO Recommendations on the Ethics of Artificial Intelligence. The UAE has a Personal Data Protection Law that regulates automated decision-making, and a Data Protection Office, although the right to algorithmic transparency has still to be adopted. Calls for

⁵⁶¹⁷ UNESCO, *Implementation of the Recommendation on the Ethics of Artificial Intelligence (AI)*, (Oct. 7, 2022), <u>https://unesdoc.unesco.org/ark:/48223/pf0000382931</u>

reinforcing the safeguards for human rights are increasing and so are mass surveillance practices which remain without proper regulation or oversight.

United Kingdom

National AI Strategy

In September 2021, the United Kingdom (UK) launched its first National Artificial Intelligence (AI) Strategy.⁵⁶¹⁹ The National Strategy followed other roadmaps including the National Data Strategy (2020), a Plan for Digital Regulation (2021) and the UK Innovation Strategy (2021). The UK is ranked third in the world for research and innovation in AI but eleventh for their ability to realize innovation and impact from it. The AI Strategy sets out a ten-year plan with the vision, "to remain an AI and science superpower fit for the next decade." The UK AI Strategy has three main pillars: (1) investing and planning for the long-term requirements of the UK's AI ecosystem; (2) supporting the transition to an AI-enabled economy across all sectors and regions of the UK; and (3) ensuring that the UK gets the national and international governance of AI technologies right in order to encourage innovation, investment and protect the public and the country's fundamental values. With regard to the third pillar, the government proclaimed its intention to develop the most trusted and proinnovation system for AI governance in the world, aiming to "harness the benefits of AI as we embed our values such as fairness, openness, liberty, security, democracy, rule of law, and respect for human rights."

In July 2022, the UK government released both an AI Regulation Policy Paper,⁵⁶²⁰ put forward by the Department for Digital, Culture, Media and Sport (DCMS), and an updated AI Action Plan,⁵⁶²¹ released jointly by DCMS and the Department for Business, Energy and Industrial Strategy (BEIS), which at the time jointly administered the government's Office for Artificial Intelligence.⁵⁶²² These policy updates clarifies that UK government departments would share oversight for AI systems and their consequences across the regulatory structures that exist within those departments. For example, healthcare-related AI systems would be

regulated by the UK Department of Health & Social Care (DHSC), while broadcasting-related AI systems would be overseen by Ofcom, the UK's communications regulator.⁵⁶²³ The policy paper highlights the role of a new regulatory advisory office, the Digital Regulation Cooperation Forum (DRCF), formed in July 2020 as a coordinating body convening regulators from the Information Commissioner's Office (ICO), the Competition and Markets Authority (CMA), the Financial Conduct Authority (FCA) and Ofcom, to ensure "coherence" across regulations.⁵⁶²⁴

The AI Regulation Policy Paper prioritizes the government's intention to develop regulations which meet core principles of being: "context-specific," "pro-innovation and risk-based," "coherent," and "proportionate and adaptable."⁵⁶²⁵ While strongly endorsing continued AI innovation and investment, the Policy Paper emphasizes, "the success of our AI ecosystem is in part down to the UK's reputation for the quality of its regulators and its rule of law. This includes the transparency of the UK's regulatory regime, the detailed scrutiny that proposed regulation receives and comprehensive impact assessments....To maintain our leading regulatory approach, we must make sure that the rules that govern the development and use of AI keep pace with the evolving implications of the technologies."

The UK's cross-sectoral regulatory policies will "initially" be placed on a "non-statutory footing...so that we can monitor, evaluate and if necessary update our approach and so that it remains agile enough to respond to the rapid pace of change in the way that AI impacts upon society."⁵⁶²⁶ In place of enacting laws to govern AI, the DCMS stated, "regulators will lead the process of identifying, assessing, prioritizing and contextualizing the specific risks addressed by the [stated] principles... These principles provide clear steers for regulators, but will not necessarily

translate into mandatory obligations. Indeed we will encourage regulators to consider lighter touch options in the first instances – for example, through a voluntary or guidance-based approach for uses of AI that fall within their remit."⁵⁶²⁷

Regarding its proposed cross-sectoral, non-statutory governmental oversight of AI, the DCMS acknowledged, "Regulatory coordination will be important for our approach to work and to avoid contradictory or very different approaches across regulators... We will look for ways to support collaboration between regulators to ensure a streamlined approach....We also need to ensure that UK regulators have access to the right skills and expertise to effectively regulate AI."⁵⁶²⁸

The UK AI Action Plan for its part updated progress that had been made regarding the three pillars of focus mentioned within the original National AI Strategy: long term investments in AI; ensuring AI benefits all sectors and regions; governing AI effectively.⁵⁶²⁹ Regarding governance, the AI Action Plan described a variety of recent regulatory tools and initiatives in keeping with the UK's policy of cross-sectoral responsibility for AI oversight including:

- "one of the world's first national algorithmic transparency standards to strengthen the UK's position as a world leader in AI governance" developed within the Cabinet office;
- an "AI Assurance Roadmap, to provide meaningful information about AI systems to users and regulators" developed by the UK Centre for Data Ethics and Innovation (CDEI);
- an "AI Standards Hub... to coordinate UK engagement in AI standardization globally" led by The Alan Turing Institute and supported by the British Standards Institution and the National Physical Laboratory;

 and a formal consultation on "reforming the UK's data protection regime" led by DCMS.⁵⁶³⁰ Regarding the UK's coordination on AI governance with key international organizations, the AI Action Plan highlights collaboration between UK government regulators and the G7, OECD, Council of Europe, UNESCO, the Future Tech Forum and the Global Partnership on AI.⁵⁶³¹

The AI Action Plan provides additional regulatory updates with a clear ethical focus including:

- a policy statement from the Ministry of Defence (MOD), "Ambitious, Safe, Responsible: Our approach to the delivery of AI-enabled capability... detailing how they will augment [MOD's] robust and long-standing approach to legal, ethical and safety issues to address challenges related to the use of AI technology;"⁵⁶³²
- the UK government's Arts and Humanities Research Council, part of the UK Research and Innovation Agency (UKRI) launched "a major research program on AI ethics and regulation with its collaboration partner, the Ada Lovelace Institute;⁵⁶³³
- the Department of Health and Social Care (DHSC) published a report in coordination with the Ada Lovelace Institute detailing ethical and governance issues related to personal data and algorithms within the healthcare context with advice to regulators within that domain.⁵⁶³⁴

In September, 2022, the Digital Regulation Cooperation Forum (DRCF) published a report detailing the challenges presented by algorithmic processing tools for regulators across government agencies. The report identified the UK government regulators' shared objectives to: "protect individuals from harm; uphold individual rights; enable participation in online markets; encourage consumer trust and innovation;

promote effective competition; promote resilient infrastructure and systems."5635

In February, 2023, the UK Prime Minister's Office announced the creation of a dedicated Department for Science, Innovation and Technology, which would henceforth house the Office for Artificial Intelligence (formerly co-housed by DCMS and BEIS).⁵⁶³⁶ In March, 2023, this newly created department released a Science and Technology Framework⁵⁶³⁷, reiterating the government's commitment to "a system of regulation and standards that is pro-innovation, easy to navigate and facilitates widespread commercial science and technology applications....Regulation covering critical technologies will be worldleading... We will play an active role in the WTO, G7, G20, OECD, NATO, Council of Europe, Commonwealth, and the UN...[as an] author of international rules and conventions for critical technologies."5638

In March 2023, the Department of Science and Technology published a statement⁵⁶³⁹ following the Chancellor of the Exchequer's announcement that the government's new budget would commit £3.5 billion "to support the government's ambitions to make the UK a scientific and technologic superpower." The Department of Science and Technology reiterated the intention of the government to provide, "a new approach to AI regulation, focusing on the applications of AI rather than setting rigid rules for products with an AI component, and announced plans for the government "to begin working at pace to lead the way in clarifying the application of intellectual property law regarding generative AI."

Public Participation

The UK government has a firmly-established practice of making draft policies available to the public for consultation and of providing the public with access to the findings gleaned from consultation.⁵⁶⁴⁰ In 2018, the UK Cabinet Office published revised consultation principles,⁵⁶⁴¹ pledging to "use more digital methods to consult with a wider group of people at an earlier stage in the policy-forming process. We will make it easier for the public to contribute their views, and we will try harder to use clear language and plain English in consultation documents."5642 As a relevant example, the Online Harms White Paper⁵⁶⁴³ was released for public consultation by DCMS in 2019, resulting in "2400 responses ranging from companies in the technology industry including large tech giants and small and medium sized enterprises, academics, think tanks, children's charities, rights groups, publishers, governmental organizations and individuals." The government provided an overview of consultation responses, and enumerated the links between the revised policy proposals and the input obtained during public consultation.⁵⁶⁴⁴ A revised Online Safety Bill was released to the public in January 2023, with key provisions aimed at preventing online exploitation, particularly of children and vulnerable adults, and to bolster responsible journalism.⁵⁶⁴⁵ As of publication, this bill has not yet been ratified by Parliament.5646

Following publication of the AI Regulation Policy Paper in July 2022, DCMS provided a ten-week period for "views and evidence" from "stakeholders... about how the UK can best set the rules for regulating AI in a way that drives innovation and growth while also protecting our fundamental values. This will inform the forthcoming white paper."⁵⁶⁴⁷ As

The UK government is additionally attempting to engage members of its communities that have traditionally been excluded from participation in building artificial intelligence and playing a role in its governance through the Alan Turing Institute, created in 2015 as a "national institute for data science" and more recently adding "and artificial intelligence". In August, 2022, the Turing Institute announced funding for seven innovative projects to boost public engagement with data science and AI across the UK.⁵⁶⁴⁹ The initiative aimed to attract members of underrepresented groups to "widen participation by inspiring members of the public who may not usually interact with science to take an interest and have a voice in AI and data science."⁵⁶⁵⁰

Data Protection

Data protection in the UK is governed by both the 2018 Data Protection Act (DPA),⁵⁶⁵¹ and the UK GDPR.⁵⁶⁵² The UK GDPR essentially mirrors the EU GDPR; the DPA updated this regulation with clarification regarding oversight and enforcement powers.⁵⁶⁵³ The Information Commissioner's Office (ICO) was established as an "independent regulator for Data Protection and Freedom of Information" in accordance with the DPA, as it had previously been designated in accordance with the EU GDPR requirements.⁵⁶⁵⁴

Despite Brexit, the UK remains an active member of the Council of Europe⁵⁶⁵⁵, and a signatory to the Council of Europe Convention 108+, requiring the safeguarding of rights pertaining to the automated processing of personal data including: the right to be informed; the right to not be subject to automated decision-making, the right to object, the right to remedy following violation of rights, and the right to assistance from a supervisory authority in exercising these rights.⁵⁶⁵⁶ In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects,"5657

In March 2023, the ICO published an update to its guidance on AI to clarify how to assess the risks to rights and freedoms that AI pose from a data protection perspective, and the appropriate measures that can be implemented to reduce these risks.⁵⁶⁵⁸ With respect to data protection, the updated guidance advises organizations building or integrating AI systems on the conduct of data protection impact assessments (DPIAs).⁵⁶⁵⁹ "You should not see DPIAs as simply a box ticking compliance exercise. They can effectively act as roadmaps for you to identify and control the risks to

rights and freedoms that using AI can pose. They are also an ideal opportunity for you to consider and demonstrate your accountability for the decisions you make in the design or procurement of AI systems."

The ICO has been a member of the Global Privacy Assembly (GPA) since 2002, and co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁵⁶⁶⁰ and the 2023 GPA Resolution on Generative AI.⁵⁶⁶¹ The ICO was one of the authors of both the 2020 GPA Resolution on AI Accountability⁵⁶⁶² and the 2022 GPA Resolution on Facial Recognition Technology.⁵⁶⁶³

Algorithmic Transparency

The UK government lays claim to being a global leader in establishing algorithmic transparency standards, and there are substantive reasons for this assertion.⁵⁶⁶⁴ Firstly, the UK remains a member of the Council of Europe and is a party to Convention 108+, which enshrines the right to algorithmic transparency.⁵⁶⁶⁵ The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithmic systems⁵⁶⁶⁶ addresses additional human rights impacts of AI technologies with guidance on obligations of states and responsibilities of

⁵⁶⁶⁴ UK Cabinet Office CDDO, *UK government publishes pioneering standard for algorithmic transparency* (Nov., 2021), <u>https://www.gov.uk/government/news/uk-government-publishes-pioneering-standard-for-algorithmic-transparency</u>.

https://www.europarl.europa.eu/meetdocs/2014_2019/plmrep/COMMITTEES/LIBE/DV/ 2018/09-10/Convention_108_EN.pdf. 5666 Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on

⁵⁶⁶⁶ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

companies. The Recommendation specifically emphasizes requirements on transparency, accountability and effective remedies.

With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."⁵⁶⁶⁷

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."⁵⁶⁶⁸

Algorithmic transparency is also provided for by the UK GDPR⁵⁶⁶⁹ and DPA. "Articles 13 and 14 of the GDPR give individuals the right to be informed of the existence of solely automated decision-making, producing legal or similarly significant effects; meaningful information about the logic involved; and the significance and envisaged consequences for the individual. Article 15 of the GDPR gives individuals the right of access to information on the existence of solely automated decision-making

⁵⁶⁶⁷ Ibid.

⁵⁶⁶⁸ Ibid.

⁵⁶⁶⁹UK ICO, *The basics of explaining AI: Legal Framework* (March, 2023), <u>https://ico.org.uk/for-organisations/guide-to-data-protection/key-dp-themes/explaining-decisions-made-with-artificial-intelligence/part-1-the-basics-of-explaining-ai/legal-framework/.</u>

producing legal or similarly significant effects; meaningful information about the logic involved; and the significance and envisaged consequences for the individual."⁵⁶⁷⁰ The concept of algorithmic transparency derived from the UK's data protection framework is addressed in some detail in the ICO AI Guidance.⁵⁶⁷¹ In addition to requiring transparency regarding the use of personal data within algorithmic systems, the purposes of this personal data use, the retention periods for that personal data, and information about anyone with whom it might be shared, the guidance requires that organizations contributing to decisions made via algorithmic systems offer transparent "explanations" for these systems. More explicitly, organizations using algorithmic system must make available: a rational explanation, "reasons that led to a decision delivered in an accessible and non-technical way; a responsibility explanation, "who is involved in the development, management and implementation of an AI system, and who to contact for a human review of a decision; a data explanation, "what data has been used in a particular decision and how; a fairness explanation including, "steps taken across the design and implementation of an AI system to ensure that the decisions it supports are generally unbiased and fair; safety and performance explanation, "steps taken across design and implementation of an AI system to maximize the accuracy, reliability, security and robustness of its decisions and behaviors; and an impact explanation, "steps taken across the design and implementation of an AI system and its decisions to consider and monitor the impacts...[the] system and its decisions has or may have on an individual and on wider society.

In November 2020, the Centre for Data Ethics and Innovation (CDEI), formerly a government task force and now an arm of the Department for Science, Innovation and Technology,⁵⁶⁷² published its review into bias in algorithmic decision-making.⁵⁶⁷³ The Center focused on the use of algorithms in significant decisions about individuals in four

⁵⁶⁷² UK Centre for Data Ethics and Innovation, *About us* (March, 2023), <u>https://www.gov.uk/government/organisations/centre-for-data-ethics-and-innovation/about.</u>

⁵⁶⁷³ Gov.UK, *CDEI publishes review into bias in algorithmic decision-making* (Nov. 27, 2020), <u>https://www.gov.uk/government/publications/cdei-publishes-review-into-bias-in-algorithmic-decision-making</u>

sectors (policing, local government, financial services and recruitment). Key recommendations include:

1) Government should place a mandatory transparency obligation on all public sector organizations using algorithms that have an impact on significant decisions affecting individuals;

2) Organizations should be actively using data to identify and mitigate bias. They should make sure that they understand the capabilities and limitations of algorithmic tools, and carefully consider how they will ensure fair treatment of individuals, and

3) Government should issue guidance that clarifies the application of the Equality Act to algorithmic decision-making. This should include guidance on the collection of data to measure bias, as well as the lawfulness of bias mitigation techniques (some of which risk introducing positive discrimination, which is illegal under the Equality Act).

In May 2021, the Office for Artificial Intelligence published the Ethics, Transparency and Accountability Framework for Automated Decision-Making for public sector organizations on how to use automated or algorithmic decision-making systems in a safe, sustainable and ethical way.⁵⁶⁷⁴ This guidance was built upon in November 2021, through the Cabinet Office's Central Digital and Data Office (CDDO), upon publication of a pioneering standard for algorithmic transparency and public sector bodies, following up on commitments made in the National AI and National Data Strategies.⁵⁶⁷⁵ The Cabinet Office announced that this "made the UK one of the first countries to develop a national algorithmic transparency standard, strengthening the UK's position as a world leader in AI governance."5676 CDDO developed the standard collaboratively through working with external experts and civil society groups. Also, it is informed by a public engagement study run by the Center for Data Ethics and Innovation and Britain Thinks.⁵⁶⁷⁷

⁵⁶⁷⁵ UK Cabinet Office CDDO, *UK government publishes pioneering standard for algorithmic transparency* (Nov., 2021), <u>https://www.gov.uk/government/news/uk-government-publishes-pioneering-standard-for-algorithmic-transparency</u>.

 ⁵⁶⁷⁶ UK Cabinet Office CDDO, UK government publishes pioneering standard for algorithmic transparency (Nov., 2021), <u>https://www.gov.uk/government/news/uk-government-publishes-pioneering-standard-for-algorithmic-transparency</u>.
 ⁵⁶⁷⁷ UK Centre for Data Ethics and Innovation, *BritainThinks: complete transparency*,

⁵⁶⁷⁷ UK Centre for Data Ethics and Innovation, *BritainThinks: complete transparency, complete simplicity* (June 2021), <u>https://www.gov.uk/government/publications/cdei-publishes-commissioned-research-on-algorithmic-transparency-in-the-public-sector.</u>

On January 6, 2023, the CDEI announced that, along with the CDDO, it had updated the prior standard for public sector organizations, and released this refined Algorithmic Transparency Recording Standard following a pilot phase.⁵⁶⁷⁸ The revised standard aims to help public sector organizations provide clear information about the algorithmic tools they use, and why they are using them. The guidance specifies that algorithmic transparency requires openness on how algorithmic tools support decision-making, which includes providing information on algorithmic tools and algorithm-assisted decisions in a complete, open, understandable, easily-accessible, and free format. The standard is part of the Government's National Data Strategy, which includes a commitment to explore an appropriate and effective way to deliver greater transparency on algorithm-assisted decision making in the public sector.⁵⁶⁷⁹

Data Scraping

In August 2023, the ICO, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.⁵⁶⁸⁰

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

https://ico.org.uk/media/about-the-ico/documents/4026232/joint-statement-data-scraping-202308.pdf.

⁵⁶⁷⁸ UK CDDO + CDEI, *Guidance: Algorithmic transparency recording standard for public sector bodies* (Jan. 2023), <u>https://www.gov.uk/government/publications/guidance-for-organisations-using-the-algorithmic-transparency-recording-standard/algorithmic-transparency-recording-standard-guidance-for-public-sector-bodies.</u>

⁵⁶⁷⁹ Data Guidance. UK: CDEI and CDDO update Algorithmic Transparency Recording Standard (Jan. 9, 2023).

<u>https://www.dataguidance.com/news/uk-cdei-and-cddo-update-algorithmic-transparency</u>. ⁵⁶⁸⁰ Office of the Australian Information Commissioner, Office of the Privacy

Commissioner of Canada, Regulatory Supervision Information Commissioner's Office of the United Kingdom, Office of the Privacy Commissioner for Personal Data of Hong Kong, Federal Data Protection and Information Commissioner of Switzerland, Norwegian Datatilsynet, Office of the Privacy Commissioner of New Zealand,

Colombian Superintendencia de industria y Comercio, Jersey Office of the Information Commissioner, Moroccan CNPD, Argentine AAIP, Mexican INAI, Joint statement on data scraping and the protection of privacy (Aug. 24, 2023),

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

AI Grading Controversy

A widely reported controversy over the use of AI in the UK public sector erupted in the Summer of 2020, during the COVID-19 global pandemic.⁵⁶⁸¹ With students having completed their studies remotely, the UK Office of Qualifications and Examinations (Ofqual)applied an algorithm to estimate the exam results these students might have received given in-person assessments. Nearly 40 percent of students saw their grades reduced after the government reevaluated exams, known as "A-levels."⁵⁶⁸² The software model incorporated the school's past results and students' earlier results on mock exams. The calculations favored elites.⁵⁶⁸³ As the

⁵⁶⁸¹ Karen Hao, *UK exam algorithm can't fix broken system* (Aug., 2020), https://www.technologyreview.com/2020/08/20/1007502/uk-exam-algorithm-cant-fix-

broken-system/.

⁵⁶⁸² Adam Satariano, *British Grading Debacle Shows Pitfalls of Automating Government*, New York Times (Aug. 20, 2020) ("The uproar over an algorithm that lowered the grades of 40 percent of students is a sign of battles to come regarding the use of technology in public services."), <u>https://www.nytimes.com/2020/08/20/world/europe/uk-england-</u> grading-algorithm.html.

⁵⁶⁸³ Karla Adams, *The UK used an algorithm to estimate exam results. The calculations favored elites,* The Washington Post (Aug. 17, 2020),

https://www.washingtonpost.com/world/europe/the-uk-used-an-algorithm-to-estimateexam-results-the-calculations-favored-elites/2020/08/17/2b116d48-e091-11ea-82d8-5e55d47e90ca_story.html.

BBC explained, the algorithm "locks in all the advantages and disadvantages - and means that the talented outlier, such as the bright child in the low-achieving school, or the school that is rapidly improving, could be delivered an injustice."⁵⁶⁸⁴

As the Open Data Institute pointed out, a student would have received a high grade in math only because historically someone from her school had received a high grade, although the same student was predicted at B or C.⁵⁶⁸⁵ The new evaluation method was triggered by the COVID-19 pandemic since in-person exams were canceled and the government sought to standardize college admissions. Wired UK reported that some researchers stated that "[rather than the algorithm getting it wrong, …it was simply the wrong algorithm."⁵⁶⁸⁶ However, others thought that the application of Article 22 of the General Data Protection Regulation (prohibition of decisions solely made by automated decision making) was at stake, albeit disputed by the governmental agency that suggested the computer generated score. Ultimately, protests in front of the British Parliament and a pending lawsuit led the government to withdraw the system.⁵⁶⁸⁷

Karen Hao, a reporter with MIT Technology Review, wrote "The problem began when the exam regulator lost sight of the ultimate goal—and pushed for standardization above all else."⁵⁶⁸⁸

Facial Recognition

Human rights organizations have long criticized the UK government for the almost unparalleled deployment of CCTV.⁵⁶⁸⁹ Early in 2020,

⁵⁶⁸⁴ Sean Coughlan, *Why did the A-level algorithm say no?*, BBC (Aug. 14, 2020), <u>https://www.bbc.com/news/education-53787203.</u>

⁵⁶⁸⁹ Big Brother Watch, Stop Facial Recognition,

London's Metropolitan Police began deploying live facial recognition, an automated process using an AI-driven system to match faces against a database.⁵⁶⁹⁰ The Met reported its use of the controversial technology would be targeted to "specific locations where intelligence suggests we are most likely to locate serious offenders."⁵⁶⁹¹ Silkie Carlo, the director of Big Brother Watch, called the move "an enormous expansion of the surveillance state and a serious threat to civil liberties in the UK." There is currently no law in the UK governing facial recognition. More worrisome, between 2016-2019, Met Police use of facial recognition technology was 93% inaccurate, with 3,000+ people wrongly identified by police.⁵⁶⁹²

In August, 2020, the Court of Appeal ruled that the use of live facial recognition (LFR) by South Wales Police was unlawful as it violated privacy rates, data protection laws, and equality duties.⁵⁶⁹³ The court found that there was no clear guidance or oversight on how LFR should be deployed, who should be included on watchlists, and how long the data should be retained. The court also noted that LFR had a disproportionate impact on ethnic minorities and women, who were more likely to be misidentified or discriminated against by the technology. Following this ruling, some police forces suspended their use of LFR until further legal clarity was provided. However many, including the London Metropolitan Police, continued to use LFR with only slightly revised policies and procedures.⁵⁶⁹⁴

⁵⁶⁹⁰ Reuters, *Police to roll out live facial recognition cameras in London* (Jan, 2020), https://www.reuters.com/article/us-britain-security-cameras/police-to-roll-out-live-facial-recognition-cameras-in-london-idUSKBN1ZN1H2.

In June, 2021, the ICO's Information Commissioner produced a formal opinion on the use of facial recognition technology in public places.⁵⁶⁹⁵ The report specifies that any deployment of facial recognition technology "must comply with all relevant parts of the UK GDPR and DPA 2018. This includes the data protection principles...including lawfulness, fairness, transparency, purpose limitation, data minimization, storage limitation, security and accountability. Controllers must also enable individuals to exercise their rights. These requirements of UK law represent universal core principles of data protection common to many legal regimes worldwide... Together, these requirements mean that where LFR is used for the automatic, indiscriminate collection of biometric data in public places, there is a high bar for its use to be lawful." Despite this published opinion, live facial recognition technology continues to be used across police departments throughout the country with no opportunity for members of the public to opt out, nor any meaningful efforts towards data minimization.5696

Automated Visa Application

In 2020, migrants' rights campaigners successfully challenged the automated decision-making system used by the Home Office to process visa applications.⁵⁶⁹⁷ The algorithmic "streaming tool" was eliminated by the Home Office ahead of a judicial review by the Joint Council for the Welfare of Immigrants, which found the tool to be opaque and discriminatory toward applicants from certain nationalities and race groups. The Home Office committed to a "redesign of the process and the way in which visa applications are allocated for decision-making."⁵⁶⁹⁸

Lethal Autonomous Weapons

In June 2022, the UK's Ministry of Defense published its position on the use of lethal autonomous weapons and issued the following statement

⁵⁶⁹⁵ UK Information Commissioner's Office, *The use of live facial recognition in public places* (June, 2021), <u>https://ico.org.uk/media/2619985/ico-opinion-the-use-of-lfr-in-public-places-20210618.pdf</u>.

in the Defense AI Strategy: "The UK does not rule out incorporating AI within weapon systems. In practice, however, some concepts and capabilities may prove impossible to deliver in a safe and responsible manner – and we are very clear that there must be context-appropriate human involvement in weapons which identify, select and attack targets. This could mean some form of real-time human supervision, or control exercised through the setting of a system's operational parameters. We believe that AI can substantially augment the performance of our people and significantly enhance our capabilities. However, given concerns about the ethics and risks of delegating certain decisions to AI, it is also important to state that we do not believe that "more autonomous" necessarily means "more capable." We believe that Human-Machine Teaming delivers the best outcomes, in terms of overall effectiveness, optimal use of resources. the practicalities of integration and the ease with which we can address issues arising; it is therefore our default approach to AI adoption. The appropriate degree of system "autonomy" and type of "human control" need to be considered carefully on a case-by-case basis."5699

In February 2023, the UK participated in the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM 2023). Together with other government representatives, the United Kingdom agreed a joint call to action on the responsible development, deployment and use of artificial intelligence in the military domain.⁵⁷⁰⁰ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain

and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."⁵⁷⁰¹

The UK also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November $2023.^{5702}$

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁵⁷⁰³

The Republic of Korea will host the second REAIM summit in 2024.5704

Human Rights

According to Freedom House, the UK is "free" and received 93/100 for political rights and civil liberties in 2022.⁵⁷⁰⁵ The country "is a stable democracy that regularly holds free elections and is home to a vibrant media sector." The Freedom House also notes that: "While the government enforces robust protections for political rights and civil liberties, recent

years have seen concerns about increased government surveillance of residents, as well as rising Islamophobia and anti-immigrant sentiment."⁵⁷⁰⁶

All UK AI initiatives must comply with the UK Human Rights Act of 1998. Post-Brexit, the UK remains a part of the European Convention on Human Rights and is subject to the jurisdiction of the European Court of Human Rights in Strasbourg. Therefore, even if the GDPR can no longer be enforced in the UK through judgments of the Court of Justice of the European Union in Luxembourg, the existence of structures like the UK's Information Commissioner's Office and generally, the remnants of EU's *Acquis Communautaire* make it clear that the UK has in place a relatively robust system of human rights protection.⁵⁷⁰⁷

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."⁵⁷⁰⁸ Relatedly, also in 2020, the Alan Turing Institute issued guidelines on AI and non-discrimination/human rights.⁵⁷⁰⁹

OECD AI Principles

The UK is engaged internationally in the development of AI governance in line with the values of fairness, freedom and democracy. This engagement includes working with partners to shape AI governance under development including the EU AI Act and the potential Council of Europe

https://freedomhouse.org/country/united-kingdom/freedom-world/2022

⁵⁷⁰⁷ Information Commissioner's Office, *Overview – Data Protection and the EU*, (Accessed Feb.19, 2023), <u>https://ico.org.uk/for-organisations/dp-at-the-end-of-the-transition-period/overview-data-protection-and-the-eu/</u>.

legal framework.⁵⁷¹⁰ The UK is a founding member of the GPAI ⁵⁷¹¹ and announced a £1m investment in GPAI's data trust research in 2021.⁵⁷¹² Additionally, UK defense has a strong record of collaborating with international partners and allies, including. This includes engagement with NATO supporting the AI Partnership for Defense. On the bi-lateral front, in September 2020 the UK and the U.S. signed to establish dialogue on their shared vision for driving technological breakthroughs in AI and to explore an AI R&D ecosystem that "promotes the mutual wellbeing, prosperity, and security of present and future generations." The Declaration mentions, as one objective, to protect "against efforts to adopt and apply these technologies in the service of authoritarianism and repression."⁵⁷¹³

The UK is a member of the OECD and the G20 and therefore should adhere to the OECD/G20 AI Principles. However, the OECD/G20 AI Principles are not referred to in the National AI Strategy detailed above and there was no evidence of implementation in 2022.

UNESCO Recommendation on the Ethics of Artificial Intelligence

The UK has endorsed the 2021 UNESCO Recommendation on the Ethics of AI,⁵⁷¹⁴ the first ever global agreement on the ethics of AI. It remains to be seen which steps the government will take to implement the Recommendation.

⁵⁷¹⁰ Gov.UK, *Establishing a pro-innovation approach to regulating AI* (July.20, 2022), <u>https://www.gov.uk/government/publications/establishing-a-pro-innovation-approach-to-regulating-ai-policy-statement.</u>

Al Safety Summit

In November 2023, the UK convened the first AI Safety Summit and endorsed the Bletchley Declaration.⁵⁷¹⁵ The UK thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

The UK also contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁵⁷¹⁶

Evaluation

Post-Brexit, the UK has shifted from a legislative approach based on rights and obligations, such as that applied in the data protection field, for a regulatory approach to AI, itself regulated by ethical standards and cross-ministerial coordination. From this perspective, the UK's development of a strong algorithmic transparency framework appears to be a corrective tool but not a safeguard against AI-based harm. Equally, the widespread use of live facial recognition across multiple UK law enforcement agencies in contradiction with the ICO's own guidance begs questions regarding the merits of a purely regulatory approach. In these circumstances, the resilience of the UK AI policy framework will be as good as the virtues and merits of its oversight mechanisms.

United States

National AI Strategy

The United States promotes AI policies that seek to maintain American leadership and competitiveness for the protection of civil and human rights, to ensure technology is working for the American people, and to foster global alliances prioritizing democratic values and a collective defense. Speaking to the United Nations General Assembly in September 2021, President Biden reaffirmed the U.S.'s commitment to "work together with our democratic partners to ensure that new advances in areas from biotechnology, to quantum computing, 5G, artificial intelligence, and more are used to lift people up, to solve problems, and advance human freedom — not to suppress dissent or target minority communities."⁵⁷¹⁷ President Biden's UN statement echoed similar comments to the G7 leaders at the Munich Security Conference earlier in the year. At that meeting, President Biden called for "rules that will govern the advance of technology and the norms of behavior in cyberspace, artificial intelligence, and biotechnology," that will "lift people up" and not pin them down. Biden also urged the G7 nations to stand up for "democratic values."⁵⁷¹⁸

The current U.S. position on AI is comprised of a 2020 Presidential Executive Order (13960),⁵⁷¹⁹ a 2019 Executive Order (13859),⁵⁷²⁰ the Office of Management and Budget (OMB) Guidance for Regulation of AI

⁵⁷²⁰ U.S. National Archives and Records Administration, Federal Register, *Executive Order 13859: Maintaining American Leadership in Artificial Intelligence* (Feb.11, 2019), 84 FR 3967 (pp. 3967-3972),

https://www.federalregister.gov/documents/2019/02/14/2019-02544/maintaining-american-leadership-in-artificial-intelligence.

Applications,⁵⁷²¹ the recommendations of a National Security Commission on Artificial Intelligence (NSCAI),⁵⁷²² and various initiatives and programs established by the National Artificial Intelligence Initiative Act (NAIIA).⁵⁷²³

The 2019 Executive Order emphasized the need to maintain American leadership in Artificial Intelligence, and sets out a range of policies and practices, including funding, research, training, and collaboration.⁵⁷²⁴ It also describes the need protect "civil liberties, privacy, and American values."⁵⁷²⁵

The OMB guidance also underscores the desire to maintain American leadership, and endorses such values as privacy, civil liberties, human rights, the rule of law, and respect for intellectual property.⁵⁷²⁶ The OMB guidance outlines 10 principles, including Fairness and Non-Discrimination, Disclosure and Transparency, to promote innovation and growth for AI.⁵⁷²⁷

The 2020 Executive Order on Promoting the Use of Trustworthy Artificial Intelligence in the Federal Government reflects earlier goals set in the 2019 Executive Order and established common guidance to encourage federal agencies to use AI, consistent with nine principles. ⁵⁷²⁸ The 2020 Executive Order states that "[t]he ongoing adoption and acceptance of AI will depend significantly on public trust."⁵⁷²⁹ It also emphasizes the need to ensure that "the use of AI remains consistent with

 ⁵⁷²⁹ Ibid.

all applicable laws, including those related to privacy, civil rights, and civil liberties."⁵⁷³⁰ Furthermore, it directs the OMB to "post a roadmap for the policy guidance that OMB intends to create or revise to better support the use of AI, consistent with this order. This roadmap shall include, where appropriate, a schedule for engaging with the public and timelines for finalizing relevant policy guidance."⁵⁷³¹

Section 3 of the 2020 Executive Order describes Principles for Use of AI in government. "When designing, developing, acquiring, and using AI in the Federal Government, agencies shall adhere to the following Principles:"

- a) Lawful and respectful of our nation's values
- b) Purposeful and performance-driven
- c) Accurate, reliable and effective
- d) Safe, secure, and resilient
- e) Understandable
- f) Responsible and traceable
- g) Regularly monitored
- h) Transparent
- i) Accountable⁵⁷³²

Members of the United States Congress have also proposed legislation for a U.S. national AI strategy. Representatives Robin Kelly (R-Illinois) (R-Texas) introduced a Congressional and Will Hurd Resolution calling for the creation of a US National AI Strategy (H.Res.1250).⁵⁷³³ The resolution, which was passed in the House of Representatives in December 2020, emphasizes global leadership, a prepared workforce, national security, research and development, and ethics, reduced bias, fairness, and privacy.⁵⁷³⁴ It does not establish any new agency to regulate AI nor does it make clear which new obligations would exist for those who deploy AI systems. But the resolution does provide a detailed outline of a US national AI strategy. Among other points, the resolution states "Developing and using artificial intelligence in ways that are ethical, reduce bias, promote fairness, and protect privacy is essential

⁵⁷³⁴ H.Res.1250, 116th Congress (2019-2020), *Guiding Principles of the National Artificial Intelligence Strategy of the United States* (Dec. 8, 2020), https://www.congress.gov/bill/116th-congress/house-resolution/1250/text

for fostering a positive effect on society consistent with core United States values."⁵⁷³⁵ The resolution also acknowledges the OECD Principles on Artificial Intelligence. The Bipartisan Policy Center has endorsed the resolution, declaring "we must embrace AI while protecting our civil liberties, modernizing our workforce and education programs, and investing more in R&D."⁵⁷³⁶ Following the passage of the resolution, committees in both chambers of Congress (the House and Senate) have introduced legislation and held committee meetings that build on the strategy outlined in H.Res.1250.⁵⁷³⁷

The National Artificial Intelligence Initiative Act (NAIIA) marks one of the most significant developments in U.S. AI policy. It directed the President to establish the National Artificial Intelligence Initiative (NAII), with the aim to "lead the world in the development and use of trustworthy artificial intelligence systems in the public and private sectors."⁵⁷³⁸ The NAIIA also created the National Artificial Intelligence Initiative Office (NAIIO) within the Office of Science and Technology Policy (OSTP) to coordinate and support the federal government's activities through the NAII.⁵⁷³⁹ The Act includes provisions for funding interdisciplinary AI education and workforce training, establishing AI research institutes, and cooperating with allies on trustworthy AI development.⁵⁷⁴⁰

The AI in Government Act of 2020 establishes an AI Center of Excellence (AI CoE) to facilitate cohesive and competent adoption of AI by the government "for the purposes of benefiting the public and enhancing the

productivity and efficiency of Federal Government operations."⁵⁷⁴¹ Similar to the 2020 Executive Order, the AI in Government Act requires the OMB to "issue a memorandum" to federal agencies regarding the government use of AI in ways that protect "civil liberties, civil rights, and economic and national security," along with "best practices" for identifying and mitigating bias and discriminatory impact in the use of AI.⁵⁷⁴² As of late 2022, the OMB has not fully complied with either the 2020 Executive Order or the AI in Government Act.⁵⁷⁴³

Finally, the White House and Congress have also paid close attention to the draft AI Act in the European Union as a model for future U.S. AI regulation. Jake Sullivan, the White House National Security Advisor, has stated that "United States welcomes the EU's new initiatives on artificial intelligence" and that the U.S. will "work with our friends and allies to foster trustworthy AI."⁵⁷⁴⁴ Lynne Parker, Founding Director of the NAIIO and the OSTP's Assistant Director of AI, has described the EU AI Act as a "very good comprehensive approach that the U.S. should consider."⁵⁷⁴⁵ However, there are some indications that the U.S. intends to propose significant changes to the current version of the AI Act at the next meeting of the U.S.-EU Trade and Technology Council on December 5, 2022.⁵⁷⁴⁶

OMB Guidance for AI Regulation

In November 2020, the US Office of Management and Budget (OMB) issued the Guidance for Regulation of Artificial Intelligence

https://twitter.com/jakesullivan46/status/1384970668341669891

⁵⁷⁴¹ Public Law 116-260, *AI in Government Act*, Sec. 103(a) (Dec. 27, 2020), https://www.congress.gov/bill/116th-congress/house-bill/133/text.

⁵⁷⁴² Ibid., Sec. 104(a)

⁵⁷⁴³ See CAIDP Statement to OMB (Oct. 10. 2021),

https://www.caidp.org/app/download/8350420263/CAIDP-OMB-Statement-19102021.pdf.

⁵⁷⁴⁴ Jake Sullivan [@JakeSullivan46], "The United States welcomes the EU's new initiatives on artificial intelligence. We will work with our friends and allies to foster trustworthy AI that reflects our shared values and commitment to protecting the rights and dignity of all our citizens." Twitter (Apr. 21, 2021),

⁵⁷⁴⁵ Dan Reilly, *White House A.I. director says U.S. should model Europe's approach to regulation*, Fortune (Nov. 10, 2021), <u>https://fortune.com/2021/11/10/white-house-a-i-director-regulation/</u> ⁵⁷⁴⁶ Luca Bertuzzi, *The US unofficial position on upcoming EU Artificial Intelligence*

⁵⁷⁴⁶ Luca Bertuzzi, *The US unofficial position on upcoming EU Artificial Intelligence rules*, Euractiv, (Oct. 24, 2022), <u>https://www.euractiv.com/section/digital/news/the-us-unofficial-position-on-upcoming-eu-artificial-intelligence-rules/</u>

Applications.⁵⁷⁴⁷ The Guidance follows from the Executive on American Leadership in AI and states that "when considering regulations or policies related to AI applications, agencies should continue to promote advancements in technology and innovation, while protecting American technology, economic and national security, privacy, civil liberties and other American values, including the principles of freedom, human rights, the rule of law, and respect for intellectual property." It is explicitly addressed to AI applications "developed and deployed outside of the federal government."5748

The Guidance restates key goals for the "stewardship" of AI applications:

- Public Trust in AI •
- Public Participation
- Scientific Integrity and Information Quality
- Risk Assessment and Management
- Benefits and Costs
- Flexibility
- Fairness and Non-discrimination
- Disclosure and Transparency
- Safety and Security
- Interagency Cooperation⁵⁷⁴⁹

The Guidance encourages communications to the public, describing both the benefits and risks "in a manner that promotes public trust and understanding of AI." The Guidance recommends that "agencies should communicate this information transparently by describing the underlying assumptions and uncertainties regarding expected outcomes, both positive and negative."

There are provisions in the Guidance that are controversial. The OMB recommends that agencies "increase public access to government data and models where appropriate" but fails to note whether such government data is personal data or may be subject to protections under federal law.5750

EU-U.S. Trade and Technology Council (TTC)

In June 2021, the U.S. and the European Union established the EU-U.S. Trade and Technology Council (TTC) to "strengthen global

⁵⁷⁴⁷ OMB, Guidance for Regulation of AI Applications, https://www.whitehouse.gov/wp-<u>content/uploads/2020/11/M-21-06.pdf</u> ⁵⁷⁴⁸ Ibid.

⁵⁷⁴⁹ Ibid.

⁵⁷⁵⁰ Ibid, p. 8.

cooperation on technology, digital issues, and supply chains" and "with the aim of promoting a democratic model of digital governance."⁵⁷⁵¹ At the TTC's inaugural meeting in September 2021, the U.S. and EU published a joint statement (the Pittsburgh Statement) in which they acknowledged that "AI technologies yield powerful advances but can also threaten our shared values and fundamental freedoms" and committed to "develop and implement AI systems that are innovative and trustworthy and that respect universal human rights and shared democratic values."⁵⁷⁵²

The U.S. and EU also expressed "significant concerns" with the use of "social scoring systems with an aim to implement social control at scale." Noting that such uses of AI "pose threats to fundamental freedoms and the rule of law," the TTC stated its opposition to the use of AI for social scoring or other "rights-violating systems." Finally, the TTC outlined areas of U.S.-EU cooperation, including "responsible stewardship of trustworthy AI" through the OECD AI Recommendations, "measurement and evaluation tools" to assess accuracy and bias, and the development of "AI technologies designed to enhance privacy protections."

The U.S. has made progress in support of the TTC's goals. In December 2021, the Biden administration announced an initiative to encourage development of "Democracy-Affirming Technologies" that support democratic values and governance.⁵⁷⁵³ Relatedly, the U.S. and UK announced plans to promote Privacy Enhancing Technologies (PETs), including low-data AI, the deletion of unnecessary data, and techniques for robust anonymity.⁵⁷⁵⁴

Also in December 2021, the EU-U.S. Joint Technology Competition Policy Dialogue was launched by the Federal Trade Commission, the Department of Justice's Antitrust Division, and the European Commission. The Joint Dialogue is intended to align with the TTC's goals through

coordination "as much as possible on policy and enforcement," "especially in technology sectors," and by promoting "greater alignment" between the U.S. and EU.⁵⁷⁵⁵

The TTC held its second meeting in May 2022.⁵⁷⁵⁶ At the meeting, the co-chairs announced the development of a joint roadmap on "evaluation and measurement tools for trustworthy Artificial Intelligence." This work will be performed by the AI sub-group, which was created to realize a shared commitment to responsible AI stewardship and joint support of the OECD Recommendation on AI.⁵⁷⁵⁷

In its December 2022 meeting, the TTC issued the Joint Roadmap on Evaluation and Measurement Tools for Trustworthy AI and Risk Management (AI Roadmap).⁵⁷⁵⁸ The AI Roadmap's intent is to develop international standards and provide guidance on the development of "tools, methodologies, and approaches to AI risk management."⁵⁷⁵⁹ The TTC also launched a joint report on the economic impact of AI-driven technology on the workforce. The goal of the report is to "strengthen collaboration on analysis and policy to ensure that the benefits are broadly shared."⁵⁷⁶⁰

NIST Risk Management Framework

The National Institute of Standards and Technology (NIST) within the Department of Commerce announced the development of a voluntary

^{12052022-1.}pdf.

AI risk management framework (RMF) in July 2021. The framework aims to "address risks in the design, development, use, and evaluation of AI products, services, and systems."⁵⁷⁶¹ As a part of the broader National AI Initiative, NIST hopes to produce a framework that can "develop along with the technology," "help[ing to] create and safeguard trust" in AI while "permit[ting] the flexibility for innovation."⁵⁷⁶²

Throughout 2021, NIST worked with and solicited input from the public to develop the framework, identifying "characteristics of trustworthiness" for AI systems: "accuracy, explainability and interpretability, reliability, privacy, robustness, safety, security (resilience), and mitigation of unintended and/or harmful bias, as well as of harmful uses."⁵⁷⁶³

On January 27, 2023, the NIST released Version One of its Artificial Intelligence Risk Management Framework (RMF).⁵⁷⁶⁴ Following an initial mandate⁵⁷⁶⁵ by Congress in 2020 for NIST to lead the charge, which subsequently led to a request for information, a concept paper, two drafts, and three public workshops.⁵⁷⁶⁶ As an integral part of the framework, NIST highlights core functions such as governance, risk assessments and management and documentation, ranging from organizational roles and responsibilities to the AI system's knowledge limits.⁵⁷⁶⁷

The Joint Artificial Intelligence Center

The Joint Artificial Intelligence Center (JAIC) is a research center and "focal point" of AI strategy within the Department of Defense

(DoD).⁵⁷⁶⁸ The mission of the JAIC is to "transform the DoD by accelerating the delivery and adoption of AI to achieve mission impact at scale.⁵⁷⁶⁹ The JAIC has recently undertaken an ambitious agenda to "accelerate the adoption of AI across every aspect of the military's warfighting and business operations."⁵⁷⁷⁰ The new mission set is in contrast to the JAIC's introductory goal, which was to jumpstart AI in DoD through pathfinder projects. In June 2022, the JAIC and the Defense Digital Services (among other organizations) were merged into a unified organization, the Chief Digital and Artificial Intelligence Office (CDAO).⁵⁷⁷¹

National Security Commission on AI

The U.S. Congress established the National Security Commission on AI (NSCAI) in 2018.⁵⁷⁷² The NSCAI has issued several reports and made recommendations to Congress. It also issued an interim report in November 2019, which was criticized for its lack of attention to democratic values.⁵⁷⁷³ In a more recent report titled Key Considerations for Responsible Development and Fielding of Artificial Intelligence, the NSCAI recommends "[e]mploy[ing] technologies and operational policies that align with privacy preservation, fairness, inclusion, human rights, and [the] law of armed conflict."⁵⁷⁷⁴

In March 2021, the NSCAI released its Final Report for an integrated U.S. strategy for "the coming era of AI-accelerated competition and conflict."⁵⁷⁷⁵ The Final Report included numerous recommendations for the U.S. government to use AI to protect U.S. interests and to support AI innovation, as well as recommendations to improve public transparency in its use of AI (including through AI risk and impact assessments), develop and test "technical approaches to preserving privacy, civil liberties, and civil

⁵⁷⁷⁵ NSCAI, Final Report, p. 8, https://www.nscai.gov/2021-final-report/

rights," and strengthen redress and due process mechanisms for victims of AI-related harms. The report also called on the White House and State Department to establish an "Emerging Technology Coalition (ETC) of countries respectful of democratic values" to promote emerging technologies "according to democratic norms and values," including by "building on" the OECD AI Principles and the work of the Global Partnership on AI (GPAI).⁵⁷⁷⁶ Finally, the Final Report called on the U.S. and ETC partners to create an "International Digital Democracy Initiative" that would rely, in part, on the OECD AI Principles to develop AI guidelines.⁵⁷⁷⁷

While the Final Report called for "baseline standards and safeguards regarding facial recognition," the Commission failed to address several problems previously identified by CAIDP.⁵⁷⁷⁸ Beyond the lack of opportunities for formal comment or input from the general public during its drafting, the report failed to assess U.S. compliance with the OECD AI Principles or G20 guidelines, or to support prohibitions on lethal autonomous weapons or facial recognition technology, despite growing public concern and widespread support in Congress.

Public Participation

In 2021, the United States began several new initiatives to promote public participation in AI policy. In June, the White House launched the National Artificial Intelligence Research Resource Task Force to "develop a roadmap to democratize access to research tools that will promote AI innovation and fuel economic prosperity."⁵⁷⁷⁹ In July, the White House Office of Science and Technology Policy (OSTP) and the National Science Foundation (NSF) sought input on the implementation plan for a National Artificial Intelligence Research Resource (NAIRR).⁵⁷⁸⁰ The OSTP also began a series of public meetings and requests for information regarding AI

policy. The AI Initiative Office continues to regularly post and update AI policy publications, including requests for information, concept papers and reports, ethical principles, and agency budgets, in its Publications Library on ai.gov.⁵⁷⁸¹ Finally, NIST has sought public input throughout its process of developing the AI RMF.⁵⁷⁸²

The United States government provides access to all final policy proposals concerning AI. Federal agencies have undertaken public rulemaking and requested public comment. However, the National Security Commission NSCAI attempted to keep its deliberations secret. A federal court later determined that the AI Commission had violated U.S. open government laws and was required to make both its records and its meetings open to the public.⁵⁷⁸³ Oddly, the AI Commission initially made agency documents available on a proprietary platform rather than an agency website.⁵⁷⁸⁴

Data Protection and Algorithmic Transparency

The United States does not have an overarching privacy law, such as the GDPR, nor is there a privacy agency. However, the United States has two members in the Global Privacy Assembly (GPA), the FTC (since 2010) and the recently accredited California Privacy Protection Agency (2022).⁵⁷⁸⁵ Neither voting U.S. member has endorsed the GPA's three key resolutions: the Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁷⁸⁶ the Resolution on Accountability in the Development and Use of Artificial Intelligence⁵⁷⁸⁷ and the Resolution and Expectations for the Appropriate Use of Personal Information in Facial Recognition

Technology.⁵⁷⁸⁸ However, as discussed above, the FTC recently released a best practice guide for facial recognition.⁵⁷⁸⁹

There is no general law that establishes a right to algorithmic transparency. The draft American Data Privacy and Protection Act, which was recently introduced in the House of Representatives, provides for greater data privacy rights, as well as oversight and enforcement mechanisms, including protections against algorithms that are deemed to discriminate on the basis of race, color, religion, national origin, sex, or disability.⁵⁷⁹⁰ If passed as drafted, the Act would give the FTC oversight authority over data holders and the ability to share information with enforcement agencies.⁵⁷⁹¹ However, the Act only covers "large data holders," which is defined as an entity with annual gross revenues of \$250,000,000 or more, and that "collected, processed, or transferred" data of more than 5,000,000 individuals or devices and sensitive data of more than 200,000 individuals or devices.⁵⁷⁹² U.S. federal, state, or local governments, and entities collecting information on their behalf, are excluded from the Act.⁵⁷⁹³

In April 2021, the FTC outlined a series of recommendations to encourage transparency in the development and use of AI.⁵⁷⁹⁴ Pointing to the agency's authority under the FTC Act, the Fair Credit Reporting Act, and the Equal Credit Opportunity Act, along with its January 2021 settlement requiring the photo app firm Everalbum to "delete models and algorithms it developed by using the photos and videos uploaded by its

https://www.ftc.gov/news-events/blogs/business-blog/2021/04/aiming-truth-fairness-equity-your-companys-use-ai

users,"⁵⁷⁹⁵ the FTC warned businesses using AI to "Hold yourself accountable – or be ready for the FTC to do it for you."⁵⁷⁹⁶

At the state level, the California Consumer Privacy Rights Act (CPRA) updated the state's privacy law (the CCPA), created a privacy protection agency (the CPPA), and established a right to limit algorithmic profiling.⁵⁷⁹⁷ Passed via a ballot proposition⁵⁷⁹⁸, the CPRA requires responding to requests businesses for access to include meaningful information around the logic behind the decision-making processes and the likely outcome of the process with respect to the consumer."⁵⁷⁹⁹ A former U.S. federal official said the CPRA would impose "new requirements for businesses to protect personal information, including by 'reasonably' minimizing data collection, limiting data retention, and protecting data security. It also strengthens accountability measures by requiring companies to conduct privacy risk assessments and cybersecurity audits, and regularly submit them to regulators. In addition, it supplements the individual rights in the CCPA with new notification requirements, clarifies that individuals have the right to opt out of both the 'sale' and 'sharing' of personal information, and adds protections for a new category of 'sensitive data.""5800

A separate California ballot initiative concerning AI-based profiling for criminal justice was defeated. Proposition 25 would have removed the right of people accused of a non-violent crime to secure their release by posting bail or by order of a judge with an automated system of computergenerated predictive modelling. Civil rights groups favored Proposition 24

and opposed Proposition 25.⁵⁸⁰¹ Alice Huffman, President of California NAACP stated, that "Prop. 25 will be even more-discriminatory against African Americans, Latinos and other minorities. Computer models may be good for recommending songs and movies, but using these profiling methods to decide who gets released from jail or who gets a loan has been proven to hurt communities of color." Regarding the California Privacy Rights Act, Huffman stated, "Prop. 24 allows consumers to stop companies from using online racial profiling to discriminate against them."

The Algorithmic Accountability Act, introduced in February 2022, would require large entities that deploy "automated decision systems" to conduct impact assessments for "augmented critical decision processes," submit impact assessment summaries to the FTC, and mitigate the "material negative impacts" of automated decision systems.⁵⁸⁰²

Two additional jurisdictions have passed regulations specifically relating to the use of artificial intelligence. Illinois passed the Artificial Intelligence Video Interview Act, which became effective in January 2020 and requires that employers disclose whenever they use AI to analyze applicant-submitted interview videos.⁵⁸⁰³ The act also requires employers who solely rely on AI analysis of video interviews to make employment decisions to report demographic data annually to a state agency, and for the state agency to report whether the data discloses a racial bias in the use of AI.⁵⁸⁰⁴ The first report would be released by July 1, 2023.

Additionally, New York City recently passed Local Law 144 of 2021, which would require that a bias audit be performed on any automated employment decision tools prior to their use.⁵⁸⁰⁵ The Department of Consumer and Worker Protection released a Notice of Public Hearing and Opportunity to Comment on Proposed Rules on Sept. 19, 2022.⁵⁸⁰⁶ The law is scheduled to take effect on Jan. 1, 2023.

Facial Recognition

There is growing opposition to the deployment of facial recognition technology in the United States. In May 2019, San Francisco, California became the first city in the U.S. to ban the use of facial recognition technology by city agencies.⁵⁸⁰⁷ The city supervisor said, "[i]t's psychologically unhealthy when people know they're being watched in every aspect of the public realm, on the streets, in parks."⁵⁸⁰⁸ Other cities, including Cambridge, Massachusetts; Oakland, California; and Portland, Oregon followed suit.⁵⁸⁰⁹

In October 2019, California enacted a moratorium on the use of facial recognition technology in police body cameras.⁵⁸¹⁰ The bill prohibits the use of biometric surveillance technology, which includes facial-recognition software, in police body cameras. It also prohibits police from taking body-camera footage and later running it through facial-recognition software. It does not prevent state and local police from using facial-recognition technology in other ways, such as in stationary cameras, and it does not apply to federal agencies such as the FBI.⁵⁸¹¹

In November 2021, Facebook announced it would shut down its facial recognition system and delete the face scans of more than one billion users it had gathered.⁵⁸¹² The announcement followed multiple lawsuits alleging that the company had violated state and federal privacy laws as well as repeated recommendations to the FTC that the company's business practices, including the collection and use of facial images, violated a 2011 settlement with the Commission.

In February 2022, and after months of criticism by advocacy groups, the Internal Revenue Service announced that it would halt its program with identity verification company ID.me to use facial recognition technology to

verify taxpayers' identities.⁵⁸¹³ The program would have required taxpayers to take video selfies to verify themselves, raising concerns that citizens will be "coerced into handing over their sensitive biometric information to the government in order to access essential services."

A 2020 bill introduced in the U.S. Congress would ban the use of facial recognition by law enforcement agencies.⁵⁸¹⁴ It would make it illegal for any federal agency or official to "acquire, possess, access, or use" biometric surveillance technology in the U.S. It would also require state and local law enforcement to bring in similar bans in order to receive federal funding.⁵⁸¹⁵ The bill was introduced by Senators Ed Markey and Jeff Merkley, and Representatives Pramila Jayapal and Ayanna Pressley.⁵⁸¹⁶

In February 2022, the same members of Congress urged federal agencies to end the use of Clearview AI Facial Recognition technology.⁵⁸¹⁷ In letters to the Department of Homeland Security (DHS), Department of Justice (DOJ), Department of Defense (DOD), Department of Interior (DOI), and Department of Health and Human Services (HHS), they wrote, "[f]acial recognition tools pose a serious threat to the public's civil liberties and privacy rights, and Clearview AI's product is particularly dangerous. We urge you to immediately stop the Department's use of facial recognition technology, including Clearview AI's tools."⁵⁸¹⁸

On October 22, 2022, the Federal Trade Commission (FTC) issued a press release, "FTC Recommends Best Practices for Companies That Use

Facial Recognition Technologies," promoting consumer protection innovation and best practices guidance to companies developing and deploying facial recognition technologies.⁵⁸¹⁹ The statement included the release of a staff report, "Facing Facts: Best Practices for Common Uses of Facial Recognition Technologies," a product of the Commission's December 8, 2011, workshop, "Face Facts: A Forum on Facial Recognition Technology" and the Commission's March 2012 report, "Protecting Consumer Privacy in an Era of Rapid Change."⁵⁸²⁰

In September 2022, Congressman Ted W. Lieu of Los Angeles County and other House Democrats introduced the Facial Recognition Act of 2022, ⁵⁸²¹ which would place limitations and prohibitions on law enforcement use of facial recognition technologies. ⁵⁸²²

Lethal Autonomous Weapons

The United States are among the 70 countries that endorsed a joint statement on autonomous weapons systems at the October UN General Assembly meeting. In this joint statement, States urge "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."⁵⁸²³

In February 2023, the United States participated in the first global Summit on Responsible Artificial Intelligence in the Military Domain

(REAIM 2023) hosted by the government of The Netherlands. Government representatives, including the United States, have agreed a joint call to action on the responsible development, deployment and use of artificial intelligence (AI) in the military domain.⁵⁸²⁴ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."5825

Human Rights

The United States endorsed the Universal Declaration for Human Rights, published a detailed annual report on human rights, and has historically ranked high for the protection of human rights. But in 2021 Freedom House reported "in recent years its democratic institutions have suffered erosion, as reflected in partisan pressure on the electoral process, bias and dysfunction in the criminal justice system, harmful policies on immigration and asylum seekers, and growing disparities in wealth, economic opportunity, and political influence." Freedom House scored the United States at 83/100 in 2022⁵⁸²⁶, same as 2021 but down from 86/100 in 2020.⁵⁸²⁷ On transparency, Freedom House noted that the Trump administration operated with "greater opacity than its immediate

predecessors, for example by making policy and other decisions without meaningful input from relevant agencies and their career civil servants."

The U.S. is not a member of the Council of Europe but did sign and ratify the COE Convention on Cybercrime,⁵⁸²⁸ as COE conventions are open for ratification by non-members states. The U.S. could also ratify the COE Modernized Privacy Convention as well as any future COE Convention on AI.

In October 2021, the OSTP announced its intention to develop an AI "bill of rights" to "codify" the idea that "[p]owerful technologies should be required to respect our democratic values and abide by the central tenet that everyone should be treated fairly."5829 The OSTP also issued a request for information on current or planned uses of AI-enabled biometric technologies,⁵⁸³⁰ along with six public events on "the Bill of Rights for an Automated Society" in order "to promote public education and engagement" on AI issues.⁵⁸³¹ CAIDP board members suggested at the time that the process of formulating an AI Bill of Rights 1) aim for a small number of clear, powerful principles, 2) build on prior initiatives, 3) proceed on a bipartisan basis, and 4) proceed without delay.⁵⁸³² The OSTP announced a Blueprint for an AI Bill of Rights in October, 2022.⁵⁸³³ The Blueprint contains five key principles: (1) Safe and Effective Systems; (2) Algorithmic Discrimination Protections; (3) Data Privacy; (4) Notice and Explanation; and (5) Human Alternatives, Consideration and Fallback. The framework is intended to apply to (1) automated systems that (2) have the potential to meaningfully impact the American public's rights,

opportunities, or access to critical resources or services.⁵⁸³⁴ In particular, the rights and opportunities in focus include civil rights, civil liberties, privacy, equal opportunity, and access to critical resources or services. The White House has indicated that the Blueprint is "fully consistent" with the OECD AI Principles and with Executive Order 13985 on Advancing Racial Equity and Support for Underserved Communities.⁵⁸³⁵

OECD / G20 AI Principles

The United States fully supported the OECD AI policy process, endorsed the OECD AI Principles, and is a founding member of the Global Partnership on AI. The OECD notes that the United States has taken several steps to implement the AI Principles.

Since endorsing the OECD AI Principles in 2019,⁵⁸³⁶ the U.S. has continued to voice its support. The U.S. and EU, in their joint statement on the launched of the Trade and Technology CouncilTTC, affirmed "their commitment to (...) shared democratic values and respects universal human rights, which they have already demonstrated by endorsing the OECD Recommendation on AI," which they "intend to continue to uphold and implement."⁵⁸³⁷ At a keynote address to the OECD in October 2021, Secretary of State Antony Blinken stated that the "OECD's Principles on AI back in 2019—the first set of intergovernmental principles on the topic—and the launch of the Global Partnership on AI in 2020, laid a foundation for the world to build on."⁵⁸³⁸

UNESCO Recommendation on the Ethics of Artificial Intelligence

The United States is not a UNESCO member state and has, therefore, not endorsed the UNESCO Recommendation on the Ethics of AI.⁵⁸³⁹

Evaluation

The U.S. lacks a unified national policy on AI but President Biden, and his top advisors, has expressed support for AI aligned with democratic values. The United States has endorsed the OECD/G20 AI Principles. The White House has issued two Executive Orders on AI that reflect democratic values, a federal directive encourages agencies to adopt safeguards for AI. The most recent Executive Order also establishes a process for public participation in the development of federal regulations on AI though the rulemaking has yet to occur. The overall U.S. policy-making process remains opaque and the Federal Trade Commission has failed to act on several pending complaints concerning the deployment of AI techniques in the commercial sector. But the administration has launched new initiatives and encouraged the OSTP, NIST, and other agencies to gather public input. The recent release of the Blueprint for an AI Bill of Rights by the OSTP represents a significant step forward in the adoption of a National AI Policy and in the U.S.'s commitment to implement the OECD AI Principles. There is growing opposition to the use of facial recognition, and both Facebook and the IRS have cancelled facial recognition systems, following widespread protests. But concerns remain about the use of facial surveillance technology across the federal agencies by such U.S. companies as Clearview AI. The absence of a legal framework to implement AI safeguards and a federal agency to safeguard privacy also raises concerns about the ability of the U.S. to monitor AI practices.

⁵⁸³⁹ UNESCO, *Member State List*, <u>https://en.unesco.org/countries/u</u>

Uruguay

National AI Strategy

Strictly speaking, Uruguay does not have a general national AI development strategy, but rather has an AI development strategy for the digital government, officially called Artificial Intelligence Strategy for Digital Government (AISDG) 2020.⁵⁸⁴⁰ The preparation of the AISDG was led by the Agency for Development of Electronic Government and Information Society (AGESIC).⁵⁸⁴¹ The AISDG is a part of the Digital Government Agenda⁵⁸⁴² and only focuses on digital government.

So far Uruguay has published four digital government agendas, namely: Uruguay Digital Agenda 2008-2010, Uruguay Digital Agenda 2011-2015, Uruguay Digital Agenda 2020 and Uruguay Digital Agenda 2021-2025.⁵⁸⁴³ It should be kept in mind, however, that the issues associated with AI are considered in the 2020 Digital Government Plan,⁵⁸⁴⁴ and were included in Uruguay Digital Agenda 2020⁵⁸⁴⁵ and Uruguay Digital Agenda 2021-2125.⁵⁸⁴⁶

Uruguay's digital government strategies aim, endorsing the Declaration of Principles of the World Summit on the Information Society, to advance implementation of the commitment "to build a people-centered, inclusive and development-oriented Information Society, where everyone can create, access, utilize and share information and knowledge, enabling individuals, communities and peoples to achieve their full potential in promoting their sustainable development and improving their quality of life, premised on the purposes and principles of the Charter of the United

Nations and respecting fully and upholding the Universal Declaration of Human Rights."⁵⁸⁴⁷

After a public-consultation process, Uruguay finally adopted the AISDG in January 2020⁵⁸⁴⁸ The general objective of the AISDG is to promote and strengthen the responsible use of AI in Public Administration. AISDG comprises (I) nine general principles and (II) four pillars, each one with specific objectives and areas of action.

The general principles are:

- 1) Purpose: AI must enhance the capabilities of human beings, complementing them as much as possible, aiming to improve the quality of people's life, facilitating processes and adding value to human activity;
- 2) General interest: AI-based solutions promoted by the State should oriented toward protecting the general interest, guaranteeing inclusion and equity;
- Respect for human rights: Any technological solution that uses AI must respect human rights, individual freedoms and diversity;
- 4) Transparency: AI solutions used in the public sphere must be transparent and comply with the regulations in force;
- 5) Responsibility: Technological solutions based on AI must have a clearly identifiable person responsible for the actions derived from the AI solution;
- 6) Ethics: When the application and/or development of AI-based solutions present ethical dilemmas, they must be addressed and resolved by human beings;
- 7) Added value: AI-based solutions should only be used when adding value to a process;
- Privacy by design: AI solutions should consider people's privacy from their design stage. Personal data-protection principles in force in Uruguay are considered strategic components; and
- 9) Security: AI developments must comply, from their design, with the basic principles of information security. The guidelines and

⁵⁸⁴⁸ Uruguay Government, AGESIC, *Estrategia de Inteligencia Artificial para el Gobierno Digital*, <u>https://www.gub.uy/agencia-gobierno-electronico-sociedad-informacion-conocimiento/comunicacion/publicaciones/estrategia-inteligencia-artificial-para-gobierno-digital/estrategia.</u>

regulations related to cybersecurity in force in Uruguay that apply to the development of AI are considered components of this strategy.

The four pillars of the Artificial Intelligence Strategy for the Digital Government are:

- 1) AI governance in public administration: Ensure that the principles and comply with the recommendations outlined in the strategy;
- 2) Capacity development for AI: Should focus on training civil servants in different capacities related to AI;
- 3) Use and application of AI: Implies generating technical guides for the good use of AI in public administration, promoting algorithm transparency and designing specific action plans in strategic sectors; and
- 4) Digital citizenship and AI: Prepare citizens to take advantage of opportunities and face the challenges that AI poses, as well as to generate the necessary confidence in people to develop and use new technologies.

In March 2022, the OECD published a report assessing the use of AI in the public sector across Latin America and the Caribbean.⁵⁸⁴⁹ The report acknowledges that the AISDG is one of the few AI strategies in the region "to be fully dedicated to the public sector".⁵⁸⁵⁰ Concerning implementation, the OECD notes that "Uruguay's strategy does not always include measurable goals, leaving some actions open to interpretation"⁵⁸⁵¹ and, like the strategies from Brazil and Peru, does "not generally include specific time frames"⁵⁸⁵².

In June 2022, the Uruguayan government announced the establishment of an Observatory of the Use of AI in the State, which seeks to further promote transparency around the AISDG and contribute to enhance trust and mitigate risks around the use of AI technologies.⁵⁸⁵³

The Uruguayan government currently has projects to implement AI solutions in sectors like public education and public health. This includes a predictive model of educational disengagement in elementary education, prepared jointly with the Public Education National Administration (ANEP), which is in the final stages; and a predictive model for cardiovascular disease, which is currently undergoing tests.⁵⁸⁵⁴ The model for educational purposes shall initially be tested on a small scale, to watch for possible errors, and the teachers will be taught how to correctly interpret the underlying information; an ANEP director notes that care must be taken not to stigmatize students. ⁵⁸⁵⁵ On a similar note, an AGESIC official has acknowledged that the model for health purposes involves the use of sensitive personal data, giving rise to ethical challenges that will need to be addressed.⁵⁸⁵⁶

Public Participation

The Artificial Intelligence Strategy for Digital Government was submitted to a public-consultation process based on a draft prepared by Agency for the Development of Electronic Government and Information Society, (AGESIC).⁵⁸⁵⁷ Likewise, AGESIC has published surveys on the implementation of AI in the public sector on its website.⁵⁸⁵⁸

Data Protection

The legal framework for personal data in Uruguay is built around the following regulations:

- The Universal Declaration of Human Rights;
- The American Convention on Human Rights or Pact of San José de Costa Rica;

⁵⁸⁵⁴ fAIr LAC Uruguay, *2. Uso responsabl*", <u>https://fairlac.iadb.org/hub/uruguay</u>, fAIR LAC is an initiative led by the BID Group and AGESIC, created to promote and strengthen the responsible use of AI, particularly in public administration through the implementation of the AISDG.

- The Constitution of the Oriental Republic of Uruguay, especially its article 72;
- Convention 108 For the protection of individuals with regards to the Processing of Personal Data;
- Act N° 18.331 on Personal-Data Protection and Habeas Data Action (LPDP) of August 11, 2008;
- Decrees N° 664/008 of December 22, 2008 and N° 414/2009 of August 31, 2009;
- Articles 152 to 156 of Act N° 18.719 of December 27, 2010, which introduce modifications to Act N° 18.331;
- Article 158 literal B) and C) of Act N° 18.719 of December 27, 2010; and
- Budget Act N° 19.670 (articles 37 to 40) dated October 25, 2019 and its regulatory Decree N° 64/020 dated February 21, 2020.

Substantively and essentially, data protection in Uruguay is regulated by Act 18.331⁵⁸⁵⁹ and its regulatory Decree N° 414/009, Regulating Law 18.331. Uruguay has a data-protection system that follows EU data-protection rules, and has regulations that adapt its data-protection system to the General Data Protection Regulation (Regulation (EU) 2016/679) (GDPR). On August 21, 2012, the European Commission formally approved Uruguay's status as a country providing "adequate protection" for personal data within the meaning of the European Data Protection Directive (Article 25(6) of Directive 95/46/EC).⁵⁸⁶⁰

Continuing with the process of full GDPR adaptation, Uruguay passed Act N° 19.670. This Act includes provisions relating to data protection that address, among others, the proactive responsibility principle (which supposes the implementation of appropriate technical and organizational measures such as privacy by design and privacy by default); the obligation to designate a data-protection officer, and data-breach notification rules. These provisions were further developed under the regulatory Decree $64/020^{5861}$, which basically regulates the implementation and enforcement of the provisions.

Article 31 of the Act 18.331 on Personal-Data Protection and Habeas Data establishes the Personal Data Regulatory and Control Unit

(URCDP)⁵⁸⁶² as the country's supervisory data-protection authority. The URCDP is an autonomous entity of the Agency for the Development of Electronic Government and Information Society.⁵⁸⁶³

As a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, the URCPD endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁵⁸⁶⁴ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁵⁸⁶⁵ Both have been framed in accordance with the RED Standards for Personal Data Protection for Ibero-American States.⁵⁸⁶⁶ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, lovalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in

a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."5867

Uruguay has been an accredited member of the Global Privacy Assembly since 2009, and is represented by its national authorities called Personal Data Regulatory and Control Unit. The 34th International Conference was hosted in Canelones, Uruguay in 2012.⁵⁸⁶⁸

The URCDP was among the co-sponsors of the 2022 GPA Resolution on Facial Recognition Technology⁵⁸⁶⁹ and the 2023 GPA Resolution on Generative AI Systems.⁵⁸⁷⁰

Algorithmic Transparency

Uruguay has not developed specific regulations on algorithmic transparency but ratified Convention 108+ (Convention for protecting individuals with the Processing of Personal Data), which includes a broad provision regarding algorithm transparency (art. 9.1.c).⁵⁸⁷¹

With regard to the transparency principle, the RED Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects, which the URCPD endorsed, provide, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete

explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."⁵⁸⁷²

In August 2022, the Uruguayan Data Protection Authority published a press release in celebration of the 14th anniversary of the Uruguayan Data Protection Act (Law No. 18.331), in which is was stated that "a new reform is currently being discussed, in an aspect of great importance such as the right to information, in order to make data processing more transparent, especially when algorithms are applied for decision making by those responsible".⁵⁸⁷³

The express objective of AISDG is to promote algorithmic transparency, by (i) defining standards, guidance and recommendations for the analysis of the impact monitoring and auditing of the decision-making algorithms deployed in the public administration, and (ii) establishing standards and procedures for the dissemination of the processes used for the development, training and implementation of algorithms and AI systems, as well as of the obtained results.⁵⁸⁷⁴

In this sense, the government, through the AGESIC, in 2020 published guidance for the preparation of Algorithmic Impact Studies.⁵⁸⁷⁵ According to the OECD, the Uruguayan Algorithmic Impact Study was designed "as a tool for analysing automated decision support systems that use machine learning", to "identify key aspects of systems that merit more attention or treatment".⁵⁸⁷⁶ Uruguay also has in place a Framework for Data

Quality Management, released in December 2019⁵⁸⁷⁷, which provides "tools, techniques, standards, processes and good practices related to data quality".⁵⁸⁷⁸

The AGESIC also released a general note on its website in February 2021, with guidance for citizens about how algorithms work and how they may impact daily life.⁵⁸⁷⁹

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Uruguay approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁵⁸⁸⁰ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

⁵⁸⁷⁷ Uruguay Government, *Marco de referencia para la gestión de calidad de datos*, (Dec. 27,2019), <u>https://www.gub.uy/agencia-gobierno-electronico-sociedad-informacion-</u>conocimiento/comunicacion/publicaciones/marco-referencia-para-gestion-calidad-datos.

⁵⁸⁷⁹ AGESIC, *Entender qué son y cómo funcionan los algoritmos* (Feb. 4, 2021), https://www.gub.uy/agencia-gobierno-electronico-sociedad-informacion-

conocimiento/politicas-y-gestion/entender-son-funcionan-algoritmos ⁵⁸⁸⁰ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-</u> content/uploads/2024/03/CIIA-EN-03-2024.pdf.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."5881

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."⁵⁸⁸²

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of human-

⁵⁸⁸¹ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/um.content/umloads/2024/02/CILA_EN_02_2024.pdf

⁵⁸⁸² Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

centring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.⁵⁸⁸³

Facial Recognition

In November 2020, Uruguay began developing a facialidentification database for public-safety purposes under the Ministry of the Interior. According to some civil-society organizations."⁵⁸⁸⁴ This system

⁵⁸⁸³ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

⁵⁸⁸⁴ DATYSOC, Organizaciones de la sociedad civil y académicas expresan su preocupación por reconocimiento facial en el Proyecto de Ley de Presupuesto de Uruguay (Nov. 17, 2020), <u>https://datysoc.org/2020/11/17/organizaciones-de-la-sociedad-</u>

was approved using the National Budget Act as an 'omnibus law,' thus preventing proper discussion about the issue due to the tight deadlines for approval of this type of law. Development of this database will be under the responsibility of the Ministry of the Interior, using the database currently under the control of the National Directorate of Civil Identification, the organization in charge of issuing identification cards. The database will include facial images of adults, first and last names, sex, date of birth, nationality, and identification card number, as well as issue and expiration date. The Ministry of the Interior has already purchased automated facial recognition software and currently has a system of 8,433 cameras distributed in the country in the 19 country's departments, in addition to private surveillance systems. The national government has admitted that the intended use of this facial-identification database is automated surveillance using facial-recognition algorithms."⁵⁸⁸⁵

As indicated above, the Uruguayan Data Protection Authority was among the co-sponsors of the 2022 GPA Resolution on Facial Recognition Technology, which set forth "principles and expectations for the appropriate use of personal information in facial recognition technology", including the need for lawful basis; reasonableness, necessity, and proportionality; protection of human rights; transparency; and accountability.⁵⁸⁸⁶

Lethal Autonomous Weapons

Uruguay co-authored several documents submitted during the 7th Meeting of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS) in 2022. These included a Working Paper on emerging

technologies in the area of lethal autonomous weapons systems,⁵⁸⁸⁷ setting considerations for the future work of the GGE, including the acknowledgment of the "centrality of the human element in the use of force" and the "urgent need for adequate rules and limits on the development, deployment, and use of autonomous weapon systems to ensure sufficient human involvement and oversight."

Uruguay also submitted, jointly with other countries, a written commentary calling for a legally-binding instrument on autonomous weapon systems⁵⁸⁸⁸ and a proposal for a roadmap towards new protocol on autonomous weapons systems.⁵⁸⁸⁹

Human Rights

In 2022 Uruguay is ranked "free" by the Freedom House, with a score of 97/100 points.⁵⁸⁹⁰ Freedom House acknowledges that Uruguay has "a historically strong democratic governance structure and a positive record of upholding political rights and civil liberties while also working toward social inclusion", even though "there are still disparities in treatment and political representation of women, transgender people, Uruguayans of African descent, and the Indigenous population".

Uruguay is among the countries with a very high level of formal adherence to the international human rights protection system, as it has ratified practically all existing international instruments on the matter.

⁵⁸⁸⁹ Proposal: Roadmap Towards New Protocol on Autonomous Weapons Systems, submitted by the delegations of Argentina, Costa Rica, Guatemala, Kazakhstan, Nigeria, Panama, Philippines, Sierra Leone, State of Palestine, Uruguay,

⁵⁸⁹⁰ Freedom House, *Freedom in the World 2022 – Uruguay*, https://freedomhouse.org/country/uruguay/freedom-world/2022.

However, according to some reports, Uruguay has serious shortcomings when it comes to effective compliance with such standards.⁵⁸⁹¹ Likewise, a 2013 report by the Office of the United Nations High Commissioner for Human Rights mentions the debts that the country maintains related to certain human-rights categories contained in the treaties ratified by Uruguay.⁵⁸⁹² Impunity for crimes against humanity committed during the military dictatorship (1973-1985) persists and is still an open issue. In 2020, Uruguayan NGO Peace and Justice Service (SERPAJ) reported that "35 years after the democratic transition, the scenario of denial of justice for the victims of crimes against humanity of the dictatorship of Uruguay shows how the country is still far from developing and implementing satisfactory and successful public policies regarding the search for justice for serious human rights violations."⁵⁸⁹³

OECD's 2022 report assessing the use of AI in the public sector across Latin America and the Caribbean notes that at the end of 2013 the Uruguayan government acquired Predpol, an "AI-enabled policing software to predict the potential for crimes in different areas of the country".⁵⁸⁹⁴ Such software "offered predictions based on data collected by the Ministry of the Interior, but doubts remained because of the possibility that historical biases in the criminal system could bias the data against marginalised groups. Knowledge about the model design was not made public, undermining efforts to explain its decisions, although, according to public information, the machine learning algorithm relied on four variables: type of crime, location, date and time".⁵⁸⁹⁵

Uruguay's deployment of Predpol raised human rights concerns. A study on the deployment of algorithms and AI solutions in Latin America,

⁵⁸⁹¹ Institute of Legal and Social Studies of Uruguay (IELSUR) y United Nations Development Program in Uruguay (PNUD), *Estudio sobre armonización Legislativa conforme a los tratados de derechos humanos ratificados por Uruguay u otras normas legales con fuerza vinculante* 35 (2006),

⁵⁸⁹² United Nations, General Assembly, Human Rights Council, *National report* submitted in accordance with paragraph 5 of the annex to Human Rights Council resolution 16/21, Uruguay, A/HRC/WG.6/18/URY/2 (2018), https://digitallibrary.un.org/record/3877948

⁵⁸⁹³ SERPAJ, *Derechos Humanos en el Uruguay, Informe 2020*, p. 22, <u>http://www.serpaj.org.uy/destacados/presentacion-del-informe-anual-2020-de-serpaj-</u> <u>derechos-humanos-en-el-uruguay-2020/</u>

⁵⁸⁹⁵ Ibid.

including Predpol, stated: "A report published in 2016 by researchers from the Human Rights Data Analysis Group (HRDAG) took these criticisms further, suggesting that these models generate a feedback loop: a greater police presence in a given area makes it more likely for crime to be detected. The more crimes recorded in an area, the more likely that police forces will be deployed. According to HRDAG, this means officers will be repeatedly sent to the same areas of the city, usually those where minorities are concentrated, regardless of the true crime rate in that area."⁵⁸⁹⁶

The study continues: "At the local level, the Human Rights organization SERPAJ expressed similar concerns about PredPol in 2017. They underlined that these programs "detect patterns in the data fed in and then repeat them in future predictions." [...] If applied without due care, the logic is that of a vicious circle. Technology is used to legitimise the policeman's mythical sixth sense." Basically legitimizing arbitrary police behavior, which translates into police abuse, and is often the product of racism or classism."⁵⁸⁹⁷ In 2017, the Uruguayan Ministry of Interior evaluated the performance of the software and concluded it did not perform better than "a more traditional annual retrospective reporting system based on statistical tools created by the Police's Tactical Information Directorate", which led to the discontinuation of the project.⁵⁸⁹⁸

OECD / G20 AI Principles

Uruguay has not endorsed the OECD/G20 AI principles. However, OECD's 2022 report assessing the use of AI in the public sector across Latin America and the Caribbean analyzed the consistency of the Uruguayan AI strategy for the public sector (AISDG) with the OECD AI principles.

The OECD stated, for instance, that "Uruguay's "General Interest" principle aligns with OECD principles 1 and 2. The first part of the principle sets a social goal, namely, protecting the general interest, and guaranteeing inclusion and equity. The second part states that "work must be carried out specifically to reduce the possibility of unwanted biases in the data and models used that may negatively impact people or favor discriminatory practices."⁵⁸⁹⁹

 ⁵⁸⁹⁶ Juan Ortiz Freuler and Carlos Iglesias, *Algorithms and Artificial Intelligence in Latin America: a Study of Implementation by Governments of Argentina and Uruguay* (Sept. 2018), <u>http://webfoundation.org/docs/2018/09/WF_AI-in-LA_Report_Screen_AW.pdf</u>
 ⁵⁸⁹⁷ Ibid. See also: SERPAJ, *Derechos Humanos en Uruguay: Informe 2017* (2017), pp. 176-177, <u>https://sitiosdememoria.uy/sites/default/files/publicaciones-completas/2021-</u>02/derechos-humanos-en-el-uruguay-2017.pdf

⁵⁸⁹⁸ Ibid.

⁵⁸⁹⁹ OECD Public Governance Reviews, *The Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean* (Mar. 22, 2022),

On what regards transparency, the OECD noted that the principles set forth in the AISDG "consider transparency but make no mention of explainability. However, inclusion of the expression "active transparency" could open the principle up to broader interpretation. However, Uruguay's Algorithmic Impact Study (EIA) does consider explainability".⁵⁹⁰⁰ The OECD further takes note of the fact that "Uruguay's AI principles include a requirement that technological solutions based on AI must have a clearly identifiable person responsible for the actions derived from the solutions".⁵⁹⁰¹

Uruguay is not a member of the Global Partnership on AI, however it is a member of Digital Nations,⁵⁹⁰² the Open Government Partnership,⁵⁹⁰³ Electronic Government Network of Latin America and the Caribbean.⁵⁹⁰⁴ Uruguay also has endorsed the Digital Agenda for Latin America and the Caribbean eLAC2022⁵⁹⁰⁵ in the context of the Seventh Ministerial Conference on the Information Society in Latin America and the Caribbean.⁵⁹⁰⁶ This is assessed favorable by the OECD in terms of international cooperation.

UNESCO Recommendation on the Ethics of AI

Uruguay has endorsed the UNESCO AI Recommendation.⁵⁹⁰⁷ In June 2022, the CAF – Development Bank of Latin America and UNESCO signed a letter of intent to work together on the implementation of the UNESCO AI Recommendations in Latin America and the Caribbean, which

https://www.oecd-ilibrary.org/governance/the-strategic-and-responsible-use-of-artificialintelligence-in-the-public-sector-of-latin-america-and-the-caribbean_1f334543-en,

intelligence#:~:text=Banning%20social%20scoring%20and%20mass,used%20in%20a% 20broad%20way

shall include the creation of a regional council including governments of the region.⁵⁹⁰⁸

Uruguay is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.⁵⁹⁰⁹ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁵⁹¹⁰

Uruguay also signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.⁵⁹¹¹ It aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.⁵⁹¹²

Council of Europe Convention on Al

Uruguay contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁵⁹¹³

Evaluation

Uruguay has focused its policies on digital government — and it has done well. Proof of this is that according to the Digital Government of the United Nations (UN) 2020 global-index report, Uruguay is the Latin American regional leader and occupies the 26th place globally.⁵⁹¹⁴ In 2022, the OECD also acknowledged the soundness of Uruguay's AI strategy for the public sector.

Uruguay chose to design an AI development strategy for digital government, which constitutes a positive first step toward creating a more comprehensive AI regulatory framework. Uruguay's data protection legal regime, which is largely aligned with the GDPR, presents an promising view of the future for the country's AI regulation. Uruguay also contains relevant mechanisms in place to promote algorithmic transparency, especially in the public sector. However, facial-recognition practices remain a concern.

⁵⁹¹⁴ United Nations, *E-Government Knowledge Base - Uruguay*, <u>https://publicadministration.un.org/egovkb/en-us/Data/Country-Information/id/185-</u> <u>Uruguay</u>

Venezuela

National AI Strategy

Venezuela does not have an AI Strategy. According to reports collected by Global Information Society Watch (GIS),⁵⁹¹⁵ there are laws that regulate the use and management of emerging technologies, such as:

- Organic Law of Science, Technology and Innovation
- Reform of the Organic Law of Science, Technology and Innovation
- National Science, Technology and Innovation Plan
- Law of the Government
- National Plan of Information Technologies for the State
- Telecommunications Law
- Law Against Computer Crimes
- Law on Data Messages and Electronic Signatures
- Law on the Simplification of Administrative Procedures⁵⁹¹⁶ The use of technology is also included in the following development

plans and programs:

- The Second National Economic and Social Development Plan 2013-2019
- The Homeland Plan 2019-2025
- The Economic Recovery Program for Growth and Prosperity
- The Plan for the Country's Future, which was created by the political opposition

Public Participation

Venezuela has experienced continued and wide-ranging restrictions to civic and democratic spaces thus hindering public participation. The Office of the High Commissioner for Human Rights (OHCHR) observed cases of stigmatization, criminalization and threats against dissenting voices, civil society, media and trade unionists to affect their capacity to effectively carry out their legitimate duties.⁵⁹¹⁷ While the report by the United Nations High Commissioner for Human Rights observed some willingness by the government to open dialogue with civil societies following two high level meetings between the government and Foro Civico

⁵⁹¹⁵ Global Information Society Watch, Venezuela,

ahrc5059-advance-unedited-version

(a group of civil society organizations) in April 2022, the above challenges persist.⁵⁹¹⁸

The Report of the United Nations High Commissioner for Human Rights further observes that reforms relating to public participation must be supported by genuine engagement with civil society actors through meaningful, inclusive, genuine consultation. "A favourable environment for work by civil society must be strengthened allowing zero tolerance for attacks against human rights defenders and journalists implementing preventive policies and ensuring effective accountability mechanisms."⁵⁹¹⁹

There is currently no consultation process in the field of AI but should Venezuela develop a national AI strategy, its drafting would benefit from citizens' insights.

Data Protection

There is no specific regulation regarding data privacy. However, Article 28 of the Constitution of the Bolivarian Republic of Venezuela (CRBV) defines the Habeas Data as a ground for individual complaints before the Constitutional Court. "Anyone has the right of access to the information and data concerning him or her or his or her goods which are contained in official or private records, with such exceptions as may be established by law, as well as what use is being made of the same and the purpose thereof, and to petition the court of competent competence for the updating, correction or destruction of any records that are erroneous or unlawfully 'affect the petitioner's right. He or she may, as well, access documents of any nature containing information of interest to communities or groups of persons."

The e-Government law (*ley de Infogobierno*) also provides in its Article 75 for the right to information about automated data collection.⁵⁹²⁰ Also of relevance are the 1991, Law on the Protection of the Privacy of Communications, the 2001 Special Law Against Computer Related Crimes, and the 2018 Regulation for the Protection of the Rights of Users in the Provision of Telecommunications Services.⁵⁹²¹

Based on the Supreme Court case law, employers have a general duty to uphold employees' right to privacy and must observe the data protection principles determined by the Supreme Court (DP Principles).

⁵⁹¹⁸ Ibid.

⁵⁹¹⁹ Ibid., p. 12.

⁵⁹²⁰ e-Government law,

https://www.asambleanacional.gob.ve/storage/documentos/leyes/ley-de-infogobierno-20211108160540.pdf

⁵⁹²¹ Government of Venezuela, Ministry of Communication and Information, <u>http://www.conatel.gob.ve/marco-legal-2/</u>

"The DP Principles apply to systems, registers or compilations of data that allow the creation of a complete or partial profile of an individual forming part of such system, register or compilation (in this case, an employee, for example). There is no clear outline of what a "complete or partial profile" involves. This means that, in general, employee consent is required to process personal data. Venezuelan case law does not draw a distinction between forms of personal data. Therefore, there are no separate standards for the protection of sensitive data."⁵⁹²²

According to the data protection Principles, "employers must (i) inform the employee what data has been collected, (ii) inform the employee of the purpose(s) of the collection of their personal data, (iii) inform the employee who will be the final users of the data (ie, whether any third parties will have access to the data) and (iv) allow the employee to correct any erroneous data or delete any data that may be incomplete, inadequate or excessive in relation to the purpose(s) for which they were gathered (and this must be communicated to any third party who has been given access to the personal data)." Employers have a strict obligation to keep employee health information and records confidential.⁵⁹²³

Despite the fact that these laws exist, there are reports of challenges in implementation due to the lack of an independent data protection oversight authority.⁵⁹²⁴ Further, there are concerns of government surveillance and counterintelligence activities through the introduction of public digital ID programs such as Carnet de la Patria as well as the mobile app VeQR-Somos that requires vast amounts of personal data that can be used to track both personal data and location.⁵⁹²⁵

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Venezuela approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁵⁹²⁶ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy

⁵⁹²² Ibid.

⁵⁹²³ Ibid.

⁵⁹²⁴ Freedom House, Venezuela Freedom on the Net 2022,

https://freedomhouse.org/country/venezuela/freedom-net/2022.

⁵⁹²⁵ Ibid.

strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."⁵⁹²⁷

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on

⁵⁹²⁷ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."5928

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the

⁵⁹²⁸ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.⁵⁹²⁹

Deepfakes and Computational Propaganda

According to experts, deepfakes are the latest tool used in disinformation campaigns promoting Venezuela. In 2023, short Youtube videos have been circulating with fake hosts of a seemingly Western news broadcast to spread propaganda. The purported journalists on screen are artificial intelligence avatars created by a company called Synthesia that for just \$30 a month will say whatever the buyer wants.⁵⁹³⁰ President Maduro has been disregarding criticism of the AI–generated propaganda by stating that it was "popular intelligence" and "revolutionary intelligence."⁵⁹³¹

According to the 2023 Freedom House Report on Freedom on the Net, "during the coverage period, progovernment propaganda generated by AI was viewed widely on social networks⁵⁹³²."⁵⁹³³

Lethal Autonomous Weapons

Venezuela is a party to the Convention on Certain Conventional Weapons (CCW),⁵⁹³⁴ which aims to prohibit or restrict the use of certain types of weapons that are considered to cause unnecessary or unjustifiable suffering to combatants or to affect civilians indiscriminately. The CCW does not specifically address lethal autonomous weapons, but the topic has been discussed in CCW meetings and some countries have called for a ban on their development, production, and use.

⁵⁹²⁹ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

https://freedomhouse.org/country/venezuela/freedom-net/2023

⁵⁹³⁴United Nations, *The Convention on Certain Conventional Weapons*, https://www.un.org/disarmament/the-convention-on-certain-conventional-weapons/

In October 2022, Venezuela endorsed, together with 69 other countries, a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."⁵⁹³⁵

In February 2023, Venezuela endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,⁵⁹³⁶ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Human Rights

In 2024, Freedom House scored Venezuela as "not free" (15/100).⁵⁹³⁷ The 2023 Report by Freedom House on digital rights and the status of human rights on the net in Venezuela gives the country a 29 out of 100 score.⁵⁹³⁸ The report highlights cases of lack of access and blockage of the Internet by the government, violations of right to privacy, surveillance among other violations of digital rights.

The United Nations Human Rights Council put in place the Independent Fact-Finding Mission for Venezuela to look into allegations of human rights violations.⁵⁹³⁹ The fact-finding mission released its report in September 2022 that indicated continued human rights violations including acts of torture, sexual violence and mass surveillance by the Venezuelan government to repress dissenting voices. Following this report, the United

Nations Human Rights Council extended the mandate of the fact-finding mission for a further 2 years.⁵⁹⁴⁰ According to Amnesty International's latest report,⁵⁹⁴¹ the government continues to use repression and intimidation to silence dissent and maintain its grip on power, with widespread human rights abuses committed by security forces and pro-government armed groups.

OECD AI Principles / G20 AI Guidelines

Venezuela is not a member of the OECD⁵⁹⁴² and has not endorsed the OECD AI principles.

UNESCO Recommendation on the Ethics of Artificial Intelligence

The Venezuela is a member state of UNESCO having joined as a member on 25th September, 1946.⁵⁹⁴³ Venezuela endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.⁵⁹⁴⁴

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the recommendation on artificial intelligence ethics in Latin America and the Caribbean. They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts.⁵⁹⁴⁵ It is so far not known whether Venezuela will take part in this endeavor.

Venezuela signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.⁵⁹⁴⁶ It aligns with the UNESCO Recommendation and

⁵⁹⁴⁰ United Nations Human Rights Council, *Venezuela: new UN report details* responsibilities for crimes against humanity to repress dissent and highlights situation in remotes mining areas (Sept. 2022), <u>https://www.ohchr.org/en/press-</u>

Declaracion de Santiago "Para promover una inteligencia artificial ética en América Latina y el Caribe" (Oct. 2023),

establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.⁵⁹⁴⁷

Evaluation

Venezuela has neither an AI strategy nor a data protection law with an independent supervisory authority. In a country deemed "not free," the use of AI to comfort the power in place and reinforce authoritarian practices is a major concern. However, Venezuela endorsed the UNESCO Recommendation on the Ethics of AI which could prove useful in taming the risks posed by AI.

https://minciencia.gob.cl/uploads/filer_public/40/2a/402a35a0-1222-4dab-b090-5c81bbf34237/declaracion_de_santiago.pdf.

Vietnam

National AI Strategy

In March 2021, the Prime Minister's Office for the Socialist Republic of Vietnam published the government's "National Strategy on R&D and Application of Artificial Intelligence. The Strategy outlines Vietnam's AI ambitions projected through 2030, with specific, measurable, and incremental targets by 2025 and 2030.⁵⁹⁴⁸ The bulk of the Strategy focuses on planned investments in education, innovation, and infrastructure, aimed at helping Vietnam become a leading hub for AI technologies within the Association of Southeast Asian Nations (ASEAN).

The Strategy proclaims AI as "the background technology for the Fourth Industrial Revolution," pledging to align the nation's AI investments with its "socio-economic development tasks and goals," "national defense and security," "to unlock the potentials of the entrepreneurs," and to "effectively mobilize all resources." Vietnam's AI strategy additionally outlines the government's commitment to creating "a system of legal documents and regulations related to AI" aimed at "developing and applying AI with people and entrepreneurs at the center, avoiding technology abuse and infringement upon legitimate rights and interests of organizations and individuals."

The strategy assigns to Vietnam's Ministry of Public Security a lead role in "develop[ing] and supplement[ing] additional legal documents on privacy protection, human rights, security related to the development and application of AI and in ensuring network security for AI-related activities."

In keeping with principles of digital inclusivity, the Strategy commits to applying AI towards elevating public services, pledging to improve the "operational efficiency of the public administrative management system in social resources allocation and mobilization, social management and urban planning, especially in big cities such as Hanoi and Ho Chi Minh City and Da Nang."

Vietnam's AI strategy also forecasts plans to design AI applications in "military, defense, in the advancing and modernization of equipment and weapons, in the development of operational plans, in national defense systems...immigration management systems, high-tech crime control systems, and [to] develop proactive technical solutions to prevent crimes using scientific achievements on AI."

⁵⁹⁴⁸ Viet Nam Government Portal, *National Strategy On R&D and Application of Artificial Intelligence*, (Apr. 10, 2021), <u>https://en.baochinhphu.vn/national-strategy-on-</u> rd-and-application-of-artificial-intelligence-11140663.htm

Public Participation

Vietnam's AI strategy does not mention any structured process for public participation in the development of AI policy. As noted, the strategy tasks the Ministry of Public Security with devising a legal structure that places "people and entrepreneurs at the center," yet there has been no indication of an opportunity for the public to give feedback on potential AI regulations since the release of the strategy. By contrast, a draft Personal Data Protection Bill was issued for public consultation on 9th February 2021.⁵⁹⁴⁹ The ratified data protection law, Decree No. 53, aimed to boost cybersecurity in Vietnam, went into effect on October 1, 2022; yet no evidence was available regarding whether or how public participation meaningfully contributed to the recent data privacy legislation.⁵⁹⁵⁰

Data Protection

While Vietnam has not yet enacted a comprehensive data protection law, the country's constitution includes provisions identifying rights pertaining to personal data. As per article 21 of the Constitution of Vietnam, "everyone is entitled to the inviolability of personal privacy, personal secrecy, and familial secrecy and has the right to protect his or her honor and prestige."⁵⁹⁵¹ Several laws and regulations are also of relevance.

The Vietnamese government ratified a Law on Cybersecurity, Decree No. 53/2022/ND-CP ("Decree 53/2022") on 15 August 2022 which became fully effective on 1 October 2022.⁵⁹⁵² In keeping with OECD Principle 1.4 on "robustness, security, and safety," the law prescribes measures aimed at shoring up data security and restricting illegal activities, in part via a "data localization" requirement mandating that foreign entities store certain categories of data pertaining to users in Vietnam within the

⁵⁹⁵² Socialist Republic of Vietnam, Decree: Elaborating a number of articles on the law on cybersecurity of Vietnam (Nov. 7, 2022), <u>https://thuvienphapluat.vn/van-</u> <u>ban/EN/Cong-nghe-thong-tin/Decree-53-2022-ND-CP-elaborating-the-Law-on-</u> cybersecurity-of-Vietnam/527750/tieng-anh.aspx

country's borders. However, there is insufficient infrastructure to prevent cybersecurity and digital rights violations of Vietnamese citizens.⁵⁹⁵³ Also, as indicated in this report, there is State-sponsored espionage and surveillance that infiltrates the digital real estate of Vietnamese citizens.⁵⁹⁵⁴ Citizens of Vietnam remain both a source and victim of cyberattacks. In 2019, Kaspersky, a leading cybersecurity firm declared Vietnam as the 'second most cyber-attacked country in the world.'⁵⁹⁵⁵ The country is also the source of cyberattacks. In 2018, over 992,952 originated in Vietnam.⁵⁹⁵⁶

Data protection norms have additionally been developed through other laws, notably the 2016 Law on Network Information Security ("LNIS").⁵⁹⁵⁷ This law assigns organizations the responsibility of protecting the personal data to which it is given access, and identifies legal consequences for individuals and organizations who violate these provisions. Section 2 of the law stipulates a requirement of consent from individuals when organizations collect personal information (Article 17), and explicitly requires the deletion of personal data upon accomplishment of the purpose (Article 18). Sanctions punishing violations of personal data use can also be found in other regulations. For example, Vietnam's 2020 Decree No.15/2020/ND-CP assigns fines for infringements of personal information and privacy including email, postal and telephonic spam.⁵⁹⁵⁸

None of these data protection rules apply to the state itself. While the new law requiring data localization may indeed strengthen cybersecurity, it also provides the Vietnamese government with additional

authoritarian leverage, cementing restrictions on residents' access to international media, social media, and other applications.⁵⁹⁵⁹

Vietnam's landscape of data governance is a collage of legal instruments variously reflected in the country's constitution, criminal code, civil code, and a raft of sectoral and procedural regulations. The Ministry of Public Security's (MPS) much-anticipated Draft Decree on Personal Data Protection ("draft PDPD") and the Draft Decree on Sanctions against Administrative Violations in Cybersecurity ("draft cybersecurity decree") constitute the Vietnamese government's ambitious effort at consolidating its numerous regulations into one comprehensive law.

In February 2023, the Vietnamese Government issued Resolution No. 13/NQ-CP (Resolution 13) to formally approve all the Personal Data Protection Decree (PDPD) formulation dossier, including the draft decree's content, as well as to seek appraisal comments from the National Assembly Standing Committee (NASC) on the draft decree. Resolution 13 signifies the upcoming issuance of the PDPD.⁵⁹⁶⁰

One of the significant developments out of Resolution 13 is that until then the Vietnamese law, including the prior published version of the Draft PDPD, had never used the terms "data controller", "data processor," and "parties controlling and processing personal data." According to Tilleke & Gibbins,⁵⁹⁶¹ the inclusion of these terms suggests that the latest version of the Draft PDPD has adopted the GDPR-like concepts of "data controller" and "data processor." However, until the latest version of the Draft PDPD can be assessed, it is uncertain how these concepts are defined and whether they are fully in line with GDPR definitions, let alone rights and obligations.⁵⁹⁶²

Algorithmic Transparency

Vietnam's AI strategy commits to the development of a legal infrastructure that will uphold "privacy protection, human rights, security related to the development and application of AI"; yet there is no mention

⁵⁹⁵⁹ Freedom House, *Freedom in the World 2022: the global expansion of authoritarian rule* 2022, (Nov. 10, 2022), <u>https://freedomhouse.org/country/vietnam/freedom-</u>world/2022

⁵⁹⁶⁰ Tran MH, Vietnam: Latest Updates on the Draft Personal Data Protection Draft Decree via Connect Tech (Feb. 2023), <u>https://www.connectontech.com/vietnam-latest-updates-on-the-draft-personal-data-protection-draft-decree/</u>

⁵⁹⁶² Ibid.

in either this or other official documents of a pledge to ensure algorithmic transparency.⁵⁹⁶³ It remains to be seen what will be the final provisions of the PDPD once adopted.

Based on the Freedom House Country Report on Vietnam,⁵⁹⁶⁴ the government uses a variety of legislative machinery to acquire citizens' personal data and engineer sophisticated forms of mass surveillance. These include the Cybersecurity Law 2019, the Publishing Law, the Penal Code, the Law on Protection of State Secrets 2018, the Law on Information Security 2016, and a number of decrees. One notable example is Bluezone--a tracing application ostensibly introduced to control COVID-19. Freedom House reports that "it shared user data with the government without disclosing that fact to users. The source code was not made available for external auditing. In late May 2021, the Ministry of Health issued an instruction to local governments that recommended sanctioning people who did not install Bluezone and other COVID apps before entering certain public places and facilities; local authorities were tasked with determining the specific sanction. As of May 2021, Bluezone had reached 31.88 million downloads." The report cites other examples of State-supported phishing attacks to acquire the personal data of citizens, especially dissidents and activists. No right to algorithmic transparency exist which would allow for citizens to obtain judicial redress, should it be a possibility.

Rice ATMs

In the early months of the COVID-19 lockdown in 2020, a business leader in Vietnam partnered with community organizations to deploy "rice ATMs" (automatic rice-dispensing machines) enabled with AI-facial recognition technology to ration food to people in need.⁵⁹⁶⁵ This program was widely publicized internationally, credited as an instance of applying advanced technology towards resolving basic human needs during this

public health crisis.⁵⁹⁶⁶ This popular program has reportedly helped cement a benign view of AI and facial recognition technology within the country's population.⁵⁹⁶⁷

Smart City Initiatives

Vietnam's "smart city" initiative began as a directive from the prime minister in 2018 to promote sustainable cities.⁵⁹⁶⁸ The country's 2021 national AI strategy elaborated on this plan, promising substantial AI investments to upgrade and target resources in the country's most populous cities - namely Hanoi, Ho Chi Minh, Da Nang, and Can Tho - to benefit the quality of life and improve services ranging from energy distribution to traffic control to water supply to education. Vietnam's Ministry of Information and Communication released codified principles regarding the smart cities project, committing to "a people-centered approach...[to] encourage the neutrality of technology...[to] pilot new services with improvements based on the experience of users; [to] use open standards or open sources."5969 The OECD AI Policy Observatory has identified the smart cities initiative as addressing its core principle 2.2, "Fostering a digital ecosystem for AI." Vietnam's smart city policies additionally echo OECD's core principle 1.1 pertaining to "inclusive growth, sustainable development, and wellbeing." Alongside these potentially vast benefits, there are credible reasons for concern that the smart cities project will include surveillance technologies that will further the government's capacity for authoritarian control.⁵⁹⁷⁰

Aus4Innovation: Innovation Policy Exchange with Australia

In 2017, Australia and Vietnam announced an "innovation partnership" named "Aus4Innovation", aimed at building prosperity within Vietnam and furthering a strategic and economic partnership between the two countries. Currently overseen by CSIRO, the Australian Government agency responsible for scientific research, Aus4Innovation includes a notable "policy exchange", aimed at helping Vietnam "bring up the living standards of all of [its] citizens over the coming decades", while setting the stage for Australia to be a source of policy influence in establishing "an international best practice review based on expert input from Australia."⁵⁹⁷¹ The OECD AI Policy Observatory has identified Aus4Innovation as representing an instance of its core principle 2.5, "International cooperation for trustworthy AI."⁵⁹⁷² The Aus4Innovation Program also supported 2022 Vietnam Artificial Intelligence Day, (AIV4N), a conference that brings together government representatives, policymakers, and practitioners to discuss the latest development in Vietnam's AI landscape.⁵⁹⁷³

Public Security and Identity Verification

Since April 2021, the Inspection Commissions of Party organizations at all levels in the PPSF have been mandated with building their action plans to realize the Party resolutions regarding digital technology, artificial intelligence, and the 4th Industrial Revolution, contributing to building elite and modern public security forces by 2030.⁵⁹⁷⁴

In December 2022, Deputy Minister Luong Tam Quang asked the Immigration Department to deploy 37 level-4 public services related to entry and exit, perfect the issuance of electronic passports, promote research and application of science and technology, artificial intelligence, and biometric identification to the management of entry and exit.⁵⁹⁷⁵

Predictive Policing

In its July 2022 report on inclusive development and artificial intelligence in Southeast Asia, the Asia Society Policy Institute notes, if AI adoption is "nascent" in Vietnam, "the topic of ethics in relation to AI has barely begun to percolate in the country."⁵⁹⁷⁶ The institute highlights with particular concern Vietnam's stated plans to use AI applications in policing and immigration, "to proactively prevent crimes," with the implication that Vietnam intends to apply surveillance technologies in developing predictive policing. The Asia Society Policy Institute report summarizes, "While there is some degree of recognition in Vietnam of the importance of AI ethics, their formulation and application remain underexplored."

EdTech and Children Tracking

Human Rights Watch conducted an analysis of education technology (EdTech) products between March and August 2021 on the prevalence and frequency of tracking technology embedded in each product. This report is a global investigation of EdTech products endorsed by 49 governments for children's online education learning during the Covid-19 pandemic. Vietnam was one of the 49 countries analyzed.

It is reported that out of a total of 65 EdTech products built or financed by governments, the majority—56, or 86 percent—were found transmitting children's data to AdTech companies. Included in the 56 government-built EdTech products is Vietnam's OLM, which was also noted to have failed to offer any privacy policy at all, thus keeping students in the dark about how the government was handling their personal data and privacy.⁵⁹⁷⁷

Human Rights

Vietnam has been designated as "Not Free" by Freedom House, scoring 19 out of 100 in the think tank's "freedom in the world" metrics, with particularly low marks (3 out of 40) for "political rights", and a low score (16 out of 60) for metrics pertaining to "civil liberties".⁵⁹⁷⁸ As the most recent Freedom House global report elaborates, "freedom of

⁵⁹⁷⁸ Freedom House, *Freedom in the World 2022: the global expansion of authoritarian rule* (Nov. 10, 2022), <u>https://freedomhouse.org/country/vietnam/freedom-world/2022</u>

expression, religious freedom, and civil society activism are tightly restricted" within Vietnam, with leaders having increasingly "cracked down on citizens' use of social media and the internet to voice dissent and share uncensored information." Vietnam's data protection laws, requiring "data localization" within the country's borders for a range of applications, additionally restricts residents' ability to access information and media from abroad. Freedom House further ranks Vietnam 22 out of 100, "Not Free" in its Freedom On The Net Report for 2022. This was attributed primarily to State restrictions over content access, its escalation of digital surveillance and harassment of digital activists.⁵⁹⁷⁹

OECD / G20 AI Principles

Vietnam has not explicitly endorsed the OECD / G20 AI principles.⁵⁹⁸⁰ Yet, several elements of its national strategy echo some of the OECD AI principles. For example, OECD AI Principle 1.2, "AI systems should be designed in a way that respects the rule of law, human rights, democratic values, and diversity and should include appropriate safeguards to ensure a fair and just society." The Vietnam AI Strategy endorses "developing and applying AI with people...at the center, avoiding technology abuse and infringement upon legitimate rights and interests of organizations and individuals," and pledges to "develop and supplement additional legal documents on privacy protection, human rights, security related to the development and application of AI and on ensuring network security for AI-related activities."

Vietnam most robustly endorses a version of OECD AI principle 2.1, "Governments should facilitate public and private investment in research and development to spur innovation in trustworthy AI."⁵⁹⁸¹ Vietnam's AI Strategy document mirrors this language in its pledge to establish "national innovation centers for AI; increasing the number of innovative AI startups and total investment in the AI sector in Vietnam...[to] focus the public investment in forming mutually used, shared and open administrative databases."

The OECD AI Policy Observatory report on Vietnam's AI policies highlights the country's investment in Ho Chi Minh as a Smart City

beginning in 2017 as marking the implementation of OECD AI Principle 2.2, "Fostering a digital ecosystem for AI: Governments should foster accessible AI ecosystems with digital infrastructure and technologies, and mechanisms to share data and knowledge."5982 The report elaborates, "Ho Chi Minh (HCM) City is being transformed into a smart city and will develop blockchain infrastructure to minimize potential risks...to help the City deal with problems such as rapid population growth and inadequate healthcare, education, and transport services...; to ensure sustainable economic growth, taking the City towards a digital, knowledge-based economy and attracting investments."5983

Additionally, the OECD AI Policy Observatory has identified Vietnam's partnership with Australia, which includes a significant policy exchange component, as an instance of its core principle 2.5 pertaining to "international cooperation for trustworthy AI."5984

UNESCO Recommendation on the Ethics of Artificial Intelligence

November 2021, Vietnam endorsed the UNESCO In Recommendation on the Ethics of AI, together with 192 other UNESCO member states.⁵⁹⁸⁵ However, there is no evidence so far that Vietnam has developed policies or oversight mechanisms to support the implementation of the UNESCO Recommendation, other than in the area of data protection.5986

Evaluation

In March 2021, the Prime Minister's Office released its formal AI strategy for the next decade. The government of Vietnam pledged that the nation would become an innovation leader in AI technology within the ASEAN nations, promising to apply AI towards the betterment of its citizens and to devise a system of laws and regulations that would prevent "abuse and infringement upon legitimate rights and interests of organizations and individuals," as well as pledging to develop "legal

⁵⁹⁸⁴ OECD AI Policy Observatory, Aus4Innovation (Nov. 12, 2022), https://oecd.ai/en/dashboards/policy-initiatives/http:%2F%2Faipo.oecd.org%2F2021data-policyInitiatives-26843 5985 UNESCO Recommendations on Ethics of AI (2021) https://en.unesco.org/artificial-

intelligence/ethics

⁵⁹⁸⁶ Refer to the section of this country report, *Data Protection*.

documents on privacy protection, human rights...for AI-related activities."5987

Since that time, Vietnam has continued to invest in programs within the country, including international partnerships aimed at improving its technological leadership and promoting the industry both domestically and abroad. However, there is little evidence that the country has made progress in establishing a framework that would protect human rights with respect to this rapidly advancing technology. Perhaps the most salient risk is that AI may be used to further authoritarian rule. As Freedom House reported recently in its 2022 report designating Vietnam as "Not Free", "authorities have increasingly cracked down on citizens' use of social media and the internet to voice dissent and share uncensored information."5988 The Asia Society Policy Institute notes, Vietnam's commitment to applying AI to "proactively prevent crimes' begs further discussion about the implications of surveillance technologies, algorithmic processes, and quality of datasets for predictive policing purposes."5989 Freedom House reports that Vietnam already "engages in surveillance of private online activity" and that "authorities continue to attack and imprison those that criticize the state."⁵⁹⁹⁰ In these circumstances, it remains to be seen which concrete steps Vietnam will take to implement the UNESCO Recommendation on the Ethics of AL

METHODOLOGY

Scope

We assessed the AI policies and practices of the top 40 countries by GDP. We also looked at 35 other countries we considered "high-impact" and allowing for the AIDV Index to be representative of both the diversity and commonalities among countries worldwide in terms of AI policies and issues encountered and best practices. Our aim is to examine those countries likely to have the greatest policy impact in the AI field. We considered also influential intergovernmental organizations, such as the institutions of the European Union, the Council of Europe, the OECD, UNESCO and G20, but we did not attempt to evaluate their AI policies.

Time Period

The research for the 2020 edition of the report was undertaken in late 2020 for publication in mid-December 2020. For the 2021 edition of the report, published in mid-February 2022, we continued to gather information throughout 2021 and into early 2022. For this year edition, information was gathered throughout 2022 and into early 2023.

Factors

We identified 12 factors to assess national AI policies and practices. The factors reflect well known frameworks for AI policy (the OECD/G20 AI Principles, UNESCO Recommendation on the Ethics of AI), human rights (the Universal Declaration for Human Rights), and democratic decision-making (transparency, public participation, and access to policy documents). We also highlighted key themes for AI policy, including algorithmic transparency and accountability.

On certain factors, we deferred to well established legal frameworks and well-known international organizations. For example, countries within the European Union are subject to the General Data Protection Regulation and the Data Protection Law Enforcement Directive which provide certain rights to those who are subject to automated decision-making, including access to the underlying logic of an algorithm. The Council of Europe Modernized Convention 108 provides similar legal rights regarding AI. On general human rights assessments, we deferred to the reports of Freedom House, Human Rights Watch, and Amnesty International. We also recognized those countries that endorsed the resolution on AI and Ethics, the resolution on AI and Accountability and the resolution on facial

recognition adopted by the Global Privacy Assembly, the global association of leading privacy experts and officials.

On the issue of implementation, we recognize that it is difficult to assess empirically progress toward AI policy goals, particularly when the underlying objective is not measured in quantitative terms, such as would be the case for research investment, papers published, or patents obtained. Nonetheless we believe this must be a key component of the evaluation. We turned first to the OECD, which has begun a process to track implementation of the OECD AI Principles. The OECD published substantial reports in 2020 and 2021 on implementation of the OECD AI Principles.⁵⁹⁹¹ The OECD has also encouraged member states to provide overviews on national AI strategies to the OECD AI Group of Experts, though at present these reports are not generally available to the public.

We looked next at national developments, both favorable and controversial, concerning the implementation of AI policy. We consulted official sources but also reviewed independent sources, such as news sources, agencies, and thinks thanks not directly aligned with national governments, for these assessments.

Finally, because AI policy is in the early days, there is far more information about what governments intend to do than what they have done. We encourage governments to establish independent agencies with annual public reporting requirements to provide information about progress toward national goals and compliances with international policy frameworks. Such reports could provide the basis for future comparative evaluations.

The Metrics

Q1. Has the country endorsed the OECD/G20 AI Principles?

The OECD/G20 AI Principles are the first global framework for AI policy. Endorsement of these principles provides a baseline to determine a country's compliance with international AI policy norms. Countries that have endorsed the OECD/G20 AI Principles fall into three categories: (1) OECD Member Countries, (2) Non-member OECD Countries that endorsed the OECD AI Principles, and (3) G-20 Member countries that subsequently endorsed the G20 AI Principles which follow closely the original OECD AI Principles.⁵⁹⁹²

⁵⁹⁹¹ OECD, *State of Implementation of the OECD AI Principles* (June 18, 2021), https://www.oecd.org/digital/state-of-implementation-of-the-oecd-ai-principles-1cd40c44-en.htm

⁵⁹⁹² The G20 AI Principles directly restate the value-based principles in Part I of the OECD AI Principles

Determinations in this category are essentially binary: a country has either endorsed the OECD/G20 AI Principles or it has not.

Q2. Is the country implementing the OECD AI Principles?

Endorsement alone of the AI Principles is not sufficient to determine a country's AI practices. The OECD itself has begun a process to track implementation of the AI Principles, but the reporting to date is mostly anecdotal and inconclusive. We begin our analysis of implementation with the OECD reporting and then look to other sources, including government documents, news articles and NGO reports, to assess implementation.

Determinations in this category are more nuanced: some countries have called attention to their efforts to implement the OECD/G20 AI principles. Others have done so in practice without explicit references to the AI Principles. We have made reasonable efforts to identify national projects that implement the OECD/G20 AI Principles, based on reporting from the OECD, but information is often difficult to find. In some instances, we were able to acknowledge partial implementation (P). In 2020, we concluded that no country has fully implemented the OECD/G20 AI Principles and therefore no country received a Y determination. In 2021, we have chosen to recognize the leading role of four countries in the development and implementation of the OECD AI Principles – Canada, France, Korea, and Japan.

Q3. Has the country endorsed the Universal Declaration of Human Rights?

In the human rights field, the Universal Declaration of Human Rights is the most well-known and widely adopted legal framework for the protection of fundamental rights. Although the UDHR preceded the rise of Artificial Intelligence, we anticipated that many of the significant policy debates ahead will be grounded in principles set out in the Universal Declaration. For this reason, we propose endorsement of the UDHR as a second baseline to assess country AI policies and practices.

Determinations in this category are essentially binary: a country has either endorsed the UDHR or it has not. The one notable exception is Saudi Arabia which did not endorse the UDHR but is a member of the United Nations and has recognized, according to human rights organizations, certain human rights obligations.

Q4. Is the country implementing the Universal Declaration for Human Rights?

Like the question regarding implementation of the OECD AI Principles, measuring implementation of the UDHR is not a simple task. Several well-established international organizations, such as Freedom

House and Human Rights Watch, have developed formal metrics to evaluate compliance with human rights norms. We defer to these organizations for the evaluation of general human rights practices, while also noting that several of these factors may be useful in future evaluation of AI practices.

Determinations in this category typically fell into two categories: Y, a country widely recognized for its defense of human rights as generally understood by reference to the UDHR, and P, a country in partial compliance with human rights obligations. In 2021, we made this determination more precise. Countries that Freedom House designated as "Free" received Y. A country designated "Partly Free" was designated "P" and countries designated "Note Free" were designated "N."

Q5. Has the country established a process for meaningful public participation in the development of a national AI Policy?

Almost every country in our report has set out a national AI strategy or action plan. We have attempted to fairly summarize and present these initiatives. But we are also interested in the development of these policies. Was there an opportunity for public participation? Was there a formal consultation process? Do the national AI policies reflect the views of those who may be impacted by the deployment of AI techniques? And is there an ongoing mechanism for public participation as national AI policies evolve?

Determinations in this category were based on our ability to identify opportunities for meaningful public participation. The distinction between a Y and P in this category reflected the quality of the opportunity for public participation.

Q6. Are materials about the country's *AI* policies and practices readily available to the public?

Effective public participation requires public access to relevant documents. Has the national government taken steps to ensure that documents concerning AI policy are readily available, complete, and accurate? Are the materials available on the website of a public agency or are they maintained by a private company? Are there opportunities for future comment?

The determinations in this category often aligned with the determinations about public participation. We respect the practice of countries to publish reports, and to seek public reports, in the national language. We note however that the absence of an English translation may make independent evaluation of a country's AI policies and practices more difficult. We discuss the issue of Language in more detail below.

Q7. Does the country have an independent (agency/mechanism) for AI oversight?

All governments understandably seek to advance national AI priorities. And most governments have directed a science or industry ministry to lead national efforts. But the deployment of AI techniques also raises concerns about accountability, privacy and data protection, fairness, transparency, and equity. For these reasons, we look to determine whether countries have independent agencies, such as a data protection agency, a human rights commission, or an AI ethics commission, to protect fundamental rights.

Determinations in this category were based on the actual establishment of mechanisms to oversee or guide AI practices. Again, the difference between a Y and a P determination reflected the quality and breadth of the oversight mechanisms.

Q8. Do the following goals appear in the national AI policy: "Fairness," "Accountability," "Transparency," "Rule of Law," "Fundamental Rights"?

There are many themes in the AI policy realm. We identified these five goals as the most significant. They appear frequently in AI policy frameworks and they are grounded in law. We recognize that countries that have endorsed the OECD/G20 AI Principles have, by implication, endorsed these goals. But this question asks whether countries have explicitly endorsed these goals in their national AI strategies.

Determinations in this category attempt to evaluate the extent to which a country has prioritized these AI policy goals. Full endorsement received a Y, partial endorsement a P.

Q9. Has the country by law established a right to Algorithmic Transparency?

One of the most significant AI policy issues today is Algorithmic Transparency. We take the position that individuals should have the right to access the logic, the factors, and the data that contributed to a decision concerning them. This right is currently established in two legal frameworks: The General Data Projection Regulation of the European Union (Article 22) and the Council of Europe Convention 108+, the modernized Privacy Convention (Article 9). Countries that are within the EU and/or signatories to COE 108+ have therefore established this right. We have also considered whether countries, by national law, have established the right to algorithmic transparency.

For determinations in this category, we assigned a Y to those countries that are subject to the GDPR and/or the Council of Europe Convention. In a subsequent review, we will investigate whether countries

have *implemented* a right to algorithmic transparency. This will provide a more detailed assessment of this key metric.

Q10. Has the country endorsed the UNESCO Recommendation on AI Ethics?

In November 2021, UNESCO member states adopted the first ever global agreement on the Ethics of Artificial Intelligence. We consider this a watershed moment in the development of AI policies and have incorporated country support for the UNECO framework as a positive indicator for national AI policies and practices. Determinations in this category are similar to those regarding endorsement of the OECD AI Principles and the UN Declaration of Human Rights, and not an indication of implementation of the framework. We note that that Hong Kong, Israel, Taiwan, and the United States were not among the signatories for reasons unrelated to their views on AI policies and practices.

[Note on Methodology: in AIDV-2020, we asked in Q11 whether countries supported the Social Contract for AI and in AIDV-2021, we asked in Q10 whether countries had endorsed the Universal Guidelines on AI. We described both as "aspirational goals for the Age of AI that go beyond the OECD/G20 AI Principles." In our assessment, country support for the UNESCO Recommendation on AI Ethics constitutes a similar metric that is also more easily determined, at least with regard to initial support. Nonetheless, this constitutes a change in the methodology originally established in order to adapt to the rapid evolution of AI policy which we fully acknowledge.]

Q11: Is the country implementing the UNESCO Recommendation on the *Ethics of AI*?

Endorsement alone of the UNESCO Recommendation is not sufficient to determine a country's AI practices. UNESCO itself has begun a process to track implementation of the Recommendation, but the reporting to date is not yet available and is in its infancy. We begin our analysis of implementation with UNESCO documents pertaining to planned partnerships and the 2022 UNESCO AI Needs Assessment Survey in Africa.⁵⁹⁹³ However, we deepened the analysis by searching for statements made by countries pledging their commitment to implement the UNESCO

⁵⁹⁹³ UNESCO, UNESCO Launches the findings of the Artificial Intelligence Needs Assessment Survey in Africa (Sept. 28, 2022), <u>https://www.unesco.org/en/articles/unesco-</u> launches-findings-artificial-intelligence-needs-assessment-survey-

 $\frac{a frica? TSPD_101_R0=080713870 fab2000 b997 f8502 bad446 dd247 c280241 aa 27 fd78227}{94303 d84 c6660 f286 b5a18426908 ddf3745 b1430007 a6 bae 5 f69251 a9 f6e076 c992 f212 add}{23 a de97 d15 b9 e6 e1 e4 b6982 ed494862 a fe0 a ec 119 ec 0669 b25 f164 dab4 a0 2 b42}$

Recommendation. We tracked preliminary announcements regarding implementation and monitoring mechanisms which shall be put into place. We then look to other sources, including regional organizations documents, news articles and NGO reports, to assess implementation.

Determinations in this category show that some countries have attention to their efforts to implement the UNESCO called Recommendation and help other countries to implement it. We also started to identify other countries which have done so in practice without explicit references to the Recommendation. We will proceed in the future with implement identifying national projects that the UNESCO Recommendation, based on future reporting from the UNESCO, but information is often difficult to find at this stage and not made publicly available yet. In some instances, we were able to acknowledge partial implementation (P). We have also chosen to recognize the leading role of a few countries in the development and implementation of the UNESCO Recommendation (Y).

Q12: Has the country's Data Protection Agency endorsed the 2018 GPA Resolution on AI and Ethics, the 2020 GPA Resolution on AI and Accountability, the 2022 GPA Resolution on AI and Facial Recognition and the 2023 GPA Resolution on Generative Artificial Intelligence Systems?

In the fall of 2018, the Global Privacy Assembly (then known as the International Conference of Data Protection and Privacy Commissioners). adopted a foundational Declaration on Ethics and Data Protection in Artificial Intelligence.⁵⁹⁹⁴ The 2018 Declaration emphasized fairness, vigilance, transparency and intelligibility, and measures to reduce unlawful bias and discrimination. In 2020, the GPA adopted a resolution on AI and Accountability.⁵⁹⁹⁵ That resolution sets out a dozen steps for AI accountability, including the preparation of human rights impact assessments. This Declaration was followed by three other key AI-related resolutions: the 2020 resolution on AI and Accountability, the 2022 resolution on AI and Facial Recognition and the 2023 resolution on Generative Artificial Intelligence Systems.

⁵⁹⁹⁴ ICPDPC, Declaration on Ethics and Data Protection in Artificial Intelligence (including list of authors and co-sponsors) (Oct. 23, 2018), http://globalprivacyassembly.org/wp-content/uploads/2018/10/20180922 ICDPPC-

⁴⁰th AI-Declaration ADOPTED.pdf 5995 Global Privacy Assembly, Adopted Resolution on Accountability in the Development and Use of Artificial Intelligence (including list of main sponsors and co-sponsors) (Oct. 2020), https://globalprivacyassembly.org/wp-content/uploads/2020/11/GPA-Resolutionon-Accountability-in-the-Development-and-Use-of-AI-EN.pdf

We believe that support for these resolutions is an important indicator of a country's commitment to AI and data protection and effective implementation of AI policy goals. We checked to see which countries explicitly sponsored the resolutions. We will also consider other notable initiatives in future global surveys of AI policies and practices.

For determinations in this category, we assigned a Y to countries that sponsored the four resolutions, an N to countries that sponsored none of them (or are not represented at the GPA), and P to the countries that sponsored only one, two or three of these resolutions.

As an aside to the Global Privacy Assembly, we would recommend new mechanisms that would allow members to endorse resolutions concerning AI in subsequent years. We will update country ratings accordingly.

Hong Kong

Hong Kong constitutes a special case in our review of national AI policies and practices. Although Hong Kong, an Administrative Region of the People's Republic of China (HKSAR) is not a country, it ranks number 37 in the world for GDP, placing it within the top 40 countries we reviewed for the 2021 index. Hong Kong also has an active data protection agency that has contributed to the formulation of the AI policies endorsed by the Global Privacy Assembly. As Hong Kong is not a country it could not enter into international agreements, such as the OECD AI Principles. So, we treated commitments made by China to these polices as if they were made by Hong Kong. At the same time, we recognized variances in AI practices in the Region as well as the different ratings for compliance with the human rights norms, as determined by Freedom House.

Exemplars

In developing the methodology, we also created a list of exemplar countries for several metrics. For example, on Question 5, concerning meaningful public participation, we were struck by the high level of public engagement in Switzerland. On Question 6, concerning the availability of a countries AI policies and practices, Germany's *Plattform Lernende Systeme* offers a map that shows, by region, AI developments across the country. And the multiple agencies in France, the CNIL and the Defender of Rights, provide a very good example of independent oversight for AI, highlighted by Question 7.

Scoring

We assigned a numeric value of 1.0 to each "Y" answer, 0.5 to each "P" answer, and 0.0 to each "N" or "U" answer. (We may revise scores upward for U answers upon receipt of evidence regarding progress toward the specific metric). We then tallied the numbers, weighing each metric equally, and produced a total score. A top score would be 12, a bottom score is 0. On the basis of total scores, we grouped countries by color gradation and then into tiers. The groupings reflect a normalized distribution with Yellow or Tier III as the median.

Search Strategy

To locate relevant policy materials, we conducted extensive online searches. Key search terms, often used in combination with "AI" or "Artificial Intelligence," included: "Accountability," "Algorithmic Transparency," "Data Protection," "Digital," "Ethical," "Ethics," "Fairness," "Governance," "Law," "Legislation," "Policy," "Poll," "Privacy," "Regulation, "Strategy," and "Technology."

Descriptive Summary

Each country report includes a descriptive summary labelled "Evaluation." The evaluation does not precisely track the metrics. It is intended to highlight the key findings in the country report and provide a general overview for the reader.

Language

Our research team has rapidly expanded and diversified, with language expertise in various languages such as English, French, German, Italian, Japanese, Korean, Mandarin, Russian, Spanish, Turkish, Uyghur, or Vietnamese. However, we preferred English publications, as they would be considered authoritative original sources or authoritative translations for the international community from the original sources. In some instances, we translated text from non-English to English with a Machine Translation ("[MT]") tool, such as DeepL Translate ("[DT]") or Google Translate ("[GT]"). We noted such instances in the citations.

Citation Format

We adopted a simplified citation format for the *AI and Democratic Values Index 2022.* Each citation includes the author and title of the publication. Where there are multiple authors, we provided the name of the

institution if available but not the names of the authors. We include also a date where there was a final publication date. By way of contrast, cites to websites do not include dates. And we included URLs, which we made transparent so that the reader could quickly assess the source. In a paragraph where there may be multiple references to the same source, we cited to the source in the first instance, but not in subsequent instances unless there was an intervening reference to a different source.

Gender Balance and Diversity

In the development of the *AI and Democratic Values Index*, the selection of team members and reviewers, we strived to maintain gender balance. We have also tried to promote diversity and regional representation.

Bias

We did not explicitly examine the issue of bias in AI, although this is a widely discussed topic and the focus of extensive research, including the bias of data sets. Our view is that the most effective policy response to the problem of bias is the *explicit recognition of Fairness, Accuracy, and Transparency* in AI policy and the implementation of these principles in AI practices. Several questions in the *AI and Democratic Values Index* (Q1, Q2, Q7, Q9, Q10, Q11, Q12) make these factors key metrics for the evaluation of a nation's AI policies.

We also recognize the inherent bias in the construction of all surveys, including in the survey focus, the framing of questions, and the research methodology.⁵⁹⁹⁶

Private Sector Practices

We did not attempt to review or evaluate the practices of private firms or organizations. The *AI and Democratic Values Index* attempts only to evaluate the policies and practices of national governments. We do believe that private firms must act in compliance with law and through democratic institutions, and that the evaluation of government policies must ultimately be the measure of private sector practices.⁵⁹⁹⁷

⁵⁹⁹⁶ Max Weber, Objectivity of Social Science and Science Policy (1904).

⁵⁹⁹⁷ Further discussion of the methodology underlying the *AI Index* is presented in Marc Rotenberg, *Time to Assess National AI Policies*, Blog@CACM (Nov. 24, 2020),

OECD AI Principles

Recommendation of the Council on Artificial Intelligence Adopted May 21, 2019

THE COUNCIL,

HAVING REGARD to Article 5 b) of the Convention on the Organisation for Economic Co-operation and Development of 14 December 1960;

HAVING REGARD to the OECD Guidelines for Multinational Enterprises [OECD/LEGAL/0144]; Recommendation of the Council concerning Guidelines Governing the Protection of Privacy and Transborder Flows of Personal Data [OECD/LEGAL/0188]; Recommendation of the Council concerning Guidelines for Cryptography Policy [OECD/LEGAL/0289]; Recommendation of the Council for Enhanced Access and More Effective Use of Public Information [OECD/LEGAL/0362]; Sector Recommendation of the Council on Digital Security Risk Management for Economic and Social Prosperitv [OECD/LEGAL/0415]: Recommendation of the Council on Consumer Protection in E-commerce [OECD/LEGAL/0422]; Declaration on the Digital Economy: Innovation, Growth Social Prosperity (Cancún Declaration) and Declaration on [OECD/LEGAL/0426]; Strengthening SMEs and Entrepreneurship for Productivity and Inclusive Growth [OECD/LEGAL/0439]; as well as the 2016 Ministerial Statement on Building more Resilient and Inclusive Labour Markets, adopted at the OECD Labour and Employment Ministerial Meeting;

HAVING REGARD to the Sustainable Development Goals set out in the 2030 Agenda for Sustainable Development adopted by the United Nations General Assembly (A/RES/70/1) as well as the 1948 Universal Declaration of Human Rights;

HAVING REGARD to the important work being carried out on artificial intelligence (hereafter, "AI") in other international governmental and non-governmental fora;

RECOGNISING that AI has pervasive, far-reaching and global implications that are transforming societies, economic sectors and the world of work, and are likely to increasingly do so in the future;

RECOGNISING that AI has the potential to improve the welfare and wellbeing of people, to contribute to positive sustainable global economic activity, to increase innovation and productivity, and to help respond to key global challenges;

RECOGNISING that, at the same time, these transformations may have disparate effects within, and between societies and economies, notably regarding economic shifts, competition, transitions in the labour market, inequalities, and implications for democracy and human rights, privacy and data protection, and digital security;

RECOGNISING that trust is a key enabler of digital transformation; that, although the nature of future AI applications and their implications may be hard to foresee, the trustworthiness of AI systems is a key factor for the diffusion and adoption of AI; and that a well-informed whole-of-society public debate is necessary for capturing the beneficial potential of the technology, while limiting the risks associated with it;

UNDERLINING that certain existing national and international legal, regulatory and policy frameworks already have relevance to AI, including those related to human rights, consumer and personal data protection, intellectual property rights, responsible business conduct, and competition, while noting that the appropriateness of some frameworks may need to be assessed and new approaches developed;

RECOGNISING that given the rapid development and implementation of AI, there is a need for a stable policy environment that promotes a humancentric approach to trustworthy AI, that fosters research, preserves economic incentives to innovate, and that applies to all stakeholders according to their role and the context;

CONSIDERING that embracing the opportunities offered, and addressing the challenges raised, by AI applications, and empowering stakeholders to engage is essential to fostering adoption of trustworthy AI in society, and to turning AI trustworthiness into a competitive parameter in the global marketplace;

On the proposal of the Committee on Digital Economy Policy:

I. AGREES that for the purpose of this Recommendation the following terms should be understood as follows:

-*AI system*: An AI system is a machine-based system that can, for a given set of human-defined objectives, make predictions, recommendations, or decisions influencing real or virtual environments. AI systems are designed to operate with varying levels of autonomy.

-AI system lifecycle: AI system lifecycle phases involve: *i*) 'design, data and models'; which is a context-dependent sequence encompassing planning and design, data collection and processing, as well as model building; *ii*) 'verification and validation'; *iii*) 'deployment'; and *iv*) 'operation and monitoring'. These phases often take place in an iterative manner and are not necessarily sequential. The decision to retire

an AI system from operation may occur at any point during the operation and monitoring phase.

-*AI knowledge*: AI knowledge refers to the skills and resources, such as data, code, algorithms, models, research, know-how, training programmes, governance, processes and best practices, required to understand and participate in the AI system lifecycle.

-*AI actors*: AI actors are those who play an active role in the AI system lifecycle, including organisations and individuals that deploy or operate AI. -*Stakeholders*: Stakeholders encompass all organisations and individuals involved in, or affected by, AI systems, directly or indirectly. AI actors are a subset of stakeholders.

Section 1:

Principles for responsible stewardship of trustworthy AI

II. RECOMMENDS that Members and non-Members adhering to this Recommendation (hereafter the "Adherents") promote and implement the following principles for responsible stewardship of trustworthy AI, which are relevant to all stakeholders.

III. CALLS ON all AI actors to promote and implement, according to their respective roles, the following Principles for responsible stewardship of trustworthy AI.

IV. UNDERLINES that the following principles are complementary and should be considered as a whole.

1.1.Inclusive growth, sustainable development and well-being

Stakeholders should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for people and the planet, such as augmenting human capabilities and enhancing creativity, advancing inclusion of underrepresented populations, reducing economic, social, gender and other inequalities, and protecting natural environments, thus invigorating inclusive growth, sustainable development and well-being.

1.2. Human-centred values and fairness

a) AI actors should respect the rule of law, human rights and democratic values, throughout the AI system lifecycle. These include freedom, dignity and autonomy, privacy and data protection, non-discrimination and equality, diversity, fairness, social justice, and internationally recognised labour rights.

b) To this end, AI actors should implement mechanisms and safeguards, such as capacity for human determination, that are appropriate to the context and consistent with the state of art.

1.3. Transparency and explainability

AI Actors should commit to transparency and responsible disclosure regarding AI systems. To this end, they should provide meaningful information, appropriate to the context, and consistent with the state of art:

i. to foster a general understanding of AI systems,

ii. to make stakeholders aware of their interactions with AI systems, including in the workplace,

iii.to enable those affected by an AI system to understand the outcome, and,

iv.to enable those adversely affected by an AI system to challenge its outcome based on plain and easy-to-understand information on the factors, and the logic that served as the basis for the prediction, recommendation or decision.

1.4. Robustness, security and safety

a) AI systems should be robust, secure and safe throughout their entire lifecycle so that, in conditions of normal use, foreseeable use or misuse, or other adverse conditions, they function appropriately and do not pose unreasonable safety risk.

b) To this end, AI actors should ensure traceability, including in relation to datasets, processes and decisions made during the AI system lifecycle, to enable analysis of the AI system's outcomes and responses to inquiry, appropriate to the context and consistent with the state of art.

c) AI actors should, based on their roles, the context, and their ability to act, apply a systematic risk management approach to each phase of the AI system lifecycle on a continuous basis to address risks related to AI systems, including privacy, digital security, safety and bias.

1.5. Accountability

AI actors should be accountable for the proper functioning of AI systems and for the respect of the above principles, based on their roles, the context, and consistent with the state of art.

Section 2:

National policies and international co-operation

for trustworthy AI

V.RECOMMENDS that Adherents implement the following recommendations, consistent with the principles in section 1, in their national policies and international co-operation, with special attention to small and medium-sized enterprises (SMEs).

2.1. Investing in AI research and development

a) Governments should consider long-term public investment, and encourage private investment, in research and development,

including interdisciplinary efforts, to spur innovation in trustworthy AI that focus on challenging technical issues and on AI-related social, legal and ethical implications and policy issues.

b) Governments should also consider public investment and encourage private investment in open datasets that are representative and respect privacy and data protection to support an environment for AI research and development that is free of inappropriate bias and to improve interoperability and use of standards.

2.2. Fostering a digital ecosystem for AI

Governments should foster the development of, and access to, a digital ecosystem for trustworthy AI. Such an ecosystem includes in particular digital technologies and infrastructure, and mechanisms for sharing AI knowledge, as appropriate. In this regard, governments should consider promoting mechanisms, such as data trusts, to support the safe, fair, legal and ethical sharing of data.

2.3. Shaping an enabling policy environment for AI

a) Governments should promote a policy environment that supports an agile transition from the research and development stage to the deployment and operation stage for trustworthy AI systems. To this effect, they should consider using experimentation to provide a controlled environment in which AI systems can be tested, and scaled-up, as appropriate.

b) Governments should review and adapt, as appropriate, their policy and regulatory frameworks and assessment mechanisms as they apply to AI systems to encourage innovation and competition for trustworthy AI.

2.4. Building human capacity and preparing for labour market transformation

a) Governments should work closely with stakeholders to prepare for the transformation of the world of work and of society. They should empower people to effectively use and interact with AI systems across the breadth of applications, including by equipping them with the necessary skills.

b) Governments should take steps, including through social dialogue, to ensure a fair transition for workers as AI is deployed, such as through training programmes along the working life, support for those affected by displacement, and access to new opportunities in the labour market.

c) Governments should also work closely with stakeholders to promote the responsible use of AI at work, to enhance the safety of workers and the quality of jobs, to foster entrepreneurship and

productivity, and aim to ensure that the benefits from AI are broadly and fairly shared.

2.5. International co-operation for trustworthy AI

a) Governments, including developing countries and with stakeholders, should actively co-operate to advance these principles and to progress on responsible stewardship of trustworthy AI.

b) Governments should work together in the OECD and other global and regional fora to foster the sharing of AI knowledge, as appropriate. They should encourage international, cross-sectoral and open multi-stakeholder initiatives to garner long-term expertise on AI.

c) Governments should promote the development of multistakeholder, consensus-driven global technical standards for interoperable and trustworthy AI.

d) Governments should also encourage the development, and their own use, of internationally comparable metrics to measure AI research, development and deployment, and gather the evidence base to assess progress in the implementation of these principles.

VI. INVITES the Secretary-General and Adherents to disseminate this Recommendation.

VII. INVITES non-Adherents to take due account of, and adhere to, this Recommendation.

VIII. INSTRUCTS the Committee on Digital Economy Policy:

a) to continue its important work on artificial intelligence building on this Recommendation and taking into account work in other international fora, and to further develop the measurement framework for evidence-based AI policies;

b) to develop and iterate further practical guidance on the implementation of this Recommendation, and to report to the Council on progress made no later than end December 2019;

c) to provide a forum for exchanging information on AI policy and activities including experience with the implementation of this Recommendation, and to foster multi-stakeholder and interdisciplinary dialogue to promote trust in and adoption of AI; and

d) to monitor, in consultation with other relevant Committees, the implementation of this Recommendation and report thereon to the Council no later than five years following its adoption and regularly thereafter.

OECD AI Policy Adherents

The following countries have endorsed the OECD AI Principles

OECD Member Countries

Australia Austria Belgium Canada Chile Colombia Czech Republic Denmark Estonia Finland France Germany Greece Hungary Iceland Ireland Israel Italy Japan Korea Latvia Lithuania Luxembourg Mexico Netherlands New Zealand Norway Poland Portugal Slovak Republic Slovenia Spain Sweden Switzerland Turkey United Kingdom United States

OECD Non-Member Countries

Argentina Brazil Costa Rica Malta Peru Romania Ukraine

G-20 Countries

China India Indonesia Russia Saudi Arabia South Africa

As of December 1, 2020, 51 countries have endorsed the OECD/G20 AI Principles.

Universal Guidelines for AI

Universal Guidelines for Artificial Intelligence 23 October 2018 Brussels, Belgium

New developments in Artificial Intelligence are transforming the world, from science and industry to government administration and finance. The rise of AI decision-making also implicates fundamental rights of fairness, accountability, and transparency. Modern data analysis produces significant outcomes that have real life consequences for people in employment, housing, credit, commerce, and criminal sentencing. Many of these techniques are entirely opaque, leaving individuals unaware whether the decisions were accurate, fair, or even about them.

We propose these Universal Guidelines to inform and improve the design and use of AI. The Guidelines are intended to maximize the benefits of AI, to minimize the risk, and to ensure the protection of human rights. These Guidelines should be incorporated into ethical standards, adopted in national law and international agreements, and built into the design of systems. We state clearly that the primary responsibility for AI systems must reside with those institutions that fund, develop, and deploy these systems.

- 1. **Right to Transparency.** All individuals have the right to know the basis of an AI decision that concerns them. This includes access to the factors, the logic, and techniques that produced the outcome.
- 2. **Right to Human Determination.** All individuals have the right to a final determination made by a person.
- 3. **Identification Obligation.** The institution responsible for an AI system must be made known to the public.
- 4. **Fairness Obligation.** Institutions must ensure that AI systems do not reflect unfair bias or make impermissible discriminatory decisions.
- 5. Assessment and Accountability Obligation. An AI system should be deployed only after an adequate evaluation of its purpose and objectives, its benefits, as well as its risks. Institutions must be responsible for decisions made by an AI system.
- 6. Accuracy, Reliability, and Validity Obligations. Institutions must ensure the accuracy, reliability, and validity of decisions.
- 7. **Data Quality Obligation.** Institutions must establish data provenance, and assure quality and relevance for the data input into algorithms.

- 8. **Public Safety Obligation.** Institutions must assess the public safety risks that arise from the deployment of AI systems that direct or control physical devices, and implement safety controls.
- 9. Cybersecurity Obligation. Institutions must secure AI systems against cybersecurity threats.
- 10. **Prohibition on Secret Profiling.** No institution shall establish or maintain a secret profiling system.
- 11. **Prohibition on Unitary Scoring.** No national government shall establish or maintain a general-purpose score on its citizens or residents.
- 12. **Termination Obligation.** An institution that has established an AI system has an affirmative obligation to terminate the system if human control of the system is no longer possible.

UGAI Explanatory Memorandum

Context

The Universal Guidelines on Artificial Intelligence (UGAI) call attention to the growing challenges of intelligent computational systems and proposes concrete recommendations that can improve and inform their design. At its core, the purpose of the UGAI is to promote transparency and accountability for these systems and to ensure that people retain control over the systems they create. Not all systems fall within the scope of these Guidelines. Our concern is with those systems that impact the rights of people. Above all else, these systems should do no harm.

The declaration is timely. Governments around the word are developing policy proposals and institutions, both public and private, are supporting research and development of "AI." Invariably, there will be an enormous impact on the public, regardless of their participation in the design and development of these systems. And so, the UGAI reflects a public perspective on these challenges.

The UGAI were announced at the 2018 International Data Protection and Privacy Commissioners Conference, among the most significant meetings of technology leaders and data protection experts in history.

The UGAI builds on prior work by scientific societies, think tanks, NGOs, and international organizations. The UGAI incorporates elements of human rights doctrine, data protection law, and ethical guidelines. The Guidelines include several well-established principles for AI governance, and put forward new principles not previously found in similar policy frameworks.

Terminology

The term "Artificial Intelligence" is both broad and imprecise. It includes aspects of machine learning, rule-based decision-making, and other computational techniques. There are also disputes regarding whether Artificial Intelligence is possible. The UGAI simply acknowledges that this term, in common use, covers a wide range of related issues and adopts the term to engage the current debate. There is no attempt here to define its boundaries, other than to assume that AI requires some degree of automated decision-making. The term "Guidelines" follows the practice of policy frameworks that speak primarily to governments and private companies.

The UGAI speaks to the obligations of "institutions" and the rights of "individuals." This follows from the articulation of fair information practices in the data protection field. The UGAI takes the protection of the

individual as a fundamental goal. Institutions, public and private, are understood to be those entities that develop and deploy AI systems. The term "institution" was chosen rather than the more familiar "organization" to underscore the permanent, ongoing nature of the obligations set out in the Guidelines. There is one principle that is addressed to "national governments." The reason for this is discussed below.

Application

These Guidelines should be incorporated into ethical standards, adopted in national law and international agreements, and built into the design of systems.

The Principles

The elements of the **Transparency Principle** can be found in several modern privacy laws, including the US Privacy Act, the EU Data Protection Directive, the GDPR, and the Council of Europe Convention 108. The aim of this principle is to enable independent accountability for automated decisions, with a primary emphasis on the right of the individual to know the basis of an adverse determination. In practical terms, it may not be possible for an individual to interpret the basis of a particular decision, but this does not obviate the need to ensure that such an explanation is possible.

The **Right to a Human Determination** reaffirms that individuals and not machines are responsible for automated decision-making. In many instances, such as the operation of an autonomous vehicle, it would not be possible or practical to insert a human decision prior to an automated decision. But the aim remains to ensure accountability. Thus where an automated system fails, this principle should be understood as a requirement that a human assessment of the outcome be made.

Identification Obligation. This principle seeks to address the identification asymmetry that arises in the interaction between individuals and AI systems. An AI system typically knows a great deal about an individual; the individual may not even know the operator of the AI system. The Identification Obligation establishes the foundation of AI accountability which is to make clear the identity of an AI system and the institution responsible.

The **Fairness Obligation** recognizes that all automated systems make decisions that reflect bias and discrimination, but such decisions should not be normatively unfair. There is no simple answer to the question as to what is unfair or impermissible. The evaluation often depends on context. But the Fairness Obligation makes clear that an assessment of objective outcomes alone is not sufficient to evaluate an AI system.

Normative consequences must be assessed, including those that preexist or may be amplified by an AI system.

The Assessment and Accountability Obligation speaks to the obligation to assess an AI system prior to and during deployment. Regarding assessment, it should be understood that a central purpose of this obligation is to determine whether an AI system should be established. If an assessment reveals substantial risks, such as those suggested by principles concerning Public Safety and Cybersecurity, then the project should not move forward.

The Accuracy, Reliability, and Validity Obligations set out key responsibilities associated with the outcome of automated decisions. The terms are intended to be interpreted both independently and jointly.

The **Data Quality Principle** follows from the preceding obligation.

The **Public Safety Obligation** recognizes that AI systems control devices in the physical world. For this reason, institutions must both assess risks and take precautionary measures as appropriate.

The **Cybersecurity Obligation** follows from the Public Safety Obligation and underscores the risk that even well-designed systems may be the target of hostile actors. Those who develop and deploy AI systems must take these risks into account.

The **Prohibition on Secret Profiling** follows from the earlier Identification Obligation. The aim is to avoid the information asymmetry that arises increasingly with AI systems and to ensure the possibility of independent accountability.

The **Prohibition on Unitary Scoring** speaks directly to the risk of a single, multi-purpose number assigned by a government to an individual. In data protection law, universal identifiers that enable the profiling of individuals across are disfavored. These identifiers are often regulated and in some instances prohibited. The concern with universal scoring, described here as "unitary scoring," is even greater. A unitary score reflects not only a unitary profile but also a predetermined outcome across multiple domains of human activity. There is some risk that unitary scores will also emerge in the private sector. Conceivably, such systems could be subject to market competition and government regulations. But there is not even the possibility of counterbalance with unitary scores assigned by government, and therefore they should be prohibited.

The **Termination Obligation** is the ultimate statement of accountability for an AI system. The obligation presumes that systems must remain within human control. If that is no longer possible, the system should be terminated.

Universal Declaration of Human Rights

Preamble

Whereas recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Whereas disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind, and the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want has been proclaimed as the highest aspiration of the common people,

Whereas it is essential, if man is not to be compelled to have recourse, as a last resort, to rebellion against tyranny and oppression, that human rights should be protected by the rule of law,

Whereas it is essential to promote the development of friendly relations between nations,

Whereas the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in larger freedom,

Whereas Member States have pledged themselves to achieve, in cooperation with the United Nations, the promotion of universal respect for and observance of human rights and fundamental freedoms,

Whereas a common understanding of these rights and freedoms is of the greatest importance for the full realization of this pledge,

Now, Therefore THE GENERAL ASSEMBLY proclaims THIS UNIVERSAL DECLARATION OF HUMAN RIGHTS as a common standard of achievement for all peoples and all nations, to the end that every individual and every organ of society, keeping this Declaration constantly in mind, shall strive by teaching and education to promote respect for these rights and freedoms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the peoples of Member States themselves and among the peoples of territories under their jurisdiction.

Artificial Intelligence and Democratic Values 2023

Center for AI and Digital Policy

Article 1

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

Article 2

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, nonself-governing or under any other limitation of sovereignty.

Article 3

Everyone has the right to life, liberty and security of person.

Article 4

No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

Article 5

No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

Article 6

Everyone has the right to recognition everywhere as a person before the law.

Article 7

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

Article 8

Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by law.

Artificial Intelligence and Democratic Values 2022

Center for AI and Digital Policy

Article 9

No one shall be subjected to arbitrary arrest, detention or exile.

Article 10

Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

Article 11

(1) Everyone charged with a penal offence has the right to be presumed innocent until proved guilty according to law in a public trial at which he defence. has had all the guarantees necessary for his (2) No one shall be held guilty of any penal offence on account of any act or omission which did not constitute a penal offence, under national or international law, at the time when it was committed. Nor shall a heavier penalty be imposed than the one that was applicable at the time the penal offence was committed.

Article 12

No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.

Article 13

(1) Everyone has the right to freedom of movement and residence within the borders of each state.

(2) Everyone has the right to leave any country, including his own, and to return to his country.

Article 14

(1) Everyone has the right to seek and to enjoy in other countries asylum from persecution.

(2) This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

Artificial Intelligence and Democratic Values 2023

Center for AI and Digital Policy

Article 15

(1) Everyone has the right to a nationality.

(2) No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

Article 16

(1) Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.

(2) Marriage shall be entered into only with the free and full consent of the intending spouses.

(3) The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

Article 17

(1) Everyone has the right to own property alone as well as in association with others.

(2) No one shall be arbitrarily deprived of his property.

Article 18

Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

Article 19

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

Article 20

(1) Everyone has the right to freedom of peaceful assembly and association.

(2) No one may be compelled to belong to an association.

Article 21

(1) Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.

(2) Everyone has the right of equal access to public service in his country.(3) The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

Article 22

Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international cooperation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

Article 23

 Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.
 Everyone, without any discrimination, has the right to equal pay for equal work.

(3) Everyone who works has the right to just and favourable remuneration ensuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.(4) Everyone has the right to form and to join trade unions for the protection of his interests.

Article 24

Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays with pay.

Article 25

(1) Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control. (2) Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

Article 26

(1) Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis

merit.

(2) Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace. (3) Parents have a prior right to choose the kind of education that shall be given to their children.

Article 27

(1) Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.

(2) Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

Article 28

Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

Article 29

(1) Everyone has duties to the community in which alone the free and full development of his personality is possible.

(2) In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.

(3) These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

Article 30

Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

GPA Declaration on Ethics and Data Protection in AI

DECLARATION ON ETHICS AND DATA PROTECTION IN ARTIFICAL INTELLIGENCE 40th International Conference of Data Protection and Privacy Commissioners 23rd October 2018, Brussels

[Note: The International Conference of Data Protection and Privacy Commissioners was later renamed the Global Privacy Assembly]

AUTHORS

Commission Nationale de l'Informatique et des Libertés (CNIL), France

European Data Protection Supervisor (EDPS), European Union Garante per la protezione dei dati personali, Italy

CO-SPONSORS:

Agencia de Acceso a la Información Pública, Argentina Commission d'accès à l'information, Québec, Canada Datatilsynet (Data Inspectorate), Norway Information Commissioner's Office (ICO), United Kingdom Préposé fédéral à la protection des données et à la transparence, Switzerland Data protection Authority, Belgium Privacy Commissioner for Personal Data, Hong-Kong Data protection Commission, Ireland Data Protection Office, Poland Instituto Nacional de Transparencia, Acceso a la Información y Protección de Datos Personales (INAI), Mexico National Authority for Data Protection and Freedom of Information, Hungary Federal Commissioner for Data Protection and Freedom of Information, Germany Office of the Privacy Commissioner (OPC), Canada National Privacy Commission, Philippines

The 40th International Conference of Data Protection and Privacy Commissioners:

Considering the initial discussion at the 38th International Conference of Data Protection and Privacy Commissioners in Marrakesh on Artificial intelligence, Robotics, Privacy and Data Protection;

Recognizing that artificial intelligence systems may bring significant benefits for users and society, including by: increasing the rapidity of processes and supporting decision-making; creating new ways to participate in democratic processes; improving efficiency in public sector and industry; achieving more equitable distribution of resources and opportunities; offering new methods and solutions in various fields such as public health, medical care, security, sustainable development, agriculture and transport; bringing new opportunities in scientific research and education and; providing individuals with more personalized services;

Taking into account the significant progress in certain areas of artificial intelligence, in particular regarding the processing of large amounts of information, the analysis and prediction of human behavior and characteristics, and in related fields such as robotics, computer vision and autonomous systems, likely to make significant progress in the near future;

Highlighting the rapid advancement of big data and artificial intelligence, notably machine learning, in particular with the development of deep learning technologies, allowing algorithms to solve complex operations leading to potential decisions, making however such processes more opaque;

Affirming that the respect of the rights to privacy and data protection are increasingly challenged by the development of artificial intelligence and that this development should be complemented by ethical and human rights considerations;

Considering that machine learning technologies in particular, and artificial intelligence systems in general, may rely on the processing of large sets of personal data for their development, potentially impacting data protection and privacy; also taking into account the potential risks induced by the current trend of market concentration in the field of artificial intelligence;

Recognizing the link between collections, uses and disclosures of personal information – the traditional sphere of privacy and data protection – on the one hand, and the direct impacts on human rights more broadly, most notably regarding discrimination and freedom of expression and information, and thus acknowledging the need for data protection and

privacy authorities to think about human rights more broadly, and for data protection and privacy authorities to work with other authorities addressing human rights;

Pointing out that some data sets used to train machine learning-based and artificial intelligence systems have been found to contain inherent bias resulting in decisions which can unfairly discriminate against certain individuals or groups, potentially restricting the availability of certain services or content, and thus interfering with individuals' rights such as freedom of expression and information or resulting in the exclusion of people from certain aspects of personal, social, professional life;

Stressing that artificial intelligence powered systems whose decisions cannot be explained raise fundamental questions of accountability not only for privacy and data protection law but also liability in the event of errors and harm;

Noting that many stakeholders in the field of artificial intelligence have expressed their concerns about the risks of malicious use of artificial intelligence, as well as the risks related to privacy, data protection and human dignity, pointing out for example that the development of artificial intelligence in combination with mass surveillance raises concerns about their possible use to curtail fundamental rights and freedoms;

Highlighting that those risks and challenges may affect individuals and society, and that the extent and nature of potential consequences are currently uncertain;

Emphasising the importance of trust, since strong data protection and privacy safeguards help to build individuals' trust in how their data is processed, which encourages data sharing and thereby promotes innovation;

Taking the view that the current challenges triggered by the development of artificial intelligence and machine learning systems reinforce the need for the adoption of an international approach and standards, in order to ensure the promotion and protection of human rights in all digital developments at international level;

Reaffirming the commitment of data protection authorities and the Conference of Data Protection and Privacy Commissioners to uphold data protection and privacy principles in adapting to this evolving environment,

notably by engaging resources and developing new skills in order to be prepared for future changes.

The **40th International Conference of Data Protection and Privacy Commissioners** considers that any creation, development and use of artificial intelligence systems shall fully respect human rights, particularly the rights to the protection of personal data and to privacy, as well as human dignity, non-discrimination and fundamental values, and shall provide solutions to allow individuals to maintain control and understanding of artificial intelligence systems.

The Conference therefore endorses the following guiding principles, as its core values to preserve human rights in the development of artificial intelligence:

1. Artificial intelligence and machine learning technologies should be designed, developed and used in respect of fundamental human rights and in accordance with the **fairness principle**, in particular by:

- a. Considering individuals' reasonable expectations by ensuring that the use of artificial intelligence systems remains consistent with their original purposes, and that the data are used in a way that is not incompatible with the original purpose of their collection,
- b. taking into consideration not only the impact that the use of artificial intelligence may have on the individual, but also the collective impact on groups and on society at large,
- c. ensuring that artificial intelligence systems are developed in a way that facilitates human development and does not obstruct or endanger it, thus recognizing the need for delineation and boundaries on certain uses,

2. Continued attention and vigilance, as well as accountability, for the potential effects and consequences of, artificial intelligence systems should be ensured, in particular by:

- a. promoting accountability of all relevant stakeholders to individuals, supervisory authorities and other third parties as appropriate, including through the realization of audit, continuous monitoring and impact assessment of artificial intelligence systems, and periodic review of oversight mechanisms;
- b. fostering collective and joint responsibility, involving the whole chain of actors and stakeholders, for example with the development of collaborative standards and the sharing of best practices,

- c. investing in awareness raising, education, research and training in order to ensure a good level of information on and understanding of artificial intelligence and its potential effects in society, and
- d. establishing demonstrable governance processes for all relevant actors, such as relying on trusted third parties or the setting up of independent ethics committees,

3. Artificial intelligence **systems transparency and intelligibility** should be improved, with the objective of effective implementation, in particular by:

- a. investing in public and private scientific research on explainable artificial intelligence,
- b. promoting transparency, intelligibility and reachability, for instance through the development of innovative ways of communication, taking into account the different levels of transparency and information required for each relevant audience,
- c. making organizations' practices more transparent, notably by promoting algorithmic transparency and the auditability of systems, while ensuring meaningfulness of the information provided, and
- d. guaranteeing the right to informational self-determination, notably by ensuring that individuals are always informed appropriately when they are interacting directly with an artificial intelligence system or when they provide personal data to be processed by such systems,
- e. providing adequate information on the purpose and effects of artificial intelligence systems in order to verify continuous alignment with expectation of individuals and to enable overall human control on such systems.

4. As part of an overall "ethics by design" approach, artificial intelligence systems should be **designed and developed responsibly**, by applying the principles of **privacy by default and privacy by design**, in particular by:

- a. implementing technical and organizational measures and procedures proportional to the type of system that is developed to ensure that data subjects' privacy and personal data are respected, both when determining the means of the processing and at the moment of data processing,
- b. assessing and documenting the expected impacts on individuals and society at the beginning of an artificial intelligence project and for relevant developments during its entire life cycle, and

c. identifying specific requirements for ethical and fair use of the systems and for respecting human rights as part of the development and operations of any artificial intelligence system,

5. **Empowerment of every individual** should be promoted, and the exercise of individuals' rights should be encouraged, as well as the creation of opportunities for public engagement, in particular by:

- a. respecting data protection and privacy rights, including where applicable the right to information, the right to access, the right to object to processing and the right to erasure, and promoting those rights through education and awareness campaigns,
- b. respecting related rights including freedom of expression and information, as well as non- discrimination,
- c. recognizing that the right to object or appeal applies to technologies that influence personal development or opinions and guaranteeing, where applicable, individuals' right not to be subject to a decision based solely on automated processing if it significantly affects them and, where not applicable, guaranteeing individuals' right to challenge such decision,
- d. using the capabilities of artificial intelligence systems to foster an equal empowerment and enhance public engagement, for example through adaptable interfaces and accessible tools.

6. Unlawful **biases or discriminations** that may result from the use of data in artificial intelligence should be reduced and mitigated, including by:

- a. ensuring the respect of international legal instruments on human rights and non-discrimination,
- b. investing in research into technical ways to identify, address and mitigate biases,
- c. taking reasonable steps to ensure the personal data and information used in automated decision making is accurate, up-to-date and as complete as possible, and
- d. elaborating specific guidance and principles in addressing biases and discrimination, and promoting individuals' and stakeholders' awareness.

Taking into consideration the principles above, the 40th International Conference of Data Protection and Privacy Commissioners calls for **common governance principles on artificial intelligence** to be established, fostering concerted international efforts in this field, in order to ensure that its development and use take place in accordance with ethics

and human values, and respect human dignity. These common governance principles must be able to tackle the challenges raised by the rapid evolutions of artificial intelligence technologies, on the basis of a multistakeholder approach in order to address all cross-sectoral issues at stake. They must take place at an international level since the development of artificial intelligence is a trans- border phenomenon and may affect all humanity. The Conference should be involved in this international effort, working with and supporting general and sectoral authorities in other fields such as competition, market and consumer regulation.

The 40th International Conference of Data Protection and Privacy Commissioners therefore establishes, as a contribution to a future common governance at the international level, and in order to further elaborate guidance to accompany the principles on Ethics and Data Protection in Artificial Intelligence, a permanent working group addressing the challenges of artificial intelligence development. This working group on Ethics and Data Protection in Artificial Intelligence will be in charge of promoting understanding of and respect for the principles of the present resolution, by all relevant parties involved in the development of artificial intelligence systems, including governments and public authorities, standardization bodies, artificial intelligence systems designers, providers and researchers, companies, citizens and end users of artificial intelligence systems. The working group on Ethics and Data Protection in Artificial Intelligence shall take into account the work carried out by other working groups of the Conference and shall report regularly on its activities to the Conference. The Conference thus endeavors to proactively support an active public debate on digital ethics aiming at the creation of a strong ethical culture and personal awareness in this field.

The 2020 GLOBAL PRIVACY ASSEMBLY:

Recalling the Declaration on Ethics and Data Protection in Artificial Intelligence made by the 40th International Conference of the Data Protection and Privacy Commissioners on 23 October 2018, which endorsed *inter alia* the principle of accountability of all relevant stakeholders to individuals, supervisory authorities and other third parties, and which established a permanent Working Group (AI WG) to address the challenges of development of artificial intelligence (AI), and promote understanding of and respect for the principles of the Declaration,

Highlighting that the Work Programme of the AI WG includes an action to prepare a statement on the essential need for accountability and liability of human actors for AI systems,

Taking into account the results of a survey conducted by the AI WG in May and June 2020, to gather the views of the members of the Global Privacy Assembly on accountability for AI systems, as detailed in the Explanatory Note,

Noting that international organisations (including the United Nations, the Organisation for Economic Co-operation and Development, the Council of Europe and the European Commission), governments, civil society bodies, and technology companies have produced and continue to produce guidelines and recommendation on the legal and ethical development of AI, and that the need for accountability and a human-centric approach are common themes within these guidelines,

Noting that accountability is to be understood as the compliance and demonstration of compliance with personal data protection and privacy regulations, in particular through the adoption and implementation of appropriate, practicable, systematic and effective measures,

Affirming that the responsibility for the operation and effects of AI systems remains with human actors,

Taking the view that in order to be effective, accountability obligations should be assessed against clearly defined principles and frameworks, and extend to both organisations that develop AI systems and organisations that use them,

Emphasising that the principle of accountability encompasses accountability to the people affected by the decisions made by or with AI systems, as well as to supervisory authorities and, where appropriate, to other third parties, and that beyond the compliance element, accountability should also be demonstrated in order to build trust with the stakeholders,

Recognising that AI systems may affect human rights in different ways, the application of specific obligations should take into account the risks for human rights as well as the importance of the principle of human accountability,

Asserting that in order to support the trustworthiness of organisations developing and using AI systems, these organisations should work closely with policy-makers, individuals and other stakeholders (e.g. non-government organisations, public authorities and academia) to resolve concerns and rectify adverse impacts on human rights.

The 2020 GLOBAL PRIVACY ASSEMBLY therefore resolves to:

1. Urge organisations that develop or use AI systems to consider implementing the following accountability measures:

(1) Assess the potential impact to human rights (including data protection and privacy rights) before the development and/or use of AI;

(2) Test the robustness, reliability, accuracy and data security of AI before putting it into use, including identifying and addressing bias in the systems and the data they use that may lead to unfair outcomes;(3) Keep records of impact assessment, design, development, testing and use of AI;

(4) Disclose the results of the data protection, privacy and human rights impact assessment of AI;

(5) Ensure transparency and openness by disclosing the use of AI, the data being used and the logic involved in the AI;

(6) Ensure an accountable human actor is identified (a) with whom concerns related to automated decisions can be raised and rights can be exercised, and (b) who can trigger evaluation of the decision process and human intervention;

(7) Provide explanations in clear and understandable language for the automated decisions made by AI upon request;

(8) Make human intervention on the automated decision made by AI upon request;

(9) Continuously monitor and evaluate the performance and impacts of AI by human beings, and act promptly and firmly to address identified issues;

(10) Implement whistleblowing / reporting mechanisms about noncompliance or significant risk in the use of AI;

(11) Ensure the auditability of AI systems and be prepared to demonstrate accountability to data protection authorities on request; and

(12) Engage in multi-stakeholder discussions (including with nongovernmental organisations, public authorities and academia) to identify and address the wider socio- economic impact of AI and to ensure algorithmic vigilance.

2. Urge organisations that develop or use AI systems to implement accountability measures which are appropriate regarding the risks of interference with human rights.

3. Call upon all members of the Global Privacy Assembly to work with organisations that develop or use AI systems in their jurisdictions and globally to promote the principles adopted in its 2018 resolution, and accountability in the development and use of AI, and the adoption of accountability measures;

- 4. Encourage governments to consider the need to make legislative changes in personal data protection laws, to make clear the legal obligations regarding accountability in the development and use of AI, where such provisions are not already in place; and
- 5. Encourage governments, public authorities, standardisation bodies, organisations developing or using AI systems and all other relevant stakeholders to work with data protection authorities in establishing principles, standards, and accountability mechanisms, such as certification, for the purpose of demonstrating legal compliance, accountability and ethics in the development and use of AI systems.

[An Explanatory Note accompanies the Resolution. The Explanatory Note summarizes the opinions of the members of the Global Privacy Assembly on the measures for demonstrating accountability in the development and use of AI.]

UNESCO Recommendation on AI Ethics

The UNESCO Recommendation on the Ethics of Artificial Intelligence

Adopted November 24, 2021

Preamble

The General Conference of the United Nations Educational, Scientific and Cultural Organization (UNESCO), meeting in Paris from 9 to 24, at its 41st session,

Recognizing the profound and dynamic positive and negative impacts of artificial intelligence (AI) on societies, environment, ecosystems and human lives, including the human mind, in part because of the new ways in which its use influences human thinking, interaction and decision-making and affects education, human, social and natural sciences, culture, and communication and information,

Recalling that, by the terms of its Constitution, UNESCO seeks to contribute to peace and security by promoting collaboration among nations through education, the sciences, culture, and communication and information, in order to further universal respect for justice, for the rule of law and for the human rights and fundamental freedoms which are affirmed for the peoples of the world,

Convinced that the Recommendation presented here, as a standard-setting instrument developed through a global approach, based on international law, focusing on human dignity and human rights, as well as gender equality, social and economic justice and development, physical and mental wellbeing, diversity, interconnectedness, inclusiveness, and environmental and ecosystem protection can guide AI technologies in a responsible direction,

Guided by the purposes and principles of the Charter of the United Nations,

Considering that AI technologies can be of great service to humanity and all countries can benefit from them, but also raise fundamental ethical concerns, for instance regarding the biases they can embed and exacerbate, potentially resulting in discrimination, inequality, digital divides, exclusion and a threat to cultural, social and biological diversity and social or

economic divides; the need for transparency and understandability of the workings of algorithms and the data with which they have been trained; and their potential impact on, including but not limited to, human dignity, human rights and fundamental freedoms, gender equality, democracy, social, economic, political and cultural processes, scientific and engineering practices, animal welfare, and the environment and ecosystems,

Also recognizing that AI technologies can deepen existing divides and inequalities in the world, within and between countries, and that justice, trust and fairness must be upheld so that no country and no one should be left behind, either by having fair access to AI technologies and enjoying their benefits or in the protection against their negative implications, while recognizing the different circumstances of different countries and respecting the desire of some people not to take part in all technological developments,

Conscious of the fact that all countries are facing an acceleration in the use of information and communication technologies and AI technologies, as well as an increasing need for media and information literacy, and that the digital economy presents important societal, economic and environmental challenges and opportunities of benefit-sharing, especially for low- and middleincome countries (LMICs), including but not limited to least developed countries (LDCs), landlocked developing countries (LLDCs) and small island developing States (SIDS), requiring the recognition, protection and promotion of endogenous cultures, values and knowledge in order to develop sustainable digital economies,

Further recognizing that AI technologies have the potential to be beneficial to the environment and ecosystems, and in order for those benefits to be realized, potential harms to and negative impacts on the environment and ecosystems should not be ignored but instead addressed, *Noting* that addressing risks and ethical concerns should not hamper innovation and development but rather provide new opportunities and stimulate ethically-conducted research and innovation that anchor AI technologies in human rights and fundamental freedoms, values and principles, and moral and ethical reflection,

Also recalling that in November 2019, the General Conference of UNESCO, at its 40th session, adopted 40 C/Resolution 37, by which it mandated the Director-General "to prepare an international standard-setting

instrument on the ethics of artificial intelligence (AI) in the form of a recommendation", which is to be submitted to the General Conference at its 41st session in 2021,

Recognizing that the development of AI technologies necessitates a commensurate increase in data, media and information literacy as well as access to independent, pluralistic, trusted sources of information, including as part of efforts to mitigate risks of misinformation, disinformation and hate speech, and harm caused through the misuse of personal data,

Observing that a normative framework for AI technologies and its social implications finds its basis in international and national legal frameworks, human rights and fundamental freedoms, ethics, need for access to data, information and knowledge, the freedom of research and innovation, human and environmental and ecosystem well-being, and connects ethical values and principles to the challenges and opportunities linked to AI technologies, based on common understanding and shared aims,

Also recognizing that ethical values and principles can help develop and implement rights-based policy measures and legal norms, by providing guidance with a view to the fast pace of technological development,

Also convinced that globally accepted ethical standards for AI technologies, in full respect of international law, in particular human rights law, can play a key role in developing AI-related norms across the globe,

Bearing in mind the Universal Declaration of Human Rights (1948), the instruments of the international human rights framework, including the Convention Relating to the Status of Refugees (1951), the Discrimination (Employment and Occupation) Convention (1958), the International Convention on the Elimination of All Forms of Racial Discrimination (1965), the International Covenant on Civil and Political Rights (1966), the International Covenant on Economic, Social and Cultural Rights (1966), the Convention on the Elimination of All Forms of Discrimination against Women (1979), the Convention on the Rights of the Child (1989), and the Convention on the Rights of Persons with Disabilities (2006), the Convention against Discrimination in Education (1960), the Convention on the Protection and Promotion of the Diversity of Cultural Expressions (2005), as well as any other relevant international instruments, recommendations and declarations,

Also noting the United Nations Declaration on the Right to Development (1986); the Declaration on the Responsibilities of the Present Generations Towards Future Generations (1997); the Universal Declaration on Bioethics and Human Rights (2005); the United Nations Declaration on the Rights of Indigenous Peoples (2007); the United Nations General Assembly resolution on the review of the World Summit on the Information Society (A/RES/70/125) (2015): the United Nations General Assembly Resolution on Transforming our world: the 2030 Agenda for Sustainable Development (A/RES/70/1) (2015); the Recommendation Concerning the Preservation of, and Access to, Documentary Heritage Including in Digital Form (2015); the Declaration of Ethical Principles in relation to Climate Change (2017); the Recommendation on Science and Scientific Researchers (2017); the Internet Universality Indicators (endorsed by UNESCO's International Programme for the Development of Communication in 2018), including the ROAM principles (endorsed by UNESCO's General Conference in 2015); the Human Rights Council's resolution on "The right to privacy in the digital age" (A/HRC/RES/42/15) (2019); and the Human Rights Council's resolution on "New and emerging digital technologies and human rights" (A/HRC/RES/41/11) (2019),

Emphasizing that specific attention must be paid to LMICs, including but not limited to LDCs, LLDCs and SIDS, as they have their own capacity but have been underrepresented in the AI ethics debate, which raises concerns about neglecting local knowledge, cultural pluralism, value systems and the demands of global fairness to deal with the positive and negative impacts of AI technologies,

Also conscious of the many existing national policies, other frameworks and initiatives elaborated by relevant United Nations entities, intergovernmental organizations, including regional organizations, as well as those by the private sector, professional organizations, nongovernmental organizations, and the scientific community, related to the ethics and regulation of AI technologies,

Further convinced that AI technologies can bring important benefits, but that achieving them can also amplify tension around innovation, asymmetric access to knowledge and technologies, including the digital and civic literacy deficit that limits the public's ability to engage in topics related to AI, as well as barriers to access to information and gaps in capacity, human and institutional capacities, barriers to access to technological innovation, and a lack of adequate physical and digital

infrastructure and regulatory frameworks, including those related to data, all of which need to be addressed,

Underlining that the strengthening of global cooperation and solidarity, including through multilateralism, is needed to facilitate fair access to AI technologies and address the challenges that they bring to diversity and interconnectivity of cultures and ethical systems, to mitigate potential misuse, to realize the full potential that AI can bring, especially in the area of development, and to ensure that national AI strategies are guided by ethical principles,

Taking fully into account that the rapid development of AI technologies challenges their ethical implementation and governance, as well as the respect for and protection of cultural diversity, and has the potential to disrupt local and regional ethical standards and values,

- 1. *Adopts* the present Recommendation on the Ethics of Artificial Intelligence;
- 2. *Recommends* that Member States apply on a voluntary basis the provisions of this Recommendation by taking appropriate steps, including whatever legislative or other measures may be required, in conformity with the constitutional practice and governing structures of each State, to give effect within their jurisdictions to the principles and norms of the Recommendation in conformity with international law, including international human rights law;
- 3. *Also recommends* that Member States engage all stakeholders, including business enterprises, to ensure that they play their respective roles in the implementation of this Recommendation; and bring the Recommendation to the attention of the authorities, bodies, research and academic organizations, institutions and organizations in public, private and civil society sectors involved in AI technologies, so that the development and use of AI technologies are guided by both sound scientific research as well as ethical analysis and evaluation.

I. Scope of Application

1. This Recommendation addresses ethical issues related to the domain of Artificial Intelligence to the extent that they are within UNESCO's mandate. It approaches AI ethics as a systematic normative reflection, based on a holistic, comprehensive, multicultural and evolving framework of interdependent values, principles and actions that can guide societies in dealing responsibly

with the known and unknown impacts of AI technologies on human beings, societies and the environment and ecosystems, and offers them a basis to accept or reject AI technologies. It considers ethics as a dynamic basis for the normative evaluation and guidance of AI technologies, referring to human dignity, well-being and the prevention of harm as a compass and as rooted in the ethics of science and technology.

2. This Recommendation does not have the ambition to provide one single definition of AI, since such a definition would need to change over time, in accordance with technological developments. Rather, its ambition is to address those features of AI systems that are of central ethical relevance. Therefore, this Recommendation approaches AI systems as systems which have the capacity to process data and information in a way that resembles intelligent behaviour, and typically includes aspects of reasoning, learning, perception, prediction, planning or control. Three elements have a central place in this approach:

(a) AI systems are information-processing technologies that integrate models and algorithms that produce a capacity to learn and to perform cognitive tasks leading to outcomes such as prediction and decision-making in material and virtual environments. AI systems are designed to operate with varying degrees of autonomy by means of knowledge modelling and representation and by exploiting data and calculating correlations. AI systems may include several methods, such as but not limited to:

(i) machine learning, including deep learning and reinforcement learning;

(ii) machine reasoning, including planning, scheduling, knowledge representation and reasoning, search, and optimization.

AI systems can be used in cyber-physical systems, including the Internet of things, robotic systems, social robotics, and human-computer interfaces, which involve control, perception, the processing of data collected by sensors, and the operation of actuators in the environment in which AI systems work.

(b) Ethical questions regarding AI systems pertain to all stages of the AI system life cycle, understood here to range from research, design and development to deployment and use, including maintenance, operation, trade, financing, monitoring

and evaluation, validation, end-of-use, disassembly and termination. In addition, AI actors can be defined as any actor involved in at least one stage of the AI system life cycle, and can refer both to natural and legal persons, such as researchers, programmers, engineers, data scientists, end-users, business enterprises, universities and public and private entities, among others.

(c) AI systems raise new types of ethical issues that include, but are not limited to, their impact on decision-making, employment and labour, social interaction, health care, education, media, access to information, digital divide, personal data and consumer protection, environment, democracy, rule of law, security and policing, dual use, and human rights and fundamental freedoms, including freedom of expression, privacy and non-discrimination. Furthermore, new ethical challenges are created by the potential of AI algorithms to reproduce and reinforce existing biases, and thus to exacerbate already existing forms of discrimination, prejudice and stereotyping. Some of these issues are related to the capacity of AI systems to perform tasks which previously only living beings could do, and which were in some cases even limited to human beings only. These characteristics give AI systems a profound, new role in human practices and society, as well as in their relationship with the environment and ecosystems, creating a new context for children and young people to grow up in, develop an understanding of the world and themselves, critically understand media and information, and learn to make decisions. In the long term, AI systems could challenge humans' special sense of experience and agency, raising additional concerns about, inter alia, human selfunderstanding, social, cultural and environmental interaction, autonomy, agency, worth and dignity.

3. This Recommendation pays specific attention to the broader ethical implications of AI systems in relation to the central domains of UNESCO: education, science, culture, and communication and information, as explored in the 2019 Preliminary Study on the Ethics of Artificial Intelligence by the UNESCO World Commission on Ethics of Scientific Knowledge and Technology (COMEST):

(a) Education, because living in digitalizing societies requires new educational practices, ethical reflection, critical thinking, responsible design practices and new skills, given the

implications for the labour market, employability and civic participation.

(b) Science, in the broadest sense and including all academic fields from the natural sciences and medical sciences to the social sciences and humanities, as AI technologies bring new research capacities and approaches, have implications for our concepts of scientific understanding and explanation, and create a new basis for decision-making.

(c) Cultural identity and diversity, as AI technologies can enrich cultural and creative industries, but can also lead to an increased concentration of supply of cultural content, data, markets and income in the hands of only a few actors, with potential negative implications for the diversity and pluralism of languages, media, cultural expressions, participation and equality.

(d) Communication and information, as AI technologies play an increasingly important role in the processing, structuring and provision of information; the issues of automated journalism and the algorithmic provision of news and moderation and curation of content on social media and search engines are just a few examples raising issues related to access to information, disinformation, misinformation, hate speech, the emergence of new forms of societal narratives, discrimination, freedom of expression, privacy and media and information literacy, among others.

4. This Recommendation is addressed to Member States, both as AI actors and as authorities responsible for developing legal and regulatory frameworks throughout the entire AI system life cycle, and for promoting business responsibility. It also provides ethical guidance to all AI actors, including the public and private sectors, by providing a basis for an ethical impact assessment of AI systems throughout their life cycle.

II. Aims and Objectives

5. This Recommendation aims to provide a basis to make AI systems work for the good of humanity, individuals, societies and the environment and ecosystems, and to prevent harm. It also aims at stimulating the peaceful use of AI systems.

6. In addition to the existing ethical frameworks regarding AI around the world, this Recommendation aims to bring a globally accepted normative instrument that focuses not only on the articulation of values and principles, but also on their practical

realization, via concrete policy recommendations, with a strong emphasis on inclusion issues of gender equality and protection of the environment and ecosystems.

7. Because the complexity of the ethical issues surrounding AI necessitates the cooperation of multiple stakeholders across the various levels and sectors of international, regional and national communities, this Recommendation aims to enable stakeholders to take shared responsibility based on a global and intercultural dialogue.

8. The objectives of this Recommendation are:

(a) to provide a universal framework of values, principles and actions to guide States in the formulation of their legislation, policies or other instruments regarding AI, consistent with international law;

(b) to guide the actions of individuals, groups, communities, institutions and private sector companies to ensure the embedding of ethics in all stages of the AI system life cycle;

(c) to protect, promote and respect human rights and fundamental freedoms, human dignity and equality, including gender equality; to safeguard the interests of present and future generations; to preserve the environment, biodiversity and ecosystems; and to respect cultural diversity in all stages of the AI system life cycle;

(d) to foster multi-stakeholder, multidisciplinary and pluralistic dialogue and consensus building about ethical issues relating to AI systems;

(e) to promote equitable access to developments and knowledge in the field of AI and the sharing of benefits, with particular attention to the needs and contributions of LMICs, including LDCs, LLDCs and SIDS.

III. Values and Principles

9. The values and principles included below should be respected by all actors in the AI system life cycle, in the first place and, where needed and appropriate, be promoted through amendments to the existing and elaboration of new legislation, regulations and business guidelines. This must comply with international law, including the United Nations Charter and Member States' human rights obligations, and should be in line with internationally agreed social, political, environmental, educational,

scientific and economic sustainability objectives, such as the United Nations Sustainable Development Goals (SDGs).

10. Values play a powerful role as motivating ideals in shaping policy measures and legal norms. While the set of values outlined below thus inspires desirable behaviour and represents the foundations of principles, the principles unpack the values underlying them more concretely so that the values can be more easily operationalized in policy statements and actions.

11. While all the values and principles outlined below are desirable per se, in any practical contexts, there may be tensions between these values and principles. In any given situation, a contextual assessment will be necessary to manage potential tensions, taking into account the principle of proportionality and in compliance with human rights and fundamental freedoms. In all cases, any possible limitations on human rights and fundamental freedoms must have a lawful basis, and be reasonable, necessary and proportionate, and consistent with States' obligations under international law. To navigate such scenarios judiciously will typically require engagement with a broad range of appropriate stakeholders, making use of social dialogue, as well as ethical deliberation, due diligence and impact assessment.

12. The trustworthiness and integrity of the life cycle of AI systems is essential to ensure that AI technologies will work for the good of humanity, individuals, societies and the environment and ecosystems, and embody the values and principles set out in this Recommendation. People should have good reason to trust that AI systems can bring individual and shared benefits, while adequate measures are taken to mitigate risks. An essential requirement for trustworthiness is that, throughout their life cycle, AI systems are subject to thorough monitoring by the relevant stakeholders as trustworthiness is appropriate. As an outcome of the operationalization of the principles in this document, the policy actions proposed in this Recommendation are all directed at promoting trustworthiness in all stages of the AI system life cycle.

1) VALUES

Respect, protection and promotion of human rights and fundamental freedoms and human dignity

13. The inviolable and inherent dignity of every human constitutes the foundation for the universal, indivisible, inalienable, interdependent and interrelated system of human rights and

fundamental freedoms. Therefore, respect, protection and promotion of human dignity and rights as established by international law, including international human rights law, is essential throughout the life cycle of AI systems. Human dignity relates to the recognition of the intrinsic and equal worth of each individual human being, regardless of race, colour, descent, gender, age, language, religion, political opinion, national origin, ethnic origin, social origin, economic or social condition of birth, or disability and any other grounds.

14. No human being or human community should be harmed or subordinated, whether physically, economically, socially, politically, culturally or mentally during any phase of the life cycle of AI systems. Throughout the life cycle of AI systems, the quality of life of human beings should be enhanced, while the definition of "quality of life" should be left open to individuals or groups, as long as there is no violation or abuse of human rights and fundamental freedoms, or the dignity of humans in terms of this definition.

15. Persons may interact with AI systems throughout their life cycle and receive assistance from them, such as care for vulnerable people or people in vulnerable situations, including but not limited to children, older persons, persons with disabilities or the ill. Within such interactions, persons should never be objectified, nor should their dignity be otherwise undermined, or human rights and fundamental freedoms violated or abused.

16. Human rights and fundamental freedoms must be respected, protected and promoted throughout the life cycle of AI systems. Governments, private sector, civil society, international organizations, technical communities and academia must respect human rights instruments and frameworks in their interventions in the processes surrounding the life cycle of AI systems. New technologies need to provide new means to advocate, defend and exercise human rights and not to infringe them.

Environment and ecosystem flourishing

17. Environmental and ecosystem flourishing should be recognized, protected and promoted through the life cycle of AI systems. Furthermore, environment and ecosystems are the existential necessity for humanity and other living beings to be able to enjoy the benefits of advances in AI.

18. All actors involved in the life cycle of AI systems must comply with applicable international law and domestic legislation, standards and practices, such as precaution, designed for

environmental and ecosystem protection and restoration, and sustainable development. They should reduce the environmental impact of AI systems, including but not limited to its carbon footprint, to ensure the minimization of climate change and environmental risk factors, and prevent the unsustainable exploitation, use and transformation of natural resources contributing to the deterioration of the environment and the degradation of ecosystems.

Ensuring diversity and inclusiveness

19. Respect, protection and promotion of diversity and inclusiveness should be ensured throughout the life cycle of AI systems, consistent with international law, including human rights law. This may be done by promoting active participation of all individuals or groups regardless of race, colour, descent, gender, age, language, religion, political opinion, national origin, ethnic origin, social origin, economic or social condition of birth, or disability and any other grounds.

20. The scope of lifestyle choices, beliefs, opinions, expressions or personal experiences, including the optional use of AI systems and the co-design of these architectures should not be restricted during any phase of the life cycle of AI systems.

21. Furthermore, efforts, including international cooperation, should be made to overcome, and never take advantage of, the lack of necessary technological infrastructure, education and skills, as well as legal frameworks, particularly in LMICs, LDCs, LLDCs and SIDS, affecting communities.

Living in peaceful, just and interconnected societies

22. AI actors should play a participative and enabling role to ensure peaceful and just societies, which is based on an interconnected future for the benefit of all, consistent with human rights and fundamental freedoms. The value of living in peaceful and just societies points to the potential of AI systems to contribute throughout their life cycle to the interconnectedness of all living creatures with each other and with the natural environment.

23. The notion of humans being interconnected is based on the knowledge that every human belongs to a greater whole, which thrives when all its constituent parts are enabled to thrive. Living in peaceful, just and interconnected societies requires an organic, immediate, uncalculated bond of solidarity, characterized by a permanent search for peaceful relations, tending towards care for others and the natural environment in the broadest sense of the term.

24. This value demands that peace, inclusiveness and justice, equity and interconnectedness should be promoted throughout the life cycle of AI systems, in so far as the processes of the life cycle of AI systems should not segregate, objectify or undermine freedom and autonomous decision-making as well as the safety of human beings and communities, divide and turn individuals and groups against each other, or threaten the coexistence between humans, other living beings and the natural environment.

1) PRINCIPLES

Proportionality and Do No Harm

25. It should be recognized that AI technologies do not necessarily, per se, ensure human and environmental and ecosystem flourishing. Furthermore, none of the processes related to the AI system life cycle shall exceed what is necessary to achieve legitimate aims or objectives and should be appropriate to the context. In the event of possible occurrence of any harm to human beings, human rights and fundamental freedoms, communities and society at large or the environment and ecosystems, the implementation of procedures for risk assessment and the adoption of measures in order to preclude the occurrence of such harm should be ensured.

26. The choice to use AI systems and which AI method to use should be justified in the following ways: (a) the AI method chosen should be appropriate and proportional to achieve a given legitimate aim; (b) the AI method chosen should not infringe upon the foundational values captured in this document, in particular, its use must not violate or abuse human rights; and (c) the AI method should be appropriate to the context and should be based on rigorous scientific foundations. In scenarios where decisions are understood to have an impact that is irreversible or difficult to reverse or may involve life and death decisions, final human determination should apply. In particular, AI systems should not be used for social scoring or mass surveillance purposes.

Safety and security

27. Unwanted harms (safety risks), as well as vulnerabilities to attack (security risks) should be avoided and should be addressed, prevented and eliminated throughout the life cycle of AI systems to ensure human, environmental and ecosystem safety and security. Safe and secure AI will be enabled by the development of sustainable,

privacy-protective data access frameworks that foster better training and validation of AI models utilizing quality data.

Fairness and non-discrimination

AI actors should promote social justice and safeguard 28. fairness and non-discrimination of any kind in compliance with international law. This implies an inclusive approach to ensuring that the benefits of AI technologies are available and accessible to all. taking into consideration the specific needs of different age groups, cultural systems, different language groups, persons with disabilities, girls and women, and disadvantaged, marginalized and vulnerable people or people in vulnerable situations. Member States should work to promote inclusive access for all, including local communities, to AI systems with locally relevant content and services, and with respect for multilingualism and cultural diversity. Member States should work to tackle digital divides and ensure inclusive access to and participation in the development of AI. At the national level, Member States should promote equity between rural and urban areas, and among all persons regardless of race, colour, descent, gender, age, language, religion, political opinion, national origin, ethnic origin, social origin, economic or social condition of birth, or disability and any other grounds, in terms of access to and participation in the AI system life cycle. At the international level, the most technologically advanced countries have a responsibility of solidarity with the least advanced to ensure that the benefits of AI technologies are shared such that access to and participation in the AI system life cycle for the latter contributes to a fairer world order with regard to information, communication, culture, education, research and socio-economic and political stability.

29. AI actors should make all reasonable efforts to minimize and avoid reinforcing or perpetuating discriminatory or biased applications and outcomes throughout the life cycle of the AI system to ensure fairness of such systems. Effective remedy should be available against discrimination and biased algorithmic determination.

30. Furthermore, digital and knowledge divides within and between countries need to be addressed throughout an AI system life cycle, including in terms of access and quality of access to technology and data, in accordance with relevant national, regional and international legal frameworks, as well as in terms of connectivity, knowledge and skills and meaningful participation of the affected communities, such that every person is treated equitably.

Sustainability

31. The development of sustainable societies relies on the achievement of a complex set of objectives on a continuum of human, social, cultural, economic and environmental dimensions. The advent of AI technologies can either benefit sustainability objectives or hinder their realization, depending on how they are applied across countries with varying levels of development. The continuous assessment of the human, social, cultural, economic and environmental impact of AI technologies should therefore be carried out with full cognizance of the implications of AI technologies for sustainability as a set of constantly evolving goals across a range of dimensions, such as currently identified in the Sustainable Development Goals (SDGs) of the United Nations.

Right to Privacy, and Data Protection

32. Privacy, a right essential to the protection of human dignity, human autonomy and human agency, must be respected, protected and promoted throughout the life cycle of AI systems. It is important that data for AI systems be collected, used, shared, archived and deleted in ways that are consistent with international law and in line with the values and principles set forth in this Recommendation, while respecting relevant national, regional and international legal frameworks.

33. Adequate data protection frameworks and governance mechanisms should be established in a multi-stakeholder approach at the national or international level, protected by judicial systems, and ensured throughout the life cycle of AI systems. Data protection frameworks and any related mechanisms should take reference from international data protection principles and standards concerning the collection, use and disclosure of personal data and exercise of their rights by data subjects while ensuring a legitimate aim and a valid legal basis for the processing of personal data, including informed consent.

34. Algorithmic systems require adequate privacy impact assessments, which also include societal and ethical considerations of their use and an innovative use of the privacy by design approach. AI actors need to ensure that they are accountable for the design and implementation of AI systems in such a way as to ensure that personal information is protected throughout the life cycle of the AI system.

Human oversight and determination

35. Member States should ensure that it is always possible to attribute ethical and legal responsibility for any stage of the life cycle of AI systems, as well as in cases of remedy related to AI systems, to physical persons or to existing legal entities. Human oversight refers thus not only to individual human oversight, but to inclusive public oversight, as appropriate.

36. It may be the case that sometimes humans would choose to rely on AI systems for reasons of efficacy, but the decision to cede control in limited contexts remains that of humans, as humans can resort to AI systems in decision-making and acting, but an AI system can never replace ultimate human responsibility and accountability. As a rule, life and death decisions should not be ceded to AI systems.

Transparency and explainability

37. The transparency and explainability of AI systems are often essential preconditions to ensure the respect, protection and promotion of human rights, fundamental freedoms and ethical principles. Transparency is necessary for relevant national and international liability regimes to work effectively. A lack of transparency could also undermine the possibility of effectively challenging decisions based on outcomes produced by AI systems and may thereby infringe the right to a fair trial and effective remedy, and limits the areas in which these systems can be legally used.

While efforts need to be made to increase transparency and 38. explainability of AI systems, including those with extra-territorial impact, throughout their life cycle to support democratic governance, the level of transparency and explainability should always be appropriate to the context and impact, as there may be a need to balance between transparency and explainability and other principles such as privacy, safety and security. People should be fully informed when a decision is informed by or is made on the basis of AI algorithms, including when it affects their safety or human rights, and in those circumstances should have the opportunity to request explanatory information from the relevant AI actor or public sector institutions. In addition, individuals should be able to access the reasons for a decision affecting their rights and freedoms, and have the option of making submissions to a designated staff member of the private sector company or public sector institution able to review and correct the decision. AI actors should inform users when a product or service is provided directly or with the assistance of AI systems in a proper and timely manner.

39 From а socio-technical lens, greater transparency contributes to more peaceful, just, democratic and inclusive societies. It allows for public scrutiny that can decrease corruption and discrimination, and can also help detect and prevent negative impacts on human rights. Transparency aims at providing appropriate information to the respective addressees to enable their understanding and foster trust. Specific to the AI system, transparency can enable people to understand how each stage of an AI system is put in place, appropriate to the context and sensitivity of the AI system. It may also include insight into factors that affect a specific prediction or decision, and whether or not appropriate assurances (such as safety or fairness measures) are in place. In cases of serious threats of adverse human rights impacts, transparency may also require the sharing of code or datasets.

40. Explainability refers to making intelligible and providing insight into the outcome of AI systems. The explainability of AI systems also refers to the understandability of the input, output and the functioning of each algorithmic building block and how it contributes to the outcome of the systems. Thus, explainability is closely related to transparency, as outcomes and subprocesses leading to outcomes should aim to be understandable and traceable, appropriate to the context. AI actors should commit to ensuring that the algorithms developed are explainable. In the case of AI applications that impact the end user in a way that is not temporary, easily reversible or otherwise low risk, it should be ensured that the meaningful explanation is provided with any decision that resulted in the action taken in order for the outcome to be considered transparent.

41. Transparency and explainability relate closely to adequate responsibility and accountability measures, as well as to the trustworthiness of AI systems.

Responsibility and accountability

42. AI actors and Member States should respect, protect and promote human rights and fundamental freedoms, and should also promote the protection of the environment and ecosystems, assuming their respective ethical and legal responsibility, in accordance with national and international law, in particular Member States' human rights obligations, and ethical guidance throughout the life cycle of AI systems, including with respect to AI actors within their effective territory and control. The ethical responsibility and liability for the decisions and actions based in any way on an AI system should

always ultimately be attributable to AI actors corresponding to their role in the life cycle of the AI system.

43. Appropriate oversight, impact assessment, audit and due diligence mechanisms, including whistle-blowers' protection, should be developed to ensure accountability for AI systems and their impact throughout their life cycle. Both technical and institutional designs should ensure auditability and traceability of (the working of) AI systems in particular to address any conflicts with human rights norms and standards and threats to environmental and ecosystem wellbeing.

Awareness and literacy

44. Public awareness and understanding of AI technologies and the value of data should be promoted through open and accessible education, civic engagement, digital skills and AI ethics training, media and information literacy and training led jointly by governments, intergovernmental organizations, civil society, academia, the media, community leaders and the private sector, and considering the existing linguistic, social and cultural diversity, to ensure effective public participation so that all members of society can take informed decisions about their use of AI systems and be protected from undue influence.

45. Learning about the impact of AI systems should include learning about, through and for human rights and fundamental freedoms, meaning that the approach and understanding of AI systems should be grounded by their impact on human rights and access to rights, as well as on the environment and ecosystems.

Multi-stakeholder and adaptive governance and collaboration

46. International law and national sovereignty must be respected in the use of data. That means that States, complying with international law, can regulate the data generated within or passing through their territories, and take measures towards effective regulation of data, including data protection, based on respect for the right to privacy in accordance with international law and other human rights norms and standards.

47. Participation of different stakeholders throughout the AI system life cycle is necessary for inclusive approaches to AI governance, enabling the benefits to be shared by all, and to contribute to sustainable development. Stakeholders include but are not limited to governments, intergovernmental organizations, the technical community, civil society, researchers and academia, media, education, policy-makers, private sector companies, human rights

institutions and equality bodies, anti-discrimination monitoring bodies, and groups for youth and children. The adoption of open standards and interoperability to facilitate collaboration should be in place. Measures should be adopted to take into account shifts in technologies, the emergence of new groups of stakeholders, and to allow for meaningful participation by marginalized groups, communities and individuals and, where relevant, in the case of Indigenous Peoples, respect for the self-governance of their data.

IV. Areas for Policy Action

The policy actions described in the following policy areas 48. operationalize the values and principles set out in this Recommendation. The main action is for Member States to put in place effective measures, including, for example, policy frameworks or mechanisms, and to ensure that other stakeholders, such as private sector companies, academic and research institutions, and civil society adhere to them by, among other actions, encouraging all stakeholders to develop human rights, rule of law, democracy, and ethical impact assessment and due diligence tools in line with guidance including the United Nations Guiding Principles on Business and Human Rights. The process for developing such policies or mechanisms should be inclusive of all stakeholders and should take into account the circumstances and priorities of each Member State. UNESCO can be a partner and support Member States in the development as well as monitoring and evaluation of policy mechanisms.

49. UNESCO recognizes that Member States will be at different stages of readiness to implement this Recommendation, in terms of scientific, technological, economic, educational, legal, regulatory, infrastructural, societal, cultural and other dimensions. It is noted that "readiness" here is a dynamic status. In order to enable the effective implementation of this Recommendation, UNESCO will therefore: (1) develop a readiness assessment methodology to assist interested Member States in identifying their status at specific moments of their readiness trajectory along a continuum of dimensions; and (2) ensure support for interested Member States in terms of developing a UNESCO methodology for Ethical Impact Assessment (EIA) of AI technologies, sharing of best practices, assessment guidelines and other mechanisms and analytical work.

Policy Area 1: Ethical Impact Assessment

50. Member States should introduce frameworks for impact assessments, such as ethical impact assessment, to identify and assess benefits, concerns and risks of AI systems, as well as appropriate risk prevention, mitigation and monitoring measures, among other assurance mechanisms. Such impact assessments should identify impacts on human rights and fundamental freedoms, in particular but not limited to the rights of marginalized and vulnerable people or people in vulnerable situations, labour rights, the environment and ecosystems and ethical and social implications, and facilitate citizen participation in line with the values and principles set forth in this Recommendation.

51. Member States and private sector companies should develop due diligence and oversight mechanisms to identify, prevent, mitigate and account for how they address the impact of AI systems on the respect for human rights, rule of law and inclusive societies. Member States should also be able to assess the socio-economic impact of AI systems on poverty and ensure that the gap between people living in wealth and poverty, as well as the digital divide among and within countries, are not increased with the massive adoption of AI technologies at present and in the future. In order to do this, in particular, enforceable transparency protocols should be implemented, corresponding to the access to information, including information of public interest held by private entities. Member States, private sector companies and civil society should investigate the sociological and psychological effects of AI-based recommendations on humans in their decision-making autonomy. AI systems identified as potential risks to human rights should be broadly tested by AI actors, including in real-world conditions if needed, as part of the Ethical Impact Assessment, before releasing them in the market.

52. Member States and business enterprises should implement appropriate measures to monitor all phases of an AI system life cycle, including the functioning of algorithms used for decision making, the data, as well as AI actors involved in the process, especially in public services and where direct end-user interaction is needed, as part of ethical impact assessment. Member States' human rights law obligations should form part of the ethical aspects of AI system assessments.

53. Governments should adopt a regulatory framework that sets out a procedure, particularly for public authorities, to carry out ethical impact assessments on AI systems to predict consequences, mitigate

risks, avoid harmful consequences, facilitate citizen participation and address societal challenges. The assessment should also establish appropriate oversight mechanisms. including auditability. traceability and explainability, which enable the assessment of algorithms, data and design processes, as well as include external review of AI systems. Ethical impact assessments should be transparent and open to the public, where appropriate. Such assessments should also be multidisciplinary, multi-stakeholder, multicultural, pluralistic and inclusive. The public authorities should be required to monitor the AI systems implemented and/or deployed by those authorities by introducing appropriate mechanisms and tools.

Policy Area 2: Ethical Governance and Stewardship

54. Member States should ensure that AI governance mechanisms are inclusive, transparent, multidisciplinary, multilateral (this includes the possibility of mitigation and redress of harm across borders) and multi-stakeholder. In particular, governance should include aspects of anticipation, and effective protection, monitoring of impact, enforcement and redress.

55. Member States should ensure that harms caused through AI systems are investigated and redressed, by enacting strong enforcement mechanisms and remedial actions, to make certain that human rights and fundamental freedoms and the rule of law are respected in the digital world and in the physical world. Such mechanisms and actions should include remediation mechanisms provided by private and public sector companies. The auditability and traceability of AI systems should be promoted to this end. In addition, Member States should strengthen their institutional capacities to deliver on this commitment and should collaborate with researchers and other stakeholders to investigate, prevent and mitigate any potentially malicious uses of AI systems.

56. Member States are encouraged to develop national and regional AI strategies and to consider forms of soft governance such as a certification mechanism for AI systems and the mutual recognition of their certification, according to the sensitivity of the application domain and expected impact on human rights, the environment and ecosystems, and other ethical considerations set forth in this Recommendation. Such a mechanism might include different levels of audit of systems, data, and adherence to ethical guidelines and to procedural requirements in view of ethical aspects.

At the same time, such a mechanism should not hinder innovation or disadvantage small and medium enterprises or start-ups, civil society as well as research and science organizations, as a result of an excessive administrative burden. These mechanisms should also include a regular monitoring component to ensure system robustness and continued integrity and adherence to ethical guidelines over the entire life cycle of the AI system, requiring re-certification if necessary.

57. Member States and public authorities should carry out transparent self-assessment of existing and proposed AI systems, which, in particular, should include the assessment of whether the adoption of AI is appropriate and, if so, should include further assessment to determine what the appropriate method is, as well as assessment as to whether such adoption would result in violations or abuses of Member States' human rights law obligations, and if that is the case, prohibit its use.

58. Member States should encourage public entities, private sector companies and civil society organizations to involve different stakeholders in their AI governance and to consider adding the role of an independent AI Ethics Officer or some other mechanism to oversee ethical impact assessment, auditing and continuous monitoring efforts and ensure ethical guidance of AI systems. Member States, private sector companies and civil society organizations, with the support of UNESCO, are encouraged to create a network of independent AI Ethics Officers to give support to this process at national, regional and international levels.

59. Member States should foster the development of, and access to, a digital ecosystem for ethical and inclusive development of AI systems at the national level, including to address gaps in access to the AI system life cycle, while contributing to international collaboration. Such an ecosystem includes, in particular, digital technologies and infrastructure, and mechanisms for sharing AI knowledge, as appropriate.

Member mechanisms, 60. States should establish in collaboration with international organizations, transnational corporations, academic institutions and civil society, to ensure the active participation of all Member States, especially LMICs, in particular LDCs, LLDCs and SIDS, in international discussions concerning AI governance. This can be through the provision of funds, ensuring equal regional participation, or any other mechanisms. Furthermore, in order to ensure the inclusiveness of AI

fora, Member States should facilitate the travel of AI actors in and out of their territory, especially from LMICs, in particular LDCs, LLDCs and SIDS, for the purpose of participating in these fora.

61. Amendments to the existing or elaboration of new national legislation addressing AI systems must comply with Member States' human rights law obligations and promote human rights and fundamental freedoms throughout the AI system life cycle. Promotion thereof should also take the form of governance initiatives, good exemplars of collaborative practices regarding AI systems, and national and international technical and methodological guidelines as AI technologies advance. Diverse sectors, including the private sector, in their practices regarding AI systems must respect, protect and promote human rights and fundamental freedoms using and new instruments in combination with existing this Recommendation.

62. Member States that acquire Al systems for human rightssensitive use cases, such as law enforcement, welfare, employment, media and information providers, health care and the independent judiciary system should provide mechanisms to monitor the social and economic impact of such systems by appropriate oversight authorities, including independent data protection authorities, sectoral oversight and public bodies responsible for oversight.

63. Member States should enhance the capacity of the judiciary to make decisions related to AI systems as per the rule of law and in line with international law and standards, including in the use of AI systems in their deliberations, while ensuring that the principle of human oversight is upheld. In case AI systems are used by the judiciary, sufficient safeguards are needed to guarantee inter alia the protection of fundamental human rights, the rule of law, judicial independence as well as the principle of human oversight, and to ensure a trustworthy, public interest-oriented and human-centric development and use of AI systems in the judiciary.

64. Member States should ensure that governments and multilateral organizations play a leading role in ensuring the safety and security of AI systems, with multi-stakeholder participation. Specifically, Member States, international organizations and other relevant bodies should develop international standards that describe measurable, testable levels of safety and transparency, so that systems can be objectively assessed and levels of compliance determined. Furthermore, Member States and business enterprises should continuously support strategic research on potential safety and

security risks of AI technologies and should encourage research into transparency and explainability, inclusion and literacy by putting additional funding into those areas for different domains and at different levels, such as technical and natural language.

65. Member States should implement policies to ensure that the actions of AI actors are consistent with international human rights law, standards and principles throughout the life cycle of AI systems, while taking into full consideration the current cultural and social diversities, including local customs and religious traditions, with due regard to the precedence and universality of human rights.

66. Member States should put in place mechanisms to require AI actors to disclose and combat any kind of stereotyping in the outcomes of AI systems and data, whether by design or by negligence, and to ensure that training data sets for AI systems do not foster cultural, economic or social inequalities, prejudice, the spreading of disinformation and misinformation, and disruption of freedom of expression and access to information. Particular attention should be given to regions where the data are scarce.

67. Member States should implement policies to promote and increase diversity and inclusiveness that reflect their populations in AI development teams and training datasets, and to ensure equal access to AI technologies and their benefits, particularly for marginalized groups, both from rural and urban zones.

Member States should develop, review and adapt, as 68. appropriate, regulatory frameworks to achieve accountability and responsibility for the content and outcomes of AI systems at the different phases of their life cycle. Member States should, where necessary, introduce liability frameworks or clarify the interpretation of existing frameworks to ensure the attribution of accountability for the outcomes and the functioning of AI systems. Furthermore, when developing regulatory frameworks, Member States should, in particular, take into account that ultimate responsibility and accountability must always lie with natural or legal persons and that AI systems should not be given legal personality themselves. To ensure this, such regulatory frameworks should be consistent with the principle of human oversight and establish a comprehensive approach focused on AI actors and the technological processes involved across the different stages of the AI system life cycle.

69. In order to establish norms where these do not exist, or to adapt the existing legal frameworks, Member States should involve all AI actors (including, but not limited to, researchers,

representatives of civil society and law enforcement, insurers, investors, manufacturers, engineers, lawyers and users). The norms can mature into best practices, laws and regulations. Member States are further encouraged to use mechanisms such as policy prototypes and regulatory sandboxes to accelerate the development of laws, regulations and policies, including regular reviews thereof, in line with the rapid development of new technologies and ensure that laws and regulations can be tested in a safe environment before being officially adopted. Member States should support local governments in the development of local policies, regulations and laws in line with national and international legal frameworks.

70. Member States should set clear requirements for AI system transparency and explainability so as to help ensure the trustworthiness of the full AI system life cycle. Such requirements should involve the design and implementation of impact mechanisms that take into consideration the nature of application domain, intended use, target audience and feasibility of each particular AI system.

Policy Area 3: Data Policy

71. Member States should work to develop data governance strategies that ensure the continual evaluation of the quality of training data for AI systems including the adequacy of the data collection and selection processes, proper data security and protection measures, as well as feedback mechanisms to learn from mistakes and share best practices among all AI actors.

72. Member States should put in place appropriate safeguards to protect the right to privacy in accordance with international law, including addressing concerns such as surveillance. Member States should, among others, adopt or enforce legislative frameworks that provide appropriate protection, compliant with international law. Member States should strongly encourage all AI actors, including business enterprises, to follow existing international standards and, in particular, to carry out adequate privacy impact assessments, as part of ethical impact assessments, which take into account the wider socio-economic impact of the intended data processing, and to apply privacy by design in their systems. Privacy should be respected, protected and promoted throughout the life cycle of AI systems.

73. Member States should ensure that individuals retain rights over their personal data and are protected by a framework, which notably foresees: transparency; appropriate safeguards for the

processing of sensitive data; an appropriate level of data protection; effective and meaningful accountability schemes and mechanisms; the full enjoyment of the data subjects' rights and the ability to access and erase their personal data in AI systems, except for certain circumstances in compliance with international law; an appropriate level of protection in full compliance with data protection legislation where data are being used for commercial purposes such as enabling micro-targeted advertising, transferred cross-border; and an effective independent oversight as part of a data governance mechanism which keeps individuals in control of their personal data and fosters the benefits of a free flow of information internationally, including access to data.

74. Member States should establish their data policies or equivalent frameworks, or reinforce existing ones, to ensure full security for personal data and sensitive data, which, if disclosed, may cause exceptional damage, injury or hardship to individuals. Examples include data relating to offences, criminal proceedings and convictions, and related security measures; biometric, genetic and health data; and -personal data such as that relating to race, colour, descent, gender, age, language, religion, political opinion, national origin, ethnic origin, social origin, economic or social condition of birth, or disability and any other characteristics.

75. Member States should promote open data. In this regard, Member States should consider reviewing their policies and regulatory frameworks, including on access to information and open government to reflect AI-specific requirements and promoting mechanisms, such as open repositories for publicly funded or publicly held data and source code and data trusts, to support the safe, fair, legal and ethical sharing of data, among others.

76. Member States should promote and facilitate the use of quality and robust datasets for training, development and use of AI systems, and exercise vigilance in overseeing their collection and use. This could, if possible and feasible, include investing in the creation of gold standard datasets, including open and trustworthy datasets, which are diverse, constructed on a valid legal basis, including consent of data subjects, when required by law. Standards for annotating datasets should be encouraged, including disaggregating data on gender and other bases, so it can easily be determined how a dataset is gathered and what properties it has.

77. Member States, as also suggested in the report of the United Nations Secretary-General's High-level Panel on Digital

Cooperation, with the support of the United Nations and UNESCO, should adopt a digital commons approach to data where appropriate, increase interoperability of tools and datasets and interfaces of systems hosting data, and encourage private sector companies to share the data they collect with all stakeholders, as appropriate, for research, innovation or public benefits. They should also promote public and private efforts to create collaborative platforms to share quality data in trusted and secured data spaces.

Policy Area 4: Development and International Cooperation

78. Member States and transnational corporations should prioritize AI ethics by including discussions of AI-related ethical issues into relevant international, intergovernmental and multistakeholder fora.

79. Member States should ensure that the use of AI in areas of development such as education, science, culture, communication and information, health care, agriculture and food supply, environment, natural resource and infrastructure management, economic planning and growth, among others, adheres to the values and principles set forth in this Recommendation.

80. Member States should work through international organizations to provide platforms for international cooperation on AI for development, including by contributing expertise, funding, data, domain knowledge, infrastructure, and facilitating multi-stakeholder collaboration to tackle challenging development problems, especially for LMICs, in particular LDCs, LLDCs and SIDS.

81. Member States should work to promote international collaboration on AI research and innovation, including research and innovation centres and networks that promote greater participation and leadership of researchers from LMICs and other countries, including LDCs, LLDCs and SIDS.

82. Member States should promote AI ethics research by engaging international organizations and research institutions, as well as transnational corporations, that can be a basis for the ethical use of AI systems by public and private entities, including research into the applicability of specific ethical frameworks in specific cultures and contexts, and the possibilities to develop technologically feasible solutions in line with these frameworks.

83. Member States should encourage international cooperation and collaboration in the field of AI to bridge geo-technological lines.

Technological exchanges and consultations should take place between Member States and their populations, between the public and private sectors, and between and among the most and least technologically advanced countries in full respect of international law.

Policy Area 5: Environment and Ecosystems

84. Member States and business enterprises should assess the direct and indirect environmental impact throughout the AI system life cycle, including, but not limited to, its carbon footprint, energy consumption and the environmental impact of raw material extraction for supporting the manufacturing of AI technologies, and reduce the environmental impact of AI systems and data infrastructures. Member States should ensure compliance of all AI actors with environmental law, policies and practices.

85. Member States should introduce incentives, when needed and appropriate, to ensure the development and adoption of rightsbased and ethical AI-powered solutions for disaster risk resilience; the monitoring, protection and regeneration of the environment and ecosystems; and the preservation of the planet. These AI systems should involve the participation of local and indigenous communities throughout the life cycle of AI systems and should support circular economy type approaches and sustainable consumption and production patterns. Some examples include using AI systems, when needed and appropriate, to:

- (a) Support the protection, monitoring and management of natural resources.
- (b) Support the prediction, prevention, control and mitigation of climate-related problems.
- (c) Support a more efficient and sustainable food ecosystem.

(d) Support the acceleration of access to and mass adoption of sustainable energy.

(e) Enable and promote the mainstreaming of sustainable infrastructure, sustainable business models and sustainable finance for sustainable development.

(f) Detect pollutants or predict levels of pollution and thus help relevant stakeholders identify, plan and put in place targeted interventions to prevent and reduce pollution and exposure.

86. When choosing AI methods, given the potential dataintensive or resource-intensive character of some of them and the respective impact on the environment, Member States should ensure that AI actors, in line with the principle of proportionality, favour

data, energy and resource efficient AI methods. Requirements should be developed to ensure that appropriate evidence is available to show that an AI application will have the intended effect, or that safeguards accompanying an AI application can support the justification for its use. If this cannot be done, the precautionary principle must be favoured, and in instances where there are disproportionate negative impacts on the environment, AI should not be used.

Policy Area 6: Gender

87. Member States should ensure that the potential for digital technologies and artificial intelligence to contribute to achieving gender equality is fully maximized, and must ensure that the human rights and fundamental freedoms of girls and women, and their safety and integrity are not violated at any stage of the AI system life cycle. Moreover, Ethical Impact Assessment should include a transversal gender perspective.

88. Member States should have dedicated funds from their public budgets linked to financing gender-responsive schemes, ensure that national digital policies include a gender action plan, and develop relevant policies, for example, on labour education, targeted at supporting girls and women to make sure they are not left out of the digital economy powered by AI. Special investment in providing targeted programmes and gender-specific language, to increase the opportunities of girls' and women's participation in science, technology, engineering, and mathematics (STEM), including information and communication technologies (ICT) disciplines, preparedness, employability, equal career development and professional growth of girls and women, should be considered and implemented.

89. Member States should ensure that the potential of AI systems to advance the achievement of gender equality is realized. They should ensure that these technologies do not exacerbate the already wide gender gaps existing in several fields in the analogue world, and instead eliminate those gaps. These gaps include: the gender wage gap; the unequal representation in certain professions and activities; the lack of representation at top management positions, boards of directors, or research teams in the AI field; the education gap; the digital and AI access, adoption, usage and affordability gap; and the unequal distribution of unpaid work and of the caring responsibilities in our societies.

90. Member States should ensure that gender stereotyping and discriminatory biases are not translated into AI systems, and instead identify and proactively redress these. Efforts are necessary to avoid the compounding negative effect of technological divides in achieving gender equality and avoiding violence such as harassment, bullying or trafficking of girls and women and under-represented groups, including in the online domain.

Member States should encourage female entrepreneurship, 91. participation and engagement in all stages of an AI system life cycle by offering and promoting economic, regulatory incentives, among other incentives and support schemes, as well as policies that aim at a balanced gender participation in AI research in academia, gender representation on digital and AI companies' top management positions, boards of directors and research teams. Member States should ensure that public funds (for innovation, research and technologies) are channelled to inclusive programmes and companies, with clear gender representation, and that private funds are similarly encouraged through affirmative action principles. Policies on harassment-free environments should be developed and enforced, together with the encouragement of the transfer of best practices on how to promote diversity throughout the AI system life cycle.

92. Member States should promote gender diversity in AI research in academia and industry by offering incentives to girls and women to enter the field, putting in place mechanisms to fight gender stereotyping and harassment within the AI research community, and encouraging academic and private entities to share best practices on how to enhance gender diversity.

93. UNESCO can help form a repository of best practices for incentivizing the participation of girls, women and under-represented groups in all stages of the AI system life cycle.

Policy Area 7: Culture

94. Member States are encouraged to incorporate AI systems, where appropriate, in the preservation, enrichment, understanding, promotion, management and accessibility of tangible, documentary and intangible cultural heritage, including endangered languages as well as indigenous languages and knowledges, for example by introducing or updating educational programmes related to the application of AI systems in these areas, where appropriate, and by ensuring a participatory approach, targeted at institutions and the public.

95. Member States are encouraged to examine and address the cultural impact of AI systems, especially natural language processing (NLP) applications such as automated translation and voice assistants, on the nuances of human language and expression. Such assessments should provide input for the design and implementation of strategies that maximize the benefits from these systems by bridging cultural gaps and increasing human understanding, as well as addressing the negative implications such as the reduction of use, which could lead to the disappearance of endangered languages, local dialects, and tonal and cultural variations associated with human language and expression.

96. Member States should promote AI education and digital training for artists and creative professionals to assess the suitability of AI technologies for use in their profession, and contribute to the design and implementation of suitable AI technologies, as AI technologies are being used to create, produce, distribute, broadcast and consume a variety of cultural goods and services, bearing in mind the importance of preserving cultural heritage, diversity and artistic freedom.

97. Member States should promote awareness and evaluation of AI tools among local cultural industries and small and medium enterprises working in the field of culture, to avoid the risk of concentration in the cultural market.

98. Member States should engage technology companies and other stakeholders to promote a diverse supply of and plural access to cultural expressions, and in particular to ensure that algorithmic recommendation enhances the visibility and discoverability of local content.

99. Member States should foster new research at the intersection between AI and intellectual property (IP), for example to determine whether or how to protect with IP rights the works created by means of Al technologies. Member States should also assess how AI technologies are affecting the rights or interests of IP owners, whose works are used to research, develop, train or implement AI applications.

100. Member States should encourage museums, galleries, libraries and archives at the national level to use AI systems to highlight their collections and enhance their libraries, databases and knowledge base, while also providing access to their users.

Policy Area 8: Education and Research

101. Member States should work with international organizations, educational institutions and private and non-governmental entities to provide adequate AI literacy education to the public on all levels in all countries in order to empower people and reduce the digital divides and digital access inequalities resulting from the wide adoption of AI systems.

102. Member States should promote the acquisition of "prerequisite skills" for AI education, such as basic literacy, numeracy, coding and digital skills, and media and information literacy, as well as critical and creative thinking, teamwork, communication, socio-emotional and AI ethics skills, especially in countries and in regions or areas within countries where there are notable gaps in the education of these skills.

103. Member States should promote general awareness programmes about AI developments, including on data and the opportunities and challenges brought about by AI technologies, the impact of AI systems on human rights and their implications, including children's rights. These programmes should be accessible to non-technical as well as technical groups.

104. Member States should encourage research initiatives on the responsible and ethical use of AI technologies in teaching, teacher training and e-learning, among other issues, to enhance opportunities and mitigate the challenges and risks involved in this area. The initiatives should be accompanied by an adequate assessment of the quality of education and impact on students and teachers of the use of AI technologies. Member States should also ensure that AI technologies empower students and teachers and enhance their experience, bearing in mind that relational and social aspects and the value of traditional forms of education are vital in teacher-student and student-student relationships and should be considered when discussing the adoption of AI technologies in education. AI systems used in learning should be subject to strict requirements when it comes to the monitoring, assessment of abilities, or prediction of the learners' behaviours. AI should support the learning process without reducing cognitive abilities and without extracting sensitive information, in compliance with relevant personal data protection standards. The data handed over to acquire knowledge collected during the learner's interactions with the AI system must not be subject to misuse, misappropriation or criminal exploitation, including for commercial purposes.

105. Member States should promote the participation and leadership of girls and women, diverse ethnicities and cultures, persons with disabilities, marginalized and vulnerable people or people in vulnerable situations, minorities and all persons not enjoying the full benefits of digital inclusion, in AI education programmes at all levels, as well as the monitoring and sharing of best practices in this regard with other Member States.

106. Member States should develop, in accordance with their national education programmes and traditions, AI ethics curricula for all levels, and promote cross-collaboration between AI technical skills education and humanistic, ethical and social aspects of AI education. Online courses and digital resources of AI ethics education should be developed in local languages, including indigenous languages, and take into account the diversity of environments, especially ensuring accessibility of formats for persons with disabilities.

107. Member States should promote and support AI research, notably AI ethics research, including for example through investing in such research or by creating incentives for the public and private sectors to invest in this area, recognizing that research contributes significantly to the further development and improvement of AI technologies with a view to promoting international law and the values and principles set forth in this Recommendation. Member States should also publicly promote the best practices of, and cooperation with, researchers and companies who develop AI in an ethical manner.

108. Member States should ensure that AI researchers are trained in research ethics and require them to include ethical considerations in their designs, products and publications, especially in the analyses of the datasets they use, how they are annotated, and the quality and scope of the results with possible applications.

109. Member States should encourage private sector companies to facilitate the access of the scientific community to their data for research, especially in LMICs, in particular LDCs, LLDCs and SIDS. This access should conform to relevant privacy and data protection standards.

110. To ensure a critical evaluation of AI research and proper monitoring of potential misuses or adverse effects, Member States should ensure that any future developments with regards to AI technologies should be based on rigorous and independent scientific research, and promote interdisciplinary AI research by including

disciplines other than science, technology, engineering and mathematics (STEM), such as cultural studies, education, ethics, international relations, law, linguistics, philosophy, political science, sociology and psychology.

111. Recognizing that AI technologies present great opportunities to help advance scientific knowledge and practice, especially in traditionally model-driven disciplines. Member States should encourage scientific communities to be aware of the benefits, limits and risks of their use; this includes attempting to ensure that conclusions drawn from data-driven approaches, models and treatments are robust and sound. Furthermore, Member States should welcome and support the role of the scientific community in contributing to policy and in cultivating awareness of the strengths and weaknesses of AI technologies.

Policy Area 9: Communication and Information

112. Member States should use AI systems to improve access to information and knowledge. This can include support to researchers, academia, journalists, the general public and developers, to enhance freedom of expression, academic and scientific freedoms, access to information, and increased proactive disclosure of official data and information.

113. Member States should ensure that AI actors respect and promote freedom of expression as well as access to information with regard to automated content generation, moderation and curation. Appropriate frameworks, including regulation, should enable transparency of online communication and information operators and ensure users have access to a diversity of viewpoints, as well as processes for prompt notification to the users on the reasons for removal or other treatment of content, and appeal mechanisms that allow users to seek redress.

114. Member States should invest in and promote digital and media and information literacy skills to strengthen critical thinking and competencies needed to understand the use and implication of AI systems, in order to mitigate and counter disinformation, misinformation and hate speech. A better understanding and evaluation of both the positive and potentially harmful effects of recommender systems should be part of those efforts.

115. Member States should create enabling environments for media to have the rights and resources to effectively report on the benefits and harms of AI systems, and also encourage media to make ethical use of AI systems in their operations

Policy Area 10: Economy and Labour

116. Member States should assess and address the impact of AI systems on labour markets and its implications for education requirements, in all countries and with special emphasis on countries where the economy is labour-intensive. This can include the introduction of a wider range of "core" and interdisciplinary skills at all education levels to provide current workers and new generations a fair chance of finding jobs in a rapidly changing market, and to ensure their awareness of the ethical aspects of AI systems. Skills such as "learning how to learn", communication, critical thinking, teamwork, empathy, and the ability to transfer one's knowledge across domains, should be taught alongside specialist, technical skills, as well as low-skilled tasks. Being transparent about what skills are in demand and updating curricula around these are key.

117. Member States should support collaboration agreements among governments, academic institutions, vocational education and training institutions, industry, workers' organizations and civil society to bridge the gap of skillset requirements to align training programmes and strategies with the implications of the future of work and the needs of industry, including small and medium enterprises. Project-based teaching and learning approaches for AI should be promoted, allowing for partnerships between public institutions, private sector companies, universities and research centres.

Member States should work with private sector companies, 118. civil society organizations and other stakeholders, including workers and unions to ensure a fair transition for at-risk employees. This includes putting in place upskilling and reskilling programmes, finding effective mechanisms of retaining employees during those transition periods, and exploring "safety net" programmes for those who cannot be retrained. Member States should develop and implement programmes to research and address the challenges identified that could include upskilling and reskilling, enhanced social protection, proactive industry policies and interventions, tax benefits, new taxation forms, among others. Member States should ensure that there is sufficient public funding to support these programmes. Relevant regulations, such as tax regimes, should be carefully examined and changed if needed to counteract the consequences of unemployment caused by AI-based automation.

119. Member States should encourage and support researchers to analyse the impact of AI systems on the local labour environment in order to anticipate future trends and challenges. These studies should

have an interdisciplinary approach and investigate the impact of AI systems on economic, social and geographic sectors, as well as on human-robot interactions and human-human relationships, in order to advise on reskilling and redeployment best practices.

Member States should take appropriate steps to ensure 120. competitive markets and consumer protection, considering possible measures and mechanisms at national, regional and international levels, to prevent abuse of dominant market positions, including by monopolies, in relation to AI systems throughout their life cycle, whether these are data, research, technology, or market. Member States should prevent the resulting inequalities, assess relevant markets and promote competitive markets. Due consideration should be given to LMICs, in particular LDCs, LLDCs and SIDS, which are more exposed and vulnerable to the possibility of abuses of market dominance as a result of a lack of infrastructure, human capacity and regulations, among other factors. AI actors developing AI systems in countries which have established or adopted ethical standards on AI should respect these standards when exporting these products, developing or applying their AI systems in countries where such standards may not exist, while respecting applicable international law and domestic legislation, standards and practices of these countries.

Policy Area 11: Health and Social Wellbeing

121. Member States should endeavour to employ effective AI systems for improving human health and protecting the right to life, including mitigating disease outbreaks, while building and maintaining international solidarity to tackle global health risks and uncertainties, and ensure that their deployment of AI systems in health care be consistent with international law and their human rights law obligations. Member States should ensure that actors involved in health care AI systems take into consideration the importance of a patient's relationships with their family and with health care staff.

122. Member States should ensure that the development and deployment of AI systems related to health in general and mental health in particular, paying due attention to children and youth, is regulated to the effect that they are safe, effective, efficient, scientifically and medically proven and enable evidence-based innovation and medical progress. Moreover, in the related area of digital health interventions, Member States are strongly encouraged to actively involve patients and their representatives in all relevant steps of the development of the system.

123. Member States should pay particular attention in regulating prediction, detection and treatment solutions for health care in AI applications by:

- (a) ensuring oversight to minimize and mitigate bias;
- (b) ensuring that the professional, the patient, caregiver or service user is included as a "domain expert" in the team in all relevant steps when developing the algorithms;
- (c) paying due attention to privacy because of the potential need for being medically monitored and ensuring that all relevant national and international data protection requirements are met;
- (d) ensuring effective mechanisms so that those whose personal data is being analysed are aware of and provide informed consent for the use and analysis of their data, without preventing access to health care;
- (e) ensuring the human care and final decision of diagnosis and treatment are taken always by humans while acknowledging that AI systems can also assist in their work;

(f) ensuring, where necessary, the review of AI systems by an ethical research committee prior to clinical use.

124. Member States should establish research on the effects and regulation of potential harms to mental health related to AI systems, such as higher degrees of depression, anxiety, social isolation, developing addiction, trafficking, radicalization and misinformation, among others.

125. Member States should develop guidelines for human-robot interactions and their impact on human-human relationships, based on research and directed at the future development of robots, and with special attention to the mental and physical health of human beings. Particular attention should be given to the use of robots in health care and the care for older persons and persons with disabilities, in education, and robots for use by children, toy robots, chatbots and companion robots for children and adults. Furthermore, assistance of AI technologies should be applied to increase the safety and ergonomic use of robots, including in a human-robot working environment. Special attention should be paid to the possibility of using AI to manipulate and abuse human cognitive biases.

126. Member States should ensure that human-robot interactions comply with the same values and principles that apply to any other

AI systems, including human rights and fundamental freedoms, the promotion of diversity, and the protection of vulnerable people or people in vulnerable situations. Ethical questions related to AIpowered systems for neuro technologies and brain-computer interfaces should be considered in order to preserve human dignity and autonomy.

127. Member States should ensure that users can easily identify whether they are interacting with a living being, or with an AI system imitating human or animal characteristics, and can effectively refuse such interaction and request human intervention.

128. Member States should implement policies to raise awareness about the anthropomorphization of AI technologies and technologies that recognize and mimic human emotions, including in the language used to mention them, and assess the manifestations, ethical implications and possible limitations of such anthropomorphization, in particular in the context of robot-human interaction and especially when children are involved.

129. Member States should encourage and promote collaborative research into the effects of longterm interaction of people with AI systems, paying particular attention to the psychological and cognitive impact that these systems can have on children and young people. This should be done using multiple norms, principles, protocols, disciplinary approaches, and assessment of the modification of behaviours and habits, as well as careful evaluation of the downstream cultural and societal impacts. Furthermore, Member States should encourage research on the effect of AI technologies on health system performance and health outcomes.

130. Member States, as well as all stakeholders, should put in place mechanisms to meaningfully engage children and young people in conversations, debates and decision-making with regard to the impact of AI systems on their lives and futures.

V. Monitoring and Evaluation

131. Member States should, according to their specific conditions, governing structures and constitutional provisions, credibly and transparently monitor and evaluate policies, programmes and mechanisms related to ethics of AI, using a combination of quantitative and qualitative approaches. To support Member States, UNESCO can contribute by:

(a) developing a UNESCO methodology for Ethical Impact Assessment (EIA) of AI technologies based on rigorous scientific research and grounded in international human rights

law, guidance for its implementation in all stages of the AI system life cycle, and capacity-building materials to support Member States' efforts to train government officials, policy-makers and other relevant AI actors on EIA methodology;

(b) developing a UNESCO readiness assessment methodology to assist Member States in identifying their status at specific moments of their readiness trajectory along a continuum of dimensions;

(c) developing a UNESCO methodology to evaluate ex ante and ex post the effectiveness and efficiency of the policies for AI ethics and incentives against defined objectives;

(d) strengthening the research- and evidence-based analysis of and reporting on policies regarding AI ethics;

(e) collecting and disseminating progress, innovations, research reports, scientific publications, data and statistics regarding policies for AI ethics, including through existing initiatives, to support sharing best practices and mutual learning, and to advance the implementation of this Recommendation.

132. Processes for monitoring and evaluation should ensure broad participation of all stakeholders, including, but not limited to, vulnerable people or people in vulnerable situations. Social, cultural and gender diversity should be ensured, with a view to improving learning processes and strengthening the connections between findings, decision-making, transparency and accountability for results.

133. In the interests of promoting best policies and practices related to ethics of AI, appropriate tools and indicators should be developed for assessing the effectiveness and efficiency thereof against agreed standards, priorities and targets, including specific targets for persons belonging to disadvantaged, marginalized populations, and vulnerable people or people in vulnerable situations, as well as the impact of AI systems at individual and societal levels. The monitoring and assessment of the impact of AI systems and related AI ethics policies and practices should be carried out continuously in a systematic way proportionate to the relevant risks. This should be based on internationally agreed frameworks and involve evaluations of private and public institutions, providers and programmes, including self-evaluations, as well as tracer studies and the development of sets of indicators. Data collection and processing should be conducted in accordance with international law, national

legislation on data protection and data privacy, and the values and principles outlined in this Recommendation.

134. In particular, Member States may wish to consider possible mechanisms for monitoring and evaluation, such as an ethics commission, AI ethics observatory, repository covering human rights-compliant and ethical development of AI systems, or contributions to existing initiatives by addressing adherence to ethical principles across UNESCO's areas of competence, an experience-sharing mechanism, AI regulatory sandboxes, and an assessment guide for all AI actors to evaluate their adherence to policy recommendations mentioned in this document.

VI. Utilization and Exploitation of the Present Recommendation

135. Member States and all other stakeholders as identified in this Recommendation should respect, promote and protect the ethical values, principles and standards regarding AI that are identified in this Recommendation, and should take all feasible steps to give effect to its policy recommendations.

136. Member States should strive to extend and complement their own action in respect of this Recommendation, by cooperating with all relevant national and international governmental and nongovernmental organizations, as well as transnational corporations and scientific organizations, whose activities fall within the scope and objectives of this Recommendation. The development of a UNESCO Ethical Impact Assessment methodology and the establishment of national commissions for the ethics of AI can be important instruments for this.

VII. Promotion of the Present Recommendation

137. UNESCO has the vocation to be the principal United Nations agency to promote and disseminate this Recommendation, and accordingly will work in collaboration with other relevant United Nations entities, while respecting their mandate and avoiding duplication of work.

138. UNESCO, including its bodies, such as the World Commission on the Ethics of Scientific Knowledge and Technology (COMEST), the International Bioethics Committee (IBC) and the Intergovernmental Bioethics Committee (IGBC), will also work in collaboration with other international, regional and sub-regional governmental and non-governmental organizations.

139. Even though, within UNESCO, the mandate to promote and protect falls within the authority of governments and

intergovernmental bodies, civil society will be an important actor to advocate for the public sector's interests and therefore UNESCO needs to ensure and promote its legitimacy.

VIII. Final Provisions

140. This Recommendation needs to be understood as a whole, and the foundational values and principles are to be understood as complementary and interrelated.

141. Nothing in this Recommendation may be interpreted as replacing, altering or otherwise prejudicing States' obligations or rights under international law, or as approval for any State, other political, economic or social actor, group or person to engage in any activity or perform any act contrary to human rights, fundamental freedoms, human dignity and concern for the environment and ecosystems, both living and non-living.

The Center for AI and Digital Policy

The Center for AI and Digital Policy aims to promote *a better society, more fair, more just* —*a world where technology promotes broad social inclusion based on fundamental rights, democratic institutions, and the rule of law.* The Center advises national governments and international organizations on AI policies and practices; publishes commentaries on AI policy; publishes annually Artificial Intelligence and Democratic Values; organizes educational events with AI policy experts; and supports AI initiatives, projects, and campaigns that safeguard rule of law, democratic institutions, and fundamental rights. The Center also promotes the Universal Guidelines for AI; monitors implementation of the OECD AI Principles and other AI policy frameworks; and support the establishment of new legal frameworks for AI that safeguard the rule of law, democratic institutions, and fundamental rights. More information about the Center is available at CAIDP.ORG.

About this Report

Artificial Intelligence and Democratic Values Index – The essential companion to AI policy practitioners, academics, and civil society.

Reflecting the collaborative work of more than 200 AI policy experts around the world, *AI and Democratic Values* is the first comprehensive survey of national AI policies and practices. The report sets out state-of-the-art analysis of 75 counties worldwide, based on a rigorous and transparent methodology. *AI and Democratic Values* provides an up-to-date review of the AI global and regional policy landscape, as well as changes to national AI strategies and current controversies surrounding e.g., social scoring, facial recognition or lethal autonomous weapons. *AI and Democratic Values* also features the primary international legal instruments for AI policy, including the OECD AI Principles, the resolutions of the Global Privacy Assembly concerning AI, and the UNESCO Recommendation on AI Ethics. Published in the PDF format, *AI and Democratic Values* offers easy and open access to more than 1,000 policy documents in the field of AI policy.
