Center for AI and Digital Policy CAIDP.ORG

TABLE OF CONTENTS

EXECUTIVE SUMMARY	
Purpose and Scope	
The 2023 Edition	
A Year in Review	
Findings	
Recommendations	
THE GLOBAL AI POLICY LANDSCAPE	
The Council of Europe	
CAHAI	
Committee of Ministers	
CAI	
European Committee on Crime Problems	53
Parliamentary Assembly	
European Court of Human Rights	
Commissioner for Human Rights	
Commission for the Efficiency of Justice	
The European Union	
The European Commission	
The European Parliament	
Committees – AIDA, IMCO, LIBE	
The Two Councils	
The Court of Justice of the European Union	
The European Data Protection Board	
The European Data Protection Supervisor Fundamental Rights Agency	
High-Level Expert Group on AI	
G-7	
G-20	
Global Privacy Assembly	
The OECD	
Global Partnership on AI	
OECD AI Observatory	
National Implementation The OECD ONE PAI	
United Nations The Secretary General	
UNESCO Recommendation on AI Ethics	

UN High Commissioner for Human Rights	92
International Telecommunications Union	93
UN Special Rapporteur	93
UN and Lethal Autonomous Weapons	94
The Vatican	
Technical Societies	98
Civil Society	99
Latin America	
Africa	101
Asia	
Europe	104
United States	
COUNTRY REPORTS	109
Argentina	109
National AI Strategy	
Local Strategies	
Public Participation	
Data Protection	
Algorithmic Transparency	
Data Scraping	
Use of AI in Public Administration	
The Salta controversy	118
Facial Recognition	119
Lethal Autonomous Weapon Systems	121
Human Rights	122
OECD/G20 AI Principles	122
UNESCO Recommendation on the Ethics of AI	123
Council of Europe Convention on AI	124
Evaluation	124
Australia	125
National AI Strategy	125
Public Participation	127
Data Protection	
Algorithmic Transparency	131
Data Scraping	132
Use of AI in Public Administration	133
Use of AI in the Military	136
Use of AI in Education	138
Human Rights	139
OECD/G20 AI Principles	139

UNESCO Recommendation on Ethics of AI	. 140
Evaluation	. 140
Austria	. 142
National AI Strategy	. 142
EU Digital Services Act	. 144
EU AI Act	. 146
Public Participation	. 152
Data Protection	. 153
Algorithmic Transparency	. 156
Facial Recognition	
Predictive Policing	. 159
Automated Tax Fraud Detection	. 160
Lethal Autonomous Weapons	. 161
Human Rights	. 163
OECD AI Principles	
UNESCO Recommendation on the Ethics of AI	. 164
Council of Europe Convention on AI	. 165
Evaluation	. 165
Azerbaijan	. 166
National AI Strategy	
Public Participation	. 167
Data Protection	. 168
Algorithmic Transparency	. 170
AI Readiness and Digitization	. 170
AI and the Judiciary	. 171
Biometrics	. 172
AI Surveillance	. 172
Facial Recognition	. 175
Smart Cities	. 176
AI and Warfare	. 177
Human Rights	. 180
OECD AI Principles	. 181
UNESCO Recommendation on the Ethics of AI	. 181
Council of Europe Convention on AI	
Evaluation	. 182
Bahrain	. 183
National AI Strategy	. 183
Public Participation	
Data Protection	
Algorithmic Transparency	. 190

Digitization	. 191
Mass Surveillance	. 192
Biometric Identification	. 193
Lethal Autonomous Weapon Systems	. 195
Human Rights	
OECD AI Principles / G20 AI Guidelines	
UNESCO Recommendation on the Ethics of AI	
Evaluation	
Bangladesh	. 199
National AI Strategy	
Public Participation	
Data Protection	
Algorithmic Transparency	
Biometric Identification	
Lethal Autonomous Weapons	
Human Rights	
OECD / G20 AI Principles	
UNESCO recommendation on the Ethics of AI	
Evaluation	. 207
Belgium	. 208
National AI Strategy	
Public Opinion	
Public Participation	
EU Digital Services Act	
EU AI Act	
Data Protection	
Algorithmic Transparency	
Digitization of Public Administration	
Facial Recognition	
Regulatory sandboxes	
Medical data	
Lethal Autonomous Weapons Systems	. 230
Human Rights	
OECD/G20 AI Principles	
UNESCO Recommendation on the Ethics of AI	
Council of Europe Convention on AI	. 234
Evaluation	
Brazil	. 236
National AI Strategy	
AI Legislation	
Public Participation	

Data Protection	. 244
AI Oversight	. 245
Algorithmic Transparency	
Use of AI in Public Administration	. 250
Algorithm-based Advertising	. 253
EdTech	. 253
Medical Data	. 254
Use of AI in Courts	. 255
Computational Propaganda	. 256
Facial Recognition	
Lethal Autonomous Weapons	. 261
Human Rights	
OECD / G20 AI Principles	
UNESCO Recommendation on the Ethics of AI	
AI Safety Summit	. 265
Evaluation	. 265
Canada	. 266
National AI Strategy	
Directive on Automated Decision-making	. 266
Digital Charter Implementation Act	. 267
Public Participation	. 268
Data Protection	. 269
Algorithmic Transparency	. 271
Data Scraping	. 273
Facial Recognition	. 274
Lethal Autonomous Weapons	. 274
EdTech	. 276
Human Rights	. 277
OECD / G20 AI Principles	
UNESCO Recommendation on the Ethics of AI	
AI Safety Summit	. 278
Council of Europe Convention on AI	
Evaluation	. 279
Chile	. 280
National AI Strategy	. 280
Public Participation	
Data Protection	
Algorithmic Transparency	. 287
Use of AI in Public Administration	. 288
Facial Recognition	. 291

Lethal Autonomous Weapons	
EdTech	
AI and Neurotechnology	
Human Rights	
OECD AI Principles / G20 AI Guidelines	
UNESCO Recommendation on the Ethics of AI	
AI Safety Summit	
Evaluation	
China	
National AI Strategy	
Management of Algorithmic Recommendations	
Deep Synthesis Regulations	
Generative AI Measures	
AI Ethics	
Public Participation	
Data Protection	
Algorithmic Transparency	
Social Governance	
Facial Recognition	
AI and Public Health	
Use of AI in Covid-19 Response	
Lethal Autonomous Weapons	
Fundamental Rights	
OECD / G20 AI Principles	
UNESCO Recommendation on the Ethics of AI	320
Global AI Governance	
AI Safety Summit	
Evaluation	322
Colombia	324
National AI Strategy	324

EXECUTIVE SUMMARY

Purpose and Scope

Artificial Intelligence and Democratic Values is the first global survey to assess progress toward trustworthy AI, based on detailed narrative reports, combined with a methodology that produces ratings and rankings for national AI policies and practices.

The **AI Index** has these objectives: (1) to document AI policies and practices, based on publicly available sources, (2) to establish a methodology for the evaluation of AI policies and practices, based on global norms, (3) to provide a basis for comparative evaluation, (4) to provide the basis for future evaluations, and (5) to ultimately encourage all countries to make real the promise of AI that is trustworthy, human-centric, and provides broad social benefit to all.

Artificial Intelligence and Democratic Values focuses on human rights, rule of law, and democratic governance metrics. Endorsement and implementation of the OECD/G20 AI Principles and the UNESCO Recommendation on the Ethics of Artificial Intelligence are among the primary metrics. Opportunities for the public to participate in the formation of national AI policy, the adoption of the right to algorithmic transparency as well as the creation of independent agencies to address AI challenges are also among the metrics. Patents, publications, investment, and employment impacts are important metrics for the AI economy, but they are not considered here.

Artificial Intelligence and Democratic Values is published on an annual basis and will evolve as country practices change and new issues emerge.

The 2023 Edition

The 2023 edition of the report updates and expands the previous reports. Among the key changes:

- The number of countries assessed increased from 75 to 80.
- For the metric concerning the implementation of the UNESCO Recommendation on the Ethics of AI, we are now taking into consideration the completion of the Readiness Assessment Methodology (RAM).
- For the metric concerning the AI-related Global Privacy Assembly resolutions, the 2023 Resolution on Generative AI has been added.
- The scores for country reports previously published were reviewed and revised based on developments during the past year concerning AI policies and practices.
- The number of researchers participating in the project has grown significantly. The 2023 CAIDP Research Group now includes more than 500 participants from almost 90 countries.
- We acknowledge the comments of several reviewers who recommended a more detailed approach to the review of human rights. We are now addressing these comments in the 2023 edition. Additional recommendations concern expanded coverage of AI and immigration and Al and criminal justice. We will address these topics in the next edition.

A Year in Review

2023: A policy momentum for regulating AI

"At the outset, it is worth considering whether the gap between the policies to govern the deployment of these new technologies and the actual deployment is narrowing or growing wider, as this would be a critical indicator of the respect for democratic values at the heart of a humancentered polity." It is with this question that we described last year the essential contribution of the *AI and Democratic Values Index* (AIDV) to the policy world. This year, the contribution of the AIDV Index might well be defined as providing a comparative assessment on how to govern AI and why it is necessary.

The irruption of ChatGPT in everyone's life, with its mass proliferation of disinformation, embedded discrimination and potential for manipulation, has served as a catalyst for policy makers to address the risks and adverse impacts of AI systems on human rights, democracy and the rule of law. Mainstream policy discourse is now shifting from an unsustainable opposition between human rights protection and innovation to the necessity of harnessing the potential of AI through the establishment of clear guardrails and red lines. The key policy question is not anymore whether to regulate AI but how to regulate it, at the international, national, and regional levels.

As we undertook the fourth survey of national AI policies and practices, we identified both positive developments and causes for concern. We built on our earlier work, identified new trends and revisited the metrics we had established for trustworthy and human-centric AI. Here are a few key findings from the past year:

Generative AI has been at the center of various and often coordinated policy initiatives to regulate AI worldwide. At the G7 Hiroshima Summit, leaders confirmed the need for generative AI governance. By the end of 2023, they reached an agreement on the world's first international framework, known as the G7 Hiroshima AI Process Comprehensive Policy Framework. It includes both a set of Guiding Principles applicable to all AI actors throughout the entire AI lifecycle and a Code of Conduct that lists in more detail the actions that AI developers must abide by.

The Hiroshima process was supported by a report prepared by the OECD geared towards ensuring a common understanding on generative AI. In parallel, the *OECD worked on updating the definition of "AI system"* enshrined in the OECD AI Principles. It was then transplanted in both the

EU AI Act and the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. This highlighted a tension between rapidly ensuring global policy governance on the one hand and offering the broadest protection for human rights on the other. *Concerns exist that the frenzy over generative AI has led to a definition overemphasizing machine learning – probabilistic AI – models and excluding traditional – deterministic AI – models*. Looking ahead, we must be sure that new definitions do not inadvertently exclude preexisting AI systems and AI deployments.

With regard to enforcement, the challenges raised by generative AI triggered an unprecedent movement of international cooperation among data protection authorities. The G7 data protection and privacy authorities roundtable led to an agreement on the need for developers and users of generative AI to demonstrate compliance with legal obligations and ensure the implementation of risk mitigating measures. The Global Privacy Assembly adopted a Resolution on Generative AI that translated into the adoption of guiding principles at national level such as in Canada or national consultations and plans for action such as in the UK. France or the Netherlands. The Italian data protection authority launched an investigation on OpenAI ChatGPT that resulted in the first legal judgement against OpenAI. The European Data Protection Board established a dedicated task force to foster cooperation and to exchange information on possible enforcement. The national privacy authorities, members of the Ibero-American Network for the Protection of Personal Data, also initiated a coordination action regarding ChatGPT concerning the human rights and disinformation risks it raises. As a result, the Colombian data protection authority launched an investigation into OpenAI's compliance with domestic law. So did the US Federal Trade Commission, after a detailed complaint and several supplements, filed by the Center for AI and Digital Policy.

The US President set out a comprehensive governance framework in the Executive Order on Safe, Secure and Trustworthy AI that systematically addresses generative AI. The Executive Order incorporates elements from the AI Bill of Rights, prepared earlier by the Office of Science and Technology Policy and establishes a new AI safety office. Nevertheless, the Executive Order, though far-reaching, barely reaches private sector AI systems and the AI Safety agency, at the moment, lacks sufficient funding to effectively oversee industry practices. Standards might not be the most efficient policy tool in tackling the challenges posed by AI but it is difficult to assess whether, despite several strong initiatives, AI legislation in the US will ever see the light of day.

The rise of generative AI also triggered the last minute insertion of dedicated provisions in the EU AI Act, including the creation of a supervisory European AI Office within the European Commission. Although providers of high-risk AI systems that build on General Purpose AI (GPAI) models will have to comply with the regular provisions of the EU AI Act, concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.

The EU AI Act risk-based approach has not been exempt from criticisms either. If it does take into consideration significant risks to human rights, democracy and the rule of law and posits some prohibitions, it leaves ample space to private standards. Both the risk-based and GPAI regimes have rekindled a debate over the democratic legitimacy of voluntary frameworks and self-regulation. The dual regime GPAI / other AI systems also casts a doubt on whether the EU AI Act risk-based approach is actually future-proof. Maybe, after all, a right-based approach would have been more efficient in tackling the challenges posed by AI and ensuring a necessary coordination with the GDPR. Still, the explicit prohibition on several categories of AI systems in the EU AI Act is noteworthy. The Commission has prioritized these red lines with a six-month deadline after the Act enters into force to identify prohibited AI systems.

A right-based approach is precisely what was meant to be the core of the *Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.* However, Council of Europe standards cannot be considered as respected if rights are addressed as principles or States only "seek to ensure" their protection, explaining why the Convention was finally named a "Framework.". The COE AI Treaty does not overtly distinguish between generative AI and other AI systems, but another crucial distinction is drawn between public sector AI, fully covered, and private sector AI, covered only to the extent each State deems necessary to address risks to human rights, democracy or the rule of law. States can also unilaterally amend the agreed private sector regime at any time.

The hollowing out of the Council of Europe Convention relies on a gambit: that human rights protection is worth sacrificing to ensure the global ambition of the Framework Convention i.e., to get the seal of prestigious

States which are not members of the Council of Europe, such as the US, on the off chance that one day they will ratify the Convention. Only time will tell whether the sacrifice of human rights at the Council of Europe was a smart maneuver or a losing move.

China for its part is quietly completing its rulebook with the entry into force of its Administrative Measures for Generative Artificial Intelligence Services, followed by the publication of proposed security requirements for firms offering services powered by generative AI, including a blacklist of sources that cannot be used to train AI models. These new domestic rules, together with the launch of a *Global AI Governance Initiative*, serve the common purpose of protecting the Chinese way and circumventing the so-called democratic alliance or, in practice, blockade. China still aims to set out standards for AI governance in the Belt and Roads Initiative countries that would compete with standards from democratic nations, though that undertaking seems less formidable than it did a few years ago.

In the meantime, the African Union and the ASEAN have been busy developing their own regional approach. Both call for the establishment of ethical frameworks that promote data privacy, security, transparency, and accountability. However, if the *African Union Continental Strategy* is geared toward states, the *ASEAN Guide* directly addresses AI actors. This finds roots in another difference. The African Union still hesitates between regulation and "agile' governance while the ASEAN has already opted for the latter. A link exists nevertheless between the two: the African Union considered Singapore as a model for agile governance. However, when considering AI governance options, context matters behind mere concepts. Agile governance in not free or partly free countries joining forces in order to have more leverage might turn out to be as compulsory as regulation in democratic countries.

The importance of further diplomatic efforts to come to a common understanding not only on the challenges posed by (generative) AI but also on the human-centric solutions to be adopted has highlighted the *UN leadership on AI Governance*. UN Secretary General Guterres, echoing the plea of several UN Special Rapporteurs and the UN High Commissioner for Human Rights, asserted that regulating AI is a necessity. It should be based on the United Nations Charter and the Universal Declaration of Human Rights. This position got enshrined in the recent UN Resolution on seizing the opportunities of safe, secure and trustworthy artificial intelligence systems for sustainable development. The UN Resolution builds itself on several other international initiatives such as the G7 Hiroshima Process or the Bletchley Declaration on AI Safety. The Secretary General also

convened a multi-stakeholder high level Advisory Board tasked with providing recommendations on how to govern AI. The Advisory Board released an interim report on Governing AI for Humanity and called for a closer alignment between international norms and how AI is developed and rolled out.

The UN Secretary General's position also builds on the achievements of *the UNESCO Recommendation on the Ethics of AI*, the first global, right-based and transversal AI policy framework. The secret to its effective implementation lies in collaborating with states on their national AI strategy and policies through two new operational tools the Readiness Assessment Methodology and the Ethical Impact Assessment, coupled with a regional strategy, which translated in 2023 into the Santiago Declaration to Promote Ethical AI and the establishment of the Regional Council on AI for Latin America and the Caribbean.

AI-assisted conflicts in Ukraine and Gaza have shed light on the extreme risks to human rights and security posed by the use of AI in warfare. With military activities excluded from the scope of most AI policy frameworks, the UN has become a forum of choice to agree on common rules to regulate autonomous weapons. 2023 marked the adoption of *Resolution 78/241 on lethal autonomous weapons systems* by the UN General Assembly (GA). The Resolution affirms that international law, in particular the UN Charter, international humanitarian law and international human rights law, applies to autonomous weapons systems. The General Assembly requested the Secretary General to submit a substantive report on how to address the challenges raised at the next GA session. Concerns exist that it might be too little too late for those whose life and rights continue to be endangered in ongoing conflicts. It remains to be seen whether these first steps, supported by other international and regional initiatives, will lead to a ban on lethal autonomous weapons.

Another policy gap remains largely unaddressed: the use of AI for national security purposes. Mass surveillance through the use of facial recognition technologies or the development of smart city projects continues to spread on behalf of State security, often without proper safeguards for human rights and at the expense of State security itself when threats signal foreign interference. This uncovers another aspect of the digital revolution: the blurring of the lines between national security, military, public and private use, all at the expense of democratic values.

Between carve outs and blank exemptions, there is one less controversial field where consensus appears on the need for safeguards: the digitization of public services. This is clear from the US Executive Order, the Council of Europe Convention, but also the Ibero American

Charter on Artificial Intelligence in Civil Service or the Australian Interim Guidance on Government Use of Publicly Available Generative Artificial Intelligence Platforms and Data and the Digital Government Strategy which draw lessons from the Robodebt Scheme scandal

Still, our survey of national AI policies and practices also revealed the hard work of many NGOs, advocates, academics, and government officials, around the world, who have fully engaged the challenges that AI poses and are prepared to stand on the front lines in defense of fundamental rights. Concerning in this regard were the successful attempts to exclude civil society organizations from the Council of Europe's table of negotiations, even with regard to the Explanatory Report. Negotiations behind closed door is something we take seriously and report negatively as public participation is one of our key metrics for the evaluation of AI policies and practices.

We cannot say enough to thank the extraordinary CAIDP team members -- the Global Academic Network, the Teaching Fellows, the Policy Group, the Research Group, the Team Leaders, the law school externs, and friends - who made possible this report. From an early project with a handful of people, the current report reflects the efforts and dedication of more than 300 experts in more than 80 countries. They did the hard work of researching, presenting for discussion, and then preparing the assessments and ratings that make possible comparative analysis. We are also grateful to the advisors and reviewers who provided comments on earlier drafts of the report and direction for future editions. Our board members and dedicated volunteers have kept us on course during this period of remarkable growth. And we thank the benefactors and supporters of CAIDP who have helped establish one of the most influential organizations in the field of AI policy. Together we share a commitment to *a better society, more* fair, more just -a world where technology promotes broad social inclusion based on fundamental rights, democratic institutions, and the rule of law.

To those in the AI policy field, whether advisors, decisionmakers, heads of government, independent experts, or simply members of the public who are interested in the growing impact of artificial intelligence on our lives and our societies, we hope you will give this report your attention. The rate of change is accelerating. We must act now to preserve our rights and freedom.

As always, we welcome your advice, suggestions, revisions, and updates. Please send editorial comments to <u>editor@caidp.org</u> and visit our website caidp.org to find more about our activities, recent policy developments and how to get involved.

- US Sets out AI Regulations for Public Agencies, Joins International Initiatives
- Concerns about LAWS on the Rise with Regional Conflicts
- China adopts legislative package on AI, launches Global AI Initiative

THE GLOBAL AI POLICY LANDSCAPE

As a field of research, AI policy is in the early stages. Only in the last few years have national governments formally considered and adopted policy frameworks that explicitly discuss "Artificial Intelligence."¹ While government funding for work on Artificial Intelligence goes back to the mid-1950s, it would be many years before governments examined the consequences of this research. That gap is now closing. Governments around the world confront important decisions about AI priorities, AI ambitions, and AI risks. Much of this report concerns the current policies and practices of national governments.

In addition to national governments, many intergovernmental organizations are pursuing AI policies and initiatives. This section provides an overview of these organizations, listed in a simple A to Z. We also note the important work of technical associations and civil society organizations This section briefly summarizes these activities, as of early 2024.

The Council of Europe

The Council of Europe (COE) is the continent's leading human rights organization.² The COE is comprised of 47 member states, 27 of which are members of the European Union. All COE member states have endorsed the European Convention of Human Rights, a treaty designed to protect human rights, democracy and the rule of law. Article 8 of the Convention, concerning the right to privacy, has influenced the development of privacy law around the world.

The COE Convention 108 (1981) is the first binding international instrument which protects the individual against abuses which may accompany the collection and processing of personal data and which regulates the transborder flow of personal data.³

In 2018, the Council of Europe amended Convention 108 and opened for signature and ratification the COE Modernized Convention $108+.^4$ Article 9(1)(c) specifically addresses AI decision-making. As the COE explains, the "modernised Convention extends the catalogue of information to be transmitted to data subjects when they exercise their right

¹ Marc Rotenberg, *AI Policy Sourcebook* (2019, 2020).

² Council of Europe, Who we are, https://www.coe.int/en/web/about-us/who-we-are

of access. Furthermore, data subjects are entitled to obtain knowledge of the reasoning underlying the data processing, the results of which are applied to her/him. This new right is particularly important in terms of profiling of individuals."⁵ Forty-two states have signed the protocol amending the Privacy Convention.⁶

Several new AI initiatives are underway at the Council of Europe, including at the Council of Ministers, the COE Parliamentary Assembly. Marija Pejčinović Burić, Secretary General of the Council of Europe, has said "It is clear that AI presents both benefits and risks. We need to ensure that AI promotes and protects our standards. I look forward to the outcome of the work of the Ad hoc Committee on Artificial Intelligence (CAHAI). The Council of Europe has, on many occasions, demonstrated its ability to pioneer new standards, which have become global benchmarks."⁷

Citing the risks to privacy and data protection in 2021, the Council of Europe called for strict rules to limit the use of facial recognition.⁸ The guidelines were developed by the Consultative Committee of the Council of Europe Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data,⁹ reflecting the close connection between traditional rules for data protection and the emerging realm of AI policy.

CAHAI

The COE Council of Ministers established the Ad Hoc Committee on Artificial Intelligence (CAHAI) in September 2019.¹⁰ The aim of the CAHAI is to "examine the feasibility and potential elements on the basis of broad multi-stakeholder consultations, of a legal framework for the

development, design and application of artificial intelligence, based on the Council of Europe's standards on human rights, democracy and the rule of law."¹¹ The Council of Ministers approved the first progress report of the CAHAI in September 2020.¹²

The CAHAI held its final meeting and completed its mandate in December 2021.¹³ At the end of the meeting, the CAHAI adopted the "Possible elements of a legal framework on artificial intelligence, based on the Council of Europe's standards on human rights, democracy and the rule of law." The CAHAI framework contains an outline of the legal and other elements which in the view of the Committee could be included in legally binding or non-legally binding instruments that will make up an appropriate legal framework on AI of the Council of Europe. The CAHAI framework was submitted to the Committee of Ministers for further consideration.

Committee of Ministers

In September 2020 the Committee of Ministers approved the CAHAI progress report, which concluded that the "Council of Europe has a crucial role to play today to ensure that AI applications are in line with human rights protections."¹⁴ The Committee of Ministers asked the CAHAI to draft a feasibility study on a legal instrument that could "regulate the design, development and application of AI that have a significant impact on human rights, democracy and the rule of law." The Committee of Ministers also proposed that the CAHAI should examine "human rights impact assessments" and "certification of algorithms and AI systems." The Committee of Ministers review the recommendation in early February 2022. These initiatives follow the 2020 Recommendation of the Committee of Ministers to member States on the human rights impacts of algorithmic

https://search.coe.int/cm/Pages/result_details.aspx?ObjectID=09000016809ed062 ¹³ Council of Europe, The CAHAI held its 6th and final plenary meeting (Dec. 2, 2021),

systems¹⁵ and its 2019 Declaration on the manipulative capabilities of algorithmic processes.¹⁶

In March 2021, the Committee of Ministers issued a comprehensive declaration on the need to ensure that AI systems for social services respect human rights.¹⁷ The Committee emphasized said that such systems should be developed and implemented in accordance with the principles of legal certainty, legality, data quality, non-discrimination, and transparency. The Ministers also recommended effective arrangements to protect vulnerable persons from serious or irreparable harm.

In November 2021, the Committee of Ministers also issued a Recommendation on the protection of individuals with regard to automatic processing of personal data in the context of profiling. The Committee stressed that "respect for fundamental rights and freedoms, notably the rights to human dignity and to privacy but also to freedom of expression, and for the principle of non-discrimination and the imperatives of social justice, cultural diversity and democracy, should be guaranteed, in both the public and private sectors, during the profiling operations."¹⁸

CAI

In April 2022, the Committee on AI (CAI), composed of representatives of Member States, held its first meeting. Under the authority of the Committee of Ministers, the CAI is instructed to "establish an international negotiation process and conduct work to elaborate an appropriate legal framework on the development, design, and application of artificial intelligence, based on the Council of Europe's standards on human rights, democracy and the rule of law, and conducive to innovation, which can be composed of a binding legal instrument of a transversal character,

including notably general common principles, as well as additional binding or non-binding instruments to address challenges relating to the application of artificial intelligence in specific sectors, in accordance with the relevant decisions of the Committee of Ministers."¹⁹ In October 2022, a group of civil society organizations, including CAIDP, called for the "work of the Council of Europe on the AI Treaty to continue without undue delay" amid EU concerns regarding the European Commission's mandate to negotiate on behalf of EU Member States. The civil society organizations also raised concerns regarding the proposal of the EU to align CAI's work with that of the EU on the EU AI Act. The EU AI Act is a risk-based framework for the regulation of certain AI systems whereas the CAI's mandate consists in drafting a comprehensive framework focusing on human rights, the rule of law and democracy in congruence with the Council of Europe's own mandate.²⁰

At the occasion of its 2nd Plenary meeting, the CAI decided "to establish a Drafting Group to prepare the draft [Framework] Convention, composed of potential Parties to the [Framework] Convention and reporting to the Plenary", thus effectively excluding from the negotiations carried out by the Drafting Group, civil society organizations which have been granted observer status.²¹ Members of civil society organizations have denounced this decision as creating "a black box for AI policy,"²² despite the Council of Europe's call for the Democratic Governance of Artificial Intelligence in a 2020 resolution.²³

At its 4th Plenary meeting, the CAI decided to make the revised "Zero Draft" [Framework] Convention on Artificial Intelligence, Human

Rights, Democracy and the Rule of Law publicly available.²⁴ The Zero Draft serves as a basis for the negotiation of the Council of Europe Framework Convention on AI.

At its 10th and last meeting in March 2024, the CAI concluding the negotiations on the Framework Convention. The CAI in Plenary examined, discussed and approved the Draft Framework Convention, as revised by the Drafting Group. The CAI instructed the Secretariat to submit the Draft Framework Convention to the Committee of Ministers with a view to formal adoption.

European Committee on Crime Problems

In September 2021, based on the results of the 2020 Feasibility Study on a future Council of Europe instrument on artificial intelligence and criminal law,²⁵ the CDPC set up a Drafting Committee consisting of experts appointed by the members of the CDPC tasked with the elaboration of an instrument on AI and criminal law related to vehicles and automated driving.²⁶ One of the main purposes of this instrument would be to "ensure the development of AI systems in accordance with the fundamental rights protected by Council of Europe instruments."²⁷ In November 2021, the Drafting Committee held its first meeting but failed to agree on the bindingness of the instrument.²⁸

Parliamentary Assembly

In October 2020, the Parliament Assembly of the Council of Europe has adopted a new resolution on the Need for Democratic Governance of

Artificial Intelligence.²⁹ The Assembly called for "strong and swift action" by the Council of Europe. The parliamentarians warned that "soft-law instruments and self-regulation have proven so far not sufficient in addressing these challenges and in protecting human rights, democracy and rule of law."

In a set of recommendations examining the opportunities and risks of AI for democracy, human rights and the rule of law adopted in October 2020 as well, the Parliamentary Assembly called on the Committee of Ministers to take into account the particularly serious potential impact of the use of artificial intelligence "in policing and criminal justice systems"³⁰ or "on the enjoyment of the rights to equality and non-discrimination", ³¹ when assessing the necessity and feasibility of an international legal framework for artificial intelligence.

European Court of Human Rights

The European Court of Human Rights has generated an abundant amount of case law interpreting Article 8 of the European Convention on Human Rights on the right to private life. The opinions of the Court on privacy and data protection are widely regarded by other courts. The Court has dealt with numerous aspects relating to the protection of personal data, which has been deemed of fundamental importance to a person's enjoyment of a person's right to respect for private and family life as guaranteed by Article 8. The Court has addressed privacy challenges in relation to telephone conversations, telephone numbers, computers, video surveillance, voice recording, bulk interceptions of telecommunications and the internet.³² However, to date, the Court has not addressed matters relating to AI tools, including automated decision-making based on algorithms.

Commissioner for Human Rights

In January 2021, at a virtual event organized by the German Federal Foreign Office and Federal Ministry of Justice and Consumer Protection as part of Germany's Chairmanship of the Committee of Ministers of the Council of Europe, the Commissioner for Human Rights started her speech on "Human Rights in the Era of AI – Europe as international Standard Setter for Artificial Intelligence" by asserting that "Ensuring that technological development works for and not against human rights, democracy and the rule of law is one of the biggest tasks that states face".³³

Her speech refers to and builds on the 10-point Recommendation on AI and human rights she addressed to Council of Europe member states in May 2019.³⁴ It focused more specifically on 1) Human rights impact assessment, 2) Public consultations 3) Obligations of member states to facilitate the implementation of human rights standards in the private sector 4) Information and transparency 5) Independent oversight 6) Nondiscrimination and equality 7) Data protection and privacy 8) Freedom of expression, freedom of assembly and association, and the right to work 9) Remedies 10) Promotion of "AI literacy."

In March 2024, before the last CAI Plenary, the Commissioner issued a statement in which she stated, "As they reach their final stage, I reiterate my position that the legally binding instrument on AI and human rights should contain unambiguous obligations for states parties to reinforce the protection of human rights, democracy and the rule of law in the context of AI." It appears that her call has not been followed by the negotiating parties. Although the Framework Convention covers both the public and the private sectors, with regard to the private sector, states' commitment to strengthen the protection of human rights, democracy and the rule of law comes in the shape of individual declarations in which each state shall describe how it intends to address the risks and challenges raised by AI. States can amend their declarations unilaterally and at any time.

Commission for the Efficiency of Justice

In December 2020, The European Commission for the Efficiency of Justice (CEPEJ) adopted a feasibility study on the establishment of a certification mechanism for artificial intelligence tools and services. The

³³ Commissioner for Human Rights, *Human Rights in the Era of AI – Europe as international Standard Setter for Artificial Intelligence* (Jan. 20, 2021) https://rm.coe.int/german-cm-presidency-high-level-conference-human-rights-in-the-era-

³⁴ Commissioner for Human Rights, Recommendation, Unboxing Artificial Intelligence: 10 steps to protect Human Rights (May 2019) <u>https://rm.coe.int/unboxing-artificial-</u> intelligence-10-steps-to-protect-human-rights-reco/1680946e64

study is based on the CEPEJ Charter on the use of artificial intelligence in judicial systems. According to the CEPEJ, the Council of Europe, if it decides to create such a mechanism, would be a pioneer in this field.³⁵

In December 2021, the CEPEJ adopted the 2022-2025 Action plan: "Digitalisation for a better justice." The CEPEJ Action Plan sets out as the priority assisting "States and courts in a successful transition towards digitalisation of justice in line with European standards and in particular Article 6 of the European Convention of Human Rights" on the right to a fair trial, "while also ensuring that justice is human, efficient and of high quality." "Human justice" is presented as one of the main goals the CEPEJ should take into account: "The digitalisation of justice shall make justice more efficient but must never seek to replace the judge. The judge must remain at the centre of the procedure."³⁶

In December 2023, the CEPEJ adopted an Assessment Tool for the operationalization of the European Ethical Charter on the use of AI in judicial systems and their environment.³⁷ The Assessment Tool provides for a set of verifications, key measures and safeguards that decision-makers within judicial systems should follow when purchasing, designing, developing, implementing and/or using AI in judicial systems and their environment, in compliance with the CEPEJ Charter. The Tool aims to complement the Human Rights, Democracy and the Rule of Law Impact Assessment (HUDERIA) which is under discussion before the CAI.

The European Union

Many institutions in the European Union now play a significant role in the development of AI policies and practices.

The European Commission

The European Commission plays an active role in developing the EU's overall strategy and in designing and implementing EU policies. The Commission is the initiator of EU legislation. AI was identified as a priority

when the new Commission, under the Presidency of Ursula von der Leyen, was established in late 2019.³⁸ At that time, von der Leyen recommended new rules on Artificial Intelligence that respect human safety and rights.³⁹

Von der Leyen's proposal followed remarks by Chancellor Angela Merkel at the G20 summit in 2019, who called for the European Commission to propose comprehensive regulation for artificial intelligence. "It will be the job of the next Commission to deliver something so that we have regulation similar to the General Data Protection Regulation that makes it clear that artificial intelligence serves humanity," Merkel stated.

In February 2020, the Commission published a White Paper On Artificial Intelligence - A European Approach to Excellence and Trust⁴⁰ for public comment. The Commission subsequently proposed several options for AI regulation. Speaking to the EU Ambassadors Conference in November 2020, President von der Leyen said, "European rules on personal data protection have inspired others to modernise their own privacy rules. We must now put special focus on the international transfer of data, particularly after a recent ruling of the European Court of Justice."⁴¹ And in remarks to the Council on Foreign Relations, she said "we must work together on a human-centric vision on AI - a global standard aligned with our values."⁴²

Following the U.S. election in November 2020, the European Commission developed a new framework for transatlantic relations. On December 2, 2020, the European Commission proposed a New EU-US Agenda for Global Change. The New Agenda covers a wide range of topics, but it is notable that the Commission states, "we need to start acting together on AI - based on our shared belief in a human- centric approach and dealing with issues such as facial recognition. In this spirit, the EU will propose to start work on a Transatlantic AI Agreement to set a blueprint for regional

and global standards aligned with our values."⁴³ The Commission further states, "We must also openly discuss diverging views on data governance and see how these can be overcome constructively. The EU and the US should intensify their cooperation at bilateral and multilateral level to promote regulatory convergence and facilitate free data flow with trust on the basis of high standards and safeguards."

The Trade and Technology Council

At the US-EU Summit in Brussels in June 2021, President von der Leyen launched together with US President Biden the EU-US Trade and Technology Council (TTC). One of its main purposes is to coordinate approaches to key technology issues and deepen transatlantic trade and economic relations based on shared democratic values. The Trade and Technology Council will include a working group on technology standards cooperation including AI and another one on the misuse of technology threatening security and human rights. For the EU, the TTC is co-chaired by European Commission Executive Vice Presidents Valdis Dombrovskis and Margrethe Vestager and for the US by Trade Representative Katherine Tai, Secretary of Commerce Gina Raimondo and Secretary of State Anthony Blinken.

In a joint statement following the TTC inaugural meeting in Pittsburgh in September 2021, "the European Union and the United States acknowledge that AI technologies yield powerful advances but also can threaten our shared values and fundamental freedoms if they are not developed and deployed responsibly or if they are misused. The European Union and the United States affirm their willingness and intention to develop and implement AI systems that are innovative and trustworthy and that respect universal human rights and shared democratic values."⁴⁴ They also agreed on the importance of public consultation as the TTC undertakes its work. As a result, in October 2021, the Commission launched an online consultation platform on the TTC⁴⁵ allowing stakeholders to share their views and make recommendations as well as be informed about its work.

⁴⁵ Futurium Platform, *Trade and Technology Council Community*, <u>https://futurium.ec.europa.eu/en/EU-US-TTC</u>

At the third TTC meeting in December 2022, the EU and the US issued a TTC Joint Statement⁴⁶ in which they declared that their "cooperation will enable trustworthy AI systems that enhance innovation, lower barriers to trade, bolster market competition, operationalise common values, and protect the universal human rights and dignity of our citizens." With this Joint Statement, the EU and the US also "reaffirm[ed] that international rules-based approaches to trade, technology, and innovation that are founded on solid democratic principles and values can improve the lives of our citizens and generate greater prosperity for people around the world."

In terms of specific initiatives, the EU and the US:

- (1) acknowledged that the "TTC Working Groups on Data Governance and Technology Platforms and on Misuse of Technology Threatening Security and Human Rights are coordinating to understand and address the spread of Russian information manipulation and interference, particularly in the context of Russia's aggression against Ukraine, and its impact on third countries, notably in Africa and Latin-America."
- (2) stressed as one of the key outcomes of their continuous "commitment on developing and implementing trustworthy AI" the release of their first Joint Roadmap on Evaluation and Measurement Tools for Trustworthy AI and AI Risk Management.⁴⁷ They also announced that they "aim to build a shared repository of metrics for measuring AI trustworthiness and risk management methods, which would support ongoing work in other settings such as the OECD and GPAI."
- (3) "Recognising the importance of privacy in advancing responsible AI development, the European Union and the United States will work on a pilot project to assess the use of privacy-enhancing technologies and synthetic data in health and medicine, in line with applicable data protection rules."
- (4) Finalized a joint study on the impact of AI on the workforce based on EU and US case studies.⁴⁸

At the fifth TTC meeting in January 2024, the EU and the US welcomed the G7 International Guiding principles on AI and the voluntary Code of Conduct for AI developers adopted in the framework of the Hiroshima Process. The EU and the US also agreed to continue cooperating on international AI governance.⁴⁹

The Draft EU AI Act

In April 2021, the European Commission published the "AI package." This package consisted of: a Communication on Fostering a European Approach to Artificial Intelligence; the Coordinated Plan with Member States: 2021 update; a proposal for an AI Regulation laying down harmonised rules for the EU (the "AI Act").⁵⁰ In January 2022, the European Commission proposed to define a set of principles for a human-centered digital transformation.⁵¹

The draft AI Act follows a risk-based approach and proposes to categorize AI systems based on the four different risk levels they create: 1) an unacceptable risk; 2) a high risk; 3) limited risk; or 4) minimal risk. No limitations or requirements are set for use of AI systems creating minimal or low risk.

The draft AI Act prohibits certain AI practices that create unacceptable risk as they contradict EU values and fundamental rights. The draft Act proposes to prohibit four AI practices: 1) deployment of subliminal techniques beyond a person's consciousness, 2) exploitation of the vulnerabilities of specific vulnerable groups, 3) social scoring, and 4) use of 'real-time' remote biometric identification systems in publicly accessible spaces.

The draft AI Act sets out specific requirements for high-risk AI systems, that create an adverse impact on safety or fundamental rights. This includes AI systems that are product or safety components or systems used in the areas listed in Annex III of the draft AI Act, including such areas as biometric identification and categorization, education, employment, law enforcement, migration, asylum and border control.

For other AI systems that do not pose high risks, the draft AI Act imposes limited transparency rules. The draft Act classifies as limited-risk

AI systems intended to interact with natural persons, emotion recognition systems and biometric categorization systems, and AI systems used to generate or manipulate image, audio or video content.

The Commission proposal was reviewed and amended by the Parliament and the Council separately, and then through a subsequent negotiation, known as the "trilogue."52 The final compromise on the text of the EU AI Act keeps intact the risk-based approach but adds specific provisions regarding General Purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model. Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection. Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.⁵³

Intense negotiations surrounded also the scope of the EU AI Act and red lines. In particular, a large carve out now exists for the sake of national security. AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. This also applies to product oriented research, testing and development activity regarding AI systems or models, prior to their being

put into service or placed on the market.⁵⁴ The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact⁵⁵ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

The Draft EU Artificial Intelligence Liability Directive

The European Parliament's JURI Committee, responsible for Legal Affairs, requested a significant report on Artificial Intelligence and Civil Liability.⁵⁶ The report "demonstrates how technology regulation should be technology-specific, and presents a Risk Management Approach, where the party who is best capable of controlling and managing a technology-related risk is held strictly liable, as a single entry point for litigation." The report outlines the application to four case studies. Following the European Parliament's October 2020 resolution on the topic, the European Commission published an inception impact assessment on a legislative initiative to adapt the EU liability rules to the digital age and circular

economy in June 2021 57 and launched a public consultation on the topic from October 2021 until January 2022. 58

In September 2022, the Commission released the Proposal for an Artificial Intelligence Liability Directive. The Proposal aims to address the specific difficulties of proof linked with AI and ensure that justified claims are not hindered by laying down uniform rules for certain aspects of non-contractual civil liability for damage caused with the involvement of AI systems. According to BEUC, the European Consumer Organization, "the new rules provide progress in some areas, do not go far enough in others, and are too weak for AI-driven services. Contrary to traditional product liability rules, if a consumer gets harmed by an AI service operator, they will need to prove the fault lies with the operator. Considering how opaque and complex AI systems are, these conditions will make it de facto impossible for consumers to use their right to compensation for damages."⁵⁹

Now that an agreement has been reached with regard to the EU AI Act, attention will focus on the Liability Directive as a complementary. In Parliament, the draft Directive has been assigned to the Legal Affairs Committee (JURI) and MEP Axel Voss has been appointed as rapporteur. The next step is for the European Parliament and Council to consider and adopt the draft Directive.⁶⁰

Fundamental Rights in the Digital Age

In December 2021, the European Commission released its annual report on the application of the Charter of Fundamental Rights in the EU. It is the first thematic report and it focuses on the challenges in protecting fundamental rights in the digital age.⁶¹ One of the key policy areas of the

⁶¹ European Commission, Protecting Fundamental Rights in the Digital Age – 2021 Annual Report on the Application of the EU Charter of Fundamental Rights, COM(2021)

report concerns "Safeguarding fundamental rights where artificial intelligence is used" and another one "Supervising digital surveillance" with a paragraph dedicated to remote biometric identification.

In January 2022, the European Commission proposed to define a set of principles for a human-centered digital transformation in an interinstitutional Declaration.⁶² This was one of the four cardinal points identified by the Commission in its Digital Compass in which it set its vision for a successful digital transformation of Europe by 2030.⁶³ In December 2022, in the margins of the European Council, Commission President Ursula von der Leyen signed the Declaration, together with the President of the European Parliament Roberta Metsola, and Czech Prime Minister Petr Fiala for the rotating Council presidency.⁶⁴

The European Parliament

The European Parliament is co-legislator, together with the Council of the European Union. The Parliament has convened hearings and adopted resolutions to outline the elements of EU legislation.⁶⁵ One resolution urged the Commission to establish legal obligations for artificial intelligence and robotics, including software, algorithms and data. A second would make those operating high-risk AI systems strictly liable for any resulting damage. And a third resolution on intellectual property rights makes clear that AI should not have legal personality; only people may claim IP rights.

The European Parliament adopted all of these proposals in sweeping majorities, across parties. But even those proposals are unlikely to meet the concerns of civil society. As Access Now and EDRi said of the resolution on AI ethics, "They are cautious and restrained on fundamental rights, taking only tentative steps to outline the biggest threats that artificial intelligence pose to people and society, while also failing to propose a

legislative framework that would address these threats or provide any substantive protections for people's rights."

The influential LIBE Committee has also highlighted concerns about AI and fundamental rights and AI in criminal justice.⁶⁶ In February 2020, the Committee held a hearing on Artificial Intelligence and Criminal Law, and examined the benefits and risks of AI, predictive policing, facial recognition, as well as the ethical and fundamental rights implications. LIBE worked in association with the United Nations Interregional Crime and Justice Research Institute (UNICRI), the European Union Agency for Fundamental Rights (FRA), and the Council of Europe (COE). In November 2020, LIBE issued an opinion concerning AI and the application of international law.⁶⁷

Following a report by the JURI Committee, the European Parliament adopted in January 2021 a resolution on "artificial intelligence: questions of interpretation and application of international law in so far as the EU is affected in the areas of civil and military uses and of state authority outside the scope of criminal justice"68. In its resolution, the Parliament reiterated its call for an EU strategy to prohibit the use of lethal autonomous weapon systems and for a ban on "killer robots". It also called for the EU to play a leading role in creating and promoting a global framework governing the military use of AI. Regarding the use of AI in the public sector, especially healthcare and justice, the Parliament stressed that "the use of AI systems in the decision-making process of public authorities can result in biased decisions that negatively affect citizens, and therefore should be subject to strict control criteria regarding their security, transparency, accountability, non-discrimination, social and environmental responsibility, among others; urges Member States to assess the risks related to AI-driven decisions connected with the exercise of State authority, and to provide for safeguards such as meaningful human

supervision, transparency requirements and the possibility to contest such decisions". The Parliament also invited the Commission to "assess the consequences of a moratorium on the use of facial recognition systems, and, depending on the results of this assessment, to consider a moratorium on the use of these systems in public spaces by public authorities and in premises meant for education and healthcare, as well as on the use of facial recognition systems by law enforcement authorities in semi-public spaces such as airports, until the technical standards can be considered fully fundamental rights-compliant, the results derived are non-biased and nondiscriminatory, and there are strict safeguards against misuse that ensure the necessity and proportionality of using such technologies."

In May 2020, the Directorate General for Parliamentary Research Services of the European Parliament published "The Impact of the General Data Protection Regulation (GDPR) on Artificial Intelligence."69 The study examines the tensions and proximities between AI and data protection principles, such as in particular purpose limitation and data minimization. And in June 2020 the European Parliament established a Special Committee on Artificial Intelligence to study the impact of AI and to propose a roadmap for the EU. According to the decision of Parliament, the Committee should pursue a "holistic approach providing a common, long-term position that highlights the EU's key values and objectives."70

The work of the European Parliament on Artificial Intelligence also intersects with the Digital Services Act, an initiative to overhaul the E-Commerce Directive which has been the foundation of the digital single market for the last twenty years.⁷¹ At the end of October, 2020, European Margrethe Vestager said the proposed Digital Services Act package will aim to make ad targeting more transparent and to ensure companies are held accountable for their decisions.⁷² "The biggest platforms would have to

provide more information on the way their algorithms work, when regulators ask for it," Vestager said. Following the adoption of the Digital Services Package in the first reading by the European Parliament in July 2022, the Council of the EU adopted as well the Digital Services Act. The Act was then signed by the Presidents of both institutions and published in the Official Journal.

Committees – AIDA, IMCO, LIBE

There are three committees within the European Parliament that have primary jurisdiction for the development of AI policy. The AIDA Committee - the Special Committee on Artificial Intelligence in a Digital Age – was established by the European Parliament on June 18, 2020 with the goal of "setting out a long-term EU roadmap on Artificial Intelligence (AI)."⁷³ Over an 18-month period, AIDA organized hearings and workshops with key stakeholders, including experts, policy-makers, and the business community. In November 2021, members of the AIDA committee met with policymakers, NGOs, and business groups in Washington, DC.

In January 2022, the rapporteur of the AIDA Committee published a draft report on artificial intelligence in a digital age.⁷⁴ Approximately 1,400 amendments were received.⁷⁵ AIDA committee anticipated the finalization of the report and a vote on the associated resolution in March 2022. In May 2022, the European Parliament adopted a resolution on the basis of the AIDA Report. The European Parliament "noted that the world is on the threshold of the fourth industrial revolution and that the ongoing digital transformation, in which AI plays a key role, has triggered a global competition for technological leadership. The EU has so far lagged behind, especially in comparison to China and the US, so that future technological standards risk being developed without sufficient EU input, often by undemocratic actors, which poses a risk to political stability and economic competitiveness. The EU should act as a global standard-setter on AI. Members (...) stressed that the EU has the opportunity to shape the international debate on AI and to develop common global rules and standards, promoting a human-centered, trustworthy and sustainable

https://www.europarl.europa.eu/meetdocs/2014_2019/plmrep/COMMITTEES/AIDA/PR/ 2022/01-13/1224166EN.pdf ⁷⁵ AIDA, *AIDA Commttee Meeting, Consideration of Amendments* (Feb. 1, 2022),

⁷⁴ Special Committee on Artificial Intelligence in a Digital Age, *Draft Report on artificial intelligence in a digital age*, (2020/2266(INI)) (Nov. 2, 2021),

⁷⁵ AIDA, *AIDA Commttee Meeting, Consideration of Amendments* (Feb. 1, 2022), <u>https://www.europarl.europa.eu/committees/en/aida-committee-meeting-consideration-of-/product-details/20220117CAN64673</u>

approach to AI, in full respect of fundamental rights. At present, the EU is still far from achieving its aspiration to become globally competitive in AI. Parliament therefore believes that the possibility of consolidating a distinctive European approach to AI on the international stage requires the Union to rapidly agree on a common strategy and regulatory framework for AI. Reiterating the EU's call for a global agreement on common standards for the responsible use of AI. Members believe that the development of international technological norms and standards requires closer coordination and cooperation with like-minded democratic partners. (...) Members noted with concern that such AI technologies pose crucial ethical and legal questions. Certain AI technologies enable the automation of information processing to an unprecedented scale, which paves the way for mass surveillance and other unlawful interference and poses a threat to fundamental rights, in particular the rights to privacy and data protection. (...) The resolution concluded that the EU's AI strategy must not overlook the military and security considerations and concerns that arise from the global deployment of AI technologies. Members stressed the challenge of reaching a consensus within the global community on minimum standards for the responsible use of AI and expressed concern about military research and development on autonomous lethal weapons systems."⁷⁶

Two committees in the European Parliament have then take the reins for the proposed EU AI Act. The IMCO Committee is responsible for the legislative oversight and scrutiny of EU rules on the single market, including the digital single market, customs and consumer protection.⁷⁷ The LIBE Committee "is responsible for the majority of legislation and democratic oversight of policies that enable the European Union to offer its citizens an area of freedom, security and justice (Article 3 TEU). While doing so, we ensure, throughout the EU, the full respect of and compliance with the EU Charter of Fundamental Rights, in conjunction with the European Convention on Human Rights."⁷⁸

A joint hearing between IMCO and LIBE was held on January 25, 2022.⁷⁹ The two rapporteurs expressed their views on the AI Act. Brando

Benifei, co-rapporteur for the Internal Market and Consumer Protection Committee, stated "Our aim is to protect citizens and consumers, and stimulate positive innovation at the same time, while focussing especially on SMEs and start-ups. A legislative framework ensuring that AI systems entering the EU single market are safe, human-centric and respect our fundamental rights and freedoms will stimulate trust among citizens, which is key to a successful and inclusive uptake of AI on our continent. That is what we will strive for." Dragos Tudorache, co-rapporteur for the Civil Liberties, Justice and Home Affairs Committee, said, "The AI Act is a central piece of the European regulatory environment for the digital future and the first of its kind worldwide. We have a chance to lead by example and to shape the rules of the digital world according to our values. As the heart of European democracy, the European Parliament has a key role to play: we need to find the right balance between enhancing the protection of our fundamental rights and boosting Europe's competitiveness and capacity to innovate." The two co-rapporteurs MEP Brando Benifei and MEP Dragos Tudorache unveiled their draft report in April 2022. The draft report received more than 3000 amendments before a compromise was reached within the European Parliament and with the Council.

The Two Councils

The European Council defines the EU's overall political direction and priorities.⁸⁰ Its members are the heads of state or government of the 27 EU member states, the European Council President, and the President of the European Commission. The European Council is not one of the EU's legislating institutions, so does not negotiate or adopt EU laws. This is the prerogative of the Council of the European Union ("Council"), composed of representatives of member states' ministers.

In June 2020, the Council of the European Union set out Conclusions for Shaping Europe's Digital Future.⁸¹ Regarding AI, the Council stressed, "some artificial intelligence applications can entail a number of risks, such as biased and opaque decisions affecting citizens' well-being, human dignity or fundamental rights, such as the rights to nondiscrimination, gender equality, privacy, data protection and physical integrity, safety and security, thus reproducing and reinforcing stereotypes and inequalities. Other risks include the misuse for criminal or malicious purposes such as disinformation."

⁸⁰ European Council <u>https://www.consilium.europa.eu/en/european-council/</u>

⁸¹ Council of the European Union, *Shaping Europe's Digital Future* (June 9, 2020), https://data.consilium.europa.eu/doc/document/ST-8711-2020-INIT/en/pdf

And then in October 2020, the European Council issued conclusions on the Charter of fundamental rights in the context of artificial intelligence and digital change.⁸² "These conclusions are designed to anchor the EU's fundamental rights and values in the age of digitalisation, foster the EU's digital sovereignty and actively contribute to the global debate on the use of artificial intelligence with a view to shaping the international framework," the Presidency of the Council stated.

The Presidency recommended a "fundamental rights-based" approach to AI and emphasized dignity, freedoms, equality, solidarity, citizen's rights, and justice.⁸³ The Council urged the Union and Member States to "consider effective measures for identifying, predicting and responding to the potential impacts of digital technologies, including AI, on fundamental rights." The Council said the "Commission's announced proposal for a future regulatory framework for AI, should strengthen trust, strike a fair balance between the various interests and leave room for research and development and further innovation and technical and sociotechnical developments." The Council also acknowledged the work of the FRA on AI.

The Council of the European Union, through the Transport, Telecommunications and Energy Council, has already set out proposed changes to the EU AI Act. The Slovenian Presidency (July to December 2021) published in late November 2021 compromise text Articles 1 - 7 of the AI Act.⁸⁴ The text strengthens certain provisions but would also exempt general purpose AI systems.

A compromise text dated January 13th was proposed by the French Presidency (January to June 2022), addressing Articles 8-15 and Annex IV.⁸⁵ The French Presidency aimed at adopting a Council position before July 2022. The French proposal suggested to extend the ban on social scoring to private actors, make clear that obligations for high-risk systems apply to both public and private authorities, add insurance to the list of high-

risk systems, expand the definition of prohibited system that distort human behaviour, and expand the limitation on remote identification systems. At the same time, the French proposal aimed to exclude AI systems "exclusively developed or used for military purposes" as long as it is used only for military purposes. A related provision would exclude AI systems that are exclusively developed or used for national security purposes. Both proposals ended up in the final version of the EU AI Act.

Two other presidencies, the Czech and the Swedish presidencies, took place before a final compromise could be reached within the Council. The Council adopted a common position ('general approach') on the AI Act in December 2022 however negotiations were reopened towards the finish line around the regulation of general purpose AI. The Spanish Presidency played a pivotal role in finding a final compromise on GPAI, of great concern for some Tech companies, as well as national security, of great concern for some states. It is under the Belgium Presidency, in February 2024, that the deal got sealed among EU member states by a unanimous vote.

The Court of Justice of the European Union

Although the Court of Justice has yet to rule directly on AI policies, the Court will play a significant role as AI policies evolve and AI law is adopted.⁸⁶ Judgments of the Court concerning data transfers will also impact the development of AI systems. In the 2020 *Schrems II* judgment, the Court struck down the Privacy Shield framework that permitted the transfer of personal data from the European Union to the United States.⁸⁷ The *Schrems II* judgment will likely limit the collection and use of personal data for AI systems.

In its *Ligue des Droits Humains* Judgment of June 2022 concerning the Passenger Name Records Directive, the Court of Justice has reaffirmed the primacy of a human-centered approach to AI. The Court of Justice ruled that machine learning techniques may be incompatible with the protection of fundamental rights.⁸⁸ The Court observed that the opacity of artificial

⁸⁶ CAIDP Update 1.1, *EU Privacy Decision Will Have Global Consequences*, (July 19, 2020), <u>https://dukakis.org/news-and-events/center-for-ai-and-digital-policy-update-eu-privacy-decision-will-have-global-consequences/</u>

https://curia.europa.eu/juris/document/document.jsf?text=&docid=261282&pageIndex=0 &doclang=EN&mode=req&dir=&occ=first&part=1&cid=13059170

intelligence might make it impossible to understand the reason why a given program arrived at a positive match.⁸⁹ As the Advocate General had earlier observed, algorithms "must function transparently and that the result of their application must be traceable."⁹⁰ The Court added in *Ligue des droits humains* that the use of pre-determined criteria also precludes the use of systems that modify "the assessment criteria on which the result of the application of that process is based as well as the weighting of those criteria."⁹¹ These holdings could have far-reaching significance for the use of Artificial Intelligence (AI) techniques by law enforcement agencies, and the future interpretation of the EU AI Act.⁹²

The European Data Protection Board

The European_Data Protection Board (EDPB) is an independent European body, which contributes to the consistent application of data protection rules throughout the European Union and promotes cooperation between the EU's data protection authorities.⁹³

In a January 2020 letter to Sophie in't Veld, the EDPB Chair addressed "the appropriateness of the GDPR as a legal framework to protect citizens from unfair algorithms" and also whether the EDPB would issue guidance on the topic.⁹⁴ The Chair stated that the GDPR is a "robust legal framework" to protect citizens' right to data protection, and highlighted several articles in the GDPR that would apply to AI systems, including Article 22, regarding the legal effects of automated processing, and Article 35, about the obligation to undertake Data Protection Impact Assessments prior to processing.

The EDPB Chair also warned of specific challenges arising from AI. The "data maximization presumption of AI "creates an incentive for large and possibly unlawful data collection and further processing of data." She also warned that the opacity of algorithms (the "black box") can lead to lack of transparency towards the data subject and also "a loss of human

autonomy for those working with algorithms." But the Chair concluded that it would be "premature at this time" to issue guidance on what constitutes a "fair algorithm."

In a June 2020 letter to several members of the European Parliament about facial recognition and the company ClearView AI, the EDPB Chair stated "Facial recognition technology may undermine the right to respect for private life and the protection of personal data . . .It may also affect individuals' reasonable expectation of anonymity in public spaces. Such technology also raises wider issues from an ethical and societal point of view."⁹⁵

In May 2022, pursuant with the EU Data Protection Law Enforcement Directive which provides for the EDPB to issue guidelines, recommendations and best practices in order to ensure that the Member States apply the LED consistently⁹⁶ and in view of recurring issues concerning the use of facial recognition by law enforcement authorities in various Member States, the EDPB issued guidelines on the use of facial recognition technologies in the area of law enforcement.97 "The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stressed that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."98

⁹⁸ European Data Protection Board, *EDPB adopts Guidelines on calculation of fines & Guidelines on the use of facial recognition technology in the area of law enforcement*, Press release (May 16, 2022), <u>https://edpb.europa.eu/news/news/2022/edpb-adopts-guidelines-calculation-fines-guidelines-use-facial-recognition en</u>

In May 2023, the EDPB adopted Guidelines on the use of facial recognition technology in the area of law enforcement⁹⁹. Now that the EU AI Act will enter into force, a key question will be the articulation between the data protection regime and the AI regime.

The European Data Protection Supervisor

The European Data Protection Supervisor is the European Union's independent data protection authority.¹⁰⁰ The EDPS responsibilities include the mission to "monitor and ensure the protection of personal data and privacy when EU institutions and bodies process the personal information of individuals." In comments on the Commission's White Paper on Artificial Intelligence, the EDPS stated, "benefits, costs and risks should be considered by anyone adopting a technology, especially by public administrations who process great amounts of personal data."¹⁰¹ The EDPS also expressed support for a moratorium on facial recognition in public space, "so that an informed and democratic debate can take place and until the moment when the EU and Member States have all the appropriate safeguards."

In June 2021, the EDPB Chair and the EDPS, Wojciech Wiewiórowski, issued a joint opinion on the European Commission's Proposal for a Regulation laying down harmonized rules on artificial intelligence (AI).¹⁰² They stressed the need to make clear that existing EU data protection legislation, including the GDPR, applies to the processing of personal data falling under the scope of the draft AI Regulation. They also proposed that compliance with legal obligations arising from EU legislation - including on personal data protection - should be a precondition for entering the European market as CE marked product.

They also recommended several "red lines" for AI deployment, including general ban on any use of AI for automated recognition of human features in publicly accessible spaces, such as recognition of faces, gait,

19_opinion_ai_white_paper_en.pdf

⁹⁹ European Data Protection Board, *Guidelines 05/:2022 on the use of facial recognition in the area of law enforcement* (May 17, 2023), <u>https://www.edpb.europa.eu/our-work-tools/general-guidance/guidelines-recommendations-best-practices_en</u>

¹⁰⁰ EDPS, *About*, <u>https://edps.europa.eu/about-edps_en</u>

¹⁰¹ EDPS, Opinion 4/2020, EDPS Opinion on the European Commission's White Paper on Artificial Intelligence – A European approach to excellence and trust (June 29, 2020), <u>https://edps.europa.eu/sites/edp/files/publication/20-06-</u>

¹⁰² EDPB, EDPB & EDPS call for ban on use of AI for automated recognition of human features in publicly accessible spaces, and some other uses of AI that can lead to unfair discrimination (June 21, 2021), <u>https://edpb.europa.eu/news/news/2021/edpb-edps-call-ban-use-ai-automated-recognition-human-features-publicly-accessible en</u>

fingerprints, DNA, voice, keystrokes and other biometric or behavioral signals. They proposed a ban on AI systems using biometrics to categorize individuals into clusters based on ethnicity, gender, political or sexual orientation, or other grounds on which discrimination is prohibited under Article 21 of the Charter of Fundamental Rights. Furthermore, the EDPB and the EDPS said that the use of AI to infer emotions of a natural person should be prohibited, except for very specified cases. The EDPB Chair and the EDPS, said:

Deploying remote biometric identification in publicly accessible spaces means the end of anonymity in those places. Applications such as live facial recognition interfere with fundamental rights and freedoms to such an extent that they may call into question the essence of these rights and freedoms. This calls for an immediate application of the precautionary approach. A general ban on the use of facial recognition in publicly accessible areas is the necessary starting point if we want to preserve our freedoms and create a human-centric legal framework for AI. The proposed regulation should also prohibit any type of use of AI for social scoring, as it is against the EU fundamental values and can lead to discrimination.

Inferring emotions ended up in the list of prohibited practices under the EU AI Act however only with reference to workplaces or educational institutions and except for medical or safety reasons.

Fundamental Rights Agency

The EU Agency for Fundamental Rights is also examining the impact of AI. In 2018, the FRA launched a project on Artificial Intelligence, Big Data and Fundamental Rights to assesses the use of AI for public administration and business in the EU.¹⁰³ A 2018 report explores discrimination in AI¹⁰⁴ and a 2019 FRA report examines facial recognition.¹⁰⁵

¹⁰³ FRA, Artificial Intelligence, Big Data and Fundamental Rights (May 30, 2018), <u>https://fra.europa.eu/en/project/2018/artificial-intelligence-big-data-and-fundamental-rights</u>

In mid-December 2020, the German presidency of the EU, in collaboration with the EU Fundamental Rights Agency and German Ministry of Justice and Consumer Protection, organized a conference on AI and the European Way.¹⁰⁶ The conference highlighted recent papers on AI policy from the FRA. The organizers reposted the 2018 FRA report on discrimination in AI and the 2019 FRA report on facial recognition. One paper also summarized FRA AI policy initiatives between 2016 and 2020.¹⁰⁷ The German Government also provided its comments on the Commission White Paper on AI¹⁰⁸ and the detailed 2019 Opinion of the Data Ethics Commission concerning algorithm-based decision-making, AI, and data.¹⁰⁹ In December 2020, the FRA also issued a report on "Getting the future right-Artificial intelligence and fundamental rights in the EU."¹¹⁰

The FRA is currently working on a project which aims to provide empirical analysis and guidance on how to assess high-risk AI in relation to fundamental rights by focusing on selected use cases and a combination of desk-research and fieldwork.¹¹¹

High-Level Expert Group on Al

Following the launch of the Artificial Intelligence Strategy in 2018, the European Commission appointed a group of 52 experts to advice for its implementation.¹¹² The group members were selected following an open selection process and comprised representatives from academia, civil society and industry. The High-Level Expert Group on Artificial Intelligence (AI HLEG) has produced four reports: Ethics Guidelines for

Trustworthy AI, Policy and Investment Recommendations for Trustworthy AI, The final Assessment List for Trustworthy AI, and Sectoral Considerations on the Policy and Investment Recommendations.

According to the ethical guidelines AI should be 1 lawful — respect laws and regulations (including the EU Charter on Fundamental Rights, UN Human Rights Treaties and the Council of Europe Convention on Human Rights); 2. ethical - respect ethical principles and values and 3. robust from a technical perspective and with consideration of its social environment.¹¹³ Since publication in 2019, the ethics guidelines have helped frame EU policy processes with among others key requirements derived form the guidelines in the European Commission's 2021 "AI Act" proposal.¹¹⁴

International outreach for human-centric artificial intelligence initiative

In September 2021, The European Commission's Service for Foreign Policy Instruments (FPI) and the Directorate General for Communications Networks, Content and Technology (DG CONNECT), in collaboration with the European External Action Services (EEAS), launched the International outreach for human-centric artificial intelligence initiative (InTouchAI.eu) - a large foreign policy instrument project to engage with international partners on regulatory and ethical matters and promote the responsible development of trustworthy AI at global level with the main vision to ensure that AI "works for people and protects fundamental rights."¹¹⁵

G-7

The Group of Seven (G7) is an inter-governmental political forum consisting of Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States. The members constitute the wealthiest liberal democracies. The group is officially organized around shared values of pluralism and representative government. The G7 is also the incubator for significant work on AI policy.

¹¹⁵ European Commission, International outreach for human-centric artificial intelligence initiative, <u>https://digital-strategy.ec.europa.eu/en/policies/international-outreach-ai</u>

In advance of the 2016 G7 summit in Japan, then Prime Minister Shinzo Abe urged his government to develop policies for AI that could provide the basis for a global standard.¹¹⁶ At the subsequent meeting of G7 ICT ministers, Japan's Communications Minister proposed international rules that would make "AI networks controllable by human beings and respect for human dignity and privacy."¹¹⁷ She introduced eight basic principles Japans proposed for AI. These principles are very similar to those later adopted by the OECD and then the G20.

Prior to the 2018 G7 summit, France and Canada announced a joint undertaking on Artificial Intelligence that led to the creation of the Global Partnership on AI.¹¹⁸ According to the Mission Statement of the two countries, the goal "will be to support and guide the responsible adoption of AI that is human-centric and grounded in human rights, inclusion, diversity, innovation and economic growth."¹¹⁹

In advance of the 2019 G7 summit, hosted by France, leaders of scientific societies set out a declaration on Artificial Intelligence and Society in which they stated, "Artificial intelligence (AI) is one of the technologies that is transforming our society and many aspects of our daily lives. AI has already provided many positive benefits and may be a source of considerable economic prosperity. It also gives rise to questions about employment, confidentiality of data, privacy, infringement of ethical values and trust in results."¹²⁰

At the 2021 G7 summit hosted by the UK, the G7 Leaders committed to work together for a "values-driven digital ecosystem for the common good that enhances prosperity in a way that is sustainable,

inclusive, transparent and human-centric."¹²¹ They called for a "human centric approach to artificial intelligence," building on the work of the Global Partnership for Artificial Intelligence (GPAI) advanced by the Canadian and French G7 Presidencies in 2018 and 2019.

The G7 Leaders committed to work together for a "values-driven digital ecosystem for the common good that enhances prosperity in a way that is sustainable, inclusive, transparent and human-centric." They called for a "human centric approach to artificial intelligence," building on the work of the Global Partnership for Artificial Intelligence (GPAI) advanced by the Canadian and French G7 Presidencies in 2018 and 2019, and looking forward to the GPAI Summit in Paris in November 2021.

At the 2021 G7 privacy officials also issued a statement on Data Free Flows with Trust.¹²² Regarding artificial intelligence, the officials said, "human dignity, must be central to AI design; AI must be transparent, comprehensible, and explainable; and the data protection principles of purpose limitation and data minimization must apply to AI." They further said that "red lines' are needed for AI systems that are not compatible with our values and fundamental rights."

At the 2023 G7 summit hosted by Japan, the G7, released the G7 Leaders' Statement on the Hiroshima AI Process.¹²³ The G7 leaders emphasized: "We also recognize the need to manage risks and to protect individuals, society, and our shared principles including the rule of law and democratic values, keeping humankind at the center." The G7 leaders confirmed the need for generative AI governance. Thanks to Japanese diplomacy, by the end of 2023, the G7 leaders reached an agreement on the world's first international framework, known as the G7 Hiroshima AI Process Comprehensive Policy Framework. It includes both a set of Guiding Principles applicable to all AI actors throughout the entire AI lifecycle and a Code of Conduct that lists in more detail the actions that AI developers must abide by.¹²⁴ The Hiroshima process was supported by a report prepared by the OECD geared towards ensuring a common understanding on generative AI.¹²⁵

G-20

The G20 is an international forum, made up of 19 countries and the European Union, representing the world's major developed and emerging economies.¹²⁶ Together, the G20 members represent 85 % of global GDP, 75% of international trade and two-thirds of the world's population. According to the OECD, because of its size and strategic importance, the G20 has a crucial role in setting the path for the future of global economic growth.

In the last few years, and in collaboration with the OECD, the G20 has taken a leading role in the promulgation of the global framework for AI policy. At the Osaka summit in 2019, former Prime Minister Abe and OECD Secretary General Gurria gathered support for the OECD AI Principles from the G20 countries. The preparatory work for the 2020 summit in Riyadh provided the first opportunity to assess progress toward implementation of the OECD AI Principles.¹²⁷

In November 2020, the G20 Leaders Declaration addressed both Artificial Intelligence and the digital economy. On AI, the G20 nations said, "We will continue to promote multi-stakeholder discussions to advance innovation and a human-centered approach to Artificial Intelligence (AI), taking note of the Examples of National Policies to Advance the G20 AI Principles. We welcome both the G20 Smart Mobility Practices, as a contribution to the well-being and resilience of smart cities and communities, and the G20 Roadmap toward a Common Framework for Measuring the Digital Economy."¹²⁸

On the Digital Economy, the G20 said in 2020, "We acknowledge that universal, secure, and affordable connectivity, is a fundamental enabler for the digital economy as well as a catalyst for inclusive growth, innovation and sustainable development. We acknowledge the importance of data free flow with trust and cross-border data flows." The G20 Declaration further said, "We support fostering an open, fair, and non-discriminatory environment, and protecting and empowering consumers, while addressing the challenges related to privacy, data protection, intellectual property rights, and security."

 ¹²⁸ G20 Riyadh Summit, *Leaders Declaration* (Nov. 21-22, 2020),

The G20 advanced AI policy in the 2021 Leaders' Declaration, issued at the conclusion of the Summit in Rome.¹²⁹ Recognizing the "benefits stemming from the responsible use and development of trustworthy human-centered Artificial Intelligence (AI)," the G20 Leaders said in Rome they would encourage competition and innovation, "as well as diversity and inclusion," and the importance of international cooperation to promote research, development, and application of AI

In advance of the 2021 Summit, the G20 Digital Economy Ministers reaffirmed "their willingness to implement trustworthy Artificial Intelligence (AI) and to commit to a human-centered approach, as . . . guided by the G20 AI Principles, drawn from the OECD Recommendations on AI."¹³⁰ The Ministers also noted that the "measurement of AI, notably its diffusion and impact across the economy and the international comparability of indicators on AI, needs to be improved."

"Privacy and data protection" figured prominently in the 2021 G20 Leaders Statement with multiple references in policies concerning health and COVID, transportation and travel, the digital economy and higher education, data free flows with trust, and digital identity tools. The G20 Leaders also prioritized Gender Equality and Women's Empowerment, a focus area for AI policy. And the G20 Leaders said they would work in 2022 "towards enhancing confidence in the digital environment by improving internet safety and countering online abuse, hate speech, online violence and terrorism while protecting human rights and fundamental freedoms."

The 43 Heads of Delegations, the largest ever in G20, participated in the G20 New Delhi Summit in September 2023.¹³¹ India stated that the "G20 Presidency would be a watershed moment in her history as it seeks to play an important role by finding pragmatic global solutions for the wellbeing of all, and in doing so, manifest the true spirit of 'Vasudhaiva Kutumbakam' or the 'World is One Family'."¹³²

In the New Dehli Declaration, G20 leaders "reaffirm[ed] [their] commitment to G20 AI Principles (2019)". G20 leaders also asserted, "It is our endeavour to leverage AI for the public good by solving challenges in a

responsible, inclusive and human-centric manner, while protecting people's rights and safety. To ensure responsible AI development, deployment and use, the protection of human rights, transparency and explainability, fairness, accountability, regulation, safety, appropriate human oversight, ethics, biases, privacy, and data protection must be addressed. To unlock the full potential of AI, equitably share its benefits and mitigate risks, we will work together to promote international cooperation and further discussions on international governance for AI."133

Global Privacy Assembly

The Global Privacy Assembly is the global network of privacy officials and experts. The Global Privacy Assembly meets annually to discuss emerging privacy issues and to adopt resolutions. In recent years, the focus of the GPA has moved toward AI.134

The GPA adopted a foundational Declaration in 2018 on Ethics and Data Protection in Artificial Intelligence.¹³⁵ The 2018 GPA 2018 Resolution on Ethics in AI emphasized fairness, vigilance, transparency and intelligibility, and measures to reduce unlawful bias and discrimination.

In 2020, the Assembly adopted a significant Resolution on Accountability and AI that urged organizations deploying AI systems to implement accountability measures, including a human rights impact assessment.¹³⁶ The Privacy Assembly also urged governments to make changes to data protection law "to make clear the legal obligations regarding accountability in the development and use of AI." The 2020 GPA AI Accountability Resolution builds on a recent a recent GPA survey that identified accountability measures that are "very important or important for either AI developers or AI users." The GPA Resolution reiterated several key principles for data protection, such as fairness and transparency, but

See also complete text in Reference section

stopped short of endorsing a formal ban which had been urged by many human rights advocates at the 2019 conference in Tirana. More than 100 organizations and 1,200 experts recommended that "countries suspend the further deployment of facial recognition technology for mass surveillance" and "establish the legal rules, technical standards, and ethical guidelines necessary to safeguard fundamental rights and comply with legal obligations before further deployment of this technology occurs." The Assembly said it would consider the "circumstances when facial recognition technology poses the greatest risk to data protection and privacy rights," and develop a set of principles that could be adopted at the next conference.

In October 2022, at its 44th Closed Session in Ankara, Turkey, the Assembly adopted a Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology. These main tenets are: Lawful basis; Reasonableness, necessity, and proportionality; Protection of human rights; Transparency; Accountability; Data protection principles."¹³⁷

In October 2023, the Assembly adopted a resolution on Generative AI Systems. The signatories stressed that "they were particularly "concerned by the release – often with insufficient pre-deployment assessment – of generative AI systems to the wider public, which may present risks and potential harms to data protection, privacy and other fundamental human rights if not properly developed and regulated."¹³⁸

The OECD

The OECD is an international organization that "works to build better policies for better lives."¹³⁹ The goal of the OECD is to "shape policies that foster prosperity, equality, opportunity and well-being for all."

The OECD has led the global effort to develop and establish the most widely recognized framework for AI policy. This is a result of a concerted effort by the OECD and the member states to develop a coordinated international strategy. The OECD AI Principles also build on earlier OECD initiatives such as the OECD Privacy Guidelines, a widely

¹³⁹ OECD, Who we are, https://www.oecd.org/about/

recognized framework for transborder data flows and the first global framework for data protection.¹⁴⁰ OECD policy frameworks are not treaties, do not have legal force, and are not directly applicable to OECD member states. However, there are many instances of countries adopting national laws based on OECD policies, and a clear convergence of legal norms, particularly in the field of data protection.

Following the publication of the OECD AI Principles in 2019, the OECD continues extensive work on the adoption and implementation of AI policies.¹⁴¹

In 2023, the OECD supported the Hiroshima process by producing a report geared towards ensuring a common understanding on generative AI. In parallel, the *OECD* worked on updating the definition of "AI system" enshrined in the OECD AI Principles. The new definition was then transplanted in both the EU AI Act and the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law, thus fostering global convergence. Concerns exist however that the OECD definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

Global Partnership on Al

The Global Partnership on Artificial Intelligence (GPAI) emerged from the OECD Recommendation on Artificial Intelligence.¹⁴² GPAI activities are intended to foster the responsible development of AI grounded in "human rights, inclusion, diversity, innovation, and economic growth."¹⁴³ The GPAI aims to "bridge the gap between theory and practice on AI by supporting cutting-edge research and applied activities on AI-related priorities." The GPA developed within the G7 under the Canadian and French presidencies. As of January 2022, GPAI's members now include Australia, Belgium, Brazil, Canada, Czech Republic, Denmark, France, Germany, India, Ireland, Israel, Italy, Japan, Mexico, the Netherlands, New Zealand, Poland, the Republic of Korea, Singapore, Slovenia, Spain, Sweden, the United Kingdom, the United States, and the European Union.

The GPAI held the Montreal Summit in early 2020.¹⁴⁴ The five key themes at the first GPAI meeting were the Responsible Use of AI, Data Governance, The Future of Work, AI and the Pandemic Response, Innovation, and Commercialization. The organizers of the Montreal Summit included an AI Art Session to learn how AI will "advance art artistry."

In November 2022, the Ministers of the Global Partnership on Artificial Intelligence Members, convened in Tokyo and adopted a Declaration in which they "Reaffirm our commitment to the OECD AI Principles, which are based on human-centred values, protecting dignity and well-being and promoting trustworthy, responsible and sustainable use of artificial intelligence; Affirm our commitment to protecting and promoting human-centred values and democracy that underpin an inclusive, development-oriented, sustainable and peaceful society; Oppose unlawful and irresponsible use of artificial intelligence and other technologies, which is not in line with our shared values."¹⁴⁵

OECD AI Observatory

The OECD AI Observatory, launched in February 2020, provides extensive data and multi-disciplinary analysis on artificial intelligence across a wide range of policy areas.¹⁴⁶ According to the OECD, the AI Policy Observatory is based on multidisciplinary, evidence-based analysis, and Global multi-stakeholder partnerships.

National Implementation

The OECD has also published the first report that attempts to assess the implementation of the OECD AI Principles among the G-20 nations.¹⁴⁷ Examples of AI National Policies surveys "rationales and illustrative actions" for the 10 principles that make up the OECD/G-20 Guidelines on AI policy. The report was prepared by the G20 Digital Economy Task Force. Key observations from the Task Force report:

• G20 countries are moving quickly to build trustworthy AI ecosystems, though most initiatives are very recent

¹⁴⁴ GPAI, *Montreal Summit 2020*, <u>https://www.c2montreal.com/en/lp/global-partnership-on-artificial-intelligence/</u>

¹⁴⁵ GPA 2022 Ministers' Declaration (Nov. 2022), <u>https://www.gpai.ai/events/tokyo-2022/ministerial-declaration/</u>

¹⁴⁶ OECD, AI Policy Observatory, https://www.oecd.ai/

¹⁴⁷ CAIP Update 1.13, *OECD Report Examines Implementation of AI Principles* (Oct. 5, 2020), <u>https://dukakis.org/center-for-ai-and-digital-policy/caidp-update-oecd-report-examines-implementation-of-ai-principles/</u>

- Many national AI strategies address multiple G20 AI Principles simultaneously, which the OECD contends reinforce the strong complementarity of the Principles
- So far, few national policies emphasize Principles of robustness, security and safety, and accountability,
- Many national policies emphasize R&D, fostering a digital ecosystem, human capacity, and international cooperation

The Task Force also found that "there is potential for steering public research towards socially oriented applications and issues, and for leveraging R&D activities to make progress on issues such as accountability, explainability, fairness and transparency." The Task Force emphasized that there "is currently a critical window for G20 members to continue their leadership on AI policy issues and to promote implementation of the G20 AI Principles. Development, diffusion and use of AI technologies are still at a relatively early level of maturity across many countries and firms, and policy-making on AI is in an active experimental phase."¹⁴⁸

A second report on implementation was published in 2021.¹⁴⁹ The report builds both on the expert input provided at meetings of the OECD.AI Network of Experts working group on national AI policies that took place online from February 2020 to April 2021 and on the EC-OECD database of national AI strategies and policies. The expert group leveraged the OECD AI Policy Observatory www.oecd.ai (OECD.AI), containing a database of national AI policies from OECD countries and partner economies and the EU. These resources help policy makers keep track of national initiatives to implement the recommendations to governments contained in the OECD AI Principles. National policy makers are the primary audience for this report. The expert group met monthly between June 2020 and March 2021 to discuss case studies from selected countries during 90-minute online meetings. Over this period, 24 case studies were discussed during ten virtual meetings. These discussions provided "deep dives" into national experiences in implementing AI policies and were rich in lessons learned and good practices identified for each phase of the AI policy cycle.

OECD Secretary General Angel Gurria remarks at the 2020 G-20 Digital Economy Ministers Meeting in Riyadh also provide insight into the

¹⁴⁸ OECD G20 Digital Economy Task Force, Examples of AI National Policies (2020), https://www.mcit.gov.sa/sites/default/files/examples-of-ai-national-policies.pdf

¹⁴⁹ OECD, State of Implementation of the OECD AI Principles: Insights from National AI Polices (June 2021), https://oecd.ai/en/policies

work of the OECD on AI.¹⁵⁰ Secretary Gurria, addressing the global challenges of the COVID-19 crisis, urged countries to "use digital technologies to build our economies back in a better way: more resilient, inclusive and sustainable." He also spoke about the need to bridge the digital divide, to shift to smart mobility practices, and to continue work on measurement of the digital economy.

As the 2020 G20 AI Dialogue showed," Secretary Gurria said, "AI's full potential is still to come. To achieve this potential, we must advance a human-centred and trustworthy AI, that respects the rule of law, human rights, democratic values and diversity, and that includes appropriate safeguards to ensure a fair and just society. This AI is consistent with the G20 AI Principles you designed and endorsed last year, drawing from the OECD's AI Principles."

In 2023, the OECD published a new report on the state of implementation of the OECD AI Principles, four years on. The report provides an overview of national AI strategies, including their governance frameworks. The report also analyses the various regulatory approaches that countries are adopting to ensure AI trustworthiness, such as ethics frameworks, AI-specific regulations, and regulatory sandboxes. To foster mutual learning among policy-makers, the report offers policy examples for each of the ten OECD AI Principles.¹⁵¹

The OECD ONE PAI

The OECD has also established a Working Group on Policies for AI (ONE PAI).¹⁵² The Working Group is developing practical guidance for policymakers on a wide array of topics: investing in AI R&D; data, infrastructure, software & knowledge; regulation, testbeds and documentation; skills and labor markets; and international co-operation.

The ONE PAI leverages lessons learned by other OECD bodies, as well as analysis of national AI policies. The working group is focusing on the practical implementation of the OECD AI Principles throughout the AI policy cycle for:

• Policy design – focusing on national AI governance policies and approaches;

¹⁵⁰ CAIP Update 1.2, *OECD's Gurria Underscores AI Fairness at G-20* (July 26, 2020), <u>https://dukakis.org/center-for-ai-and-digital-policy/center-for-ai-policy-update-oecds-gurria-underscores-ai-fairness-at-g-20-meeting/</u>

¹⁵¹ OECD, The state of implementation of the OECD AI Principles four years on (2023), <u>https://www.oecd.org/publications/the-state-of-implementation-of-the-oecd-ai-principles-four-years-on-835641c9-en.htm</u>

¹⁵² OECD, OECD Network of Experts on AI (ONE AI), https://oecd.ai/network-of-experts

- Policy implementation focusing on lessons learned to date through national implementation examples;
- Policy intelligence identifying different evaluation methods and monitoring exercises; and
- Approaches for international and multi-stakeholder cooperation on AI policy.

The OECD ONE PAI held five virtual meetings between June and September 2020 which provided "deep dives" into national experience in implementing AI policies in practice.

United Nations

The United Nations launched work on AI in 2015 with the General Assembly event Rising to the Challenges of International Security and the Emergence of Artificial Intelligence.¹⁵³ In 2015, the UN Interregional Crime and Justice Research Institute (UNICRI) launched a program on AI and Robotics.

The Secretary General

In its 2020 Roadmap for Digital Cooperation, the UN Secretary General stated that "Digital technologies provide new means to advocate, defend and exercise human rights, but they can also be used to suppress, limit and violate human rights," noting with emphasis lethal autonomous weapons and facial recognition.¹⁵⁴ He also announced the creation of an advisory body on global artificial intelligence cooperation to provide guidance to the Secretary General and the international community on artificial intelligence that is trustworthy, human-rights based, safe and sustainable and promotes peace. The advisory body will comprise Member States, relevant United Nations entities, interested companies, academic institutions, and civil society groups.

The Roadmap echoes the UN Secretary General 2018 Strategy on New Technologies whose goal was to "define how the United Nations system will support the use of these technologies to accelerate the

achievement of the 2030 Sustainable Development Agenda and to facilitate their alignment with the values enshrined in the UN Charter, the Universal Declaration of Human Rights and the norms and standards of International Laws" with the first principle: "Protect and Promote Global Values" and the second principle: "Foster inclusion and transparency."¹⁵⁵

In a 2021 report Our Common Agenda, the UN Secretary General also proposed the creation of a Digital Global Compact which could "promote regulation of artificial intelligence to ensure that this is aligned with shared global values." The Compact would be agreed on during a Summit of the Future, prepared in part by "a multi-stakeholder digital technology track."¹⁵⁶

On January 26, 2022, Maria-Francesca Spatolisano was designated as the Acting UN Envoy on Technology. She is in charge of coordinating the implementation of the Secretary-General's Roadmap on Digital Cooperation and advancing work towards the Global Digital Compact proposed in the Common Agenda, in close consultation with Member States, the technology industry, private companies, civil society, and other stakeholders.¹⁵⁷

In December 2021, Secretary-General Antonio Guterres encouraged the Review Conference of the U.N.'s Convention on Certain Conventional Weapons "to agree on an ambitious plan for the future to establish restrictions on the use of certain types of autonomous weapons."¹⁵⁸ This follows his call for an international legal ban on LAWS which he qualified in a 2019 message to Meeting of the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems as "politically unacceptable, morally repugnant."¹⁵⁹

In 2023, the UN Secretary General launched a UN High-Level Advisory Body on risks, opportunities, and international governance of

artificial intelligence to reflect on global AI governance. The Advisory Body released its Interim report: Governing for Humanity at the end of 2023. The Advisory Body calls for a closer alignment between international norms and how AI is designed, deployed and used. The Advisory Body identifies the following principles that should guide the formation of new global AI governance institutions: Inclusivity, Public Interest, Centrality of data governance, Universal, networked and multistakeholder, International Law;"¹⁶⁰

UNESCO Recommendation on AI Ethics

In 2020 UNESCO embarked on a two-year project to develop a global standard for Artificial Intelligence. UNESCO Director General Audrey Azoulay stated, "Artificial intelligence can be a great opportunity to accelerate the achievement of sustainable development goals. But any technological revolution leads to new imbalances that we must anticipate."¹⁶¹

In 2020 UNESCO published a draft Recommendation on the Ethics of Artificial Intelligence. UNESCO stated that the Recommendation "aims for the formulation of ethical values. principles and policy recommendations for the research, design, development, deployment and usage of AI, to make AI systems work for the good of humanity, individuals, societies, and the environment." The UNESCO draft Recommendation sets out about a dozen principles, five Action Goals, and eleven Policy Actions. Notable among the UNESCO recommendations is the emphasis on Human Dignity, Inclusion, and Diversity. UNESCO also expresses support for Human Oversight, Privacy, Fairness, Transparency Explainability, Safety and Security. among and other goals. Understandably, UNESCO is interested in the scientific, educational, and cultural dimensions of AI, the agency's program focus.

The UNESCO Recommendation was adopted on November 24, 2021, at the 41st General Conference at its 41st session. This is the first global agreement on the Ethics of Artificial Intelligence.¹⁶² UNESCO Director General Audrey Azoulay stated, "The world needs rules for artificial intelligence to benefit humanity. The recommendation on the ethics of AI is a major answer. It sets the first global normative framework

¹⁶⁰ UN AI Advisory Body, *Interim Report: Governing AI for Humanity*, <u>https://www.un.org/en/ai-advisory-body</u>

¹⁶¹ UNESCO, Artificial intelligence with human values for sustainable development, https://en.unesco.org/artificial-intelligence

¹⁶² UNESCO, *Recommendation on the Ethics of Artificial Intelligence* (2021), https://unesdoc.unesco.org/ark:/48223/pf0000380455

while giving member states the responsibility to apply it at their level. UNESCO will support its 193 member states in its implementation and ask them to report regularly on their progress and practices."

The UNESCO Recommendation was the outcome of a multi-year process and was drafted with the assistance of more than 24 experts.¹⁶³ According to UNESCO, the "historical text defines the common values and principles which will guide the construction of the necessary legal infrastructure to ensure the healthy development of AI."¹⁶⁴ UNESCO explained, "The Recommendation aims to realize the advantages AI brings to society and reduce the risks it entails. It ensures that digital transformations promote human rights and contribute to the achievement of the Sustainable Development Goals, addressing issues around transparency, accountability and privacy, with action-oriented policy chapters on data governance, education, culture, labour, healthcare and the economy." The key achievements of the UNESCO AI Recommendation include:

- 1. **Protecting data.** The UNESCO Recommendation calls for action beyond what tech firms and governments are doing to guarantee individuals more protection by ensuring transparency, agency and control over their personal data.
- 2. **Banning social scoring and mass surveillance**. The UNESCO Recommendation explicitly bans the use of AI systems for social scoring and mass surveillance.
- 3. **Monitoring and Evaluation.** The UNESCO Recommendation establishes new tools that will assist in implementation, including Ethical Impact Assessments and a Readiness Assessment Methodology.
- 4. Protecting the environment. The UNESCO Recommendation emphasizes that AI actors should favor data, energy and resourceefficient AI methods that will help ensure that AI becomes a more prominent tool in the fight against climate change and on tackling environmental issues.

The Recommendation aims to provide a basis to make AI systems work for the good of humanity, individuals, societies and the environment and ecosystems, and to prevent harm. It also aims at stimulating the peaceful use of AI systems. The Recommendation provides a universal framework

¹⁶³ UNESCO, *Preparation of a draft text of the Recommendation: Ad Hoc Expert Group*, <u>https://en.unesco.org/artificial-intelligence/ethics#aheg</u>

¹⁶⁴ UNESCO, UNESCO member states adopt the first ever global agreement on the Ethics of Artificial Intelligence (Nov. 25, 2021), <u>https://en.unesco.org/news/unesco-member-states-adopt-first-ever-global-agreement-ethics-artificial-intelligence</u>

of values and principles of the ethics of AI. It sets out four values: respect, protection and promotion of human rights and fundamental freedoms and human dignity; environment and ecosystem flourishing; ensuring diversity and inclusiveness; living in peaceful, just and interconnected societies.

Further, the Recommendation outlines 10 principles – proportionality and do no harm, safety and security, fairness and nondiscrimination, sustainability, right to privacy and data protection, human oversight and determination, transparency and explainability, responsibility and accountability, awareness and literacy – backed up by more concrete policy actions on how they can be achieved. The Recommendation also introduces red-lines to unacceptable AI practices. For example, it states that "AI systems should not be used for social scoring or mass surveillance purposes."

The Recommendation focuses not only on values and principles, but also on their practical realization, via concrete eleven policy actions. It encourages Member States to introduce frameworks for ethical impact assessments, oversight mechanisms etc. Member States should ensure that harms caused through AI systems are investigated and redressed, by enacting strong enforcement mechanisms and remedial actions, to make certain that human rights and fundamental freedoms and the rule of law are respected.

UN High Commissioner for Human Rights

In the Roadmap for Digital Cooperation, the Secretary General stated, "To address the challenges and opportunities of protecting and advancing human rights, human dignity and human agency in a digitally interdependent age, the Office of the United Nations High Commissioner for Human Rights will develop system-wide guidance on human rights due diligence and impact assessments in the use of new technologies, including through engagement with civil society, external experts and those most vulnerable and affected."¹⁶⁵

In September 2021, the UN High Commissioner for Human Rights Michelle Bachelet called for a moratorium on the sale and use of AI that pose a serious risk to human rights until adequate safeguards are put in place.¹⁶⁶ She also called for a ban on AI applications that do not comply with

roadmap/assets/pdf/Roadmap_for_Digital_Cooperation_EN.pdf)

¹⁶⁵ UN Secretary General, *Report - Roadmap for Digital Cooperation* (June 2020) <u>https://www.un.org/en/content/digital-cooperation-</u>

https://www.ohchr.org/EN/NewsEvents/Pages/DisplayNews.aspx?NewsID=27469&Lang

international human rights law. "Artificial intelligence can be a force for good, helping societies overcome some of the great challenges of our times. But AI technologies can have negative, even catastrophic, effects if they are used without sufficient regard to how they affect people's human rights," Bachelet said.

The High Commissioner's statement accompanied the release of a new report on The Right to Privacy in the Digital Age. The UN Report details how AI systems rely on large data sets, with information about individuals collected, shared, merged and analyzed in multiple and often opaque ways. The UN Report finds that data used to guide AI systems can be faulty, discriminatory, out of date or irrelevant. Long-term storage of data also poses particular risks, as data could in the future be exploited in as yet unknown ways.¹⁶⁷

International Telecommunications Union

In 2017 and 2018, the International Telecommunications Union (ITU) organized the AI for Good Global Summits, "the leading United Nations platform for dialogue on AI."¹⁶⁸ Houlin Zhao, Secretary General of the ITU stated, "As the UN specialized agency for information and communication technologies, ITU is well placed to guide AI innovation towards the achievement of the UN Sustainable Development Goals. We are providing a neutral platform for international dialogue aimed at building a common understanding of the capabilities of emerging AI technologies." The 2018 ITU report *Artificial Intelligence for global good* focused on the relationship between AI and progress towards the United Nations' Sustainable Development Goals (SDGs).¹⁶⁹

UN Special Rapporteur

An extensive 2018 report by a UN Special Rapporteur explored the implications of artificial intelligence technologies for human rights in the information environment, focusing in particular on rights to freedom of

opinion and expression, privacy and non-discrimination.¹⁷⁰ The *Report of the Special Rapporteur on the promotion and protection of the right to freedom of opinion and expression* report defines key terms "essential to a human rights discussion about artificial intelligence"; identifies the human rights legal framework relevant to artificial intelligence; and presents preliminary to ensure that human rights are considered as AI systems evolve. The report emphasizes free expression concerns and notes several frameworks, including the International Covenant on Civil and Political Rights and the UN Guiding Principles on Business and Human Rights.

Among the Recommendations, the Special Rapporteur proposed "Companies should make all artificial intelligence code fully auditable and should pursue innovative means for enabling external and independent auditing of artificial intelligence systems, separately from regulatory requirements. The results of artificial intelligence audits should themselves be made public." The report emphasizes the need for transparency in the administration of public services. "When an artificial intelligence application is being used by a public sector agency, refusal on the part of the vendor to be transparent about the operation of the system would be incompatible with the public body's own accountability obligations," the report advises.

UN and Lethal Autonomous Weapons

One of the first AI applications to focus the attention of global policymakers was the use of AI for warfare.¹⁷¹ In 2016, the United Nations established the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS) following a review of the High Contracting Parties to the Convention on Certain Conventional Weapons (CCW).¹⁷² In November 2019,¹⁷³ the CCW High Contracting Parties

endorsed 11 Guiding Principles for LAWS.¹⁷⁴ But concerns about future of regulation of lethal autonomous weapons remain. At present, some countries believe that current international law "mostly suffices" while others believe new laws are needed.¹⁷⁵ Human Rights Watch provided an important overview of country positions on the future of banning fully autonomous weapons in August 2020.¹⁷⁶ Concerns over killer reports also arose at the 75th UN Assembly in October 2020.¹⁷⁷ Pope Francis warned that lethal autonomous weapons systems would "irreversibly alter the nature of warfare, detaching it further from human agency." He called on states to "break with the present climate of distrust" that is leading to "an erosion of multilateralism, which is all the more serious in light of the development of new forms of military technology."¹⁷⁸ The Permanent Representative of the Holy See to the UN called for a ban on autonomous weapons in 2014.¹⁷⁹

At the 2022 United Nations General Assembly, 70 countries endorsed a joint statement on autonomous weapons systems. The joint statement urged "the international community to further their understanding

and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."¹⁸⁰

At the 78th UN General Assembly First Committee in 2023, 164 states voted in favour¹⁸¹ of resolution L.56¹⁸² on autonomous weapons systems. The Resolution emphasizes the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

The Vatican

Pope Francis has emerged as a leading figure the world of AI policy. In addition to his statements on autonomous weapons, in November 2020 the Pope warned that AI could exacerbate economic inequalities around the world if a common good is not pursued. "Artificial intelligence is at the heart of the epochal change we are experiencing. Robotics can make a better world possible if it is joined to the common good. Indeed, if technological progress increases inequalities, it is not true progress. Future advances should be oriented towards respecting the dignity of the person and of Creation."¹⁸³

Earlier in 2020, the Pope endorsed the Rome Call for AI Ethics.¹⁸⁴ The goal of the Rome Call is to "support an ethical approach to Artificial Intelligence and promote a sense of responsibility among organizations, governments and institutions." The Pope said, "The Call's intention is to create a movement that will widen and involve other players: public institutions, NGOs, industries and groups to set a course for developing and using technologies derived from AI." The Pope also said that the Rome Call for Ethics is the "first attempt to formulate a set of ethical criteria with common reference points and values, offering a contribution to the development of a common language to interpret what is human."¹⁸⁵

The key principles of the Rome Call are 1) Transparency: AI systems must be explainable; 2) Inclusion: the needs of all human beings must be taken into consideration so that everyone can benefit and all individuals can be offered the best possible conditions to express themselves and develop; 3) Responsibility: those who design and deploy the use of AI must proceed with responsibility and transparency; 4) Impartiality: do not create or act according to bias, thus safeguarding fairness and human dignity; 5) Reliability: AI systems must be able to work reliably; 6) Security and privacy: AI systems must work securely and respect the privacy of users. These principles are described as "fundamental elements of good innovation."

In April 2021, the RenAIssance foundation was set up to guard and promote the Rome Call for AI Ethics.¹⁸⁶

In January 2023, representatives of the Chief Rabbinate of Israel's Commission for Interreligious Relations, the Pontifical Academy for Life and Abu Dhabi Forum for Peace, commended a joint declaration on "AI Ethics: An Abrahamic Commitment to the Rome Call".¹⁸⁷ The joint declaration is meant as a companion to the Rome Call.

Archbishop Vincenzo Paglia, President of the Pontifical Academy for Life and the RenAIssance Foundation, welcomed the participants to the event in which the joint declaration was issued with the following words: "We have gathered with our Jewish and Muslim brothers in an event of great importance to call upon the world to think and act in the name of

¹⁸⁷ AI Ethics: An Abrahamic Commitment to the Rome Call (Jan. 10, 2023), https://www.romecall.org/wp-content/uploads/2023/01/AI-Joint-Declaration-5-Jan1-1.pdf

brotherhood and peace – even in the field of technology. The signing of the Rome Call by Jewish and Muslim religious leaders and the joint call for algorethics to guide the design of artificial intelligence refer precisely to the increasingly urgent need to build paths of peace, mutual respect, dialogue and community."¹⁸⁸

Technical Societies

Technical societies have also played a leading role in the articulation of AI principles. The IEEE led several initiatives, often in cooperation with government policymakers, to develop and promote Ethically Aligned Design (EAD).¹⁸⁹ The initial report *A Vision for Prioritizing Human Wellbeing with Autonomous and Intelligent Systems* was published in 2015. The IEEE published the second edition in 2017.¹⁹⁰ In 2019 the IEEE issued a Positions Statement on Artificial Intelligence, concluding that "AI systems hold great promise to benefit society, but also present serious social, legal and ethical challenges, with corresponding new requirements to address issues of systemic risk, diminishing trust, privacy challenges and issues of data transparency, ownership and agency."¹⁹¹

In November 2022, the IEEE Board approved the IEEE Standard for Operator Interfaces of Artificial Intelligence. The standard consists in the definition of a set of operator interfaces frequently used in AI applications, The standard highlights various types of operators, such as those related to basic mathematics, neural network, and machine learning.¹⁹²

ACM, an international society of computer scientists and professionals, has also contributed to the global AI policy landscape.¹⁹³ In 2017 ACM released a Statement on Algorithmic Transparency and Accountability, identifying key principles to minimize bias and risks in algorithmic decision-making systems, including transparency,

¹⁹³ Association for Computing Machinery, www.acm.org/public-policy

accountability, explainability, auditability, and validation.¹⁹⁴ In 2020, in response to growing concerns about the use of facial recognition technologies in public spaces, ACM released another statement addressing the unique issues of biometric data systems and the potential bias and inaccuracies that have significant consequences for violation of human rights.¹⁹⁵

Civil Society

Latin America

In Latin America, NGOs have been active in AI-related aspects, particularly in connection with the use of facial recognition technology. In Argentina, the Association for Civil Rights (Asociación por los Derechos *Civiles*), a very-well known Argentinian human rights organization has criticized the increasing and unaccountable use of facial recognition technology. These efforts have led to the creation of a national campaign using the slogan "Con mi Cara No" ("No with my face"). The organization aims to raise awareness about the dangers of facial recognition technology, particularly when their data is included within opaque and unaccountable systems.¹⁹⁶ Furthermore, during 2020, the Association made contributions to Future City: AI Strategy (Ciudad Futuro: Plan Estratégico Inteligencia Artificial) of the Autonomous City of Buenos Aires.¹⁹⁷ It also participates in the Trustworthy Artificial Intelligence (TAI) program organized by Mozfest, and the working group "Making use of the Civic Voice in AI Impact Assessment" with more than thirty members of different civil society organizations around the world.

The Igarape Institute, an independent Brazilian think tank, also publishes AI-related research: in 2019, the Institute published a study on Future Crime providing an overview of the opportunities and pitfalls of new technologies to fight crime and stated recommendations to ensure

¹⁹⁴ ACM, US Public Policy Council, *Statement on Algorithmic Transparency and Accountability*, (Jan. 12, 2017),

https://www.acm.org/binaries/content/assets/publicpolicy/2017_usacm_statement_algorit hms.pdf.

¹⁹⁵ ACM, US Technology Policy Committee, *Statement on Principles and Prerequisites for the Development, Evaluation and Use of Unbiased Facial Recognition Technologies* (June 30, 3030), https://www.acm.org/binaries/content/assets/public-policy/ustpc-facialrecognition-tech-statement.pdf

¹⁹⁶ Asociación por los Derechos Civiles, <u>https://conmicarano.adc.org.ar/</u>

¹⁹⁷ Asociación por los Derechos Civiles, *Yearbook 20021* https://adc.org.ar/wp-content/uploads/2022/01/ADC-Yearbook-2021.pdf

transparency and accountability.¹⁹⁸ The emphasis was on predictive analytics and the Institute recommended that enforcement agencies are informed about the challenges and caveats associate applying these new crime prediction platforms. The principles of transparency and accountability were also highlighted, as well as the need to ensure the safety, dignity and rights of people in the crime forecasting process, including when advanced software packages are deployed. Predictive tools need not replace the intuition and experience of law enforcement officers, but rather complement them in an agile and auditable manner.

Furthermore, in relation to the São Paulo Metro operator, ViaQuatro, that installed and used an AI crowd analytics system that claims to predict the emotion, age, and gender of metro passengers without processing personal data, Access Now filed an expert opinion criticizing this initiative.¹⁹⁹

Fundoción Karisma, another civil society organization dedicated to supporting the responsible use of tech highlights the pitfalls of these systems. In their report titled Discreet Cameras, they point out that surveillance technology and biometric identification systems in Colombia only take into consideration the technical and impact considerations while assessing systems. There is no analysis using necessity, proportionality or the possible effect of the technology on human rights. Although the government tries to ensure transparency by sharing the location of video surveillance systems that use facial recognition technology, the right to privacy and other fundamental rights of individuals are still ignored.²⁰⁰

In addition, when Uruguay began developing a facial identification database some civil society organizations warned that "this system was approved using the National Budget Act as an 'omnibus law,' thus preventing proper discussion about the issue due to the tight deadlines for approval of this type of law.²⁰¹

¹⁹⁸ Igarape Institute, *Future Crime - Assessing twenty first century crime prediction* (Feb. 3, 2019),

²⁰⁰ Fundación Karisma, *Discreet Cameras*, (Feb. 2, 2018), https://web.karisma.org.co/camaras-indiscretas/

²⁰¹ DATYSOC, Organizaciones de la sociedad civil y académicas expresan su preocupación por reconocimiento facial en el Proyecto de Ley de Presupuesto de Uruguay (Nov. 17, 2020), <u>https://datysoc.org/2020/11/17/organizaciones-de-la-sociedadcivil-y-academicas-expresan-su-preocupacion-por-reconocimiento-facial-en-el-proyectode-ley-de-presupuesto-de-uruguay/</u>

More broadly, several civil society organizations under the banner "Al Sur" in Latin America that seeks to strengthen human rights in the digital environment responded to the public consultation on "Ethics and Data Protection in Artificial Intelligence: continuing the debate" promoted by the International Conference of Data Protection and Privacy Commissioners (ICDPPC).²⁰²

Africa

In relation to Africa, research shows more limited engagement with AI-related questions. In relation to Nigeria, Paradigm Initiative, which operates regional offices in Cameroon, Kenva, Nigeria, Senegal, Zambia, and Zimbabwe, has observed that Nigeria conducts surveillance activities without judicial oversight and a comprehensive framework for data protection and recommended the enactment of a comprehensive framework for data protection and privacy and judicial oversight over surveillance.²⁰³ With regard to AI, Paradigm Initiative has published policy briefs and factsheets, providing a series of recommendations, namely: assessment of Nigeria's strategic priorities, strengths and weaknesses, alignment with supranational AI standards, concerns regarding the use of AI in certain sectors, such as law enforcement, criminal justice, immigration and national security; a human-centric approach to data governance; reinforcing the responsibility of the Nigerian State to protect citizens human rights, and the responsibility of businesses to respect these rights; prioritizing local AI and ensuring a transparent procurement process for AI systems from abroad: and calling for AI upskilling and reskilling.²⁰⁴

Paradigm Initiative has also published a policy brief on the AI policy of Kenya highlighting the challenges faced in the adoption of AI systems, which include the lack of relevant data for the development of the systems, lack of regulatory framework governing the AI ecosystem in the country, lack of relevant AI skills, connectivity divide in the country, and the lack of investment in research on development of AI systems and protection of

²⁰² Ethics and Data Protection in Artificial Intelligence: continuing the debate. A contribution from Latin America & the Caribbean, <u>https://web.karisma.org.co/ethics-and-data-protection-in-artificial-intelligence-continuing-the-debate-a-contribution-from-latin-america-the-caribbean/</u>

²⁰⁴ Paradigm Initiative, *Towards A Rights-Respecting Artificial Intelligence Policy for Nigeria*,

⁽November 2021), <u>https://paradigmhq.org/wp-content/uploads/2021/11/Towards-A-Rights-Respecting-Artificial-Intelligence-Policy-for-Nigeria.pdf</u>

human rights.²⁰⁵ Paradigm Initiative also stressed the risks posed by the use of AI systems on human rights, focusing not only on bias caused by the systems, but also the weaponization of AI systems by the Government which may undermine freedom of expression and association, surveillance through the use of facial recognition technologies, and violation of rights through contents moderation.

In 2019, Witness and the Centre for Human Rights at the University of Pretoria, hosted an expert meeting on deepfakes and other forms of AIenabled synthetic media.²⁰⁶ The Centre for Human Rights also launched the #Tech4Rights initiative to, among several purposes, build stronger regional partnerships for advocacy on the effective use of digital technologies for human rights protection.²⁰⁷

The African Internet Rights Alliance (AIRA) is made up of nine civil society organizations based in countries across Central, East, Southern and West Africa.²⁰⁸ The work of AIRA is rooted in four values: accountability, transparency, integrity, and good governance. Using these values as a guide, AIRA undertakes collective interventions and executes strategic campaigns that engage the government, private sector, media and civil society to institute and safeguard digital rights. In February 2022, the Alliance hosted a seminar on "Artificial Intelligence in Africa: Opportunities, Challenges, and Ethical Imperatives."

Furthermore, the Digital Transformation Center, a German-Rwandan innovation hub, among other tasks, organises events about current ICT topics and trends, organizes training and capacity-development, as well as networking opportunities.²⁰⁹

Moreover, the Rwandan government has engaged Future Society, an independent think tank, to support the development of Rwanda's national artificial intelligence strategy, along with AI ethical guidelines, and a

practical implementation strategy fit for the local context.²¹⁰ In 2021, the Future Society also organised workshops for employees working specific banks with branches in Africa regarding the concept of responsible AI, existing corporate guidelines, the ethical challenges raised by the use of algorithmic prediction for credit lending, and potential impact of facial recognition technologies (FRT) in the banking sector.²¹¹ The Future Society has also published a briefing about the opportunities and challenges of AI in Healthcare in Africa, based on research conducted in TFS' Responsible AI for Development (RAI4D) program.²¹²

Asia

In China, the Beijing Academy of Artificial Intelligence (BAAI) is a non-profit research institute aimed at promoting collaboration among academia and industries, as well as fostering top talents and a focus on longterm research on the fundamentals of AI technology. In 2019, the BAAI released the Beijing AI Principles for the research and development, use, and governance of AI.²¹³

In India, the Artificial Intelligence Foundation Trust aims to spread and promote the quality education in the area of Artificial Intelligence and concerned engineering streams.²¹⁴ The trust will also explore the applications of artificial intelligence in the life, i.e. agriculture, healthcare sector, business, social media, navigation and travel, banking and finance, security and surveillances, e-commerce and many other unexplored application areas.

In Indonesia, the Institute for Policy Research and Advocacy (ELSAM) is a civil society organisation that works to enhance the democratic political order by empowering civil society. With regard to Indonesia's national strategy on AI, ELSAM's researcher Alia Yofira Karunian said the national strategy should be centered around human needs and uphold principles of fairness, accountability and transparency as pillars

in AI implementation.²¹⁵ The Big Data and AI Association (ABDI) is also concerned with AI developments; in relation to the national strategy its Chairman Rudi Rusdiah commented that the government should prioritize trade and industrial affairs in AI development to reap the economic benefits.²¹⁶

Furthermore, the Association for Civil Rights in Israel, which is the oldest and most influential civil and human rights organization advocating across the broad spectrum of human rights and civil liberties, has been active in this field. It was one of the groups that brought before the Israel's Supreme Court a case concerning the Israeli Security Agency tracing the phone location of those who may be infected with Covid-19, eventually banned by the Court.²¹⁷

In Russia, the Human Rights Watch and Amnesty International have criticized the expansion of the use of facial recognition and highlighted threats to privacy taking into account Russia's track record of rights violations.²¹⁸ Amnesty International has also been critical of Russia's plans to broaden the use of widespread facial-recognition systems, saving their expected deployment during public gatherings will "inevitably have a chilling effect" on protesters.²¹⁹

Europe

Civil Society organizations, particularly in Europe, are also shaping national AI policies and practices. Group such as Access Now have published detailed assessment of AI regulatory proposals²²⁰ and a report on

²¹⁵ The Jakarta Post, Indonesia sets sights on artificial intelligence in new national strategy (Aug. 14, 2020), https://www.thejakartapost.com/news/2020/08/13/indonesiasets-sights-on-artificial-intelligence-in-new-national-strategy.html²¹⁶ ibid. See ABID, <u>https://www.abdi.id/</u>

⁽Nov. 2018).

https://www.accessnow.org/cms/assets/uploads/2018/11/mapping regulatory proposals for AI in EU.pdf

"trustworthy AI."²²¹ AlgorithmWatch has drawn attention to controversies in the use of AI-based decision-making systems.²²² BEUC, the European consumer organization, has surveyed public attitudes toward AI,²²³ and in October 2020 proposed specific AI rights for consumers.²²⁴ Privacy International has examined the impact of AI in several context, including advertising, welfare, and migration.²²⁵

The European Commission's White Paper on AI provided an opportunity for these groups to express their views on regulatory options. Several European NGOs said that the Commission has moved too slowly to establish a legislative framework and has placed too much emphasis on ethics rather than fundamental rights. Access Now and EDRi said that the Commission's "risk-based approach" fails to safeguard fundamental rights.²²⁶ As they explained, "the burden of proof to demonstrate that an AI system does not violate human rights should be on the entity that develops or deploys the system" and "such proof should be established through a mandatory human rights impact assessment."

BEUC wrote "a strong regulatory framework is necessary" to "facilitate innovation and guarantee that consumers can fully reap the benefits of the digital transformation of our societies but are protected against the risks posed by AI."²²⁷ The German consumer association vzbv has also said that the EC recommendation is too narrow.²²⁸ Risky

applications that can cause immense harm to consumers' self-determination would then most likely be out of the scope, such as insurance, e-commerce, and smart personal assistants like Amazon Echo/Alexa. The European Commission's plan also appears to include only machine-learning applications. This would exclude a range of expert systems, such as. the German credit scoring system "Schufa." According to vzbv, this is not technology neutral as it should be.

In the fall of 2020, more than a dozen NGOs in Europe joined together to ban biometric mass surveillance.²²⁹ The Reclaim Your Face coalition demands "transparency, red lines, and respect for humans," and has specifically objected to the deployment of facial recognition in Belgrade. According to the organizations, "ReclaimYourFace is a European movement that brings people's voices into the discussion around biometric data used to monitor the population. We question why these sensitive data are being used and raise the alarm on the impact on our freedoms in public spaces."²³⁰

In 2021, the Reclaim YourFace campaign continued to gather support. On January 7, 2021, the European Commission formally recognized the campaign as a European Citizen Initiative.²³¹ As of February 2022, approximately 68,000 signatures in support had been received.²³² Signatures will continue to be gathered until August 2022.

In response to the release of the Commission proposal, Access Now urged stronger action, and called for redline for applications of AI that are incompatible with fundamental rights.²³³ Later in the year, Fanny Hidvégi, Europe Policy Manager at Access Now, stated "Access Now's priority is not to have an EU law on AI, but to have one that is an effective instrument to protect people's rights," said Fanny Hidvégi, Europe Policy Manager at Access Now, stated "We've laid out the steps needed to boost the proposed regulation's human rights standards, and are looking forward to working with the Council and Parliament to guarantee they are achieved."²³⁴

²³⁴ AccessNow, *The EU needs an Artificial Intelligence Act that protects fundamental rights* (Nov. 30, 2021), <u>https://www.accessnow.org/eu-artificial-intelligence-act-fundamental-rights/</u>

In the framework of the negotiations of the Council of Europe Framework Convention on AI, Democracy and the Rule of Law, more than 100 European CSOs called for state negotiators to ensure the transversal scope of the treaty in order for citizens's rights not to be watered down.²³⁵ This shows the vitality of the Europe CSO ecosystem.

United States

In the United States, the AI Now Institute at New York University has organized important conferences²³⁶ and issued expert reports²³⁷ on several AI topics. The AI Now Institute also recently provided a statement to the New York City Council on discrimination in automated employment decision tools.²³⁸ The Electronic Privacy Information Center (EPIC) has pursued several innovative complaints concerning AI with the US Federal Trade Commission,²³⁹ provided comments on AI to federal agencies,²⁴⁰ expert statements to Congress,²⁴¹ and pursued public release of materials concerning the activities of the National Security Commission on AI.242 EPIC has also pursued open government cases concerning the use of proprietary forensic techniques in the criminal justice system.

Fight for the Future, an independent NGO, organized a national campaign in the US to ban facial recognition.243 Amazon also came under widespread criticism from many US NGOs in 2018 about the company's facial recognition system Rekognition.²⁴⁴ In June 2020, Amazon agreed to "pause" the police use of its facial recognition software.245 IBM and

COUNTRY REPORTS

Argentina

National AI Strategy

The Ministry of Science, Technology and Productive Innovation (MINCYT) published the National Strategy for Artificial Intelligence in 2019.²⁵¹ The plan includes two priority initiatives Digital Agenda Argentina 2030²⁵² and the National Strategy for Science, Technology, and Innovation, Argentina Innovates 2030.²⁵³

With the ultimate goal of positioning Argentina as a regional leader on AI, the ten-year strategy plan seeks to transform the country through AI, leveraging the technology in pursuit of developmental objectives built on the UN's sustainable Development Goals (SDGs). The Strategy aims to minimize the potential risks of AI development and implementation for Argentinean society, by protecting personal data and individual privacy through guidelines for the design of AI systems consistent with ethical and legal principles. The strategy also proposes to analyze the impact in the production scheme, resulting effects on labor forces and prevent automate systems from reproducing or reinforcing discriminatory or exclusionary stereotypes. The Strategy addresses the following areas:

- Talent and education
- Data
- Research & Development and Innovation
- Supercomputing infrastructure
- Actions to facilitate job transitions
- Facilitating public-private co-operation on data use
- Public services and manufacturing (as target sectors for AI development)

The cross-cutting themes in the Strategy are:

- Ethics and regulation
- Communication and awareness building
- International co-operation

As can be seen from the wide range of topics covered, the Strategy requires a whole-of-government effort that brings together different

content/uploads/2020/09/Plan-Nacional-de-Inteligencia-Artificial.pdf.

government ministries under the leadership of the Digital Agenda Executive Roundtable (Mesa Ejecutiva Agenda Digital). This effort is supported by twenty different government agencies, as well as a Multi-sectoral Committee of Artificial Intelligence and a Scientific Committee of experts.

The 2019 National AI Strategy for Argentina set out ambitious goals that were built upon other national strategies developed under the former President Mauricio Marci, just before President Alberto Fernandez was elected in December 2019.²⁵⁴ The Executive Branch of the Fernandez administration published the Productive Development Plan Argentina 4.0 in April 2021. This plan, an initiative of the National Ministry of Productive Development, aims to promote the incorporation of technologies 4.0 including AI – in the national production chain. The Argentina 4.0 Plan does not refer to the National AI Strategy. In November 2021, the Secretariat for Strategic Affair also adopted Resolution 90/2021²⁵⁵ entitled Artificial Intelligence Program. This Program complements Decree 970/2020.²⁵⁶ The aim is to foster the responsible use of technology, such as artificial intelligence, "that contribute to consolidating Argentine technological sovereignty in the 4.0 revolution."²⁵⁷

Local Strategies

The Autonomous City of Buenos Aires launched Future City: AI Strategy (Ciudad Futuro: Plan Estratégico Inteligencia Artificial) in August 2021. The Plan outlines the following three objectives:

- Use AI for the city's development
- Use AI for the benefit of the citizens
- Use cross-cutting tools to ensure the city's sustainability

Under this strategy, the Buenos Aires government has established Buenos Aires AI Lab (BA Laboratorio IA), which provides opportunities for training and professional development to the youth and serves as a hub

for facilitating R&D and application of AI.²⁵⁸ As with the National Plan, one of the key aspects of the Buenos Aires strategy is that it aims to foster mechanisms and tools for the development and use of AI technology that respects fundamental values and human rights.²⁵⁹

Public Participation

To define the specific risks and opportunities that the AI plan should address, the government organized several meetings to gather the perspectives of people from different disciplines and sectors. Through the 32 working tables that were assembled, experts from the government, the private sector, the scientific community, the academia, civil society and international organizations collaborated actively in this effort of priorities definition. The outcomes provided the basis for the strategic objectives and lines of action reflected in the plan. Several creative workshops and "unconferences" were held as well. However, mechanisms for ordinary citizens to express their views regarding AI could not be identified.

Data Protection

Article 43 of Argentina's Constitution guarantees an individual's access to personal data in private and public registries, and exercise agency over how that data is used. The Argentinian Personal Data Protection Law (PDPL) follows international standards regarding basic personal data rules, and has even been deemed adequate by the European Commission under the former Directive 95/46/EC.²⁶⁰ A new proposal has been put forward by the former administration to reform the PDPL and related legislation. However the legislative draft has been under consideration by the Argentinean National Congress since 2018, with no formal decision made in that regard as of this date. The purpose of this reform is not only for the country to keep its international status as a jurisdiction that provides an adequate level of protection, particularly after the passing of the European General Data Protection Regulation, but also to keep its data protection regime up to date with the technological and legal developments that have taken place in recent years.

The AAPI is Argentina's data protection authority. Although it enjoys functional autonomy by law, the agency remains under the National Executive Branch from a structural perspective; an aspect that, along with the absence of proper mechanisms in place, has led civil society groups to

question the impartiality and independence of the appointment process of its Executive Director.²⁶¹

In September 2022, the AAPI released a new draft bill on personal data protection.²⁶² Following an extended public consultation featuring 173 submissions, the AAPI took up 80 articles in its final proposal and modified 43 based on public comments. The reform package was presented to Argentina's government for review before introduction to the National Congress of Argentina in June 2023.²⁶³

In September 2023, AAIP issued Resolution No. 161/23 which established the Transparency and Protection of Data Program on the use of AI.²⁶⁴ This program has the objective of enhancing regulatory frameworks and strengthening state powers necessary for the development and use of AI, based on the assumption that the state is responsible for guaranteeing the effective exercise of citizens' rights regarding transparency and the protection of personal data.

Additionally, it included the formation of the Observatory on AI, an initiative to foster governance and community engagement. A week after this Resolution was created, Argentina's President Chief of Staff issued Administrative Decision No. 750/2023 which created an Inter-Ministerial roundtable on AI.²⁶⁵

As a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, the AAPI endorsed the General Recommendations for the

Processing of Personal Data in Artificial Intelligence²⁶⁶ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.²⁶⁷ Both have been framed in accordance with the RED Standards for Personal Data Protection for Ibero-American States.²⁶⁸ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."²⁶⁹

Argentina's AAIP agency has been a member of the Global Privacy Assembly (GPA) since 2018. AAIP co-sponsored the 2018 GPA Resolution

Argentina is also party to Convention 108 since the first of June 2019. In April 2023, Argentina became the 23rd state to ratify 108+ on data protection.²⁷¹

Algorithmic Transparency

The current Argentinian data protection law does not contain formal legal prescriptions that recognizes the right of citizens to receive information about automated-decision systems or to object to a decision based solely on automatic data processing methods.

The AAPI has provided guidance through a resolution issued on 2019,²⁷² in which it recognizes that, under the right of access enshrined in the current data protection law, data subjects have the right to request from data controllers an explanation about the logic used by any system that reaches decisions solely based on automated processing of data and which can affect citizens or have pernicious legal effects on them.²⁷³

The AAPI's proposed reform Act includes the right of citizens to get information about "the existence of automated decision systems, including those that create digital profiles," as well as "meaningful information" about the logic applied by those systems.²⁷⁴ A formal right to object to a decision based solely on automatic processing methods is also included in the proposal.²⁷⁵

The RED Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects also provide, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily

Data Scraping

In August 2023, the AAIP, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.²⁷⁷

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

Use of AI in Public Administration

In June 2023, the Undersecretariat of Information Technologies enacting Resolution 2/2023. This resolution delineates a comprehensive framework of ethical principles and recommendations for the design, development, implementation, or use of AI projects in the public service.²⁷⁸

As a member of the Latin American Centre for Development Administration (CLAD), Argentina approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.²⁷⁹ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

https://www.dentons.com/en/insights/articles/2023/june/15/resolution-2-2023-guidelines-for-reliable-artificial-intelligence.

²⁷⁸ S. Oliva Pinto and D. Macchi, *Resolution 2/2023, Guidelines for Reliable Artificial Intelligence* (Jun. 15, 2023),

²⁷⁹ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."²⁸⁰

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."²⁸¹

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of human-

²⁸⁰ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

²⁸¹ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

centring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.²⁸²

The Salta controversy

There are many AI use cases in the public sector^{.283} One of the most controversial was the use of AI by the Government of the Province of Salta, in Argentina, which implemented a system to predict teenage pregnancy and school dropout using machine learning algorithms trained on data

https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf. ²⁸³OECD.AI, *AI Use Cases in The Public Sector Policy*, ,

²⁸² Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21,

collected in low-income districts of the city of Salta in the years 2016 and 2017. Parameters taken into consideration included teenagers' personal information (age, ethnicity, country of origin, etc.), environment (number of people with whom they lived, if they had hot water in the bathroom) and if they (adolescent women) were or had already been pregnant.²⁸⁴ The program came to an end following the 2019 national and state elections when the new administration terminated several programs, including the use of algorithms to predict pregnancy.²⁸⁵

Facial Recognition

Several documented cases of facial recognition technology use have been reported in various cities and localities as well as at the provincial level in the country. Facial recognition systems being deployed, according to authorities, for the identification and capture of fugitives (in the Autonomous City of Buenos Aires);²⁸⁶ for the identification of missing persons and people with criminal backgrounds (town of Tigre, Buenos Aires province);²⁸⁷; for the use of the police to surveille massive gatherings (Mendoza province);²⁸⁸ or for the prevention and prosecution of crimes (Salta province).²⁸⁹ The program in the City of Buenos Aires in particular was denounced by the UN Special Rapporteur for the Right of Privacy when visiting the city, as a technology whose "proportionality" was questionable when compared to the "serious privacy implications" for people not related to any crime and for not carefully updating and checking for accuracy.²⁹⁰

Human Rights Watch also denounced the system, noting the illegal exposure of minor's personal information.²⁹¹ The City legislature approved a bill in 2020 to authorize the use of AI for the purpose of capturing fugitives.²⁹² But it has been alleged that this fact does not alter the unconstitutional character of the Buenos Aires program.²⁹³ The increasing and unaccountable use of this technology led to the creation of a national campaign by the Association for Civil Rights (Asociación por los Derechos *Civiles*), a very well-known Argentinian human rights organization. With the slogan: "Con mi Cara No" ("Not with my face"), the organization aims to raise awareness about the dangers facial recognition technologies pose to citizens, particularly when their data is included within opaque and systems.²⁹⁴ unaccountable In September 2022. а trial judge declared the implementation of the Fugitive Facial Recognition System (SRFP, for its name in Spanish) by the Government of the City of Buenos Aires unconstitutional.²⁹⁵

In April 2023, the Court of Appeals of the City of Buenos Aires confirmed the unconstitutionality of the use of the Fugitive Facial Recognition System implemented by the Buenos Aires City Government.²⁹⁶ The use of SRFP is currently suspended.

Lethal Autonomous Weapon Systems

Argentina has been very critical about the development and use of lethal autonomous weapons systems, particularly those without significant human involvement. Argentina has set out a strong position in public statements as well as within international organizations, including during meetings regarding the Convention on Conventional Weapons. Within the framework of those meetings, Argentina stressed the need "to preserve meaningful human control at all phases of the development and use" of weapons systems.²⁹⁷ On behalf of the Group of Latin American and Caribbean Countries, Argentina raised several concerns over fully autonomous weapons, including the risks of reprisal, retaliation and terrorism.²⁹⁸ And Argentina has called for a "preemptive prohibition of the development of lethal autonomous systems.²⁹⁹

At the 78th UN General Assembly First Committee in 2023, Argentina voted in favour³⁰⁰ of resolution L.56³⁰¹ on autonomous weapons systems, along with 163 other states. Resolution L.56 stressed the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems", and mandated the UN Secretary-General to prepare a report, reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.

In October 2022, Argentina was one of the 70 countries which endorsed a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to

upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."³⁰²

In February 2023, Argentina endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,³⁰³ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Human Rights

According to the Freedom House 2024 report, Argentina is considered a "free" country under the organization's Global Freedom Scores, receiving overall a score of 85/100.³⁰⁴ The Freedom House country report highlights concerns regarding democratic backsliding. Citizens continue to use social media to mobilize protests on political and social issues although new president Javier Milei has implemented restrictions on protests. The President has also dismantling several ministries, reducing their number from 20 to 8. Some controversial reforms have also been engaged regarding women, gender, and Indigenous affairs, raising concerns regarding the protection of vulnerable groups.

In the international arena, Argentina has shown a strong commitment to the protection of human rights, including international and regional initiatives that pertain to AI.

OECD/G20 AI Principles

As part of the G20 and as a prospective member to the OECD, Argentina has endorsed the OECD/G20 AI Principles.³⁰⁵ According to an OECD report, several policies of Argentina's national AI strategy align with the G20 AI principles. These include the comprehensive, human-centered and human rights-focus nature, which aligns with the Principles for

Responsible Stewardship of Trustworthy AI (Section 1); while Argentina's investment initiatives, the focus on conditions for AI development, educational plans and international engagements implement Section 2 of the G20 AI Principles (National Policies and International Co-operation for Trustworthy AI).³⁰⁶

In October 2023, the OECD's report on "The State of the Implementation of the OECD AI Principles Four Years On" noted that Argentina's Ethics Principles for the Development of AI reflect both the five value-based OECD AI Principles as well as the five recommendations to national governments.³⁰⁷

UNESCO Recommendation on the Ethics of AI

Argentina is a UNESCO member and adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021.

In 2022, CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean.³⁰⁸ They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts.

The Regional Council, comprising national and local governments from Latin America and the Caribbean, including Argentina, was formally established, with its inaugural meeting convened in October 2023.³⁰⁹

Argentina also signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.³¹⁰ It reflects UNESCO's

Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

Council of Europe Convention on Al

Argentina contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³¹¹

Evaluation

Argentina's comprehensive, ambitious and human-centered national strategy reflects the country's interest in matching socioeconomic development with strong human rights commitments in the design and development of AI. Despite the initial enthusiasm that surrounded the launching of the Plan, the new government seems to have abandoned this path. It remains to be seen how the Productive Development Plan Argentina 4.0 will be operationalized in practice. Despite significant progress in modernizing data protection law and bringing it up to international standards, the deployment of facial recognition systems has raised widespread concern that AI could be used for purposes that violate individual rights. It is especially the case in view of recent reports of democratic backsliding in Argentina.

Argentina has the resources and the infrastructure to pursue regional leadership. Argentina has signed the UNESCO Recommendation on the Ethics of AI and with the collaboration of the CAF is on its path to its implementation. Argentina has also been calling for a prohibition and regulation of autonomous weapons.

Australia

National AI Strategy

In November 2019, the Australian government published a Roadmap for AI, to "help develop a national AI capability to boost the productivity of Australian industry, create jobs and economic growth, and improve the quality of life for current and future generations."³¹² Australia's AI Technology Roadmap is intended to help guide future investment in AI and provide a pathway to ensure Australia captures the full potential of AI.³¹³ As well as identifying three high potential areas of AI specialization, the Roadmap elaborates the foundations needed in terms of data governance, ethics, trust research, skills and infrastructure. It particularly underscores its complementarity with the OECD AI Principles.

The Roadmap identifies three domains of AI development and application where AI could transform Australian industry, based on existing strengths and comparative advantages, opportunities to solve Australian problems, and opportunities to export solutions to the rest of the world. These domains are Health, Aging and Disability; Cities, Town and Infrastructure (including connected and automated vehicle technology); and National Resources and Environment (especially building on strengths related to mining and agriculture).

In November 2019, Australia also published an AI Ethics Framework to "help guide businesses and governments looking to design, develop, and implement AI in Australia."³¹⁴ Key goals are to achieve better outcomes, reduce the risk of negative impact, and practice the highest standards of ethical business and good governance. The eight AI Ethics Principles are Human, social and environmental wellbeing, Humancentered values, Fairness, Privacy protection and security, Reliability and

safety, Transparency and explainability, Contestability and Accountability.³¹⁵

In January 2024, the Australian government issued its interim response to a public consultation on the need to regulate AI it launched in 2023.³¹⁶ The Australian government came to the conclusion that the current regulatory framework likely does not sufficiently address known risks presented by AI systems.

The government is undertaking work to strengthen existing laws in areas that will help to address known harms with AI. This includes the implementation of privacy law reforms, including an in-principle agreement to require non-government entities to conduct a privacy impact assessment to identify and manage, minimize or eliminate risks, which is already a reuirement for government entities, a review of the Online Safety Act 2021, and introduction of new laws relating to misinformation and disinformation.

The government will consider possible legislative vehicles for introducing mandatory safety guardrails for AI in high-risk settings. The government also recognises the need to consider specific obligations for the development, deployment and use of frontier or general-purpose models.

In 2020, Australia and Singapore, building on their pre-existing trade agreement, also signed the Singapore-Australia Digital Economy Agreement (SADEA), where Parties agreed to advance their cooperation on AI.³¹⁷

In November 2023, Australia participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³¹⁸ Australia thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to

protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Australia also contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.³¹⁹

Public Participation

In June 2023, the Department of Industry, Science and Resources launched a two-month public consultation on AI regulation.³²⁰ The consultation was based on a policy paper issued by the Australian governement and a more technical report by the National Science and Technology Council. The discussion paper entitled "Safe and Responsible AI in Australia"³²¹ mapped existing regulatory and governance frameworks in Australia and abroad, identified potential gaps and proposed options to strengthen the framework governing the safe and responsible use of AI. The Rapid Response Report on generative AI"³²² offered an assessment of potential risks and opportunities related to AI and existing strategies to address them.

In January 2024, the Australian government issued an interim response to the consultation.³²³

In order to signal international leadership in AI exports, in March 2022 the Australian Department of Industry, Science and Resources released an issue paper on 'Positioning Australia as a leader in digital economy regulation – Automated decision making and AI regulation' paper for public comment.³²⁴

The development of Australia's AI Ethics Framework followed a public consultation. The Minister for Industry, Science and Technology Karen Andrews released a discussion paper to encourage conversations on how to design, develop, deploy and operate AI in Australia.³²⁵ In particular, the Australian government sought feedback on the draft AI Ethics Principles presented in the discussion paper. The Minister received more than 130 submissions from government, business, academia, non-government organizations and individuals. According to the Minister, the submissions generally supported a principles-based framework to guide the design, development, deployment and operation of AI in Australia. There were questions about how the draft principles can be applied in practice. The Law Council of Australia provided extensive comments on the Ethics Framework. The Council expressed concerns about the administrative law implications of AI: "an AI involved in a government decision should be able to explain its decision-making process."³²⁶

Noted Australian AI ethics researcher Roger Clarke published a critical assessment of the AI Ethics Principles. In 2019 Clarke undertook an extensive survey of AI policy frameworks and identified 10 themes and 50 principles.³²⁷ Clarke concluded that the AI Ethics Principles for Australia

³²⁷ Roger Clarke, *Responsible AI Technologies, Artifacts, Systems and Applications: The* 50 Principles, <u>http://www.rogerclarke.com/EC/AIP.html#App1</u>.

adequately addressed only 13 of the 50 Principles.³²⁸ "An additional 19 are partly or weakly addressed, and 18 are not addressed at all." Clarke stated that "the key to achieving trust is to ensure trustworthiness of the technologies and of organisations' uses of the technologies. That requires a comprehensive set of principles of real substance; articulation of them for each stage of the supply chain; educational processes; means of encouraging their application and discouraging behaviour in breach of the principles; a credible regulatory framework; and the enforcement of at least baseline standards."

A 2020 survey of Australian attitudes toward AI found high levels of support for the use of AI to address social, humanitarian and environmental challenges.³²⁹ The survey also found high levels of support for legislation to ban the use of lethal autonomous weapons, ensure the safety of autonomous vehicles, and protect data privacy.

Another public consultation took place in Octover 2020 on "Mapping Australia's Artificial Intelligence and Autonomous Systems Capability."³³⁰ Part A of the survey sought information at an organizational level about Australia's national artificial intelligence and autonomous systems capabilities. Part B of the survey focused on unique, world-leading and significant Australian case studies and projects.

In March 2022, the Australian Department of Industry, Science and Resources released "Positioning Australia as a leader in digital economy regulation" requesting for public comment on automated decision making and AI regulation.³³¹

Data Protection

In February 2023, the Australian Attorney-General's Department released its review of the Privacy Act 1988,³³² a significant step in the reform of Australia's privacy law. The Privacy Act Review Report³³³ includes 116 recommendations based on 30 "key themes and proposals" from stakeholders during the course of the last two years. "The proposed reforms are aimed at strengthening the protection of personal information and the control individuals have over their information. Stronger privacy protections would support digital innovation and enhance Australia's reputation as a trusted trading partner," according to the Attorney-General's Department.

The Office of the Australian Information Commissioner welcomed the release of the report. "This is an important milestone as we move towards further reform of Australia's privacy framework," Australian Information Commissioner and Privacy Commissioner Angelene Falk said. "As the privacy regulator we see the proposal to introduce a positive obligation that personal information handling is fair and reasonable, as a new keystone of the Australian privacy framework. This shifts the burden from individuals, who are currently required to safeguard their privacy by navigating complex privacy policies and consent requirements, and places more responsibility on the organisations who collect and use personal information to ensure that their practices are fair and reasonable in the first place."³³⁴

In his review of the Privacy Act 1988, the Federal Attorney-General referred positively to a Human Technology Institute (HIT)'s report outlining a Facial Recognition Model Law.³³⁵ The Federal Attorney-General noted that the Model Law is "a way of striking the right balance, endorsing, in principle, a risk assessment approach to regulating facial recognition and other biometric technologies." "The HTI report responds to growing calls for reform from leading voices in civil society, the private sector, government and academic experts." In its submission to the Attorney-General's consultation on the Privacy Act Review report, HTI

again calls for immediate action on dedicated regulation for facial recognition technology.³³⁶

In September 2023, the Government released its Response to the Privacy Act 1988 Review. It announced that it will strengthen the framework for the protection of personal information to reduce privacy risks to individuals.³³⁷

Algorithmic Transparency

The concept of algorithmic transparency is briefly addressed in the AI Ethics Framework. The Victorian Information Commissioner warns of risks associated with "corporate co-option" of transparency and accountability mechanisms.³³⁸ The paper argues that "significant resources must be invested in developing the necessary skills in the public sector for deciding whether a machine learning system is useful and desirable, and how it might be made as accountable and transparent as possible."

In early 2019, the Australian Human Rights Commission called for an AI Policy Council to guide companies and regulators regarding artificial intelligence technology. "When companies use AI decision-making systems, they must build them in a way that allows a person to understand the basis of decisions that affect them. This is fundamental to ensuring accountability and will be really important for all companies that use AI," Human Rights Commissioner Ed Santow said.³³⁹

In a 2020 paper, Santow called on the Australian government to modernize privacy and human rights laws to take into account the rise of artificial intelligence.³⁴⁰ "We need to apply the foundational principles of our democracy, such as accountability and the rule of law, more effectively to the use and development of AI," he said.

Data Scraping

In August 2023, the Office of the Australian Information Commissioner, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.³⁴¹

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the

addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

Use of AI in Public Administration

From 2016 till 2020, the Australian government agency, Services Australia, used the robodebt scheme to calculate overpayments and issue debt notices to welfare recipients with an automated data matching system that compared the records of Services Australia payment compliance program with averaged income data from the Australian Taxation Office. Robodebt has been the subject of an investigation by the Commonwealth Ombudsman,³⁴² two Senate Committee inquiries,³⁴³ several legal challenges³⁴⁴ and a Royal Commission³⁴⁵ due to concerns regarding false or incorrectly calculated debt notices, the impact on the physical and mental health of debt notice recipients, often among the most vulnerable, and the lawfulness of the scheme.

The Australian government lost a 2019 lawsuit over the legality of the income averaging process, and settled a class-action lawsuit in 2020. The scheme was further condemned by Federal Court Justice Bernard Murphy in his June 2021 ruling against the Government where he approved

a \$1.8 billion settlement, including repayments of debts paid, wiping of outstanding debts, and legal costs. In October 2022, the newly-elected government effectively forgave the debts of 197,000 people that were still under review.

The Royal Commission into the Robodebt Scheme issued its report in July 2023.³⁴⁶ In August 2023, the government passed a formal motion of apology in the House of Representatives, apologising for the scheme on behalf of the Parliament. In November 2023, the Australian government released its response to the report of the Royal Commission.³⁴⁷ The government accepted or accepted in principle all 56 recommendations made by the Royal Commission with the aim to strengthen the Australian Public Service and capability of oversight agencies. The Government Response commits to action to implement the recommendations, and reinforces the Government's commitments to improve trust in government, deliver strong institutions, invest in a capable public sector and ensure people are at the centre of policy development and government service delivery.

In September 2023, the Digital Transformation Agency (DTA) and the Department of Industry, Science and Resources (DISR) established the Artificial Intelligence in Government Taskforce.³⁴⁸ The Chief Executive Officer for the DTA, Chris Fechner, said that government has an important role to play in setting an example for the safe and ethical use of AI technologies. "We don't want to be left behind but we do want to protect government systems and ensure we're ultimately benefiting the wider Australian community."³⁴⁹

The Taskforce is composed of representatives from multiple Australian Public Service (APS) agencies and aims to develop a safe, ethical, and responsible approach to AI application, policy, standards, and

guidance across the government. The initiative will operate for up to six months and will deliver programs addressing short, medium, and long-term goals, including updating guidelines on the use of generative AI platforms.

Building on the AI Ethics Framework, the Taskforce identified four key principles: 1) AI should be deployed responsibly in low-risk situations. 2) Transparency and explainability: tell when AI is used and why its use was warranted. 3) Privacy protection and security: use only public information. 4) Accountability and human centred decision-making: final word should be with a human.³⁵⁰

In July 2023, the AI Taskforce, co-led by the DTA and the Department of Industry, Science and Resources DISR, released initial interim guidance on government use of publicly available generative artificial intelligence (AI) platforms. The Guidance has already been updated in November 2023.³⁵¹

According to the Guidance, one of the golden rules that Australian Public Service staff should follow for the responsible use of generative AI tools is: "you should be able to explain, justify and take ownership of your advice and decisions."³⁵² They should adhere to Australia's AI Ethics Principles.

In December 2023, the Australian government issued the Data and Digital Government Strategy. The data and vision for a world-class APS to 2030.³⁵³ The Data and Digital Government Strategy is accompanied by an Implementation Plan and a Roadmap timeline.

With the Strategy, the Australian government commits to "improving and maintaining trust in its use of data and digital technology through adopting a whole-of-government Data Ethics Framework (...) and adopting AI technologies in safe, ethical and responsible ways."³⁵⁴ The

government also commits to responding to the recommendations of the Review of the Privacy Act to strengthen the protection of Australians' personal information.³⁵⁵

Use of AI in the Military

In October 2022, Australia was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.³⁵⁶ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."³⁵⁷

In February 2023, Australia participated in an international summit on the responsible application of artificial intelligence in the military domain co-hosted by the Netherlands and the Republic of Korea. At the end of the Summit, Government representatives, including Australia, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³⁵⁸ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are

consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."³⁵⁹ Australia has also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁶⁰

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.³⁶¹

The second REAIM summit will take place in 2024 and hosted by the Republic of Korea.³⁶²

At the 78th UN General Assembly First Committee in 2023, Australia voted in favour³⁶³ of resolution L.56³⁶⁴ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Use of AI in Education

In May 2022, in a global investigative report on the education technology (EdTech) endorsed by for children's education during the pandemic, Human Rights Watch analyzed the technical and policy features of Minecraft: Education Edition used in Australia. Human Rights Watch found that the endorsements of this online learning platform put at risk or directly violated children's rights due their tracking abilities for advertising purposes.

According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.³⁶⁵

In February 2023, education ministers agreed to develop an evidence-based, best practice framework to guide schools in harnessing AI

tools to support teaching and learning, and to establish a Taskforce to develop the framework.

The Taskforce issued the Australian Framework for Generative AI in Schools in November 2023.³⁶⁶ The Education Ministers will review the Framework at least once each 12 months, to accommod the fast-moving pace of technological development. The framework relies on key principles such as Human and Social Wellbeing including the use of AI tools "in ways that respect and worker rights, including individual autonomy and dignity"; Transparency including explainability: "vendors ensure that end users broadly understand the methods used by generative AI tools and their potential biases"; Fairness; Accountability; Privacy, Security and Safety. safe and ethical use of generative AI tools; best practice implementation of generative AI tools in the classroom to lift student outcomes; reducing workload burden and administration using generative AI tools; and establishing education-specific standards and governance to meet the needs of Australian schools.

Human Rights

Australia is a signatory to many international human rights treaties and conventions. Freedom House ranked Australia very highly (97/100) in 2020 and 2021 and reported that, "Australia has a strong record of advancing and protecting political rights and civil liberties. Challenges to these freedoms include the threat of foreign political influence, harsh policies toward asylum seekers, and ongoing difficulties ensuring the equal rights of indigenous Australians."³⁶⁷ In 2022, Freedom House ranked Australia "free" however its status declined (95/100).³⁶⁸

OECD/G20 AI Principles

Australia has endorsed the OECD and the G20 AI Principles. Regarding implementation of the AI Principles, the OECD notes the Australia Roadmap for AI, the AI Ethics Framework, and the Australia's AI Standards Roadmap, "intended to identify priority areas for AI standards development and a pathway for Australian leadership on international

standardization activities for AI."³⁶⁹ The OECD also notes the work of Australia on trustworthy AI for health.

Australia joined the Global Partnership on AI as a founding member in June 2020.³⁷⁰ Minister Andrews stated, "Australia is committed to responsible and ethical use of AI. Membership of the GPAI will allow Australia to showcase our key achievements in AI and provide international partnership opportunities which will enhance our domestic capability." Andrews further stated, "Membership of the GPAI will build on the work the Government started at last year's National AI Summit, which brought together 100 AI experts to discuss the challenges and opportunities which AI will present for the Australian economy."

UNESCO Recommendation on Ethics of AI

In November 2021, Australia adopted the UNESCO Recommendation on the Ethics of AI.³⁷¹ Its AI strategy was published before the finalization of the UNESCO Recommendations and therefore contains no explicit reference to the Recommendation. It remains to be seen how Australia will implement it in practice.

Evaluation

Australia has set out an AI Roadmap and an AI Ethics Framework. Australia has encouraged public participation in the development of AI policy, joined the Global Partnership on AI and has a strong record on human rights. Australia has independent agencies, including a national regulator for privacy and freedom of information³⁷² and a human rights commission that is engaged in AI oversight. Australia was also a cosponsor

of the GPA resolution on Accountability in the development and use of AI. However, questions have been raised about the adequacy of the Ethics Framework and Australia should take steps to implement the UNESCO Recommendation on the Ethics of AI. The modernization of Australia's data protection law to better protect the human rights has been going on for several years but it is encouraging that it seems to be progressing. In the meantime, concerns exist with regard to facial recognition and it remains to be seen whether the modernization of Australia's data protection law will encompass this aspect as well.

Austria

National AI Strategy

The Austrian Government presented the national AI strategy, Artificial Intelligence Mission Austria 2030' (AIM AT 2030), in August 2021.³⁷³ The objectives are: A broad use of AI oriented to the common good; Positioning Austria as an innovation location for AI in key areas and fields of strength; Securing the competitiveness of Austria through the development and use of AI.

The Austrian strategy is guided by the two cornerstones of the European AI strategy: an ecosystem for trust and an ecosystem for excellence. Austria not only supports increased cooperation at the European level, as proposed in the European Commission's White Paper on AI³⁷⁴ and the EU AI Act,³⁷⁵ but also intends to shape national AI ecosystems in line with the European AI strategy.³⁷⁶

The Austrian strategy is based on a human-centered approach to AI in order to ensure that resources are used to support fundamental European values and respect and guarantee fundamental rights, such as privacy and the principle of equality. Citizens' involvement is also identified as key.³⁷⁷ Regarding ethical principles,³⁷⁸ reference is made to the European High-Level Expert Group on AI's Ethics guidelines for trustworthy AI.³⁷⁹ Accordingly, AI systems must fulfil three basic principles to be considered trustworthy. They must:

- "be lawful by respecting all existing laws and regulations;

³⁷⁹ High-Level Expert Group on Artificial Intelligence, *Ethics guidelines for trustworthy AI* (2019), <u>https://digital-strategy.ec.europa.eu/en/library/ethics-guidelines-trustworthy-ai</u>

- respect ethical principles and values such as equality and fairness; and
- be robust, both in a technical sense and from a societal perspective."³⁸⁰

The Strategy also mentions the need to establish a clear legal framework that releases innovation in science and economy, reduces uncertainties and at the same time guarantees legal certainty. The Austrian Federal Government supports the creation of a Europe-wide legal framework for AI applications to avoid isolated national solutions.

The Federal Ministry Republic of Austria Climate Action, Environment, Energy, Mobility, Innovation and Technology is in charge of AI policy. Under the broad topic of innovation, the Ministry oversees topics such as digital policy, international/EU aspects, future mobility, research technology and innovation policy in Austria.³⁸¹

The Austrian Council on Robotics and Artificial Intelligence (ACRAI) which consisted of experts on robotics, and artificial intelligence from industry, research and teaching used to advise the Federal Ministry Republic of Austria Climate Action, Environment, Energy, Mobility, Innovation and Technology on top priorities, topical issues, challenges, risks, on the use of artificial intelligence as well as robotics and autonomous systems. ACRAI's mandate expired in October 2021 and the council was subsequently disbanded³⁸².

An interministerial working group chaired by the Federal Ministry for Climate Protection, Environment, Energy, Mobility, Innovation and Technology and the Federal Ministry of Science, Research and Economy is to be set up to accompany the implementation of the strategy and to promote regular updates. In addition, the ongoing involvement of the relevant stakeholders and the public will be ensured. This is to be done in part through 64 defined measures.³⁸³

In Austria, Research and Technology Reports are *compiled annually*. The focus lies on current topics of national and international research and technology. Reports include information on current developments and trends, extensive data on research and development, as

 ³⁸³ AIM AT 2030, p. 62.

well as priority topics. Currently, the Government of Austria does not offer any specific annual report about developments regarding AI or monitoring the implementation of the AI strategy.³⁸⁴

EU Digital Services Act

As an EU member state, Austria shall apply the EU Digital Services Act (DSA).³⁸⁵ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content

³⁸⁴ Austrian Federal Ministry of Education, Science and Research, *Austrian Research and Technology Report*, (2022)

https://www.bmbwf.gv.at/en/Topics/Research/Research-in-Austria/Services/FTB.html

³⁸⁵ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

and hate speech.³⁸⁶ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.³⁸⁷

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation³⁸⁸ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.³⁸⁹ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force³⁹⁰ on the 2024 European elections.

EU AI Act

As an EU member State, Austria is bound by the EU AI Act.³⁹¹ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

 ³⁹¹ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9 TA(2024)0138 EN.pdf

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.³⁹² However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area

³⁹² EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.³⁹³

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances

³⁹³ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.³⁹⁴ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems.

³⁹⁴ Brussels Privacy Hub, *More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence* (Sept. 12, 2023), <u>https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-institutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificial-intelligence-act/</u>

Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.³⁹⁵

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office³⁹⁶ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of

'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next, <u>https://www.euronews.com/next/2024/02/27/furious</u>-critics-question-microsofts-deal-with-mistral-ai-as-eu-set-to-look-into-it

³⁹⁵ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale Davies,</u>

³⁹⁶ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Austria will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact³⁹⁷ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Public Participation

Experts and other stakeholders were involved in the development of the national AI strategy.³⁹⁸ The strategy also provides for broad participation of civil society organizations, intermediaries, and citizens in the implementation of the measures. Furthermore, the Federal Government endeavors to formulate its target provisions in close coordination and comprehensive agreement with the fundamental values and objectives of the European Union. With this strategy, Austria is thus also contributing to

³⁹⁷ European Commission, AI Pact, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

³⁹⁸ The Austrian Council on Robotics and AI (ACRAI) served as an advisor to the Government and its departments until 23 October 2021, <u>https://www.acrai.at/en/home/</u>

the promotion of Europe's industrial and technical performance regarding AI.

Data Protection

Since Austria is an EU Member State, the General Data Protection Regulation (GDPR)³⁹⁹ is directly applicable in Austria and to Austrians. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."⁴⁰⁰ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Austrian Data Protection Act (DSG) supplements the GDPR.⁴⁰¹

According to Article 35(4) GDPR, national supervisory authorities shall compose and publish the list of processing operations that requires performing a data protection impact assessment. According to the list established by the Austrian DPA, a data protection impact assessment is necessary in some cases involving AI use. These concern:

"- processing which involves an assessment or classification of natural persons - including the compilation of profiles and forecasts - for purposes relating to the performance of the person's work, economic situation, health, personal preferences and interests, reliability or behaviour, location or movements, and which is based solely on automated processing and may have negative legal, physical or financial consequences.

- processing of data for the purpose of evaluating the behaviour and other personal aspects of natural persons and which may be used by third parties to make automated decisions that have legal effects on the persons evaluated or similarly significantly affect them.

- processing of data using or applying new or novel technologies or organisational solutions which make it difficult to assess the impact on data subjects and the social consequences, in particular through the use of artificial intelligence and the processing of biometric data, provided that the

https://www.ris.bka.gv.at/Dokumente/Erv/ERV_1999_1_165/ERV_1999_1_165.html

processing does not involve the mere real-time reproduction of facial images.

- merging and/or cross-checking of data sets consisting of two or more processing operations carried out for different purposes and/or by different controllers, in the framework of a data processing operation going beyond the processing operations normally expected of a data subject, where the use of algorithms makes it possible to take decisions which significantly affect the data subject."⁴⁰²

Regarding the activities of law enforcement authorities, Austria transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁰³ with the DSG as well.⁴⁰⁴ "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."⁴⁰⁵ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁴⁰⁶ The LED also requires for Member States, including Italy, to enable data subjects to exercise their rights via national data protection authorities.⁴⁰⁷

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the

⁴⁰⁷ Article 17 of the LED.

Member States apply the LED consistently."⁴⁰⁸ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.⁴⁰⁹ The now former "EDPB Chair, Andrea Jelinek, said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."⁴¹⁰

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Austria is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴¹¹

The Austrian DPA is a member of the Global Privacy Assembly (GPA) since 2002. The DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;⁴¹² the 2020 GPA

Resolution on AI Accountability;⁴¹³ or the 2022 GPA Resolution on Facial Recognition Technology.⁴¹⁴

Algorithmic Transparency

Austria is subject to the GDPR, as well as Convention 108+ since July 2022. Austrians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴¹⁵

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴¹⁶ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."417

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

⁴¹⁷ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (April 8, 2020),

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."⁴¹⁸

Research show that the Public Employment Service Austria (AMS) makes use of algorithmic profiling of job seekers, and there have been concerns about notable discrimination and bias.⁴¹⁹ Algorithm Watch also disclosed that the sorting algorithm used in Austria for employment gives lower scores to the disabled and women, and women with children are given even more negative weight.⁴²⁰ On this matter, the Australian Federal Administrative Court rendered a decision before Austria ratified the Modernized Convention 108. The Court held at the time that the Public Employment Service could lawfully process personal data belonging to jobseekers as this was necessary in order to guarantee a well-functioning labour market. This is outlined in Austrian law and it is in the substantial public interest in line with Article 9(2)(g) GDPR."421 On the one hand, the Court stressed that "there are no indications that such data processing is not sufficiently clear in section 25 AMSG and is not otherwise regulated by means of adequate and specific measures to protect the fundamental rights and interests of the person concerned. It should be noted that the result of

(any) assessment undoubtedly depends not only on the (personal) data used, but also on who or what carries out the assessment and how the individual factors (data) are weighted in each case. An assessment based on the same (personal) data may therefore not always lead to the same result. However, this does not change the fact that the result is based on the same (personal) data and thus the same information." On the other hand, the Court pointed out that "the case of an automated decision, which is separately regulated by Article 22 of the GDPR, is not given here, because the assessment of labour market opportunities is only to be carried out with the help of AMAS. The final decision on a jobseeker's chances of finding work and his or her further support remains with the counsellors, and not only were guidelines and instructions issued by the Public Employment Service to its employees, but training courses were also held."⁴²²

In September 2020, the DPA ruled on a case concerning the calculation of marketing scores. The "scores consisted of alleged likelihoods (expressed in a percentage number) that the complainant would belong to certain demographic groups, such as "conservatives", "traditionalists", "hedonists" or "digital individualists".⁴²³ The complainant sent an access request under Article 15(1)(h) GDPR on how the marketing scores had been calculated. The respondent refused to access to the request because the requested information qualified as a trade secret. The DPA first held that the marketing scores constitute personal data under Article 4(1)GDPR. The processing activities leading to the creation of the marketing scores constitute profiling within the meaning of Article 4(4) GDPR. According to the DPA, the right to information under Article 15(1)(h) GDPR is not limited to cases of automated decision making. The DPA further held that the respondent was not required to disclose the algorithm, source code or compiler code used when creating the marking scores (as this would most likely qualify as a trade secret under Directive 2016/943/EU. However the respondent "had to provide the following information in connection with the score calculation: parameters / input variables and how they came about (e.g. using statistical information); effect of the parameters/input variables on the score; explanation of why the data subject was assigned to a particular evaluation result; list of possible profile categories or similar equivalent information that enable the data

subject to exercise his or her rights of rectification and erasure and to review the lawfulness of processing."

Facial Recognition

Since December 2017, 25 "E-Gates", where border controls are supported by facial recognition, have been installed at the Vienna International Airport in Austria. Manual border controls have also remained in place.⁴²⁴

After a one-year test phase, facial recognition for law enforcement has been in regular operation in Austria since August 2020. The police can only use digital image comparison if there is a suspicion of the commission of an intentional judicially punishable act in the case of unknown perpetrators. The Ministry of the Interior published information about the use of the software after parliamentary inquiries.⁴²⁵ Accordingly, the Federal Criminal Police Office may use the system to investigate intentional acts, authorized by the judiciary, regardless of the level of punishment for an offense. Whether Austrian law allows for such practice has been the object of a controversy in Austria. ⁴²⁶

Predictive Policing

Efforts to base police work on computer-assisted forecasts have existed in Austria since 2004.⁴²⁷ Due to the increasing importance of big data and AI, an increase and expansion of predictive policing methods is to be expected in the next few years. Most of the predictive policing methods developed or applied in Austria do not affect the scope of protection of the right to respect for privacy (Art 8 ECHR, Art 7 GRC) or the fundamental right to data protection (Art 1 § 1 Abs 1 DSG, Art 8 GRC), and are intended in particular to support the patrol service and burglary prevention.⁴²⁸ The

situation was different with the project called INDECT, in which an Austrian university, the FH Technikum Wien, was also involved.⁴²⁹ In this project, personal data from social media was to be combined with retained data and video recordings in order to be able to identify "abnormal behavior" at an early stage. The project was funded by the European Commission from 2009 to 2014.⁴³⁰ Neither the official project website, nor the official project website of the FH Technikum Wien show further information on this project.⁴³¹

Automated Tax Fraud Detection

The Austrian Ministry of Finance operates the Predictive Analytics Competence Center (PACC). The expectation is that the use of AI will make a significant contribution to establishing a more efficient risk management structure with an increased efficiency in auditing, fraud prevention and tax collection.⁴³²

Approximately 6 million income tax disclosures and 1.4 million applications for COVID-19 assistance payments were reviewed by PACC in an automated manner. Based on machine learning, potential fraud scenarios are derived from a variety of historical data sources. This method is used, among other things, for the selection of tax audits, plausibility checks of tax returns, and the evaluation of start-ups and applications of all kinds. The Ministry of Finance claims that this will make it easier to detect tax evasion, including customs fraud.⁴³³

User Tracking and Website Analytics

after declaring the use of Google Analytics illegal,⁴³⁴ held a similar decision with regard to the "Facebook Login" and "Meta Pixel" tools provided by Meta.⁴³⁵ If these tools are used, data is inevitably transferred to the United States, where the data is at risk of intelligence surveillance. Such transfer would contravene the European Court of Justice's 2020 *Schrems II* decision. According to NOYB, "there is no information if a penalty was issued or if the DSB is planning to also issue a penalty. The GDPR foresees penalties of up to \notin 20 million or 4% of the global turnover in such cases, but data protection authorities seem unwilling to issue fines, despite controllers ignoring two CJEU rulings for more than two years."⁴³⁶

Lethal Autonomous Weapons

Austria supports a legally binding instrument that would ban autonomous weapons and systems that are not meaningfully controlled by humans.⁴³⁷ At the virtual conference, "Safeguarding Human Control over Autonomous Weapon Systems" held in September 2021,⁴³⁸ the Austrian Ministry for European and International Affairs through the Federal Minister for European and International Affairs of Austria, situated themselves as the vanguard of many disarmaments, non-proliferation, and arms control issues. They also talked about the challenges of AI, and questioned algorithms which make death or life decisions based on ethics, morality and law and called for a legal norm in the form of a treaty to ensure human control.⁴³⁹

Austria was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices,

limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."⁴⁴⁰

In February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.⁴⁴¹ Austria has now endorsed the resulting Political Declaration issued in November 2023.⁴⁴²

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁴⁴³

The second REAIM summit will take place in 2024 and will be hosted by the Republic of Korea.⁴⁴⁴

At the 78th UN General Assembly First Committee in 2023, Austria tabled and voted in favour⁴⁴⁵ of resolution L.56⁴⁴⁶ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to the 2024 Freedom House report, Austria scores highly for political rights and civil liberties 2022 (93/100), and is designated as "Free."⁴⁴⁷Austria was the 70th country that joined the United Nations and is party to the most important international legal instruments for the protection and defence of human rights.⁴⁴⁸

With regards to AI policy, as part of the objectives contained in its AI Strategy, Austria states that it will deploy AI responsibly targeting the common good relying on fundamental human rights.⁴⁴⁹ The strategy further provides that a human-rights compliant framework is being created in partnership with European partners in order to ensure that fundamental rights issues are tackled.⁴⁵⁰

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are

experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."⁴⁵¹

OECD AI Principles

Austria has endorsed the OECD and G20 AI Principles. Regarding implementation, the OECD notes that Austria is actively involved in relevant international organizations, the EU and other processes and its AI strategy specifically addresses "human-centered values and fairness, robustness, security and safety, inclusive growth, sustainable development and well-being, investing in AI R&D and providing an enabling policy environment for AI."⁴⁵²

Austria is not a member of the Global Partnership on AI, a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁴⁵³

UNESCO Recommendation on the Ethics of AI

Austria has endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.⁴⁵⁴

The Austrian Commission for UNESCO created an Advisory Board on the Ethics of Artificial Intelligence to implement the UNESCO Recommendation on the Ethics of Artificial Intelligence. The Advisory Board aims to exchange information on developments related to AI and the UNESCO Recommendation, advise the National Contact Point at the Austrian Commission for UNESCO, and support measures to raise

awareness and initiate a dialogue in society as a whole with regard to the ethical implications of AI.⁴⁵⁵

Council of Europe Convention on AI

Austria contributed as a Council of Europe and EU member state in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁴⁵⁶

Evaluation

The Austrian AI strategy, released in late 2021, follows the larger goals of the EU strategy, emphasizing both excellence and the protection of fundamental rights. Austria has emphasized public participation in the development of the national AI strategy and receives expert advice from the Austrian Council on Robotics and Artificial Intelligence, which has stressed the importance of human-centric AI. Following the discontinuation of this Council, it remains to be seen when and how it will be replaced. Austria ranks highly for traditional human rights protection and is active at the OECD, although it is not a member of the Global Partnership on AI. In July 2022. Austria ratified the Modernized Convention 108 of the Council of Europe which includes an important provision on algorithmic transparency. This should avoid any doubts in the future regarding the scope of application of the right to algorithmic transparency. With the adoption of the EU AI Act, Austria shall establish a national supervisory mechanism which, it is to be hoped, will be an independent and will take the protection of human rights seriously. With regard to the UNESCO Recommendation on the Ethics of AI, it remains to be seen how Austria will implement it in practice. Concerns also persist regarding the use of AI techniques for facial surveillance and predictive policing.

Azerbaijan

National AI Strategy

In recent years, Azerbaijan has taken an active interest in Artificial Intelligence and new technologies to reform the country's economy and extend internal security and policing.⁴⁵⁷ The Ministry of Economy of the Republic of Azerbaijan announced in February 2022 that the country would establish an AI Strategy.⁴⁵⁸ In March 2024, the Acting Chairperson of the Innovation and Digital Development Agency of the Ministry of Digital Development and Transport, Inara Valiyeva, declared that the national AI strategy "is now at the approval stage."⁴⁵⁹

The Fourth Industrial Revolution Analysis and Coordination Centre (4SIM), in collaboration with the World Economic Forum Artificial Intelligence and Machine Learning Platform, has played a key role in preparing a roadmap for shaping Azerbaijan's National Strategy on Artificial Intelligence.⁴⁶⁰

In parallel, the Azerbaijan is also preparing a digital development strategy,⁴⁶¹ including a data management strategy,⁴⁶² with the support of the World Bank.

In 2016, Azerbaijan approved the "Strategic Roadmap for Development of Telecommunications and Information Technologies in the

Azerbaijan Republic" (hereinafter Roadmap).⁴⁶³ The Roadmap focuses on Information Communication Technology (hereinafter ICT) sector and sets three main strategic targets:

- Improve governance structures and strengthen ICT;
- Increase productivity and operational efficiency of the business environment;
- Digitize government and social environment⁴⁶⁴. In February 2021, Azerbaijan adopted its "2030 vision: National Priorities on Socio-Economic Development,"⁴⁶⁵ which highlighted the importance of technological transformation.

Both the Ministry of Economy and the Ministry of Digital Development and Transport have been active in areas related to AI adoption. The Ministry of Economy manages the Center for Analysis and Coordination of the Fourth Industrial Revolution established by Presidential Decree of January 6, 2021. The mandate of the center is to respond to global challenges and trends including artificial intelligence.⁴⁶⁶ In October 2021, another Presidential Decree established the Innovation and Digital Development Agency under the Ministry of Digital Development and Transport. This decision aimed to "improve governance in the field of digitalization, innovation, high technologies and communications in the Republic of Azerbaijan."⁴⁶⁷

Public Participation

Azerbaijan lacks a process for public consultations for matters of policy in AI or policies in general. The country is committed, as a member of the Council of Europe (CoE) to implement the National Action Plan for the Promotion of Open Government 2020-2022, which among several

goals, is intended to enhance digitalization, enhance civilian oversight, expand public participation and prevent corruption.⁴⁶⁸ Azerbaijan, is part of the Enlarged Partial Agreement of the North-South Centre of the Council of Europe (NSC), to encourage a bottom-up dialogue between civil society and other democratic governance actors around four goals: global development education, youth co-operation, women empowerment and migration.

Data Protection

Data Protection is enshrined in the Constitution of the Republic of Azerbaijan. Article 32, paragraph VIII establishes the right to inviolability of private life, and states that the "scope of the personal information, as well as the conditions of their processing, collection, passing, use and protection is prescribed by law.⁴⁶⁹

The country's data protection laws also currently encompass three bodies of legislation:⁴⁷⁰ (1) the Law on State Secrets,⁴⁷¹ (2) the 1998 Law on Data, Data Processing and Data Protection and (3) the 2010 Law on Personal Data.⁴⁷² The Personal Data Law provides for data subjects' right to be informed, right to access, right to rectification, right to erasure, right to object opt-out, and right not to be subject to automated decision-making (unless this is required by law). The Law regulates the collection, processing and protection of personal data, in the public and private sectors. The Law also covers cross-border transfer of personal data, and the rights and obligations of public bodies and local authorities, individuals and legal entities operating in this field.

The Ministry of Transport, Communications and High Technologies (MTCHT) is the authority tasked with the implementation of this Law. A 2018 Decree of the President of the Republic of Azerbaijan dated January

⁴⁶⁸ Council of Europe. *Action Plan Azerbaijan 2022-2025* (Feb 1, 2022). https://rm.coe.int/action-plan-azerbaijan-2022-2025-eng/1680a59aa3

⁴⁷¹ Law of 7 September 2004 No. 733-IIQ *Azərbaycan Respublikasının Ədliyyə Nazirliyi Hüquqi aktların vahid elektron bazası, Dövlət sirri haqqında Azərbaycan Respublikasının Qanunu*, <u>https://e-qanun.az/framework/5526</u>

⁴⁷² Was adopted by the Milli Majlis of the Republic of the Azerbaijan on 11 May 2010 upon the Law No 998-IIIQ. *Azarbaycan Respublikasının Milli Maclisi, Fardi malumatlar* <u>haqqında</u> Azərbaycan Respublikasının Qanunu, https://meclis.gov.az/newsganun.php?id=1201&lang=az</u>

2018 authorizes the MTCHT to⁴⁷³ exercise the authority to avoid infringements of the provision of the law, ensure information security, verify compliance in collection, processing and protection of personal data, and keep registry on information resources related to personal data. Are also involved in the implementation of the data protection legal regime: the Ministry of Communications and High Technologies, State Security Service, the Ministry of Internal Affairs, and the Ministry of Justice and Special State Protection Service.⁴⁷⁴

Azerbaijan is a Party to Convention 108 or Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data.⁴⁷⁵ Convention 108 reaffirms the fundamental values of respect for privacy. Article 5 defines the need for personal data to be "obtained and processed fairly and lawfully." Convention 108 requires Azerbaijan to establish an independent data protection authority.

The Council of Europe (CoE) Action Plan for Azerbaijan 2022-2025 launched in April 2022 has a specific chapter on data protection and artificial intelligence. Azerbaijan is committed to:

- move closer to signing and ratifying the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Convention 108+).
- adopt legislation compliant with the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (ETS No. 108).
- establish a dedicated independent authority for personal data protection.
- disseminate and implement Council of Europe guidelines on the use of artificial intelligence.
- Conduct an awareness-raising campaign on the importance of data protection for the benefit of the local population.

The Chief of Special Communication and Information Security State Service of Azerbaijan, Tural Mammadov, said during an event on "Cyber-secure economy: reforms, innovative approaches and solutions" in

September, 2022 that a draft law on ensuring personal data protection has been prepared in Azerbaijan based on European standards, the GDPR in particular.⁴⁷⁶

Azerbaijan is not an accredited member of the Global Privacy Assembly and has not sponsored the 2018 GPA Resolution on AI and Ethics,⁴⁷⁷ the 2020 Resolution on AI and Accountability,⁴⁷⁸ the 2022 Resolution on Facial Recognition Technology, or the 2023 GPA Resolution on Generative AI Systems.⁴⁷⁹

Algorithmic Transparency

Azerbaijan has neither signed nor ratified the protocol modernizing Convention 108 which provides for algorithmic transparency.⁴⁸⁰ National legislation does not provide for algorithmic transparency either.

AI Readiness and Digitization

The Azerbaijan government has taken concrete steps to promote technology innovation. In June 2019, the Presidential Decree No. 718 created a Centralized Government Cloud,⁴⁸¹ for the effective organization of the formation, storage, maintenance and integration of state information systems and reserves. This Decree also emphasized AI related matters as follows:

• The document supports innovative solutions based on Artificial Intelligence and robotics;

• Azerbaijan will use "machine learning" (M2M), "artificial intelligence" (EU), "big data" and "internet of things" (IoT) as bases for providing public services in the country.

In April 2021, the E-GOV Development Center of the State Agency for Public Service and Social Innovations organized the International Conference on Artificial Intelligence in Digital Governance. The first panel discussions were dedicated to the transformation of healthcare with AI, the second panel focused on AI and society and the last session addressed the future of artificial intelligence and how it will change human life.⁴⁸²

The Center for Analysis and Coordination of the Fourth Industrial Revolution (C4IR) held several events dedicated to AI and machine learning. The events focused on exchanging views and experience on the development of AI and machine learning with the involvement of government agencies, private companies, scientific and educational institutions, and civil society.⁴⁸³

In October 2022, a mission of the Center for Analysis and Coordinator of the Fourth Industrial Revolution (C4IR) participated in a "Global Dialogue: The role of artificial intelligence in the new global development- innovation and inclusiveness", presenting the measures taken by the government in regards to the digital economy in the country.⁴⁸⁴

AI and the Judiciary

The Head of the Innovation and Digital Development Agency of Azerbaijan, Inara Valiyeva, announced the planned introduction of the Unified Court System based on AI for 2023. The Unified Court System is currently operating in test mode, in coordination with the Supreme Court,

with about 50,000 documents used in the creation of the system.⁴⁸⁵ Azerbaijan plans to focus on improving the quality of decision-making and management by using Big Data and AI technologies.⁴⁸⁶ The project, conducted with the cooperation of the Council of Europe for the Efficiency of Justice (CEPEJ) and the World bank, includes an automated random allocation of cases based on criteria regarding subject matter, weight of the case, and the court's or judge's caseload, a "fast-track procedure for uncontested small clams "e-Order" automated system," and a unified judicial portal.⁴⁸⁷

Biometrics

The Law on Biometric Data adopted in 2008 determines the formation and requirements for biometric information resources, the organization and purpose of the biometric identification system, the application of biometric technologies and regulates the relations arising in this area. Azerbaijan began issuing biometric based electronic identity cards in September 2018. The cards contain information on citizen's place of residence, marital status, as well as photos and fingerprints if the citizen is over age of 15.⁴⁸⁸

⁴⁸⁸ Was adopted by the Milli Majlis on 13 June 2008 by Law No 651-IIIQ, Azərbaycan Respublikasının Ədliyyə Nazirliyi Hüquqi aktların vahid elektron bazası, Biometrik informasiya haqqında Azərbaycan Respublikasının Qanunu, <u>https://e-</u> qanun.az/framework/15144

activity or track users remains unclear."489 Usage of surveillance tools by Azerbaijan Government was also reported by Amnesty International.⁴⁹⁰ The OCCRP (Organized Crime and Corruption Reporting Project) named Azerbaijan's surveillance as "Digital Autocracy."⁴⁹¹ A report by Open Tech found that Azerbaijan is one of several countries where censorship, facial recognition, and access to encrypted communication have been prevalent as forms of information control.⁴⁹²

The Law on Operative-Search Activity of Azerbaijan authorizes agencies to conduct surveillance without a court order in cases where it is regarded as necessary to prevent serious crimes against individuals or especially dangerous crimes against the state. The vaguely written provision leaves the law open to abuse. It has long been believed that the State Security Service and the Ministry of Internal Affairs monitor the communications of certain individuals, especially foreigners, prominent political activists, and business figures.493

In 2015, leaked documents from the Italian surveillance company Hacking Team showed that the Azerbaijani government was a client.⁴⁹⁴ In previous year, Citizen Lab reported that the government was using RCS (Remote Control System) spyware sold by Hacking Team. RCS endpoint in Azerbaijan was active between June and November 2013. Azerbaijan hit international headlines in 2013 when the results of the October presidential

elections were accidentally released before voting began.⁴⁹⁵ RCS allows anyone with access to activate a targeted device's camera and microphone and to steal videos, photos, documents, contact lists, or emails⁴⁹⁶.

In 2017, Amnesty International reported that Azeri human rights activists, journalists and political dissidents have been the targets of a sustained 'spear phishing' campaign using emails and Facebook chat, apparently aimed at gaining access to their personal information and private communications⁴⁹⁷. In the same year, malware targeted Azeri dissidents too⁴⁹⁸.

An April 2018 report by Qurium revealed that in 2015, Azerbaijan had purchased specialized security equipment, in particular Deep Packet Inspection (DPI) technology, from the Israeli company Allot Communications for some \$3 million.⁴⁹⁹

In October 2018, Israeli newspaper Haaretz reported that Israel's Verint Systems had sold surveillance equipment and software to the Azerbaijani government, and local police later used it to identify the sexual orientation of users on Facebook.⁵⁰⁰ Haaretz express its thoughts that a few years after Verint's systems began being used in the country, in 2017 Azeri police started arresting and torturing 45 gay men and transgender women.⁵⁰¹

In July 2021, an investigative initiative led by Forbidden Stories, concluded that the Pegasus software, produced by the Israeli cybersurveillance company NSO Group, was used in Azerbaijan targeting

potentially more than 40 Azerbaijani journalists.⁵⁰² Reporters with the Organized Crime and Corruption Reporting Project (OCCRP), which was among the groups working on the project, found some 250 potential targets in Azerbaijan, the majority of which were "dissidents, activists, journalists, and opposition politicians." It added that "journalists came under particular pressure, with dozens of prominent names, including OCCRP's Khadija Ismayilova, appearing on the list."⁵⁰³

In September 2021, the day full-scale war erupted between Azerbaijani and Armenian forces in Nagorno-Karabakh, the MTCHT throttled mobile and fixed-line broadband internet across Azerbaijan and blocked a number of social media platforms and websites, including Facebook, WhatsApp, and Skype. The action lasted 46 days—Azerbaijan's longest internet disruption to date.⁵⁰⁴

Facial Recognition

In December 2019, a report by Qurium indicated that the government may be using Find Face facial-recognition technology. Qurium identified an AzerTelecom server running the software.⁵⁰⁵

In February 2022 the Ministry of Transport, Communications and High Technologies (MTCHT) announced a Public-Private Partnership with SVORT and Sinam, under AzInTelecom LLC⁵⁰⁶ to develop a new generation cloud digital signature called SIMA⁵⁰⁷. SIMA's initial purpose is to facilitate access to e-government services but expands to the use of services through banks, mobile operators, internet providers and household appliance stores. SIMA combines face recognition, public key and cloud technologies and is based on biometric authentication. Based on SIMA signatures, the Information Computing Centre of the MTCHT is developing

a payment system with face recognition technology.⁵⁰⁸ Users scan their identity card and verify their identity via face recognition through the front camera of the mobile devices.⁵⁰⁹ E-signatures are regulated by the Law of Azerbaijan on Electronic Signature and Electronic Document of 9 March 2004.⁵¹⁰ No amendments were introduced concerning SIMA, biometric authentication or facial recognition.

Smart Cities

As part of its plan to repopulate the Karabakh area following the war with Armenia, Azerbaijan plans to build Smart Cities/Villages in Zangilan. After the first pilot project of the Aghali village, three more smart villages are planned for 2023.⁵¹¹

The President of Azerbaijan, Ilham Aliyev, had announced in January 2021 that "settlements recently liberated from Armenian occupation will be re-established based on the concept of smart city/village."⁵¹² The Concept of Smart Cities and Smart Villages was later approved by the President Order N2584 in April 2021.⁵¹³ The Smart City/Village concept is to be implemented through working groups representing various ministries.⁵¹⁴ A publication of the Baku Research Institute provides insights about the Smart Cities concept as a means to promote sustainable development of territories and attract population

AI and Warfare

During his swearing-in ceremony in February 2024, Azerbaijan President, Ilham Aliyev stated, "Today, in the field of industrial development, in military industrial complex and, in general, in the military field, technological development and superiority are of great importance. Everyone saw this during the Second Karabakh War and the anti-terrorist operation. (...) Technological development, digitization, cyber security, application of artificial intelligence – all these should become part of our daily life. Government agencies, the private sector and all other segments of society must be ready for this. (...) I do not see any dangers or threats to Azerbaijan but I know why – because they know that our response will be merciless, it will be crushing and it will be given regardless of anything. Therefore, if we do not achieve technological development, if there are not just not a few thousand but tens of thousands of Azerbaijanis in this business, we may be overtaken. Therefore, I think that all institutions and, at the same time, society should know and see this as a duty."⁵¹⁷

Azerbaijan is not a party to the Convention on Conventional Weapons (CCW),⁵¹⁸ although the country participated as an observer on CCW meetings on killer robots in November 2019.⁵¹⁹ Azerbaijan is not

among those countries, which support a ban on lethal autonomous weapons. 520

Over the last decade, Azerbaijan has steadily built up its armed forces, and purchased weapons from Russia, Israel and Turkey.⁵²¹ Azerbaijan also developed drone arsenal composed of Turkish and Israeli UAVs, which inter alia include: Bayraktar TB2 (purchased from Turkey in June 2020); loitering munitions purchased from Israel: the Harop (during 2014-2016), Orbiter 1k (2016-2019), Orbiter-3 (2016-2017), SkyStriker (2016-2019); Medium-altitude, long-endurance UAVs purchased from Israel: Hermes-900 (2017-2018), Hermes-450 (2008-2013), Heron (2011-2013)⁵²².

In 2016, during the Four-day War, Azerbaijan used the Harop, that hit many targets, including artillery, air defence systems and a busload of Armenian troops.⁵²³ As Forbes reported,⁵²⁴ the Harops were supplied by IAI. In 2017 a team from Aeronautics was in Azerbaijan to finalize a contract for Orbiter 1K kamikaze drones and were asked to attack enemy positions. Apparently when the Israeli drone operators refused, "senior representatives of the company took control and operated the craft themselves, ultimately missing their targets." Israeli authorities imposed a two-year ban on Aeronautics for this stunt. But when the ban expired in 2019, the company promptly announced a \$13m deal to sell drones to Azerbaijan. In the longer term, the Azerbaijan plans to produce a licensed copy of the Orbiter known as Zarba themselves. In 2018, an Azeri company announced it was working on three different sizes of kamikaze drone,⁵²⁵ including one with an 11-pound warhead able to cruise for three hours

looking for targets, while another company announced manufacturing kamikaze-drone called Bat.⁵²⁶

During the 2020 War, Azerbaijan used several UAVs or autonomous weapons. The videos of the drone strikes have been posted daily on the website of the Azerbaijan's Defense Ministry, broadcast on big screens in the capital, Baku, and tweeted and retweeted online.⁵²⁷

Algorithm Watch reported that Azerbaijani forces used at least three different models of drones that are capable of identifying and destroying a target automatically.⁵²⁸ The 2020 War rose serious questions concerning the legality of using UAVs and autonomous weapons. Ulrike Franke, autonomous weapons expert from the European Council on Foreign Relations, saw a watershed in warfare and commented: "The really important aspect of the conflict in Nagorno-Karabakh, in my view, was the use of these loitering munitions, so-called 'kamikaze drones' – these pretty autonomous systems."⁵²⁹ Human Rights Watch, in a statement to support the International Committee of the Red Cross initiative to ban Killer Robots, indicated:"the increased use of weapons systems with autonomy in today's armed conflicts underscores the importance of creating a new international legal standard now, before it is too late." ⁵³⁰

In the preliminary report on the draft of the UNESCO Recommendation on the Ethics of AI Azerbaijan was referenced as a case of the use of AI technologies in armed conflicts. The conclusion was that: "from the point of view of international humanitarian law, it is highly recommended to have certain regulations concerning the use of AI in military technology, so-called lethal autonomous weapons."⁵³¹

Human Rights

Azerbaijan is a Member State of the Council of Europe and of the United Nations, and has human rights obligations at the regional⁵³² and universal levels. Azerbaijan endorsed the Universal Declaration of Human Rights.⁵³³

The 2024 Freedom House report on Azerbaijan ranks the country as "Not Free" (score 7 out of 100), two points lower than in 2023.⁵³⁴ Among key aspects, "power in Azerbaijan's authoritarian regime remains heavily concentrated in the hands of Ilham Aliyev, who has served as president since 2003, and his extended family. Corruption is rampant, and the formal political opposition has been weakened by years of persecution. The authorities have carried out an extensive crackdown on civil liberties in recent years, leaving little room for independent expression or activism. In 2023, Azerbaijani forces seized control of Nagorno-Karabakh—an ethnic Armenian enclave that had enjoyed de facto independence since 1994—following a months-long blockade and a two-day military operation; the surrender of local political leaders and defense forces prompted nearly the entire ethnic Armenian population of the territory to flee to the Republic of Armenia."

With regard to "Internet freedom," Azerbaijan scores 37. Internet Freedom continues to be restricted with blocked access to several social media. "The government also launched a media registry, required by the new media law adopted in 2022, and rejected the applications of several independent news outlets to join the registry. Prosecution of activists for their online criticism of the government continued during the coverage period. Additionally, activists faced online harassment, doxing, and blackmail." ⁵³⁵

As a member of the Council of Europe, Azerbaijan participates in the Committee on Artificial Intelligence (CAI) mandated to draft a legallybinding Framework Convention on AI, human rights, democracy and the rule of law. The last plenary occurred in March 2024. The Committee of

Ministers is set to vote on the adoption of the Framework Convention in May 2024.

In April 2022, the Council of Europe (CoE) Action Plan for Azerbaijan 2022-2025 was launched. This strategic programming instrument seeks to align legislation, institutions and practices further with CoE standards in human rights, the rule of law and democracy.⁵³⁶ Among the objectives of the Action Plan are: the implementation of the UN 2030 Agenda for Sustainable Development,⁵³⁷ and the identification of areas for co-operation in artificial intelligence.

Azerbaijan is also part of Partnership for Good Governance, through which the European Union and the Council of Europe cooperate to strengthen governance in the Eastern Partnership region⁵³⁸ to advance localized efforts to improve "stability, prosperity and resilience." ⁵³⁹

OECD AI Principles

Azerbaijan is not an OECD member and has not endorsed the OECD AI Principles. The OECD Development Centre has been supporting Azerbaijan in the promotion of enterprise digitalization. A 2022 study highlighted the significance of digitalization to allow Small Medium Enterprises access to strategic resources and integration into global markets.⁵⁴⁰

UNESCO Recommendation on the Ethics of AI

Azerbaijan is a UNESCO member since 1992 and is one of the 193 countries that endorsed the UNESCO Recommendation on the Ethics of AI. ⁵⁴¹ It remains to be seen which steps Azerbaijan will take to implement the Recommendation.

⁵³⁶ Council of Europe, *Council of Europe Action Plan for Azerbaijan 2022-2025*, <u>https://rm.coe.int/action-plan-azerbaijan-2022-2025-eng/1680a59aa3</u>

Council of Europe Convention on Al

Azerbaijan contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁵⁴²

Evaluation

Azerbaijan has set an ambitious goal of embracing new technologies in an effort to propel the economic growth of the country. The digitalization process in Azerbaijan has been accelerating in recent years and has stimulated several initiatives, including the development of a National AI Strategy. The country has not yet signed the protocol modernizing Convention 108, it still has to create an independent agency or mechanism for data (and AI) oversight, and has yet to modernize as well its data protection law regime. Concerns exist that, with the use of AI, Azerbaijan is turning into a "digital autocracy." The country has not endorsed any declaration against the use of LAWS and has been a laboratory for their use in the Nagorno-Karabakh conflict.

Bahrain

National AI Strategy

The Kingdom of Bahrain has declared AI as one of the focus areas of its digital strategy plans. Notwithstanding Bahrain's relatively strong position as a leader in cloud technology and e-government in the Gulf Region, and a strong Government AI readiness index,⁵⁴³ the country is yet to formulate an AI policy framework.⁵⁴⁴

However, in November 2023, Bahraini Prime Minister Prince Salman bin Hamad Al Khalifa approved the Sixth National Telecommunications Plan with the promulgation of an Edict on the Minister of Transportation and Telecommunications recommendation.⁵⁴⁵ The plan seeks to boost the telecommunication sector and includes the development of a national AI strategy and monitoring mechanism, "collaborative AI governance," "Conducive AI," and AI "adoption across high-impact sectors."⁵⁴⁶

A draft bill to regulate AI is also currently pending before the country's Shura Council. The draft bill sets some offenses for misusing AI with fines and imprisonment as punishment.⁵⁴⁷

Under the leadership of HM King Hamad bin Isa Al Khalifa, King of Bahrain, the government initiated plans for the transition of Bahrain to a knowledge-based economy that keeps pace with the global trends in science and technology.⁵⁴⁸ In the opening of the 5th legislative cycle of 2019, H.M.

⁵⁴⁸ Oxford Business Group. King Hamad bin Isa Al Khalifa,

https://oxfordbusinessgroup.com/articles-interviews/eye-on-the-future-king-hamad-binisa-al-khalifa-on-modernisation-and-the-ongoing-transition-to-a-knowledge-basedeconomy-viewpoint

directed the government to undertake a national plan to increase the readiness for the digital economy "by adopting and employing artificial intelligence technology in the production and service sectors, through the establishment of the necessary systems and technical frameworks, as well as through encouraging quality investments, in order to guarantee the maximum benefit to our national economy."549

Elements of an AI roadmap are nested within the broader strategic digital and economic initiatives, including the Kingdom's Economic Vision 2030,⁵⁵⁰ which addresses AI policy and development in the country⁵⁵¹. The Digital Transformation Journey of the Kingdom focuses on fostering an innovation ecosystem for the use of emerging technologies for the benefit of the Bahraini society. The Kingdom "encourages those involved in designing, developing, and deploying new technologies to ensure that they are consistent with the Kingdom's values and adhere to international norms and standards."552

The Digital Transformation Journey engages key government entities across multiple sectors, such as the Bahrain Economic Development Board (EDB) - which sets the goals and policies for Vision 2030- and the Information and eGovernment Authority (IGA) - which implements digital transformation under the supervision of the ICT Government Committee (ICTGC).⁵⁵³ Tamkeen, the Bahrain Labor Fund, supports the private sector through strategies for enterprise growth and workforce development, and by leveraging AI in the higher education sector. Other actors are the Bahrain Information Technology Society and AI Society, which act as a medium for civil society, under license of

government regulators.554

This vision for a modernized and digital economy in the public and private sector helped shape Bahrain's Digital Government Strategy 2022, to digitize and transform public services and increase digital usage in the country. The strategy is part of the Government of Bahrain's Government Action Plan 2019-2022, under the supervision of the Supreme Council for Information & Communication Technology (SCICT) led by the Deputy Prime Minister. The digital initiatives are under the coordination of the National ICT Governance Committee (ICTGC).⁵⁵⁵

The Digital Government Strategy 2022 promotes principles of inclusion, increased digitization, design considerations, data analysis and transparency, and has five focus areas for including artificial intelligence: - Strengthening digital infrastructure, reinforcement of the cloud based working environment, data, and artificial intelligence to fostering AI for the digital economy

- Accelerating the transformation and collaboration efforts of various public sector entities

- Ensuring the enforcement of policies, regulations and standards by safeguarding constituents' basic rights and protecting them against cyber risks

- Strengthening accountability, transparency and civic engagement through open data and e-Participation

- Encouraging innovation & nurturing entrepreneurship.

In February 2022, Bahrain announced the 2022-2026 Telecommunications, ICT and Digital Economy Sector Strategy in line with the country Economic Recovery Plan, and the Digital Government Strategy 2022. The Minister of Transportation and Telecommunications, Kamal bin Ahmed Mohammed, explained that the strategy aims "to increase the efficiency of government services through e-transformation, digitizing documents, moving to e-payments, and expanding the use of AI,

while strengthening public private partnerships."⁵⁵⁶ Performance indicators set for evaluation of the implementation by 2026, include the increase of start-ups by 20%, automation of 200 government services, increase in the sector by 35% and training 20,000 on cybersecurity. The government of Bahrain has aligned the ICT digital strategy to the UN Sustainable Development Goals, the Government Action Plan and the Economic Vision 2030⁵⁵⁷

Bahrain is one of the first countries, along with the United Kingdom, to pilot test the World Economic Forum (WEF) AI procurement guidelines for the public sector.⁵⁵⁸ The guidelines aim to "enable governments to responsibly and sustainably deploy AI technology,"⁵⁵⁹ and "set government use and adoption of AI on a better path."⁵⁶⁰ The guidelines have the potential to enhance explainability and accountability in the AI systems before acquiring and deploying these solutions, at the stage of writing proposal requests.⁵⁶¹ Under the leadership of the Bahrain Economic Development Board (EDB), the adoption of the framework was in line with the country's "reputation as the Middle East's testbed thanks to its innovative regulatory framework, strong technology ecosystem and rapid shift to e-government."⁵⁶² To date there are no reports about the progress of the pilot in Bahrain.

Public Participation

Since 2016, Bahrain has been very active in promoting and developing public participation in relation to its digital services and technology. This has consistently involved a theme of strong encouragement of citizens and users to primarily engage with the government via digital means and social media. Bahrain's eGov Strategy 2016, included a digitized National Suggestions and Complaints System, an open data platform, and continued encouragement of uptake of eGovernment services. In 2018, the strategy directly prioritized objectives including 'Nurturing active participation and engagement with constituents.'¹⁷

In 2021, the Personal Data Protection Authority called a public consultation on the implementation of at least six draft regulations to complement the Personal Data Protection Law (PDPL).⁵⁶³ The consultation resulted in the enactment of ten ministerial resolutions in March 2022 to align the PDPL to international standards and the GDPR.

In 2022, within the Digital Government Strategy 2022, the government developed the "Leave No One Behind" digital policy to focus on citizen needs, underpinned by the Digital First principle.⁵⁶⁴ This principle prioritizes the design of public services digitally first, to encourage citizens voicing their concerns and opinions via portals such as Tawasul. The design should promote the supply of data from citizens and corporations only once to a government entity, and the pooling of government data for greater public accessibility and civic engagement, which supports Bahrain's Digital Identities initiative.

Public participation in Bahrain focuses on deriving feedback from users on how to run services more efficiently and effectively. However, despite these efforts, outcomes and findings from participatory action are not always publicly available.

Data Protection

Bahrain has led the region in the enactment of legislation aligned to the highest global standards. The Kingdom was the second State in the Gulf Region, following Qatar to address personal data protection as a right, with the enactment of Law No. (30) of 2018 with Respect to Personal Data

⁵⁶³ Bahrain News Agency, *Consultation on implementing Bahrain's Personal Data Protection Law launched online* (Jun. 14, 2021),

 $[\]label{eq:https://www.bna.bh/en/ConsultationonimplementingBahrainsPersonalDataProtectionLawlaunchedonli} \\ \underline{https://www.bna.bh/en/ConsultationonimplementingBahrainsPersonalDataProtectionLawlaunchedonli} \\ \underline{https://www.bna.bh/en/ConsultationonimplementingBahrainsPersonalDataProtectionDataProtectionPersonalDataProtectionPersonalDataProtectionPersonalDataProte$

ne.aspx?cms=q8FmFJgiscL2fwIzON1%2BDhLTzyak%2BXqL0ckS1SQmlDM%3D ⁵⁶⁴ Kingdom of Bahrain, *Digital-First Principle* (2022), https://www.bahrain.bh/new/en/digitalfirst_en.html

Protection Law (PDPL).⁵⁶⁵ The Royal Decree No (78) of 2019 established the Personal Data Protection Authority (PDPA),⁵⁶⁶ and granted the Minister of Justice, Islamic Affairs and Waqf the chair of the Board of Directors of the PDPA.⁵⁶⁷ The PDPA has the responsibility to enforce the law and investigate potential violations.⁵⁶⁸

The PDPL is inspired by the EU GDPR and entered into effect in August of 2019. The Law protects the rights of individuals, regarding the collection, processing and storage of their personal data (whether by automatic or manual means), and establishes obligations to data controllers or data processors in their relationship with data owners or subjects.⁵⁶⁹

The PDPL shares similarities with the GDPR,⁵⁷⁰ in the rights to notification of data collection and processing by data controllers to data subjects, right to erasure and right of rectification, but differs in some specifics: The treatment of the right to be informed (Article 18); the right to object to processing of personal data (Articles 19, 20, and 21). The exceptions in the right not to be subject to decision-making based on solely automated means (Article 22), the absence of the right to data portability; and the shorter period of response to data subjects' request (15 days vs one month in the GDPR) are important differences.

Unlike the GDPR, the PDPL mandates data managers to recognize the right of Bahraini data owners to object to personal data which causes harm or distress to the data owner or any persons. Prior written approval from the Personal Data Protection Authority is mandatory before processing certain personal data. Article 58 defines criminal and civil penalties for violations including prison, in specified cases, in contrast with GDPR where only monetary penalties are defined.

The Kingdom of Bahrain started a cycle of public consultations on

22 includes the right to object to decisions based solely on automated processing for purposes of assessing performance at work, financial standing, credit scoring, reliability or conduct. Yet the PDPL does not include provisions to ensure transparency in the methods of processing.

In September 2022, Bahrain together with other member states of the Digital Cooperation Organization (DCO) adopted the Riyadh AI Call for Action Declaration (RAICA), launched during the Global AI Summit of 2022.⁵⁸⁴ This Declaration is a commitment to develop AI technology that benefit people, communities and nations. Item 4 of the Call for Action addresses the establishment of safeguards to prevent unfairness of algorithms against individuals due to their orientation, culture, gender or race.

Digitization

Bahrain stands for with its e-government and smart city plans. In November 2021, Bahrain launched an ambitious Economic Recovery Plan to propel growth post-COVID-19, through an investment of more than \$30 billion in national infrastructure and strategic priority sectors.⁵⁸⁵ Government entities have plans for the use of AI by the National Space Science Agency in agriculture⁵⁸⁶, by the Supreme Judicial Council in the courtroom,⁵⁸⁷ in research, through the University of Bahrain in labs for AI and advanced computing for applications in industry. The Kingdom has taken steps to build Smart cities, establish Smart traffic control, smart cooling systems, Smart banking.⁵⁸⁸

The Governmental Digital Journey issued on September 2022, focuses on modern technologies and AI in the development of government services, leveraged by digital infrastructure and data.⁵⁸⁹

In cooperation with UNDP Bahrain, the country developed a comprehensive plan and roadmap of implementation of the sustainable Digital economy by 2025. A range of AI related initiatives and policies related to emerging technologies included:

- A cloud-first policy approach for the public sector during procurement processes.
- AI and Robotics use in banking, retail and financial services, supported by the government agencies such as Tamkeen.
- The creation of the region's first national data repository, encompassing 73 government bodies for predictive analytics to improve public service and data access, including a partnership with AWS for a 'Big Data Hub'. Internet of Things (IoT) initiatives are also being developed with agencies including the National Space Science Agency (NSSA), the Ministry of Transportation and Telecommunication, the Ministry of Works, Municipalities Affairs, and Urban Planning, and the Economic Development Board. Partnership of the Government of Bahrain with Amazon Web Services to establish Big Data centers.⁵⁹⁰

Mass Surveillance

Amnesty International reported about an ongoing investigation on the use of Pegasus Spyware to infect the devices of three political activists in Bahrain in 2021.⁵⁹¹ The misuse of the spyware provided Israeli NSO Group, to trace mobile phones, targeted at least 50,000 devices of journalists and human rights activists. According to Citizen Lab, Bahrain authorities used cyber surveillance since 2013, including phone forensics technology sold by Israeli company, Cellebrite, to extract private data from devices of arrested activists.⁵⁹²

The Carnegie Endowment for Peace report on AI surveillance, found that Bahrain is using facial recognition for smart policing, mainly

from Chinese technology providers, such as Dahua.⁵⁹³ Reports of use of surveillance cameras in public spaces, surfaced. In September 2022, the OHCHR reiterated concerns about surveillance of individuals and groups cooperating with the United Nations.⁵⁹⁴ The Ministry of Interior has issued statements warning about legal procedures against activists and their followers who incur in cybercrime on social media.⁵⁹⁵

e-government authority released The Bahrain the "BeAwareBahrain" app to "ensure the safety of all its citizens and residents;"596 The app alerted individuals in case of close contact with a confirmed case of COVID-19 and was able to confirm the location of people who had moved more than 15 meter distance from their phone. A report by Amnesty International in 2020 of 11 countries using data tracing apps for COVID-19, concluded that the BeAwareBahrain app was among "the most alarming tools (...) carrying out live or near-live tracking of users' locations by frequently uploading GPS coordinates to a central server."597 The surveillance activities included the real-time broadcast of users' locations to a government database, the publication of online sensitive information linked to their national ID, and the enforced use of a Bluetooth bracelet during quarantine.

Biometric Identification

Bahrain has integrated biometrics and digital IDs as part of the Digital First Policy. The use of a nationwide digital identity scheme to include Sijilat (the Commercial Registration Portal), the National Taxation System, and Sehati (the National Social Health Insurance Program), aims to facilitate users access to government services through one-time input into the sytem.⁵⁹⁸ Users can visit a Government Service

Center if they lack internet access.

Bahrain introduced biometric identification for automated border control in Bahrain International Airport (BIA) in 2019, as part of the Airport Modernization Programme (AMP).⁵⁹⁹ In July 2022, Bahrain joined the Global Entry Partnership, the U.S. Customs and Border Protection (CBP) program for expedited entry into the U.S. for pre-approved, low-risk travelers. The program makes use of facial recognition and travelers can make use of biometric kiosks at airports to process them.⁶⁰⁰

Tamkeen (Labour Fund), Bahrain's government agency promoting private-sector business and individual development, launched digital onboarding using biometric identification to register customers. Tamkeen uses B2B payment integrated with BENEFIT Pay.⁶⁰¹ BenefitPay is a financial network established in 1997 under license of the Central Bank of Bahrain.⁶⁰² Benefit uses facial recognition for validation and authentication of users, recognizing all all GCC IDs and passports of all nationalities. The service is available for Fin Tech firms, insurance, investment companies to curtail cybercrime.⁶⁰³

In 2023, Bahrain witnessed a significant uptake of digital identification and online civil registration services, with 743,000 transactions completed. The digitization of these services is crucial to the country's digital transformation.

With the growing trend towards digitization, only around 5% of transactions require physical contact, mainly for issues related to issuing residence permits and biometric updates. New initiatives include a national birth system, digital archiving of records, and a Central

Lethal Autonomous Weapon Systems

Bahrain is a High Contracting party to the Convention on Certain Conventional Weapons' (CCW) Protocols III, IV and V.⁶⁰⁵ Bahrain, is one of the 12 Arab state parties to the CCW, which in 2020 called "for a new treaty to prohibit and restrict lethal autonomous weapons systems (...) and (...) the importance of maintaining human control over the critical functions of weapons,"⁶⁰⁶ which prohibits the use of weapons that are considered injurious or indiscriminate such as landmines and booby traps.

Bahrain, as part of the Non-Aligned Movement (NAM), expressed its position against lethal autonomous weapons systems during the UN General Assembly of 2015, due to its "moral, humanitarian, and legal challenges for the international community."⁶⁰⁷ In a statement, presented during the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems Meeting in Geneva in 2022, the NAM called for the negotiation of a "legally binding international instrument stipulating prohibitions and regulations on lethal autonomous weapons systems."

In February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.⁶⁰⁸ Bahrain endorsed the resulting Political Declaration issued in November 2023.⁶⁰⁹

⁶⁰⁹ US Department of State, *Political Declaration on Responsible Military Use of Artificial Intelligence and Autonomy*, (Nov. 9, 2023) endorsing States as of Feb. 12,

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁶¹⁰

The Republic of Korea will host the second REAIM summit in 2024.611

Human Rights

Bahrain is a signatory of the Universal Declaration of Human Rights.⁶¹² The Prime Minister of the Country has expressed the importance of the UDHR in public statements.⁶¹³ The country has completed four cycles of Universal Periodic Reviews, with the last one in November 2022.⁶¹⁴ The UPR of Bahrain noted the recommendations of various States for Bahrain to ratify international human rights covenants. The country made a voluntary pledge and commitment to implement projects of the national human rights plan (102 projects), for 2022-2026 and to submit voluntary reports every two years on the

ongoing efforts to enhance the country's human right system.⁶¹⁵

Bahrain is one of the 16 State Parties to the Arab Charter on Human Rights,⁶¹⁶ and has ratified the International Covenant on Civil and Political Rights. (ICCPR) and the International Covenant on Economic, Social and cultural Rights (ICESCR).⁶¹⁷

The Freedom House rated Bahrain as "Not Free" (12/100) in 2024.⁶¹⁸ Restrictions to freedom of expression and beliefs, the use of spyware and surveillance technology to target activists and dissidents, are areas of concern. In 2023, Internet freedom in Bahrain remained restricted, with content critical of the government blocked and removed. Freedom House notes that despite the continued use of social media for activism, self-censorship prevailed due to fear of state surveillance.⁶¹⁹

The Transparency International's 2022 Corruption Perception Index ranks Bahrain in 69th place out of 180 countries with a score of 44/100, signifying some level of corruption.⁶²⁰

In a report of 2019, the UN High Commissioner for Human Rights (OHCHR) urged Bahrain to align counter-terrorism and counter-extremism legislation to the international human rights standards.⁶²¹

OECD AI Principles / G20 AI Guidelines

Bahrain is not a member of the OECD and has not endorsed the OECD AI Principles.⁶²² Bahrain has not submitted reports to the OECD AI Policy Observatory in relation to ongoing policies, strategies or activities associated with AI.⁶²³

Bahrain is a member of the MENA-OECD Initiative on Governance and Competitiveness created in 2021 to implement reforms to improve governance structures and cooperation, while not specifically related to AI.⁶²⁴

UNESCO Recommendation on the Ethics of AI

Bahrain is a UNESCO member since 1972⁶²⁵ and is one of the 193 member States which endorsed the Recommendation on the Ethics of AI.⁶²⁶ However, no reports exist about how Bahrain is implementing the UNESCO Recommendation.

Evaluation

Bahrain's Economic Vision 2030, Digital Government Strategy 2022 and Digital Economy Sector Strategy 2022-2026 frame the efforts of the Kingdom to provide a roadmap and KPIs for the governance of AI. The formulation of a National AI Strategy is a necessary next step in Bahrain's pathway to responsible and trustworthy innovation, provided that Bahrain takes the drafting of the Strategy as an opportunity to implement the UNESCO Recommendation on the Ethics of AI.

The participation of multiple governmental agencies advancing the digitalization and AI plans is a strength in the pathway to governing AI. Building on the experience of the public consultation for the Personal Data Protection Law (PDPL) in 2021, Bahrain has the potential to establish a formalized system for public consultation in AI policy to ensure the adoption of explainable, trustworthy and fair AI.

In terms of data protection and independent oversight, the alignment of the Bahrain's Personal Data Protection Law (PDPL) to GDPR, and the draft regulations for Data protection impact assessments (DPIA) are positive steps, which can be enhanced by the adoption of algorithmic transparency and the creation of an independent data and AI supervisory authority.

Although it has signed the Universal Declaration of Human Rights and the Arab Charter on Human Rights, Bahrain stands as a 'not free' country in relation to human rights protection. Concerns exist with regard to the use of AI for mass surveillance purposes.

Bangladesh

National AI Strategy

Bangladesh published its National Strategy on Artificial Intelligence in March 2020.⁶²⁷ The goal is to make Bangladesh a "technologically advanced nation by the next decade." The National AI Strategy for Bangladesh is driven by the slogan "AI for Innovative Bangladesh." The AI Strategy identified seven national priority sectors, which are:

- 1) public service delivery
- 2) manufacturing
- 3) agriculture
- 4) smart mobility and transportation
- 5) skill & education
- 6) finance & trade
- 7) health

To create a "sustainable AI Ecosystem," the report proposes six strategic pillars, namely:

- 1) research and development,
- 2) skilling and reskilling of AI workforce
- 3) data and digital infrastructure
- 4) ethics, data privacy, security & regulations
- 5) funding and accelerating AI startups
- 6) industrialization for AI technologies

Each pillar consists of a strategic brief, a roadmap, action plan, related stakeholders and lead ministries. Finally, a summary roadmap in the report includes steps for the development of AI over the next five years.

Under Strategy 4 of the AI national roadmap: "Ethics, Data Privacy, Security & Regulations," the Bangladeshi government will create a new set of AI ethics guidelines to address issues such as fairness, safety, cybersecurity, and transparency. By 2023-2024, its ICT Division and Ministry of Law, Justice and Parliamentary Affairs intend to formulate RTE (Right To Explanation) Guideline For AI Algorithm.⁶²⁸

 $[\]underline{https://ictd.portal.gov.bd/sites/default/files/files/ictd.portal.gov.bd/policies/e57f1366_a62$

In July 2023, the national Parliament passed the Agency to Innovate (a2i) Bill 2023' a2i as Bangladesh's national innovation agency, a statutory body. It is a flagship program of the 2019 Smart Bangladesh's Vision 2041⁶²⁹ and its 20-year Perspective Plan⁶³⁰ which aim to utilize technology for societal advancement by 2041. The Vision and Perspective Plan focus on four institutional pillars: governance, democratization, decentralization, and capacity building. As part of the three-Pong Strategy for Bangladesh's Innovation Economy, the Plan aims to leverage the fourth industrial revolution, including AI and smart machines, for competitiveness and a low-carbon economy. To this end, Bangladesh aims to develop a robust legal framework and governance structure for e-government and has taken steps in this direction by enacting laws in 2023, laying the groundwork for AI regulation.⁶³¹

In February 2024, Minister of Law, Justice, and Parliamentary Affairs Mr. Anisul Huq announced the government's initiative to draft a law on AI. The Minister emphasized plans to consult with international stakeholders before finalizing the act.⁶³² In March 2024, Minister Huq led a discussion on the draft framework for the AI law, stressing the importance of addressing critical aspects related to human welfare and the ethical use of AI. He highlighted the commencement of discussions on AI's legal framework, with a focus on safeguarding human rights and promoting the beneficial application of AI across various sectors.⁶³³ It is anticipated that the proposed draft of the AI law will be completed by September 2024.

Public Participation

The National AI Strategy of Bangladesh identified engagement with media and civil societies for creating a "robust ethics, data privacy, security and regulations guideline" for emerging technologies.⁶³⁴ In March 2020, as part of its National Internet of Things (IoT) Strategy, the Bangladesh government proposed to establish "an Advisory Committee including representatives from Government, industry, academia and community" to provide ongoing guidance in the emerging areas of IoT.⁶³⁵

In August 2023, the Bangladeshi government sought civil society input on its draft of the Cyber Security Act, receiving around 900 recommendations in the two weeks of the comment period.⁶³⁶

Data Protection

Although the Constitution of Bangladesh does not explicitly grant the fundamental right to privacy, Article 43 of the Constitution recognises this right under certain restrictions and states that, "every citizen shall have the right, subject to any reasonable restrictions imposed by law in the interests of the security of the State, public order, public morality or public health – (a) to be secured in his home against entry, search and seizure; and b) to the privacy of his correspondence and other means of communication."⁶³⁷

Bangladesh proposed a draft Data Protection Act in 2022.⁶³⁸ "The proposed Data Protection Act, 2022 and the Bangladesh Telecommunication Regulatory Commission Regulation for Digital, social

media and OTT Platforms, 2021 attempt to protect citizen information against American tech companies, but both draft regulations grant Bangladesh authorities powers to control everything on the Bangladeshi internet."⁶³⁹ The purpose of this law is to provide security for personal data. The law does not provide for a definition of personal data.⁶⁴⁰ The proposed data protection law mandates storage of citizen data within Bangladesh. "The localization of the data within Bangladesh gives authorities broad powers to access people's personal data without judicial oversight and accountability for any violation of people's right to privacy," wrote Amnesty International⁶⁴¹ in feedback to the proposed bill.

In November 2023, the Cabinet of Bangladesh gave its approval in principle to the Draft Data Protection Act 2023. The Act shall now be enacted by the Parliament.⁶⁴² The revised Act addressed stakeholders' feedback on the transition period and data localization requirements. However, the definition of personal data was not addressed.⁶⁴³ The Act provides for the establishment of a Board, in charged of overseeing data protection in the country. The Board shall be constituted by the Government and consisting of a chairman and four members.

The Telecommunications Act (2000) is a law "for the purpose of development and efficient regulation of telecommunication systems and telecommunication services in Bangladesh."⁶⁴⁴ Under Section 67 (b) of the Act no person can "intercept any radio communication or telecommunication nor shall utilise or divulge the intercepted communication, unless the originator of the communication or the person

to whom the originator intends to send it has consented to or approved the interception or divulgence." Under Section 97 of the Act, the government may ask the telecommunication operator to maintain records relating to the communications of a specific user under the broad definition of National Security and Public Interest.

The Information Communication Technology Act (2006) imposes responsibility on any individual or body corporate handling personal or sensitive data and requires them to maintain and implement reasonable security practices for this.⁶⁴⁵ Section 46 of the Act states that the state can intercept, monitor or decrypt data if it is in the interest of:

- 1) "the sovereignty, integrity, or security of the state;
- 2) friendly relations with foreign states;
- 3) public order;
- 4) for preventing incitement to the commission of any cognisable offence relating to the above;
- 5) for investigation of any offence.".

The Digital Security Act came into force in full on 8 October 2018 and pertains to "offences committed through digital devices."⁶⁴⁶ Section 26 of the Act provides for "punishment for unauthorised collection, use etc. of identity information." Under the Digital Security Act two entities have been formed: the National Data Security Council (NDSC) and the Digital Security Agency (DSA) "to carry out the purposes of the Act." The NDSC under Section 13 of the Act "shall provide necessary direction and advice to the Agency" and the DSA shall have the power to "remove or block some data-information." In order to do so, the DSA will have a Digital Forensic Lab and an Emergency Response Team to: (a) "ensure the emergency security of the critical information infrastructure; (b) take immediate necessary measures for remedy if there is any cyber or digital attack and if the cyber or digital security is affected; (c) take necessary initiatives to prevent probable and imminent cyber or digital attack; (d) take overall cooperational initiatives, including exchange of information with any similar type of foreign team or organisation, for carrying out the purposes of this Act, with the prior approval of the Government; (e) do such other acts as may be prescribed by rules."

In September 2023, Bangladesh's parliament passed the Cyber Security Act (CSA), replacing the Digital Security Act of 2018, to combat

⁶⁴⁵ Bangladesh Computer Council, ICT Act 2006,

https://bcc.portal.gov.bd/site/page/8a843dba-4055-49af-83f5-58b5669c770d/-

⁶⁴⁶ Bangladesh e-Government Computer Incident Response Team, *Digital Security Act* 2020, <u>https://www.cirt.gov.bd/wp-content/uploads/2020/02/Digital-Security-Act-</u>2020.pdf.

cybercrime and disinformation. The CSA outlines measures for detecting, preventing, and prosecuting crimes committed through digital or electronic means. Additionally, Section 5 of the Act establishes a National Cyber Security Agency, which will operate under the ICT Division to fulfill the Act's objectives, including supervising and coordinating with the National Computer Emergency Response Team, Computer Emergency Teams, or the Computer Incident Response Team.

The Cyber Security Act has largely been critiqued as a replication of the DSA. "The only changes the CSA makes are related to sentencing, which can be summarized as follows: lowering the maximum applicable prison sentence for eight offences, removing a sentence of imprisonment for two offences, increasing the maximum applicable fine for three offences and removing the higher applicable penalty for all repeat offences." stated Amnesty International.⁶⁴⁷

Algorithmic Transparency

While there is no public declaration of adapting the Human Rights framework for AI policy in Bangladesh as of 2021, its government acknowledged the lack of transparency of machine learning. The national AI strategy explicitly stated⁶⁴⁸ that:

- 1) The EU General Data Protection Regulation (GDPR) can be a good solution to the challenge on rules about who will be responsible for an unwanted inversion.
- 2) There should be a rule of 'right to get an explanation' in each and every process.
- 3) The impacts AI will bring to human physiology, dignity and autonomy is a core challenge.
- 4) A strong legal and ethical framework on how AI would be implemented in applications is a must.
- 5) AI ethics should be righteous, fundamentally sound, assessable, reversible and inclusive.

Biometric Identification

Since 2008, the Election Commission of Bangladesh has issued a National Identity Card (NID) which is compulsory for every Bangladeshi citizen above the age of 18 for voting and for availing 22 types of services, including banking, taxpayer identity number (TIN), driving licence and

www.amnesty.org/en/documents/asa13/7125/2023/en/

⁶⁴⁸ Ibid., pp. 47-48.

passport. In 2016, the government started issuing a machine readable "smart NID card" with a chip that can store encrypted data such as biometric and identification data for enhancing security and reducing forgery.⁶⁴⁹

Lethal Autonomous Weapons

Bangladesh expressed its support for multilateral talks on lethal autonomous weapons systems at the UN General Assembly in October 2016.⁶⁵⁰ The country participated for the first time in the Convention on Certain Conventional Weapons (CCW)⁶⁵¹ meetings on lethal autonomous weapons systems in 2019, but did not make any statements.

In October 2023, at the 78th UN General Assembly, Bangladesh voted in favor of resolution L.56, emphasizing the international community's need to address concerns regarding autonomous weapons.⁶⁵² Bangladesh advocates for a comprehensive assessment of these systems' compliance with international law, including humanitarian and human rights laws. Additionally, Bangladesh supports negotiating a legally binding instrument on autonomous weapons and aligns with the Non-Aligned Movement (NAM) in this endeavor. The NAM emphasizes the urgency of regulating emerging technologies in the area of autonomous weapons systems through a legally binding instrument under the Convention.

Human Rights

In 2024, Freedom House report ranked Bangladesh as "partly free" with a score of 40/100 for political and civil rights.⁶⁵³ The report states that, "the ruling Awami League (AL) has consolidated political power through

sustained harassment of the opposition and those perceived to be allied with it, as well as of critical media and voices in civil society. Corruption is a serious problem, and anticorruption efforts have been weakened by politicised enforcement. Due process guarantees are poorly upheld and security forces carry out a range of human right abuses with near impunity."⁶⁵⁴

In January 2024, UN experts have urged the Government of Bangladesh to implement significant human rights reforms to address repressive trends and restore political dialogue and participation during its fourth consecutive term. Expressing alarm over widespread attacks and intimidation of civil society, human rights defenders, journalists, and political activists during recent general elections, the experts highlighted reports of arrests, violence, and lack of independent investigations.⁶⁵⁵

The authorities of Bangladesh "imprisoned 433 people under the Digital Security Act, the majority of whom were held on allegations of publishing "false or offensive information" under Section 25."656 Under this law, any kind of criticism of the ruling government would be considered an act of spreading false information. This represented a "21% year-on-year increase in the number of people detained under the Act. As of 11 July, the longest-serving prisoner detained under the Act had been held since 24 December 2018. Section 25 (publication of false or offensive information), Section 29 (publication of defamatory information) and Section 31 (offence and punishment for deteriorating law and order) of the Act were used systematically to target and harass dissenting voices, including those of journalists, activists and human rights defenders. The actions contravened Bangladesh's commitments under the ICCPR as well as its domestic constitutional obligations." 657 Bangladesh authorities also arrested a 15year-old for "defaming" Prime Minister Sheikh Hasina Wazed in a Facebook post.658

OECD / G20 AI Principles

Bangladesh has not endorsed OECD AI principles.

UNESCO recommendation on the Ethics of AI

Bangladesh has endorsed the UNESCO Recommendation on the Ethics of Artificial Intelligence.⁶⁵⁹ It remains to be seen how Bangladesh will implement the UNESCO Recommendation in practice.

Evaluation

Bangladesh has set out a national strategy for AI that recognizes the importance of AI ethics and endorsed the UNESCO Recommendation on the Ethics of AI. Although Bangladesh does not have a comprehensive data protection law, there is support in the national AI strategy for a GDPR-style law and also for an explicit right of explanation. In view of the country low credentials with regard to human rights protection, concerns exist with Bangladesh's extensive programme of biometric identification.

⁶⁵⁹ UNESCO, Recommendation on the Ethics of Artificial Intelligence (Nov. 23, 2021), https://unesdoc.unesco.org/ark:/48223/pf0000381137

Belgium

National AI Strategy

In October 2022, the Council of Ministers of the Belgian Federal Government approved a National Convergence Plan for the development of artificial intelligence. The plan aims to foster AI development while emphasizing that "fundamental rights, such as privacy and non-discrimination, are protected and that new technologies should be developed within an appropriate ethical and legal framework."⁶⁶⁰ The Plan aims to reduce the fragmentation of Belgian Regional AI strategies by establishing nine common objectives: (1)Promoting trustworthy AI; (2) Guaranteeing cybersecurity; (3) Strengthening the competitiveness and the attractiveness of Belgium through AI; (4) Developing a data-driven economy and a high-performance infrastructure; (5) Centralizing AI in healthcare; (6) Using AI for sustainable mobility; (7) Protecting the environment; (8) Providing better and life-long learning opportunities; (9) Offering citizens better service and protection.

The Convergence Plan also includes the establishment of a Governing Board to execute and coordinate it.⁶⁶¹ The Convergence Plan explicitly refers to the need for transparency in AI design; preventing biased outcomes; assessing the societal impact of AI; ensuring system robustness and safety; and promoting diversity. It also advocates for AI that contributes to "the protection of fundamental rights, democracy, and the rule of law" and sees more representative and responsible data use as the key to prevent discrimination against women, minorities, the elderly, and other groups. In addition, the Convergence Plan envisions Belgium's "active participation in the development of norms, standards, and recommendations in international fora" and argues for clear rules on "accuracy, transparency, accountability, explainability, and equality."⁶⁶²

Belgium is a federal state. It has three regions as well as three communities, all of which have their own government, and many of which have also developed strategies and initiatives on digitalization or AI. "The

Flemish Community, the French Community and the German-speaking Community are divided according to language and culture. They are responsible for language, culture, education, audiovisual media, and individual assistance such as specific parts of health policy and social welfare. The regions (the Flemish Region, the Brussels Capital Region and the Walloon Region) are divided based on territory."⁶⁶³ They are responsible for the economy, employment, housing, public works, energy transportation, environmental and spatial planning and have some things to say concerning international affairs. The Federal Government is responsible for foreign affairs, defense, justice, finance, social security, healthcare and internal affairs.⁶⁶⁴

The Flemish Region released the *Vlaanderen Radicaal Digitaal*, in 2019, which was renewed as the *Vlaanderen Radicaal Digitaal II* in 2021. This regional digital strategy aims to foster digital public services, data processing, and automation in the public sector.⁶⁶⁵ In 2019 as well, the Flemish government approved the Flemish policy plan on AI. It focuses specifically on algorithmic transparency, privacy, explainability, and human-centered, safe, sustainable, and trustworthy AI.⁶⁶⁶ The plan also envisions the allocation of 5 million euros to initiatives related to AI ethics and education.⁶⁶⁷ In 2022, the Flemish government adopted a new strategy for data governance, which also comprises initiatives for ethical data use, privacy, transparency, and AI analytics for the public sector.⁶⁶⁸

The Walloon government published the Digital Wallonia 2019-2024 strategy 'based on values including a cross-disciplinary approach,

transparency, coherence, openness and flexibility."⁶⁶⁹ In 2019, the Walloon government also launched the regional strategy "DigitalWallonia4.ai". It aims to accelerate the development of the Walloon AI ecosystem and "sustainably include Wallonia in national and European AI initiatives in order to build a foundation of trust around transparent, ethical and responsible AI."⁶⁷⁰

In 2022, the Brussels Capital Region started a pilot project with the FARI Institute, a non-profit initiative led by Vrije Universiteit Brussel and Université Libre de Bruxelles, to develop an AI strategy for the region.⁶⁷¹ In January 2023, FARI published the outcomes of its 2022 Conference on AI, Data and Robotics in Cities. It included some recommendations from the Observer Committee for the Brussels Capital Region such as raising AI awareness and literacy; governing with various stakeholders, including citizens; determining AI-related responsibilities; collaborating on multi-and interdisciplinary levels; (responsibly) enabling data flows; reusing and readapting the existing AI guidelines, principles, and regulations.⁶⁷²

The adoption of the 2022 Convergence Plan was also preceded by several initiatives at national and European level.

In 2019, the Information Report on the necessary cooperation between the Federal State and the federated entities regarding the impact, opportunities, possibilities and risks of the digital "smart society" was released by a working group created by the Belgian Senate that has been meeting since 2018.⁶⁷³ Their findings and recommendations are grouped in six chapters: governance, ethics and human rights, and legislation; economy, labour market and taxation; education and training; attention economy: impact on people; privacy and cybersecurity; research and

development. The report states that "[t]he development and use of artificial intelligence shall be based on the following guiding principles: prudence, vigilance, loyalty, reliability, justification and transparency, accountability, limited autonomy, humanity, human integrity, and balancing of individual and collective interests". "Fundamental rights, in particular human dignity and freedom, and privacy, must be the basis and starting point for all actions and legislation in the field of artificial intelligence."⁶⁷⁴

In October 2020, the Belgian government, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI. This paper sets out two visions for the EU's development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. The countries call for a borderless single market for AI in the EU. They state that "[t]he main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth, and competitiveness in order to protect our society, maintain our high-quality public service, and benefit our citizens and businesses. This can help the EU to protect and empower its citizens, stimulate innovation and progress in society, and ensure its values are protected."⁶⁷⁵

Public Opinion

A 2019 opinion survey by AI4Belgium examined the public perception of AI, its perceived impact, and the role the government should play in AI implementation.⁶⁷⁶ According to the survey, 76% of the respondents hold a positive attitude towards technological developments, while only 6% hold a negative attitude. Most respondents were worried about the loss of privacy, security and integrity of their personal information (85%), less use of human common sense (85%), less human interaction

⁶⁷⁴ Sénat de Belgique, *Rapport d'information relatif à la nécessaire collaboration entre l'État fédéral et les entités fédérées en ce qui concerne les retombées, les opportunités, les potentialités et les risques de la « société intelligente » numérique, (Mar. 2019), https://www.senate.be/www/webdriver?MItabObj=pdf&MIcolObj=pdf&MInamObj=pdfi d&MItypeObj=application/pdf&MIvalObj=100664119*

(83%) and the loss of trust and control over robots and artificial intelligence (77%).

When asked which activity to prioritize, the highest priority concerned "the management of ethical risks around AI. For example, discrimination, privacy, etc." (74%). This was followed by "supporting employees and employers in the transition to AI in the workplace" (65%); "improving public service through AI" (58%); "supporting research and development (R & D) and innovation in the field of AI" (52%); "facilitating and supporting enterprise access to AI technologies" (48%); and "supporting start-ups engaged in AI" (45%). The majority of citizens suspect that AI will increase inequality between highly educated and low-or unskilled people (66%) and between persons with a privileged background and persons without one (60%).

Public Participation

As part of its Presidency of the Council of the European Union in the first half of 2024, Belgium launched a pioneering democratic initiative: a citizens' panel on artificial intelligence (AI).⁶⁷⁷ This initiative underlines the country's commitment to an inclusive and participatory approach towards the formulation of European policies in the field.⁶⁷⁸

The citizens' panel, which is made up of 60 people selected at random from over 16,000 invitations sent out across Belgium, brings together all strata of the population in terms of age, gender, levels of education, and other demographic criteria.⁶⁷⁹ This diversity will ensure that the discussions and recommendations reflect a wide range of perspectives and experiences rooted in people's lived experiences.

Belgian Minister of Foreign and European Affairs described the initiative as their determination "to put the Belgian people at the heart of the decision-making process.⁶⁸⁰ Civil society must be heard on issues as important as artificial intelligence and contribute towards ambitious policies

⁶⁷⁷ Belgian Federal Government, *Belgium launched AI Presidency Citizen Panel* (Feb 27, 2024), <u>https://belgian-presidency.consilium.europa.eu/en/news/launch-of-citizens-panel-on-artificial-intelligence/</u>

that meet their expectations." The panel's conclusions will be presented to Belgian and European political leaders in May 2024.⁶⁸¹

EU Digital Services Act

As an EU member state, Belgium shall apply the EU Digital Services Act (DSA).⁶⁸² The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content

⁶⁸¹ Belgian Federal Government, *Belgium launched AI Presidency Citizen Panel* (Feb 27, 2024), <u>https://belgian-presidency.consilium.europa.eu/en/news/launch-of-citizens-panel-on-artificial-intelligence/</u>

⁶⁸² Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

and hate speech.⁶⁸³ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.⁶⁸⁴

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation⁶⁸⁵ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.⁶⁸⁶ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force⁶⁸⁷ on the 2024 European elections.

EU AI Act

As an EU member State, Belgium is bound by the EU AI Act.⁶⁸⁸ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

⁶⁸⁸ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.⁶⁸⁹ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area

⁶⁸⁹ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.⁶⁹⁰

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances

⁶⁹⁰ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.⁶⁹¹ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems.

⁶⁹¹ Brussels Privacy Hub, *More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence* (Sept. 12, 2023), <u>https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-institutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificial-intelligence-act/</u>

Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.⁶⁹²

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office⁶⁹³ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange;

'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next, <u>https://www.euronews.com/next/2024/02/27/furious</u>-critics-question-microsofts-deal-with-mistral-ai-as-eu-set-to-look-into-it

⁶⁹³ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Belgium will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact⁶⁹⁴ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Belgium is an EU Member State, the General Data Protection Regulation (GDPR) is directly applicable in Belgium. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."⁶⁹⁵

⁶⁹⁴ European Commission, AI Pact, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

⁶⁹⁵ European Commission, *Data protection in the EU*,

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en

Taking stock of the GDPR, the Belgium Privacy Commission was reformed in 2018.⁶⁹⁶ It is now called the Belgian Data Protection Authority (DPA) and aims to ensure compliance with the GDPR.⁶⁹⁷ It has direct sanctioning powers as well as extended enforcement capabilities.

In March 2022, the DPA expressed concern over the Belgian draft legislation on amending the Act of 3 December 2017 establishing the Data Protection Authority. In particular, the DPA mentioned that the draft law jeopardizes its efficiency and independence. ⁶⁹⁸ The draft legislation introduces parliamentary interference regarding the DPA internal organization and the setting its priorities. The European Data Protection Board expressed similar concerns in its letter of April 2022 in support of the Belgian DPA.⁶⁹⁹ As of January 2023, there is no further progress regarding this legislative amendment.

Regarding the activities of law enforcement authorities, Belgium transposed⁷⁰⁰ the EU Data Protection Law Enforcement Directive (LED).⁷⁰¹ "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and

⁷⁰⁰ Act on the protection of natural persons with regard to the processing of personal data (July 30, 2018), <u>https://www.dataprotectionauthority.be/publications/act-of-30-july-2018.pdf</u>

²⁰¹*Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA*, <u>https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504</u>

terrorism."⁷⁰² The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁷⁰³ The LED also requires for Member States, including Belgium, to enable data subjects to exercise their rights via national data protection authorities.⁷⁰⁴

Following the transposition of the EU Law Enforcement Directive in Belgian law, the Supervisory Body for Police Information, "the oversight body which looks at how the police use information (COC) was reformed to function as an independent data protection body." ⁷⁰⁵ It is intended to oversee how the police use data.⁷⁰⁶

Both the DPA and the COC are members of the Global Privacy Assembly (GPA). The DPA co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁷⁰⁷ but did not endorse the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,⁷⁰⁸ the 2022 GPA Resolution on Facial Recognition Technology⁷⁰⁹ or the 2023 GPA Resolution on Generative AI Systems.⁷¹⁰

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Belgium is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁷¹¹

In 2019, a national human rights institution, the Federal Institute for the Protection and Promotion of Human Rights, was established. Its main goal is to facilitate cooperation between the existing human rights oversight mechanisms and fill the gaps in the existing landscape.⁷¹² More specifically, it "ensures that the use of new technologies and the digitalisation of society contribute to strengthening our rights rather than limiting them."⁷¹³

Algorithmic Transparency

Belgium is subject to the GDPR and Convention 108+. Belgians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁷¹⁴

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁷¹⁵ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable

users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."⁷¹⁶

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."⁷¹⁷

In 2019, the Federal Institute for the Protection and Promotion of Human Rights issued its first opinion on the use of algorithms and artificial intelligence by the administration and argued in favor of more transparency from public authorities.⁷¹⁸

In April 2021, Members of the Chamber of Representatives proposed a change to a 1994 law to make the use of algorithms by public administrations more transparent. Key points of the law are to "publish algorithmic processes online, specifically when used for individual decisions," to inform people of the algorithms used in making decisions on their cases, and to allow citizens to receive "comprehensible responses" to

questions on algorithmic decisions.⁷¹⁹ The amendment has not passed yet.⁷²⁰

In the meantime, in January 2023, Brussels, in collaboration with eight other cities across Europe and with the help of Eurocities' Digital Forum, adopted an algorithm register, the Algorithmic Transparency Standard. It will be used by the data officer for the Brussels Capital region. The aim is to provide more information for residents with regard to the use of algorithm by municipalities and their impact. The register includes a range of information such as the type and purpose of an algorithm, the department using the algorithm, the geographical area and domain it relates to and a risk category. It also includes details on the data source and training data, any bias and mitigation, and human oversight. This initiative builds on similar algorithm registers launched in Amsterdam and Helsinki in September 2020.

According to André Sobczak, Secretary General, Eurocities, "[t]he efforts undertaken by these cities aim to set a standard for the transparent and ethical use of algorithms while their use is still in its relative infancy across city administrations in Europe. In this way, they seek to offer both a safeguard for people whose data may be used by algorithms, and have created a validated model that other cities can use straight away, without having to invest further resources themselves."⁷²¹

Digitization of Public Administration

In July 2023, the Council of Ministers proposed the establishment of an Advisory Committee on Ethics on Data and Artificial Intelligence for the federal administration.⁷²² It will have the following objectives: a) empower civil servants in the use of data and AI, b) raise awareness among

civil servants about the ethical aspects of data use, and c) show citizens that the Federal Administration is setting an example and dealing with digital technology in an ethical and innovative way.

In January 2024, Wallonia announced its aim to integrate AI into the public service sector.⁷²³ To this end, Wallonia launched a public call for the development of a Proof of Concept (PoC) with public entities.⁷²⁴

Facial Recognition

The EDPB has issued guidelines on the use of facial recognition technologies in the area of law enforcement.⁷²⁵ The EDPB Chair at the time said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."⁷²⁶

According to AlgorithmWatch, facial recognition has been used at the Brussels Airport, football matches, for school registration and for healthcare. A "smart" video surveillance system is also in use to locate criminals, solve theft cases and collect statistical information.⁷²⁷ AlgorithmWatch stressed that there is no legal framework governing this activity by the police.

The COC has criticized the use of facial recognition at the Brussels airport, stating that there is "too little information about the implementation and risks of the technology as there was no clear policy or data protection impact assessment conducted to come to a conclusion or offer advice." In a

2022 report, the COC reiterated "the lack of legal basis for the use of facial recognition technology by the Brussels airport police" and noted that it took "corrective action" in order to halt the pilot project.⁷²⁸ The COC also reported that Belgian police had used the controversial facial recognition system Clearview AI without a legal basis and advised Belgian police to cease this activity."⁷²⁹

In January 2022, the Belgian Minister of Internal Affairs expressed the objective of "creating an ethical advisory board on safety that will evaluate the ethical and efficient use of technology and methods for investigation and intervention."⁷³⁰ As of January 2023, there has been no further communication in this regard.

Regulatory sandboxes

In Belgium, the Flemish and Walloon regions have both developed regulatory sandboxes aimed at creating self-contained, low-regulation environments where software developers can experiment with innovative solutions without taking on significant risks. In Flanders, the Sandbox Flanders project is coordinated through the Flemish government agency for digitalization, Digital Flanders. Sandbox Flanders is designed to develop innovative solutions for the public sector by "matching" start-ups with government agencies and departments. The project also aims to be a "permanent marketplace" for ideas without a profit motive.⁷³¹ Many of the projects in question use AI systems to solve practical issues in particular "challenges," such as predicting exam enrollments and automated policy

impact assessments.⁷³² In the Walloon case, a private entity (LUDEBO) coordinates the sandbox ecosystem together with Digital Wallonia and the blockchain startup-collective Walchain, but the goal of this regulatory sandbox is only to foster blockchain technology development.⁷³³

Starting in July 2023, regional authorities commenced sectorial AI testing under the Digital Europe Program.⁷³⁴ The Testing and Experimentation Facilities (TEFs) are poised to aid in the implementation of the EU AI Act, particularly by supporting regulatory sandboxes in collaboration with national authorities. This initiative encompasses a facility spearheaded by Digitaal Vlaanderen, focused on smart cities and communities, with the objective of ensuring AI technologies align with European values prior to market introduction.

Medical data

The use of AI in healthcare is one of the cornerstones of Belgium's AI strategy. An entire chapter of its national convergence plan is devoted to "centralizing AI in healthcare"⁷³⁵ and the plan states that "the creation of a healthcare data agency reflects the importance and the necessity of facilitating the re-use of healthcare for research and innovation." The national strategy also emphasizes the "perspective of the user" in that it aims to stimulate human-centric use of AI in healthcare, while acknowledging the necessity of clear accountability rules, attention to data bias and privacy, and giving patients agency over their own data.⁷³⁶

Lethal Autonomous Weapons Systems

In 2018, the Belgian Parliament passed a "Resolution to prohibit use, by the Belgian Defense, of killer robots and armed drones."⁷³⁷ In this resolution, the Parliament states that Belgium should:

- Participate in international working groups within the framework of the United Nations and the Convention on Certain Conventional Weapons (CCW) in particular to work towards an internationally recognized definition of killer robots and to determine which types of weapons will fall into this category in the future;
- 2) Advocate in international fora, together with like-minded countries, for a global ban on the use of killer robots and fully automated armed drones;
- 3) Ensure that the Belgian Defense never deploys killer robots in military operations; and
- 4) Support the development and use of robotic technology for civilian purposes.

The culmination of Belgium's efforts, which began in 2018 to ban lethal autonomous weapons, was marked by the Belgian Defense Committee's approval of a bill to this effect.⁷³⁸ Consequently, in January 2023, Belgium became one of the first countries in the world to implement an outright ban on lethal autonomous weapons.

Belgium has taken a relatively central role in putting Lethal Autonomous Weapons Systems (LAWS) on the international agenda. During its chairmanship of the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems, Belgium aimed to "find consensus in relation to the clarification, consideration, and development of aspects of the normative and operational framework on emerging technologies in the area of LAWS."⁷³⁹

https://www.lachambre.be/doc/flwb/pdf/54/2643/54k2643001.pdf ⁷³⁸ Nick Amies, Belgium upholds decision to ban 'killer robots'

⁷³⁷ Chambre des représentants de Belgique [Belgian Chamber of Representatives], Proposition de résolution relative à la création d'un agenda robonumérique inclusif et durable [Proposal for a Resolution Regarding the Creation of an Inclusive and Sustainable Robo-Digital Agenda] (July 27, 2017),

⁷³⁹ Delegation of the European Union to the UN and other international organisations in Geneva, EU lines to take: Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems (Mar. 2022),

Belgium was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."⁷⁴⁰

In February 2023, Belgium participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Belgium endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁷⁴¹ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security. stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."⁷⁴²

Belgium also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁷⁴³

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁷⁴⁴

The second REAIM summit will be hosted by the Republic of Korea in 2024. 745

At the 78th UN General Assembly First Committee in 2023, Belgium voted in favour⁷⁴⁶ of resolution L.56⁷⁴⁷ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Belgium is a signatory to many international human rights treaties and conventions. In 2024, Belgium received a rating of 96/100 in the Freedom House Index. Freedom House reported that "Belgium is a stable electoral democracy with a long record of peaceful transfers of power. Political rights and civil liberties are legally guaranteed and largely respected. Major concerns in recent years have included the threat of terrorism, corruption scandals, and rising right-wing nationalism and xenophobia.".⁷⁴⁸

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."⁷⁴⁹

OECD/G20 AI Principles

Belgium has endorsed the OECD/G20 AI Principles. In its 2021 survey, the OECD noted several examples of implementation of the AI Principles by Belgium, including the establishment of an AI Observatory, providing financial and non-financial support to retrain and attract top AI talent, development of an AI self-assessment tool, and the resolution to prohibit the use of lethal autonomous weapons by local armed forces.⁷⁵⁰

Belgium is a member of the Global Partnership for AI, a multistakeholder initiative which aims to foster international cooperation on AI

research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁷⁵¹

Belgium's 2022 national AI strategy covers all of the OECD AI principles: inclusive growth, sustainable development and well-being; human-centered values and fairness, transparency and explainability; robustness, security and safety; and accountability.⁷⁵² However, the strategy does not explicitly mention the OECD as the basis for its common objectives.⁷⁵³

UNESCO Recommendation on the Ethics of AI

Belgium is a signatory to the UNESCO Recommendation on the Ethics of Artificial Intelligence. However, Belgium's 2022 national strategy does not explicitly refer to the UNESCO Recommendation.⁷⁵⁴

Council of Europe Convention on AI

Belgium contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.⁷⁵⁵

Evaluation

In 2022, Belgium adopted a national AI strategy with a strong focus on AI ethics which should ensure coherence among the various regional AI strategies and federate them towards common objectives. Belgium's

national and regional strategies are guided by values and principles that closely resemble those of the OECD AI principles. It remains to be seen how its endorsement of the UNESCO Recommendation on the Ethics of AI will translate in practice. With the adoption of the EU AI Act, Belgium shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Brazil

National AI Strategy

In September 2020, President Jair Bolsonaro declared before the United Nations General Assembly that Brazil is "open for the development of state-of-the-art technology and innovation efforts, such as 4.0 Industry, artificial intelligence, nanotechnology and 5G technology, with all partners who respect our sovereignty and cherish freedom and data protection".⁷⁵⁶

In April 2021, following on the Digital Transformation Strategy (E-Digital),⁷⁵⁷ the Brazilian government adopted a national AI strategy, "Estratégia Brasileira de Inteligência Artificial" (EBIA).⁷⁵⁸ Its elaboration was delayed due to some changes in ministerial organization. The Ministry of Science, Technology, Information and Communications (MCTIC) was split into two: a Ministry of Science, Technology and Information (MCTI) and a Ministry of Communication (MCom). AI is now the responsibility of a broad Directorate on Science, and Digital Innovation (under the Secretary of Entrepreneurship and Innovation of MCTI).⁷⁵⁹

The EBIA sets out six key objectives: develop ethical principles that guide responsible use of AI; remove barriers to innovation; improve collaboration between government, the private sector and researchers; develop AI skills; promote investment in technologies; and advance Brazilian technological innovation and involvement at the international level.⁷⁶⁰

⁷⁵⁶ President Jair Bolsonaro, *Remarks at the General Debate of the 75th Session of the United Nations General Assembly* (Sept. 22, 2020), <u>https://www.gov.br/mre/en/content-centers/speeches-articles-and-interviews/president-of-the-federative-republic-of-brazil/speeches/remarks-by-president-jair-bolsonaro-at-the-general-debate-of-the-75th-session-of-the-united-nations-general-assembly-september-22-2020.</u>

⁷⁵⁷ The 2018 Estratégia Brasileira para a Transformação Digital (E-Digital) includes a specific action "to evaluate potential economic and social impact of (...) artificial intelligence and big data, and to propose policies that mitigate negative effects and maximize positive results". See OECD AI Policy Observatory, *Brazilian Strategy for Digital Transformation*, 2018, <u>https://oecd.ai/en/dashboards/policy-</u>

initiatives/http:%2F%2Faipo.oecd.org%2F2021-data-policyInitiatives-24273.

⁷⁶⁰ Government of Brazil, *Estratégia Brasileira para a Transformação Digital*, pp. 3-4 (July 13, 2021), <u>https://www.gov.br/mcti/pt-br/acompanhe-o-</u>

On May 12, 2022, the Governance Committee of the Brazilian AI Strategy published the Working Plan for EBIA for 2022.⁷⁶¹ The Governance Committee is composed of members from the public sector and government, companies and associations, NGOs and civil society, and centers for education and research.⁷⁶² The Working Plan mentions which actions will be prioritized within the scope of the EBIA for 2022. It is structured around 9 axes: (1) Legislation, regulation, and ethical use; (2) AI governance; (3) International aspects; (4) Qualifications for a digital future; (5) Workforce and training; (6) Research, development, innovation, and entrepreneurship; (7) Application in productive sectors; (8) Application in public power; (9) Public security.

The actions set forth in the Working Plan encompass: (1) Encouraging public agencies that will make use of AI for public security to submit data protection impact assessment prior to implementation; (2) Development of a framework with recommendations for an ethical AI, with mitigation of risks and biases; (3) Development of a dynamic repository of legislation and revision of regulatory model/sandboxes for active monitoring of the Bills in progress, with timely submission of multi-sectoral positioning; (4) Creation of an Artificial Intelligence observatory in Brazil, which can cooperate with other international observatories; (5) Preparation of an annual report with initiatives focused on international aspects; and (6) Expanding the offer of undergraduate and graduate courses related to Artificial Intelligence.

The Governance Committee of the Brazilian AI Strategy had two meetings in 2022. The first one, on February 9, discussed the revision of the Brazilian Strategy for Digital Transformation "Estratégia Brasileira para a Transformação Digital," to be conducted by MCTI. MCTI published the new Brazilian Strategy for Digital Transformation in November 2022.⁷⁶³ The second meeting was on August 25, and had as its goal to evaluate the activities already conducted by the Committee and to plan the next steps.

Regarding the governance of the Brazilian AI strategy, Belli, Curzi and Gaspar,⁷⁶⁴ analyzing the Committees' meetings from 2021, highlighted the lack of transparency with regard to the institutions taking part in the Governance Committee meetings as well as the criteria used to choose them, as they were invited by the MCTI to participate in the Committee. They also identified that, throughout the meetings, there was a constant majority of private sector associations compared to academia and civil society, which might result in biased results for the implementation of the EBIA.

The federal government has initiated the review of the Brazilian Artificial Intelligence Strategy (EBIA), launched in 2021. The goal is to reassess objectives and actions to align them with national interests and priorities. The forecast is for the review process to be completed by May 2024.⁷⁶⁵

AI Legislation

On September 29, 2021, the House of Representatives approved the draft Bill No. 21/2020 establishing the Legal Framework for Artificial Intelligence in Brazil (*Marco Legal da Inteligência Artificial*).⁷⁶⁶ After approval in the House of Representatives, the draft Bill proceeded to the Federal Senate for joint analysis with two other legislative proposals: Bill No. 5051/2019 establishing the principles for the use of AI in Brazil and Bill No. 872/2021 providing for the ethical framework and guidelines that underline the development and use of AI in Brazil.

The aim of draft Bill No. 21/2020 is to create a legal framework for the development and use of AI by the government, companies, various entities and individuals.⁷⁶⁷ AI agents, those who develop, deploy or use an

⁷⁶⁶ Brazilian House of Representatives, *Câmara aprova projeto que regulamenta uso da inteligência artificial*, (Sept. 29, 2021), <u>https://www.camara.leg.br/noticias/811702-camara-aprova-projeto-que-regulamenta-uso-da-inteligencia-artificial/</u>

⁷⁶⁷ Brazilian House of Representatives, *Projeto cria marco legal para uso de inteligência artificial no Brasil: Texto determina que a inteligência artificial deverá respeitar os direitos humanos e os valores democráticos* (Mar. 4, 2020),

AI system, will have a series of obligations, such as answering legally for decisions made by an artificial intelligence system and ensuring that the data used respects the Brazilian General Data Protection Law (LGPD).⁷⁶⁸ The processing of personal data of customers and users of companies in both the public and private sector is covered.

Academics and NGOs have criticized the draft Bill 21/2020, warning that the bill "may help perpetuate recent cases of algorithmic discrimination through provisions that hinder accountability for AI-induced errors and restrict the scope of the rights established in the LGPD and in the Brazilian Constitution."⁷⁶⁹ According to them, the legislation favors a regime of subjective responsibility (requiring proof of a fault) which not only results in imposing the costs of developing AI applications on citizens - "in a patent inversion of the constitutional values" - but also does not establish the necessary incentives for the adoption of appropriate safeguards against the risks of AI.⁷⁷⁰ The non-discrimination principle "merely mitigates the possibility of applying systems for illicit or abusive discriminatory purposes." As for the principle of neutrality, its "pursuit" creates no binding obligation. The Bill also "reduces the scope of application of the principle of non-discrimination in the LGPD, which prohibits personal data processing for illicit or abusive discriminatory purposes." The Brazilian AI Bill "gravely undermines the exercise of fundamental rights such as data protection, freedom of expression and equality."

In response to these criticisms, in March 2022, the Federal Senate appointed a temporary Commission of Jurists (*Comissão de Juristas*, "CJSUBIA") chaired by Justice Ricardo Villas Bôas Cueva from the Superior Court of Justice (*Superior Tribunal de Justiça*, STJ) and with renowned academic Laura Schertel Ferreira Mendes as the Rapporteur.⁷⁷¹

⁷⁷¹ More details about the Commission's work, statute and schedule are publicly available at <u>https://legis.senado.leg.br/comissoes/comissao?codcol=2504</u>.

The Commission is responsible for analyzing the three draft AI bills and consolidate them in a proposal for a new Brazilian AI Act.

The work of the Commission of Jurists was developed in three stages. The first stage was the establishment of public participation mechanisms in order to ensure the participation of society and obtain technical and multidisciplinary contributions. The second phase consisted in conducting ordinary working meetings and an international seminar with legal AI experts across the world, such as such as Alessandro Mantelero, Marc Rotenberg, Mireille Hildebrandt, or Maria Paz Canales, with the aim to gather further feedbacks. The third phase was dedicated to the writing and consolidation of the inputs obtained for the elaboration of the proposal for a new Brazilian AI Act. In the third phase, 5 subgroups were created to develop the writing: 1. Concepts, fundamentals and principles (headed by Clara Iglesias Keller), 2. Rights and Governance Rules (headed by Miriam Wimmer), 3. Risk categorization and algorithmic impact assessment (headed by Bruno Bioni), 4. Measures to support innovation (headed by Mariana Valente, 5. Supervision and Oversight.⁷⁷²

The Commission of Jurists finalized its work on December 1, 2022,⁷⁷³ and submitted it to the Federal Senate on December 6, 2022.⁷⁷⁴ The "explanatory statement" of the report stresses, "Therefore, this substitute bill is based on the premise that there is no trade-off – a mutually exclusive choice – between protection of fundamental rights and freedoms, appreciation of work and dignity of the human person in the face of the economic order and the creation of new value chains. (...) Its normative objective is to conciliate an approach based on risks with a regulatory model based on rights (...) weight of regulation is dynamically calibrated according to the potential risks of the technology application context. Were established, symmetrically to the rights, certain general measures and specific governance for, respectively, artificial intelligence systems with any degree of risk and for those categorized as high risk."

⁷⁷² CJSUBIA. *001 – Regulamento Interno, Plano de Trabalho e Cronograma*, https://legis.senado.leg.br/comissoes/comissao?codcol=2504.

⁷⁷³ Federal Senate, Jurists Commission Approves Draft of the Legal Framework for Artificial Intelligence (Dec. 1, 2022),

https://www12.senado.leg.br/noticias/audios/2022/12/comissao-de-juristas-aprovaanteprojeto-do-marco-legal-da-inteligencia-artificial.

⁷⁷⁴ Federal Senate, Jurists Commission Concludes Text of the Legal Framework for Artificial Intelligence (Dec. 6, 2022),

https://www12.senado.leg.br/noticias/materias/2022/12/06/comissao-conclui-texto-sobre-regulacao-da-inteligencia-artificial-no-brasil.

The proposal has 45 articles, divided into 9 chapters: 1) Preliminary provisions, 2) Rights, 3) Risk Categorization, 4) Governance of AI Systems, V) Civil Liability, VI) Codes of Good Practice and Governance, VII) Reporting Serious Incidents, VIII) Supervision and Enforcement, IX) Final Provisions. It has two different regulatory approaches. Overall, it is risk-based approach, imposing different obligations depending on the level of risk of the AI system. However, it also brings a rights-based approach, since there are rights recognized for all individuals affected by AI systems, regardless of their risk levels.

The rights for all affected individuals include: right to prior information before interacting with AI systems, right to explanation, right to challenge decisions or predictions made by AI, right to human participation in decisions in AI systems, right to non-discrimination and right to privacy and protection of personal data.

Chapter 3 describes the risk categorization of AI systems. Prior to being placed on market or used in service every AI system will go through a preliminary evaluation, performed by the supplier of the AI system, to classify its degree of risk, according to the criteria set forth in the law. For high-risk artificial intelligence systems, it will be mandatory to conduct an algorithmic impact assessment, and its conclusions will be made public, with the protection of industrial and trade secrets when necessary. Artificial Intelligence systems classified as excessive risk are prohibited to be used or implemented, and there is a non-exhaustive list of such in the law. The law also proposes a regulation to restrict the use of remote biometric identification systems in public security.

A controversial theme since draft Bill No. 21/2020 was Civil Liability for damages caused by AI systems. The proposal defines that in the case of high risk or excessive risk of the AI systems, the supplier or operator is objectively liable for the damage caused. Otherwise, the liability will be presumed and there will be a reversal of the burden of proof in favor of the victim.

To enforce the new legislation the competent authority wouls be a body or entity of the Federal Government, still to be defined.

In 2023, this text was presented in the form of a bill (Bill 2338/2023). To address this matter and others related to the topic of AI in the Senate, an Internal Temporary Committee on Artificial Intelligence (CTIA) was established, with Senator Carlos Viana (PODEMOS/MG) as the president and Senator Eduardo Gomes (PL/TO) as the rapporteur.

In October, the Internal Temporary Committee concluded a cycle of 10 public hearings, marked by criticisms from technology sector companies and academics regarding the "negative" bias of the project, with concerns

about inhibiting innovation. On the other hand, jurists advocated for a riskbased approach, rejecting the idea of preventing innovations. There were also disagreements regarding the authority responsible for overseeing AI applications.

The rapporteur intended to present the report before December 15, 2023, the initial deadline for the conclusion of the Committee's work. However, due to other priorities of the Senate and the short time frame to deliberate and approve a matter with little consensus, the CTIA's work was extended by 120 days, until April 13, 2024.⁷⁷⁵

On August 11, 2021, the State of Ceará for its part adopted Law No. 17/611 establishing obligations and guidelines for the implementation and use of AI systems within the State.⁷⁷⁶ This law establishes that AI systems must be designed in a safe way, based on ethics and in accordance with this Law and Brazilian laws more generally. It defines an AI system as computer science technologies that enable computers to interact with humans, through technological mechanisms that enable the simulation of human reasoning.

State Law No. 17/611 set some obligations for AI systems and the companies that develop them:

- (i) establish secure mechanisms and algorithms, capable of protecting and ensuring the privacy and inviolability of users' data;
- (ii) respect for human dignity and equal treatment for all users, non-discrimination;
- (iii) enable users to have control over their personal data and how they are being used;
- (iv) ensure that the systems are always managed by humans, and submitted to them, and maintain human autonomy and supervision;
- (v) promote social well-being and not incite hatred and violence; and
- (vi) respect freedom of expression, as long as it does not contradict the previous items.

^{02/}Brazil_New%20Government%27s%20First%20Year_Review%20and%20Outlook_D IGITAL%20ENVIRONMENT.pdf

⁷⁷⁶ Legislative Assembly of the State of Ceará, *Law No. 17.611 of 11 August 2021*, https://www2.al.ce.gov.br/legislativo/legislacao5/leis2021/17611.htm.

In addition, State Law No. 17/611 states that companies headquartered in the State of Ceará, or that have their artificial intelligence systems in use and operation in the State of Ceará, must be responsible for how their systems operate, being liable for any damages in accordance with the law.

Public Participation

The Ministry of Science, Technology, Innovations and Communications (MCTIC) organized an online public consultation between December 2019 and February 2020 to gather inputs for "a National Artificial Intelligence Strategy that allows to enhance the benefits of AI for the country, mitigating any negative impacts."⁷⁷⁷ According to the terms of the public consultation, "the objective of the strategy is to solve concrete problems in the country, identifying priority areas in the development and use of AI-related technologies in which there is greater potential for obtaining benefits. It is envisaged that AI can bring gains in promoting competitiveness and increasing Brazilian productivity, in providing public services, in improving people's quality of life and in reducing social inequalities, among others."⁷⁷⁸

The consultation addressed thematic areas related to AI and focused on the government's role regarding the impact of AI technologies on society. Relevant documents to artificial intelligence were made available on the consultation website. The consultation collected about 1,000 contributions in total, which were taken into account for the development of the strategy proposal.⁷⁷⁹

Academics and NGOs have stated that the debate on Bill No. 21/2020 lacked public participation. According to José Renato Laranjeira de Pereira and Thiago Guimarães Moraes, "[t]he debate on the bill ignored the claims of experts and civil society organisations to address the high risks of the technology regarding fundamental rights. In contrast, Members of

Congress delivered favorable speeches on the positive impacts of AI in society, especially as a tool for efficiency and innovation."⁷⁸⁰

As indicated above, the Federal Senate responded to these criticisms by establishing a Commission of Jurists to prepare a new consolidated proposal for a Brazilian AI Act, the preparation of which involved the establishment of public participation mechanisms. The Commission of Jurists initiated the organization of meetings, seminars, and public hearings divided into thematic axes, with the participation of experts and national and international representatives. 12 thematic panels were created and the Commission of Jurists received 102 statements from civil society entities, consolidated in the report submitted to the Federal Senate.⁷⁸¹

Data Protection

In September 2020, Brazil's President signed the new Brazilian data protection law, *Lei Geral de Proteção de Dados Pessoais* (LGPD).⁷⁸² The LGPD is the first comprehensive data protection law in Brazil and mirrors the European Union's GDPR.⁷⁸³ The LGPD is relevant to the processing of personal data in relation to AI applications.⁷⁸⁴

Seven principles underpin the protection of personal data in the LGPD: (1) respect for privacy; (2) informative self-determination; (3) freedom of expression, information, communication and opinion; (4) the inviolability of intimacy, honor and image; (5) economic and technological development and innovation; (6) free enterprise, free competition and

consumer protection; and (7) human rights, the free development of personality, dignity and the exercise of citizenship by natural persons.

On February 10, 2022, the Brazilian Congress enacted Constitutional Amendment (EC) 115, which establishes personal data protection as a fundamental right in Brazil's 1988 Federal Constitution.⁷⁸⁵ EC 115 also gives the Federal Government exclusive jurisdiction to legislate on personal data protection and processing.

The amendment establishes the competence of the highest court within Brazil's judiciary, the Federal Supreme Court (*Supremo Tribunal Federal*, STF), to adjudicate legal issues involving personal data. Previously, the STF had examined related cases based on other constitutional guarantees, such as the inviolability of intimacy and individuals' private life.

Brazil's alignment with international data protection trends is also reflected in EC 115. Personal data protection is recognized as a fundamental right by numerous other democratic states and international organizations, and, as an example, is established in Article 8 of the Charter of Fundamental Rights of the European Union.

Entities that process personal data in compliance with the Brazilian legislation are set to benefit from greater legal certainty with the passing of EC 115. By giving Brazil's federal government exclusive jurisdiction over data protection legislation, EC 115 prevents alternative, and possibly incompatible, regulations on the subject from being enacted at state or municipal level.⁷⁸⁶

AI Oversight

The LGPD establishes a national data protection authority in Brazil, *Autoridade Nacional de Proteção de Dados (ANPD)* as an agency of the federal government linked to the office of the President of Brazil.⁷⁸⁷ The ANPD is guaranteed technical and decision-making autonomy,⁷⁸⁸ and is

⁷⁹³ Ibero-American Network for the Protection of Personal Data (RED), *Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects* (Jun. 2019), https://www.redipd.org/sites/default/files/2020-02/guide-specific-guidelines-ai-

for Personal Data Protection for Ibero-American States.⁷⁹⁴ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."⁷⁹⁵

The ANPD is not a member of the Global Privacy Assembly (GPA). It has observer status since October 2021. The ANPD has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁷⁹⁶ the 2020 GPA Resolution on AI Accountability,⁷⁹⁷ the 2022

⁷⁹⁴ Ibero-American Network for the Protection of Personal Data (RED), *Standards for Personal Data Protection for Ibero-American States* (2017),

GPA Resolution on Facial Recognition Technology⁷⁹⁸ or the 2023 GPA Resolution on Generative AI Systems.⁷⁹⁹

In September 2020, the Federal Government published a decree establishing the rules governing the ANPD with the objective of giving effect to the LGPD and enabling sanctions in case of non-compliance.⁸⁰⁰

Some concerns have been voiced regarding the ANPD's independence. Of the five members of the ANPD Board of Directors appointed by the President, three were military, including the ANPD's president.⁸⁰¹ In October 2020, the OECD stated that: "administrative and legal frameworks that leave open even a small possibility of a privacy enforcement authority being instructed by another administrative body on how to exercise its functions do not satisfy the independence criterion."⁸⁰² The OECD recommended that "Brazil amend the law establishing the National Data Protection Authority; ensure that the rules for appointing the ANPD's Board of Directors and the National Council for the Protection of Personal Data are transparent, fair and based on technical expertise; and guarantee an adequate and predictable budget to the ANPD through a transparent process".⁸⁰³

On October 26, 2022, the National Congress approved Law No. 14.460/2022 which severed the ANPD's ties with the Presidency.⁸⁰⁴ Thanks to its special nature, the ANPD preserves its technical and decision-making

autonomy in relation to direct public administration. Like other autarchies, it will benefit from administrative and budgetary autonomy.

On November 8, 2022, the Brazilian Data Protection Authority (ANPD) published its regulatory agenda for 2023-2024 with the goal to provide greater predictability, publicity, transparency and efficiency to its regulatory process. According to the ANPD, in addition to ensuring the proper application of the LGPD, in particular its Article 20 which deals with the right of the data subject to request the review of automated decisions, the ANPD can better address the issue of AI by means of guidance documents (such as guides and technical studies). The ANPD states that it is essential that it studies and monitors the subject from the perspective of personal data protection and, in particular, the application of the LGPD, since these guidelines will serve as a basis for the development of other rules that may be necessary for the discipline of AI systems.⁸⁰⁵

Algorithmic Transparency

Article 20 of the LGPD establishes the right of any individual "to request the review of decisions taken solely on the basis of automated processing of personal data that affect his interests, including decisions designed to define his personal, professional, consumer and credit profile or aspects of his personality."⁸⁰⁶

As a result, "the controller shall provide, whenever requested, clear and adequate information regarding the criteria and procedures used for the automated decision, observing the commercial and industrial secrets."⁸⁰⁷ Where the information is not provided due to the observance of commercial and industrial secrecy, the national data protection authority "may perform audits to verify discriminatory aspects in automated processing of personal data."⁸⁰⁸

Some Brazilian researchers, such as Prof. Renato Leite Monteiro, have stated that a comprehensive interpretation of the LGPD, in conjunction with the Constitution, consumer law and other legal provisions, guarantees

⁸⁰⁷ Article 20.1 LGPD.

⁸⁰⁸ Article 20.2 LGPD.

the existence of a right to explanation in Brazil. However, this position demands greater judicial consolidation.⁸⁰⁹

The national AI strategy heavily features algorithmic transparency as a goal for the development of AI capabilities and policies in Brazil. One of the critical strategic actions delineated in the EBIA is "[e]ncouraging transparency and responsible disclosure actions regarding the use of AI systems, and promoting compliance by such systems with human rights, democratic values and diversity."⁸¹⁰ The EBIA also outlined algorithmic transparency as a critical theme to be pursued in AI research. The strategy outlined transparency as a critical element of AI governance both regarding explainability of decisions taken by autonomous systems and the transparency of methodologies used in the development of AI systems, including data sources and project procedures.⁸¹¹

With regard to the transparency principle, the RED Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects provide, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."⁸¹²

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Brazil approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁸¹³ The Charter

https://www.redipd.org/sites/default/files/2020-02/guide-specific-guidelines-ai-projects.pdf.

⁸⁰⁹ Institute for Research on Internet and Society, *Automated decisions and algorithmic transparency* (Nov. 16, 2019), <u>https://irisbh.com.br/en/automated-decisions-and-algorithmic-transparency/</u>.

⁸¹² Ibero-American Network for the Protection of Personal Data (RED), *Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects* (Jun. 2019), p. 17, https://www.redind.org/sites/dofoult/files/2020.02/guide.gnaifie.guidelines.ei

⁸¹³ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation.^{**}

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory

⁸¹⁴ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation.¹⁸¹⁵

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive

⁸¹⁵ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.⁸¹⁶

Algorithm-based Advertising

In December 2021, the Brazilian Advertising Self-Regulation Council (CONAR)⁸¹⁷ decided a case involving algorithm-based advertising.⁸¹⁸ The ruling was issued with regard to Complaint No. 203/2021, filed by a consumer against a streaming platform, alleging that an ad did not reflect the actual content of the platform. In its defense, the streaming platform clarified that its ads are created automatically through algorithms, which, having identified the consumer's interest in the film, would have then used the film to increase the consumer's engagement with the ad. CONAR did not consider that the streaming platform had committed any irregularities through this practice. However it warned that advertisers should be cautious when using algorithm-based advertising, as those may hinder consumers from obtaining the solutions they actually seek.

EdTech

The EdTech apps Descomplica and Stoodi used in Sao Paulo were part of a 2022 global study conducted by Human Rights Watch on the education technology endorsed by 49 governments, including Brazil, for children's education during the pandemic. Based on technical and policy analysis of these EdTech products, Human Rights Watch found that Brazil's endorsement of these online learning platforms put at risk or directly violated children's rights.

Human Rights Watch found that both Descomplica and Stoodi have "the ability to collect their users' advertising IDs. This allowed these apps to tag children and identify their devices for the sole purpose of advertising to them." According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process

⁸¹⁷ CONAR is a non-governmental organization that acts as a tribunal within the advertising industry, seeking to ensure advertising practices are lawful and ethical (CONAR, About CONAR, <u>http://www.conar.org.br/</u>).

⁸¹⁶ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

⁸¹⁸ CONAR, *Complaint No. 203/21, Ruling issued on 7 Dec. 2021*, in CONAR, Conar Gazette: Ethics in Practice, Issue 222, (Jan. 2022), pp. 6-7, http://www.conar.org.br/pdf/conar222.pdf.

children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.⁸¹⁹

Medical Data

According to a 2020 OECD report for the G20 Digital Economy Task Force, Brazil is in the process of establishing regulation in the area of privacy and personal data protection in health systems, consistent with existing legislation, including the LGPD. To this end, the country is developing a national electronic health records system, which aims to provide a robust database for current medical use, as well as for technology development and innovation.⁸²⁰

On March 24, 2022, the Brazilian Health Regulatory Agency (ANVISA)⁸²¹ published a Resolution about the regularization of Software as a Medical Device (SaMD). Resolution (RDC) 657/2022 entered into force on July 1, 2022.⁸²² ANVISA clarified that the purpose of the device must be respected. There is currently no provision for specific regulation of SaMD that includes AI or ML technology; however, manufacturers of SaMD using this type of technology should submit, at the time of regularization, a description of the databases used for AI learning, training and verification activities, information regarding the origin, the amount and the description of the data used together with a report containing a justification for the AI technique applied, the size of the databases used and

⁸²¹ The Brazilian Health Regulatory Agency (Anvisa) is an autarchy linked to the Ministry of Health, part of the Brazilian National Health System (SUS) as the coordinator of the Brazilian Health Regulatory System (SNVS), present throughout the national territory. Anvisa's role it to promote the protection of the population's health by executing sanitary control of the production, marketing and use of products and services subject to health regulation, including related environments, processes, ingredients and technologies, as well as the control in ports, airports and borders. More information at https://www.gov.br/anvisa/pt-br/english.

⁸²² Brazilian Government, *Resolution No. 657 of 24 March 2022*, <u>https://www.in.gov.br/en/web/dou/-/resolucao-de-diretoria-colegiada-rdc-n-657-de-24-de-marco-de-2022-389603457</u>.

a report on the training history. The absence of such information at the time of submission of the device regularization may lead to a negative outcome, for lack of sufficient explanation regarding the technology applied to the product, as required in the medical device regulation.⁸²³

Use of AI in Courts

With a current backlog of 78 million lawsuits, the Brazilian judicial system operates with substantial challenges in case flow management. The lack of resources to meet this demand⁸²⁴ has led to numerous initiatives involving Artificial Intelligence.⁸²⁵

In this context, the President of the National Council of Justice (CNJ), a judicial agency responsible for the administrative and financial control of the judiciary and the supervision of judges,⁸²⁶ published in August 2020 a Resolution on ethics, transparency and governance in the production and use of Artificial Intelligence in the Judiciary.⁸²⁷ The NCJ Resolution addresses AI-related requirements such as respect for human rights, preservation of equality, non-discrimination, plurality and solidarity, transparency (from disclosure to explainability), data security, user control and accountability.

The Public Prosecutor's Office⁸²⁸ of the State of Rio de Janeiro has reportedly invested in data science and AI to expedite investigations and

⁸²⁵ AI devices (called "robots"), tested in the Brazilian Judiciary include Leia, Poti, Jerimun, Clara, Radar, Elis, Sinapse, Victor, each with a specific function.

⁸²⁶ US Law Library of Congress, *Brazil, Legal Research Guide – The Judicial Branch* (2011), <u>https://www.loc.gov/law/help/legal-research-guide/brazil-judicial-branch2_2011-005662_RPT.pdf</u>.

⁸²⁷ National Council of Justice, *Resolution No. 332 provides for ethics, transparency and governance in the production and use of Artificial Intelligence in the Judiciary and provides other measures* (Aug. 21, 2020), <u>https://atos.cnj.jus.br/atos/detalhar/3429</u>. ⁸²⁸ In Brazil, the Prosecution Service is not part of the Executive. The legislative and judicial branches are totally independent. It cannot be terminated and its duties cannot be transferred to other government agencies. Prosecutors have their independence guaranteed by the Brazilian Constitution. They are subordinated to an authority for administrative purposes only, but each member of the Prosecution Service is free to act according to their conscience and convictions under the law. See Brazilian Prosecution Service, https://www.mpf.mp.br/rj.

prevent crimes.⁸²⁹ The system has allowed information from different sources and bodies to be collected as well as real-time data to be collected from suspected criminals. Likewise, Brazil's federal and state police are using AI applications such as military drones⁸³⁰ and crime prediction software.⁸³¹

Similar to the EU GDPR, the LGPD (Art. 4) excludes "the processing of data for the purposes of public security" from its scope and states that such processing "shall be governed by specific legislation, which shall provide proportional and strictly necessary measures in order to serve the public interest." However, such specific legislation does not yet exist in Brazil.⁸³²

Computational Propaganda

According to Freedom House, Brazil is only "partly free" when it comes to "Freedom on the net". "Manipulated content is common in the Brazilian online environment, with a notable proliferation of disinformation during the 2018 and 2022 election campaigns."⁸³³ Several studies⁸³⁴ have

pointed out the use of bots on online gatekeepers in the electoral context. Misinformation campaigns in Brazil have consisted in "pro-government and pro-party propaganda"; "attack[ing] the opposition and mount[ing] smear campaigns"; "suppress[ing] participation through trolling and harassment"; "driv[ing] division and polariz[ing] citizens."⁸³⁵

Global Voice also reported that "in February 2022, the Federal Police delivered a partial report to the Supreme Court in which it further detailed the structure of these "digital militias" charged with coordinating attacks against rival politicians, democratic institutions, and the dissemination of "false news." This report was part of a Supreme Court probe (dubbed "the digital militias probe") opened in 2021."⁸³⁶

Facial Recognition

Facial recognition is implemented by both the public and private sectors in Brazil. According to Instituto Igarapé, a Brazilian think tank, there were at least 48 facial recognition applications throughout 16 Federal States between 2011 to 2019.⁸³⁷ The main use sectors are (i) public security, (ii) border control, (iii) transportation and (iv) education.⁸³⁸

In March 2024, the Center for Security and Citizenship Studies (Cesec) published a new study which shows that 67.4 million Brazilians, close to a third of the population, are potentially under surveillance by facial recognition cameras in the country. The survey was based on the places where this technology is being used. At least 195 video surveillance projects with facial recognition were mapped.⁸³⁹

In August 2018, the Brazilian Institute for Consumer Protection (IDEC) brought a civil public class action⁸⁴⁰ before the Court of Justice of

https://idec.org.br/sites/default/files/acp_viaquatro.pdf.

Sao Paulo for breach of privacy and consumer legislation against the São Paulo Metro operator, regarding an AI crowd analytics system that claimed to predict the emotion, age, and gender of metro passengers without processing personal data.⁸⁴¹ In May 2021, the São Paulo 37th Civil Court ordered the company to pay compensation for passengers' data collection without their consent and prohibited it from continuing the implementation and use of cameras which recognized human presence or identified emotion, gender, and age groups.⁸⁴²

Another monitoring system with built-in facial recognition installed in São Paulo subway network was challenged in Court. Early 2020, the operating company was requested to provide clarifications on the risks and impact assessment expected with the implementation of the new technology, on how personal data will be processed, on technical databases and security systems issues, and on actions to mitigate the potential risk of a data breach.⁸⁴³ In March 2022, the 6th Public Treasury Court of São Paulo delivered a preliminary injunction ordering the operating company to suspend the deployment and use of a facial recognition system in the São Paulo metro stations.⁸⁴⁴ In April 2022, the preliminary injunction was confirmed in appeal by the São Paulo 5th Public Law Chamber.⁸⁴⁵ However, in October 2022, the same Chamber ruled that the operating company was entitled to deploy and use facial recognition technology on the ground that

the LGPD allows such use for public security purposes. Governor Rodrigo Garcia officially inaugurated the facial recognition system on 21 November. The aim is for 5.000 biometric cameras to be deployed in transit stations over the next 30 months.⁸⁴⁶

In July 2023, the government of São Paulo introduced the Muralha Paulista system, a security network that interconnects cameras and radars in different cities, to the Metropolitan Region of São José do Rio Preto.⁸⁴⁷ The Muralha Paulista system has since been used by football clubs to identify perpetrators of violence or harassment at large sporting events, specifically, to flag people with open warrants or judicial restrictions.⁸⁴⁸ In November 2023, Brazil's national data protection authority issued a technical note that sheds light on the legal waters of using facial recognition technology in sports stadiums. Amid controversies about striking a balance between enhancing public safety and safeguarding individual privacy, the note lays down concrete suggestions to ensure compliance with the General Data Protection Law. Key among these suggestions is the call for comprehensive Data Protection Impact Assessments that specifically address the processing of biometric data. The note outlines critical guidelines for avoiding legal pitfalls and details the consequences of failing to adhere to these standards, marking a step forward in the ongoing discussions around ethical deployment of AI technologies in public spaces.849

The Brazilian police has also been using live facial recognition for Carnival and has plans to use the technology in events involving crowds to find wanted criminals. In 2020, police forces rolled out facial recognition in six capitals across the country. When announcing the use of live facial recognition, the São Paulo police said a "situation room" would monitor the images from the cameras, which would then be compared with a database

managed by a biometrics lab. According to the police, the aim is to reduce the likelihood of mistakes, such as wrongful arrests.⁸⁵⁰

In 2021, Brazil rolled out end-to-end biometric identification technologies by IDEMIA, a technology solution provider, for use in passenger identification at several airports, including domestic airports in São Paulo and Rio de Janeiro.⁸⁵¹ Many have voiced concern at the government's embrace of facial recognition technology, especially surrounding issues of racial bias, given that the LGPD does not address these technologies.⁸⁵²

In the first quarter of 2022, several campaigns started in Brazil opposing the widespread use of facial recognition technologies in public spaces.

One of them is called *Sai da minha cara* (Get off my face) and is led by civil society organizations, including the IDEC.⁸⁵³ A localized campaign with several states and cities joining it, "Sai da minha cara" advocates in favour of the adoption of laws to ban facial recognition. Some examples (all of which are yet to be adopted) are:

- In the state of Sao Paulo (the most populous in Brazil), there is currently a bill pending before the State Legislative Assembly, seeking to restrict the use of facial recognition by public authorities;⁸⁵⁴
- In the city of Curitiba (capital city of the State of Paraná), there is currently a bill before the City Council, seeking to

restrict the use of facial recognition for mass surveillance by public authorities;⁸⁵⁵

• In the city of Porto Alegre (capital city of the State of Rio Grande do Sul), there is currently a bill before the City Council, seeking to restrict the use of facial recognition by public authorities.⁸⁵⁶

Another campaign started in May 2022 under the name "Tire o Meu Rosto da Sua Mira" (Get My Face Out of Your Sight).⁸⁵⁷ Civil society organizations demand a total ban on the use of facial recognition technologies for public security purposes in Brazil. According to the campaign's open letter, in Brazil, a country with the third largest incarcerated population in the world, the use of facial recognition technologies for public security purposes would lead to the worsening of racist practices.

On 31 August 2022, a Federal Law proposal seeking to regulate the use of facial recognition technologies in Brazil both for the private and public sectors was submitted to the Brazilian House of Representatives.⁸⁵⁸ On 5 October 2022, the legislative process started and the proposed legislation was forwarded to the responsible commissions.

The banning of the use of facial recognition systems for public security purposes was one of the key points that emerge during the public hearings promoted by the Commission of Jurists which elaborated the proposal for the regulation of artificial intelligence in Brazil.⁸⁵⁹

Lethal Autonomous Weapons

During the 2018 discussions of the Group of Governmental Experts (GGE) on lethal autonomous weapons (LAWS),⁸⁶⁰ Brazil issued a joint

⁸⁶⁰ Group of Governmental Experts on emerging technologies in the area of lethal autonomous weapons systems (GGE LAWS) of the High Contracting Parties to the Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects.

statement along with Austria and Chile, which proposed to establish an open-ended GGE to negotiate a legally binding instrument to ensure meaningful human control over critical functions in LAWS.⁸⁶¹

At the 77th UN General Assembly First Committee meeting in October 2022, Brazil's representative emphasized the need for a regulation that recognizes the centrality of human control in the development and use of autonomous systems, in line with international humanitarian law.⁸⁶² However, Brazil was not among the 70 countries that endorsed a joint statement on autonomous weapons systems at the October UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."⁸⁶³

In February 2023, Brazil endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,⁸⁶⁴ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Human Rights

Brazil is a signatory to many international human rights treaties and conventions and is considered as a free country in the world for the

protection of human rights and transparency.⁸⁶⁵ In 2024, Freedom House gives Brazil a "free" (72/100) rating for political rights and civil liberties. According to Freedom House, Brazil is "a democracy that holds competitive elections, and the political arena, though polarized, is characterized by vibrant public debate. However, independent journalists and civil society activists risk harassment and violent attack, and the government has struggled to address high rates of violent crime and disproportionate violence against and economic exclusion of minorities."⁸⁶⁶

OECD / G20 AI Principles

Brazil has endorsed the OECD and the G20 AI Principles and referred to the OECD Principles as important guidance for the development of its national AI strategy. Brazil has also joined the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."⁸⁶⁷

UNESCO Recommendation on the Ethics of AI

Brazil has endorsed the UNESCO Recommendation on the ethics of AI and recognizes its obligation to implement the framework. On May 11, 2022, UNESCO, in cooperation with the Regional Centre for Information Society Development Studies ("CETIC.br"), held an event to launch the Portuguese version of the UNESCO AI Recommendation, which aimed to "discuss and promote this subject in Brazilian society".⁸⁶⁸ In 2019, Brazil hosted the UNESCO Latin American AI forum organized by CETIC.br involving different UNESCO members and officers. According to Marlova Noleto, director and UNESCO representative in Brazil, the country was actively engaged in the preparation of the UNESCO AI Recommendation and aligned with the contents thereof even before formal adoption.⁸⁶⁹

⁸⁶⁵ Freedom House, *Freedom in the World 2024 – Brazil*,

 ⁸⁶⁹ Ibid.

The Brazilian Ambassador to UNESCO and president of UNESCO's 41st General Conference, Santiago Mourão, emphasized that the UNESCO AI Recommendations fully align with the Brazilian government's guidelines and actions on AI themes. He highlighted that the importance given to ethics in AI by Brazil is reflected in its engagement in intergovernmental negotiations, as well as in the inclusion of the theme in the Brazilian Strategy for AI.⁸⁷⁰

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the Recommendation on artificial intelligence ethics in Latin America and the Caribbean. They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts.⁸⁷¹

The Regional Council, comprising national and local governments from Latin America and the Caribbean, including Brazil, was formally established, with its inaugural meeting convened in October 2023.⁸⁷²

Brazil is one of the first countries to have completed the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.⁸⁷³ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁸⁷⁴

Brazil also signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.⁸⁷⁵ It reflects UNESCO's Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

AI Safety Summit

In November 2023, Brazil participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁸⁷⁶ Brazil thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Evaluation

Brazil has developed a robust national strategy for AI and has established a comprehensive law for data protection which includes algorithmic transparency. However, progress have stalled with regard to the adoption of a new AI legislation. Attacks on democracy have been spreading through the use of computational propaganda during electoral campaigns. The growing use of facial recognition and mixed courts' decisions in this regard are of particular concern. It is to be hoped that the establishment of the Regional Council for the implementation of the UNESCO Recommendation will help address these concerns.

Canada

National AI Strategy

The Canadian government has stated "Artificial intelligence (AI) technologies offer promise for improving how the Government of Canada serves Canadians. As we explore the use of AI in government programs and services, we are ensuring it is governed by clear values, ethics, and laws."⁸⁷⁷ Canada has set out five Guiding Principles to "ensure the effective and ethical use of AI." The government has committed to "understand and measure" impacts, be transparent about use, "provide meaningful explanations" for AI decision-making, "be as open as we can be," and provide sufficient training."⁸⁷⁸

The government of Canada and the government of Quebec announced a joint undertaking to "advance the responsible development of AI."⁸⁷⁹ The establishment of the Centre of Expertise in Montréal for the Advancement of Artificial Intelligence (ICEMAI)⁸⁸⁰, "enables Quebec to highlight the important role of its AI ecosystem, specifically in the area of responsible development of AI, and to take its place internationally as an essential partner and subject-matter expert."

Directive on Automated Decision-making

Government of Canada's Treasury Board Secretariat (TBS) has established a Directive on Automated Decision-making and the Prequalified AI Vendor Procurement Program to ensure that administrative decisions are "compatible with core administrative law principles such as transparency, accountability, legality, and procedural fairness."⁸⁸¹ Canada has developed a questionnaire for an Algorithmic Impact Assessment to "assess and mitigate the risks associated with deploying an automated

⁸⁸¹ Government of Canada, *Directive on Automated Decision-Making*, (May. 2, 2019), https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=32592

decision system" and to comply with the Directive on Automated Decisionmaking.⁸⁸² The Directive took effect on April 1, 2019, with compliance required by no later than April 1, 2020.

In 2022, the Treasury Board of Canada Secretariat (TBS) is completing the third review of the Directive on Automated Decision-Making. "The review takes stock of the current state of the directive and identifies risks and challenges to the government's commitment to responsible artificial intelligence (AI) in the federal public service."⁸⁸³

In a parallel effort to support the Directive, the TBS worked with Public Services and Procurement Canada to establish a Pre-qualified AI Vendor Procurement Program to streamline the procurement of AI solutions and services in the government. This new AI public procurement programme was used to help government departments and agencies build awareness of the solutions offered by AI. It also provided small and medium AI companies with an opportunity to provide their services to the government. In practice, the initiative did not yet gain traction.⁸⁸⁴

Digital Charter Implementation Act

In June, 2022 the Canadian government introduced Bill C-27, the Digital Charter Implementation Act (DCIA).⁸⁸⁵ It consists of three separate pieces of legislation: the Consumer Privacy Protection Act (CPPA), Personal Information and Data Protection Tribunal Act (PIDPTA), and the Artificial Intelligence and Data Act (AIDA).⁸⁸⁶ The DCIA's provisions include:

- notification to individual of data breaches that allows them to understand the significance of the breach and actions, access and amendment of personal information;
- explanations of "the predictions, recommendations or decision";

- a list of grounds for objection to such requests (e.g., national security, money laundering or terrorist activities, or enforcement of law and gathering of intelligence to support such activities;
- Standards of information use are also addressed including deidentification of personal information and prohibited uses of that personal information.

The AIDA will establish a common set of requirements for the regulation of international and interprovincial trade and commerce, including the prohibition of certain conducts. This includes processing or making available data related to human activities used to design, development, or implementation of artificial intelligent systems. For systems that can significantly impact human activities, AIDA introduces guidelines for the identification, assessment, and mitigation of risks of harm or biased results from the use of these systems, monitoring and compliance mechanisms, and the publication of plain-language explanations of these systems."

Public Participation

In 2019, Canada established an Advisory Council on Artificial Intelligence to "inform the long-term vision for Canada on AI both domestically and internationally."⁸⁸⁷ Composed of researchers, academics, and business leaders, the Council advises the Government of Canada on how to build on Canada's AI strengths to support entrepreneurship, drive economic growth and job creation and build public trust in AI. The Council has created two working groups to date, one on Commercialization and another one on Public Awareness. Public awareness is a key area for the Council that emphasized that policy design, including sectoral priorities, require the trust and support of the public to succeed.⁸⁸⁸

Canada's AI Advisory Council created its public engagement and consultation processes using both consultation and deliberation. The national survey elicited an array of citizens' input on AI use in different sectors. Online workshops aimed to find ways to address ethical concerns raised by citizens via the survey. Among the goals of the deliberative

⁸⁸⁷ Government of Canada, *Protecting and Promoting Privacy Rights*, <u>https://www.priv.gc.ca/en</u>

process is to shape a new set of guidelines and recommendations for the development of AI.⁸⁸⁹

In 2023, the government of Canada published a public consultation in view of the ongoing negotiations on the Council of Europe Convention on AI, Human Rights, Democracy and the Rule of Law. Officially, the role of Canada in the negotiations is to help shape "the treaty to reflect Canadian values and interests, while promoting Canadian objectives on AI in the context of potential risks to human rights, democracy and the rule of law."⁸⁹⁰

Data Protection

The Office of the Privacy Commissioner of Canada provides advice and information for individuals about protecting personal information.⁸⁹¹ The agency also enforces two federal privacy laws that set out the rules for how federal government institutions and certain businesses must handle personal information. The Privacy Act regulates the collection and use of personal data by the federal government.⁸⁹² The Personal Information Protection and Electronic Documents Act (PIPEDA) applies to personal data collected by private companies.⁸⁹³

Bill C-27, the Digital Charter Implementation Act, 2022⁸⁹⁴ will implement the Consumer Privacy Protection Act (CPPA) to replace the federal Personal Information Protection and Electronic Documents Act (PIPEDA), which has regulated the collection, use and disclosure of personal information in the course of commercial activity in Canada since 2001.

⁸⁹⁴ Bill C27, Parliament of Canada, Digital Charter Implementation Act, (June, 2022), https://www.parl.ca/legisinfo/en/bill/44-1/c-27.

First in November 2020, and then in November 2022, after an extensive period of consultation, the Privacy Commissioner issued proposals on regulating artificial intelligence.⁸⁹⁵ The recommendations "aim to allow for responsible AI innovation and socially beneficial uses while protecting human rights." The Commissioner recommend amending PIPEDA to:

- allow personal information to be used for new purposes towards responsible AI innovation and for societal benefits
- authorize these uses within a rights-based framework that would entrench privacy as a human right and a necessary element for the exercise of other fundamental rights
- create a right to meaningful explanation for automated decisions and a right to contest those decisions to ensure they are made fairly and accurately
- strengthen accountability by requiring a demonstration of privacy compliance upon request by the regulator
- empower the OPC to issue binding orders and proportional financial penalties to incentivize compliance with the law
- require organizations to design AI systems from their conception in a way that protects privacy and human rights

The Commissioner also highlighted a public consultation, initiated by the OPC, that received 86 comments from industry, academia, civil society, and the legal community, among others. Those inputs were incorporated in a separate report which informs the recommendations for law reform.⁸⁹⁶

In January 2024, the Office of the Privacy Commissioner of Canada published their Strategic Plan taking into account its role in the development of AI in Canada. The OPC considered AI as one of its three priorities for 2024 - 2027. The main focus of the OPC is to address "the privacy impacts of the fast-moving pace of technological advancements, especially in the world of artificial intelligence (AI) and generative AI."⁸⁹⁷

⁹⁰⁴ Office of the Privacy Commissioner, Canada, PIPEDA Fair Information Principle 9 – Individual Access (Aug. 2020), https://www.priv.gc.ca/en/privacy-topics/privacy-lawsin-canada/the-personal-information-protection-and-electronic-documents-actpipeda/p principle/principles/p access/.

subject to, automated processing."⁹⁰⁵ The Cofone Report also explains that "the right to explanation is connected to the principles of privacy, accountability, fairness, non-discrimination, safety, security, and transparency. The effort to guarantee these rights supports the need for a right to explanation."

The Digital Charter Implementation Act⁹⁰⁶ would modernize the framework for protection of personal information in the private sector. The Consumer Privacy Protection Act (CPPA), "contains new transparency requirements that apply to automated decision-making systems like algorithms and artificial intelligence." ⁹⁰⁷

In the last Open Algorithms Network meeting,⁹⁰⁸ that was cochaired by the Government of Canada, with participation from the Governments of Estonia, Norway, the United Kingdom and Scotland as well as civil society respondents, the participants have started considering issues of "equality, bias, and discrimination in their algorithmic commitments in Open Government Partnership (OGP) action plans and across government AI strategies."⁹⁰⁹ "Many of these commitments are grounded in the idea that opening data and design of algorithms is an avenue to reduce bias and discrimination, and that the process of collecting data or design is as important as the outcome." ⁹¹⁰ Algorithmic transparency⁹¹¹ is an emerging commitment⁹¹² area for OGP.

Data Scraping

In August 2023, the Office of the Privacy Commissioner, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.⁹¹³

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

Facial Recognition

Canada continues to ensure that facial recognition technologies do not threaten the rights of its citizens. In 2021, Canada took decisive action against Clearview AI after discovering the organization had scraped 3 billions of images of people from across the Internet, in clear violation of the privacy rights of Canadians.⁹¹⁴ In May 2022, the privacy commissioners of Canada, Ontario, and Québec, issued a joint statement recommending the creation of a legal regulatory framework for the use of facial recognition technology by police. The recommendation identifies four requirements⁹¹⁵:

- 1. Clear and explicit definitions for the appropriate and prohibited use of facial recognition technologies by law enforcement. This should include 'no-go' zones and the prohibition of mass surveillance.
- 2. Restricting the use of such technologies based on strict necessity and proportionality,
- 3. The use of strong independent oversight that are based on proactive engagement including program pre-authorization and advanced notice before initiating initiatives based on facial recognition technology
- 4. Privacy rights protection that limits the risk to individuals including limitations on the duration of information retention and measures to ensure that data is accurate

Following public consultation, the commissioners also indicated that federal and provincial agencies will be provided with specific advances based on specific implementation cases."

Lethal Autonomous Weapons

In 2017 Canadian academics urged Prime Minister Trudeau to oppose Autonomous Weapon Systems, as part of the #BanKillerAI campaign.⁹¹⁶

In December 2019, Canadian Prime Minister Justin Trudeau gave Foreign Affairs Minister François-Philippe Champagne a mandate to

3, 2021), https://www.priv.gc.ca/en/opc-news/news-and-announcements/2021/nr-

"Advance international efforts to ban the development and use of fully autonomous weapons systems.⁹¹⁷ However, this mandate has not been fulfilled by Champagne or subsequent ministers. In addition to Australia, Japan, South Korean, the United Kingdom, and the United States, Canada was also involved in a proposal to establish "Principles and Good Practices on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems."⁹¹⁸

In February 2023, the government of the Netherlands co-hosted with the Republic of Korea the first global Summit on Responsible Artificial Intelligence in the Military Domain, REAIM 2023. Canada, together with other countries, have agreed a joint call to action on the responsible development, deployment and use of artificial intelligence (AI) in the military domain.⁹¹⁹ Canada also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁹²⁰

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.⁹²¹

The second REAIM summit will be held in South Korea in 2024.⁹²² At the 78th UN General Assembly First Committee in 2023, Canada voted in favour⁹²³ of resolution L.56⁹²⁴ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns

autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Canada, for children's education during the pandemic. One of the case studies concerned "CBC Kids", offered by the Canadian Broadcasting Corporation and recommended by Canada's Quebec Education Ministry for pre-primary and primary school-aged children's learning. Based on technical and policy analysis of this EdTech product, Human Rights Watch found that the endorsement of this online learning platforms put at risk or directly violated children's rights, due to its tracking and profiling practices for advertising purposes. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop,

refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.⁹²⁵

Human Rights

Canada is a signatory to many international human rights treaties and conventions. Canada typically ranks among the top ten nations in the world for the protection of human rights and transparency (98/100 in 2021).⁹²⁶ Freedom House reported that, "Canada has a strong history of respect for political rights and civil liberties, though in recent years citizens have been concerned about fair elections and transparent governance; humane treatment of prisoners; citizens' right to privacy; and religious and journalistic freedom. While Indigenous peoples and other vulnerable populations still face discrimination and other economic, social, and political challenges, the federal government has acknowledged and made some moves to address these issues."⁹²⁷ Canada's Status remains the same (98/100) in the 2023 report.⁹²⁸

OECD / G20 AI Principles

Canada endorsed the OECD and the G20 AI Principles.

In 2020, Canada and France, and a dozen other countries announced the Global Partnership on Artificial Intelligence to "support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms, and our shared democratic values."⁹²⁹ According to the statement, the "GPAI will be supported by a Secretariat, to be hosted by the OECD in Paris, as well as by two Centres of Expertise – one each in Montréal and Paris." As the 2020-2021 GPAI Chair, Canada hosted the inaugural GPAI Summit in December 2020.

In 2020, Canada and the European Union recently announced that they were collaborating to leverage AI to help the international community respond to COVID-19. The initiative included the GPAI's group on AI and Pandemic Response and the annual EU-Canada Digital Dialogue.⁹³⁰

UNESCO Recommendation on the Ethics of AI

Canada is a signatory of the UNESCO Recommendation on the Ethics of Artificial Intelligence.⁹³¹ It remains to be seen which steps Canada will take to implement the UNESCO Recommendation.

AI Safety Summit

In November 2023, Canada participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁹³² Canada thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on Al

Canada also contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the

Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.933

Evaluation

Canada is among the leaders in national AI policies. In addition to endorsing the OECD/G20 AI Principles and establishing the GPAI with France, Canada has also taken steps to establish model practices for the use of AI across government agencies. The new Digital Charter Implementation intends to improve transparency criteria for AI systems. Canada has a solid record on human rights and is now working to update its national privacy law to address the challenges of AI. It remains to be seen what the content of this law will be and whether it will truly ensure the protection of the rights of Canadian citizens.

Chile

National AI Strategy

Chile's National AI Policy was published in October 2021⁹³⁴ following public consultations held in 2020 by the Ministry of Science, Technology, Knowledge and Innovation.⁹³⁵

The National AI Policy identifies a main objective, four transversal AI policy principles, and three interdependent axes. The axes address current opportunities and gaps in AI regulation by defining the scope of actions for relevant actors to achieve AI policy objectives by 2031.936 The National AI Policy is complemented by an AI Action Plan, which combines around 70 priority tasks in the areas of education, product development, talent management and others. The AI Action Plan also deals with accountability and establishes timelines for priority tasks implementation.⁹³⁷ However, the AI Policy does not provide for implementation deadlines, possible funding mechanisms or monitoring instruments, which could be beneficial for the implementation of the AI Action Plan.⁹³⁸

The main AI Policy objective for Chile is "to place the country at the forefront of AI research, development, and innovation, with an ecosystem that creates new capacities in various sectors."⁹³⁹ Such an ecosystem should be designed according to transversal concepts of

opportunity and responsibility, contribute to sustainable development, and improve the quality of life.⁹⁴⁰

To achieve this, the AI Policy provides for the following transversal principles:⁹⁴¹

1) AI with a focus on the well-being of people, respect for human rights and security

The activities will be targeted at improving people's quality of life by capitalizing on the benefits of AI while taking into account its risks and potential negative outcomes, in the light of human rights protection norms. Both the algorithms and the data used for training automated systems should be trustworthy.

2) AI for sustainable development

The actions will aim to promote AI use and development, and the inclusion of AI in Chile's sustainable development efforts.

3) Inclusive AI

The actions will put an emphasis on integrity and data quality to address their biases. Chile will ensure that AI does not discriminate based on gender, sexual orientation, and among vulnerable groups, including indigenous peoples, people with disabilities, etc.

4) AI and globalization

Chile's AI initiatives will be developed in alignment with international efforts in the field of AI. These initiatives will be consistent with the principles and agreements Chile has already signed, such as the OECD AI Principles, and will be updated in accordance with any further international commitments the country will enter into.⁹⁴²

The National AI Policy also provides for an AI Action Plan and its implementation. The first axis, "Enabling Factors," refers to the structural components of AI design and deployment, such as talent development, technology infrastructure, and data.⁹⁴³ The second axis, "Development and Adoption," covers Chile's targets regarding fundamental and applied research, technology transfer, innovation, entrepreneurship, public service improvement, and technology-based economic growth, as well as the participation of various actors in these processes, such as academia, government, private sector and civil society.⁹⁴⁴ The third axis, "Ethics, Regulatory Aspects, and Socioeconomic Impacts," tackles human-machine interaction and the socio-technical system, considering several important

⁹⁴⁴ Ibid, pp. 40-48.

issues identified during the consultations: AI in consumer protection, intellectual property, cybersecurity, AI influence on the labour market and gender dimension, explainability and transparency of the algorithms, etc.⁹⁴⁵ Thus, throughout its AI Policy, Chile stresses the importance of international standards for AI regulation and the protection of fundamental rights and the rule of law in AI use and deployment.

The Ministry of Science, Technology, Knowledge, and Innovation is in the process of revising the National AI Policy.⁹⁴⁶ The aim is not to create a new policy but to update is Ethics and Governance axis.⁹⁴⁷

Chile is also actively working to build regional cooperation through the LATAM 4.0,⁹⁴⁸ which was launched in November of 2022. Its purpose is to regionalize AI development to exchange best practices among Latam countries, unify governance criteria, as well to promote regional integration. Moreover, institutionalizing Digital Rights Protection Treaties is one of the key regional strategies envisioned in the LATAM 4.0 regional coalition.

The Chilean Parliament is currently discussing a draft Bill to regulate AI systems. The Bill takes the EU AI Act as a model.⁹⁴⁹

Public Participation

In January 2024, the Ministry of Science, Technology, Knowledge, and Innovation announced the launch of a public consultation to revise the National AI Policy.⁹⁵⁰ The Ministry is especially asking for contributing on topics such as gender, equity, and non-discrimination, impact of AI on

work, children and adolescents, intellectual property rights, culture, preservation of cultural heritage, safe digital ecosystem, regulation and institutions, international cooperation, environment and climate change. The online consultation was opened until March 15, 2024.

The drafting of the initial National AI Policy was marked by an effort to ensure wide and inclusive participation across the industry, academia, civil society and the public at large. The core team was composed of 12 experts in the field.⁹⁵¹ Virtual and in-person AI seminars, discussion groups and workshops were held across the country, including the regions, where inputs for the AI Policy were collected.⁹⁵² After the first draft of the AI Policy was produced, a citizens' consultation was held to collect their views. Overall, a total of more than 9,000 people participated in the process.⁹⁵³ The civil society expressed criticism regarding the lack of transparency regarding the output of regional and online workshops and difficulties accessing meeting minutes.⁹⁵⁴ The inclusivity of the process was also called into question as only 21% of respondents to the second stage consultation were female and a consultation questionnaire was available only in Spanish.⁹⁵⁵

Data Protection

Article 19 of Chile's Constitution (*Constitución Política de la República de Chile*) of 1980 protects the right to private life.⁹⁵⁶ In 2018, the constitutional guarantee was extended to explicitly protect personal data.⁹⁵⁷

⁹⁵⁷ Law No 21096 Concerning the Right to Protection of Personal Data (June 16, 2018), https://www.leychile.cl/Navegar?idLey=21096&tipoVersion=0.

The Law on Protection of Private Life (*Ley Sobre Protección De La Vida Privada*) (LPPL) of 1999 regulates the processing of personal data in public and private databases.⁹⁵⁸ In addition to LPPL, the processing of personal data in the financial and healthcare sectors is regulated by relevant sectoral laws.⁹⁵⁹ As of today, there is no authority in Chile with the overall responsibility for data protection supervision. Legal actions regarding the violations of the constitutionally protected right to personal data can be brought before courts.⁹⁶⁰ Limited supervisory powers are shared between two authorities:

The Transparency Council (*Consejo para la Transparencia*) is an independent oversight agency which, as a part of its mandate, monitors compliance with the data protection law by the organs of the state administration. The Transparency Council does not have the power to impose fines.⁹⁶¹

However, in 2017, the Chilean government introduced a draft Bill Bill No. 11144-07 Regulating the Processing and Protection of Personal Data and Creating the Data Privacy Authority which takes the EU GDPR as a model. The draft Bill is still under consideration by the Chamber of Deputies. ⁹⁶²

As a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, the AAPI endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁹⁶³ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁹⁶⁴ Both have been framed in accordance with the RED Standards

⁹⁵⁸ Law No 19628 on Protection of Private Life, 18 August 1999 (consolidated version as of Feb. 28, 2020), <u>https://www.bcn.cl/leychile/navegar?idNorma=141599.</u>

for Personal Data Protection for Ibero-American States.⁹⁶⁵ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."⁹⁶⁶

The Transparency Council is also a member of the Global Privacy Assembly.⁹⁶⁷ The Transparency Council has not endorsed any AI-related

Since December 2021, a consumer protection agency SERNAC (*Servicio Nacional del Consumidor*) has had a competency to monitor data protection compliance in consumer matters. It cannot impose fines but may initiate and participate in judicial proceedings and collective voluntary proceedings.⁹⁷⁰

In March 2017, the Government of Chile presented a Bill Regulating the Processing and Protection of Personal Data and Creating the Data Privacy Authority (*Proyecto de Ley Regula la protección y el tratamiento de los datos personales y crea la Agencia de Protección de Datos Personales*) (PPPD Bill).⁹⁷¹ The PPPD Bill aims to modernize the LPPL and align it with international standards. The PPPD Bill establishes a supervisory authority with the competence to impose sanctions for violation of data protection obligations. If the Bill is adopted, the authority will have the power to impose fines of up to 10,000 Monthly Tax Units (approx. \$670,000 or €592,080).⁹⁷² In January 2022, the PPPD Bill passed the

Chilean Senate and at the time of writing is being considered by the Chilean Chamber of Deputies.⁹⁷³

Algorithmic Transparency

There is currently no legally established right to algorithmic transparency in Chile, and the LPPL does not provide for individual rights related to automated decision-making (ADM).

Article 8.7 of the PPPD Bill introduces a "right not to be subject to automated decision-making^{"974} unless this is necessary for the conclusion or performance of the contract or is based on the data subject's consent or a legal obligation. This is defined as the right to object to solely automated decisions, including profiling. If exercised, the data controller must take necessary measures to ensure individual rights, in particular, the right to obtain human intervention by the controller, to express their point of view, and to request a review of the decision.⁹⁷⁵ Compared to Article 22 of the GDPR.⁹⁷⁶ the right under the PPPD Bill appears to be broader in scope as it extends to all solely automated decisions and does not include a qualifying factor that appears in the GDPR, i.e. a requirement that such decisions produce legal or similarly significant effects on a data subject.⁹⁷⁷ However, the PPPD Bill does not require provision of information about the existence and logic of ADM. In the absence of such information provided before the data processing commences, it will be challenging for individuals to anticipate ADM and effectively exercise their right to objection.

With regard to the transparency principle, the RED Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects, endorsed by

See also Working Party 29, *Guidelines on transparency under Regulation 2016/679* (Nov. 29, 2017), para. 41, <u>https://ec.europa.eu/newsroom/article29/redirection/document/51025.</u>

⁹⁷⁷ Also see Paz, *Algorithmic transparency, a regulatory or technological problem?* CUHSO (Temuco) vol.31 no.2 Temuco (Dec, 2021), <u>https://www.scielo.cl/scielo.php?pid=S2452-</u>

the Transparency Council, provide, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."⁹⁷⁸

In October 2022, the Transparency Council initiated efforts to draft a General Instruction on Algorithmic Transparency.⁹⁷⁹ The analysis of algorithmic transparency in the public sector carried out by the public innovation lab GobLab UAI and the Transparency Council shows that although information about processing activities and algorithmic logic is sometimes available, it is frequently fragmented and dispersed across different sources.⁹⁸⁰ The researchers pointed to the considerable effort required to collect, systematize and present the information in a manner understandable to the recipient.⁹⁸¹

The survey of 74 companies selling IoT devices carried out by SERNAC in February 2022 showed a widespread lack of knowledge regarding the use of AI and algorithmic technologies within the private sector. Many companies were not aware if manufacturers had employed such technologies in the products they were selling or distributing.⁹⁸² This is aggravated by the lack of understanding about what data categories are collected by the IoT devices and the absence of privacy policies explaining processing to the consumers.

Use of AI in Public Administration

In December 2023, the government published a circular entitled Guidelines for the use of AI tools in the public sector. It addresses key

⁹⁸² SERNAC, *Exploratory study on the risks of use of IoT devices in Chile* (Feb. 25, 2022), <u>https://www.sernac.cl/portal/619/w3-article-64912.html</u>.

themes such as human-centric AI, transparency and explainability, privacy and data use. It came into effect on January 1st, 2024 and was distributed to all public services.⁹⁸³

As a member of the Latin American Centre for Development Administration (CLAD), Chile approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁹⁸⁴ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

⁹⁸³ Ministerio de Ciencia, Tecnologia, Conocimento e Innovacion, *Gobierno publica circular para un uso responsable de la IA en los servicios públicos* (Dec. 14, 2023), <u>https://www.minciencia.gob.cl/noticias/gobierno-publica-circular-para-un-uso-</u>responsable-de-la-ia-en-los-servicios-publicos/.

⁹⁸⁴ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."⁹⁸⁵

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."⁹⁸⁶

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

⁹⁸⁵ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

⁹⁸⁶ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.⁹⁸⁷

Facial Recognition

In 2019, a group of 28 civil society organizations and nearly 70 experts have issued a public statement rejecting President Piñera's Mobile Surveillance System deployed the same year.⁹⁸⁸ The system was created under Chile's Safe Street (*Calle Segura*) plan and used drones equipped with high definition cameras and facial recognition technology to monitor public areas to fight crime and improve coordination of security agencies. Despite the criticism, the surveillance system which started with a fleet of 8 drones was expanded and new public procurements were ongoing at the time of the writing.⁹⁸⁹

Over the past years, a number of cases were recorded in Chile demonstrating errors, false positives and a general lack of effectiveness with

⁹⁸⁷ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

respect to publicly funded and invasive facial recognition systems. The facial recognition system which was deployed in one of Santiago's shopping malls and used to cross-reference images with the Investigative Police database of wanted suspects was reported to result in a 90% rate of false positives.⁹⁹⁰ The Transparency Council criticized the system for being disproportionate and intrusive from a privacy perspective.⁹⁹¹ Inadequate results and widespread errors were also reported when using IDEMIA's real-time image analysis and facial recognition software in the municipality of Las Condes⁹⁹² and the facial recognition system implemented by the Civil Registry.⁹⁹³ No regulatory initiatives banning mass deployment of facial recognition technology were registered at the time of writing.

Lethal Autonomous Weapons

During the 2018 discussions of the Group of Governmental Experts (GGE) on lethal autonomous weapons (LAWS),⁹⁹⁴ Chile issued a joint statement along with Austria and Brazil, which proposed to establish an open-ended GGE to negotiate a legally binding instrument to ensure meaningful human control over critical functions in LAWS.⁹⁹⁵ In 2020, it also joined eight other Convention on Certain Conventional Weapons

⁹⁹⁵ Austria, Brazil and Chile, Proposal for a Mandate to Negotiate a Legally-binding Instrument that Addresses the Legal, Humanitarian and Ethical Concerns Posed by Emerging Technologies in the Area of Lethal Autonomous Weapons Systems (LAWS), U.N. Doc. CCW/ GGE.2/2018/WP.7 (Aug. 30, 2018),

parties and reiterated the call for the development of a "normative and operational framework" for ensuring human control of LAWS.⁹⁹⁶

In October 2022, Chile was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.⁹⁹⁷ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."⁹⁹⁸

In February 2023, Chile endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,⁹⁹⁹ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Still in February 2023, Chile participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Chile, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁰⁰⁰ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance

¹⁰⁰⁰ Government of Netherlands, *Call to action on responsible use of AI in the military domain* (Feb.16, 2023), <u>https://www.government.nl/latest/news/2023/02/16/reaim-2023-call-to-action</u>

with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."¹⁰⁰¹

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour¹⁰⁰² of resolution L.56¹⁰⁰³ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

EdTech

In May 2022, in a global investigative report on the education technology (EdTech) endorsed by 49 governments, Chile, for children's education during the pandemic, Human Rights Watch conducted a technical and policy analysis of Aprendo in Linea in Chile. Human Rights Watch found that the government' endorsement of this EdTech put at risk or directly violated children's rights. The EdTech product sent children's data to AdTech companies. According to Human Rights Watch, in line with

child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.¹⁰⁰⁴

AI and Neurotechnology

In 2021, Chile became the first country in the world to provide constitutional protection for neuro-rights, which are recognized as a subset of human rights aimed at balancing out the potentially adverse effects of neurotechnologies.¹⁰⁰⁵ Article 19 of the Chilean Constitution was amended by introducing the following provision: "Scientific and technological development will be at the service of people and will be carried out with respect for life and physical and psychological integrity. The law will regulate the requirements, conditions and restrictions for its use on people, especially safeguarding brain activity, as well as the information derived from it."¹⁰⁰⁶This guarantee is especially relevant in light of advances in the area of neuroscience and AI, such as brain-computer interfaces.¹⁰⁰⁷ At the time of writing, there have been no accounts of secondary legislation aimed at implementing the new constitutional guarantee.

Human Rights

In 2024, Freedom House ranked Chile as a "free" country with a score of 94/100,¹⁰⁰⁸ with 38 out of 40 points earned for political rights and 56 out of 60 points scored for development with the civil liberties situation.

https://freedomhouse.org/country/chile/freedom-world/2024

Despite Chile's ratification of several human rights instruments,¹⁰⁰⁹ some lingering issues remain with regard to human rights protection. Chile still has problems with incarceration conditions in detention facilities, and experiences cases of torture and brutality by law enforcement.¹⁰¹⁰ There are also reported cases of arbitrary or unlawful murders, as well as issues with the protection of the rights of women, indigenous population, LGBTQI+, migrants, and refugees.¹⁰¹¹ In October 2020, following a series of protests and clashes with law enforcement authorities, more than 70% of citizens voted in favor of forming a constituent assembly to rewrite the constitution, unchanged since the dictatorship in the 1980s.

OECD AI Principles / G20 AI Guidelines

As an OECD member, Chile endorsed the OECD AI Principles,¹⁰¹² referencing them on several occasions in AI-related documents, including the National AI Policy.¹⁰¹³ OECD has noted Chile's efforts in AI and data sharing, human capacity development within AI domain, promoting social dialogue on AI, creating a partnership with private sector on upskilling workforce for AI, international AI cooperation among others.¹⁰¹⁴

Chile's AI policy vision also echoes several principles of the OECD AI Guidelines. For example, Chile's AI Policy, among others, refers to the principles of transparency and explainability of AI, human-centered AI, building human capacity for AI.

UNESCO Recommendation on the Ethics of AI

Chile is a UNESCO member and adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021.¹⁰¹⁵

In 2022, CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean.¹⁰¹⁶ They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts.

In October 2023, Chile's Ministry of Science, in partnership with UNESCO and CAF, convened the first Regional Forum on AI Ethics. The aim of the event was to shape a collective strategy among Latin American Caribbean (LAC) countries aligned with the and UNESCO Recommendation. Chile signed the resulting Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁰¹⁷ It establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection. The Declaration also constitutes a milestone towards establishing a Regional Council on AI for the LAC region. Chile will preside over the working group created to this end.1018

Chile is also one of the first countries to have completed the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.¹⁰¹⁹ The RAM helps

countries and UNESCO identify and address any institutional and regulatory gaps. 1020

Al Safety Summit

In November 2023, Chile participated in the first AI Safety Summit and endorsed the Bletchley Declaration.¹⁰²¹ Chile thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Evaluation

In recent years, Chile has made considerable progress towards developing legislative and policy frameworks in data protection and AI and aligning them with international standards, in particular the UNESCO Recommendation on the ethics of AI. Chile's efforts in introducing international AI practices and visions into the National AI Policy, among which a human-centric approach to AI, a dialogue with civil society about AI's risks and opportunities, international cooperation on AI, are to be commended. There are however areas for improvement, including the pressing need to finalize Chile's data protection law reform, establish a regulatory oversight agency with adequate enforcement powers, and implement enforceable standards in algorithmic transparency. A key area of risk that can undermine Chile's ambitious AI agenda based on respect for human rights relates to the proliferation of intrusive facial recognition technologies in public spaces.

China

National AI Strategy

Since 2013, the Chinese government has published several nationallevel policies, guidelines, and action plans, which reflect the intention to develop, deploy, and integrate AI in various sectors. In 2015, Prime Minister Li Keqiang launched the "Made in China" (MIC 2025) initiative aimed at turning the country into a production hub for high-tech products within the next few decades. In the same year, the State Council released guidelines on China's Internet + Action plan. It sought to integrate the internet into all elements of the economy and society. The document emphasized the importance of cultivating emerging AI industries and investing in research and development. The Central Committee of the Communist Party of China's 13th 5-year plan is another notable example. The document mentioned AI as one of the six critical areas for developing the country's emerging industries and as an essential factor in stimulating economic growth. Robot Industry Development Plan,¹⁰²² Special Action of Innovation and Development of Smart Hardware Industry,¹⁰²³ and Artificial Intelligence Innovation Action Plan for Higher Institutions¹⁰²⁴ illustrate detailed action plans and guidelines concerning specific sectors.

Most notable of all is the New Generation Artificial Intelligence Development Plan (AIDP) – an ambitious strategy to make China the world leader in AI by 2030 and the most transparent and influential indication of China's AI strategy's driving forces. China's State Council issued the AIDP in 2017. According to the Plan, AI should be used in a broad range of sectors, including defense and social welfare. The AIDP also indicates the need to develop standards and ethical norms for the use of AI. The actual innovation and transformation are expected to be driven by the private sector and local governments.¹⁰²⁵ The Chinese government has handpicked three major tech giants to focus on developing specific sectors of AI: Baidu,

https://www.ndrc.gov.cn/xxgk/zcfb/ghwb/201604/t20160427_962181.html

1024 高等学校人工智能创新行动计划

¹⁰²² 机器人产业发展规划(2016-2020年)

¹⁰²³ 智能硬件产业创新发展专项行动 (2016-2018 年) <u>http://www.gov.cn/xinwen/2016-09/21/content_5110439.htm</u>

http://www.moe.gov.cn/jyb_xwfb/xw_fbh/moe_2069/xwfbh_2018n/xwfb_20180608/201 806/t20180608_338911.html

¹⁰²⁵ 3-year plan promoting the AIDP (2018–2020) emphasizes coordination between provinces and local governments.

Alibaba, and Tencent.¹⁰²⁶ In return, these companies receive preferential contract bidding, more convenient access to finance, and sometimes market share protection.

Following the AIDP, the Ministry of Science and Technology published the New Generation Artificial Intelligence Development Code of Ethics (Code of Ethics).¹⁰²⁷ The New Generation AI Governance Professional Committee, consisting of experts from academics and the industry,¹⁰²⁸ created the Code of Ethics and is responsible for its implementation. The Code of Ethics aims to "thoroughly implement the AIDP, refine the principles of AIDP, enhance society's awareness and behavioural consciousness of AI ethics, actively guide responsible AI research, development, and application activities, as well as promote the healthy development of AI." The Code of Ethics highlights six fundamental ethical requirements, including (1) "improving human well-being," (2) "promoting fairness and justice," (3) "protecting privacy and security," (4) "ensuring controllability, and trustworthiness," (5) "strengthening responsibility," and (6) "improving ethical literacy," taking into ethical issues of privacy, biases, discrimination, and fairness into consideration.¹⁰²⁹ Thus, the Code of Ethics marks a step forward at the national level to develop ethical guidelines and principles for Artificial Intelligence.

Regarding local governments, there is a system of incentives for fulfilling national government policy aims. For this reason, local governments often become a testing ground for the central government's policies. Chinese cities and provinces, as well as regional administrations, compete for the new AI incentives. Large metropolises, such as Tianjin and Shanghai, have already launched multi-billion-dollar AI city Venture Capital funds and converted entire districts and islands for new AI companies. Shenzhen and Shanghai have taken the lead to create policies and standards for the Artificial Intelligence industry in China at the provincial level. Coming into effect on 1 November 2022, the Regulations

¹⁰²⁷ Ministry of Science and Technology, *New Generation Artificial Intelligence Development Code of Ethics* (Sept. 26, 2021)

on the Promotion of Artificial Intelligence Industry in Shenzhen, in particular, marks the birth of the country's first regulation on the AI industry¹⁰³⁰. Shanghai, in the meantime, published Regulations of Shanghai on Promoting the Development of Artificial Intelligence Industry, coming into effect on 1 October 2022.¹⁰³¹ The two Regulations aim to promote the innovation and development of the AI industry in their provinces for the benefit of citizens, society, and the economy. Both Regulations establish mechanisms, Committees of AI Ethics, to develop AI ethics policy and standards as well as provide guidance on AI ethics.

The establishment of the New Generational AI Governance Professional Committee at the national level and Committees of AI Ethics at the provincial level embodies the creation of a monitoring regime for the guidance and supervision of AI and AI ethics. The impact of the oversight of AI in policy implementation processes as well as the level of independence of these mechanisms remains unclear.

Management of Algorithmic Recommendations

China has started to adopt a comprehensive set of regulations on AI. The Provisions on the Management of Algorithmic Recommendations in Internet Information Services came into force in March 2022.¹⁰³² The Provisions apply to any entity that uses algorithm recommendation technologies to provide Internet information services within Mainland China. The Provisions require companies to register algorithms to an online database to the extent that the algorithm has public opinion properties or social mobilisation capabilities. Companies shall also complete an algorithm security self-assessment report. Users shall have the right to opt out of recommendation algorithms. The use of recommendation algorithms for illegal or harmful purposes is prohibited.

Deep Synthesis Regulations

In January 2023, the Cyberspace Administration of China (CAC) introduced new regulations regarding deepfake content. The regulations were formulated in order to "carry forward the core Socialist value vision, to safeguard national security and the societal public interest." It prohibits the production of deepfakes without user consent and requires specific identification that the content had been generated using AI. Any content that was created using an AI system must be clearly labeled with a watermark i.e., text or image visually superimposed on the video indicating that the content had been edited. Deep synthesis services cannot use the technology to disseminate fake news. Content that goes against existing laws is prohibited, as is content that endangers national security and interests, damages the national image or disrupts the economy.¹⁰³³

Generative AI Measures

The Provisional Administrative Measures of Generative Artificial Intelligence Services (Generative AI Measures), were published by the Cyberspace Administration of China (CAC), together with six other authorities, on 13 July 2023 and took effect on 15 August 2023. The Generative AI Measures apply to "the use of generative AI technology to provide services for generating text, pictures, sounds, videos and other content within the territory of China". They will apply to domestic companies and to overseas generative AI service providers offering AI services in China to the public."¹⁰³⁴

AI Ethics

Despite widely reported cases of unethical use of AI in China, the Chinese authorities, private companies, and academia have been active in the global trend towards formulating and issuing statements on AI ethics. The AIDP goes as far as to outline a specific desire for China to become a world leader in defining ethical norms and standards for AI.¹⁰³⁵ There has

¹⁰³³ Cyberspace Administration of China, *Regulations on the In-depth Synthesis Management of Internet Information Services*, (December 22, 2022), <u>http://www.cac.gov.cn/2022-12/11/c_1672221949318230.htm</u>; Stanford University, *Translation*, <u>https://digichina.stanford.edu/work/translation-internet-information-service-deep-synthesis-management-provisions-draft-for-comment-jan-2022/</u>

¹⁰³⁵ China's 'New Generation Artificial Intelligence Development Plan' (July 20, 2017) (English translation), <u>https://www.newamerica.org/cybersecurity-</u>

been a recent wave of attempts to define ethical standards by both government bodies and private companies.

In 2017, China's Artificial Intelligence Industry Alliance (AIIA), released a draft "joint pledge" on self-discipline in the artificial intelligence (AI) industry - emphasizing AI ethics, safety, standardization, and international engagement.¹⁰³⁶

In 2019, the Beijing Academy of Artificial Intelligence (BAAI) released the Beijing AI Principles¹⁰³⁷ to be followed for the research and development, use, and governance of AI. The Beijing Principles are centered around doing good for humanity, using AI "properly," and having the foresight to predict and adapt to future threats. But just like other principles presented, they are still very vague.

In line with these principles, Governance Principles for Developing Responsible Artificial Intelligence¹⁰³⁸ was prepared in 2019, by the National New Generation Artificial Intelligence Governance Expert Committee which was established by China's Ministry of Science and Technology. This document outlines eight principles for the governance of AI: harmony and friendliness, fairness and justice, inclusivity, and sharing, respect for human rights and privacy, security, shared responsibility, open collaboration, and agility to deal with new and emerging risks. Above all else, AI development should begin by enhancing the common well-being of humanity, states the document.

Another important document is a white paper on AI standards¹⁰³⁹ released in 2018 by the Standardization Administration of the People's Republic of China, the national-level body responsible for developing technical standards. Three key principles for setting the ethical requirements of AI technologies are (1) the ultimate goal of AI is to benefit human welfare; (2) transparency and the need to establish accountability as a

requirement for both the development and the deployment of AI systems and solutions; (3) protection of intellectual property.

In April 2022, China published "Opinions on Strengthening the Management of Science and Technology Ethics,¹⁰⁴⁰ which is the first national policy on tech ethics. The document proposes five principles ont how to supervise and review technology ethics. It calls for the establishment of the China Science and Technology Ethics Society and ethical supervision in AI research.

It is apparent that these principles bear some similarities to the OECD AI Principles. Nevertheless, the principles established in China place a greater emphasis on social responsibility, community relations, national security, and economic growth, with relatively less focus on individual rights. However, establishing ethical AI principles can be viewed as a first step and a signal that China wishes to become engaged in a dialogue with international partners.

Public Participation

There is a growing concern in China about the misuse of personal data and the risk of data breaches. In a 2018 survey by the Internet Society of China, 54% of respondents stated that they considered the problem of personal data breaches as "severe."¹⁰⁴¹ The World Economic Forum suggests that 2018-2019 "could be viewed as the time when the Chinese public woke up to privacy." According to the WEF, a controversy arose in 2019 when the Zao app, using AI and machine learning techniques, allowed users to swap faces with celebrities in movies or TV shows.¹⁰⁴² "It went viral as a tool for creating deepfakes, but concerns soon arose as people noticed that Zao's user agreement gave the app the global rights to use any image or video created on the platform for free." The company later clarified that the app would not store any user's facial information. Chinese consumers also challenged Alibaba when they learned that they had been enrolled in a credit scoring system by default and without consent. "Under pressure, Alibaba apologized."

At the 2022 World Artificial Intelligence Conference, the Shanghai Artificial Intelligence Laboratory Governance Research Center, Tsinghua University, and Fudan University jointly launched an open platform for artificial intelligence ethics – OpenEGLab.¹⁰⁴³ There are five major sections in the platform including rule sets, governance maps, risk displays, evaluation frameworks, and industry solutions. The rule set is dedicated to building a global governance knowledge base. Currently, about 1,500 marked rule documents have been included, including ethical principles, policy strategies, laws, regulations, and standards.

All recently adopted regulations, from those tackling Deepfake to those addressing facial recognition, have been opened for comments.

Data Protection

In recent years, China has introduced a number of major data protection laws, including the Personal Information Protection Law (PIPL) (effective from November 1, 2021) and the Data Security Law (DSL) (effective from September 1, 2021), together with a series of implementation regulations and administrative rules. The PIPL¹⁰⁴⁴ establishes a new comprehensive regulatory framework for personal information protection in China, requiring consents as its principal basis for data collection and handling, introducing provisions with extraterritorial effect, restricting cross border data transfers and imposing significant revenue-based fines for non-compliant conduct. The law is modeled after the EU GDPR¹⁰⁴⁵ however the law places a greater emphasis on how private companies may collect and use data rather than the use of data by authorities. For instance, Article 26 on personal images and facial recognition allows the collection of unlimited amounts of personal data so long as it is done "for the purpose of safeguarding public security."¹⁰⁴⁶ That is to say, the law does not limit the government's ability to collect or store

biometric data obtained through facial recognition. In contrast, the EU GDPR sees personal images as sensitive biometric data and requires Data Protection Impact Assessment (DPIA) for facial recognition technology. Finally, the law does not assign responsibilities when it comes to government entities that collect personal data, and who will be held responsible when it leaks. This becomes increasingly important with the rise of recent incidents of government leaks of the personal information of its citizens.¹⁰⁴⁷ Nevertheless, as the big data industry has been rapidly growing in China, the law provides more protection to users against unwanted data collection by private companies.

In March 2023, China's Ministry of Science and Technology established the National Data Administration (NDA). The NDA will be "responsible for the coordination and advancement of building the data factor system; for overall planning of the integrated sharing and development and use of data resources; for overall planning and advancement of Digital China, digital economy; and digital society plans and construction".¹⁰⁴⁸ The new regulator will have responsibilities that were previously performed by the Cyberspace Administration of China and by the National Development and Reform Commission.¹⁰⁴⁹

Algorithmic Transparency

Article 4 of the Interim Measures for Generative Artificial Intelligence Services refers to "effective measures to increase transparency in generative AI services and to increase the accuracy and reliability of generated content" based on the "service type". The National Information Security Standardization Technical Committee (T260) then released the

Basic Requirements for Security of Generative Artificial Intelligence Service¹⁰⁵⁰ with specific requirements laid out for providing users with information about the service and its functioning. Enforcement of those requirements is currently rolled out as a AI-content oversight campaign by Cyberspace Administration of China (CAC)¹⁰⁵¹ and might be further aided via emerging AI standardisation guidelines. The Ministry of Industry and Information Technology's target is that at least 60% of these prospective standards will be implemented in "general key technologies and application development projects", with over 1,000 Chinese companies championing early adoption.¹⁰⁵²

The Provisions on the Management of Algorithmic Recommendations in Internet Information Services¹⁰⁵³ highlight the principles of "openness" and "transparency" while establishing legal liabilities for violations of these principles. Article 4 Chapter I emphasizes that "the provision of algorithm recommendation services shall comply with laws and regulations, respect social morality and ethics, abide by business ethics and professional ethics, and follow the principles of fairness,

openness and transparency, scientific reasonableness, and good faith." Companies shall be transparent regarding how their recommendation algorithms are trained and deployed, including which datasets the algorithm is trained on. Article 12 states, "Algorithmic recommendation service providers are encouraged to (...) optimize the transparency and understandability of search, ranking, selection, push notification, display, and other such norms, to avoid creating harmful influence on users, and prevent or reduce controversies or disputes." Chapter V establishes clear legal liability for non-compliance to and violation of the Provisions, including "the suspension of information updates and a fine of between 10,000 and 10,000 RMB, administration punishments or sanctions such as ordering the closure of websites, revoking relevant business permits, or revoking business licenses."

Article 24 Chapter II, Section 1 of the PIPL provides, "Where personal information processors use personal information to make automatic decisions, the transparency of decision-making and the fairness and justice of the results shall be ensured, and shall not impose unreasonable differential treatment on individuals in terms of transaction price and other transaction conditions.

Where business marketing and information push are carried out through automatic decision-making, options not based on his/her personal characteristics shall be provided at the same time, or a convenient way for individual's to reject shall be provided.

Where automatic decision-making has a significant impact on individual's rights and interests, he/she has the right to require the personal information processor to give an explanation, and to reject the decision made by the personal information processor only through automatic decision-making."¹⁰⁵⁴

Social Governance

Social governance is another area in which AI is promoted as a strategic opportunity for China. The Chinese authorities focus on AI as a way of overcoming social problems and improving the welfare of

¹⁰⁵⁴ The PRC Personal Information Protection Law (Final): A Full Translation, China Briefing (Aug. 24, 2021), <u>https://www.china-briefing.com/news/the-prc-personal-information-protection-law-final-a-full-translation/</u>

citizens.¹⁰⁵⁵ Specifically, in the healthcare reform,¹⁰⁵⁶ environmental protection¹⁰⁵⁷, the administration of justice,¹⁰⁵⁸ and Social Credit System or Social Score.¹⁰⁵⁹ Another concrete example of how China is using AI in social governance can be seen in the sphere of internal security and policing. China has been at the forefront of the development of smart cities equipped with surveillance technologies, such as facial recognition and cloud computing. A recent proposal for the southwestern Chinese city of Chongqing would put "AI in charge."¹⁰⁶⁰ Today half of the world's smart cities are located in China. This exemplifies the Chinese government's intent to rely on AI technology for social governance and also to control the behavior of its citizens.¹⁰⁶¹

Facial Recognition

As early as the 2008 Beijing Olympics, China began to deploy new technologies for mass surveillance.¹⁰⁶² China put in place more than two million CCTV cameras in Shenzen, making it the most-watched city in the world.¹⁰⁶³ In recent years, the techniques for mass surveillance have

¹⁰⁶³ Naomi Wolf, China's All-Seeing Eye With the help of U.S. defense contractors, China is building the prototype for a high-tech police state. It is ready for export, Rolling Stone

expanded rapidly, most notably in Shenzen, also to oversee the Muslim minority group the Uyghurs, and in Hong Kong. Modern systems for mass surveillance rely on AI techniques for such activities as facial recognition, communications analysis, and location tracking. As one industry publication has reported, "In the world of surveillance, no country invests more in its AI-fueled startups and growth-stage businesses than China. And no technology epitomizes this investment more than facial recognition—a technology that courts more controversy than almost any other."¹⁰⁶⁴ Forbes continues, "But a thriving domestic tech base has done nothing to quell the concerns of citizens. China is held up as a Big Brother example of what should be avoided by campaigners in the West, but that doesn't help people living in China."

However, the Supreme People's Court of the People's Republic of China adopted and released the Provisions on Several Issues Concerning the Application of Law in the Trial of Civil Cases Relating to the Use of Facial Recognition Technology to Process Personal Information, which came into effect on August 1, 2021.¹⁰⁶⁵ The Provisions aim to "hear civil cases relating to the use of facial recognition technology in processing personal information, protect the lawful rights and interests of litigants, and promote the healthy development of the digital economy", in accordance with "Provisions of the Civil Code of the People's Republic of China, the Cybersecurity Law of the People's Republic of China, the Law of the People's Republic of China on the Protection of Consumer Rights and Interests, the E-Commerce Law of the People's Republic of China, the Civil Procedure Law of the People's Republic of China, and other laws, and in conjunction with trial practice."

In particular, the Supreme People's Court highlights that the Provisions apply to civil cases arising from violations of the provisions of laws, administrative regulations, or the agreement of both parties to process facial information, which refers to "biometrics information" or facial

information generated through facial recognition technologies.¹⁰⁶⁶ In this regard, the Provisions establish civil liabilities for the infringement of the rights and interests of natural persons in the process of biometrics data and information in the application of facial recognition technologies, which was republished and redistributed by local People's Courts.¹⁰⁶⁷ Before the enforcement of the Provisions regulating facial recognition technology, the China Academy for Information and Communications Technology (CAICT), a national think tank administrated by the Ministry of Industry and Information Technology, initiated the "Trustworthy Facial Recognition Protection Plan" in response to issues including "privacy leakage, technology abuse, biases and discrimination" in the development and application of facial recognition technologies while encouraging self-discipline of the industry.¹⁰⁶⁸

There are many reports on China's use of facial recognition technology against ethnic minorities.¹⁰⁶⁹ The discriminatory ways in which state organs, companies, and academics have researched, developed, and implemented facial recognition in China would seem not to comply with the OECD AI Principles or the Governance Principles for the New Generation Artificial Intelligence. The deployment of facial recognition has also provoked opposition within China.¹⁰⁷⁰ This gap between stated ethical principles and on-the-ground applications of AI demonstrates the weakness of unenforceable ethics statements.¹⁰⁷¹

In September 2019, China's information-technology ministry announced that telecom carriers must scan the face of anyone applying for

mobile and internet service.¹⁰⁷² There are over 850 million mobile Internet users in China. Meanwhile, the Hong Kong government invoked emergency powers in October 2019 to ban demonstrators from wearing face masks.¹⁰⁷³

Protests in Hong Kong over the use of facial surveillance are widespread. Umbrellas once used to deflect pepper spray, are now deployed to shield protester activities from the digital eyes of cameras.¹⁰⁷⁴ It is notable that the battle over the use of facial surveillance in Hong Kong began with widespread public protests about a national security law that extended police authority over the semi-autonomous region.¹⁰⁷⁵ According to the AP, "Young Hong Kong residents protesting a proposed extradition law that would allow suspects to be sent to China for the trial are seeking to safeguard their identities from potential retaliation by authorities employing mass data collection and sophisticated facial recognition technology."¹⁰⁷⁶

China is also exporting the model of mass surveillance by facial recognition to other parts of the world. A detailed report, published in *The Atlantic* in September 2020, stated that "Xi Jinping is using artificial intelligence to enhance his government's totalitarian control—and he's exporting this technology to regimes around the globe."¹⁰⁷⁷ According to *The Atlantic*, "Xi's pronouncements on AI have a sinister edge. Artificial intelligence has applications in nearly every human domain, from the instant translation of spoken language to early viral outbreak detection. But Xi also wants to use AI's awesome analytical powers to push China to the cutting edge of surveillance. He wants to build an all-seeing digital system of social control, patrolled by precog algorithms that identify potential dissenters in real-time."

¹⁰⁷⁷ Ross Anderson, *The Panopticon is Already Here*, The Atlantic (Sept. 2020), https://www.theatlantic.com/magazine/archive/2020/09/china-ai-surveillance/614197/

In September 2020, the United States State Department issued voluntary guidelines for American companies "to prevent their products or services (...) from being misused by government end-users to commit human rights abuses."¹⁰⁷⁸ The report came amid growing concern that China is rapidly exporting its own surveillance capabilities to authoritarian regimes around the world, as part of its Belt and Road Initiative (BRI).¹⁰⁷⁹ But the Washington Post highlighted the ongoing role of US-made technology in the sweeping surveillance of China, and notably the Uighur Muslim minority.¹⁰⁸⁰ The Washington Post explained that "the aim is to monitor cars, phones, and faces — putting together patterns of behavior for 'predictive policing' that justifies snatching people off the street for imprisonment or so-called reeducation. This complex opened four years ago, and it operates on the power of chips manufactured by U.S. supercomputer companies Intel and Nvidia." The Post editorial followed a New York Times investigation which found extensive involvement by U.S. firms in the Chinese surveillance industry.¹⁰⁸¹

Facial recognition technology will also be pushed forward with the development of humanoid robots to be deployed across all sectors of social life by 2025.¹⁰⁸² The draft Shenzhen Accelerates High-level Application Action Plan for Promoting the High-quality Development of Artificial Intelligence (2023-2024) released in May 2023 mentions the deployment of

"general-purpose embodied intelligent robots" and "large-scale application of humanoid robots".¹⁰⁸³

In August 2023, the Cyberspace Administration of China also released a draft of regulation for facial recognition technology. Article 4 states that "facial recognition technology may only be used to handle facial information where there are specified purposes and sufficient need, and where strict protective measures are employed. Where other non-biometric identification schemes exist that can realize the same goals or achieve the same operational requirements, priority shall be given to the non-biometric identification schemes." Regulations impose a necessity for full informed and individual consent and transparency in use of this technology in public spaces and compliance with data protection regulations.¹⁰⁸⁴

AI and Public Health

In China, the ultimate ambition of AI is to liberate data for public health purposes. The AIDP outlines the ambition to use AI to "strengthen epidemic intelligence monitoring, prevention and control," and to "achieve breakthroughs in big data analysis, Internet of Things, and other key technologies" for the purpose of strengthening intelligent health management. The State Council's 2016 official notice on the development and use of big data sets are a national resource and that their development should be seen as a national priority to improve the nation's health.¹⁰⁸⁵ However, there is a rising concern that relaxed privacy rules and the transfer of personal data between government bodies will promote the collection and aggregation of health data without the need for individual consent.¹⁰⁸⁶

Beijing Municipal Health Commission strictly prohibited the use of AI for automatically generating medical prescriptions and regulated various online healthcare activities with the draft set of 41 rules (open for public comment), with the goal that AI "shall not replace the doctors to provide diagnosis and treatment services."¹⁰⁸⁷

Use of AI in Covid-19 Response

In June 2020, the State Council released a White Paper, entitled "Fighting COVID-19: China in Action," which provides that China has "fully utilized" artificial intelligence to not only research, analyze, and forecast COVID-19 trends and developments, but also to track infected persons, identify risk groups, and facilitate the resumption of normal business operations."¹⁰⁸⁸ During the pandemic, China has used AI for surveillance of infected individuals and medical imaging. China also sought to reduce human interaction by using computers and robots for various purposes and has proven to be very effective in reducing exposure, providing necessary services such as assistance for healthcare professionals, improving efficiency in hospitals, and precautionary measures for returning to normal business operations.¹⁰⁸⁹

Lethal Autonomous Weapons

The AIDP states that "the development of AI [is] (...) a major strategy to enhance national competitiveness and protect national security" and that China will "[p]romote all kinds of AI technology to become quickly embedded in the field of national defense innovation."

At the 8th Beijing Xiangshan Forum (BXF),¹⁰⁹⁰ China's major platform for international security and defense dialogue, Major General Ding Xiangrong, Deputy Director of the General Office of China's Central Military Commission, stated that China's military goals are to use AI to

advance Chinese military.¹⁰⁹¹ Zeng Yi, a senior executive at China's thirdlargest defense company, predicted that by 2025 lethal autonomous weapons, and military command decision-making would be commonplace. He also mentioned that the ever-increasing military use of AI is "inevitable." He emphasized that military AI would replace the human brain and exercise independent judgment. "AI may completely change the current command structure, which is dominated by humans" to one that is dominated by an "AI cluster." These sentiments are shared by academics from the People's Liberation Army (PLA) who believe that AI will be used to predict battlefield situations and outpace human decision-making.¹⁰⁹²

China's Ministry of National Defense has established two major new research organizations focused on AI and unmanned systems: the Unmanned Systems Research Center (USRC) and the Artificial Intelligence Research Center (AIRC).¹⁰⁹³ According to some experts, China is pursuing the most aggressive strategy for developing AI for military uses among the major military powers.¹⁰⁹⁴ In the spring of 2017, a civilian Chinese university with ties to the military demonstrated an AI-enabled swarm of 1,000 uninhabited aerial vehicles at an airshow. A media report released after the fact showed a computer simulation of a similar swarm formation finding and destroying a missile launcher. Open-source publications indicate that China is also developing a suite of AI tools for cyber operations.

With regard to its official position on Lethal Autonomous Weapons, China maintains that both the common security and the dignity of mankind should be safeguarded. In the discussion of the 2022 Group of Governmental Experts on Lethal Autonomous Weapons Systems

(LAWS),¹⁰⁹⁵ China published the Working Paper of the People's Republic of China on Lethal Autonomous Weapons Systems.¹⁰⁹⁶ The Working Paper highlights the need for balancing both "national security" and "humanitarian concerns" in regulating the use of LAWS. The Working Paper also points out that "military applications of AI should be conducive to improving the humanitarian situation on the modern battlefields" and that countries should "ensure that relevant weapon systems and their means of warfare comply with international humanitarian law and other applicable international law."¹⁰⁹⁷

China attended the first summit on Responsible AI in the Military Domain – REAIM 2023 hosted by the Netherlands. The summit provided a platform for all stakeholders (governments, industry, civil society, academia, and think tanks) to forge a common understanding of the opportunities, dilemmas, and vulnerabilities associated with military AI.¹⁰⁹⁸ China is one of the 57 endorsing countries that underlined the need to put the responsible use of AI higher on the political agenda and to further promote initiatives that make a contribution to this respect.

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-

stakeholder community.¹⁰⁹⁹ The second REAIM summit will be hosted by the Republic of Korea in 2024.¹¹⁰⁰

At the 78th UN General Assembly First Committee in 2023, China was one of 8 states which abstained from voting onresolution L.56¹¹⁰¹ on autonomous weapons systems, 164 states voted in favour.¹¹⁰² The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

The Chinese Ambassador, Shen Jian, during the Debate on Conventional Weapons during the 78th Session of UNGA First Committee asserted that China "support(s), when conditions are ready, the negotiation of a legally binding instrument to prohibit fully autonomous weapons system, if all parties could reach consensus on issues such as definition and characterization of LAWS. Meanwhile, China encourages countries to combine the guiding principles with its domestic situation, adopt further measures, including industrial norms, ethical declarations, action guides, etc. to guide and regulate the development of technologies within the framework of existing laws and military management system."¹¹⁰³

At the First Session of the 2024 CCW Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapon Systems, Ambassador Shen reiterated that China supports the

negotiation of a legally binding instrument on LAWS "based on a common understanding of their characterization and definitions. (...) In the absence of clear characterization and definitions, we may exercise tiered management on autonomous weapon systems (...) China proposed five technical characteristics of "unacceptable LAWS,"¹¹⁰⁴ and is ready to engage in further discussions." Then, Ambassador Shen asserted that "China believes that as a means and method of combat, LAWS are subject to the basic principles and stipulations of international humanitarian laws (...). Great uncertainties remain, nevertheless, as to whether current international humanitarian laws are adequate in responding to the challenge posed by LAWS."¹¹⁰⁵

Fundamental Rights

China has endorsed the Universal Declaration of Human Rights. As a party to the UDHR, China shall recognize "the inherent dignity" of all human beings and secure their fundamental rights to "privacy." Privacy rights are guaranteed to Chinese citizens under the Constitution. However, Article 40 of the Chinese constitution justifies the invasion of privacy "to meet the needs of State security." Furthermore, the provisions of the Constitution are not directly enforceable since there is neither a constitutional court nor any possibility to assert constitutional rights.¹¹⁰⁶ Relatedly, problematic exemptions for the collection and use of data, when it is related to security, health, or the flexibly interpretable "significant public interests" ¹¹⁰⁷ contribute to weak data protection in China.

https://documents.unoda.org/wp-content/uploads/2022/07/Working-Paper-of-the-Peoples-Republic-of-China-on-Lethal-Autonomous-Weapons-

¹¹⁰⁴ On the "*Working Paper of the People's Republic of China on Lethal Autonomous Weapons Systems*", in July 2022, China had advanced the five characterizations of the "unacceptable LAWS" which are: 1) lethality, meaning sufficient lethal payload (charge) and means; 2) autonomy, meaning absence of human intervention and control during execution of a task; 3) impossibility for termination; 4) indiscriminate killing, meaning that the device will execute the mission of killing and maiming regardless of conditions, scenarios and targets. 5) evolution, meaning that through interaction with the environment, the device can learn autonomously, expand its functions and capabilities in a degree exceeding human expectations.

According to Freedom House, China is not a free country and obtains a total score of 9/100.¹¹⁰⁸ It even obtains a negative score of -2/40 regarding political rights. The 2024 Freedom House Report notes that "China's authoritarian regime has become increasingly repressive in recent years. The ruling Chinese Communist Party (CCP) continues to tighten control over all aspects of life and governance, including the state bureaucracy, the media, online speech, religious practice, universities, businesses, and civil society associations, and it has undermined an earlier series of modest rule-of-law reforms. The CCP leader and state president, Xi Jinping, has consolidated personal power to a degree not seen in China for decades. Following a multiyear crackdown on political dissent, independent nongovernmental organizations (NGOs), and human rights defenders, China's civil society has been largely decimated."

OECD / G20 AI Principles

As a member of the G20, China has endorsed the G20 AI Principles.

UNESCO Recommendation on the Ethics of AI

As Member of the UNESCO Ad Hoc Expert Group on AI Ethics, Zeng Yi, Director of the Sino-British Research Centre for AI Ethics and Governance, Institute of Automation, at the Chinese Academy of Sciences as well as Member of the National New Generation AI Governance Professional Committee, actively participated in the drafting and formulation of the UNESCO Recommendation on the Ethics of AI.¹¹⁰⁹ According to Zeng Yi, "the Recommendation is the most widely reached consensus worldwide at the governmental level, which will become a benchmark for reference to the development of AI ethics related international standards and international law."

The value of "harmonious coexistence", as Zhang Yi pointed out in the formulation of the Recommendation, contributes to the harmonious development of human society coexisting with AI technologies as well as the empowerment of human development, society, and ecology by AI.¹¹¹⁰ It was however, partially accepted as "peaceful coexistence" to reflect

¹¹¹⁰ Chinese Academy of Science, *the Institute of Automation contributed to UNESCO's Recommendation on the Ethics of Artificial Intelligence* (Nov. 30, 2021), https://ia.cas.cn/xwzx/kydt/202111/t20211130 6282785.html

diverse values and interests of different cultures, countries, and organizations.

The idea of "harmonious coexistence" is reflected in China's New Generation Artificial Intelligence Governance Principles¹¹¹¹ (Governance Principles) and New Generation Artificial Intelligence Code of Ethics¹¹¹² (Code of Ethics) formulated by the National New Generation AI Governance Professional Committee, which shows similar visions with the shared Recommendation. Another vision concerns sustainable development. Zhang Yi's proposal for the sustainable development of AI was accepted by the Recommendation in the policy section, which provided suggestions for achieving sustainability through deploying AI in the field of environment. At the national level, both the Governance Principles and the Code of Ethics issued by China consider sustainable development as the overall vision and objective for the New Generation Artificial Intelligence.¹¹¹³

Since the publication of the UNESCO Recommendation on AI Ethics, Chinese mainstream news media, think tanks, research institutions, and organizations actively interpreted, reposted, and communicated the Recommendation to the wider public in China.

Global AI Governance

In October of 2023, China suggested the establishment of a Global AI Governance Initiative.¹¹¹⁴ In its announcement, the Ministry of Foreign Affairs called on countries to strengthen cooperation on the governance of AI. After stressing the "unpredictable risks and complicated challenges" posed by AI, the Ministry highlighted the need to "uphold a people-centered approach in developing AI." The Ministry called for "respect[ing] other countries' national sovereignty and strictly abid[ing] by their laws when providing them with AI products and services." The Ministry stated, "We

¹¹¹⁴ Chinese Ministry of Foreign Affairs, "*Global AI Governance of AP*", (Oct. 20, 2023), https://www.mfa.gov.cn/eng/wjdt_665385/2649_665393/202310/t20231020_11164834.h tml

oppose using AI technologies for the purposes of manipulating public opinion, spreading disinformation, intervening in other countries' internal affairs, social systems and social order, as well as jeopardizing the sovereignty of other states." The Ministry indirectly called out US restrictions regarding export controls on AI chips and chipmaking tools,¹¹¹⁵ "We oppose drawing ideological lines or forming exclusive groups to obstruct other countries from developing AI. We also oppose creating barriers and disrupting the global AI supply chain through technological monopolies and unilateral coercive measures. (...) We should increase the representation and voice of developing countries in global AI governance, and ensure equal rights, equal opportunities, and equal rules for all countries in AI development and governance".

The Ministry also emphasized the need to put "ethics first", establish and improve relevant laws, develop a testing and assessment system based on AI risk levels and implement agile governance.

AI Safety Summit

In November 2023, China participated in the first AI Safety Summit and endorsed the Bletchley Declaration.¹¹¹⁶ Australia thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Evaluation

China is one of the first AI superpowers implementing the ambitious plan of leading the world in AI by 2030. The country has also already endorsed principles on AI ethics, enforced a new law on data protection, and adopted a comprehensive set of regulations on AI. However, concerns

¹¹¹⁵ See most recently, Reuters, *US updates export curbs on AI chips and tools to China* (Mar. 30, 2024), <u>https://www.reuters.com/technology/us-commerce-updates-export-</u>curbs-ai-chips-china-2024-03-29/

¹¹¹⁶ UK Department for Science, Innovation & Technology, Foreign, Commonwealth & Development Office, *Prime Minister's Office, The Bletchley Declaration by Countries Attending the AI Safety Summit*, (Nov. 2023),

https://www.gov.uk/government/publications/ai-safety-summit-2023-the-bletchleydeclaration/the-bletchley-declaration-by-countries-attending-the-ai-safety-summit-1-2november-2023

exist that the main objective of China's legislative frenzy is not to protect human rights but to make sure that it controls and monitors the digital world as much as it does with the physical world. The validation of the use of facial recognition for public security purposes in the data protection law, the various enforcement mechanisms and sanction regimes put in place to regulate AI are some cases in point. The use of AI technology against minorities and dissidents is also of concern. Nevertheless, China's participation in international efforts to create an ethical AI framework such as the UNESCO Recommendation on the Ethics of AI might show its willingness to establish some common understandings in foreign relations. It is as much a sign of its international status as an AI superpower.

Colombia

National AI Strategy

"In an increasingly digital world, artificial intelligence is presented as a fundamental tool that can positively shape the future of our nation. However, we recognize that this power must be guided by solid ethical principles and a strategic vision that guarantees the well-being of all Colombians" said the Minister of Science, Technology, and Innovation, Yesenia Olaya, during the launch of the AI Roadmap to ensure the ethical and sustainable adoption of AI in Colombia in February 2024.¹¹¹⁷

The Roadmap identifies Ethics and Governance as a key theme. It suggests establishing and strengthening the legal and regulatory AI framework to tackle ethical challenges posed by AI. The Roadmap also identifies nine key principles: transparency and explainability, privacy, human control, security, responsibility, non-discrimination, inclusion, primacy of children's rights, and societal benefit. It defines them in three different contexts: personal data, algorithms and practice.¹¹¹⁸

The Roadmap also addresses the use of AI for national security and defence purposes. It highlights the necessity of an ethical and transparent framework to strengthen the effectiveness of security forces and guarantee the protection of Colombian citizens.

The aim is for the Roadmap to serve as a basis for the adoption of an AI policy developed by the National Council of Economic and Social Policy and ready by September 2024.¹¹¹⁹

The Ministry of Science, Technology, and Innovation is also in the process of constituting the first Committee of High Level Experts on AI

¹¹¹⁷ Ministerio de Ciencia, Tecnologia e Innovacion, *Colombia ya cuenta con una Hoja de Ryta en Inteligencia Artificial* (Feb. 12, 2024), translated from Spanish, <u>https://minciencias.gov.co/sala_de_prensa/colombia-ya-cuenta-con-una-hoja-ruta-en-inteligencia-artificial</u>.

which will advise the government on AI policies.¹¹²⁰ More than 1.700 persons answered a call for applications launched by the Ministry.¹¹²¹

All these policy initiatives are in line with the objectives and goals of the National Development Plan 2022-2026 "Columbia World Power of Life", adopted in May 2023.¹¹²²

Already in March 2022, Colombia issued its Ethical Framework for AI,¹¹²³ which, according to the President Iván Duque, provides "tools that strengthen the principle of democracy, free competition and equity."¹¹²⁴ It is with these considerations along with ethics, social aspects, economic development and technological concepts that Colombia developed its AI policy.

The National Planning Department of Colombia, through the National Development Plan for 2018-2022 was the first to encourage the inclusion of emerging technologies of the Fourth Industrial Revolution, such as AI, the Internet of Things (IoT) and robotics in the digital transformation of national entities and strategies across all sectors.¹¹²⁵

Following this, the National Planning Department, the Ministry of Information and Communications Technologies (MinTIC), and the Office of the President launched the country's National AI Strategy, titled the

¹¹²⁵ Congress of the Republic of Colombia, *National Development Plan 2018-2022 'Pact for Colombia, Pact for Equity'* (2019), <u>https://www.dnp.gov.co/DNPN/Paginas/Plan-Nacional-de-Desarrollo.aspx</u>

National Policy for Digital Transformation and AI.¹¹²⁶ The Strategy introduced social and economic conditions that facilitate the development of AI by creating a flexible framework of principles and guidelines rather than a rule-based structure. While the Strategy acknowledges its adoption of the OECD AI principles, it sets out 14 additional principles with a focus on four aspects namely inclusive growth, sustainable development, and well-being; building human capacity and preparing for labor market transition; fostering a digital ecosystem for AI; and providing an enabling policy environment for AI. The Strategy also endorses the adoption of an ethical framework for the development of AI, and establishment of a market that uses AI productively and competitively.

To ensure the sustainable execution and continuity of AI public policy, various entities were created to coordinate the development and implementation of the National AI Strategy and other AI policies in the country. This includes the Presidential Advisory for Economic Affairs and Digital Transformation (DAPRE), the AI Expert Mission and the International Council for AI. DAPRE coordinates the work of government functionaries in implementing digital transformation through various systems including AI-based ones, while advising the government on the development of a digital ecosystem, along with the formulation and implementation of related policy.¹¹²⁷ The AI expert mission or task force serves as a bridge between regulators and experts. It includes experts from various professions who advise the government on policy formulation and assist them in developing a prospective roadmap for the implementation of AI policy, combining their technical and comprehensive vision.¹¹²⁸ The AI expert mission was launched with 10 experts. The International Council of AI was created to integrate international experts in the implementation and

deployment of Colombia's national AI systems.¹¹²⁹ The Council consists of six government officials and nine international experts as permanent guests to collectively analyze and present policy proposals that will impact the development and deployment of AI. The Council will also review and guide the implementation of AI policy, while studying Colombia's position in international AI indices to determine points of improvement that can be integrated into a roadmap for the future of AI. "The Mission ended on July 19, 2022, leaving the country with 2 major projects implemented, the Policy Lab: AI Public Policy Lab: Future of Work and Gender and the Empowerment Platform: AprendeIA. In addition, a document on AI and Sustainability was developed."¹¹³⁰

There are various policy intelligence tools in place to monitor the implementation of AI policy. For instance, SisCONPES monitors the implementation of each action line of the National AI Strategy, by reporting to implementing authorities on progress made and obstacles that arise.¹¹³¹

In February 2023, the Colombian Government presented the National Development Plan for 2022-2026, which included public policies related to digital transformation and democratization of ICT. However, it does not include direct references or developments on any national AI public policy.¹¹³² The National Development Plan for 2022-2026 is expected to become law by the end of the first semester of 2023.

Ethical Framework for Artificial Intelligence

In Colombia, the aim of the Ethical Framework for AI is to address concerns arising from the implementation of emerging technologies such as AI.¹¹³³ The Ethical Framework for AI was developed around ethical principles that can serve as a criterion for evaluating the different uses and

challenges that arise in this respect. The Ethical Framework for AI was developed as a tool that can be applied to different sectors taking into consideration the diversity of interests and opinions around the use of AI. The ten principles provided by the framework to guide the design, development, implementation and evaluation of AI systems include transparency, explainability, privacy, human oversight over AI decisions, security, responsibility, non-discrimination, inclusion, prevalence of the rights of children and adolescents, and social benefit.¹¹³⁴

The framework also proposes an ethical algorithm register in which entities periodically report what their AI project is about, how they are implementing the AI ethics principles, and the ethical risks to the use of AI in their project. The register allows for the monitoring of progress in the implementation of AI principles and reinforces citizen participation by inviting their comments or questions on policies, good practices and projects related to AI.¹¹³⁵ The DAPRE and the Superintendency of Industry and Commerce (SIC) are responsible for monitoring AI projects. The DAPRE developed a Dashboard for Monitoring the Ethical Framework for AI,¹¹³⁶ which is a publicly accessible tool allowing citizens to learn more about the use of AI systems. The Superintendence of Industry and Commerce monitors AI projects by carrying out the Data privacy regulatory Sandbox¹¹³⁷. The ethical algorithm register of Colombia is based on the models of Amsterdam and Helsinki.¹¹³⁸

Regulatory Sandboxes and Beaches

Colombia has adopted a smart regulation approach to AI through regulatory sandboxes and beaches.¹¹³⁹ This controlled environment was set up to experiment and test AI systems in the local context, to identify technical and governance flaws while promoting innovation.¹¹⁴⁰

At first, a Draft Model Concept for the Design of Regulatory Sandboxes and Beaches in AI was published in August 2020 with public comments received from various stakeholders.¹¹⁴¹ The purpose of this policy was to understand technology before trying to regulate it, by balancing precaution with experimentation and learning. The document suggests a process of implementation that includes (1) defining a policy leadership to implement public policy; (2) defining emerging technologies and preliminary problems to be addressed; (3) completing a regulatory mapping of the impacted sector; (4) selecting a public entity to perform inspection and surveillance functions; (5) capacity building and training; (6) creating working groups; (7) designing a risk model and defining possible risks; (8) setting out a selection criteria for the risks; (9) designing the sandbox; (10) sharing the project for comment; (11) publishing and implementing; and (12) reporting on the findings and evidence.¹¹⁴²

Later in 2020, a policy proposing a regulatory sandbox for Privacy and AI was open for public comments until November 30 by the DAPRE along with the Superintendence of Industry and Commerce. The regulatory sandbox here is meant to be preventive, so AI systems related to ecommerce, advertising and marketing protect personal data from the stage of design to execution, using tools like privacy impact assessments and privacy by design. It proposes (1) criteria to ensure compliance with

¹¹³⁹ Regulatory sandboxes are a testbed for selected AI projects, where the regulatory framework is relaxed with some laws and regulations set aside while entities test their projects. Regulatory beaches are similar to regulatory sandboxes, but they are wider in scope. They allow a larger number of companies and sectors to participate in regulatory experimentation during extended amounts of time even longer than a year, with the goal of resolving industry problems.

regulation on data processing in AI; (2) proper processing of personal data in all stages of an AI project; (3) creation of AI products that respects individual rights to personal data; (4) advice to companies on the protection of personal data in AI systems; (5) adoption of a preventive approach to protect human rights in AI projects; (6) suggestion of amendments or modifications to Colombian regulations on technological advances.¹¹⁴³

In April 2021, the Superintendence of Industry and Commerce released a final document governing privacy by design and by default in AI projects. In August 2021, the government approved the first proposals under the sandbox program.¹¹⁴⁴ The Superintendence of Industry and Commerce's sandbox for Privacy and AI started operating during 2021, and on January 2022, it selected a first project.¹¹⁴⁵

Research & Development

On 26 July 2019, the MinTIC released an Information and Communication Technology (ICT) Plan for 2018-2022 titled "The Digital Future is for Everyone." Highlighting the need to develop human capital, the ICT Plan proposes an AI Center of Excellence & Appropriation to generate innovative proposals that benefit the national system and serve as references internationally.¹¹⁴⁶

The ICT plan also emphasizes the importance of removing obstacles to the use of technology for digital businesses. In this respect, on 29 April 2019, the World Economic Centre for the Fourth Industrial Revolution was launched in Medellín, bringing together governments, the private sector,

¹¹⁴³ Presidential Advisory for Economic Affairs and Digital Transformation (DAPRE), and the Superintendence of Industry and Commerce, *Sandbox on privacy by design and by default in Artificial Intelligence projects* (2020),

¹¹⁴⁶ Ministry of Information and Communications Technology (MinTIC), *ICT Plan 2018-2022 "The Digital Future is For Everyone"* (2019),

https://micrositios.mintic.gov.co/plan_tic_2018_2022/pdf/plan_tic_2018_2022_2019112 1.pdf

civil society organizations, academia, and tech experts from across the globe.¹¹⁴⁷ Together, these actors collaborate in designing, testing, and developing projects that prioritize policy and tech innovation on AI, the Internet of Things, blockchain, and robotics.¹¹⁴⁸

To boost innovative AI research, Colombia launched a start-up incubator and accelerator, C-Emprende. ¹¹⁴⁹ In addition to scaling enterprises and mobilizing resources, C-Emprende facilitates the exchange of knowledge between national and international academia, private sector actors, investors, and government representatives.

Public Participation

The Development Bank of Latin America (CAF) with the authorship of international expert, Armando Guío Español, has developed AI policy and implementation documents, including the ethical framework for AI, a model concept for the design of regulatory sandboxes and beaches in AI, a data governance model, a task force on the development and implementation of AI, and the outline of an international council for the implementation of AI policy.¹¹⁵⁰

Draft AI policies and legislations of Colombia have been opened for public comment from academia, national, regional and international civil society actors, intergovernmental organizations and the private sector. These consultations have taken on various forms.¹¹⁵¹ Most recently, the Ministry of Science, Technology and Innovation (MinCiencias) conducted a public consultation on the Roadmap to ensure the ethical and sustainable adoption of AI in Colombia¹¹⁵² and plans on organizing subsequent consultations to flesh it out further.¹¹⁵³

Additionally, the Ethical Framework for AI and its ethical algorithm register promote public participation in the implementation of AI ethics principles, as the registry is publicly accessible and includes an interactive channel where citizens can ask questions or post comments on the ethical implementation of AI.¹¹⁵⁴ The presence of regulatory sandboxes and beaches also allows the participation of the private sector and academic institutions in the development of AI technology.

Data Protection

Data Protection in Colombia is governed by Article 15 of the Constitution.¹¹⁵⁵ Additionally, Colombia regulates financial credit, commercial and services information¹¹⁵⁶ and personal data processing and databases.¹¹⁵⁷

For the implementation and monitoring of regulations regarding privacy, the Personal Data Authority (DPA) was established under the Division of Data Protection of the Superintendence of Industry and Commerce (SIC), according to Article 19 of Law 1581 of 2012. This authority functions as an oversight body, providing instructions and setting mandates, along with receiving complaints on the handling of data.

On automated decision-making, Law 1581 establishes that personal data processing must be for a legitimate purpose under the Constitution and other laws, it must be notified to the subject, and the purpose must be specific. As a result, if automated decision-making is the purpose of processing data, then it must be (1) legitimate as per the Constitution and other laws of Colombia, (2) specific in purpose, and (3) data subject should be informed of it.¹¹⁵⁸

Secondary decrees, decisions and regulations provide a better understanding of data protection, particularly with regard to the application of automated mechanisms to databases. Databases have been defined under Article 3 of Law 1581 as an organized set of personal data which is treated in the same as personal data. Decree 886 that regulates Article 25 of Law 1581 explains this further by stating that, when automation is applied to databases containing personal data, it should be registered in the public directory of databases called the National Register of Databases.¹¹⁵⁹ Drawing from the necessity to register information from databases and the protection of the right to habeas data,¹¹⁶⁰ the Constitutional Court concluded that the administrator of a database has specific obligations regarding the quality of data being transmitted and allows data subjects to authorize how their information in an automated system is handled.¹¹⁶¹ Additionally, Article 26 of Decree 1377 establishes the principle of proven liability, according to which those responsible for handling personal data have an obligation to prove that they have taken sufficient and effective measures to abide by regulations, even when the data is processed by an automated method.¹¹⁶²

In July 2020, through Resolution 38281, the Superintendence of Industry and Commerce concluded that Law 1581 is thematically and technologically neutral.¹¹⁶³ Thus, the provisions of Law 1581 apply to the processing of any data regardless of techniques or technologies used. The protection of personal data extends to all techniques and tools, including AI in its use for predictive dialing, robocalls and nuisance calls. Nelson Remolina, the Superintendent for the Protection of Personal Data, elaborated on this by stating that, while Colombian law allows for the creation, design, and use of technological innovations to process data, it

¹¹⁵⁹ Office of the President of the Republic of Colombia, *Decree 886 of 2014* (2014), <u>https://www.suin-juriscol.gov.co/viewDocument.asp?id=1184150</u>

¹¹⁶⁰ *Habeas data* is a fundamental right and tool to provide legal protection to owners of personal data, particularly when faced with undue or illegal processing of their personal data by databases, or public or private registries.

must be done in a way that respects the legal system by complying with all the rules pertaining to the processing of personal data.¹¹⁶⁴

Colombian data protection law differs in scope from the GDPR, since it only applies to data processing carried out by data processors and data controllers within the country or to those who have a legal obligation under international law and treaties. Unlike the GDPR, the Colombian privacy law does not set out conditions under which data profiling is allowed. However, Colombian privacy law protects individual privacy through habeas data rights, guaranteed by Article 15 of the Colombian Constitution. Article 15 is intended to protect an individual's right to know, update, and rectify information gathered about them in online files or databases.¹¹⁶⁵

In January 2022, President Duque issued Decree 092, modifying the structure of the Superintendence of Industry and Commerce. The modifications include the creation of the Habeas Data Department, under the Deputy Superintendence for Personal Data Protection. The Decree tasks the Habeas Data Department with ensuring that all entities covered by the data protection regime comply with data protection law. The Habeas Data Department may also resolve any complaint or claim submitted by data subjects seeking to enforce their data rights. The Department may issue orders to enforce its statutory mandates.¹¹⁶⁶

The Superintendence of Industry and Commerce, as a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, also endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence¹¹⁶⁷ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data

recommendations-processing-personal-data-ai.pdf.

¹¹⁶⁴ Ibero-American Data Protection Network (RIPD), *Colombian data protection authority concluded that predictive dialing, robocalls and artificial intelligence must comply with regulation regarding the processing of personal data* (July 20, 2020), <u>https://www.redipd.org/en/news/colombian-data-protection-authority-concluded-predictive-dialing-robocalls-and-artificial</u>

 ¹¹⁶⁵ Privacy International, *State of Privacy Colombia* (Jan. 2019),
 <u>https://privacyinternational.org/state-privacy/58/state-privacy-colombia</u>
 ¹¹⁶⁶ Government of Colombia, *Decreto 092 de 2022*,

https://www.funcionpublica.gov.co/eva/gestornormativo/norma.php?i=176826 ¹¹⁶⁷ Ibero-American Network for the Protection of Personal Data (RED), *General Recommendations for the Processing of Personal Data in Artificial Intelligence* (Jun. 2019), https://www.redipd.org/sites/default/files/2020-02/guide-general-

in Artificial Intelligence Projects.¹¹⁶⁸ Both have been framed in accordance with the RED Standards for Personal Data Protection for Ibero-American States.¹¹⁶⁹ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation were also raised. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."¹¹⁷⁰

It is on this basis that also in May 2023 the Superintendence of Industry and Commerce has launched an investigation to assess whether the application ChatGPT complies with Colombian data protection law.¹¹⁷¹

The Superintendence of Industry and Commerce sponsored the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence.¹¹⁷² The Superintendence also co-sponsored the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.¹¹⁷³ However, it did not co-sponsor the 2020 GPA Declaration on Ethics and Data Protection in AI¹¹⁷⁴ or the 2023 GPA Resolution on Generative AI.¹¹⁷⁵

Algorithmic Transparency

Colombian data protection law does not provide for algorithmic transparency. However, the 2022 Ethical Framework for AI¹¹⁷⁶ does provide for both transparency and explainability. The 2024 AI Roadmap to ensure the ethical and sustainable adoption of AI in Colombia also refers to algorithmic transparency.

On November 2022, a group of Colombian Senators introduced a Draft Bill 253 of 2022 to establish the guidelines for an AI policy. If this piece of legislation were to pass, it would be the first one regarding this topic in Colombia and would enshrine algorithmic transparency in law.¹¹⁷⁷

With regard to the transparency principle, the RED Specific Guidelines for Compliance with the Principles and Rights that Govern the

Protection of Personal Data in Artificial Intelligence Projects provide, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."¹¹⁷⁸

Data Infrastructure

Colombia facilitates data access for those designing and developing AI systems, achieved by removing unnecessary and unjustified barriers to access information. To facilitate such data access and to generate social and economic well-being, the Colombian government has developed data infrastructure policies with a shared dynamic and standardized resources across different actors. Thus, data infrastructure is used to strengthen institutional capacity to provide better quality services to citizens, to include citizens and the private sector in data governance, to drive innovation in governance, and to guide decision-making.

The first policy document on data infrastructure is the National Policy on Data Exploitation or CONPES No. 3920 of 2018, developed by the National Council on Economic and Social Policy, the National Planning Department, and the Office of the President.¹¹⁷⁹ This policy uses data within a legal, ethical, and institutional framework to generate social and economic value; to increase the availability and interoperability of government data; to promote data culture in public entities, academia and the private sector; to promote data ethics and AI; and to provide test environments through data sandboxes, sandboxes on privacy and AI, and conceptual models for regulatory sandboxes and beaches in AI. To achieve this target, CONPES 3920 sets out 45 action steps with indicators, responsible parties, budgets and a timeline.

The second policy document is the National Data Infrastructure Plan (PNID) developed by MinTIC, the National Planning Department, and the

¹¹⁷⁸ Ibero-American Network for the Protection of Personal Data (RED), *Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects* (Jun. 2019), p. 17, https://www.redind.org/sites/default/files/2020-02/guide-specific-guidelines-ai-

¹¹⁷⁹ National Council on Economic and Social Policy, the National Planning Department, and the Office of the President, *National Policy on Data Exploitation (Big Data)* (Apr. 17, 2018),

https://www.mindeporte.gov.co/recursos_user/2020/Jur%C3%ADdica/Julio/Conpes_392 0.pdf

Office of the President, with the support of the World Economic Centre for the Fourth Industrial Revolution.¹¹⁸⁰ The draft of the PNID was shared for public comment until 17 September 2021. The PNID presents an approach to data as infrastructure, defines the components of data infrastructure, and provides a roadmap with concrete actions to implement data infrastructure in the country. This roadmap identifies 6 elements including governance, data, data leveraging, infrastructure interoperability, data security and privacy, as well as technical and technological input for data management.

For the successful integration of the PNID into the data regulation ecosystem, the government intends to create between 2022 and 2025 PNID guidelines. The aim is to identify priority data and create guidelines to ensure data quality; to develop a data infrastructure governance model; to identify indicators for monitoring; and to draw up a collaborative participation strategy for different actors in the data ecosystem.

The third policy document is the Data Infrastructure Governance Model for the Development of Emerging Technologies that was created by the DAPRE, the National Planning Department, and the CAF.¹¹⁸¹ CONPES 3920 and the PNID both emphasized the need to develop an institutional framework to accompany the development of data infrastructure. The governance model responds to this need. The governance model outlines five objectives to guide its design, including institutional coordination, private sector participation, confidence building, technical modelling, and international impact. Under each of these objectives, responsible parties or entities and specific tasks have been provided.

Data Scraping

In August 2023, the Superintendence of Industry and Commerce, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.¹¹⁸²

¹¹⁸⁰ Ministry of Information and Communications Technology (MinTIC), National Planning Department and the Office of the President, *National Data Infrastructure Plan (PNID)* (Sept. 2021), <u>https://mintic.gov.co/portal/715/articles-179710_recurso_2.pdf</u>

¹¹⁸¹ Presidential Advisory for Economic Affairs and Digital Transformation (DAPRE), the National Planning Department and the Development Bank of Latin America (CAF), *Data Infrastructure Governance Model for the Development of Emerging Technologies* (August, 2020), <u>https://bit.ly/306wVvn</u>

¹¹⁸² Office of the Australian Information Commissioner, Office of the Privacy Commissioner of Canada, Regulatory Supervision Information Commissioner's Office of the United Kingdom, Office of the Privacy Commissioner for Personal Data of Hong Kong, Federal Data Protection and Information Commissioner of Switzerland, Norwegian Datatilsynet, Office of the Privacy Commissioner of New Zealand,

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Colombia approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.¹¹⁸³ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy

Colombian Superintendencia de industria y Comercio, Jersey Office of the Information Commissioner, Moroccan CNPD, Argentine AAIP, Mexican INAI, Joint statement on data scraping and the protection of privacy (Aug. 24, 2023),

https://ico.org.uk/media/about-the-ico/documents/4026232/joint-statement-data-scraping-202308.pdf.

¹¹⁸³ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."¹¹⁸⁴

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on

¹¹⁸⁴ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."¹¹⁸⁵

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the

¹¹⁸⁵ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.¹¹⁸⁶

Use of AI in Courts

From 1996, the Colombian government introduced the use of technology in the administration of justice through Article 95 of Law 270, while mandating protection of confidentiality, privacy, and security of personal data.¹¹⁸⁷ As a result, several government entities use AI in judicial aspects of their work. This includes the Constitutional Court, the Office of the Attorney General, and the Superintendence of Companies.

Concerning the Constitutional Court of Colombia, where thousands of case documents are received daily, their processing has been expedited using an AI system called Prometea. Applying machine learning abilities, this system investigates, analyses, identifies and suggests priority cases on health-related aspects within a few minutes.¹¹⁸⁸ Additionally, it produces statistical reports, automates documentation, systematizes and synthesizes case law across the country, and improves security by integrating blockchain technology. This system that includes human oversight, improved the efficiency of case processing by 937%.¹¹⁸⁹

The Office of the Attorney General makes use of an AI system called Fiscal Watson, which consolidates criminal cases across different databases and regional offices to analyze similar evidentiary elements such as modus operandi, physical attributes, types of weapon and other aspects.¹¹⁹⁰ By accelerating the processing of case information, Fiscal Watson has helped connect and solve similar cases across the country. The Attorney General has also suggested that Fiscal Watson can be used to

identify irregularities in government contracts made during the COVID-19 pandemic, since all data and documentation is available online.¹¹⁹¹

The Superintendence of Companies, an administrative body, employs a robot assistant called Siarelis (System based on AI for the Resolution of Company Litigation) to exercise its discretionary judicial powers in corporate cases related for example to the piercing of the corporate veil or insolvency.¹¹⁹² Using Case Based Reasoning (CBR), Siarelis helps officials identify relevant case law for a specific case and also provides users with possible decisions that could be reached in their case.¹¹⁹³ The outcome reached by the system is decided based on the judicial history and precedent relevant to a specific case.

Law 2213 of 2022¹¹⁹⁴ and the General Procedure Code¹¹⁹⁵ allow the use of different technologies in the different stages of Civil, Labor, Family, Administrative, Constitutional, Disciplinary and Criminal procedures in Colombia. The Law specifies that such technologies should only be used when they are suitable for the task. In this regard, Professor Gutierrez noted, "If ChatGPT and other LLMs currently available are evidently unreliable, since their outputs tend to include incorrect and false information, then judges would require significant time to check the validity of the AIgenerated content, thereby undoing any significant "time savings". As it happens with AI in other areas, under the narrative of supposed "efficiencies", fundamental rights can be put at risk."¹¹⁹⁶

In 2023, ChatGPT was used in Colombian Courts in two different cases. The answers provided by ChatGPT were determinant in both cases. In the first case, the judge asked questions with regard to key legal issues, specific to the Colombian legal system. In the second case, the questions touched upon issues of access to justice and due process pertaining to

carrying out a hearing in the metaverse. There was no evidence that the answers received by ChatGPT were corroborated by other sources. Professor Florez also raised the risk of over-reliance on "the outputs of automated systems."¹¹⁹⁷

Facial Recognition

In Colombia, facial recognition technology is used extensively by the State. The Ministry of Transport is integrating a network of cameras with facial recognition technology throughout Bogota. The system, which is meant to prevent and reduce road accidents, has become operational in December 2021 and provides the location of cameras out of transparency.¹¹⁹⁸ A facial recognition system to improve surveillance was also introduced by local authorities in September 2021 at a stadium in Barranguilla. This system combines cameras with access to unlimited databases to record and track individuals.¹¹⁹⁹ The system will be used to identify and detain anyone with cases pending before the judicial system or any other relevant authority. The Atanasio Girardot stadium in Medellín also has 170 smart cameras installed for surveillance, since 2016.¹²⁰⁰ Expanding the reach of surveillance in the city, Medellín introduced 40 security robots with facial recognition capability and an integrated AI security system to patrol the city.¹²⁰¹ The Border Control Agency located at El Dorado International Airport in Bogota uses the Iris recognition system, with the system expected to reach other airports in the country within the next few years.

Fundación Karisma, a civil society organization dedicated to supporting the responsible use of tech, highlights the pitfalls of these systems. In a report titled "Discreet Cameras," Fundacion Karisma points out that surveillance technology and biometric identification systems in Colombia only take into consideration technical and impact considerations while assessing systems. There is no analysis using necessity, proportionality or the possible effect of the technology on human rights.¹²⁰² However, Colombia's co-sponsorship of the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology indicates a move towards official recognition of the importance of parameters such as reasonableness, necessity, proportionality, and the effect of the technology on human rights.¹²⁰³ Although the government tries to ensure transparency by sharing the location of video surveillance systems that use facial recognition technology, the right to privacy and other fundamental rights of individuals are still ignored.1204

Use of AI during COVID-19 Pandemic

Despite this situation during the emergency of the COVID-19 the government released a mobile app named CoronApp.¹²⁰⁵ At first, CoronApp's main objective was to allow people to stay updated on the progression of the pandemic in Colombia. In the days that followed, however, the narrative around the app changed. Its purpose became more ambitious. It soon became a digital tool to keep the population informed and "save as many lives as possible".¹²⁰⁶

Concerns were raised about the app's data privacy implications, as it collected personal information such as location data and potentially exposes users to security risks. The Colombian government stated that the

app is voluntary and that users' data will be kept confidential, but it is important for individuals to carefully review the app's privacy policy and consider the potential risks before downloading and using it.

In response to these concerns, the Colombian human rights organization Dejusticia has called for greater transparency and accountability in the use of personal data collected through this app and another implemented in the future.¹²⁰⁷ Dejusticia had also called for the government to implement strict measures to protect the privacy of individuals and ensure that their data is only used for the purposes that the app was created.

Dejusticia has also urged the government to establish clear guidelines for the collection, use, and storage of personal data, and to provide users with the ability to opt out of the app(s) at any time. Additionally, they have called for the government to establish a system of oversight and accountability to ensure that data collected through the app(s) is not misused or mishandled.

CoronApp had the potential to be a useful tool in guaranteeing the health of the population, but it is important that the government takes steps to ensure that the personal data of users is protected and used responsibly. In April 2022, the Constitutional Court reviewed and determined that the plaintiffs' rights to privacy should be respected, even during a national state of emergency. Furthermore, the Court declared that authorities had a duty to "avoid the abusive and arbitrary use of personal data" and the National Data Authority was ordered to erase the plaintiffs' data.¹²⁰⁸

Lethal Autonomous Weapons

During the 2015 meeting of the Group of Governmental Experts (GGE) on lethal autonomous weapons (LAWS), Colombia issued a statement calling for multilateral regulation to ensure human control over autonomous weapons at all times, so that no machine makes an autonomous decision.¹²⁰⁹ Colombia has called for a pre-emptive ban on all LAWS¹²¹⁰

and for an international treaty that will ensure meaningful human control over any use of force.¹²¹¹

Colombia was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."¹²¹²

In February 2023, Colombia endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,¹²¹³ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour¹²¹⁴ of resolution L.56¹²¹⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns

autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Colombia is a signatory to many international human rights treaties and conventions. If in 2022 Freedom House considered the country as partly free¹²¹⁶ due to among others illegal surveillance operations by the state security forces.¹²¹⁷ As of 2023, the country has been considered as free. However it is still ranked as partly free with regard to internet freedom.¹²¹⁸

According to Article 93 of Colombia's Constitution, rights and duties in the national system are interpreted according to international treaties and conventions that have been ratified by its Congress.¹²¹⁹ Thus, Colombia has made powerful commitments backed by strong action that encourages legal certainty, with an entire implementation, regulatory and monitoring ecosystem for AI. This is strengthened by expert contributions and public participation at the national, regional and international level.

OECD / G20 AI Principles

Colombia has endorsed the OECD AI Principles. Colombia's Ethical Framework for AI introduced as a guideline for trustworthy AI, provides standards for the ethical use and governance of AI and is aligned with the OECD AI principles.¹²²⁰ Additionally, Colombia has developed policy intelligence tools and a follow up plan to monitor the implementation of the OECD AI Principles, while identifying good practices to determine if OECD's recommendations to Colombia have been implemented. However, Colombia has not joined the Global Partnership on AI (GPAI).¹²²¹

UNESCO Recommendations on the Ethics of AI

Colombia endorsed the UNESCO Recommendation on the Ethics of AI in November 2021. Based on the principles of OECD and UNESCO "the Presidency of the Republic has identified the importance of ethical considerations for the design, development, and implementation of artificial intelligence in Colombia and more precisely the need to adopt an Ethical Framework as a non-binding guide for the implementation of artificial intelligence in the country."¹²²²

In 2022, CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean.¹²²³ They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts.

The Regional Council, comprising national and local governments from Latin America and the Caribbean, including Colombia, was formally established, with its inaugural meeting convened in October 2023. This initial meeting focused on the collaborative exchange and formulation of proposals, encompassing both political and technical perspectives, aimed at guiding the ethical development of Artificial Intelligence within the region.¹²²⁴ Colombia signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹²²⁵ It reflects UNESCO's Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

Evaluation

Colombia has anchored its AI policy in the Ethical Framework for Artificial Intelligence, which has influenced AI policies across Latin America. Columbia has recently adopted an AI Roadmap which should guide it towards the adoption of a human-centric national AI strategy. Colombia will be part of the Regional Council for the implementation of the UNESCO recommendation on the Ethics and has endorsed the Ibero-American Charter on AI in Civil Service. The Constitution of Colombia established a right to data protection, and the country has a comprehensive data protection law and an active data protection agency. The Colombian data protection authority is the first in the region to have opened an investigation on OpenAI ChatGPT. However, Colombia's laws do not include yet algorithmic transparency. There are also growing concerns regarding the use of facial recognition systems and of AI in courts.

Costa Rica

National AI Strategy

Costa Rica does not have yet a dedicated national AI strategy. However, the Ministry of Science, Technology and Telecommunications (MICITT) in Costa Rica has signed a declaration of intent with UNESCO to develop an AI strategy for the country. The National Strategy was due to be presented in August 2023¹²²⁶ but is not yet available.

In the meantime, two draft bills have been proposed in 2023 regarding the governance of AI. The first one, Draft Bill on Artificial Intelligence Regulation (Bill 23771) seeks to regulate the development, implementation, and use of AI in Costa Rica.¹²²⁷ The Bill was drafted with the support of ChatGPT-4. The Bill gained support from some political parties. However, opponents anticipate that it will need to be subject to a substantial amendment if not a complete withdrawal.

The second law, Draft Bill Regulation for the Responsible Promotion of Artificial Intelligence (Bill 23919) was proposed in September 2023. The Bill adopts an ethical and human-centric approach.¹²²⁸ The purpose of this law is to promote the use, research, design, development, deployment, utilization, implementation, and application of artificial AI in Costa Rica, in accordance with the principles of ethics, responsibility, and human dignity.

The country has developed a general human-centered science, technology and innovation plan and a specific digital strategy that addresses issues related to AI technology.

In its second version, the National Plan on Science, Technology and Innovation 2022-2027 (*Plan Nacional de Ciencia, Tecnología e Innovación* 2022-2027 (PNCTI)) provides a general overview of the country's goals regarding the use of information and communication technologies for a sustainable, equitable and creative future. In this Plan, AI is one of several thematic areas. Regarding AI, the focus is placed on pursuing the following actions: i) the development of technical capabilities and competencies across STEM/STEAM curricula in schools and technical colleges, ii) the

¹²²⁶ Mariana Alvarez, *Costa Rica will be the first country in Central America to have an Artificial Intelligence strategy* (March 1, 2023), <u>https://www.unesco.org/en/articles/costa-</u> rica-will-be-first-country-central-america-have-artificial-intelligence-strategy

¹²²⁷ Ministry of Science, Technology and Telecommunications (30 May 2023), https://delfino.cr/asamblea/proyecto/23771

¹²²⁸ Ministry of Science, Technology and Telecommunications (6 Sep 2023), https://delfino.cr/asamblea/proyecto/23919

development of a program of study for technical certification in AI as offered by a collaboration between the Ministry of Public Education and technical colleges, iii) the development of understandable and accessible AI systems for all, and iv) the further support of the fAIr Latin America and Caribbean (LAC) initiative designed by the Inter-American Development Bank (IDB) to ensure the ethical and responsible adoption of AI.¹²²⁹

Pursuant to the first version of the National Plan on Science, Technology and Innovation 2015-2021, the Ministry of Science, Technology and Telecommunications (MICITT) presented the Digital Transformation Strategy: The Bicentennial of Costa Rica 4.0 (*Estrategia de Transformación Digital hacia la Costa Rica del Bicentenario 4.0 2018-2022*).¹²³⁰ In terms of governance, the High Level Commission of the Digital Government (*Comisión de Alto Nivel de Gobierno Digital del Bicentenario*) serves as an advisory agency to the MICITT. The Commission's function is to identify, propose, and validate national projects. Of particular relevance with regard to AI, the Digital Transformation Strategy mentions the country's goal "to transform public institutions with efficient and collaborative work, applying new technologies for intelligent decision-making."¹²³¹

Costa Rica's science, innovation, technology and telecoms ministry presented an updated Digital Transformation Strategy 2023-2027 in August 2023. The Strategy focuses on two strategic axes: digital citizenship and good governance. The latter includes an action item on defining a National Strategy on Artificial Intelligence. According to the updated Digital Transformation Strategy, the use of AI is to drive the country's economic competitiveness and productivity through innovation and value creation.

Another initiative specific to AI is Costa Rica's declared intention to build a National Laboratory for AI (*Laboratorio Nacional de Inteligencia Artificial* (LaNIA)).¹²³² A letter was signed by MICITT, the National Center

¹²³¹ Ibid.

¹²³² Ministry of Science, Technology and Telecommunications, *Transformación Digital: potenciando las sinergías en campos como la Inteligencia Artificial dentro del Sistema Nacional de Ciencia y Tecno*logía (Jan. 27, 2020),

of High Technology (*Centro Nacional de Alta Tecnología* (CENAT)) and the National Program (*Programa del Estado de la Nación* (PEN)) for the cooperation in AI, science and technology. The laboratory intends to search for cross-sector solutions to national problems with the support of AI through international cooperation and interaction between the public and private sectors with the goal to create an ecosystem, strengthen trust, and promote research and education in AI.

Public Participation

Citizen participation in Costa Rica has a vast and rich history that has given rise to a significant number of democratic innovations. The Constituent Assembly of 1949 was reintroduced into the constitutional text with instruments for citizen participation. With later reforms to the Constitution in 2002 and 2003, public participation was enhanced through the inclusion of the Referendum and the Popular Initiative. In 2003, Article 9 of the Constitution of Costa Rica was further amended, supplementing the various instruments of citizen participation that had already been incorporated into the Constitution. Costa Rica's democratic institutions provide a robust legal framework to support public participation.

The National Commission for Open Government is using its online platform to enable public consultations on relevant national policies. The MICITT publishes all its public consultation opportunities on its website¹²³³ as well as on social media through its Facebook page.¹²³⁴

Costa Rica has made important progress in aligning its regulations and practices regarding public participation with OECD standards.¹²³⁵ Costa Rica also takes part in the CoST initiative to implement the Infrastructure Transparency Index (ITI) for improving transparency and accountability

https://www.elindependiente.co.cr/2020/01/transformacion-digital-potenciando-lassinergias-en-campos-como-la-inteligencia-artificial-dentro-del-sistema-nacional-deciencia-y-tecnologia/.

https://www.oecd.org/costarica/costa-rica-public-governance-evaluation-accessionreview.pdf; Costa Rica busca fortalecer la participación ciudadana con políticas de impacto regulatorio (Dec.8, 2017) Comunicados Desarrollo Social Economía, https://www.presidencia.go.cr/comunicados/2017/12/costa-rica-busca-fortalecer-laparticipacion-ciudadana-con-politicas-de-impacto-regulatorio/

across public infrastructures. These commitments consolidate the transformation of Costa Rica towards an open government.¹²³⁶

Public participation opportunities were offered with regard to the National Plan on Science, Technology and Innovation 2022-27,¹²³⁷ the creation of the High Level Commission of the Digital Government,¹²³⁸ and more recently the National Strategy for Cybersecurity,¹²³⁹ among other digital initiatives. However, being that there is no specific national AI strategy, there is no public participation solely on AI initiatives and policies.

Data Protection

Costa Rica has two comprehensive laws that protect personal data. While under the Ministry of Justice and Peace (Ministerio de Justicia y Paz), the entity in charge of compliance with data protection law, the Agency for the Protection of Citizen's Data (Agencia de Protección de Datos de los Habitantes (Prodhab) is fully independent.¹²⁴⁰

Law No. 8968 protects the personal data handling of individuals. Law No. 7975, the Undisclosed Information Law, specifies that the unauthorized disclosure of confidential and/or personal information is a crime.¹²⁴¹ These laws, together with their by-laws, were enacted to regulate activities of companies that administer databases containing personal information.¹²⁴² The laws require data subjects' consent before the processing or use of their data. Consent must cover in particular the purpose for data collection and how the data will be processed. The identity of all recipients and parties with access to personal data must be disclosed.

Transfer of personal data to third countries is also conditional upon data subjects' consent.

Additional laws include Costa Rica's Executive Decree No. 37554-JP for data breach and the General Telecommunications Law No. 8642 (Article 42) that protects the privacy of communications and personal information. The General Telecommunications Law is supplemented by administrative regulation N° 35205-MINAET that guarantees the secrecy of communications, the right to privacy, and the protection of personal data of subscribers and users.¹²⁴³

In January 2021, based on the European Union's General Data Protection Regulation (GDPR) model, Costa Rica a) reformed its data protection Law No. 8968,¹²⁴⁴ b) restructured Prodhab, and c) adopted Convention 108 of the European Union on the Protection of Personal Data.¹²⁴⁵ Organizations which manage databases containing personal information and which distribute and commercialize such personal information in any manner will have to comply with the new reformed Law No. 8968. Particularly, they must comply with the following: a) report and register the company and the databases with Prodhab, b) report technical measures to secure the databases, c) protect and respect confidentiality of personal information, d) secure information contained in the databases, and e) establish a mechanism to review requests filed by data subjects for the correction of any errors or mistakes in the databases.¹²⁴⁶

As a member of the Ibero-American Network for the Protection of Personal Data (RED) which comprises 16 data protection authorities of 12 countries, the Prodhab endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence¹²⁴⁷ and the accompanying Specific Guidelines for Compliance with the Principles and

Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.¹²⁴⁸ Both have been framed in accordance with the RED Standards for Personal Data Protection for Ibero-American States.¹²⁴⁹ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RED data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. "ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones."¹²⁵⁰

Despite being an accredited member of the Global Privacy Assembly (GPA) since 2012,¹²⁵¹ the Prodhab has not endorsed the 2018

Algorithmic Transparency

The current data protection laws of Costa Rica are silent with regard to algorithmic transparency.

With regard to the transparency principle, the RED Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects provide, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."¹²⁵⁶

In the Lisboa Declaration approved during the XXV International Congress for State Reform and Public Administration of 24-27 November 2020 co-organized by the Latin American Center for Administration for Development (CLAD), a series of actions pertaining to AI were proposed. These actions include i) the assessment of algorithmic models by informing, documenting and publishing the results from pilot projects online, and ii) the further updating of Law No. 8968 to include the ethics of AI specific to algorithmic transparency and the creation of a manual on the ethics of AI for the public administration to use as an instrument to measure and evaluate

¹²⁵⁵ Global Privacy Assembly, *Resolution on Generative Artificial Intelligence Systems* (Oct. 2023).

the impact of AI throughout Costa Rica. These actions were given a time frame ranging from one to four years.¹²⁵⁷

The proposed reform of law 8968 does provide for algorithmic transparency.¹²⁵⁸ Furthermore, Costa Rica signed a declaration of intent with UNESCO to develop an AI strategy for the country in line with the UNESCO Recommendation on the Ethics of AI which Costa Rica has endorsed and which also provides for algorithmic transparency.¹²⁵⁹

More generally, transparency is one of the key principles of the 2022 National Code of Digital Technologies.¹²⁶⁰

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Costa Rica approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.¹²⁶¹ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. It is completed by a series of recommendations on the implementation of the Charter and human-centric best practices. The Charter aims to minimize the challenges posed by AI including:

- "Remove the biases and gender, ethnics, religion and any other human feature that may be mirrored in data that feed AI systems.

- Prevent algorithm opacity in automated public services and decisions through the monitoring and audit of algorithms in every moment of their life cycle, from design to assessment, to avoid black box effects and contain any restrictions on explainability and accountability.

¹²⁶¹ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

- Straighten the invasive control in the workplace over civil servants by the proper regulation of algorithms in every aspect of the work relationship.

- Preclude the violation of fundamental rights resulting from algorithmbased decisions by means of accountability in all and any processes and actions taken for their operation.

- Avoid any undesirable effects from the use of AI systems by anticipating the ethical conundrums in especially sensitive areas or areas at a high risk in the public sector.

- Reduce citizens' distrust in their interaction with the machines operating in civil service by making the operations simpler, clearer and friendlier.

- Ensure human rights in the interaction with neuro-technologies by setting up the necessary controls of the devices and systems used in each case and analysing the consequences of the expanded mental and physical skills (transhumanism).

- Oversee the independence of public authorities in respect of private corporations in the creation, development, implementation and assessment of algorithm models and AI systems.

- Negate the use of AI to erode democratic systems, particularly by overseeing the use of algorithms designed to disseminate fake news and promote disinformation or misinformation."¹²⁶²

The Charter also establishes key guiding principles which shall "rely on a sound ethical approach of AI in civil service as a general principle. This means the express admission of the need for an assessment tool of the ethical aspect of the multiple domains covered in this Charter to itemize the implications in human rights and fundamental liberties. Regulatory instruments ought to be established to assess the ethical impact of AI on civil service in order anticipate risks, prevent undesirable effects and ensure its proper implementation."¹²⁶³

The guiding principles of AI in civil service include: the principle of human autonomy, the principle of transparency, traceability and explainability, the principle of accountability, liability and auditability, the principle of security and technical robustness, the principle of reliability, accuracy and reproducibility, the principle of confidence, proporationality and prevention of damage, the principle of privacy and protection of personal data, the principle of data quality and safety, the principle of

¹²⁶² Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 8, https://clad.org/um.content/umloads/2024/02/CILA_EN_02_2024.pdf

https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

¹²⁶³ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 10, <u>https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf</u>.

fairness, inclusiveness and non-discrimination, the principle of humancentring, public value and social responsibility, and the principle of sustainability and environmental protection.

The Charter also reflects the need to create a domestic public registry of algorithms in the public sector and to establish a domestic oversight, audit and algorithm assessment authority.

The Charter calls for the implementation, within domestic legal systems, of AI risk classification mechanisms. It recommends the adoption of - at least - a three risk-level classification: low risks, high risks and extreme risks. Low risks are deemed acceptable and addressed through basic requirements of accessibility and transparency. This category includes content platform recommendation systems or systems which create audios or videas that may result in false contents.

High risks may or may not be acceptable. This category includes AI systems with a potentially direct and adverse effect on fundamental rights, or personal safety or privacy. High risk systems must be assessed before deployment across their life cycle. This category covers biometric identification and categorization of persons; management and utilization of critical infrastructure; health and health care; education and capacity building; labour and employment organisation; public utilities; essential private services and public-private cooperation; migration and border control, and justice administration, among others.

Extreme risks are considered non acceptable. This category covers physical biometric or real-time performance and highly invasive biometric systems. The Charter recommends for mechanisms against human rights violation to be set up through domestic legislation. This category includes facial recognition systems; systems aimed at behaviour and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly), and social ranking systems based on certain personality traits, individual behaviours, socio-demographic features or economic status.¹²⁶⁴

Use of AI in Courts

A new AI system called Prometea, developed by the Innovation and AI Laboratory of the School of Law of the University of Buenos Aires and the Public Prosecutor's Office of the Autonomous City of Buenos Aires, has been implemented in the judicial system of the Inter-American Court of

¹²⁶⁴ Latin American Centre for Development Administration (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (Nov. 2023), p. 21, https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf.

Human Rights in Costa Rica for its use in judicial cases.¹²⁶⁵ Regardless of whether judicial cases are simple (e.g. minor infractions, traffic accidents, and taxi license disputes) or complex (e.g. murder trials), controversy lies in the inevitable biases of the AI-enabled system and the lack of algorithmic transparency behind the decision-making process. Transparency of the AI system's algorithm, therefore, must be assured to protect due process and the rule of law.¹²⁶⁶

AI and Hiring

The use of data analytics and AI techniques for hiring, firing and promoting employees in Costa Rica has also been very controversial due to AI systems' bias and lack of transparency. Companies recruiting in Costa Rica must adapt their recruiting processes to accommodate Costa Rican law, especially with regard to discrimination. However, controversy persists because Costa Rican law does not directly regulate the impact or effects of AI on recruitment.¹²⁶⁷

Costa Rica has piloted a skills and training platform that uses AI to "provide skill development suggestions to participants, based on their abilities, interests and experiences." ¹²⁶⁸

Lethal Autonomous Weapons

Costa Rica is one of the 126 member states signatory to the Convention on Certain Conventional Weapons (CCW) and has participated in CCW meetings in 2016-2019. During the UN General Assembly in October 2013, Costa Rica proposed that critical functions of weapons systems be subject to meaningful human control highlighting the risks and harms identified with the use of armed drones and robotic weapons. In 2016 Costa Rica called for a preemptive ban on lethal autonomous weapons systems.¹²⁶⁹ Costa Rica has continued to advocate for the ban on lethal

autonomous weapons. In 2020 the Ministry of Foreign Affairs, together with the Foundation for Peace and Democracy (FUNPADEM), called for the prohibition of the use of Lethal Autonomous Weapons (LAWs).¹²⁷⁰ Still in 2020, while intervening as a member of the Group of Governmental Experts (GGE) on emerging technologies in the area of LAWS, Costa Rica advocated for the development of international legally binding agreements providing for prohibitions and regulations on autonomous weapons systems.¹²⁷¹

Costa Rica was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."¹²⁷²

In February 2023, the Costa Rican Ministry of external relations, together with the Foundation for Peace and Democracy, organized the Latin American and Caribbean Conference on the social and humanitarian impact of autonomous weapons. This resulted in the endorsement, by Costa Rica and more than 30 other Latin American and Caribbean states, of the Belén Communiqué,¹²⁷³ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

At the 78th UN General Assembly First Committee in 2023, Costa Rica voted in favour¹²⁷⁴ of resolution L.56¹²⁷⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

In 2024, Freedom House ranked the country free, receiving an overall score of 91/100. In 2023, Costa Rica obtained a score of 85/100 for freedom on the internet.¹²⁷⁶ Human rights in Costa Rica predominantly stem from the UDHR, the country's Constitution, and the Inter-American Human Rights System.

OECD / G20 AI Principles

Costa Rica endorsed the OECD AI Principles for designing safe, fair, trustworthy and robust AI systems¹²⁷⁷ before becoming a member of OECD on May 25, 2021.¹²⁷⁸

Several proposed policies of Costa Rica's national digital transformation strategy, in which AI is included, align with the OECD AI principles. These include a focus on inclusive growth; human-centered

values and fairness; transparency; robustness, security, and safety; and accountability.¹²⁷⁹

The fAIr LAC hub in the country is a promising initiative because it aims to help in defining an ethical and responsible AI framework,¹²⁸⁰ as well as supporting the country in designing a roadmap for a national AI strategy.¹²⁸¹

UNESCO Recommendation on the Ethics of AI

Costa Rica is one of the 193 countries that adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021. The instrument is the first of its kind that considers ethics as a basis for normative evaluation and guidance of AI technologies making reference to human dignity and wellbeing, and the prevention of harm.¹²⁸²

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the Recommendation in Latin America and the Caribbean. They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts. According to Gabriela Ramos, UNESCO Assistant Director-General for Social and Human Sciences, Costa Rica will be a member of the Regional Council.¹²⁸³

The Regional Council, comprising national and local governments from Latin America and the Caribbean, including Argentina, was formally established, with its inaugural meeting convened in October 2023. This initial meeting focused on the collaborative exchange and formulation of proposals, encompassing both political and technical perspectives, aimed at

guiding the ethical development of Artificial Intelligence within the region.¹²⁸⁴

Costa Rica signed the resulting Santiago Declaration to Promote Ethical Artificial Intelligence.¹²⁸⁵ It aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.¹²⁸⁶

In March 2023, the Ministry of Science, Technology and Telecommunications in Costa Rica signed a declaration of intent with UNESCO to develop an AI strategy for the country in line with the UNESCO Recommendation.¹²⁸⁷

Costa Rica is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.¹²⁸⁸ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.¹²⁸⁹

Council of Europe Convention on Al

Costa Rica contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.¹²⁹⁰

Evaluation

Costa Rica has not yet set out a dedicated national AI strategy but is now collaborating towards this goal with UNESCO. Costa Rica has specifically endorsed worldwide initiatives focused on the ethical and responsible use of AI, including the OECD AI principles and the UNESCO recommendation on the Ethics of AI, and has also participated in the IDBled fAIr LAC hub. Costa Rica has an independent data protection agency charged with enforcing its comprehensive data protection law regime. The extensive use of AI both in public and private sectors calls however for a strong recognition of the right to algorithmic transparency and the adoption and implementation of a national AI strategy.

Czech Republic

National AI Strategy

In 2019, the Czech Ministry of Industry and Trade released the "National Artificial Intelligence Strategy" (NAIS).¹²⁹¹ The NAIS follows up on the commitment the Czech Republic undertook by signing, together with other EU Member States the 2018 EU Declaration of Cooperation on Artificial Intelligence.¹²⁹² The NAIS is part of the "Innovation Strategy of the Czech Republic 2019-2030"¹²⁹³ and the "Digital Czech Republic" strategy.¹²⁹⁴ The NAIS sets out a framework of priority objectives and tools to support AI development in the academic, public and private sectors, mutual cooperation and international engagement.

The aim of the NAIS is to improve the national economic growth and competitiveness in AI by (1) promoting research and development activities; (2) financing research and development, investment support, and development of the AI ecosystem; (3) Creating public service infrastructures and providing access to data for AI development (4) Upgrading human capital and the educational system in order to meet the demands of AI (5) Measuring the impact of AI on labor systems and labor markets (6) addressing legal, societal and ethical aspects of AI, consumer protection and security issues, with reference to the work of the UN, OECD and Council of Europe in the field; (7) Engaging in international cooperation in the field of AI

To achieve these objectives, the Czech Government envisages policy actions across key areas like education, R&D support, financing, industry, social impacts, regulation and international cooperation. For each key area, the Strategy identifies the responsible Ministry, the policy initiatives to develop, the cooperating entities, and key targets until 2021, 2027 and 2035.

The Deputy Prime Minister and Minister of Industry and Trade are directly responsible for the NAIS implementation and will coordinate it

¹²⁹¹ Ministry of Industry and Trade of the Czech Republic, *National Artificial Intelligence Strategy of the Czech Republic*, (2019), <u>https://www.mpo.cz/assets/en/guidepost/for-the-media/press-releases/2019/5/NAIS_eng_web.pdf</u>

¹²⁹³ Council for Research, Development and Innovation, *Innovation Strategy of the Czech Republic 2019-2030*, <u>https://ai-watch.ec.europa.eu/countries/czech-republic/czech-republic-ai-strategy-report_en</u>

¹²⁹⁴Ministry of Industry and Trade of the Czech Republic, *Digital Czech Republic,* <u>https://www.mpo.cz/en/business/digital-society/digital-czech-republic-243601/</u>

through the newly established AI Committee. The AI committee is a subcommittee of the Digital Czech Republic Steering Committee. The Committee primarily includes responsible ministries who are competent to coordinate each specific key area of the Strategy and will be in charge of the NAIS operational management. Working groups are affected to each of the NAIS seven key objectives. Once a year, the Steering Committee and the Czech Government will receive a progress report on the NAIS implementation.

Although the NAIS includes a section dedicated to the legal, societal and ethical aspects of AI, it does not specifically refers to "Fairness," "Accountability," "Transparency," or the "Rule of Law." The NAIS however mentions "maintaining a high level of protection of fundamental and other rights, in line with the European approach of human-centric AI."1295 In introduction to the NAIS, the Czech Prime Minister stated, "We are going to focus on protecting every person and consumer, their rights and privacy, especially the weakest ones. We are going to prevent discrimination, manipulation and misuse of AI, we are going to set the rules for decision-making of algorithms about people in everyday life."¹²⁹⁶ The NAIS also refers to "securing standards primarily in the areas of security, personal data protection and the protection of fundamental rights in research, development and use of AI." The NAIS provides for the "continuous evaluation of legislative and other legal risks for the competitiveness of the Czech Republic, creation of ethical frameworks and for the national implementation of binding EU regulations and recommenda- tions."1297

The NAIS embodies the Government's "commitment to becoming one of Europe's innovative leaders and a country of the technological future within twelve years."¹²⁹⁸ This translates into a position cautioning the EU against overregulation in view of the adoption of an EU AI Act, following the release of the European Commission's White Paper on AI.¹²⁹⁹ In November 2019, the Czech Republic prepared a position non-paper for the EU on the "Regulatory Framework for AI in the EU."¹³⁰⁰ In this non-paper,

¹³⁰⁰ AI Observatory and Forum, *Regulatory Framework for Artificial Intelligence in the European Union: Non-paper of the Czech Republic* (Fb. 15, 2020),

the Czech Republic recommended to refrain from initial overregulation of AI, to promote self-regulation and soft-law based on best practices, and to define horizontal red lines as a means of ensuring the protection of fundamental rights as well as legal certainty. The Czech Republic also emphasized that "securing the safety of citizens is the very precondition for the true implementation of fundamental human rights and freedoms."

The Czech Republic is also one of 14 EU Member States which urged the Commissionin October 2020 to push for as little regulation as possible in the AI field in order to find a balance between setting up rules and ensuring fast AI development. In their non-paper, Czechia and other EU Member States set out two visions for the EU's development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage.¹³⁰¹

Public Participation

The preparations for the NAIS started in 2018 under the responsibility of the Ministry of Industry and Trade and the Office of the Government. The Office was tasked with the coordination of the process, whereas the Ministry was mainly responsible for the substantial writing. During the writing phase other stakeholders were involved in co-writing certain chapters, including representatives of social partners, such as the chamber of commerce and academics. For example, the chapters dealing with the legal and ethical aspects of AI were co-analyzed and written mostly by academics working in that field. Other segments of civil society, however, such as human rights organizations, had no role in the process.¹³⁰² NAIS includes only limited information on formalized participation, simply referring to "Convening stakeholder working groups to coordinate individual chapters to meet their objectives and keeping the AI Committee updated on their functioning" and to "Cooperation with private and non-State actors institutionalized in the form of Memoranda."

In February 2020, Czechia launched the AI Observatory and Forum, an expert platform on legal aspects of AI to create a favorable social and legal environment for research, development and use of responsible AI.¹³⁰³ The platform is tasked with identifying legislative obstacles for research, development and use of AI and offering recommendations on their removal, developing legal and ethical recommendations for practice, providing space for public debate and engaging Czechia in international discussions on AI regulation and data economy. Audits in the public and private sector will also detect the existence of legal barriers. The core of the expert platform and forum consists of a team of independent experts which continuously monitors trends in research and development of AI, its social impact, the development of legal and ethical rules in Czechia, in other countries and at international level. The platform cooperates closely with the AI Committee in charge of coordinating the implementation of the NAIS. It is not clear how the general public is involved in the discussions or the work of the Platform. The latest news uploaded to the platform website are from 2020.

EU Digital Services Act

As an EU member state, Czechia shall apply the EU Digital Services Act (DSA).¹³⁰⁴ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-

¹³⁰³ AI Observatory and Forum, *Czech Republic's Expert Platform and Forum for Monitoring Legal and Ethical Rules for Artificial Intelligence*, http://observatory.ilaw.cas.cz/

¹³⁰⁴ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.¹³⁰⁵ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.¹³⁰⁶

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation¹³⁰⁷ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.¹³⁰⁸ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures

¹³⁰⁵ European Commission, *The Commission sends request for information to X under the Digital Services Act* (Oct. 2023),

¹³⁰⁸ European Commission, *Guidelines under the DSA for the mitigation of systemic risks online for elections* (March, 2024),

https://ec.europa.eu/commission/presscorner/detail/en/IP_24_1707

ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force¹³⁰⁹ on the 2024 European elections.

EU AI Act

As an EU member State, Czechia is bound by the EU AI Act.¹³¹⁰ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI

¹³⁰⁹ European Digital Media Observatory, *EDMO Taskforce on 2024 European Elections*, <u>https://edmo.eu/thematic-areas/european-elections/edmo-taskforce-on-2024-european-</u> elections/

¹³¹⁰ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;

of:

- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.¹³¹¹ However, the ban concerns only real-time

¹³¹¹ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.¹³¹²

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

¹³¹² Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and

beyond.¹³¹³ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.¹³¹⁴

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies,

¹³¹³ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-

institutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

¹³¹⁴ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-</u>deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office¹³¹⁵ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

¹³¹⁵ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Czechia will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact¹³¹⁶ a voluntary initiative that seeks to support the

¹³¹⁶ European Commission, *AI Pact*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since the Czech Republic is an EU Member State, the General Data Protection Regulation (GDPR)¹³¹⁷ is directly applicable in Czechia and to Czechs. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."¹³¹⁸ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.

Regarding the activities of law enforcement authorities, the EU Data Protection Law Enforcement Directive (LED).¹³¹⁹ protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."¹³²⁰ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹³²¹ The LED also requires for Member States, including the Czech Republic, to enable data subjects to exercise their rights via national data protection authorities.¹³²²

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en 1321 Article 11 (1) and (2) of the LED, https://eur-lex.europa.eu/legal-

¹³¹⁹ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, ¹³²⁰ European Commission, *Data protection in the EU*,

¹³²² Article 17 of the LED.

The 2019 Personal Data Processing Act both supplements the GDPR and implements the LED in Czech law.¹³²³

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

The Czech Republic is also a member of the Council of Europe. It signed but has not yet ratified¹³²⁴ the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.¹³²⁵

Al Oversight

The Office for Personal Data Protection (DPA) is the national supervisory authority in the Czech Republic. The DPA is in charge of enforcing both the GDPR and the Personal Data Processing Act. Despite being a member of the Global Privacy Assembly (GPA) since 2002, the DPA has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;¹³²⁶ the 2020 GPA Resolution on AI

¹³²³ Czech Personal Data Protection Act (March 12, 2019),

Accountability;¹³²⁷ the 2022 GPA Resolution on Facial Recognition Technology¹³²⁸ or the 2023 GPA Resolution on Generative AI.¹³²⁹

The Czech Republic has also several oversight bodies for human rights which could make a contribution in field of data protection. The Government Council for Human Rights is a permanent advisory body to the Government with regard to protection of human rights.¹³³⁰ The Council is in charge of monitoring compliance with the Constitution and other legislation governing the protection of human rights as well as the national implementation of international commitments of the Czech Republic in the field of human rights. There is similarly a Government Council for Gender Equality, a Government Council for National Minorities, a Government Board for Persons with Disabilities and an Inter-ministerial Commission for Roma Community Affairs.¹³³¹ The Czech Republic Ombudsman, the Public Defender of Rights is a non-accredited associate member of European Network of National Human Rights Institutions.¹³³²

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, the Czech Republic is subject to the GDPR. Czechs have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹³³³

¹³²⁸ Global Privacy Assembly, *Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology* (Oct. 2022), <u>https://globalprivacyassembly.org/wp-content/uploads/2022/11/15.1.c.Resolution-on-</u> <u>Principles-and-Expectations-for-the-Appropriate-Use-of-Personal-Information-in-Facial-</u> <u>Recognition-Technolog.pdf</u>

¹³³³ See Recital 63 and Article 22 of the GDPR.

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹³³⁴ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."1335

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."¹³³⁶

Lethal Autonomous Weapons

According to the Czech Republic, "it is indispensable for the CCW High Contracting Parties to have sufficient guidance on how to ensure that

any new weapon, means or methods of warfare are in compliance with the International Humanitarian Law, which is our main objective" and "welcome[s] the work on Lethal Autonomous Weapons Systems."¹³³⁷

The Czech Republic is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."¹³³⁸

In February 2023, Czechia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Czechia endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹³³⁹ In this joint call. States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil

society and academia, to collaborate and exchange information on responsible AI in the military domain."¹³⁴⁰

The Czech Republic also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹³⁴¹

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.¹³⁴² The second REAIM summit will take place in 2024 in the Republic of Korea.¹³⁴³

At the 78th UN General Assembly First Committee in 2023, Czechia voted in favour¹³⁴⁴ of resolution L.56¹³⁴⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and

concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Czechia adopted the United Nations Declaration on Human Rights. As a member of the European Union and of the Council of Europe, Czechia is committed to upholding the EU Charter of Fundamental Rights and the European Convention on Human Rights. According to Freedom House, the Czech Republic is considered "Free" with a combined score of 92/100 in 2023.¹³⁴⁶

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."¹³⁴⁷

OECD / G20 AI Principles

The Czech Republic has been a member of OECD since 1995 and has endorsed the OECD AI Principles.¹³⁴⁸ The NAIS also emphasizes the importance of cooperation with the OECD for the implementation of the Strategy measures. Exchange of information in expert groups on AI at the OECD, coordination of preparations for negotiations within the OECD are amongst those measures.¹³⁴⁹ The OECD AI Policy Observatory considers

that "inclusive growth, sustainable development and well-being; robustness, security and safety; accountability; fostering a digital ecosystem for AI; providing an enabling policy environment for AI; building human capacity and preparing for labour market transition, international co-operation for trustworthy AI" are the OECD AI principles addressed by the NAIS.¹³⁵⁰.

In January 2022, the Czech Republic joined the Global Partnership on AI,¹³⁵¹ a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."¹³⁵²

UNESCO Recommendation on the Ethics of AI

A UNESCO member state since1993,¹³⁵³ Czechia is among the 193 countries that endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.¹³⁵⁴ The Czech Republic has been supporting the implementation of the UNESCO Recommendation by hosting the first ever Global Forum on the Ethics of AI under the Czech Presidency of the Council of the European Union and under the patronage of UNESCO. in December 2022.¹³⁵⁵ The Global Forum took place in December 2022, one year after the adoption of the UNESCO Recommendation. The forum placed a spotlight on "ensuring inclusion in

the AI world," and took stock of the implementation of the recommendation so far.¹³⁵⁶

Council of Europe Convention on AI

The Czech Republic contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.¹³⁵⁷

Evaluation

The Czech Republic's ambition to become one of the European leaders in the digital field within the next 10 years¹³⁵⁸ has shaped its position with regard to AI policy. Although it adheres to a human centric approach to AI through its commitment to implementing the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI, Czechia has consistently stood against "overregulation," notably through the EU AI Act, and strives with its national AI strategy to remove what it considers as legal impediments to AI development. The Czech Republic has not yet ratified the modernized Convention 108 for the protection of individuals with regard to the processing of personal data. With the adoption of the EU AI Act, Czechia shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Denmark

National AI Strategy

The Danish government unveiled their national AI strategy in March 2019.¹³⁵⁹ The Danish strategy on AI development outlines the issues that must be tackled, and defines specific policy efforts and key initiatives. The national AI strategy intends to establish Denmark as a leader in responsible AI development. There are four objectives to accomplish this goal:

- Establish a consistent ethical and human-centered foundation for artificial intelligence;
- Prioritize and promote research in artificial intelligence;
- Encourage the growth of Danish firms through the development and use of artificial intelligence;
- Ascertain that the public sector utilizes AI to provide world-class services to citizens and society.

The strategy covers both the public and the private sector and presents key challenges, focus areas, policy initiatives as well as priority areas. It aims to create a framework that shall improve the level of trust in AI. Therefore, the strategy states six principles for AI, including self-determination, human dignity equality and justice, and addresses also responsibility and explainability.¹³⁶⁰ The national strategy establishes priority areas to lift the work of AI within Denmark. These priority areas are healthcare, energy and utilities, agriculture and transport.

In June 2023, Marie Bjerre, Denmark's Minister for Digitization, announced that she had initiated the preparation of a guide on the safe use of AI for businesses, authorities and citizens.¹³⁶¹

Denmark has also issued several digital strategies to create the foundation for digital development. They refer briefly to AI. The current Joint Government Digital Strategy runs form 2022 until 2025 and "shall seize opportunities of digital development in Denmark". It contains topics such as labour shortage, climate change, migration and digital inclusion and introduces 28 initiatives. The Joint Government Digital Strategy aims to allow a broad civil participation. The previous Joint Government Digital Strategy ran form 2016-2020. It established three objectives: To create

digital solutions simple to use and of high quality, To provide favorable conditions for growth, and To always promote security and confidence. ¹³⁶²

Denmark contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.¹³⁶³

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Danish Minister for digitalization signed the declaration on "AI in the Nordic-Baltic region" establishing a collaborative framework on "developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used" and "on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability."¹³⁶⁴

The ministerial declaration Digital North 2.0¹³⁶⁵ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. "In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and reuse of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and

digital-north-20

globally in a sustainable and inclusive digital transformation of our societies."¹³⁶⁶

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Danish inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them. ¹³⁶⁷

In September 2022, the Nordic and Baltic ministers for digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this "rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities." The ministers declared that they "have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. (...) Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services."1368

As part of its action plan for Vision 2030 (2021-2024), the Nordic Council of Ministers identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.¹³⁶⁹ The Nordic Council of Ministers also

emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to "a Nordic civil society network and public consultations."1370

Public Participation

Denmark provides programs that enable non-governmental actors (e.g., the academic community, business, civil society, and regional and local governments) to express their perspectives or provide expert advice that informs policy-making processes. These policy initiatives enable stakeholders or experts to engage in public discussions to share information and foster collaboration. Public awareness campaigns and civic engagement activities include informing and consulting with members of the public.¹³⁷¹

The Danish AI strategy for its part is based on proposals from a Digital Growth Panel¹³⁷² and the Danish Government's Disruption Committee.¹³⁷³

In 2021, the Danish Ministry of Foreign Affairs launched the "Tech for Democracy Initiative" that shall bring together government members. organizations, industries and civil society to ensure that technology works for humans and not the other way round. It wants to establish a multistakeholder dialogue and offers numerous events on AI and human rights.¹³⁷⁴

In 2021, a new Danish Pioneer Centre for AI opened. It focuses on fundamental AI research and aims to make Denmark a leader in humancentered and ethically responsible AI. The Pioneer Center is a national initiative initiated by the Ministry of Higher Education and Science. It includes research foundations as well as Danish universities.¹³⁷⁵

¹³⁷⁵ University of Copenhagen, The Danish Pioneer Centre for AI marks its official opening

In 2022, a Danish political party called "Synthetic Party" led by an AI hoped to be able to stand for Denmark's general election. The party's mission was to raise awareness of the role of AI and its impact on society. Although the party was far from receiving enough signatures of support to be able to stand for the election, it drew attention to the interaction between AI and humans.¹³⁷⁶

EU Digital Services Act

As an EU member state, Denmark shall apply the EU Digital Services Act (DSA).¹³⁷⁷ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X.

https://di.ku.dk/english/news/2022/the_danish_pioneer_centre_for_ai_marks_its_official_opening/

¹³⁷⁶ Det Syntetiske Parti, <u>https://detsyntetiskeparti.wordpress.com/program/</u>

¹³⁷⁷ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.¹³⁷⁸ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.¹³⁷⁹

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation¹³⁸⁰ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.¹³⁸¹ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force¹³⁸² on the 2024 European elections.

EU AI Act

As an EU member State, Denmark is bound by the EU AI Act.¹³⁸³ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;

¹³⁸³ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;

of:

- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.¹³⁸⁴ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of

¹³⁸⁴ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.¹³⁸⁵

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content.

¹³⁸⁵ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.¹³⁸⁶ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations

¹³⁸⁶ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.¹³⁸⁷

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office¹³⁸⁸ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

¹³⁸⁷ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-</u> deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

¹³⁸⁸ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all

appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Denmark will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact¹³⁸⁹ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Denmark, like other European countries, has enacted laws to supplement the EU General Data Protection Regulation (GDPR).¹³⁹⁰ In Denmark, the GDPR and its Danish supplementary act, the Data Protection

¹³⁸⁹ European Commission, AI Pact, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

¹³⁹⁰ Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation).

Act (DPA)¹³⁹¹ are the primary regulations governing the processing of personal data. The DPA provides for certain exceptions to the GDPR, most notably regarding the processing of personal data in the employment sector and the processing of national registration numbers.

In 2002, the Danish Act on Personal Data Processing came into force, implementing Directive 95/46 EC. However, despite the fact that the Danish data protection regulation is approximately two decades old, until the GDPR was implemented in 2016, little attention was paid to data protection in Denmark. Prior to 2017–2018, the term 'data protection' was almost unknown to the broader Danish population and many businesses. Thus GDPR compliance has been a hot topic in recent years. Since the GDPR's adoption, Danish businesses have invested in data protection compliance, mostly to mitigate economic and legal risks.

The Danish and other European supervisory authorities have released several recommendations and decisions interpreting the GDPR and relevant national legislation, allowing Danish businesses to conduct significantly more targeted and resource-efficient compliance operations. Denmark has lagged behind the majority of other EU Member States when it comes to data protection knowledge and compliance. So far, there have only been two cases in which fines have been imposed by Danish courts for GDPR breaches. The levels of fines (100.000 DKK and 50.000 DKK) were very low compared to fines in other countries (with fines up to millions). According to some privacy law professionals, there is a significant risk for Denmark to be considered a "safe haven" in relation to fines, which could cause companies that do not want to comply with the GDPR to locate in Denmark.¹³⁹²

Regarding the activities of law enforcement authorities, Denmark transposed the EU Data Protection Law Enforcement Directive (LED)¹³⁹³

¹³⁹¹ Data Protection Act, Act No. 502 of 23 May 2018 on supplementary provisions to the regulation on the protection of natural persons with regard to the processing of personal data and on the free movement of such data,

https://www.datatilsynet.dk/media/7753/danish-data-protection-act.pdf

¹³⁹² Claas Thöle, *Four years of GDPR: The Danish approach to data protection, or absence thereof?* (Sept. 15, 2022), <u>https://inplp.com/latest-news/article/four-years-of-gdpr-the-danish-approach-to-data-protection-or-absence-thereof/</u>

¹³⁹³ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504

through the Danish Law Enforcement Act.¹³⁹⁴ The LED "protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."1395 The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹³⁹⁶ The LED also requires for Member States, including Denmark, to enable data subjects to exercise their rights via national data protection authorities.¹³⁹⁷

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Danish data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the Member States apply the LED consistently."¹³⁹⁸ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.¹³⁹⁹ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if

¹³⁹⁵ European Commission. Data protection in the EU.

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu en ¹³⁹⁶ Article 11 (1) and (2) of the LED, https://eur-lex.europa.eu/legal-

¹³⁹⁸ Communication from the Commission to the European Parliament and the Council, First report on application and functioning of the Data Protection Law Enforcement Directive (EU) 2016/680 ('LED'), COM/2022/364 final, https://eur-lex.europa.eu/legalcontent/EN/TXT/?uri=CELEX%3A52022DC0364&gid=1658824345764#footnote136

necessary and proportionate, as laid down in the Charter of Fundamental Rights."¹⁴⁰⁰

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Denmark is also a member of the Council of Europe. Although it ratified the Council of Europe's Convention 108 for the protection of individuals with regard to the processing of personal data, Denmark did neither sign nor ratified its modernized version which includes a provision on algorithmic transparency.¹⁴⁰¹

The Danish data protection agency, the Datatilsynet, is the national supervisory authority in Denmark. Despite being a member of the Global Privacy Assembly (GPA) since 2002, the Datatilsynet has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;¹⁴⁰² the 2020 GPA Resolution on AI Accountability;¹⁴⁰³ the 2022 GPA Resolution on Facial Recognition Technology¹⁴⁰⁴ or the 2023 GPA Resolution on Generative AI.¹⁴⁰⁵

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Denmark is subject to the GDPR. Danes have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁴⁰⁶

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁴⁰⁷ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."1408

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment,

including through the provision of easily accessible contact points and hotlines." $^{1409}\,$

Independent Council for Ethical use of Data

According to Statistics Denmark, 83 percent of Danes have confidence in the way public authorities manage personal information.¹⁴¹⁰ The government has set a goal of increasing this to 90% by 2024 in worldclass digital services. To accomplish this goal and fully exploit the potential of artificial intelligence, the government has set to instill confidence in the public sector's and private sector's work with data and new technologies. The government has established six ethical principles that will serve as the foundation for future development and application of artificial intelligence and has developed several initiatives promoting a strong emphasis on data ethics and establishing a responsible foundation for AI as part of the Danish National Strategy for AI. A critical component of these initiatives is to increase the accountability of both the public and private sectors' use of data and AI by ensuring transparency and compliance with data ethical guidelines. The Danish government established an Independent Data Ethics Council in 2019 with the mission of advising the public and private sectors on data-related ethical issues.

Danish Labeling Program for Digital Accountability

Another key initiative is the "D-seal." The Danish government established an independent labelling scheme in collaboration with a consortium of the Confederation of Danish Industry, the Danish Chamber of Commerce, SMEdenmark, and the Danish Consumer Council. It is supported by the Danish Business Authority and financed by the Danish Industry Foundation. "All companies, regardless of their size, must meet the D-seal's data ethics requirements if they develop software and if they use or develop algorithms and AI."¹⁴¹¹

"The purpose of the D-seal is to promote data security, data protection and data ethics at Danish companies, so that customers and

consumers can feel safe when using the companies' products and services."¹⁴¹² The idea is for the seal to create a market incentive for actors to be more data ethical. The D-seal was launched in September 2021.

The D-seal is based on 8 criteria: A management system for data accountability; Awareness and safe behavior; Technical IT security; Requirements for suppliers' IT security and digital accountability; Transparency and control of data; Privacy & security by design & default; Reliable algorithms & AI; Data ethics.

In 2020, ahead of the negotiations regarding the draft EU AI Act, Denmark, together with 13 other EU Member States, issued a non-paper responding to the European Commission's White Paper on AI.¹⁴¹³ Through this non paper, Denmark called for a "flexible" framework with voluntary self-labelling schemes. Denmark argued for a risk-based approach towards AI, highlighting that trustworthy and human-centric AI goes hand in hand with innovation, economic growth and competitiveness. The non-paper concludes with a call to the EU for a voluntary European labelling scheme that would make it visible for potential users, for example, citizens, businesses as well as public administrations, which applications are based on secure, responsible and ethical AI and data.¹⁴¹⁴

Digitization of Public Administration

In October 2023, he Danish Data Protection Authority (Datatilsynet) published guidance on the development and use of AI by public authorities.¹⁴¹⁵ The report contained the results of the mapping of the use of AI across the public sector longer term. The Danish Data Protection Authority stated that it will look at more guidance on how organizations can

handle the risks that may be associated with the use of AI, such as bias and lack of transparency.

Lethal Autonomous Weapons

At a 2015 informal meeting of the Convention on Certain Convention Weapons Experts on Lethal Autonomous Weapons Systems, Denmark affirmed that weapons must remain under "meaningful human control.¹⁴¹⁶

In 2020, during the General Debate of the First Committee of the 75th UN General Assembly, the Permanent Representative of Denmark declared, "Denmark supports the work of the GGE on Lethal Autonomous Weapons Systems (LAWS), in particular the 11 guiding principles. In our work on these principles we should in particular aim to develop an understanding of the type and degree of human machine interaction."¹⁴¹⁷

Denmark was also one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."¹⁴¹⁸

In February 2023, Denmark participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Denmark endorsed a joint call for action on the responsible development, deployment

and use of artificial intelligence in the military domain.¹⁴¹⁹ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national. regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."¹⁴²⁰

Denmark also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁴²¹

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-

stakeholder community.¹⁴²² The second REAIM summit will take place in 2024 in the Republic of Korea.¹⁴²³

At the 78th UN General Assembly First Committee in 2023, Denmark co-sponsored and voted in favour¹⁴²⁴ of resolution L.56¹⁴²⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to Freedom House, Denmark receives high scores for Political Rights and Civil Liberties for a combined score of 97/100 in 2024. The 2024 Freedom House report notes that "Denmark is a robust democracy with regular free and fair elections. Citizens enjoy full political rights, the government protects free expression and association, and the judiciary functions independently. However, Denmark has struggled to uphold fundamental freedoms for immigrants and other newcomers."¹⁴²⁶ Denmark is a signatory to major human rights treaties, including the Universal Declaration of Human Rights. Denmark has also ratified several European human rights instruments, including the European Convention on Human Rights (ECHR).

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of

Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."¹⁴²⁷

The Danish Parliament established the Danish Centre for Human Rights in 1987, which was renamed the Danish Institute for Human Rights in 2002. As Denmark's NHRI (National Human Rights Institute), the Institute has counterparts in other countries.¹⁴²⁸

The OECD / G20 AI Principles

Denmark is a member of the OECD and has endorsed the OECD AI Principles.¹⁴²⁹

In a 2021, report on the state of implementation of the OECD AI Principles, the OECD noted the progress that Denmark is making towards the implementation of the OECD AI principles.¹⁴³⁰

Denmark is also a member of the Global Partnership on AI, a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."¹⁴³¹

UNESCO Recommendation on the Ethics of AI

Denmark has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.¹⁴³² It remains to be seen how this endorsement will translate in practice.

Evaluation

Denmark's National AI strategy, released in 2019, sets out an ambitious agenda for the country. Denmark has emphasized responsible AI development, established an independent Data Ethics Council, endorsed the OECD AI Principles, and promoted opportunities for public participation in the development of AI policy. Denmark has also introduced certification seals to promote trustworthy AI. In a non-binding paper issued ahead of the EU Act negotiations, Denmark, together with 13 other EU Member States, set out two visions for the EU's development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage.¹⁴³³ The question that Denmark's position raises is whether Denmark considers AI ethics as a means for AI deployment or the respect of ethical principles as a condition for AI deployment. With the adoption of the EU AI Act, Denmark shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously. As Denmark has endorsed the UNESCO Recommendation on the Ethics of AI, it remains to be seen the steps Denmark will take to translate it into practice. The ratification of the modernized Convention 108 for the protection of individuals with regard to the processing of personal data would also be a strong signal that Denmark prioritizes the fundamental rights of its citizens.

¹⁴³² United Nations Educational, Scientific and Cultural Organization (UNESCO), UNESCO member states adopt the first ever global agreement on the Ethics of Artificial Intelligence (Nov. 2021), <u>https://www.unesco.org/en/articles/unesco-member-states-</u> adopt-first-ever-global-agreement-ethics-artificial-intelligence.

Dominican Republic

National AI Strategy

"We find ourselves at a transformative moment for the future of our nation. AI stands as the emblematic technology of our century, with an impact that will resonate in all facets of our society. A vast territory of new opportunities is opening before us, a horizon of transformation whch calls us to immediate action." It is with these words that the President of the Dominican Republic introduced the National AI Strategy released in October 2023.

One of the key pillars of the Strategy is Smart Governance. Smart Governance is resting on ethics and includes the digitization of public administration.

Key objectives include the promotion of ethical and responsible AI in the Dominican Republic and the strengthening of the legislative and regulatory data protection framework.

The digitization of public administration will concern the adoption of AI systems in the fields of justice, health, education, security and transport. The Dominican Republic will develop the use of Chatbots and digital assistants based on generative AI. The Dominican Republic will also deploy predictive models of AI in order to identify citizens' needs and issues. AI will also be used to fight against corruption and frauds. The Dominican Republic will also establish a set of criteria to monitor, assess and measure the performance of AI-based public services. Key components will be algorithmic transparency and quality of the data used.

AI has also been addressed through other national and regional initiatives. The Dominican Republic's Ministry of Economy, Planning and Development (MEPyD) as described as "the pillars of the fourth industrial revolution, the internet of things, Big Data and big data analysis, cloud computing, artificial intelligence, among other aspects of the technology."¹⁴³⁴ MEPyD Minister Juan Ariel Jiménez recognized that "large volumes of data, artificial intelligence and blockchain are transforming economic activities around the world. This technological trend has repercussions on production, social interaction, planning and, of course, on public management."

The Dominican Republic has focused on the use of AI in the fields of public management and economic development. In 2021, President Luis

¹⁴³⁴ Gobierno de la República Economía, *Planificación, MEPYD uses artificial intelligence to improve decision-making in public management* (Nov. 28, 2019), <u>https://mepyd.gob.do/mepyd-utiliza-inteligencia-artificial-mejorar-la-toma-decisiones-</u> <u>la-gestion-publica</u>

Abinader issued Decree 71-21, establishing the Digital Transformation Cabinet¹⁴³⁵ to oversee the Dominican Republic's Digital Agenda 2030. The Cabinet "responds to the government's vision of making information and communication technologies a strategic tool for sustainable development (...) and inclusive for Dominican society."¹⁴³⁶ Lisandro Macarrulla, Minister of the Presidency, stressed that the Agenda "will raise national productivity and competitiveness levels, placing us in a better position in global markets (...) [and] will improve the quality of life of citizens because they will be able to receive more and better services from the State and they will develop new skills that will allow them to access better jobs."¹⁴³⁷ The Digital Agenda 2030 builds on previous digital strategies to address new technological challenges while incorporating a long-term vision that involves all social actors in its design and implementation. The Vice Minister of the Digital Agenda, José David Montilla, stated that working groups and thematic committees have been created that "include members of the cabinet, representatives of public and private institutions involved. specialists and volunteers, who will develop each of the pillars of the Agenda."

The Digital Agenda 2030 is divided into five main axes: 1) governance and regulatory framework; 2) Connectivity and access 3) education and digital skills; 4) digital government; and 5) digital economy. Each of these axes responds to specific objectives through performance measurement indicators. "By 2030, the Dominican Republic expects to have reduced the digital divide and ensured access to, and use of, digital technologies in a secure and sustainable environment."1438 The Digital Agenda has been developed in line with the broader development strategy, more particularly with regard to addressing the digital divide through education.

Digitalization and transparency are among the cross-cutting themes that will be addressed through the Inter-Development Bank's country

strategy with the Dominican Republic for the 2021-2024 period. The aim of the strategy is "to assist the country in recovering a robust pace of economic growth consistent with inclusive, resilient, and sustainable development."¹⁴³⁹ The IDB will concentrate its actions on three areas: "(i) improvement of public management and fiscal institutional structure; (ii) sustainable and inclusive productive reactivation; and (iii) strengthening of human capital."¹⁴⁴⁰

The Dominican Republic has also been part of the Caribbean Artificial Intelligence Initiative led by the UNESCO Cluster Office for the Caribbean and the Broadcasting Commission of Jamaica (BCJ), with the support of UNESCO Information for all Program (IFAP) National Committee of Jamaica.¹⁴⁴¹ The Initiative "aims to develop a sub-regional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States".¹⁴⁴² The Caribbean AI Policy Roadmap was released in June 2021,¹⁴⁴³ following a period of stakeholder consultation.¹⁴⁴⁴

On February 18-19, 2021, a two-day "Artificial Intelligence Forum: Opportunities to Accelerate Human Progress for Sustainable Development in Caribbean Small Islands Developing States"¹⁴⁴⁵ as organized to collect input from diverse stakeholders regarding AI policy topics. Only 1% of the stakeholder participants were from the Dominican Republic.¹⁴⁴⁶ In April 2021, three additional workshops addressing the AI Policy Roadmap

principles were held with stakeholders from the private sector, academia, civil society and youth.¹⁴⁴⁷

The Caribbean AI Policy Roadmap acknowledges that "AI systems raise new types of ethical issues that include, but are not limited to, their impact on decision-making in employment and labour, social interaction, health care, education, media, freedom of expression, access to information, privacy, democracy, discrimination, and weaponization. Furthermore, new ethical challenges are created by the potential of AI algorithms to reproduce biases, for instance regarding gender, ethnicity, and age, and thus to exacerbate already existing forms of discrimination, identity prejudice and stereotyping. As Caribbean nations expand their adoption of AI tools and other exponential technologies, stakeholders (policymakers, citizens, private sector, academia, and NGOs) must proactively collaborate to create strategies for the humanistic development of guidelines, regulations and laws. Boundaries should be defined to regulate the AI decision-making, AI rights, inclusion of manual overrides and AI accountability protocols."

The Policy Roadmap has been developed based on a series of "assumptions" about the Caribbean and Artificial Intelligence. These include: "Human creativity is inextricably linked to Caribbean identify, economic viability and sustainable development"; "AI is a product of human creativity"; "AI is in service of humanity"; "AI must be inclusive, fair, transparent, accountable"; "AI must be regulated"; "Human rights supersede AI rights"; "Bias is everywhere in AI"; "We Are Our Data"; "Data rights will be the civil rights movement of the 21st century."¹⁴⁴⁸

The Policy Roadmap is based on six principles: Resiliency, Governance, Transformation, Upskilling, Preservation and Sustainability.¹⁴⁴⁹ With regard to governance, actions to be taken include:

- "Develop Responsible AI Governance, Oversight, Principles & Policies to Do No Harm and to enhance safety, security and accountability of AI.
- Promote AI as a tool for service to humanity.
- Establish common values and principles to ensure fairness, transparency and accountability in digital transformation and increased integration of AI algorithms.

- Develop policy and legislation to enable the establishment of national and regional AI Governance Committees / Oversight Boards as well as national and regional licensing regime to manage and monitor the development of standards that govern the industry including technical code of conduct for developers, procurement guidelines for buyers, design and use principles and ethically aligned design standards.
- Regulate AI industry to provide redress and punishment for individuals & companies that violate citizen rights and wellbeing including banning cyberbullying, hate crimes, discriminatory algorithms, disinformation and graphically violent images inclusive of penalties and fines.
- Develop an AI Appeal Court and Online Dispute Resolution System.
- Increase advocacy for AI ethics by targeting software developers at global forums and hosting a global software conference to network, lobby, share research and initiate collaborations with big tech.
- Develop AI software to test AI for biases and identify AI applications in most need of governance. Protect citizen privacy and instill trust."¹⁴⁵⁰

The Dominican Republic is also a member of the Community of Latin American and Caribbean States (CELAC) and participated in its seventh Summit on the 24 January 2023 in Buenos Aires. The Summit culminating in the signature of the "Buenos Aires Declaration" which fortifies the commitment to safeguard the rights and interests of citizens of the signatories, including the Dominican Republic, fostering greater regional integration and collaboration on topics such as AI-based cyberthreats and disinformation.¹⁴⁵¹

Public Participation

To engage with external stakeholders in development of digital service and policy design, the Dominican Republic used focus groups, public consultations and social media.¹⁴⁵²

Data Protection

The Dominican Constitution enshrines the right to the protection of personal data in public and private records under Section 44(2) and provides that data controllers and processors are to comply with data security, professional secrecy, data quality and data loyalty.¹⁴⁵³

The Dominican Republic issued Law No 172-13 on the Comprehensive Protection of consumers or users.¹⁴⁵⁴ There is no established general data protection authority. The General Law for the Protection of Consumer or User Rights No 358-05 declared that the National Institute for the Protection of Consumer Rights, "Pro Consumidor" monitors data protection compliance in relation to consumers. Pro Consumidor does not have enforcement powers although they do have mediation and conciliation competences.¹⁴⁵⁵

The Dominican Republic has started to draft a new data protection law in line with international standards such as the Council of Europe's Convention 108+, and has received support from the Council of Europe to this end.¹⁴⁵⁶ Should the initiative come to fruition, it would be an opportunity for the Dominical Republic to provide data subjects with the right to algorithmic transparency which is one of the main innovation of the modernized Convention 108.

law?inheritRedirect=false&redirect=https%3A%2F%2Fwww.coe.int%2Fen%2Fweb%2F cybercrime%2Fglacyplusactivities%3Fp p_id%3D101_INSTANCE_DD9qKA5QlKhC %26p p_lifecycle%3D0%26p p_state%3Dnormal%26p_p_mode%3Dview%26p_p_col_ id%3Dcolumn-4%26p_p_col_count%3D1

According to the 2023 National AI Strategy, the revision of Law No 172-13 shall include the establishment of safeguards for the protection of personal data and human rights in the context of AI implementation and should be ready in 2025.¹⁴⁵⁷

The Dominican Republic developed a Digital Government guide that includes a provision on the documentation and explainability of digital government initiatives, software, and services. However, specific guidelines for algorithmic transparency and explainability are not provided.¹⁴⁵⁸

Facial Recognition

In 2021, the Dominican Republic's General Director of Immigration, Enrique García, reported that facial recognition technology will be used to enforce security in airports and border entry to combat drug trafficking and international crime.¹⁴⁵⁹ In September 2022, the Dominican Airport Association explained that there are intelligent security cameras" in Dominican airports.¹⁴⁶⁰

In March 2022, the Director of the General Directorate of Passports (DGP) said that the country will transition from using mechanical passports to electronic passports. "the director of the DGP explained that the electronic passport would have an integrated chip that facilitates facial recognition and will contain all the carrier information. However, Pichardo added that at the moment, this change does not have a scheduled date because advice is being sought to prevent errors that entail significant expenses, as has happened with other countries."¹⁴⁶¹

Lethal Autonomous Weapons

The National AI Strategy makes clear that the goal of the Dominican Republic is to pursue the prohibition of the use of AI as a weapon of war.¹⁴⁶²

The Dominican Republic endorsed 2019 Declaration on Lethal Autonomous Weapons prepared by France and Germany and opened for endorsement during the Alliance for Multilateralism event on 26 September 2019. The Declaration posits 11 Principles on Lethal Autonomous Weapons Systems. These principles respond to challenges relating to the development of LAWS within the UN's Convention of Certain Conventional Weapons (CCW).¹⁴⁶³ These principles affirm among others that "international humanitarian law applies to these systems; a human must always be responsible for the decision to use these systems; [and] States must examine the legality of these new weapons that they are developing or requiring at the design stage.

The Dominican Republic is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."¹⁴⁶⁴

In February 2023, the Dominican Republic endorsed, along with more than 30 other Latin American and Caribbean states, the Belén

Communiqué,¹⁴⁶⁵ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Also in February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.¹⁴⁶⁶ The Dominican Republic endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁴⁶⁷

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.¹⁴⁶⁸ The second REAIM summit in will be take place in 2024 in South Korea.¹⁴⁶⁹

At the 78th UN General Assembly First Committee in 2023, the Dominican Republic co-sponsored resolution L.56 on autonomous

weapons systems¹⁴⁷⁰ and voted in favour¹⁴⁷¹ of it, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

In 2024, Freedom House ranked the Dominican Republic as "partly free," with a score of 68/100 for political rights and civil liberties.¹⁴⁷² According to Freedom House 2024 report, "The Dominican Republic holds regular elections that are relatively free, though recent years have been characterized by controversies around implementing a new electoral framework." "Pervasive corruption undermines state institutions and the use of excessive force by police is a problem. Discrimination against Dominicans of Haitian descent and Haitian migrants, as well as against LGBT+ people, remain serious problems."

OECD/G20 AI Principles

The Dominican Republic has not endorsed the OECD AI principles.¹⁴⁷³ According to OECD AI Principle 2.5 regarding international co-operation for trustworthy AI, "Governments, including developing countries and with stakeholders, should actively cooperate to advance these principles and to progress on responsible stewardship of trustworthy AI. Governments should work together in the OECD and other global and regional fora to foster the sharing of AI knowledge, as appropriate." The OECD acknowledges the work of the Inter-American Development and its ""fAIr LAC" initiative to promote the responsible and ethical use of AI and improve the public services e.g., education, health, and social protection, in

Latin American and Caribbean (LAC) countries,"¹⁴⁷⁴ which includes the Dominican Republic.

In 2022, the OECD, in partnership with the Development Bank of Latin America (CAF) also published a report on "The Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean" including the Dominican Republic.¹⁴⁷⁵

UNESCO Recommendation on the Ethics of AI

The Dominican Republic is a member state of UNESCO.¹⁴⁷⁶ The Dominican Republic endorsed the UNESCO Recommendation on AI Ethics.¹⁴⁷⁷ The CAF and UNESCO signed a letter of intent to implement the Recommendation in Latin America and the Caribbean and support the establishment of a Regional Council which incorporates all governments of the region.¹⁴⁷⁸

The Domnican Republic is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.¹⁴⁷⁹ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.¹⁴⁸⁰

The Dominican Republic also signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁴⁸¹ It aligns with the UNESCO

¹⁴⁸¹ Cumbre Ministerial y de Altas Autoridades de América Latina y el Caribe, Declaracion de Santiago "Para promover una inteligencia artificial ética en América Latina y el Caribe" (Oct. 2023),

Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, nondiscrimination, gender equality, accessibility, sustainability, privacy and data protection.¹⁴⁸² The new National AI Strategy states that the Dominican Republic will draft of a code of AI ethics in line with the UNESCO Recommendation.¹⁴⁸³

Evaluation

The Dominican Republic's endorsement of the UNESCO Recommendation on the Ethics of AI seems to have invigorated efforts towards ensuring responsible AI governance. The Dominican Republic adopted a National AI Strategy with a clear ethical axis. It remains to be seen how the Strategy will be implemented in practice and whether it will lead to the adoption of algorithmic transparency not only in the public sector but in the private sector as well through the revision of the data protection legislation. The Dominican Republic has adopted an exemplar position with regard to the probihition of autonomous weapons. The use of AI for surveillance purposes remains however of concern.

Egypt

National AI Strategy

In November 2019, the Egyptian Cabinet approved the formation of a National Council for Artificial Intelligence (NCAI) tasked with "outlining, implementing and governing the AI strategy in close coordination with the concerned experts and entities."¹⁴⁸⁴ The Technical Committee of the National Council for Artificial Intelligence, composed of representatives from all relevant government entities, as well as independent experts in the field of Artificial Intelligence (AI)¹⁴⁸⁵ released the National AI Strategy in 2021. On this occasion, the President of the Arab Republic of Egypt, Abdel Fattah Al-Sisi, stated, "We strongly believe that as emerging technologies create opportunities, they also pose challenges that we should be prepared for. Thus, we aim, through the National AI Strategy, to open the door to dialogue with stakeholders and promote international cooperation to exchange views on the best practices for developing and using AI to build the common good. This is in addition to adopting and leading strong stances on AI ethics and the social and economic impact of using AI applications in African and Arab countries, under the umbrella of the African Union (AU) and the League of Arab States (LAS) to reach a common vision that reflects our needs and aspirations, and conforms to our values and principles."1486

The National AI Strategy builds on the previous work of the Ministry of Communications and Information Technology and the Ministry of Higher Education and Scientific Research, along with input from independent experts and private sector companies.¹⁴⁸⁷

The two main objectives of the Egyptian National AI Strategy are to: "Exploit AI technologies to support the achievement of Egypt's sustainable development goals, to the benefit of all Egyptians; Play a key

¹⁴⁸⁴ National Council for Artificial Intelligence (NCAI), Ministry of Communications and Information Technology (Egypt), <u>https://mcit.gov.eg/en/Artificial_Intelligence</u>

¹⁴⁸⁵ Ministry of Communications and Information Technology, *Egypt National Artificial Intelligence Strategy* (July 2021), paragraph 2,

¹⁴⁸⁶ Ministry of Communications and Information Technology, *Egypt National Artificial Intelligence Strategy* (July 2021), paragraph 10,

https://mcit.gov.eg/Upcont/Documents/Publications_672021000_Egypt-National-AI-Strategy-English.pdf.

¹⁴⁸⁷ Ibid.

role in facilitating regional cooperation within the African and Arab regions and establish Egypt as an active international player in AI."¹⁴⁸⁸

The strategy consists of four pillars:

- 1) AI for government: the automation of government processes and the embedding of AI in decision-making cycles in order to increase efficiency and transparency.
- 2) AI for development: the application of AI in different economic sectors, prioritizing agriculture/environment/water management; healthcare; Arabic natural language processing; economic planning and development; and manufacturing and smart infrastructure management.
- 3) Capacity building: increasing general awareness of AI and providing professional training.
- 4) International activities: fostering cooperation at both the regional and the international level.

In turn, these four pillars are supported by four categories of enablers:

- 1) Governance: including ethics, laws and regulations, tracking and monitoring.
- 2) Data: including collection, management and monetization strategies.
- 3) Ecosystem: including private sector, research and academia, and civil society
- 4) Infrastructure: including fair access to compute, storage, networking, and other assets.¹⁴⁸⁹

When it comes to "Governance" as an enabler, the National Strategy has shed light on the importance of adopting responsible/ethical AI policies, legislations and regulations "to mitigate potential misuse [of AI and] (...) promote and enable the widespread adoption of AI solutions."¹⁴⁹⁰

Towards that end, the National Strategy has put in place the following Key Performance Indicators (KPIs) to assess the status of ethical AI in Egypt:

- The establishment of a dedicated track within NCAI for AI Ethics
- Publish Guidelines for Responsible and Ethical development of AI
- A set of rules and regulations for responsible AI use

¹⁴⁸⁸ Ibid.

¹⁴⁸⁹ Egypt National AI Strategy

¹⁴⁹⁰ Egypt National AI Strategy, paragraph 10.1.2.

- Ethics in AI/technology courses being offered in universities as part of computing degrees¹⁴⁹¹

In this regard, the most significant milestone is the adoption of the Egyptian Charter for Responsible AI in February 2023, which offers "actionable insights and policies for decision makers in government, academia, industry, and civil society."¹⁴⁹² Egypt's efforts were also witnessed in establishing AI Faculties at Egyptian universities and teaching AI ethics in computer science faculties.¹⁴⁹³

The National Strategy is implemented in a phased approach. The first phase (2020-2022) focused on "training graduates and professionals to fulfil market needs and proving the value of AI in the different strategic sectors by starting pilot projects within government in partnership with local and foreign entities" as well as "[B]uilding regional bridges to unify AI efforts on the African and Arab levels, as well as active participation in international organizations on topics such as AI Ethics, AI for SDGs, and the impact of AI on labor markets and education."¹⁴⁹⁴

In the second phase (2023-2026), the emphasis will be placed on expanding AI into additional sectors. The government intends to establish a "paperless, collaborative, and smart" government.¹⁴⁹⁵ Egypt signed a Memorandum of Understanding (MoU) with Thales, a French technology solutions company in order to integrate AI solutions to governmental services and to build AI capacity.¹⁴⁹⁶

In December 2023, the National Council for AI, chaired by Minister of Communications and Information Technology Amr Talaat, discussed plans regarding the second phase¹⁴⁹⁷ of the National AI Strategy.¹⁴⁹⁸ The second phase will start in the second quarter of 2024 and encompass several key economic sectors. The second phase of the Strategy aims to develop initiatives across six key pillars: governance, ecosystem, information infrastructure, data, human resources, and technology. Priority initiatives

include raising public awareness about AI, supervising the domestic data lifecycle and fostering AI expertise.

Egypt is actively working to bring the perspective of developing countries to international discussions, thereby helping to narrow the AI knowledge and development gap between developed and developing countries.¹⁴⁹⁹ In 2019, Egypt participated in the drafting of the UNESCO Recommendation on the Ethics of AI, serving as the Ad Hoc Expert Group's vice-chair.¹⁵⁰⁰

Egypt is also positioning itself as a regional leader in the AI and digital policy world. In 2019, Egypt hosted the third session of the African Union (AU) Specialized Technical Committee on Communication and Information Technologies. This meeting was crowned by the adoption of the "Sharm El Sheikh Declaration", which recognized and reaffirmed the necessity for a coherent African Digital Transformation Strategy "to guide a common, coordinated response to reap the benefits of the Fourth Industrial Revolution".¹⁵⁰¹ This showcases the pioneering and regional leadership role Egypt assumes.

Egypt also helped create the AU African Working Group on AI, a group tasked with drafting a continent-wide AI strategy.¹⁵⁰² This strategy aspires to create a common stance on AI issues, areas of priority, and the role of AI in vital sectors as well as ensure "the governance of AI and the protection and availability of data, and developing AI regulations." The strategy also aims to position the African voice at the center of international fora and to "bridge the digital divide between developed [States] and African countries."¹⁵⁰³ Such active engagement has culminated in Egypt being elected Chair of the African AI Working Group.¹⁵⁰⁴ In 2021, UNESCO distributed an AI needs assessment to African countries, the results of which would inform the African Union's Working Group future

work.¹⁵⁰⁵ UNESCO distilled their survey findings into four key recommendations: the creation of an AI policy toolkit, the development of implementation guides and model use cases, the deployment of AI pilot projects in areas of interest to African countries, and the establishment of policy guidelines to tackle gender equality issues in AI.¹⁵⁰⁶ In February 2021, Egypt hosted the first meeting of the African AI Working Group, which led to the issuance of the "Common Africa Position Paper on the Priority Areas of Africa towards AI", followed by the second meeting, which was also hosted by Egypt in December 2022.¹⁵⁰⁷ Overall, the meetings of African Working Group on AI aim to craft an African AI strategy in line with African Agenda 2063.¹⁵⁰⁸

Egypt also chairs the Arab League's AI Working Group.¹⁵⁰⁹ In December 2021, the group held their third meeting, in which they discussed the draft of the unified Arab strategy for AI agreed upon by the Working Group.¹⁵¹⁰

Public Participation

The Ministry for Communications and Information Technology has launched in mid 2021 an AI Platform¹⁵¹¹ which allows the public to easily access the National Strategy, in addition to AI news, details about AI events, projects, and capacity-building programs, and information about AI partnerships with governments, international organizations, private sector companies, and academia. The AI Platform also includes a page where researchers can submit academic articles.

Regarding the drafting of the National AI Strategy, a stakeholder consultative process took place with academics, independent experts, and

private sector companies. Nevertheless, neither the National Council for AI nor the Ministry for Communications and Information Technology has sought public feedback on any AI policy proposals.

Data Protection

The Egyptian Constitution protects citizens' rights to privacy under Article 57.¹⁵¹²

Egypt passed Law No. 151 on the Personal Data Protection Law (PDPL) in July 2020.¹⁵¹³However, the Minister of Communications and Information Technology has not issued any Executive Regulation of the PDPLyet despite the Law requiring so within six months after the entry into force of the Law.¹⁵¹⁴ The PDPL was drafted following the example of the European General Data Protection Regulation (GDPR).¹⁵¹⁵ Article 2 of the PDPL provides for data subject rights such as the right to erasure, the right to be informed, the right to access, and the right to rectification and to object.¹⁵¹⁶ The PDPL also enshrines principles applicable to the collection, storage and processing of personal data. These principles are (1) Data minimization; (2) Accuracy and security; (3) Lawfulness, and (4) Storage limitation. The PDPL foresees financial sanctions in the event of violations regarding the protection of personal data.

The PDPL provides for the creation of a data protection authority, namely, the Data Protection Center (DPC). The DPC is meant to be be an independent authority which operates under the Ministry of Communications and Information Technology.¹⁵¹⁷ The DPC will set and apply decisions, regulations, and measures in relation to data protection and foresee an adequate mechanism for law enforcement. The DPC is not yet operational.¹⁵¹⁸

As of yet, Egypt is not a member of the Global Privacy Assembly (GPA) and has not endorsed the 2018 GPA Declaration on Ethics and Data

Protection in Artificial Intelligence,¹⁵¹⁹ the 2020 GPA Resolution on AI Accountability,¹⁵²⁰ the 2022 GPA Resolution on Facial Recognition Technology¹⁵²¹ or the 2023 GPA Resolution on Generative AI.¹⁵²²

At a conference on the challenges that the right to privacy faces amid the rapid development of artificial intelligence organized in July 2022 by Egypt's Supreme Standing Committee for Human Rights, in collaboration with the Arab Organization for Human Rights (AOHR), the Minister of Social Solidarity, Nevine El-Qabbaj stated that "artificial intelligence has breached all limits, even our mental privacy."¹⁵²³

Algorithmic Transparency

The PDPL does not refer to algorithmic transparency. However, the principles of "transparency and explainability" are enshrined in the Egyptian Charter for Responsible AI, in addition to the right of the user to know "when he or she is interacting with an AI system and not a human being."

The Charter provides that "[a]ny end-user using an AI system has the fundamental right to know when he or she is interacting with an AI system and not a human being, for example in the case of automated call centers." The Charter also emphasizes that: "Developers of AI systems should always strive to provide transparent and explainable AI solutions. The degree of explainability required will vary according to the application domain and project requirements, but project sponsors must be clear on the potential tradeoff between the accuracy/quality and explainability of any given model. When in doubt, developers should opt for simpler models with

higher degrees of explainability, without compromising the minimum desired quality and accuracy."¹⁵²⁴

Biometric Recognition

Egypt is increasingly adopting biometric technologies for security and surveillance. A deal was struck between the Arab Organization for Industrialization and Idemia, a leading biometric company, for the latter to produce biometric devices, including facial recognition systems, in Egypt.¹⁵²⁵ The Egyptian government agreed with Idemia in early 2020 to build a digital ID system for Egypt Post "backed by fingerprint biometrics and citizen IDs".¹⁵²⁶ In 2021, Fingo, another organization specializing in biometrics, announced it had partnered with Egypt to develop a vein-based recognition system for the country's national ID program.¹⁵²⁷

On the sidelines of the recent COP27 hosted in Sharm El-Sheikh, the Egyptian government signed an MoU with the US-based company, Honeywell International Inc, to "run a pilot model in Sharm El-Sheikh by transforming the new building of the South Sinai Governorate General Assembly and Sharm El-Shaikh Hospital into sustainable smart buildings relying on modern technologies, especially artificial intelligence and data analytics."¹⁵²⁸ This agreement came as the second deal after Egypt contracted Honeywell in 2019 to provide city-wide public safety, security and surveillance system for the new administrative capital, which, according to a press release by the company, will "integrate advanced Internet of Things (IoT) software and (...) also connect video feeds from more than 6,000 IP cameras over a futureproof wireless network, and run sophisticated video analytics to monitor crowds and traffic congestion,

detect incidents of theft, observe suspicious people or objects, and trigger automated alarms in emergency situations."¹⁵²⁹

These deals were concluded in a legal vacuum despite the fact that biometric systems could adversely impact several human rights, including the right to freedom of expression, the right to assembly, and the right to privacy.¹⁵³⁰

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Egypt, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

This is the case for example of the EdTech product "Edmodo" used in Egypt, which according to Human Rights Watch, has the capability to collect Android Advertising IDs which enable advertisers to track children, over time and across different apps installed on their device, for advertising purposes. Edmodo also allows for shadow profiling by getting access to contacts' details and photos, if saved on the phone. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.¹⁵³¹

AI Credit Scoring

Egypt introduced AI Credit Scoring in the Egypt National AI Strategy.¹⁵³² With AI Credit Scoring in finance and banking, Egypt aims to providing score cards to the finance sector and enabling access to financing, and thus empowering un-bankable individuals and small businesses to contribute greatly to the economy.

Lethal Autonomous Weapons

While Egypt has signed the Convention on Conventional Weapons (CCW), it has not yet ratified the Convention.¹⁵³³ However, Egypt has been actively participating in CCW meetings on killer robots since 2014.¹⁵³⁴Bassem Yehia Hassan Kassem Hassan, a representative of Egypt, speaking on behalf of the Arab Group, stated that the presence of weapons of mass destruction and their modernization are a grave threat to international security and development, and that international community must develop norms and rules to encourage responsible behavior and increase cooperation to reach concrete progress in dealing with threats posed by lethal autonomous weapons and the use of artificial intelligence in armaments.¹⁵³⁵

On numerous occasions, Egypt has warned that these weapon systems may have "possible ramifications on the value of human lives [and] the calculation of the cost of war"¹⁵³⁶, and thus, there must be "specific prohibitions on acquisition, research and development, testing, deployment, transfer, and use [of these systems]".¹⁵³⁷ Egypt has called for a moratorium on lethal autonomous weapons systems until a ban is achieved, supporting "a legally binding instrument against the development and manufacture of

such weapon systems (...) as well as the regulation of existing systems that fall within [the CCW] mandate."¹⁵³⁸

At the 78th UN General Assembly First Committee in 2023, Egypt voted in favour¹⁵³⁹ of resolution L.56¹⁵⁴⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Egypt has endorsed the Universal Declaration of Human Rights. However, Freedom House gave Egypt, in regard to political rights and civil liberties, a freedom score of 18/100 for 2023, considering it as "not free".¹⁵⁴¹ Freedom House also considers Egypt as "not free", scoring 27/100, with regard to internet freedom.¹⁵⁴²

In March 2021, 31 UN member states penned a joint declaration, supported by numerous NGOs, strongly condemning human rights abuses in Egypt. The declaration highlighted constraints on citizens' freedom of expression, as well as their ability to voice political opposition and to peacefully assemble.¹⁵⁴³

Egypt is criticized by international human rights organizations and civil society for state surveillance on citizens' communications and

censorship on content online.¹⁵⁴⁴ Enactment of Law No. 175/2018 on Combating Information Technology Crimes (Anti-Cyber Crime Law) aimed to ensure online safety, security and fraud, however, it is evaluated as a regulation which can be used for surveillance due to vague definitions and language.¹⁵⁴⁵ Moreover, there is also criticism on Egypt's collaboration procedures with private software and technology solution companies for the lack of transparency and accountability in projects such as Idemia and Thales.¹⁵⁴⁶

In late 2021, Egypt launched the National Human Rights Strategy.¹⁵⁴⁷ On this occasion, President Abdel-Fattah El-Sisi declared 2022 as the year of civil society.¹⁵⁴⁸ The Human Rights Strategy is based on three axes: a) Constitutional Guarantees for Enhancing Human Rights Respect b) Egypt's International and Regional Human and Protection. Rights Obligations, and 3) Sustainable Development Strategy: Egypt Vision 2030. While the Strategy tackled all human rights, particularly political rights, it did not address the positive/adverse impact of technology on these rights or the human rights implications of artificial intelligence. The Strategy referred only to the use of technology to enhance human rights under the "Right to Litigation and Strengthening Guarantees for a Fair Trial." The National Human Rights Strategy emphasizes that one of the target results of the Egyptian State is the expansion of "the automated litigation system (...) in courts and their support entities to enhance speedy justice."1549 Accordingly, the State adopted various measures "most notably

the automation of many judicial services, including automated litigation process in misdemeanor courts and launching remote litigation in civil and economic courts."¹⁵⁵⁰

In February 2023, Egypt released the Egyptian Charter on Responsible AI. The Charter builds on the OECD AI Principles and UNESCO Recommendation on the Ethics of AI. The Charter recognizes the significant risks AI might pose, such as bias, data drift, lack of transparency, lack of legal responsibility, and lack of fairness and equality. Therefore, it introduces guidelines and best practices for assessing AI systems trustworthiness with the aim to protect human rights and ensure the responsible, transparent, and fair use of the technology.¹⁵⁵¹

For instance, the Charter, as a reflection of the human-centeredness principle, stresses that "[t]he primary goal of using AI in Government is the well-being of citizens, including combating poverty, hunger, inequality, illiteracy, and corruption; achieving prosperity and inclusion." As for fairness, the Charter sets out a number of rules, including that "AI systems, especially data-driven models, must be monitored regularly while in production to ensure no data drift occurs. In those cases, the quality of the data must be reviewed and if needed, the underlying models need to be changed to accommodate changes in data." With regard to accountability, the Charter provides that the "[u]ltimate responsibility and accountability for the behavior and outcomes of an AI system must always lie with natural or legal persons. AI systems should not be given legal personality themselves." The Charter also stresses that "[f]inal Human Determination is always in place [which] means that ultimately, humans are in charge of making decisions, and are able to modify, stop, or retire the AI system if deemed necessary."1552

OECD / G20 AI Principles

Although Egypt is not an OECD member and has not endorsed the OECD AI Principles, it has taken actions to implement them. As reported by the OECD in their 2021 white paper "State of implementation of the OECD principles," Egypt has set up a governing body (the National Council for AI) to oversee the implementation of its AI strategy.¹⁵⁵³ This is a

concrete first step toward fulfilling the OECD recommendation of ensuring "a policy environment that will open the way to deployment of trustworthy AI systems."

Egypt has also taken steps toward fulfilling three of the four other OECD recommendations. The creation of both the AI Platform and the new Egyptian Center of Excellence,¹⁵⁵⁴ a government group that will work with private or academic partners to deliver AI projects on behalf of beneficiaries, help to "foster accessible AI ecosystems with digital infrastructure and technologies and mechanisms to share data and knowledge." Empowering "people with the skills for AI and support workers for a fair transition" will be accomplished through enrollments in the newly created "Faculties of AI" at eight public and private Egyptian universities.¹⁵⁵⁵ Egypt's cooperation "across borders and sectors to progress on responsible stewardship of trustworthy AI" is evidenced by its participation in and leadership of international AI committees.

The final OECD recommendation is that governments "facilitate public and private investment in research & development to spur innovation in trustworthy AI." The Egyptian government's future plans set a public goal of 7.7% of Egyptian Gross Domestic Product deriving from AI & robotics by 2030.¹⁵⁵⁶

The recently adopted Charter on Responsible AI purports to demonstrate how the country will interpret and implement the OECD AI Principles of "human-centeredness", "transparency and Explainability", "fairness", "accountability", "security and safety".¹⁵⁵⁷

Although Egypt is not a member of the Global Partnership on AI (GPAI), a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is "built around a shared commitment to the OECD [AI Principles],"¹⁵⁵⁸ the Egyptian

Ministry of Communications and Information Technology participated in GPAI Mid-Year Rendez-Vous 2021 and Second GPAI Summit on 11-12 November 2021.¹⁵⁵⁹

In May 2022, Egypt also took part in the 1st session of the OECD Working Party on Artificial Intelligence Governance, which focused on National AI Policies.¹⁵⁶⁰ This was followed by the Ministry hosting an OECD delegation in late 2022 to discuss the state of AI development in Egypt.¹⁵⁶¹

UNESCO Recommendation on the Ethics of AI

Egypt endorsed the UNESCO Recommendation on AI Ethics¹⁵⁶² and took an active part in its drafting.¹⁵⁶³ Egypt embedded most of the principles adopted in the UNESCO Recommendations on AI Ethics in its Charter for Responsible AI, albeit no concrete implementation has taken place so far. The Charter draws upon the guidelines developed by UNESCO and other organizations by translating these recommendations into steps "to help ensure the responsible development, deployment, management, and use of AI systems in the country". It is worth mentioning that although the Charter recognizes the principle of "human-centered AI", it did not acknowledge that "Respect, protection and promotion of human rights and fundamental freedoms" lie at the heart of Ethical AI.

Evaluation

Egypt has been a leading voice in the African and Arab world to foster the regulation of AI. It has been chairing African and Arab working groups on the topic and actively participated in the drafting of the UNESCO Recommendation on the Ethics of AI. A key milestone was the adoption of the Egyptian Charter on Responsible AI. Egypt will soon start implementing the second phase of its National Strategy. Concerns exist with regard to the lack of open and public participation in AI policy initiatives. The use of biometric technologies for security and surveillance is of particular concern in a country deemed "not free" according to Freedom House.

Estonia

National AI Strategy

The Estonian Cabinet adopted its first National AI Strategy in July 2019.¹⁵⁶⁴ The Government Chief Information Officer Office, based in the Ministry of Economic Affairs and Communications, was tasked with steering the AI Strategy. The first National AI Strategy built on a May 2019 report of Estonia's AI Taskforce.¹⁵⁶⁵ The actions detailed in the first AI Strategy were designed to advance the adoption of AI solutions in both the private and public sectors, to increase AI capacities and research and development, and to develop the legal environment to facilitate AI. The first AI Strategy committed to the establishment of a steering group, comprised of government representatives and other stakeholders, in order to monitor the implementation of the AI Strategy. In addition, the e-Estonia Council was tasked with considering the strategy's implementation annually. The first AI Strategy was conceived as a short-term strategy, intended to apply up until 2021. By adopting a short-term strategy, Estonia intends to gain insight and develop a long-term strategy in response to the experience gained. Estonia aims to monitor the development of the short-term action plan and keep the European Union informed of developments.

In spite of Estonia's national digital adviser initially proposing the adoption of a law granting legal personality to AI, Estonia's AI Taskforce concluded that no substantial legal changes were currently required to address the issues presented by AI.¹⁵⁶⁶ The Taskforce Report maintained, "Both now and in the foreseeable future, kratts are and will be human tools, meaning that they perform tasks determined by humans and express the intention of humans directly or indirectly." Accordingly, the AI Taskforce Report clarified that the "actions" of AI are attributable to the relevant state body or private party that uses the AI solution.¹⁵⁶⁷ Minor changes recommended include the removal of obsolete laws and providing additional clarity in order to facilitate the use of AI. Estonia's Chief

Information Officer stated that Estonia wants to "build on the EU framework, not to start creating and arguing" for a separate Estonian framework.¹⁵⁶⁸ A draft EU AI Act is currently being negotiated.

Neither the first AI Strategy nor the AI Taskforce Report provided significant detail on questions related to the ethics of artificial intelligence. Reference was, however, made to guidance provided by the European Commission for the development and implementation of trustworthy artificial intelligence.¹⁵⁶⁹ The Taskforce Report acknowledged that "trustworthy artificial intelligence must be guided by the principles of human rights, positive rights, and values, thus ensuring the ethics dimension and objective."¹⁵⁷⁰ The Report recognized the relevance of the EU Charter of Fundamental Rights and referred to the following rights as central according to the Commission guidance on AI: the right to human dignity, the right to freedom, respect of the principles of democracy and the state, based on the rule of law, right to equality, non-discrimination, and acknowledgement of minorities, and civil rights.

To ensure that the development and use of AI is ethical, the Taskforce Report emphasized the importance of ensuring that AI is humancentric; that rights, ethics principles, and values are fundamental; and that AI may bring unintended consequences. The first AI Strategy referenced the EU guidelines that identify the importance of the following values: human agency, technical reliability, privacy and data management, transparency, non-discrimination, social and environmental well-being, and responsibility.

The Estonian Cabinet adopted its new Artificial Intelligence Strategy (2022-2023) as a continuation of Estonia's first national AI

strategy (2019–2021).¹⁵⁷¹ The new AI strategy is also being carried out in line with the objectives laid out by the European Commission in its Coordinated Plan on Artificial Intelligence.¹⁵⁷²

The new AI strategy acknowledges that the development of the initial strategy took place at a time when technological advances with regard to AI were slower and the public sector was just starting to implement its first projects. By contrast, the use of AI has now become an essential and unavoidable part of the development of the digital state. "Today more than 80 AI projects have been performed, more than 40 organisations have been involved, and a number of AI groups have been developed, allowing easier implementation by both the private and public sector."

The new strategy is more concerned with human-centered and trustworthy AI and lists specific actions in this regard. The strategy mentions that the aim "is to regulate the development and use of AI in a human-centered and trustworthy way, i.e. in a reliable, ethical, and lawful way that respects fundamental rights, as well as to establish a set of rules on civil liability related to AI."¹⁵⁷³ As an example of the specific actions to implement human-centric and trustworthy AI, the new strategy has requested the Ministry of Economic Affairs and Communications (MEAC), the Ministry of Justice (MJ) and the Data Protection Inspectorate (DPI) to develop "requirements and measures to support the development and use of human-centered and reliable AI solutions". In order to "maintain and increase society's confidence in the use of the AI and to mitigate the potential risks associated with their use, policies should be developed and appropriate requirements and measures implemented.¹⁵⁷⁴ For instance, as one concrete relevant measure for transparent data processing, a requirement to implement a data monitor could be introduced." There are specific activities planned to implement these goals, one of them consist for example in the "development of a fundamental rights impact assessment

model and guidance materials for assessing and mitigating risks to fundamental rights in the development and use of the AI."¹⁵⁷⁵

With regard to legislative changes, a package of 'AI laws' to enable the deployment of AI, including a possible initiative regarding the regulation of the effects of algorithmic systems, (the so-called 'AI VTK'), was drafted with the aim of identifying possible changes to existing law to accommodate the introduction of AI.¹⁵⁷⁶ As the European Commission presented, in April 2021, an initiative for an EU-wide regulation on AI, "the legislative activity has been redirected towards solving specific problems that need to be regulated and can be regulated independently of EU action". The new strategy states that "the Artificial Intelligence Act takes into account Estonia's views to the maximum extent possible. There is a need to avoid proactive over-regulation in a rapidly evolving area. The regulation to be put in place should also aim at enabling the introduction of AI and should not create unnecessary obstacles." To reach this objective, the strategy recommends for the Ministry of Economic Affairs and Communications and the Ministry of Justice to "participate in the negotiation of the Regulation of the European Parliament and of the Council laving down harmonised rules on artificial intelligence (Artificial Intelligence Act) and advocate in favour of Estonia's views."1577

By putting more accent on AI ethics and a human-centric approach to AI in its new strategy, and by participating in policy and legislative initiatives in the field of AI at the EU and international levels, Estonia seeks "to promote Estonia's interests and to ensure the feasibility of AI and its compliance with the principles of a human-centered digital state and the requirements of trustworthy AI."¹⁵⁷⁸

Estonia's AI Task Force is developing the country's national AI strategy for 2024-2026. Until then, all projects and activities will be carried out in accordance with the 2022-2023 strategy.¹⁵⁷⁹

Estonia contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.¹⁵⁸⁰

Nordic-Baltic Cooperation on AI

As for the international landscape, the Estonian minister responsible for digital development signed the 2018 declaration on "AI in the Nordic-Baltic region" establishing a collaborative framework on "developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used" and "on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability."¹⁵⁸¹

The ministerial declaration Digital North 2.0¹⁵⁸² builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. "In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and reuse of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies."¹⁵⁸³

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion,

striving to implement measures to make digital services more accessible to all Estonian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.¹⁵⁸⁴

In September 2022, the Nordic and Baltic ministers for digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this "rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities." The ministers declared that they "have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. (...) Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services."1585

Public participation

In 2018, the Estonian government brought together an expert group to participate in a cross-sectional coordination project on AI.¹⁵⁸⁶ The three tasks of this expert group were to develop the so-called Estonian artificial intelligence action plan; prepare draft legislation to ensure clarity in the Estonian judicial area and organize the necessary supervision; notify the public about the implementation of kratts and introduce possible options.

Participants in the group included representatives from state authorities, the private sector, universities, and sectoral experts. In order to prepare the report, interviews were conducted, including with company representatives involved in the development of AI and ICT representatives

¹⁵⁸⁴ Nordic and Baltic Ministers of Digitalization, *Common statement on the importance of promoting digital inclusion as a central part of the digital transformation in the Nordic-Baltic region* (Nov. 26, 2021), <u>https://www.norden.org/en/declaration/common-statement-importance-promoting-digital-inclusion-central-part-digital</u>

¹⁵⁸⁶ Report of Estonia's AI Taskforce 42 (May 2019), <u>https://f98cc689-5814-47ec-86b3-</u>db505a7c3978.filesusr.com/ugd/7df26f 486454c9f32340b28206e140350159cf.pdf

from universities. Working groups (in the fields of law, education, and the public sector) were also created.¹⁵⁸⁷ The e-estonia website states, "In these debates, technical and legal expertise goes a long way. But the discussion must also involve the public. Honest, meaningful debate requires that dreamy utopias be balanced with open discussions about AI's controversial attributes and threats. Only this can create user-friendly legislation that's equipped to reduce legal nightmares in the long-term."¹⁵⁸⁸

Documents relating to the AI Strategy are accessible on the internet. The website Kratid provides links to the National Artificial Intelligence Strategy, the Report of Estonia's AI Taskforce, the 'Vision Paper on #KrattAI: The Next Stage of Digital Public Services in #eEstonia', and the '#KrattAI Roadmap for 2020'.¹⁵⁸⁹

In 2022, the Kratid website was updated with the new AI Strategy (2022-2023) and the new #KrattAI Roadmap for 2021-2022. A separate website exists in Estonia, the Electronic Information System (EIS),¹⁵⁹⁰ which enables anyone to follow ongoing legislatives procedures, search for documents in the information system, take part in public consultations and comment on a document under inter-agency coordination. The EIS is a working environment for inter-agency coordination, submission of documents to the government and the parliament, and public consultation. In addition to national documents, draft European Union legislation and other documents related to the European Union decision-making process are available in the EIS.

In December 2021, the Ministry of Economic Affairs and Communications published the new national AI strategy (2022-2023) for public consultation for two weeks. Although the deadline was tight, the public had the opportunity to supplement and comment on the Action Plan.

EU Digital Services Act

As an EU member state, Estonia shall apply the EU Digital Services Act (DSA).¹⁵⁹¹ The DSA regulates online intermediaries and platforms. Its

kratt-momentum/

¹⁵⁹¹ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive

main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.¹⁵⁹² The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.¹⁵⁹³

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

strategy.ec.europa.eu/en/news/commission-sends-request-information-meta-underdigital-services-act-1

^{2000/31/}EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32022R2065</u>

¹⁵⁹³ European Commission, Commission sends request for information to Meta under the Digital Services Act (March 1, 2024), <u>https://digital-</u>

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation¹⁵⁹⁴ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.¹⁵⁹⁵ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force¹⁵⁹⁶ on the 2024 European elections.

EU AI Act

As an EU member State, Estonia is bound by the EU AI Act.¹⁵⁹⁷ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition

Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts

¹⁵⁹⁷ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European

overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;

- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.¹⁵⁹⁸ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR.

¹⁵⁹⁸ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.¹⁵⁹⁹

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their

¹⁵⁹⁹ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.¹⁶⁰⁰ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in

¹⁶⁰⁰ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificial-

defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.¹⁶⁰¹

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office¹⁶⁰² established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies,

¹⁶⁰¹ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale</u>

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

¹⁶⁰² European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk

systems, it depends on the characteristics of the authority Estonia will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact¹⁶⁰³ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Estonia is an EU Member State, the General Data Protection Regulation (GDPR)¹⁶⁰⁴ is directly applicable in Estonia and to Estonians. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."¹⁶⁰⁵ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Personal Data Protection Act (PDPA)¹⁶⁰⁶ and the new Personal Data Protection Implementation Act (Implementation Act) were adopted in December 2018 and February 2019 respectively to align Estonian law with the GDPR. They entered into force in January 2019 and March 2019 respectively.

Regarding the activities of law enforcement authorities, the PDPA also transposed the EU Data Protection Law Enforcement Directive (LED).¹⁶⁰⁷ "The directive protects citizens' fundamental right to data

content/summary/general-data-protection-regulation-gdpr.html

¹⁶⁰⁴ Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, <u>https://eur-lex.europa.eu/EN/legal-</u>

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en

¹⁶⁰⁷ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or

protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."¹⁶⁰⁸ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁶⁰⁹ The LED also requires for Member States, including Estonia, to enable data subjects to exercise their rights via national data protection authorities.¹⁶¹⁰

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Estonian data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the Member States apply the LED consistently."¹⁶¹¹ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement.¹⁶¹² The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if

necessary and proportionate, as laid down in the Charter of Fundamental Rights."¹⁶¹³

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Estonia is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁶¹⁴

The Data Protection Inspectorate¹⁶¹⁵ is the national supervisory authority in Estonia. Despite being a member of the Global Privacy Assembly (GPA) since 2006, the Inspectorate has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;¹⁶¹⁶ the 2020 GPA Resolution on AI Accountability;¹⁶¹⁷ the 2022 GPA Resolution on Facial Recognition Technology¹⁶¹⁸ or the 2023 GPA Resolution on Generative AI.¹⁶¹⁹

Algorithmic Transparency

Estonia is subject to the GDPR and Convention 108+. Estonians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁶²⁰

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁶²¹ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."1622

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment,

¹⁶²² Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

including through the provision of easily accessible contact points and hotlines." 1623

The Ministry of Justice announced that it would draft legislation addressing high-risk algorithmic systems that will require the creators of AI (both public and private) to provide transparency regarding when AI communicates with an individual, processes an individual's data, or makes a decision on the basis of the individual's data.¹⁶²⁴ A representative of the Ministry said that non-transparency of decisions is the biggest threat. When it comes to AI, based on current knowledge, even the person who wrote the algorithm's code is unable to explain the reasons behind a decision, as the system is self-learning and self-evolving. "An assessment or a decision made by an algorithm may have a significant impact on fundamental rights no matter whether we are speaking of a self-learning or a human-defined algorithm. It is a duty of a country based on the rule of law to have foresight and prevent serious interferences with fundamental rights by means of setting out a relevant legislative framework," said Kai Härmand at the time Deputy Secretary General on Legal Policy at the Ministry of Justice.

Digitization of Public Services

In 2018, the Estonian Undersecretary for Communications and State Information Systems emphasized the importance of facilitating AI in Estonia for investment and innovation, as well as for public administration.¹⁶²⁵ In light of its commitment to e-government, Estonia emphasizes the use of AI for government services.¹⁶²⁶ Indeed, *KrattAI* refers to "the vision of how digital public services should work in the age of artificial intelligence;" or more specifically, KrattAI is described as an "interoperable network of AI applications, which enable citizens to use public services with virtual assistants through voice-based interaction."¹⁶²⁷

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154 ¹⁶²⁴ Estonian Ministry, Use of AI must Respect Fundamental Rights (Aug. 19, 2020)

¹⁶²⁶ It has been noted that the "Estonian public sector is highly digitalized, whereas the private sector is not." Tanel Kerikmäe and Evelin Pärn-Lee, *Legal Dilemmas of Estonian Artificial Intelligence Strategy: In Between of E-Society and Global Race*, AI & Society (2020).

¹⁶²⁷ KRATT Artificial Intelligence Programme of #Estonia, #KrattAI: roadmap for 2020 <u>https://f98cc689-5814-47ec-86b3-</u>

The Estonian government makes use of automated decision-making in many different contexts.¹⁶²⁸ For example, the Tax and Customs Board uses automated decision-making to facilitate tax refunds following the submission of an online income tax return. Other examples include the use of tachographs on lorries and automated speed checks on motorways to issue cautionary fines and the use of automated decision-making for the determination of a child's school on the basis of their registered residence.¹⁶²⁹ There has been international coverage of Estonia's ambitious plans for AI in the public sector – including on the issue of "Robot Judges."¹⁶³⁰ The Estonian court system embraces digitalization and started an e-File system in 2005. The use of AI to tackle an immense backlog of cases has been considered, including the adoption of projects that can make "autonomous decisions within more common court procedures/tasks that would otherwise occupy judges and lawyers alike for hours."¹⁶³¹

The government has also launched the AI Govstack Testbed program (Bürokratt) and invites anyone with relevant experience to participate in an experimental framework to build the next generation AI-led country. Bürokratt exemplifies the Estonian vision of how digital public services should work in the age of AI. Bürokratt is an interoperable network of public and private sector AI solutions, which from the user's point of view, act as a single channel for public services and information.¹⁶³² According to the International Research Centre on Artificial Intelligence (IRCAI), operating under UNESCO, "all the aspects regarding KrattAI are fully transparent – starting from business strategy and roadmap to the technology side: architecture, technical solutions – which is Open Source

db505a7c3978.filesusr.com/ugd/7df26f 19625e00a7b84900b99e952b1ce7d21a.pdf; Republic of Estonia, Ministry of Economic Affairs and Communications, *Report of Estonia's AI Taskforce* (May 2019), https://f98cc689-5814-47ec-86b3-

<u>db505a7c3978.filesusr.com/ugd/7df26f_486454c9f32340b28206e140350159cf.pdf</u>. The report of Estonia's AI Taskforce defined 'kratt' as being "a practical application that uses artificial intelligence and that fulfils a specific function."

and available to all users".¹⁶³³ Open source AI components are also used for the Kratid website.¹⁶³⁴

The Estonian government provides a data tracker tool accessible through the state portal (<u>eesti.ee</u>) that enables anyone with an eID to keep track of which institutions have accessed their data and for what purposes.¹⁶³⁵ As pointed out on the e-estonia website, transparency is "fundamental to foster trust in the effective functioning of the whole system." Information is also provided regarding automated processing although Algorithm Watch states that it "is not always clear if data is used as a part of an automatic process or viewed by an official."¹⁶³⁶ In spite of the ambition of this tool, the Estonian Human Rights Center argue that the data provided is variable depending on the service and at times not detailed enough. To assist transparency and understanding, the Estonian Human Rights Center suggests that visual depictions of data use should be provided.¹⁶³⁷ Similarly, Algorithm Watch states that the current tool does not provide a "clear understanding of what profiling is done by the state, which data is collected, how it is used, and for what purpose."¹⁶³⁸

"It is a duty of a country based on the rule of law to have foresight and prevent serious interferences with fundamental rights by means of setting out a relevant legislative framework," said Kai Härmand at the time Deputy Secretary General on Legal Policy at the Ministry of Justice."

Estonia plans to amend its Administrative Procedure Act with the view of automating certain administrative acts, e.g., evaluation and processing of license applications.¹⁶³⁹ The pending law "establishes the basis for conducting automatic administrative proceedings, as well as

issuing automatic administrative acts or performing actions, which means actions without the intervention of an official or employee acting on behalf of an administrative body." The key features of the draft law are the following: ¹⁶⁴⁰

- automated decisions infringing individuals' rights must be statutorily recognised, i.e., have a legal basis;
- automation must be advantageous to both, the state as well as an individual (e.g., by speeding up the decision-making);
- automation as such may not affect the ultimate outcome of the decision;
- the right to be heard, the right to communication between an individual and an authority and the right to have reasons given for automated decisions must be guaranteed, save for some limited exceptions;
- proactive services must be subject to the clear special provisions and an individual must have an opportunity to decline such services to ensure respect for her dignity.

The draft law passed the first reading in September 2022, and certain groups have submitted their opinions on the draft in October 2022. There has been no further development since then.¹⁶⁴¹

Lethal Autonomous Weapons

In a 2019 meeting of the Group of Governmental Experts on Lethal Autonomous Weapons Systems, Estonia expressed the view that "humans must retain ultimate control and responsibility in relation to the use of force in armed conflict" and "humans must exercise such control over a weapon system as may be necessary to ensure that the weapon system operates consistently with international law."¹⁶⁴²

¹⁶⁴² Permanent Mission of Estonia to the UN and other International Organisations in Geneva, Group of Governmental Experts on Lethal Autonomous Weapons Systems – First meeting, *Statement of Estonia* (March 25-29, 2019), <u>https://unoda-documents-library.s3.amazonaws.com/Convention on Certain Conventional Weapons -</u>

Estonia was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."¹⁶⁴³

In February 2023, Estonia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Estonia endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁶⁴⁴ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."1645

Estonia also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁶⁴⁶

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.¹⁶⁴⁷ The second REAIM summit will take place in 2024 in the Republic of Korea.¹⁶⁴⁸

At the 78th UN General Assembly First Committee in 2023, Estonia voted in favour¹⁶⁴⁹ of resolution L.56¹⁶⁵⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Estonia is a member of the European Union and the Council of Europe and is, accordingly, committed to the upholding of the Charter of Fundamental Rights and the European Convention on Human Rights. Estonia ratified the Universal Declaration on Human Rights and has acceded to international human rights treaties, such as the International Covenant on Civil and Political Rights. The Estonian Constitution also grants fundamental rights to citizens.

In Freedom House's 2023 Country Report, Estonia ranked highly (94/100) and the ranking has not changed since 2020.¹⁶⁵¹ In Estonia, "democratic institutions are generally strong, and both political rights and civil liberties are widely respected". In previous reports, Freedom House noted, with regard to openness and transparency, that "Estonia is wellknown for its transparency and well-developed e-governance services. Recently, however, several security flaws in these systems were revealed. While the government announced a plan to remedy the situation, additional resources to support the maintenance and further expansion of the egovernance program are needed." The 2023 report for its part does not mention such issues anymore.¹⁶⁵²

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimizing possible adverse effects."1653

¹⁶⁵¹ Freedom House, Freedom in the World 2023 – Estonia (2023), https://freedomhouse.org/country/estonia/freedom-world/2023

In a 2018 report, the Commissioner for Human Rights of the Council of Europe urged the Estonian authorities to give careful consideration "to the ethical, legal and human rights implications of using robots and artificial intelligence in the care of older persons" given Estonia's strong focus on digitalization, new technologies, and AI.¹⁶⁵⁴

OECD / G20 AI Principles

In May 2019, Estonia endorsed the OECD Principles on Artificial Intelligence, "agreeing to uphold international standards that aim to ensure AI systems are designed to be robust, safe, fair and trustworthy."¹⁶⁵⁵

Estonia is not a member of the Global Partnership on AI, a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."¹⁶⁵⁶

UNESCO Recommendation on the Ethics of AI

Estonia has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.¹⁶⁵⁷ It remains to be seen how this endorsement will translate in practice.

Evaluation

As a member of the European Union and the Council of Europe, Estonia is committed to the protection of human rights, ethics in AI, and algorithmic transparency. Estonia has also endorsed the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. At regional level, Estonia has signed the Declaration of Collaboration on AI in the Nordic-Baltic Region which includes a commitment "to develop ethical

¹⁶⁵⁴ Council of Europe, Commissioner for Human Rights, *Report of the Commissioner for Human Rights of the Council of Europe Dunja Mijatović Following her Visit to Estonia from 11 to 15 June 2018* (Sept. 28, 2018): 21,<u>https://rm.coe.int/report-of-the-council-of-</u>europe-commissioner-for-human-rights-dunja-mi/16808d77f4

and transparent guidelines, standards, norms and principles that can be employed as a steering mechanism to guide AI programmes."¹⁶⁵⁸

By contrast, Estonia's first AI Strategy did not consider the issues of ethics and human rights in significant depth. Nevertheless, Estonia opted for a short-term strategy in order to be able to adapt it to a rapidly evolving AI landscape. Based on Estonia's experience as a leading country in the world regarding the use of data¹⁶⁵⁹ and e-governance, its second national AI strategy, although still warry of "proactive over-regulation in a rapidly evolving area" and of "creating unnecessary obstacles", includes the bases for an ethical framework and provides for specific actions in this regard. Reflective of this approach is Estonia's Prime Minister Kaja Kallas' statement: "We are already using artificial intelligence in our operations and services, but we see there is a huge potential to make our services more convenient for the people." "But at the same time, we are a rule-of-law country and every individual's privacy is a very important matter for us."1660 This is a similar position that Estonia defended with regard to the draft EU AI Act. "We welcome the proposed AI Act because we have long supported the idea that European-wide harmonized regulation ensures a common market, and minimizing risks increases acceptance of AI technologies," said Mr. Velsberg, the Estonian Government Chief Data Officer. The question that these statements raises is whether Estonia considers AI ethics as a means for AI deployment or the respect of ethical principles as a condition for AI deployment. With the adoption of the EU AI Act, Estonia shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Ethiopia

National AI Strategy

Ethiopia has endowed the Artificial Intelligence Institute with the mission of developing a National AI Strategy. Once adopted, the AI Institute will be in charge of monitoring the implementation of the National Strategy.¹⁶⁶¹

In June 2023, Innovation and Technology State Minister Huria Ali announced that the National AI Strategy was now being finalized.¹⁶⁶² The National AI Strategy will cover data management, human resource development, research and development, assistance and encouragement, infrastructure, law and ethics, as well as cooperation and coordination, in particular with the African Union.

African Union

As a member of the African Union (AU), Ethiopia is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU digital transformation strategy¹⁶⁶³ and the Continental Data Policy Framework.¹⁶⁶⁴

The African Union is also in the final stage of drafting an AI Continental Strategy. The Finalization Writing Workshop, organized by the African Union Development Agency-NEPAD and the African Union High-Level Panel on Emerging Technologies (APET), took place in Addis Ababa in Ethiopia, in August 2023.¹⁶⁶⁵ It is quite symbolic considering that the African Union was established in 2001 in Addis Ababa.

The African Union Development Agency has now opened "The White Paper: Regulation and Responsible Adoption of AI for Africa Towards Achievement of AU Agenda 2063" for consultation until April 2024. The White Paper follows the 2021 AI Blueprint¹⁶⁶⁶ and the African

Commission on Human and Peoples' Rights Resolution 473,¹⁶⁶⁷ which calls for a human-rights-centric approach to AI governance. The White Paper calls for a harmonized approach to AI adoption and for member states to adopt national AI strategies that emphasize data safety, security and protection in an effort to promote the ethical use of AI. The AU AI Working Group is especially endowed with the mission to foster collaboration among African states in order to "help countries develop AI strategies, identify other regulatory and governance issues, and learn from regional best practices."¹⁶⁶⁸

BRICS

At the 2023 BRICS Summit in South Africa, Ethiopia, together with Iran, Egypt, Saudi Arabia and the United Arab Emirates, was accepted by China, Russia, India, Brazil and South Africa as a new BRICS member. Russian President Putin who takes over the rotating chairmanship of BRICS in January 2024 said that the bloc seeks "strengthening multilateralism for equitable global development and security".¹⁶⁶⁹ During the Summit, Chinese President Xi Jinping announced that "BRICS countries have agreed to launch the AI Study Group of the BRICS Institute of Future Networks at an early date."¹⁶⁷⁰

Data Protection

The 1995 Constitution of the Federal Democratic Republic of Ethiopia establishes a fundamental right to privacy.

Ethiopia has not yet enacted a comprehensive personal data protection law, despite recent efforts. The Ministry of Science and Technology first introduced a draft Personal Data Protection (PDP) Proclamation in 2020. It was subsequently updated in 2021.¹⁶⁷¹ Civil society organizations denounced the "absence of transparency and public

¹⁶⁷¹ Proclamation To Provide for Personal Data Protection (Draft 2021) preamble para 3.

consultations."¹⁶⁷² In October 2023, the Council of Ministers approved the Proclamation for parliamentary ratification. The Office of the Prime Minister said that the legislation "would help promote a culture of safeguarding individuals" privacy and personal data administration."¹⁶⁷³

Most of the provisions of the draft PDP Proclamation are inspired by the EU General Data Protection Regulation.¹⁶⁷⁴The draft Proclamation provides for the establishment of a Personal Data Protection Commission. Several society organizations have called on the government to ensure the independence of the Commission.¹⁶⁷⁵ The draft Proclamation also sets the rights and duties of data controllers and processors, as well as data subjects' rights, such as the right to access data, the right to be informed, the right to object, rectification or the right to be forgotten governs data transfers. The draft Proclamation also governs cross-border data transfers.

The right to privacy is further reinforced in several legal instruments, including the Criminal Code of the Federal Democratic Republic of Ethiopia (Proclamation No. 414/2004), the Civil Code of the Empire of Ethiopia (Proclamation No. 165/1960), the Freedom of the Mass Media and Access to Information Proclamation (No. 590/2008), and the recently enacted Media Proclamation No. 1238/2021. The Media Proclamation of 2021 repealed portions of the Mass Media & Access to Information Proclamation specifically related to mass media.¹⁶⁷⁶

Based on Section 8 of Ethiopia's Freedom of the Mass Media and Access to Information Proclamation No. 590/2008, personal data refers to any information that can be used to identify a living individual. This includes core identifiers like name, address, identification numbers, fingerprints, and

blood type. It also encompasses details of life history, such as medical, educational, professional, and financial records, along with any criminal history. Additionally, the definition covers background and affiliations, including ethnic, national, or social origin, marital status, pregnancy status, age, color, sexual orientation, religion, beliefs, culture, and language. It includes information on physical and mental health conditions, including disabilities, as well as personal views and opinions on grant proposals or awards, provided they don't identify another individual, and how others perceive the individual.¹⁶⁷⁷¹⁶⁷⁸

The Communication Services Proclamation No. 1148/2019 (Ar.50)¹⁶⁷⁹ establishes the responsibility of the Ethiopian Communication Authority to promote data privacy. The Ethiopian Communications Authority's Consumers Rights and Protection Directive No. 832/2021 explicitly defines personal data in section 2(12) as any information relating to an identified or identifiable natural person leading to identify such person, directly or indirectly in particular by reference to an identifier such as a name, an identification number, location data, telephone number, traffic and billing data, and other personal information in the context of Telecommunications Services.¹⁶⁸⁰

The Digital ID Proclamation $1284/2023^{1681}$ has been recently enacted with the view to adopt a comprehensive legal framework for the regulation of the national digital identification system. The Proclamation provides the rules for collecting, processing, transferring, disclosing, modifying, and overall management of personal data of registrants. "Personal Data" for the said Proclamation means the biometric and demographic data collected with the 'digital identification system [Article (2)(17)]. Interestingly, according to Article 17(1) of the Proclamation, the owner of the personal data is the registrant, and they shall give their data to the registrar upon their consent for processing, transferring, disclosing, and modifying.

Ethiopia has not signed the Council of Europe Convention 108¹⁶⁸² and its amending protocols or the African Union's Convention on Cyber Security and Personal Data Protection, known as the Malabo Convention¹⁶⁸³, which entered into force in June 2023.¹⁶⁸⁴

Digitization

Ethiopia's population reached 126.5 million by 2023, with more than 63% employed in agriculture¹⁶⁸⁵ and approximately 77% residing in rural areas¹⁶⁸⁶ with limited infrastructure and Internet access. At the beginning of 2024, there were only 24.83 million internet users, indicating a penetration rate of 19.4%¹⁶⁸⁷. Despite the digital divide, the Government of Ethiopia launched the national digital transformation strategy, Digital Ethiopia 2025,¹⁶⁸⁸ in June 2020. This strategy, built upon key economic sectors such as Agriculture, Manufacturing and Services, focuses on four foundational cross-sector areas: Infrastructure, Enabling Systems, Digital Interactions, and Digital Ecosystem. The overarching goals of this strategy include job creation, foreign exchange earnings, and inclusive prosperity, aiming to attain middle-income status by 2025. The World Bank approved \$200 million in concessional loans to support its implementation.¹⁶⁸⁹

The Ministry of Innovation and Technology (MinT) has significantly developed initiatives across various sectors since the Digital Ethiopia 2025 Strategy and Proclamation No. 1097/2019 in 2019 were adopted, including the Digital ID program.¹⁶⁹⁰

The National Bank has adopted the National Digital Payments Strategy¹⁶⁹¹ in the finance sector, while the government has embraced the Electronic Transaction Proclamation 1205/2020.¹⁶⁹² The International Telecommunication Union launched Digital Transformation Centers in Addis Ababa in 2022. The 17th Internet Governance Forum (IGF) took place in November and December 2022 in Addis Ababa.¹⁶⁹³

Biometric Identification

Ethiopia is currently implementing a Digital ID Program,¹⁶⁹⁴ Fayda, as part of the Digital Ethiopia 2025 Strategy. Given the ongoing civil war, there are fears that the Digital ID Program could reinforce discrimination against ethnic minorities.¹⁶⁹⁵

In March 2022, the National Identification (ID) Program hosted its first "Digital Identification Proclamation Consultation" with over 200 key stakeholders invited, representing Federal ministries and government agencies, regional governments, civil society organizations, local human rights organizations, and international institutions.¹⁶⁹⁶ In 2023, the Digital ID Proclamation 1284/2023¹⁶⁹⁷ was issued and the Fayda program got underway.

Since then, the government has taken several initiatives to promote Fayda. The National Identity Program (NIP) entered a partnership with the country's Federal Civil Service Commission to make the Fayda digital ID the main identification credential for all civil servants.¹⁶⁹⁸ NIP and the Ministry of Education have announced that biometric digital ID has been adopted as the official student ID across educational institutions,¹⁶⁹⁹ and

UNICEF signed a MoU with NIP to support digital ID registration for children.¹⁷⁰⁰ At the end of 2023, Ethiopia called for an expression of interest in recruiting a public relations firm that will communicate the adoption of Fayad digital ID to the public to attain 90 million digital ID enrollments target within the revised deadline of 2028 from 2025.¹⁷⁰¹

Although government officials told parliament in November 2023 that digital ID registration is not mandatory, and that people can continue to use their analogue Kebele ID card, the same cannot be said in 2024. The digital ID became mandatory for all transactions with financial institutions¹⁷⁰² and access to public services.¹⁷⁰³

As per statistics of January 2024, more than 4 million Ethiopians were enrolled to the digital ID dubbed Fadya.¹⁷⁰⁴ The country closed a bid for supplying biometric registration kit and SDK toolkit¹⁷⁰⁵ to speed up the enrollment process. Ethiopia also began issuing digital IDs for refugees to facilitate access to national services.¹⁷⁰⁶

Lethal Autonomous Weapons

Ethiopia has not acceded to the Convention on Certain Conventional Weapons (CCW) neither to any of its Protocols.¹⁷⁰⁷

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour¹⁷⁰⁸ of resolution $L.56^{1709}$ on autonomous weapons

systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

"Ethiopia is a member of the African Group within the United Nations and is a member of the Non-Aligned Movement (NAM). Both the African Group and the NAM support the negotiation of a legally binding instrument on autonomous weapon systems. In July 2021, a working paper on behalf of the NAM and other States Parties to the CCW was submitted to the Group of Governmental Experts on LAWS, which stated that "a strengthened and reinforced multilateral approach, with new legally-binding provisions for addressing the humanitarian and international security challenges posed by emerging technologies in the area of LAWS, is vital. There is an urgent need to pursue a legally-binding instrument on LAWS."¹⁷¹⁰"¹⁷¹¹

Human Rights

Ethiopia is a party to a number of international and regional human rights instruments, including the Universal Declaration on Human Rights 1948,¹⁷¹² the International Covenant on Civil and Political Rights 1966,¹⁷¹³ the Convention of the Rights of the Child 1989,¹⁷¹⁴ and the African Charter

on Rights and Welfare of the Child 1990.¹⁷¹⁵ These human rights instruments ratified by Ethiopia form an 'integral part' of the laws of the country, according to Article 9 of its Constitution.

In the 2023 Freedom House Report, Ethiopia received a classification of "not free" (20/100).¹⁷¹⁶ The conflict in the Tigray region since November 2020 has led to numerous human rights violations, including massacres and sexual violence involving Ethiopian and allied forces, as well as Tigrayan forces.¹⁷¹⁷ Since June 2021, Ethiopian authorities have imposed a siege on Tigray, blocking essential supplies and services, resulting in the forced displacement of tens of thousands of Tigrayans.¹⁷¹⁸ The conflict has also spread to the Amhara and Oromia regions. Despite a humanitarian truce declared in March 2022, fighting resumed in August, with a peace agreement signed in November 2022.

In the Freedom House Internet Report of 2023, Ethiopia is described as "not free" (26/100).¹⁷¹⁹ The conflicts in Tigray, Amhara, and Oromia have resulted in severe restrictions on the human rights of internet users, including via internet shutdowns.¹⁷²⁰ Ethiopian authorities have also restricted access to major social media platforms such as TikTok, Facebook, Telegram, and YouTube since February 2023 in response to attempts to organize anti-government rallies via social media.¹⁷²¹

Telecommunications infrastructure in Tigray has been restored for the first time since November 2020 after the federal government and the Tigray People's Liberation Front (TPLF) signed a peace agreement in November 2022, enabling phone and internet access in the region¹⁷²².

In February 2020, the Ethiopian parliament passed the Hate Speech and Disinformation Prevention and Suppression Proclamation

1185/2020.¹⁷²³ This law criminalizes certain incitement to violence based on protected groups, including ethnicity, religion, race, gender, and disability (Articles 2.2 & 3). The international civil society organization ARTICLE 19 raised serious concerns about this law because it lacks clarity, imposes disproportionate penalties, and threatens journalistic freedom.¹⁷²⁴

Various online journalists were arrested as the government took strict action against media outlets and reporters in retaliation for their work. In May 2023, the federal police announced that they would take action against those individuals who "spread false information to mislead the public" on social media.¹⁷²⁵

OECD / G20 AI Principles

Ethiopia has not endorsed the OECD AI Principles. However, Ethiopia is a member of the African Union which has recently joined the G20 and endorsed the G20 AI Principles.

UNESCO Recommendation on the Ethics of AI

As a member of UNESCO, Ethiopia along with 192 other member states, adopted in 2021 the UNESCO Recommendation on the Ethics of AI, the first global standard on the ethics of AI.¹⁷²⁶ It remains to be seen which measures Ethiopia will put in place to implement the Recommendation in the future.

Evaluation

Ethiopia is in the process of adopting its first national AI policy and a data protection legislation. Uncertainties remain regarding their content and their human-centric approach. It is to be hoped that Ethiopia will establish an independent data protection authority and adopt algorithmic transparency.

Ethiopia has been contributing to the work of the African Union in the elaboration of an AI Continental Strategy. Ethiopia has also recently joined the BRICS, which include countries such as China, Russia, India or Iran. The BRICS agreed to set up a working group on AI. It remains to be seen the objectives and the terms of cooperation among BRICS countries,

and their influence on Ethiopia's ongoing policy and legislative efforts. Concerns also exist with regard to the impact of the conflict in Northern Ethiopia on the digital path of the country. Fears exist that the digitization of the State and the deployment of the Digital ID Program become forceful tools of mass surveillance in a country already considered as not free.

Finland

National AI Strategy

In 2017, Finland was among the first countries to develop a national AI strategy, establishing proposed target dates and allocating public funds in furtherance of the country's AI-related business objectives. The vision put forth by the national strategy is that "[i]n another five years time, artificial intelligence will be an active part of every Finn's daily life. Finland will make use of artificial intelligence boldly in all areas of society – from health care to the manufacturing industry – ethically and openly. Finland will be a safe and democratic society that produces the world's best services in the age of artificial intelligence. Finland will be a good place for citizens to live and a rewarding place for companies to develop and grow. Artificial intelligence will reform work as well as create wellbeing through growth and productivity."

At that time, Finland explained that it implemented this AI strategy to: (1) enhance business competitiveness using AI, (2) ensure top-level expertise and attract top experts, (3) provide the world's best public services, and (4) make Finland a front runner in the age of AI.¹⁷²⁷

To that end, in May 2017, Finland's Minister of Economic Affairs launched "Finland's AI Programme,"¹⁷²⁸ an operational program tasked with "turning Finland into a leading country in the application of artificial intelligence." The Programme focused on three areas: an efficient public sector, a well-functioning society, and a competitive business and industry sector.¹⁷²⁹

The Minister of Economic Affairs appointed a steering committee, which included representatives from the public, private, and research sectors, and charged the steering committee with publishing a report containing its recommendations regarding the operationalization of Finland's AI Programme. Within the steering committee, the Minister of Economic Affairs established four subgroups "assigned to participate in the compilation and implementation of the Finnish AI Programme" and focused on four (4) key areas: (1) expertise and innovations; (2) data and platform economy; (3) transformation of work and society; and (4) ethics.

¹⁷²⁷ OECD, *State of Implementation of the OECD AI Principles* (Jun. 2021), https://read.oecd.org/10.1787/1cd40c44-en?format=pdf.

¹⁷²⁸ AI Finland Background (2018), https://www.tekoalyaika.fi/en/background/

¹⁷²⁹ Ministry of Economic Affairs and Employment, *Leading the way into the age of artificial*

Intelligence: Final Report of Finland's Artificial Intelligence Programme (2019), https://julkaisut.valtioneuvosto.fi/bitstream/handle/10024/161688/41_19_Leading%20the %20way%20into%20the%20age%20of%20artificial%20intelligence.pdf.

The steering committee published three reports. The first one, entitled "Finland's age of artificial intelligence: Turning Finland into a leading country in the application of artificial intelligence"¹⁷³⁰ was released in 2017. In this report, the streering committee examined "the significance of artificial intelligence to Finland's well-being, revised the programme objectives, and made some recommendations for actions, which, if implemented, should facilitate Finland's objective to "adopt and benefit from AI."¹⁷³¹

In June 2018, the steering committee subgroup on transformation of work and society, published a second report entitled, "Work in the age of artificial intelligence: Four perspectives on the economy, employment, skills and ethics."¹⁷³² The subgroup separately examined (1) the impact of artificial intelligence on growth and employment; (2) labour market dynamics in a technological revolution; (3) learning and skills in a transition; and (4) good application of artificial intelligence technology and ethics. The report also offered three policy recommendations: (1) Increase the competitiveness of business and industry; (2) Provide high-quality public services and improve the efficiency of the public sector; (3) Ensure a well-functioning society and wellbeing for its citizens.¹⁷³³

In this report, the subgroup defines the relationship between "good application of technology" and ethics in the following way. "In its most unassuming form, good application of technology means being aware of the potential negative impacts or problems associated with it and applying the technology accordingly. The most ambitious definition also includes a conscious attempt to use technology to promote certain societal goals regarded as valuable. We start out discussion with the more ambitious goal." Accordingly, the subgroup identifies three key "values of a good artificial intelligence society": transparency, responsibility, and extensive societal benefits.

¹⁷³⁰ Ministry of Economic Affairs and Employment, *Finland's Age of Artificial Intelligence: Turning Finland into a leading country in the application of artificial intelligence, Objective and recommendations for measures* (2017), http://julkaisut.valtioneuvosto.fi/bitstream/handle/10024/160391/TEMrap 47 2017 verk

kojulkaisu.pdf

¹⁷³¹ https://futureoflife.org/ai-policy-finland/

¹⁷³² Ministry of Economic Affairs and Employment, *Work in the age of artificial intelligence: Four perspectives on the economy, employment, skills and ethics* (2018), <u>https://julkaisut.valtioneuvosto.fi/bitstream/handle/10024/160980/TEMjul_21_2018_Work_in_the_age.pdf</u>

¹⁷³³ The report cautioned that "[t]he conclusions of the report d[id] not necessarily represent the group's joint views," but "d[id] represent a majority opinion."

According to the subgroup, "transparency refers to openness regarding 1) what data are collected and for what purpose (to underpin decision-making based on artificial intelligence), and 2) what the aim of the algorithms supporting and making decisions is." Associated with transparency, is "traceability" or "the possibility of tracing the purity and integrity of the data underpinning decision-making based on artificial intelligence and the grounds for making decisions." The subgroup explains that "[t]his is vital for a number of reasons, which include potential errors or structural biases contained in data or the decision-making process, legal protection of those the decisions concern, clarification of responsibility issues, principles of transparency contained in democratic decision-making, safety-related perspectives (for example, the possibility of humans to intervene in the operation of autonomous learning technology), and building up technology developers' expertise regarding the logic of the operation and learning of intelligent machines." "A machine is not a normative learner in the same sense as a human. It is not directed by an idea of learning that is morally correct, or the importance of absolute truth over statistical truth. As deep neural networks and in-depth learning develop, it will be more difficult to get at the grounds of individual decisions made by a machine due to the non-linearities generated in the system. In this case, rather than the grounds of decisions made by individual algorithms, the requirement of traceability focuses on comprehensive understanding of the operation of the entire neural network system. The problem of traceability can partly be responded to by clarifying the rules of when a machine makes the actual decision and when only a prediction that supports final decision-making by a human. The more security critical the activity and the more difficult to trace the decision, the higher the threshold should be for a machine making independently a decision on the basis of which action is initiated. However, the point of departure in all cases is that humans assume ultimate legal and moral responsibility for the decisions."¹⁷³⁴

In December 2019, the steering committee published its third and final report, "Leading the way into the age of artificial intelligence."¹⁷³⁵ The

http://julkaisut.valtioneuvosto.fi/bitstream/handle/10024/161688/41_19_Leading%20the %20way%20into%20the%20age%20of%20artificial%20intelligence.pdf

report detailed the steering committee's policy recommendations for Finland's AI Programme. The report also set forth the contours of Finland's "vision" of a country that, by 2025, "is competitive and able to attract talent and has the most relevantly educated population consisting of well-informed and independent citizens" in "the age of artificial intelligence."¹⁷³⁶

In November 2020, Finland launched the "Artificial Intelligence 4.0 Programme." "The purpose of the programme is to formulate the objectives and measures to promote digitalisation in Finland. Particular attention should be paid to SMEs, increases in digital investment and European cooperation. The programme will contribute to the recovery of companies and the economy from the coronavirus pandemic. According to the European Commission, digitalisation is one of the key means to generate new economic growth."¹⁷³⁷

According to the European Commission's Digital Economy and Society Index (DESI), Finland is the most digital country in the EU in 2022.¹⁷³⁸ In October 2022, while informing the Finnish Parliament of the evolution of the negotiations surrounding the EU AI Act, the government stressed the importance of supporting innovation and achieving proportionality.¹⁷³⁹

Finland contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.¹⁷⁴⁰

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Finnish Minister in charge of digitalisation signed the declaration on "AI in the Nordic-Baltic region" establishing a collaborative framework on "developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used" and "on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability."¹⁷⁴¹

The ministerial declaration Digital North 2.0¹⁷⁴² builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. "In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and reuse of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies."¹⁷⁴³

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Finnish inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.¹⁷⁴⁴

In September 2022, the Nordic and Baltic ministers of digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that

this "rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities." The ministers declared that they "have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services."¹⁷⁴⁵

As part of its action plan for Vision 2030 (2021-2024), the Nordic Council of Ministers also identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.¹⁷⁴⁶ The Nordic Council of Ministers also emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to "a Nordic civil society network and public consultations."¹⁷⁴⁷

US-Nordic Leaders' Summit

In July 2023, the Presidents of Finland and the United States and the Prime Ministers of Denmark, Iceland, Norway and Sweden participated in the third US-Nordic Leaders' Summit. The leaders recognized the significance of emerging technologies such as AI and the need for appropriate guardrails and risk mitigation measures. The US and the Nordic countries committed to "step up" cooperation on technologies such as AI

¹⁷⁴⁵ Nordic and Baltic Ministers of Digitalization, *Common statement on the importance of cooperation on digital security in the Nordic-Baltic region* (Sept. 6, 2022), <u>https://www.norden.org/en/declaration/common-statement-importance-cooperation-digital-security-nordic-baltic-region</u>

and to develop technologies and standards that align with and uphold human rights and fundamental freedoms. $^{\rm 1748}$

Public Participation

Finland's longstanding and broad commitment to an open democracy has traditionally been given expression by extensive consultation with established groups.¹⁷⁴⁹ The Finnish Constitution also states that "democracy entails the right of the individual to participate in and influence the development of society and his or her living conditions." Provisions on consultation and participation are given further weight in various laws and guidelines including the Act on the Openness of Government Activities. Bearing in mind this approach, the steering committee formed to make recommendations to implement Finland's Artificial Intelligence Programme included members of the public.

Digital Services Act

As an EU member state, Finland shall apply the EU Digital Services Act (DSA).¹⁷⁵⁰ The Finnish Transport and Communications Agency, Traficom, is the DSA main supervisor. However, certain obligations are supervised by the Consumer Ombudsman and the Data Protection Ombudsman. The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

¹⁷⁴⁹ OECD, Better Regulation in Europe: Finland, Transparency through consultation and communication 71 (2010), <u>https://www.oecd.org/gov/regulatory-</u> policy/45054502.pdf

¹⁷⁵⁰ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

Very large online platforms (VLOPs) or search engines (VLOSEs), under the supervision of the European Commission, have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.¹⁷⁵¹ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.¹⁷⁵²

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation¹⁷⁵³ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users;

¹⁷⁵³ European Commission, *The 2022 Code of Practice on Disinformation*, <u>https://digital-strategy.ec.europa.eu/en/policies/code-practice-disinformation</u>

enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.¹⁷⁵⁴ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force¹⁷⁵⁵ on the 2024 European elections.

EU AI Act

With regard to the EU AI legislation, Finland has opted for an active role at EU level, choosing not to enact new national legislation while awaiting the AI Act's entry into force.¹⁷⁵⁶ As an EU member State, Finland will be bound by the EU AI Act.¹⁷⁵⁷ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

¹⁷⁵⁷ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
 using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
 - exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
 - social scoring systems;
 - predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
 - facial recognition databases based on untargeted scraping;
 - inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
 - biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions,

trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;

• real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.¹⁷⁵⁸ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the

¹⁷⁵⁸ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.¹⁷⁵⁹

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or

¹⁷⁵⁹ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.¹⁷⁶⁰ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when

¹⁷⁶⁰ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-

institutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.¹⁷⁶¹

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office¹⁷⁶² established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies,

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

¹⁷⁶¹ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-deal-raises-concerns-european-telecom-standardisation-elections-launched/;</u> Pascale

¹⁷⁶² European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk

systems, it depends on the characteristics of the authority Finland will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact¹⁷⁶³ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data protection

Since Finland is an EU Member State, the General Data Protection Regulation (GDPR)¹⁷⁶⁴ is directly applicable in Finland and to Finnish people. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."¹⁷⁶⁵ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Finnish Data Protection Act,¹⁷⁶⁶ which entered into force on January 1, 2019, supplements the GDPR. Another key sectoral legislation in the field is the Act on the Protection of Privacy in Working Life.¹⁷⁶⁷

Regarding the activities of law enforcement authorities, Finland transposed the EU Data Protection Law Enforcement Directive (LED)¹⁷⁶⁸

¹⁷⁶⁸ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data

through the Act on the Processing of Personal Data in Criminal Cases and in connection with Maintaining National Security which entered into force on January 1, 2019 along with the Data Protection Act. The LED "protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."¹⁷⁶⁹ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁷⁷⁰ The LED also requires for Member States, including Finns, to enable data subjects to exercise their rights via national data protection authorities.¹⁷⁷¹

Finland is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁷⁷²

The Data Protection Ombudsman is the national supervisory authority which supervises compliance with data protection legislation and safeguards the rights and freedoms of individuals with regard to the processing of their personal data.¹⁷⁷³ The Ombudsman has made numerous important decisions,¹⁷⁷⁴ including with administrative fines amounting to several hundred thousand Euros.¹⁷⁷⁵

Algorithmic Transparency

Finland is subject to the GDPR-like Finnish Law and Convention 108+. Finns have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁷⁸⁰

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁷⁸¹ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private

¹⁷⁸¹ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."¹⁷⁸²

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."¹⁷⁸³

In December 2018, Juha Sipilä's Government (2015–2019) submitted to Parliament the Government report on information policy and artificial intelligence. The report combines two aspects while paying special attention to ethical issues and 200 people from different sectors of society were involved in working on the Report.¹⁷⁸⁴

In the report, information policy is studied not only from the viewpoint of information management, but also from the perspective of the conditions for the use of information, value basis, ethical principles and financial impacts. Information policies discussed in the report relate to data access rights, data ownership, copyrights, security and personal data

protection. The report constitutes the knowledge basis and a policy, upon which a roadmap with prioritized actions can be built in the future.¹⁷⁸⁵ The development and deployment of AI raises uncertainty about the application of the current legislation on these issues and increases the need for a reform of the legislative and regulatory framework.¹⁷⁸⁶

Access to Data

The 2019 final report noted that "[d]ata has become the world's most valuable resource, but when the existing operating models are applied, it primarily benefits a few giant corporations that collect the data from their service users." With respect to the adoption of the GDPR by Finland (and other EU countries), the final report opined that although the law "strengthened the rights of individuals and harmonised the EU regulation related to processing of personal data" as currently formulated, "there is no joint concept or interoperable open ecosystem for the exchange of personal data based on consumer consent."

The final report observes that "Finland is in a position to become a global trendsetter and a forerunner within the EU in the creation of fair, consumer-oriented principles" and that consumer-oriented principles require "a visionary approach and a joint EU-level roadmap, as well as technical proof of functional exchange of data."

Digitization of Public Services

In 2020, Finland launched a "National Artificial Intelligence Programme – AuroraAI".¹⁷⁸⁷ The program promotes automation in administration and aims to connect public services and their platforms e.g. in the Finnish Immigration Service.¹⁷⁸⁸

In September 2020, the city of Helsinki launched an AI registry in beta version to detail how city government uses algorithms to deliver services. "Each algorithm cited in the registry lists datasets used to train a model, a description of how an algorithm is used, how humans utilize the prediction, and how algorithms were assessed for potential bias or risks. The registry also provides citizens a way to give feedback on algorithms their

local government uses and the name, city department, and contact information for the person responsible for the responsible deployment of a particular algorithm."¹⁷⁸⁹ The city of Helsinki describes it AI register as "a window into the artificial intelligence systems used by the City of Helsinki. Through the register, you can get acquainted with the quick overviews of the city's artificial intelligence systems or examine their more detailed information based on your own interests. You can also give feedback and thus participate in building human-centred AI in Helsinki."¹⁷⁹⁰

In 2022, a new research project, "Civic Agency in AI" also started with the aim to help the public sector ensure that their AI tools are transparent, accountable, and equitable. Its purpose is to develop best practices and recommendations regarding AI governance.¹⁷⁹¹

In May 2023, a new general legislation on automatic decisionmaking in public administration entered into force, with an 18-month transition period.¹⁷⁹² The legislation requires authorities to provide appropriate information about the use of an automated decision-making procedure. The legislation allows automated decision-making on administrative matters in so far as making a decision on the matter in question does not require individual consideration. Concerns exist with regard to its compatibility with Article 22(1) GDPR which provides for the right of the data subject not to be subject to a decision solely based on automated processing.

On the basis of this law, in October 2023, the Finnish Immigration Service adopted a decision to introduce automated decision making for students' first residence permits. One condition for the use of automated decision is that "the residence permit can be granted according to the

application, and the matter does not require more extensive holistic deliberation."¹⁷⁹³

AI and Children

Finland and UNICEF have been collaborating to create internationally applicable policy guidance for the use and development of AI for children. The Ministry for Foreign Affairs supports the project, where practices are developed for the planning of safe and inclusive AI solutions that take the rights of the child into account.¹⁷⁹⁴

Facial Recognition

According to news reports, Finland's National Bureau of Investigation has acknowledged using facial recognition technology in connection with certain law enforcement activities.¹⁷⁹⁵ After initially denying that it had used facial recognition technology in response to media questioning, the Finnish officials from the National Bureau of Investigation acknowledged that four members of its Child Exploitation Investigation Unit had conducted 120 searches of the Clearview AI system during the 2019 to 2020 time period.

The Deputy Data Protection Ombudsman issued a note to the National Bureau of Investigation regarding the controversial use of Clearview AI facial recognition technology. In September 2021, the Deputy Data Protection Ombudsman warned the National Bureau of Investigation that its police officers had used a facial recognition technology system without first verifying that it complied with data security or data protection laws.¹⁷⁹⁶

Lethal Autonomous Weapons

In a 2020 report, Human Rights Watch noted that at the 2014 UN General Assembly, Finnish officials stated that the issue of lethal autonomous weapons systems is "a complex issue." Finnish officials cautioned that the "development of weapons and means of warfare where humans are completely out of the loop would pose serious risks from the ethical and legal viewpoint," stressing that "humans should always bear the ultimate responsibility when dealing with questions of life and death." Finnish officials have not supported proposals to negotiate a new international treaty to ban or restrict killer robots. However, in June 2019, Finland's new government released a coalition platform that seeks to ban weapons systems based on artificial intelligence. ¹⁷⁹⁷

Finland was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."¹⁷⁹⁸

Finland also submitted a working paper, together with Sweden, France, Germany, the Netherlands, Norway, and Spain, to the 2022 Chair of the Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems.¹⁷⁹⁹ This working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy in order to ensure compliance with

the rules and principles of international humanitarian law, by preserving human responsibility and accountability, ensuring appropriate human control and implementing risk mitigation measures.

In February 2023, Finland participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Finland endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁸⁰⁰ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."1801

Finland also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁸⁰²

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support

fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.¹⁸⁰³ The second REAIM summit will take place in 2024 in Korea.¹⁸⁰⁴

At the 78th UN General Assembly First Committee in 2023, Finland voted in favour¹⁸⁰⁵ of resolution L.56¹⁸⁰⁶ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

As one of the signatories to the Universal Declaration of Human Rights and several international human rights treaties and conventions,¹⁸⁰⁷ Finland is committed to protecting human rights, civil liberties, and political rights. Under Finnish law, these rights are guaranteed and subject to the rule of law as interpreted by an independent judiciary.

Freedom House gives Finland a top score (100/100) for political rights and civil liberties, observing that "Finland's parliamentary system features free and fair elections and robust multiparty competition.

¹⁸⁰⁷ These include the International Covenant on Economic, Social and Cultural Rights, International Covenant on Civil and Political Rights, European Convention on Human Rights and Protocol amending the Convention for the Protection of Individuals with

Corruption is not a significant problem, and freedoms of speech, religion, and association are respected. The judiciary is independent under the constitution and in practice."¹⁸⁰⁸

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."¹⁸⁰⁹

OECD / G20 AI Principles

Finland is a long-time member of the OECD and has adopted OECD AI Principles,¹⁸¹⁰ committing "to uphold international standards that aim to ensure AI systems are designed to be robust, safe, fair and trustworthy."¹⁸¹¹ However, Finland is not a member of the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."¹⁸¹²

UNESCO Recommendation on the Ethics of AI

Finland has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.¹⁸¹³ It remains to be seen how this endorsement will translate in practice.

Evaluation

Finland is one of the most digital country in the EU in 2023. In its national AI strategy, one of the first in the world, Finland has adopted an approach based on its vision of "a good artificial intelligence society." Risks posed by AI do not occupy the center stage of its strategy but Finland has tried to develop best practices and hands-on solutions for ensuring trustworthy AI by design. Its capital, Helsinki, is the first city to have developed and adopted an AI register in order to foster trust in AI and ensure the best service to citizens.

Finland benefits from a strong European and national data protection framework. Anu Talus, the Finnish new Chair of the European Data Protection Board, stated, "Part of the newly adopted EU digital legislation overlaps with the GDPR. Going forward, it is crucial to ensure that the legal framework related to the data protection is coherent, that the competences of the EDPB are safeguarded and that fragmentation is avoided. Grey areas are in no one's favour, not the individuals whose personal data we protect, nor economic operators who need legal certainty." The use of the Clearview facial recognition system by law enforcement authorities was controversial and was reprimanded by the Data Inspectorate. However, the introduction of a new law authorizing automated decisions in administration raises questions regarding its compatibility with data subjects' rights not to be subjected to automated decision making enshrined in the GDPR.

Finland has also worked closely with UNICEF to develop internationally applicable policy guidance for the use AI by children and has endorsed both the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. It still remains to be seen which concrete steps Finland will adopt to turn its commitment to the UNESCO AI Ethics Recommendation into actions.

¹⁸¹³ United Nations Educational, Scientific and Cultural Organization (UNESCO), UNESCO member states adopt the first ever global agreement on the Ethics of Artificial Intelligence (Nov. 2021), <u>https://www.unesco.org/en/articles/unesco-member-states-</u> adopt-first-ever-global-agreement-ethics-artificial-intelligence.

France

National AI Strategy

France's national Strategy on Artificial Intelligence entitled "AI for Humanity" aims to make France a world leader in AI. "AI will raise a lot of issues in ethics, in politics, it will question our democracy and our collective preferences," stated French President Emmanuel Macron in 2018.¹⁸¹⁴ "If you want to manage your own choice of society, your choice of civilization, you have to be able to be an acting part of this AI revolution."¹⁸¹⁵

France's AI strategy sets out four objectives:¹⁸¹⁶ (1)Reinforcing the AI ecosystem to attract the very best talents, (2) Developing an open data policy, especially in sectors where France already has the potential for excellence, such as healthcare, (3) Creating a regulatory and financial framework favoring the emergence of "AI champions," and (4) Promoting AI regulation and ethics, to ensure to high standard and acceptability for citizens. This includes supporting human sciences research on ethics of use, making all algorithms used by the State public, including admission to higher education, and encouraging AI's openness to diversity.

In November 2022, the French Government launched the second phase of the national AI strategy until 2025, with a focus on priority areas such as trusted AI and generative AI.¹⁸¹⁷

The national AI strategy builds on the Villani¹⁸¹⁸ report, "For a Meaningful Artificial Intelligence: Towards a French and European

strategy,"¹⁸¹⁹ as well as the work of "France Strategy"¹⁸²⁰ and of the French national data protection authority (CNIL).¹⁸²¹

The National Coordinator for AI, tasked with the implementation of the national AI strategy, works with all administrations, centers and research laboratories dedicated to AI.¹⁸²²

National Pilot Committee for Digital Ethics

With regard to AI regulation and ethics (objective 4 of the National AI Strategy), in July 2019, the Prime Minister asked the French National Consultative Committee on Bioethics (CCNE) to launch a pilot initiative dedicated to Digital Ethics. The National Pilot Committee for Digital Ethics (NPCDE), created in December 2019, "shall submit initial contributions on the ethics of digital sciences, technologies, uses and innovations and determine relevant equilibria for the organization of public debate on digital ethics and artificial intelligence." It is also tasked with maintaining ethical oversight and to raise awareness, inform and assist individuals, companies, administrations, institutions, etc., in their decision-making process.¹⁸²³ The committee has been seized by the Prime Minister to give opinions on the ethical issues concerning three specific topics of digital applications using in particular machine learning: 1) Conversational agents (chatbots); 2) Autonomous cars; and 3) Medical diagnosis and health AI.

However, civil society groups such as Access Now have objected to government studies that simply propose ethical guidelines rather than hard law. Access Now explains, "[t]here is solid and creative thinking in the advisory paper that informed the strategy around the ethical and regulatory

challenges posed by AI, but at the moment the proposed solutions largely involve the creation of groups to study them rather than the proposal of new or modified norms."¹⁸²⁴ "France's AI strategy generally cleaves to the 'ethics' framework and makes scant reference to hard legal constraints on AI development." Access Now notes that the "Villani report is considerably more detailed about the ethical and legal challenges posed by AI." While some civil society organizations oppose the need for the NPCDE, they continue to work towards their objectives and convened a conference with the European Research Consortium for Informatics and Mathematics (ERCIM) Ethics Working Group to discuss digital technology ethics and connected technologies in October 2022.¹⁸²⁵

In September 2023, the Prime Minister launched a new Committee on generative AI.¹⁸²⁶ Its aim is to make concrete recommendations in order to adapt French AI strategy. Among the members are Joëlle Barral from Google, Yann le Cun from Meta as well as Arthur Mensch and Cedric O, both involved with Mistral AI. Concerns with regard to a possible conflict of interests and influence on the French position with regard to the draft EU AI Act have been raised.¹⁸²⁷

Public Participation

The Villani report, which has been a key source of inspiration for France's national strategy, relied on the work of multiple stakeholders but no the public at large. However the CNIL for its part did organize a public debate which led to its report on "the ethical stakes of algorithms and artificial intelligence" in December 2017. The CNIL 2018 report on the ethical issues raised by AI also followed extensive public outreach in 2017. More than 3,000 people took part in 45 debates and events, organized by 60

partners, including research centers, public institutions, trade unions, think tanks and companies.¹⁸²⁸

According to BEUC, the European consumer association, more than 80% of those polled in France are familiar with Artificial Intelligence and over 50% respondents agreed that companies use AI to manipulate consumer decisions.¹⁸²⁹ BEUC also reported that there is little trust over authorities to exert effective control over organizations and companies using AI. More than 60% of respondents in France said users should be able to say "no" to automated decision-making.

EU Digital Services Act

As an EU member state, France shall apply the EU Digital Services Act (DSA).¹⁸³⁰ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission

078 artificial intelligence what consumers say report.pdf

¹⁸²⁸ CNIL, Algorithms and artificial intelligence: CNIL's report on the ethical issues, CNIL (May 25, 2018), <u>https://www.cnil.fr/en/algorithms-and-artificial-intelligence-cnils-</u> report-ethical-issues

¹⁸²⁹ BEUC, Artificial Intelligence, what consumers say: Findings and policy recommendations of a multi-country survey on AI, (Sept. 7, 2020) https://www.beuc.eu/publications/beuc-x-2020-

¹⁸³⁰ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.¹⁸³¹ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.¹⁸³²

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation¹⁸³³ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.¹⁸³⁴ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The

Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force¹⁸³⁵ on the 2024 European elections.

EU AI Act

As an EU member State, France is bound by the EU AI Act.¹⁸³⁶ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

¹⁸³⁵ European Digital Media Observatory, EDMO Taskforce on 2024 European Elections, <u>https://edmo.eu/thematic-areas/european-elections/edmo-taskforce-on-2024-european-elections/</u> elections/

¹⁸³⁶ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

of:

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.¹⁸³⁷ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or

¹⁸³⁷ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.¹⁸³⁸

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;

¹⁸³⁸ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

• emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.¹⁸³⁹ The academics called for a transversal FRIA, applicable to both

¹⁸³⁹ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-institutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificial-intelligence-act/

the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, together with Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups, and in particular the French Mistral AI, were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.¹⁸⁴⁰

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European

¹⁸⁴⁰ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-</u>deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

Commission. The Commission, including the European AI Office¹⁸⁴¹ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the

¹⁸⁴¹ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority France will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact¹⁸⁴² a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

The right to the protection of personal data falls within the scope of application of the right to respect for private life,¹⁸⁴³ which is constitutionally protected.¹⁸⁴⁴

Since France is an EU Member State, the General Data Protection Regulation (GDPR)¹⁸⁴⁵ is directly applicable in France and to French people. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."¹⁸⁴⁶ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.

Regarding the activities of law enforcement authorities, the EU Data Protection Law Enforcement Directive (LED)¹⁸⁴⁷ "protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."¹⁸⁴⁸ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁸⁴⁹ The LED also requires for Member States, including France, to enable data subjects to exercise their rights via national data protection authorities.¹⁸⁵⁰

The 1978 French Data Protection Act was amended in 2018 in order to adapt it to both the GDPR and the LED.¹⁸⁵¹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

France is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁸⁵²

AI Oversight

The French data protection authority (CNIL) has published several papers on AI, including a 2018 report on the ethical issues raised by AI.¹⁸⁵³ This report set out two founding principles – fairness and vigilance, six recommendations, and six concerns. Following this report, a joint 2020 paper by the CNIL and the Defender of Rights detailed concerns around the transparency obligations of those responsible for AI systems.¹⁸⁵⁴

The CNIL's work also contributed to the Declaration on Ethics and Data Protection in AI, which was later adopted by the Global Privacy Assembly in 2018.¹⁸⁵⁵ The CNIL is a member of the Global Privacy Assembly (GPA) since 2002. The CNIL did not endorse the 2020 GPA Resolution on AI Accountability¹⁸⁵⁶ but it co-sponsored the 2022 GPA

 $^{^{1851}}$ "Informatique et Libertés" Act, as modified by Bill n° 2018-493 (June 20, 2018), implemented by Decree n° 2018-687 (Aug. 1, 2018), and Order n° 2018-1125 (Dec. 12, 2018).

Resolution on Facial Recognition Technology 1857 and the 2023 GPA Resolution on Generative AI. 1858

In January 2023, the CNIL created an AI Department (AID) to improve its understanding of the risks posed by AI systems, prepare for the entry into force of the EU AI Act, and develop further relationships within the AI ecosystem.¹⁸⁵⁹ The AID Director is Bertrand Pailhes, the former national coordinator for France's national AI strategy, helping to align AID's efforts with the national AI strategy's objectives and work towards creating a common EU framework for trustworthy and innovative AI.¹⁸⁶⁰ Generative AI is one of the key topics the CNIL is focusing on in its 2023 action plan. The CNIL will be supported in its action in this regard by the AID¹⁸⁶¹ and its Digital Innovation Laboratory (LINC) released a study on generative AI in order to understand better its functioning and risks.¹⁸⁶²

In December 2023, the CNIL selected four AI projects aimed at improving public services for incubation in its sandbox. One project led by the French employment agency (France Travail) is to equip job agents with AI conversational assistants to help them offer a personalized path adapted to the needs of job seekers.¹⁸⁶³ Another project, the "Albert" project of the DINUM (interministerial directorate for digital affairs), is aimed at civil servants. It consists of assisting them in the search for information and helping them to formulate specific responses to users. The project is based

on an open language model. It is considered as a potential "lever for the deployment of AI in administrations".

Algorithmic Transparency

Following the assassination in October 2020 of history professor Samuel Paty, the Secretary of State for the Digital Transition and Electronic Communications, Cédric O, wrote in a blog that "the opacity of the functioning of (social media) algorithms and their moderation is a societal and democratic aberration." He added "it is also essential that full transparency be observed vis a vis the public authorities as regards the principles governing in detail the choices made by their moderation algorithms, whether it is about online hatred or dissemination of false information."¹⁸⁶⁴

France is subject to the GDPR and Convention 108+ which both provide for a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁸⁶⁵

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁸⁶⁶ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."1867

¹⁸⁶⁶ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (April 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

¹⁸⁶⁷ Ibid.

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."¹⁸⁶⁸

The Health Data Hub Controversy

In pursuit of its open data policy objective, France launched the Health Data Hub (HDH) in December 2019¹⁸⁶⁹ to facilitate data sharing and foster research. This data sharing is done by amalgamating 18 public databases of patient data to connect with environmental, patient compliance, and quality of life data, enabling consideration of all the data surrounding a patient.¹⁸⁷⁰ The HDH's compiled health data is hosted by Microsoft.¹⁸⁷¹

Following the European Court of Justice's *Schrems II* judgment in July 2020 which invalidated the Privacy Shield, France's highest administrative court (the *Conseil d'État*) considered a request for the suspension of the HDH. In October 2020, the Conseil d'Etat rejected the request. The Conseil d'Etat observed that "personal data hosted in the Netherlands under a contract with Microsoft cannot legally be transferred outside the European Union. While the risk cannot be completely excluded that the American intelligence services request access to this data, it does not justify, in the very short term, the suspension of the Platform, but

requires special precautions to be taken, under the supervision of the CNIL." 1872

Following this decision, the CNIL announced it will advise public authorities on the implementation of appropriate guarantees and will ensure that use of the HDH's health crisis-related research projects is really necessary.¹⁸⁷³

The press reported in October 2020 that the debates are far from over since the CNIL and the Conseil d'État do not have the same analysis of the situation. According to the CNIL, the end of the Privacy Shield requires an urgent change of host for the personal data. According to the Conseil d'Etat, the risks are hypothetical and not urgent.¹⁸⁷⁴ A CNIL's draft determination, could have essentially prevented the HDH's implementation.¹⁸⁷⁵ According to Mediapart, at the end of November 2020, the Minister of Health and Solidarity, Olivier Véran, responded to the President of the CNIL by saying he would put an end to Microsoft's hosting of the HDH within two years.¹⁸⁷⁶

In 2022, health data remains a major concern for the CNIL. Indeed, this data, known as sensitive data in EU law, has been widely collected and processed by many different data controllers and processors in the current health context to fulfill different purposes. Some of these purposes are access to the workplace for certain professions, implementing a sanitary pass, monitoring COVID-19 evolution, establishing vaccination campaigns, deepening research, and implementing health protocols for COVID-19 patients, among others. In this regard, in January 2023, the CNIL issued its

Standard relating to the processing of personal data implemented for the purpose of managing health vigilance systems.¹⁸⁷⁷

GAIA-X

In April 2020, France and Germany launched Gaia-X, a platform joining up cloud-hosting services from dozens of French and German companies for business to move their data freely under Europe's data processing rules. "We are not China, we are not the United States — we are European countries with our own values and our own European interests that we want to defend" said French Economy Minister Bruno Le Maire.¹⁸⁷⁸ Gaia-X is meant to play a key role in the European data strategy as its success lies in the ability to harmonize rules on data sharing.¹⁸⁷⁹ According to the GAIA-X website: "The exchange of data across organisations is currently constrained by proprietary, non-transparent, non-interoperable technologies that do not provide the necessary level of trust. Our concept of sovereignty translates into the autonomy and self-determination users need to operate their technology choices. Gaia-X enables and boosts the creation of Data Spaces through trusted platforms that comply with common rules, allowing users and providers to trust each other on an objective technological basis, to safely and freely share and exchange data across multiple actors." As of February 2023, Gaia-X has over 350 members, and is built upon three pillars: the Gaia-X Association, national Hubs, and Community. Each pillar contains several working groups and committees to ensure Gaia-X's objectives are met.

Gaia-X has been open to non-European firms, triggering worries that large American or Chinese companies could water down new rules or influence the initiative to benefit them rather than Europe's own interests.¹⁸⁸⁰

Mass surveillance

Facial recognition technology (FRT) processes sensitive personal data prohibited, at least in principle, by the GDPR and the French data protection law, subject to exceptions such as individual's consent or for important public interests. In the latter case, FRT can be authorized by a Decree of the Conseil d'État informed by an opinion from the CNIL.

FRT has long been used in France on a voluntary basis with regard to passport control in airports, bank security, and has also been tested in several colleges. The deployment of a FRT-based ID program. Alicem,¹⁸⁸¹ was scheduled for November 2019, despite a very critical opinion from the CNIL. Deployment was delayed after a group of NGOs appealed to the Conseil d'État requesting the annulment of the decree authorizing its creation. In early November 2019, the Conseil d'État dismissed the appeal.¹⁸⁸² The same month, the CNIL published guidance on the use of facial recognition.¹⁸⁸³ The document, primarily directed at public authorities in France that want to experiment with facial recognition, presents the technical, legal and ethical elements that need to be considered. After recalling that facial recognition, experimental or not, must comply with the GDPR and the LED, the CNIL sets out three general requirements: (1) facial recognition can only be used if there is an established need to implement an authentication mechanism that ensures a high level of reliability, and there are no other less intrusive means that would be appropriate; (2) the experimental use of facial recognition must respect the rights of individuals (including consent and control, transparency and security); and (3) the use of facial recognition on an experimental basis must have a precise timeline and be based on a rigorous methodology setting out the objectives pursued and the criteria for success.

In December 2019, the Observatoire des Libertés Numériques¹⁸⁸⁴ and 80 organisations signed an open letter calling on the

¹⁸⁸⁴ The Observatoire des Libertés Numériques federates several French NGOs monitoring legislation impacting digital freedoms: Le CECIL, Creis-Terminal, Globenet,

French Government and Parliament to ban any present and future use of facial recognition for security and surveillance purposes.¹⁸⁸⁵

In November 2023, investigative media Disclose revealed that in 2015, law enforcement secretly acquired surveillance video image analysis software from the Israeli company Briefcam. For eight years, the Ministry of the Interior concealed the use of this tool, which enables facial recognition. According to Disclose, the algorithmic video-surveillance option is unlawfully used by municipal police forces across the nation.¹⁸⁸⁶

In 2020, the administrative tribunal of Marseille rendered a decision on facial recognition that ruled illegal a decision by the South-East Region of France (Provence-Alpes-Côte d'Azur) to test facial recognition at the entrance of two High schools.¹⁸⁸⁷ Following an analysis from the CNIL,¹⁸⁸⁸ the court ruled that there was no opportunity for free and informed consent and also that there were other, less intrusive means to manage entrance to high schools.¹⁸⁸⁹ This was the first decision ever by a court applying the General Data Protection Regulation (GDPR) to Facial Recognition Technologies (FRTs).¹⁸⁹⁰

However, many other experiments are taking place, and companies are positioning themselves, with the Olympic Games in Paris in 2024 in their sights, and a market of seven billion euros at stake.¹⁸⁹¹ In May 2023,

the French Government enacted France's Olympic law legitimizing automated algorithmic image processing at the Olympic Games¹⁸⁹² as an experiment until March 31, 2025.¹⁸⁹³ An automated surveillance system will be put in place in order to detect "suspect" behavior or objects. According to Human Rights Watch, "the surveillance provision of the proposed bill would constitute a serious threat to civic freedoms and democratic principles" Human Rights Watch also noted that the European Data Protection Board and the European Data Protection Supervisor stated, "biometric surveillance stifles people's reasonable expectation of anonymity in public spaces and reduces their will and ability to exercise their civic freedoms, for fear of being identified, profiled or even wrongly persecuted."¹⁸⁹⁴ The civil rights organization "La Quadrature du Net" also launched a campaign against biometric surveillance.¹⁸⁹⁵ For its part, the CNIL has identified the use of augmented cameras in the framework of the Olympic games as a priority topic for investigation in 2024.¹⁸⁹⁶

French MPs unsuccessfully tried to challenge the law before the French Constitutional Council due to the use of algorithm-driven cameras in the Olympics. The French Constitutional Council noted that facial recognition will not be used and the AI-camera system was set for a legitimate purpose and only temporarily. As long as the necessary safeguards are put into place, there is no reason to invalidate the law at this stage.¹⁸⁹⁷

In May 2022, the EDPB has produced guidelines on the use of FRT in the area of law enforcement.¹⁸⁹⁸ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."1899 A few months later, in October 2022, the CNIL imposed a €20 million fine on Clearview AI for unlawful use of facial recognition technology.¹⁹⁰⁰ In April 2023, the French DPA considered that the company had not complied with the order and consequently imposed an overdue penalty payment of EUR 5,200,000 on Clearview AL¹⁹⁰¹

Lethal Autonomous Weapons

President Macron declared in an interview that he is "dead against" the deployment of lethal autonomous weapons. ¹⁹⁰²"You always need responsibility and assertion of responsibility." However, the French government has only proposed the adoption of a nonbinding declaration to curtail Lethal Autonomous Weapons (LAWS), and is opposed to the idea of a new international treaty on the issue,¹⁹⁰³ though an earlier French

initiative led to annual international discussions on LAWS within the framework of the Convention on Certain Conventional Weapons.¹⁹⁰⁴

In October 2022, France was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.¹⁹⁰⁵ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."¹⁹⁰⁶

In February 2023, France participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, France, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁹⁰⁷ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase

onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."¹⁹⁰⁸

France also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁹⁰⁹

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.¹⁹¹⁰ The second REAIM summit will take place in 2024 in Korea.¹⁹¹¹

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour¹⁹¹² of resolution L.56¹⁹¹³ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges

and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

France is a signatory to many international human rights treaties and conventions. France typically ranks among the top nations in the world for the protection of human rights and transparency.¹⁹¹⁴ Freedom House reports, "The French political system features vibrant democratic processes and generally strong protections for civil liberties and political rights. However, due to a number of deadly terrorist attacks in recent years, successive governments have been willing to curtail constitutional protections and empower law enforcement to act in ways that impinge on personal freedoms."

The French Ombudsman and the CNIL have "both, in their own area of expertise, voiced their concerns regarding the impact of algorithmic systems on fundamental rights."¹⁹¹⁵ Following a joint expert seminar in May 2020, they have called in June 2020 for a collective mobilization to prevent and address discriminatory biases of algorithms.¹⁹¹⁶

In their report, Algorithms: preventing automated discrimination,¹⁹¹⁷ the CNIL and the ombudsman stresse that bias can be introduced at every stage of the development and deployment of AI systems, discuss how algorithms can lead to discriminatory outcomes and include recommendations on how to identify and minimize algorithmic biases. The Ombudsman called on the government and relevant actors to take appropriate measures to avoid algorithms that replicate and amplify

discrimination.¹⁹¹⁸ In particular, the Ombudsman recommended to: i) support research to develop studies to measure, and methods to prevent bias; ii) reinforce information, transparency and explainability requirements with regard to algorithms; and iii) perform impact assessments to anticipate discriminatory effects of algorithms.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."¹⁹¹⁹

In April 2022, the French National Consultative Commission on Human Rights also adopted an opinion on the impact of artificial intelligence on fundamental rights. The consultative Commission recommends prohibiting certain uses of AI that are considered too prejudicial to fundamental rights, such as social scoring or remote biometric identification of people in public spaces and places accessible to the public.¹⁹²⁰

OECD / G20 AI Principles

France endorsed the OECD and the G20 AI Principles.

In 2020, France and Canada, and a dozen other countries announced the Global Partnership on Artificial Intelligence to "support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms, and our shared democratic

values."¹⁹²¹ According to the statement, the "GPAI will be supported by a Secretariat, to be hosted by the OECD in Paris, as well as by two Centers of Expertise – one each in Montréal and Paris."

The OECD also praised France for its commitment to following OECD recommendations with regard to its public administration, by publishing a guide for public administrations on the responsible use of algorithms in the public sector.

During a 2023 interview, President Emmanual Macron stated, "The G7 and the Organisation for Economic Co-operation and Development (OECD), which includes 38 countries, would be a "good platform" to develop global regulation."¹⁹²²

UNESCO Recommendation on the Ethics of AI

France endorsed the 2021 UNESCO Recommendation on AI Ethics, the first ever global agreement on the ethics of AI. It remains to be seen which steps it will take to implement it.

Al Safety Summit

In November 2023, France participated in the first AI Safety Summit and endorsed the Bletchley Declaration.¹⁹²³ France thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

France also contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.¹⁹²⁴

Evaluation

France is among the leaders in national AI policies. France has endorsed the OECD / G20 AI Principles and contributed to the creation of the Global Partnership on AI. French authorities in charge of human rights, data protection and ethics are actively involved in AI policy and have published practical guidance regarding facial recognition and algorithmic transparency. France anticipated the entry into force of the EU AI Act by creating a dedicated AI unit with its data protection authority.

However, when it comes to the use of AI by law enforcement authorities and for security purposes, strong resistance exists to fully enforce fundamental rights. France successfully advocated for a national security exemption in both the EU AI Act and the Council of Europe Framework Convention on AI, human rights, democracy and the rule of law. France also played a key role in imposing a separate and lighter regime for GPAI models under the EU AI Act.

Germany

National AI Strategy

The German government initially published its national AI strategy in November 2018.¹⁹²⁵ The three main goals are (1) "to make Germany and Europe a leading centre for AI and thus help safeguard Germany's competitiveness in the future", (2) to ensure "a responsible development and use of AI which serves the good of society," and (3) to "integrate AI in society in ethical, legal, cultural and institutional terms in the context of a broad societal dialogue and active political measures."

In December 2020, Germany updated its AI Strategy. The federal government responded to current developments - with an overview of AI principles and frameworks developed between 2018 and 2020 -, and high-priority topics such as the COVID-19 pandemic - with a discussion on how AI can help with "pandemic control -," or environmental and climate protection.¹⁹²⁶

From 2018 to 2021, the Digitalrat or Digital Council advised the German federal Government on how to best implement the National AI Strategy. The Committee is comprised of AI experts in science and business. An exchange between politics and national as well as international experts is also at the forefront of their activities.¹⁹²⁷¹⁹²⁸ The 2021 coalition agreement of the German government describes AI as a crucial strategic technology for the future and addresses many key AI topics, although the German AI Association, a federation of AI companies and organizations,

¹⁹²⁸ German Federal Government, *Digitalisierung wird Chefsache,* <u>https://www.bundesregierung.de/breg-de/aktuelles/digitalisierung-wird-chefsache-</u> <u>1140420</u>

has noted that the agreement also has its flaws, notably with regards to data protection.¹⁹²⁹

The guiding slogan for the German national strategy is "AI made in Germany." One section of the AI Strategy states: "The Federal Government advocates using an "ethics by, in and for design" approach throughout all development stages and for the use of AI as the key element and hallmark of an "AI made in Europe" strategy." The Strategy continues, "The Federal Government is engaging in dialogue with national and international bodies, including the Data Ethics Commission or the EU Commission's High-Level Expert Group on AI and will take into account the recommendations of these bodies as it develops standards on ethical aspects at German and European level."

AI ethics is a core component of the AI Strategy.¹⁹³⁰ The German government further emphasizes transparency for the development of AI to ensure the protection of civil rights and maintain trust in businesses and institutions. The AI Strategy suggests that "government agencies or private-sector auditing institutions" should "verify algorithmic decision-making in order to prevent improper use, discrimination and negative impacts on society."

Germany has launched several projects to implement its National AI Strategy. According to the OECD, there are approximately 29 initiatives on AI across several topics and institutions.¹⁹³¹ They range from the ethical guidelines to initiatives that foster fruitful business environments. There are four that specifically focus on ethics.

First, the Ethical Guidelines for Automated and Connected Driving set out 20 ethical principles for autonomous and semi-autonomous vehicles.¹⁹³² This was among the first guidelines worldwide to establish ethical principles for connected vehicular traffic. The Ethical Guidelines led

to an action plan and the "creation of ethical rules for self-driving cars" that was adopted by the Federal Government.¹⁹³³

Second, the German AI Observatory forecasts and assesses AI technologies' impact on society. The AI Observatory also develops regulatory frameworks that help deal with the rapidly changing labor market to ensure that social aspects of these changes are not neglected.¹⁹³⁴

Third, although not mentioning AI explicitly, the Ethical, Legal and Social Aspects of Modern Life Sciences Funding Priority, launched originally in 1997, funds research with the goal of establishing "findings regarding the opportunities and risks presented by modern life sciences" and developing a basis for discourse amongst involved stakeholders.¹⁹³⁵

Fourth, the Federal Ministry for Economic Cooperation and Development launched the Development Cooperation initiative FAIR Forward in 2019. The initiative aims to promote a more "open, inclusive and sustainable approach to AI on an international level" by "working together with five partner countries: Ghana, Rwanda, South Africa, Uganda and India." The FAIR Forward goals are to: Strengthen Technical Know-How on AI, Remove Entry Barriers to AI, and Develop Policy Frameworks ready for AI. Several projects are underway in partner countries.¹⁹³⁶

Further, the Federal Ministry for Economic Affairs and Energy launched a Regulatory Sandboxes initiative in 2018. This initiative, although not specifically dedicated to AI, focuses on "testing innovation and regulation which enable digital innovations to be tested under real-life conditions and experience to be gathered."¹⁹³⁷

https://www.bmwi.de/Redaktion/EN/Dossier/regulatory-test-beds-testing-environmentsfor-innovation-and-regulation.html

In response to the European Commission's White Paper on AI,¹⁹³⁸ Germany called for tighter regulation of AI on the EU level in 2020. The German government stated it welcomes new regulations but wants more specific definitions and stricter requirements for data storage, more focus on information security and more elaborate definitions of when human supervision is needed.¹⁹³⁹

Data Ethics Commission

In 2018, the German federal government established a Data Ethics Commission to "build on scientific and technical expertise in developing ethical guidelines for the protection of the individual, the preservation of social cohesion, and the safeguarding and promotion of prosperity in the information age."¹⁹⁴⁰ In 2020, the Commission recommended to the German parliament that sustainability, justice and solidarity, democracy, security, privacy, self-determination and human dignity should be the ethical and legal principles that guide the regulation of AI.¹⁹⁴¹ The Data Ethics Commission suggested a risk-based approach to the regulation of AI, which distinguishes five levels of criticality in a "criticality pyramid" and respective measures in its risk-adapted regulatory system for the use of algorithmic systems. The Commission also recommended the establishment of "*ex ante* approval mechanisms and continuous supervision by oversight bodies."¹⁹⁴²

The German consumer organization federation *Verbraucherzentrale Bundesverband* (vzbv) favored the creation of the Commission and strongly supported the recommendations, as did the main German industry body *Bundesverband der Deutschen Industrie* (BDI).¹⁹⁴³ The vzbv further emphasized that the aim of Automated Decision Making (ADM) regulation must be to ensure compliance with existing laws. Toward that goal, "it must

be possible for supervisory authorities to scrutinise and verify the legality of ADM systems and their compliance with existing laws so that they can impose penalties if the law is infringed."¹⁹⁴⁴ Vzbv also noted it is "important to ensure consumers' self-determination when making decisions, to strengthen consumers' confidence in ADM systems by creating transparency and to foster competition and innovation."

Public Participation

Germany's national AI strategy points out that its 2019 data strategy is based on "broad public consultation and a host of expert discussions," though participation in developing and updating its AI strategy was primarily limited to "experts in expert forums."¹⁹⁴⁵

One AI initiative, *Plattform Lernende Systeme* (Platform for Self-Learning Systems),¹⁹⁴⁶ focuses specifically on fostering dialogue between different stakeholders, like civil society, government, and business on the topic of self-learning systems. The Platform also aims to "shape self-learning systems to ensure positive, fair and responsible social coexistence" as well as strengthen skills for developing and using self-learning systems.¹⁹⁴⁷ The IT Security, Privacy, Legal and Ethical Framework working group has published several papers on AI security and ethical issues.¹⁹⁴⁸

To inform the public about AI policy, the German government created a website (KI-Strategie-Deutschland.de) to provide information on AI strategy implementation and new policy developments.¹⁹⁴⁹ *Plattform Lernende Systeme* also offers a map that shows AI developments across Germany by region.¹⁹⁵⁰

Germany's federal parliament also set up a Study Commission comprised in equal parts of parliamentary representatives and experts called the "Study Commission on Artificial Intelligence, Social Responsibility,

and Economic, Social and Ecological Potential."¹⁹⁵¹ The Commission's aim was to develop recommendations on AI and examine its impact on "our value systems, fundamental and human rights, and [its] benefits for society and the economy." Some of their meetings were broadcasted on parliamentary television or could be attended in person. After two years of work, the Study Commission presented its final report to the federal parliament (Bundestag) on October 28, 2020. The Commission's findings were debated in the Bundestag on November 5, 2020.¹⁹⁵²

EU Digital Services Act

As an EU member state, Germany shall apply the EU Digital Services Act (DSA).¹⁹⁵³ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6

¹⁹⁵¹ German Parliament, Enquete-Kommission, Künstliche Intelligenz – Gesellschaftliche Verantwortung und wirtschaftliche, soziale und ökologische Potenziale,

¹⁹⁵³ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legalcontent/EN/TXT/?uri=celex%3A32022R2065</u>

percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.¹⁹⁵⁴ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.¹⁹⁵⁵

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation¹⁹⁵⁶ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.¹⁹⁵⁷ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital

Media Observatory (EDMO) Task Force¹⁹⁵⁸ on the 2024 European elections.

EU AI Act

As an EU member State, Germany is bound by the EU AI Act.¹⁹⁵⁹ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

• unacceptable risks, prohibited;

¹⁹⁵⁸ European Digital Media Observatory, *EDMO Taskforce on 2024 European Elections*, <u>https://edmo.eu/thematic-areas/european-elections/edmo-taskforce-on-2024-european-elections/</u>

¹⁹⁵⁹ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

of:

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.¹⁹⁶⁰ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the

¹⁹⁶⁰ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.¹⁹⁶¹

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;

¹⁹⁶¹ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

• emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.¹⁹⁶² The academics called for a transversal FRIA, applicable to both

¹⁹⁶² Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-institutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificial-intelligence-act/

the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by Germany, France and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.¹⁹⁶³

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European

¹⁹⁶³ Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-</u>deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

Commission. The Commission, including the European AI Office¹⁹⁶⁴ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools. methodologies and benchmarks evaluating for capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the

¹⁹⁶⁴ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Germany will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact¹⁹⁶⁵ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

¹⁹⁶⁵ European Commission, AI Pact, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-pact</u>

Data Protection

Since Germany is an EU Member State, the General Data Protection Regulation (GDPR)¹⁹⁶⁶ is directly applicable in Germany and to Germans. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."¹⁹⁶⁷ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.

The activities of law enforcement authorities have been addressed at EU level by the EU Data Protection Law Enforcement Directive (LED)¹⁹⁶⁸. "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."¹⁹⁶⁹ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁹⁷⁰ The LED also requires for Member States, including Germany, to enable data subjects to exercise their rights via national data protection authorities.¹⁹⁷¹

The Federal Data Protection Act (*Bundesdatenschutzgesetz*, BDSG) was designed to bring the German privacy law on par with the GDPR and the LED. It is usually referred to as the "BDSG-new" since it replaced the

¹⁹⁶⁷ European Commission, Data protection in the EU,

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en ¹⁹⁶⁸ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, <u>https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504</u> ¹⁹⁶⁹ European Commission, Data protection in the EU,

¹⁹⁷¹ Article 17 of the LED.

former BDSG on May 25, 2018.¹⁹⁷² In addition to the BDSG-new, there are various sector-specific data protection regulations, such as those governing energy industries. December financial and In 2021. the Telecommunications Telemedia Data Protection Act (TTDSG) was introduced and set to be enforced in 2023. The TTDSG contains regulations about cookie management and Personal Information Management Systems.¹⁹⁷³ Further, the German Civil Code Article 327g is intended to protect user privacy in cases where a consumer gives their personal data in order to access a service.¹⁹⁷⁴

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Germany is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁹⁷⁵

Al Oversight

The German Federal Commissioner for Data Protection and Freedom of Information (*Der Bundesbeauftragte für den Datenschutz und die Informationsfreiheit*) is the national data protection authority for Germany. It is however only in charge of federal government authorities and private telecoms and postal services. ¹⁹⁷⁶ The Federal Data Protection Commissioner is a member of the Global Privacy Assembly since 2002. It co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in

AI¹⁹⁷⁷ and the 2023 GPA Resolution on Generative AI.¹⁹⁷⁸ The Federal Data Protection Commissioner also sponsored the 2020 GPA Resolution on AI Accountability.¹⁹⁷⁹ However, the Federal Data Protection Commissioner did not endorse the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.¹⁹⁸⁰

Any other private entity and all other authorities in Germany is regulated by the relevant state DPA.

In Bavaria, there is one authority responsible for the private sector and one for the public sector: the Data Protection Authority of Bavaria for Private Sector (BayLDA) and the Bavarian Data Protection Commissioner, which is responsible for enforcing data rights against public authorities and government agencies.¹⁹⁸¹ In other states, one authority is responsible for all data protection supervision and enforcement in the state. One example of this is Hessen, where the Hessian Commissioner for Data Protection and Freedom of Information is responsible for the public authorities, government agencies as well as the private sector.¹⁹⁸²

In 2021, numerous German DPAs launched a collective investigation on the use by German companies of third-party providers outside the EU and their compliance with the 2020 European Court of Justice's *Schrems II* decision with regard to international data transfers. The

Court has made clear that DPAs shall intervene to suspend or prohibit transfers which do not match the Schrems II criteria.¹⁹⁸³

Several State DPA are members of the Global Privacy Assembly but none of them has endorsed GPA's AI-related resolutions.¹⁹⁸⁴

The German Institute for Human Rights, founded in 2001 by the German Bundestag (Parliament) as an independent national institution, works to ensure the observation and promotion of human rights by the German government in Germany and abroad.¹⁹⁸⁵ The Institute published an interview on protecting human rights when applying AI in the context of elderly care in 2019¹⁹⁸⁶ and has emphasized the importance of assessing and preventing the human rights risks of Artificial Intelligence in 2021,¹⁹⁸⁷ though the Institute has not indicated that it sees a sustained oversight of AI-related human rights infringements as a priority.

Algorithmic Transparency

Germany is subject to the GDPR and Convention 108+. Germans have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁹⁸⁸

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁹⁸⁹ specifically emphasizes requirements on transparency, accountability and effective

¹⁹⁸⁹ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."¹⁹⁹⁰

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."¹⁹⁹¹

In 2019, the Ministry of Education and Research started a funding priority for AI R&D projects on explainability and transparency. The Ministry stated that improving explainability and transparency are two of the Federal government's central research goals.¹⁹⁹² Funding is "aimed at collaborative projects between science and industry in an interdisciplinary composition."¹⁹⁹³ The German consumer organization vzbv emphasized in

2019 that the aim of automated decision-making regulation must be to ensure compliance with existing laws.¹⁹⁹⁴

In 2020, the German Data Ethics Commission for its part sees auditability, explainability, and redress possibilities as crucial for algorithm safety.¹⁹⁹⁵ However, even though Germany has had a significant impact on the drafting of the EU AI Act and its transparency regulations, AlgorithmWatch has noted that Germany (and specifically its Ministry of the Interior) has in recent years tried to water down transparency obligations for AI systems in the AI Act, most notably with regard to exemptions for AI use in "law enforcement, migration, asylum and border control," including remote biometric identification systems.¹⁹⁹⁶

According to AlgorithmWatch,¹⁹⁹⁷ the data protection agencies of the federal government and eight German federal states stated that greater transparency in the implementation of algorithms in the administration was indispensable for the protection of fundamental rights.¹⁹⁹⁸ The agencies demanded that if automated systems are used in the public sector, it is crucial that processes are intelligible, and can be audited and controlled. In addition, public administration officials have to be able to provide an explanation of the logic of the systems used and the consequences of their use. Self-learning systems must also be accompanied by technical tools to analyze and explain their methods. An audit trail should be created, and the software code should be made available to the administration and, if possible, to the public. According to the position paper, there need to be mechanisms for citizens to demand redress or reversal of decisions, and the processes must not be discriminating. In cases where there is a high risk for citizens, there needs to be a risk assessment done before deployment. Very

sensitive systems should require authorization by a public agency that has yet to be created.

One of the State DPAs, the Berlin Commissioner for Data Protection and Freedom of Information (BlnBDI), rendered a decision reasserting the importance of algorithmic transparency. In May 2023, the Berlin Data Protection Authority fined a Berlin-based bank \in 300,000. The Bank used an online form to request various data about the applicant's income, occupation and personal details for a credit card application. Based on the information requested and additional data from external sources, the bank's algorithm rejected the customer's application without any particular justification. The algorithm is based on criteria and rules previously defined by the bank. Since the client had a good credit rating and a regular high income, he doubted the automated rejection and complained to the Berlin data protection commissioner. The lack of transparency regarding the automated decision led to the imposition of a fine by the State DPA.¹⁹⁹⁹

In January 2023, Mannheim, in collaboration with eight other cities across Europe and with the help of Eurocities' Digital Forum, adopted an algorithm register, the Algorithmic Transparency Standard.²⁰⁰⁰ The aim is to provide more information for residents with regard to the use of algorithm by municipalities and their impact. The register includes a range of information such as the type and purpose of an algorithm, the department using the algorithm, the geographical area and domain it relates to and a risk category. It also includes details on the data source and training data, any bias and mitigation, and human oversight. This initiative builds on similar algorithm registers launched in Amsterdam and Helsinki in September 2020.

According to André Sobczak, Secretary General, Eurocities, "[t]he efforts undertaken by these cities aim to set a standard for the transparent and ethical use of algorithms while their use is still in its relative infancy across city administrations in Europe. In this way, they seek to offer both a safeguard for people whose data may be used by algorithms, and have created a validated model that other cities can use straight away, without having to invest further resources themselves."²⁰⁰¹

Facial Recognition

German governments have launched several projects on facial recognition technology, but these have been met with considerable public resistance. In 2017, Hamburg police deployed facial recognition technology in the wake of the G20 protests, which led to a three-year legal battle involving the Hamburg DPA and several courts that ended with the police deleting its biometric database in 2020.²⁰⁰² In 2018, the German Ministry of the Interior deployed facial recognition technology at a large train station in Berlin, sparking opposition from civil society.²⁰⁰³ There was further outcry in 2020, when *Der Spiegel* reported that Germany planned to set up cameras capable of identifying people at 134 train stations and 14 airports.²⁰⁰⁴ In 2021. Germany's incoming coalition government said it would exclude biometric recognition in public spaces as well as automated state scoring systems by AI.²⁰⁰⁵ A January 2023 study showed that German citizens, when asked about facial recognition technology, generally "call for strong regulations to address associated risks," although citizens' trust in the government is correlated with their attitudes towards facial recognition technology.²⁰⁰⁶

In late 2022 and early 2023, Germany has made clear it has some reservations on the AI Act, although its position seems to mesh well with the Act's general approach.²⁰⁰⁷ Germany's position has been somewhat

inconsistent: the German government favored a total ban on remote biometric identification technology in 2021 as per its coalition agreement²⁰⁰⁸ while, in 2023, it only supported a ban on *real-time* biometric recognition identification and would allow ex-post identification systems.²⁰⁰⁹

The European Data Protection Board (EDPB) has produced guidelines on the use of facial recognition technologies in the area of law enforcement.²⁰¹⁰ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."²⁰¹¹

Predictive Policing

The German police has launched several projects using AI to assist in predictive policing both on the federal and state level. The Federal Crime Agency has used risk scoring for "militant Salafists"²⁰¹² while several state police forces have deployed PRECOBS, an anti-burglary system, with varying success. The police of Baden-Württemberg, for instance, started a pilot project with PRECOBS in 2015²⁰¹³ that was ended in 2019 "due to

data quality issues."2014 North Rhine-Westphalia developed and tested the predictive policing tool SKALA from 2015 to 2018.²⁰¹⁵ In late 2022, Germany's Constitutional Court started a legal review of surveillance software deployed by police in the state of Hesse since 2017. The software, dubbed 'Hessendata', is based on the US company Palantir's Gotham program and its use has been met with public criticism.²⁰¹⁶ In the case, the court found that provisions in the laws of the states of Hesse and Hamburg. which enable the police to process data by matching data from various databases and to carrv out automatic analysis, data were unconstitutional.²⁰¹⁷

In the EU AI Act negotiations, Germany called for a ban on systems that would replace human judges in crime and recidivism risk assessment as well, but it also pushed for exemptions for law enforcement in other areas.²⁰¹⁸

Lethal Autonomous Weapons

The German government's 2018 coalition agreement stated that it "rejects autonomous weapon systems devoid of human control" and called for a global ban.²⁰¹⁹ Also in 2018, in cooperation with the French government, the German government published a joint statement on Lethal Autonomous Weapons at the Meeting of the Group of Governmental Experts on Lethal Autonomous Weapons Systems (LAWS). They wrote, "At the heart of our proposal is the recommendation for a political declaration, which should affirm that State parties share the conviction that

humans should continue to be able to make ultimate decisions with regard to the use of lethal force and should continue to exert sufficient control over lethal weapons systems they use."²⁰²⁰

In 2019, the then-Foreign Minister of Germany, Heiko Maas, reasserted the German position as being in favor of a total ban on Lethal Autonomous Weapons Systems,²⁰²¹ and the Foreign Ministry organized a virtual forum on LAWS in 2020 to move closer to a "collective normative framework."²⁰²² Observers have argued, however, that the 2021 German coalition agreement is "ambivalent about legally binding action on autonomous weapons" and that it merely "rejects" these systems instead of pushing for regulation.²⁰²³

The new German government's 2021 coalition agreement states, "We reject lethal autonomous weapon systems that are completely removed from human control. We actively promote their international outlawing. We want the peaceful use of space and cyberspace. For weapons technology developments in biotech, hypersonics, space, cyber and AI, we will take early arms control initiatives. We want to contribute to strengthening norms for responsible state behavior in cyberspace."²⁰²⁴

In October 2022, Germany was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international

framework of rules and constraints.²⁰²⁵ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."²⁰²⁶

In February 2023, Germany participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Germany, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁰²⁷ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."2028

Germany also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁰²⁹

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.²⁰³⁰ The second REAIM summit will take place in 2024 in Korea.²⁰³¹

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour²⁰³² of resolution L.56²⁰³³ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to Freedom House, Germany is one of the top countries in the world for the protection of political rights and civil liberties, receiving a score of 93/100.²⁰³⁴ Freedom House reports that, "Germany is a representative democracy with a vibrant political culture and civil society. Political rights and civil liberties are largely assured both in law and practice."

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."²⁰³⁵

OECD / G20 AI Principles

Germany is a member of the OECD and endorsed the OECD and the G20 AI Principles.

In 2020, Germany joined 14 other countries to announce the Global Partnership on Artificial Intelligence to "support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms, and our shared democratic values."²⁰³⁶ In 2021, the OECD noted several examples of Germany's implementation of the OECD AI Principles, including guidelines for trustworthy AI that are largely in line with the OECD AI Principles

UNESCO Recommendation on the Ethics of AI

Germany is a signatory to the UNESCO Recommendation on the Ethics of Artificial Intelligence. While its AI plan was published before the development of the UNESCO Recommendation, the German UNESCO Commission released a report in 2022 which showed that Germany "has taken important steps to regulate AI in a way that corresponds to human rights and the public good," although more work is needed in some areas.²⁰³⁸

In September 2022, the German Bundestag held discussions over the UNESCO Recommendation on the Ethics of AI. However, no action has followed although it was noted during the discussion that states should act within 4 years of the release of the UNESCO Recommendation.²⁰³⁹

Al Safety Summit

In November 2023, Germany participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁰⁴⁰ Germany thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to

be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

Germany also contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.²⁰⁴¹

Evaluation

Germany's national AI strategy emphasizes AI ethics, and Germany has called for regulating AI at EU level. However, while generally in favor of regulation and transparency, the German position on the risks of AI systems (particularly on biometric identification and predictive policing) is difficult to pin down, as different ministries, coalition members, and state governments may have different priorities and opinions.²⁰⁴² The same could be said about the regulation of GPAI models. With the adoption of the EU AI Act, Germany shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously. As Germany endorsed the UNESCO Recommendation on the Ethics of AI, it remains to be seen which concrete steps Germany will take to implement it in practice.

Ghana

National AI Strategy

The Future Society (TFS) announced that "in October 2022, TFS delivered the Republic of Ghana National Artificial Intelligence Strategy 2023-2033 with our partners: Ghana's Ministry of Communications and Digitalisation and Data Protection Commission, GIZ FAIR Forward and Smart Africa." In January 2024, the Minister of Communications and Digitalisation, Ursula Owusu-Ekuful, stated that a draft strategy was actually ready and waiting to be tabled before Cabinet for consideration and suggestions.²⁰⁴³ The Strategy is expected to ensure better conditions for the development and use of this innovative technology for the benefit of citizens.

As member of the African Union (AU), Ghana is working to align the country efforts to the vision of the Union with regard to its Digital Transformation Strategy²⁰⁴⁴ as well as its Artificial Intelligence Continental Strategy for Africa. Ghana's Ministry of Communications and Digitalization participated in a consultative workshop organized by the AU High-Level Panel on Emerging Technologies (APET).²⁰⁴⁵ The APET discussions aimed at gathering input about "myths, challenges, and benefits of Artificial Intelligence (AI) in Africa," urging African countries to invest in AI literacy, cooperate internationally for AI innovation, enhance data protection, invest in infrastructure, and review policy implementation frameworks governing AI.

Public Participation

In Ghana, stakeholder engagement for public policies is an established practice, led by the Ministry of Communication and Digitalization (MoCD). Annual budgets support the planning sessions to

for Ghana's Digital Economy Policy at the Accra Digital Centre in November 2022.²⁰⁴⁷ Minister Ursula Owusu-Ekuful highlighted the significance of the ministerial consultation as a means to ensure inclusiveness and comprehensiveness of the policy, covering data governance, emerging tech and regulation, data classification, data sharing and open data.²⁰⁴⁸

The National AI Strategy is the result of the collaborative efforts of Ghana's Ministry of Communications and Digitalisation, Ghana's Data Protection Commission, GIZ FAIR Forward,²⁰⁴⁹ Smart Africa²⁰⁵⁰ and The Future Society.²⁰⁵¹

In total, the strategy is based on 40+ local stakeholder consultations, in-depth AI policy landscape mapping and SWOT Analysis of Ghana's AI ecosystem, and 4 high-level public sector consultation workshops to iterate the mission and vision, recommendations and action plan, and a detailed booklet of AI use cases across key sectors.²⁰⁵²

For example, in May 2022, The Future Society co-led a stakeholder consultation workshop in Ghana to support the development of Ghana's AI strategy.²⁰⁵³ The workshop sessions addressed AI governance and frameworks, policies, implementation plans, SWOT, local AI ecosystems, AI ethical guidelines and recommendations for the establishment of

program offices to drive implementation. In August 2022, The Future Society together with Ghana's Data Protection Commission, GIZ FAIR Forward and Smart Africa held the third high-level public sector consultation workshop with private and public sector, academia and civil society, to discuss the establishment of precautionary guardrails for AI across sectors.²⁰⁵⁴

Data Protection

In 2012, Ghana enacted the Data Protection Act.²⁰⁵⁵ Section 41 of the Data Protection Act provides for the right of the data subject to object for decisions that significantly affect him to not be based solely on automated processing of personal data. The Data Protection Act establishes the Data Protection Commission,²⁰⁵⁶ which is an independent statutory body in charge of enforcing the Data Protection Act and protecting data subjects' rights. The Data Protection Commission is in the process of drafting related subsidiary regulations. They should be ready by end of 2024.²⁰⁵⁷

Despite being a member of the Global Privacy Assembly since 2014, the Data Protection Commission has not endorsed the 2018 GPA resolution on AI and Ethics,²⁰⁵⁸ the 2020 GPA Resolution on AI and

Accountability,²⁰⁵⁹ the 2022 Resolution on Facial Recognition Technology²⁰⁶⁰ or the 2023 GPA Resolution on Generative AI.²⁰⁶¹

Ghana is one of five African countries that ratified (in 2019) the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).²⁰⁶² The Convention, drafted in 2011 and adopted in 2014 is an initial step to the establishment of a regulatory framework for data protection in the African region.²⁰⁶³ The agreement emphasized that each country is to develop its own legislative framework, observing the African Charter on Human and People's Rights, respecting privacy and freedoms while enhancing the promotion and development of ICT.²⁰⁶⁴

Algorithmic Transparency

The expansive presence of social media and use of online tools in African countries makes regulating algorithmic transparency the most critical to protect against misuse.²⁰⁶⁵ The Ghana Data Protection Act of 2012 establishes the principle of "fair and transparent processing of a data

subject's personal data"²⁰⁶⁶ and provides that subjects need to be informed by the data processor when a decision has been made by automated means. Section 17 of the DPA sets out principles that data controllers must adhere to when processing personal data and more particularly Section 17 (f) provides for openness as a principle for processing personal data. This section could be interpreted as including algorithmic transparency but it would need confirmation either by the Data Protection Commission or by court. The Malabo Convention does not provide for algorithmic transparency. They both would need to be revised in order to explicitely mention the right to algorithmic transparency.

A study by International Telecommunications Society (ITS) on the use of artificial intelligence in the Fintech industry of Ghana and three other African countries found gender bias in financial services decisions. A lack of algorithmic transparency and explainability were areas of concern, contributing to the inability to make institutions accountable for biased decisions.²⁰⁶⁷

Facial Recognition

Practices of surveillance and use of facial recognition are of concern in the country. Ghana's National Service Scheme has implemented facial recognition in its registration process, in order to prevent fraud and identity thefts in the receipt of payments to public employees. The deployment which included testing, staff training sessions and public awareness, has achieved its desired outcome according to government reports.²⁰⁶⁸

A 2023 report reveals that the government has increased its possession of surveillance technologies. Ghana is implementing the Integrated National Security Communications Enhancement Network (ALPHA) project, a safe city project, which will incorporate the use of facial recognition CCTV cameras.²⁰⁶⁹ Concerns exist that the Ghanaian

government wil use this technology to identify and target citizens expressing dissenting viewpoints.²⁰⁷⁰

Credit Scoring

In 2019, the use of citizen scoring mechanisms in Ghana by the National Identification Authority was subject of a study by Algorithm Watch. It resulted that six biometric databases owned by public authorities provide citizen scores, including credit reference scores issued by the Credit Reference Bureau.²⁰⁷¹

According to a report by the Bank of Ghana, it has initiated discussions with credit bureaus to introduce credit scoring as a complement to the credit reports already offered by these bureaus. This initiative follows the introduction of the Ghana Card, which serves as a distinct identifier for individuals with credit information. In 2024, the Bank of Ghana plans to facilitate the implementation of the credit scoring system by ensuring that financial institutions update existing credit information with new details from the Ghana Card.²⁰⁷²

Biometrics

Ghanaian Police Service has adopted biometric devices, as part of their strategy of digitization with the objective to "dramatically improve policing in Ghana."²⁰⁷³ The police uses biometrics to check wanted individuals against the National Identification Authority's (NIA) database. The process started in 2017 with the issuing of the new Ghana card, aimed to centralize the identity management systems.²⁰⁷⁴ The NIA biometric database amounts to 17 million records, including Ghana ID card, car

registration and insurance information allowing for identification in real time with biometric devices. The Ghana card contains personal information that allows continuous identity verification. The NIA National Identity System employs three biometric technologies for identification : unique fingerprints represented as digitized templates, facial templates depicted as digitized color photos of the cardholder, and iris recognition.²⁰⁷⁵

A report by Privacy International identified practices of surveillance in Ghana during the phase of emergency response to the COVID pandemic.²⁰⁷⁶ The PanaBIOS app endorsed by the African Union and deployed by the Ghanaian border enforcement, used algorithms to track and trace individuals that might pose a health threat.

EdTech

Ghana was the subject of a study by Human Rights Watch about the use of government-endorsed Ed Tech tools for online learning during the COVID-19 pandemic across 49 countries.²⁰⁷⁷ The findings show that the government of Ghana endorsed platforms that have the capability to collect AAID (Android Advertising ID) and identify, tag and track users, including children. The AAID is a feature used for user profiling and ads use cases. Further, learning apps endorsed by Ghana tracked and collected data from children and teachers for advertising and revenue purpose, transmitting data to AdTech companies. For Ghana, the apps in this category were Edmodo and Ghana electronic Library. Ghana was one of the only nine countries that disclosed in their privacy policies that they collected and used children data for "behavioral advertising purposes."²⁰⁷⁸

Lethal Autonomous Weapons Systems

Ghana has not acceded to the Convention on Certain Conventional Weapons (CCW). However, the country has participated in several CCW

meetings since 2014.²⁰⁷⁹ In a statement to the 2016 CCW informal meeting of experts on LAWS, Ghana called for the "promotion and preservation of human dignity for humanity as a whole (...) In our view, fully automated lethal systems must be proscribed before they are fully developed."²⁰⁸⁰ Ghana is a member of two groups that support the negotiation of a legally-binding instrument on autonomous weapons systems: The African Group within the United Nations and the Non-Aligned Movement. The African Group issued a statement in 2021 CCW calling on the "ethical, legal, moral and technical questions" in the use of autonomous weapons systems and urging concrete policy recommendations, including prohibitions and regulations.²⁰⁸¹

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour²⁰⁸² of resolution L.56²⁰⁸³ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Ghana is one of the early signatories of the Universal Declaration of Human Rights (UDHR)²⁰⁸⁴ and has enshrined the key provisions of the

²⁰⁸⁴Universal Declaration of Human Rights, <u>https://www.un.org/en/about-us/universal-</u> declaration-of-human-rights

UDHR in its Constitution. The 1992 Constitution of Ghana²⁰⁸⁵ provides for the protection of fundamental human rights and freedoms. The UDHR provides for the right to privacy under Article 12. The right to privacy is guaranteed under Article 18 of the Constitution of Ghana 1. The constitution states, "No person shall be subjected to interference with the privacy of his home, property, correspondence or communication except in accordance with law and as may be necessary in a free and democratic society for public safety or economic well-being of the country, for the protection of health or morals, for the prevention of disorder or crime or for the protection of rights and freedoms of others."

Ghana is a party to the African Charter on Human and Peoples' Rights. In its 2019 Declaration of Principles on Freedom of Expression and Access to Information in Africa, the African Commission on Human and Peoples' Rights (ACHPR), in charge of interpreting the Charter,²⁰⁸⁶ called on states to ensure that the "development, use and application of AI, algorithms and other similar technologies by internet intermediaries are compatible with international human rights law and standards, and do not infringe on the rights to freedom of expression, access to information and other human rights."²⁰⁸⁷

In February 2021, the ACHPR adopted Resolution 473 having recognized that emerging technologies such as AI have a bearing on the enjoyment of human rights under the African Charter on Human and Peoples' Rights (the African Charter).²⁰⁸⁸ The ACHPR called on state parties to the African Charter, Ghana included, to:

- Ensure that the development and use of AI, robotics and other new and emerging technologies is compatible with the rights and duties

in the African Charter and other regional and international human rights instruments, in order to uphold human dignity, privacy, equality, non-discrimination, inclusion, diversity, safety, fairness, transparency, accountability and economic development as underlying principles that guide the development and use of AI, robotics and other new and emerging technologies.

- Ensure transparency in the use of AI technologies, robotics and other new and emerging technologies and that decisions made in the use of AI technologies, robotics and other new and emerging technologies are easily understandable to those affected by such decisions.
- Work towards a comprehensive legal and ethical governance framework for AI technologies, robotics and other new and emerging technologies so as to ensure compliance with the African Charter and other regional treaties.

In September 2022, the Special Rapporteur on Freedom of Expression and Access to Information in Africa, Ourveena Geereesha Topsy-Sonoo, recalled that, with Resolution 473, the Commission, "recognizing the need to better understand the legal, ethical, safety and security opportunities and challenges raised by AI, robotics and other new and emerging technologies in Africa, observed in its Resolution (...) that new and emerging technologies present both opportunities and perils for the promotion and protection of human and peoples' rights in Africa. The Commission further observed that whilst making government services and information digital enhances transparency and accessibility and artificial intelligence allows for a number of benefits in the society, it has to be accompanied by human rights considerations and a bridging of the digital divide." The Special Rapporteur also declared that "State Parties are encouraged to develop domestic legal frameworks regulating AI and egovernance; ensure these technologies are developed and used transparently; and ensure that imported AI and e-governance systems align with the African Charter."2089

According to the Freedom House's 2024 Freedom in the World report,²⁰⁹⁰ Ghana is rated Free with a score of 80/100 on the Global Freedom

²⁰⁹⁰*Freedom House, Ghana: Freedom in the World 2024 Country Report,* https://freedomhouse.org/country/ghana/freedom-world/2024

Score. Ghana is rated *Partly Free* with a score of 64/100 on the Internet Freedom Score. According to Freedom House, Ghana political rights and civil liberties are backed by a stable democracy, with competitive multiparty elections since 1992 and peaceful transfer of power between the two major political parties. Areas of weakness concern judicial independence and the rule of law. Corruption also poses challenges to the effective performance of the government. The report also highlights political violence as a growing concern.

OECD / G20 AI Principles

Ghana is not a member of the OECD.²⁰⁹¹ However, Ghana is a member of the African Union which has recently joined the G20 and endorsed the G20 AI Principles.

Ghana is also a member of the OECD Development Centre since 2015, collaborating with members and non-member countries in policy to improve living conditions in developing and emerging economies.²⁰⁹² In the development of Ghana's national AI strategy, the government of Ghana and The Future Society collaborated with the OECD AI Policy Observatory among other organizations that champion human centric AI.²⁰⁹³

UNESCO Recommendation on the Ethics of AI

Ghana is one of the 193 member countries of UNESCO that adopted the UNESCO Recommendation on the Ethics of AI.²⁰⁹⁴ It remains to be seen whether the National AI Strategy will duly take into account the UNESCO Recommendation.

Evaluation

Ghana is progressing with the formulation of its national AI strategy. The country has endorsed the UNESCO Recommendation on the Ethics of AI and is involved in the African Union' work on a Continental

https://www.unesco.org/en/articles/unesco-member-states-adopt-first-ever-global-agreement-ethics-artificial-intelligence

AI Strategy for Africa, which is to be hoped will be reflected in the final Ghanian National AI Strategy.

Ghana benefits from an independent Data Protection Commission and developed its own data protection legal framework and also ratified the Malabo Convention. Amid the rapid deployment of AI in the country, a step further would consist in modernizing the Data Protection Act to include the right to algorithmic transparency. The regulation of practices of biometrics identification, facial recognition, and individual scoring is essential to realize the benefits of AI for the Ghanaian society.

Hong Kong

National AI Strategy

Hong Kong is making significant advances in AI development and policy implementation through the issuance of guidelines, policies, and AI technology applications in different sectors. Although this special administrative region²⁰⁹⁵ largely controlled by China does not have a national strategy for the regulation of AI, there exists a guideline on AI to guide organizations in adopting accountable and ethical processes. This guideline, issued by the Office of the Privacy Commissioner for Personal Data (PCPD), contains statements on the ethical development and use of AI, which are aimed at guiding the adherence to personal data and privacy requirements by organizations within the region.²⁰⁹⁶ The PCPD Ethical AI principles have been expanded to twelve principles from previously seven. Two of the twelve, namely (1) Transparency and Interpretability and (2) Reliability, Robustness, and Security are categorized as "Performance Principles." The rest are categorized as "Generalized Principles" that include the following: (1) Fairness, (2) Diversity and Inclusion, (3) Human Oversight, (4) Lawfulness and Compliance, (5) Data Privacy, (6) Safety, (7) Accountability, (8) Beneficial AI, (9) Cooperation and Openness and (10) Sustainability and Just Transition.²⁰⁹⁷ The PCPD guideline also provides practical steps to help organizations in managing their AI systems, covered under four major areas namely:

- Establishing AI strategy and governance;
- Conducting risk assessment and human oversight;
- Executing development of AI models and managing overall AI systems; and
- Fostering communication and engagement with stakeholders.

Alongside practical steps for AI system management, the PCPD's strategic priorities for 2023 have expanded to focus significantly on data

²⁰⁹⁵ Referred to as the Hong Kong Special Administrative Region (HKSAR). ²⁰⁹⁶ Hong Kong Office of the Privacy Commissioner for Personal Data *Guidan*

and cyber security, and enhanced enforcement, including the monitoring of doxxing activities.²⁰⁹⁸

Some sectoral initiatives are also of relevance. In 2019, the Hong Kong Monetary Authority (HKMA) published a 12-principle guideline detailing adherence items for banks that engage in designing and implementing AI and big data analytics applications.²⁰⁹⁹ The issuance of these principles aimed to ensure some form of safeguards for banks as they deal with the increased need for AI technology adoption in Hong Kong's vibrant financial sector. The HKMA has continued to refine its guidance on AI applications in banking. The updated principles emphasize governance, with the board and senior management being accountable for AI-driven decisions, ensuring proper frameworks and risk management measures. The guidelines also cover application design, development, ongoing monitoring, and maintenance, including ensuring AI applications' trustworthiness, effective data governance, rigorous validation of AI models, compliance with data protection laws, and effective cybersecurity controls.²¹⁰⁰

The Hong Kong Institute for Monetary and Financial Research (HKIMR) also released an applied research report titled "Artificial Intelligence and Big Data in the Financial Services Industry: A Regional Perspective and Strategies for Talent Development." The report describes the transformation of the financial services industry using artificial intelligence (AI) and big data (BD) technologies. It highlights the role of talent in integrating these new technologies into the financial services industry. The report also explores market participants' views on AI adoption and the demand for talent in major Asia-Pacific financial centers. It also refers to their views on promoting talent development and reviews the relevant initiatives implemented internationally and in Hong Kong. The

report suggests enriching the talent pool by narrowing the talent gap, supporting recruitment, and fostering development.²¹⁰¹

Hong Kong's technology development sector, specifically AI, is seeing increased integration with mainland China. In her 2021 policy address, the Chief Executive of Hong Kong, Carrie Lam stated that "the developments of Hong Kong and our country are closely related. Only by leveraging the Central Government's policies in support of Hong Kong can we give full play to our unique strengths, which will, in turn, bring continuous impetus to our economy."²¹⁰² This, coupled with the passage of the Hong Kong National Security Law in 2020 by China's top legislature,²¹⁰³ cast some doubts on the future of the "One Country, Two Systems" model for the governance of Hong Kong.²¹⁰⁴

In September 2022, the Hong Kong Consumer Council released its first-ever study on the use of AI in e-commerce in Hong Kong, titled "Fostering Consumer Trust – Ethical AI in Hong Kong." The study identified opinions and challenges by consumers and traders when they use or develop AI, reviewed the objectives and policies of AI governance adopted by different countries, and listened to the stakeholder views. The Council made a series of recommendations for the healthy development of AI in e-commerce based on complying with ethical standards and balancing the interests of parties, including safeguarding consumer rights.²¹⁰⁵

Also in September 2022, the Hong Kong Office of the Government Chief Information Officer developed the Ethical AI Framework for internal adoption within the Government regarding AI and big data analytics applications. The Ethical AI Framework will assist the government bureaus and departments in adopting AI and big data analytics and incorporating ethical elements in the planning, design, and implementation of IT projects

or services, and it consists of ethical principles, practices, and assessment of AI. $^{\rm 2106}$

The Hong Kong Special Administrative Region (HKSAR) Government's 2023 Policy Address identifies "AI and data science" as key areas. A Digital Policy Office, combining the Government Chief Information Officer's Office and the Efficiency Office, is being established to manage digital policies, data governance, and enhance digital services. The initiative aligns with the efforts to transform the "iAM Smart" platform into a single portal for online government services, enhancing digital identity verification and user experience.²¹⁰⁷

Public Participation

Hong Kong does not have a structured process for public participation in the development of AI policy, although some AI and digital technology projects have sought the engagement of citizens as part of their roll-out plans. For instance, the Hong Kong government embarked on a two-month public engagement drive to gather and understand the views of citizens on the digital identity project they embarked on.²¹⁰⁸

Data Protection and Algorithmic Transparency

Hong Kong passed the Personal Data (Privacy) Ordinance (PDPO) in 1995, which instilled a principles-based approach to data privacy and established the Office of the Privacy Commissioner for Personal Data (PCPD) as an independent data privacy regulator.

The PDPO saw amendments in 2012²¹⁰⁹ and 2021²¹¹⁰ to address direct marketing and criminalize doxxing, respectively. Allowing the PCPD

²¹¹⁰ Hong Kong Office of the Privacy Commissioner for Personal Data, *The Personal Data (Privacy) (Amendment) Ordinance 2021 Takes Effect Today to Criminalise Doxxing*

to conduct investigations without a warrant, press charges independently, force content to be taken down, and charge non-compliant internet platforms, there are concerns that the doxxing amendment will be used to restrict dissenting opinions.²¹¹¹ The PDPO applies to both private and public data usage. However, it allows for specific exemptions for criminal investigations, the performance of judicial functions, security and defense, and emergency situations.²¹¹² In the context of the recent Hong Kong National Security Law and associated protests, the broader implications of these exemptions on human rights are less clear. For example, police can request content be taken down or have online platforms provide information about users, although it's unclear if this information can or will be shared with mainland China.²¹¹³

The PCPD has been an active participant in international discussions on data protection, algorithmic transparency, and many other key issues in the use of AI, especially in the General Privacy Assembly.

The PCPD was a signatory to the 2018 Global Privacy Assembly (GPA) Declaration on Ethics and Data Protection in Artificial Intelligence. In November 2020, the PCPD sponsored a resolution and played a key role in encouraging greater accountability in the development and use of AI to the Global Privacy Assembly (GPA) called the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence. This sponsored resolution was in response to the GPA's adopted Declaration on Ethics and Data Protection in Artificial Intelligence two years earlier.²¹¹⁴ The resolution by the PCPD called for greater accountability as it relates to the measures below:²¹¹⁵

Acts (Oct. 8, 2021),

- assessing the potential impact on human rights (including privacy rights) before the development and/or use of AI;
- testing the robustness, reliability, accuracy, and data security of AI systems before putting them into use; and
- disclosing the results of the privacy and human rights impact assessment of AI, and the use of AI, the data being used and the logic involved to enhance transparency.

In the 44th General Privacy Assembly held in October 2022, Hong Kong's PCPD co-sponsored the Draft Resolution on International Cooperation Capacity Building for Improving Cybersecurity Regulation and Understanding Cyber Incident Harms.²¹¹⁶ However, the PCPD did not endorse the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.²¹¹⁷

The PCPD co-sponsored the 2023 GPA Resolution on Generative AI.²¹¹⁸

The AI Guidance presented by the PCPD makes several recommendations to increase transparency around the use of AI, including "putting in controls that allow human oversight and intervention of the operations of the relevant AI system."²¹¹⁹ Similarly, the guidelines for banks using AI from the Hong Kong Monetary Authority push banks to hold leadership accountable for AI decision-making, to ensure results from AI systems are explainable and auditable, and to provide transparency to

consumers on the use of AI.²¹²⁰ These recommendations align with established principles such as the OECD AI Principles, and similar recommendations in the proposed EU AI Act; however, this is just guidance to businesses, and non-binding.

Data Scraping

In August 2023, the AAIP, together with eleven other data protection authorities, all members of the GPA's International Enforcement Cooperation Working Group (IEWG), issued a joint statement on data scraping and the protection of privacy.²¹²¹

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

In their joint statement, the data protection authorities recall that in most jurisdictions, these companies have to comply with data protection and privacy laws, as well as other applicable laws, with regard to both their own data scraping or third-party scraping from their sites. These companies are responsible for protecting individuals' personal information from unlawful data scraping and should implement multi-layered technical and procedural controls to mitigate the risks. The data protection authorities also highlight some key steps individuals can take to minimize the privacy risks from data scraping. in case of lack of adequate answer from these companies following unlawful or improper data scraping, individuals can file a complaint with their relevant data protection authority.

The statement was published for the benefit of social media companies and operators of other websites. It was also sent directly to

Alphabet Inc. (YouTube), ByteDance Ltd (TikTok), Meta Platforms, Inc. (Instagram, Facebook and Threads), Microsoft Corporation (LinkedIn), Sina Corp (Weibo), and X Corp. (X, previously Twitter). Data protection authorities which endorsed this statement welcomed feedback from the addressees regarding how they comply with the expectations outlined in the statement by one month after its the issuance.

AI and Surveillance

Hong Kong has long-standing concerns about AI surveillance, especially as it relates to its relations with mainland China and the preservation of democracy in Hong Kong. Hong Kong Chief Executive Carrie Lam invoked the Emergency Regulations Ordinance in order to ban the use of face masks during anti-government protests in 2019.²¹²² This ordinance gives the chief executive the power to "make any regulations whatsoever which he may consider desirable in the public interest."²¹²³ In December 2020, Hong Kong's Court of Final Appeal largely upheld the application of the Emergency Regulations Ordinance for the facemask ban.²¹²⁴ The use of face masks in the context of the 2019 protests was a deliberate effort by protestors to shield their identity from the government and the subsequent mask ban casts doubt over the future of the right to freely protest in Hong Kong.

Hong Kong has also been a strong proponent of the use of technology in public spaces, laying out its future plans through the Hong Kong Smart Cities Blueprint 2.0, published in December 2020.²¹²⁵ These plans include the use of the "StayHomeSafe" mobile app and companion tracking bracelet, whose use was required for all new entrants into Hong Kong.²¹²⁶ Additionally, as an outcome of the Smart City Blueprint, Hong

²¹²⁶ Government of Hong Kong Special Administrative Region, *StayHomeSafe User Guide*, <u>https://www.coronavirus.gov.hk/eng/stay-home-safe.html</u>

Kong has pushed to adopt concrete policy standards for the use of autonomous vehicles (AVs).²¹²⁷

The Legislative Council Panel on Transport released a proposal for legislation on this issue, with the goal of increased testing of AVs and a clear process for licensing new test cars.²¹²⁸ The blueprint and associated initiatives also outline many plans such as the increased rollout of public wifi and contact tracing for COVID, as well as funding for robotic patrols of airport terminals and a new LawTech Fund.

Despite the clear potential upside, there is no mention of potential concerns, such as data privacy, algorithmic bias, or the potential violation of human rights in the documents rolling out these new initiatives. Furthermore, there was no significant public engagement, despite concerns about negative impacts.²¹²⁹ The rollout of new technology in public places. the Hong Kong National Security Law, and the development and use of facial recognition technology by local companies²¹³⁰ all threaten the increased use of AI for surveillance purposes in Hong Kong.

Human Riahts

As a special administrative region of China, Hong Kong has not ratified the United Nations Universal Declaration of Human Rights (UDHR).²¹³¹ But the above-mentioned AI ethical principles are mentioned to be derived from the UDHR.²¹³² Also, the UN International Covenant on Economic, Social, and Cultural Rights (ICESCR) and UN International Covenant on Civil and Political Rights (ICCPR) apply to Hong Kong.²¹³³

²¹²⁷ Legislative Council Secretariat, Information Services Division, Policy on testing and deployment of autonomous vehicles (Jan. 12, 2021), https://www.legco.gov.hk/researchpublications/english/essentials-2021ise13-policy-on-testing-and-deployment-ofautonomous-vehicles.htm

²¹³¹ The UNDHR has been ratified by China, which is also a United Nations Member State. See United Nations, Member States, https://www.un.org/en/about-us/memberstates#gotoH²¹³² Ibid., pp. 1-4.

²¹³³ United Nations Treaty Collection, International Covenant on Civil and Political Rights, China, fn6,

https://treaties.un.org/Pages/ViewDetails.aspx?src=IND&mtdsg_no=IV-

These human rights conventions are also complemented by other articles that protect the rights of citizens, including the Hong Kong Bill of Rights²¹³⁴ and the Basic Law.²¹³⁵ One of the key provisions in Article 30 of the Personal Data (Privacy) Ordinance protects citizens' right to privacy and clearly identifies principles to be adhered to in the use of personal data.²¹³⁶

The Freedom House 2022 Report ranks Hong Kong as partly free with a total score of 43/100 (down from 52/100 in the 2021 report).²¹³⁷ Political rights and civil liberties are scored very low on the report as there is still a large prevalence of pro-Beijing interests in the country's political system and the freedom and autonomy of citizens have to a large extent been controlled by political interventions from mainland China.

OECD / G20 AI Principles

Hong Kong is not a member of the OECD or the G20 and has not endorsed the OECD / G20 AI Principles.²¹³⁸

UNESCO Recommendation on the Ethics of Artificial Intelligence

As a member of UNESCO, Hong Kong including an additional National Organizing Committee (NOC) under China and other 191 member states have adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021, the first global standard on the ethics of artificial intelligence. However, no measures so far have been put in place by the country to implement the Recommendation.²¹³⁹

Evaluation

Hong Kong is a relatively new player in AI policy adoption and implementation, although it could be safe to link this special administrative region with some of China's AI efforts and achievements due to the administrative relationship between both.

Hong Kong has not been a signatory to the OECD AI Principles or the Universal Declaration for Human Rights; however, it has proposed and implemented similar principles and guidelines and endorsed the UNESCO Recommendation on the Ethics of AI. The leading role played by Hong Kong through the PCPD-sponsored resolution on greater accountability in the development and use of AI to the Global Privacy Assembly (GPA) shows that the region has the potential to play a prominent role in key global AI policy development and implementation.

However, despite being one of the first places to have an independent commissioner for data privacy, Hong Kong has not been quite as proactive in the adoption of policy with regard to the safe use of artificial intelligence. Irrespective of its complicated relationship with mainland China, especially as it relates to surveillance and data protection issues, there is some effort by the government in regulating and promoting ethical AI use within the country. It is unclear, however, how much of this extends to new government initiatives, such as the Smart Cities Blueprint, or issues of national security. More effort is needed by the government in the adoption of a comprehensive national AI strategy that promotes democratic values and human rights, as well as alignment with international commitments to AI principles.

Hungary

National AI Strategy

Recognizing the potential benefits of the technology and simultaneously considering the possible related challenges, the Government of Hungary resolved to have a comprehensive Artificial Intelligence Strategy drawn up. In September 2020, the Hungarian Ministry of Innovation and Technology Government released the National AI strategy, outlining the strategic vision and actions for the development of AI in the period 2020-2030 (Hungary, 2020).

The document sets goals up to 2030 and outlines an action plan extending up to 2025. The AI Strategy is however considered as a living document due to rapid technological developments and experience gathered through the spread of applications. The Strategy shall be reviewed at least every two years.²¹⁴⁰

In the Strategy, the Hungarian government affirms its commitment to developing Hungarian artificial intelligence – as a special branch of its digitization efforts – to be high-tech and green, in the spirit of Hungary's general development objectives. The AI strategy aims to make the most of the opportunities offered by modern technologies for raising the living standard of citizens and protecting the environment.²¹⁴¹ Hungary's AI strategy aims to support and boost all relevant sections of the AI value chain from data generation and management, through basic and applied research, to utilization of the technology and raising awareness of the possibilities inherent in practical AI applications.

Through a multi-layered set of goals, the strategy aims to:

- Strengthen the foundation pillars of the Hungarian AI ecosystem: data economy, research development and innovation (R&D&I), AI uptake, education and competence development, infrastructure deployment, and regulatory and ethical framework.
- (2) Focus on specific sectors and technology fields with the highest acceleration potential for Hungary: manufacturing, healthcare, agriculture, public administration, transportation, logistics and energy.

²¹⁴⁰ László Palkovics, *Minister for Innovation and Technology on Hungary's Artificial Intelligence Strategy 2020 – 2030.*

²¹⁴¹ László Palkovics, Minister for Innovation and Technology on Hungary's Artificial Intelligence Strategy 2020 – 2030.

(3) Initiate transformative programs with long-term ambitious goals that offer direct benefits to citizens: autonomous systems and self-driving vehicles, health-awareness in a digital world, climate-driven agriculture, data-wallet and personalized services, AI-supported development of personal competencies, automated administration procedures in Hungarian, and energy networks focused on renewable sources of energy.

Given its breadth, the Strategy requires a whole-of-government effort that brings together different government ministries under the leadership of the Ministry of Innovation. This effort will be supported by AI Coalition team of different bureaucracies supporting the relevant ministries, as well as a Multi-sectoral Committee of Artificial Intelligence and a Scientific Committee of experts.

Hungary contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.²¹⁴²

AI Ethical Guidelines

Hungary's national AI strategy aims to ensure a responsible, reliable, and human-centered use of AI thanks for the following actions:

- Creating an ethical framework: development of an AI code of conduct by the Ministry of Justice, the Ministry for Innovation and Technology, the AI Innovation Hub and the Central Statistical Office.
- Setting up an Artificial Intelligence Regulation and Ethics Knowledge Centre: the aim is to create and coordinate an extensive pool of experts to help resolve legal issues and matters of ethics relating to the regulation of AI and the implementation of the strategy.
- Establishing a regulatory framework for AI: the objective is to amend the current regulatory system to suit AI and to align it to EU regulations.
- Building data management regulation: the objective is to set up regulations for the use and exchange of public and private data and

²¹⁴² Council of Europe, *Draft Framework Convention on AI, human rights, democracy and the rule of law* (March 2024),

https://search.coe.int/cm/pages/result_details.aspx?objectid=0900001680aee411

to define rules regarding data monetization.

- As there is no one-size-fits all solution, the Hungarian strategy calls for the development of sector-specific regulatory frameworks, ensuring that the regulatory needs for AI development are adapted to the relevant industry areas

The responsible governing body for the AI Ethical Guidelines is the AI Coalition of Hungary⁷ (*MIK;Mesterséges Intelligencia Koalíció*). The AI Coalition is responsible for adapting the EU High Level Expert Group's AI ethical guidelines to the Hungarian context. The AI Coalition is a typical independent regulatory oversight and ethical advisory body. It is mainly composed of academics. The type of oversight provided is mostly technical guidance (e.g. toolkits, documentation, technical standards). One of its main activities is to gather opinions from stakeholders on ethical principles, regulation improvements etc.

Public Participation

The strategy has been developed in cooperation with the Hungarian Artificial Intelligence Coalition.²¹⁴³ The coalition was established in October 2018 to offer a community and forum for all stakeholders in the Hungarian AI ecosystem who wish to make an active contribution to the development of the Hungarian AI environment and skills.

Hungary's AI strategy also explicitly refers to public engagement activities. Hungary established an internet platform for its citizens to get trained, get exposure to the ongoing events in the AI sector, and engage with country-wide policy developments. The Hungarian government aims to get the best of artificial intelligence in terms of high-value economic return while countering possible adverse effects of the technology through increased public awareness and public participation. The National AI Strategy emphasizes that public engagement is a key aspect of the exercise of fundamental rights and a robust and inclusive business environment. For this reason, the Hungarian AI Strategy prioritizes the need to raise awareness of the use of artificial intelligence, its pragmatic and business applications as well as its projected impact on various sectors through an action plan entitled "The AI Challenge." The Challenge aspires to train 100,000 people in the fundamentals of AI using domestically-generated online course materials. The Action Plan also aims to raise 1 million people's awareness through interactive exhibitions, a website, and online

²¹⁴³ European Commission, *Hungary AI Strategy Report* (September 2020), <u>https://ai-watch.ec.europa.eu/countries/hungary/hungary-ai-strategy-report_en#ecl-inpage-287</u>

professional content.2144

To give a sector-specific example, Hungary has launched a campaign to initiate debates among citizens concerning the use of AI-supported digital health applications with a discussion of their benefits and possible drawbacks. In this regard, an extensive awareness-raising campaign has been launched regarding the importance of health data. The government is planning to receive citizens' questions and concerns through their data wallets. With the analysis of the results, the idea is to develop a marketplace in which qualified service providers would develop systems and supply related products as part of the implementation of the public's demand that is supervised by this initiative.

In November 2023, the Prime Minister's Cabinet Office invited feedback and input from the general public, stakeholders, and experts on the draft of the Law on the Digital State and Certain Rules for the Provision of Digital Services or "Digital Citizenship Law." The scheme will enable personal identification for the use of state and market services, electronic signature, and payment of public utility bills. A trial period will start in April 2024. The scheme will be optional. It has been developed in line with the EU's new Electronic Identification, Authentication and Trust Services (eIDAS) regulatory framework.²¹⁴⁵

EU Digital Services Act

As an EU member state, Hungary shall apply the EU Digital Services Act (DSA).²¹⁴⁶ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

²¹⁴⁴ AI Coalition, *Hungarian AI Program: <u>Learn - AI Hungary (2020), https://ai-hungary.com/en</u>*

²¹⁴⁵ About Hungary, *Rogán: DAP to bring transformation for Hungarian citizens in digital data handling*, (Nov. 13, 2023) <u>https://abouthungary.hu/news-in-brief/rogan-dap-to-bring-transformation-for-hungarian-citizens-in-digital-data-handling</u>.

²¹⁴⁶ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.²¹⁴⁷ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.²¹⁴⁸

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation²¹⁴⁹ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

²¹⁴⁹ European Commission, *The 2022 Code of Practice on Disinformation*, <u>https://digital-</u>strategy.ec.europa.eu/en/policies/code-practice-disinformation

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.²¹⁵⁰ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force²¹⁵¹ on the 2024 European elections.

EU AI Act

As an EU member State, Hungary is bound by the EU AI Act.²¹⁵² The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

²¹⁵² European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9_TA(2024)0138_EN.pdf

²¹⁵⁰ European Commission, *Guidelines under the DSA for the mitigation of systemic risks online for elections* (March, 2024),

https://ec.europa.eu/commission/presscorner/detail/en/IP_24_1707

²¹⁵¹ European Digital Media Observatory, *EDMO Taskforce on 2024 European Elections*, <u>https://edmo.eu/thematic-areas/european-elections/edmo-taskforce-on-2024-european-elections/</u>

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

of:

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;
- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.²¹⁵³ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.²¹⁵⁴

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This

²¹⁵³ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

²¹⁵⁴ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.²¹⁵⁵ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.²¹⁵⁶

²¹⁵⁵ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-

Davies, 'Furious'': Critics question Microsoft's deal with Mistral AI, as EU set to look into it (Feb. 27, 2024), Euronews.next,

https://www.euronews.com/next/2024/02/27/furious-critics-question-microsofts-dealwith-mistral-ai-as-eu-set-to-look-into-it

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office²¹⁵⁷ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is

²¹⁵⁷ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Hungary will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also

launched the AI Pact²¹⁵⁸ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Hungary is an EU Member State, the GDPR²¹⁵⁹ is directly applicable in Hungary and to Hungarians. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."²¹⁶⁰ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.

The activities of law enforcement authorities for their part are regulated at EU level by the EU Data Protection Law Enforcement Directive (LED).²¹⁶¹ The LED "protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."²¹⁶² The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²¹⁶³ The LED also requires for

content/EN/TXT/?uri=celex%3A02016L0680-20160504

Member States, including Sweden, to enable data subjects to exercise their rights via national data protection authorities.²¹⁶⁴

The Hungarian Act CXII of 2011 on the Right of Informational Self-Determination and on Freedom of Information (Data Protection Act) was amended on 26 July 2018 to supplement the GDPR and implement the LED Directive.

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Hungary is also a member of the Council of Europe. It signed but has not yet ratified²¹⁶⁵ the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.²¹⁶⁶

The National Authority for Data Protection and Freedom of Information (NAIH)²¹⁶⁷ is the national supervisory authority in charge of enforcing both the GDPR and the LED. The Authority is also entrusted with duties in connection with the Schengen Information System (SIS), the Customs Information System (CIS), Europol, Eurodac and the Visa Information System (VIS). The NAIH represents Hungary in the European Data Protection Board.

The NAIH is a member of the Global Privacy Assembly since 2002. The Authority endorsed the 2018 GPA Resolution on AI and Ethics,²¹⁶⁸ but did not co-sponsor the 2020 GPA Resolution on AI and Accountability,²¹⁶⁹ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition

Technology²¹⁷⁰ or the 2023 GPA Resolution on Generative AI.²¹⁷¹

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Hungary is subject to the GDPR. Hungarians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²¹⁷²

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems²¹⁷³ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."2174

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of

²¹⁷⁴ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."²¹⁷⁵

Transparency Information

In July 2023, the Hungarian Competition Authority launched an investigation against Microsoft's European services subsidiary, Microsoft Ireland Operations Limited, for possible unfair practices against Hungarian consumers about its so-called "new Bing service". This came after Microsoft integrated an artificial intelligence-based chat feature - similar to ChatGPT - into its Bing search system, which helps to answer questions in the search interface, using machine learning to learn from the content, data and information shared by users. The investigation focuses on whether Microsoft adequately informs users about certain features of its search engine, particularly concerning the AI-based chat feature. The concerns raised include contradictory policies and inadequate information about the service, such as its reliability, data management practices, and language accessibility.²¹⁷⁶

In January 2024, the Hungarian Competition Authority launched a market analysis investigation of the effects of AI on consumer rights protection and competition. The market analysis will investigate the use of AI in data collection, advertising practices, and consumer interactions, raising concerns about transparency, consumer privacy and susceptibility to manipulation.²¹⁷⁷

This case also prefigures the role that the Hungarian market surveillance authority to be identified in line with the EU AI Act could play

²¹⁷⁵ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

²¹⁷⁷ Gazdasági Versenyhivatalt, *GVH launches its market analysis on the effects of artificial intelligence*, <u>https://gvh.hu/sajtoszoba/sajtokozlemenyek/2024-es-sajtokozlemenyek/a-gvh-elinditja-piacelemzeset-a-mesterseges-intelligencia-hatasairol</u>

in ensuring respect for fundamental rights. It remains to be seen which modalities of cooperation with other authorities such as the data protection authority will be put into place as well and the relevance of the local context such as the efficiency and independence of the participating authorities.

Emotion Recognition

The NAIH has recently published its 2022 annual report in which it presented a case where it imposed the highest fine to date of ca. EUR 670,000 (HUF 250 million). The case involved the personal data processing of a bank (acting as a data controller) which automatically analysed the recorded audio of customer service calls. The bank used the results of the analysis to determine which customers should be called back. The emotional state of the caller was analyzed through the use of an AI-based speech signal processing software that automatically analysed the call based on a list of keywords and the emotional state of the caller. The software then established a ranking of the calls serving as a recommendation as to which caller should be called back as a priority.

In the course of the procedure before the Authority, it appeared that for years the bank had failed to provide to the data subjects proper notice and the right to object. The Authority emphasised that the only lawful legal basis for the processing activity of emotions-based voice analysis can only be the freely given, informed consent of the data subjects.

The NAIH also highlighted that although the bank had carried out a data protection impact assessment (DPIA) and identified that the processing is of high risk to the data subjects, capable of profiling and scoring, the DPIA had failed to present substantial solutions to address these risks.

The legitimate interest test performed by the bank had failed to take into account proportionality, the interests of the data subjects, it merely established that the data processing is necessary to achieve the purposes it pursues.

The Authority, in addition to imposing a record fine, obliged the bank to cease the analysis of emotions in the course of voice analysis. The Authority highlighted that "artificial intelligence is generally difficult to understand and monitor due to the way it works, and even new technologies pose particular privacy risks. This is one of the reasons why the use of artificial intelligence in data management requires special attention, not only on paper but also in practice."²¹⁷⁸

²¹⁷⁸ NAIH, 2022 Annual Report (Jul. 2023),

https://www.naih.hu/files/NAIH_annual_report_2022.pdf

Facial Recognition

A project called Szitakötő (dragonfly) was planned in 2016 to deploy 35,000 cameras with facial recognition capabilities in Budapest, and across the country.²¹⁷⁹ From 1 January 2016 onwards, facial data of all residents of and visitors to Hungary, are being stored in a database that can be accessed by Hungarian law enforcement authorities. Hungary's 35 000 CCTV cameras now operate as part of a single centralised searchable system, and its biometric databases have been connected, allowing the police to identify any citizen from their face. The Hungarian Secret Services and police have already made use of the system, resulting in 6000 matches, 250 stop-and-searches and 4 arrests.²¹⁸⁰

In March 2022, the NAIH investigated and fined a Hungarian municipality (Siófok) for installing AI facial-recognition software within a 39-camera CCTV network. NAIH found that this kind of data processing was unlawful and imposed a fine of HUF 500,000 (EUR 1,250) on the technical service provider partially owned by China. The investigation further revealed a lack of cooperation agreement between the municipality and the police regarding joint control of the CCTV network and the inadequate data security measures in place.²¹⁸¹

Lethal Autonomous Weapons

In 2016, Hungary acknowledged that lethal autonomous weapons systems warrant "substantial consideration" and supported continuing diplomatic talks addressing concerns.¹⁷

In October 2022, Hungary was one of the 70 states which endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers

of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²¹⁸² In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."²¹⁸³

In February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.²¹⁸⁴ Hungary endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²¹⁸⁵

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-

stakeholder community.²¹⁸⁶ The second REAIM summit will take place in 2024 in Korea.²¹⁸⁷

At the 78th UN General Assembly First Committee in 2023, Hungary co-sponsored and voted in favour²¹⁸⁸ of resolution L.56²¹⁸⁹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to Freedom House, in Hungary is a "partly free" country with an overall score of 65/100 for 2023,²¹⁹⁰ losing one points compared to the previous year. According to the Freedom House 2023 report, "After taking power in the 2010 elections, Prime Minister Viktor Orbán's Alliance of Young Democrats–Hungarian Civic Union (Fidesz) party pushed through constitutional and legal changes that have allowed it to consolidate control over the country's independent institutions, including the judiciary. The Fidesz government has since passed antimigrant and anti-LGBT+ policies, as well as laws that hamper the operations of opposition groups, journalists, universities, and nongovernmental organizations (NGOs) that are critical of the ruling party or whose perspectives Fidesz otherwise finds unfavorable." Among the key developments in 2022, Freedom House notes, "The coalition of Fidesz and the Christian Democratic People's Party (KDNP)

²¹⁹⁰ Freedom House, *Democracy Index: Hungary: Freedom in the World 2022 Country Report*, https://freedomhouse.org/country/hungary/freedom-world/2023

won the April parliamentary elections with 54.13 percent of the vote, securing a fourth consecutive term and a two-thirds parliamentary majority with 135 seats. Election observer missions noted the polls were severely marred by misuse of government resources, an unlevel playing field for opposition parties, and extensive electoral reforms that favored the ruling party." Some similar concerns were raised by the 2022 UN Human Rights Council's Periodic Review of Hungary.²¹⁹¹

These findings also correspond to those of Human Rights Watch which has cast shadow on the independence of the Hungarian data protection authority following citizens' complaints related to the 2022 elections. It was found after the elections that data collected by the state for administering public services, such as registering for the Covid vaccine, administering tax benefits, and mandatory membership in professional associations, was repurposed to spread Fidesz's campaign messages. According to Human Rights Watch, evidence indicates that the government of Hungary has collaborated with the ruling party in the way it has used personal data in political campaigns. This, combined with the weakening of the political institutions responsible for safeguarding people's right to privacy and guaranteeing an even political playing field, has raised serious human rights concerns.²¹⁹² Following Human Rights Watch's question about the NAIH's handling of the complains received, the President of the Authority distinguished between complaints involving the Hungarian government, which the Authority deemed lawful, and complaints against the data processing practices of the ruling party Fidesz with regard to which the Authority established that Fidesz failed to provide fully appropriate information compliant with requirements of the GDPR to the data subjects in the course of processing in relation to the periodic records related to the survey of the intention to participate in the elections.

Answering to a question about the NAIH's independence, Attila Peterfalvi, the President of the Authority concluded, "We are convinced that the activity of our Authority is fully compliant with the requirements the applicable international and EU law as well as the Hungarian Constitution, governing the full independence of the Authority. To date, no statement refuting this conviction of ours has been made by an authoritative forum in

this regard. We are certain that it is unambiguous for experts monitoring our activities that there can be no doubt concerning the independence of our activities."²¹⁹³

In December 2023, Prime Minister Viktor Orbán enacted the controversial Defense of National Sovereignty Act, which provides for the creation of a National Sovereignty Defense Office with broadly defined and extensive powers to investigate and report on any activity suspected of serving foreign interests. Rights defenders have expressed fear that the law will empower authorities to target anyone critical of the government.²¹⁹⁴

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."²¹⁹⁵

Another concerning case is that of the Pegasus Affair.²¹⁹⁶ Investigations conducted by Direkt3623,²¹⁹⁷ a Hungarian investigative journalism channel, confirmed that around 300 persons were potentially

targeted by Pegasus in Hungary. Hungarian authorities initially denied or did not confirmed their involvement and use of Pegasus until Lajos Kósa, Fidesz MP and Chair of the Hungarian Parliament's Committee on Defense and Law Enforcement, admitted that the Interior Ministry had bought and used Pegasus, before finally stating that it was used lawfully upon authorization by the judiciary and/or the Minister of Justice.²¹⁹⁸ At the end of January 2022, NAIH published a report²¹⁹⁹ stating that it had investigated hundreds of cases and that all of them met the required legal criteria (risk for national security, legal authorization).²²⁰⁰ The Authority reportedly will file a criminal complaint against those who uncovered the mass surveillance for possibly mishandling data.²²⁰¹

OECD / G20 AI Principles

As part of the G20 and as a member to the OECD, Hungary has endorsed the OECD / G20 AI Principles. According to the 2021 OECD report on the State of implementation of the OECD AI Principles, the Hungarian national AI strategy exhibits some features which are in line with the OECD AI Principles such as the adoption of ethical guidelines.²²⁰²

UNESCO Recommendation on the Ethics of AI

As a UNESCO member, Hungary endorsed the UNESCO Recommendation on the Ethics of AI. It remains to be seen which concrete steps the country will take to implement the Recommendation in practice.

Evaluation

Hungary has adopted the OECD/ G20 AI Guidelines, the UNESCO Recommendation on the Ethics of AI, a comprehensive National AI Strategy and AI ethical Guidelines. The country also benefits from a strong

data protection legal regime owing to its EU membership. Yet, its human rights track records, its surveillance practices and concerns regarding the autocratic turn of the government in place showcase a grimmer picture. Questions about the independence of its data protection authority have also surfaced. However the recent investigations launched by the Hungarian competition authority highlight the potential of this authority to become an efficient market surveillance authority in the framework of the EU AI Act. India

National AI Strategy

Recognizing the potential of AI to transform and advance its economy, the government of India has initiated and implemented multiple strategies to address research, development, innovation, governance, standards setting, and accountability of AI.

The Indian Ministry of Commerce set up a Task Force on Artificial Intelligence to kick start the use of AI for India's Economic Transformation.²²⁰³ In 2018, the Task Force issued a benchmark report²²⁰⁴ that has played a key role in setting forth India's vision regarding AI: "While there is a strong consensus that Artificial Intelligence will be a game-changer and a key factor in economic development, there is a concurrent need to arrive at frameworks that will promote its deployment taking all social factors into account." The "Mission" consists in (1) Leveraging AI for economic benefits; (2) Creating policy and legal framework to accelerate AI deployment (3) Formulating concrete 5 year horizon recommendations for specific government, industry and research programs, in wide range of "Domains of Focus."²²⁰⁵

In order for India to strategize its approach to AI, the Finance Minister, in his budget speech for 2018 - 2019, mandated NITI Aayog, a policy think tank of the Government of India providing guidance and policy insights,²²⁰⁶ to establish the National Program on AI, with a view to guiding the research and development in new and emerging technologies.

NITI Aayog, adopted a three-pronged approach: (1) undertaking exploratory proof-of-concept AI projects in various areas, (2) crafting a national strategy for building a vibrant AI ecosystem in India and (3) collaborating with various experts and stakeholders. In June 2018, NITI Aayog released a discussion paper²²⁰⁷ delineating "the National Strategy on Artificial Intelligence."²²⁰⁸ The strategy document "is premised on the

²²⁰⁸ Ibid.

proposition that India, given its strengths and characteristics, has the potential to position itself among leaders on the global AI map – with a unique brand of #AIforAll." The key objective is to leverage AI to ensure "social and inclusive growth in line with the development philosophy of the government." #AIforAll is meant as model that can be "replicated in other similarly placed developing countries."

NITI Aayog focused on five strategic areas for AI development: healthcare, agriculture, education, smart cities and transportation.²²⁰⁹ The Policy Think Tank also identified five barriers that need to be addressed in order to realize the full potential of AI:

- 1) Lack of broad-based expertise in research and application of AI;
- 2) Absence of enabling data ecosystems access to intelligent data;
- 3) High resource cost and low awareness for adoption of AI;
- 4) Privacy and security, including a lack of formal regulations around anonymization of data; and
- 5) Absence of collaborative approach to adoption and application of AI.

The 2018 strategy made key recommendations to promote research, education, and protection of civil liberties in AI development, including the following:

- 1) Create two-tiered research institutes to nurture both academic and industry research;
- 2) Establish learning platforms for the workforce skill/ re-skill development;
- 3) Create targeted data sets and incubation hubs for start-ups to facilitate cooperation; and
- 4) Establish a regulatory framework for data protection and Cyber security.

The discussion paper, while highlighting the ethical factors of AI such as fairness, transparency, privacy, and security, recommended the establishment of a multi-stakeholder marketplace, facilitating the creation of a large foundational annotated data set, setting up partnerships and collaborations, spreading awareness of the advantages AI offers and supporting start-ups. In the interim budget of 2019, the Ministry of Finance cleared funding of approximately USD 950 million towards the NITI

²²⁰⁹ OECD, *AI in Society* (2020), <u>https://www.oecd.org/publications/artificial-intelligence-in-society-eedfee77-en.htm</u>

Aayog's proposal for the formation of a task force to identify projects and initiatives in which to implement AI technology.²²¹⁰

The 2018 strategy discusses important issues in ethics and AI including fairness and bias, transparency and explainability, privacy, and security—and advances visions for responsible AI development in its government.

In November 2020, NITI Aayog published an accompanying paper addressing "Enforcement Mechanisms for Responsible AI for All."²²¹¹ In this document, which allowed for public participation and comments, NITI Aayog proposed the creation of an oversight body and articulated its role and proposed duties. These include:

- Manage and update Principles for Responsible AI in India,
- Research technical, legal, policy, and societal issues of AI,
- Provide clarity on responsible behavior through design structures, standards, guidelines,
- Enable access to Responsible AI tools and techniques,
- Education and awareness on Responsible AI,
- Coordinate with various sectoral AI regulators, identify gaps, and harmonize policies across sectors,
- Represent India and other emerging economies in International AI dialogue on Responsible AI

In 2021, NITI Aayog published two additional documents in the context of the #AIforAll strategy. The first one proposed a series of principles for the responsible management of AI systems that may be leveraged by relevant stakeholders in India. These principles are: 1) Principle of Safety and Reliability; 2) Principle of Equality; 3) Principle of Inclusivity and Non-discrimination; 4) Principle of Privacy and security; 5) Principle of Transparency; 6) Principle of Accountability; and 7) Principle of protection and reinforcement of positive human values.²²¹²

The second document identified the various mechanisms needed for operationalizing these seven principles by detailing a series of actions for

the government, the private sector and research institutions that must be adopted to drive responsible AI.²²¹³

In September 2021, NITI Aayog launched a "New Experience Studio" in collaboration with Amazon Web Services and Intel, to help showcase the potential of technologies such as AI, machine learning, Internet of Things (IoT), augmented reality and virtual reality, blockchain, and robotics, to accelerate their application in public sector use cases.²²¹⁴

More recently, in November 2022, NITI Aayog released a discussion paper titled "Adopting the Framework: A Use Case Approach on Facial Recognition Technology (FRT)."²²¹⁵ NITI Aayog identified FRT as a concrete case to examine the application and operationalisation of the Responsible AI principles it has identified in its previous strategy documents.²²¹⁶

In addition to the NITI Aayog, the Ministry of Electronics and Information Technology (MeitY) is also pursuing work on AI policy. The MeitY charged four AI Committees with promoting AI initiatives and developing policy frameworks to address 1) platforms and data on AI; 2) leveraging AI for identifying national missions in key sectors; 3) mapping technological capabilities, key policy enablers required across sectors, skilling, re-skill; and 4) Cybersecurity, safety, legal and ethical issues.²²¹⁷

These AI Committees have formulated some recommendations including:

- Development of an Open National AI Resource Platform (NAIRP) to become the central hub for knowledge integration and dissemination in AI and ML;
- Stakeholders need to deliberate on whether AI systems should be recognized as a legal person in the event of a civil liability claim;
- Sharing of best practices by the government around security, privacy, and other issues;

- Constitute a stakeholder committee to review existing laws to understand needed modifications for AI applications;
- AI framework should provide broad principles, and organizations should design their internal compliance programs to maximize flexibility with changing technologies;
- Standards should be set to address the AI development cycle. The Bureau of Indian Standards (BIS) has established a new committee for standardization in AI;
- Develop rigorous government safety parameters and thresholds so that AI applications are designed to minimize harm to people and property.

In October 2023 the Expert Group appointed by the Ministry of Electronics & Information Technology and composed of seven Working Groups submitted the First Edition India AI Report 2023. The Report makes recommendation regarding the establishment of key institutions including an institutional framework on governing data collection, management, processing and storage by the National Data Management Office.²²¹⁸ The Office is to be established as a statutory agency and act as a regulator with the objective of streamlining data governance. Before this, in May 2023, INDIAai had already launched a Generative AI report.²²¹⁹²²²⁰

Public Participation

The government of India has conducted several public consultations on AI policy. NITI Aayog has requested public comments on its various #AIforAll documents.²²²¹ The Department of Telecommunications also invited public comments on the AI standardization committee's design of India's AI Stack, a framework designed to provide standards for all sectors addressing: data privacy, protection, federation, and minimization; defined data structures; interfaces and protocols; ethical standards; digital rights; and trustworthiness (AI Standardization committee, 2020). The Ministry of Electronics and Information Technology (MeitY) for its part publishes

reports from each of its four AI Committees, each charged with promoting AI initiatives and developing policy frameworks.²²²²

In November 2020, the Software Freedom Law Center India (SFLC) wrote to the Chairperson of the Joint Parliamentary Committee regarding the Draft Personal Data Protection bill and asked the Committee to invite civil society organizations that "defend the rights of citizens in the digital space for consultation on the draft Data Protection Bill."²²²³ The SFLC noted "core deficiencies in the draft bill "including the lack of surveillance reforms, wide exemptions and problems with the Data Protection Authority."

Further, the NITI Aayog "proposed setting up of an oversight body to set up standards, guidelines and benchmarks for use of artificial intelligence across sectors, which will be mandatory for public sector procurement. The overarching body would also be responsible for educating and creating awareness on responsible AI, coordinating with various sectoral AI regulators as well as identifying gaps and harmonizing policies across sectors. "Further, it would represent India (and other emerging economies) in International AI dialogue on responsible AI." This oversight body is expected to have "field experts from computer science, AI, legal experts, sector specialists and representatives from civil societies, humanities and social science."²²²⁴

Data Protection

In 2017, the central government constituted a Committee of Experts on Data Protection chaired by Justice B. N. Srikrishna to examine issues relating to data protection in the country. The Committee submitted its report in July 2018. "This report is based on the fundamental belief shared by the entire Committee that if India is to shape the global digital landscape in the 21st century, it must formulate a legal framework relating to personal data that can work as a template for the developing world. Implicit in such a belief is the recognition that the protection of personal data holds the key to empowerment, progress, and innovation. Equally implicit is the need to

devise a legal framework relating to personal data not only for India, but for Indians."²²²⁵

The Supreme Court of India's landmark *Aadhaar* privacy judgment in September 2018, created another series of discussions regarding the data protection law reform and other improvements have been undertaken. The *Aadhaar* privacy decision reaffirmed the centrality of privacy in one of the world's largest AI-based identity systems. The decision has provided a strong legal foundation for data protection and respect of the individual.

The draft Personal Data Protection (PDP) Bill, 2019 was introduced in Lok Sabha in December 2019.²²²⁶ The Bill was referred to a Joint Parliamentary Committee which submitted its report to the Indian Parliament in December 2021, after two years of deliberations on the draft bill with seven dissent.²²²⁷ The draft bill has been criticized for conflating issues and bringing social media and non-personal data into its ambit and at the same time exempting government from the scope of the statute. In fact, Justice Srikrishna who had led the drafting of the original bill criticized the revision by calling it "Orwellian."²²²⁸

In August 2022, the 2019 PDP Bill was withdrawn by the Indian Government in Parliament. On 18 November 2022, the Ministry of Electronics and Information Technology released the long-awaited fourth draft of India's proposed data protection law, now renamed as the Digital Personal Data Protection Bill. The Government sought for feedback till 17 December 2022.²²²⁹ With regard to its scope, the draft bill mentions: "The

provisions of this Act shall not apply to: (a) non-automated processing of personal data.²²³⁰"

In August 2023, the President of India gave assent to the Digital Personal Data Protection Bill, 2023 (DPDP Act)²²³¹ The DPDP Act will enter into force when the government provides notice of an effective date. provides for the processing of digital personal data in a manner that recognizes both the right of individuals to protect their personal data, and the need to process such personal data for lawful purposes, and for connected matters. The Act provides for obligations of Data Fiduciaries and rights and duties of Data Principals as well as fines in case of breach.²²³² Data Fiduciaries' rights include consent, right of access, erasure and correction; right to grievance redressal. However, the right to data portability, the right to object to processing, and the right not to be subject to solely automated decision-making are not included. The PDPD Act provides for carve out for the central government and other government bodies and law enforcement authorities.

The DPDP Act empowers the Government to establish the Data Protection Board of India. The Board will play the part of an independent data protection authority.²²³³ However, the Board does not have the power to issue guidance or regulations which belongs to the government.

Algorithmic Transparency

Prime Minister Modi addressed directly the issue of algorithmic transparency in October 2020.²²³⁴ Speaking at the Responsible AI for Social

Empowerment (RAISE) summit, he declared, "It remains our collective responsibility to ensure trust in how AI is used. Algorithm Transparency is key to establishing this Trust. Equally important is accountability. We must protect the world against weaponization of AI by Non-State Actors."

The last version of the PDP Bill referred to algorithmic transparency (Clause 23), adding that companies should be transparent about the fairness of algorithms used for the processing of personal data.²²³⁵ However, the PDPD Act remains silent about algorithmic transparency. It remains to be seen whether further specifications will be adopted.

India's AI Stack and Aadhaar

In 2009, India created UIDAI (Unique Identity Authority of India) and embarked on the creation of an ambitious digital biometric identity ecosystem, the Aadhaar identity system. This ecosystem utilizes AI and machine learning techniques throughout. To facilitate a fully digital, cashless society and economy, a large number of open application programming interfaces or APIs are now associated with the Aadhaar ecosystem.

When these APIs are linked to services or data, including those utilizing AI, it is part of "The India Stack."²²³⁶ In 2019, to further address concerns of standardization of AI development, the Department of Telecommunications formed an AI standardization committee to develop interface standards and design India's AI Stack, a framework designed to provide standards for all sectors addressing: data privacy, protection, federation, and minimization; defined data structures; interfaces and protocols; ethical standards; digital rights; and trustworthiness.²²³⁷ The committee released a report in 2020, and invited public comments on the design of India's AI Stack. The India Stack is the largest system of its kind in the world, and by extension, among the largest AI / Machine Learning based systems in the world.

The Aadhaar system, originally a voluntary pilot program, became mandatory overtime and was tied to many services, which eventually

²²³⁷ AI Standardisation committee (2020), <u>https://indiaai.gov.in/ai-standards</u>

created substantive human rights and privacy issues.²²³⁸ However, a series of landmark rulings from the Supreme Court of India, culminating in the landmark Aadhaar Privacy judgment of 2018,²²³⁹ attempted to curtail the negative uses of the Aadhaar system although a significant national mandate for technological, procedural, and policy improvements remained.²²⁴⁰ Because of this, throughout India there is a strong impetus toward implementing mitigation for privacy and autonomy concerns in the Aadhaar system, the "India Stack", and in general, AI systems. This mandate includes public participation in, and understanding of, AI systems. Since the Aadhaar ruling, many improvements have been made regarding AI-based identity systems and services, the "India Stack." However, the use and implementation of Aadhaar with AI tends to fall within the gray-zone of the Aadhaar Privacy judgment of 2018 as it prohibits the use of Aadhaar by private entities and limits the use of Aadhaar by the Government towards providing subsidies, benefits and services. In this regard, the Attorney General for India later issued a guiding opinion²²⁴¹ in 2019, the Aadhaar Act was further amended²²⁴² to make the statute comply with the *Aadhaar* judgment.²²⁴³ Another concern regarding the constitutional validity of the Aadhaar statute has also arisen as it was passed as a "money bill."²²⁴⁴ However, privacy concerns remain and this area needs to be observed in the future. In addition, application of the GDPR in Europe renewed the focus

on implementation of privacy and data protection features within India as well.

In addition, in January 2020 the NITI Aayog released recommendations that an AI-explicit computer framework (AIRAWAT)²²⁴⁵ be established to serve the needs of innovation hubs, AI research, and students, as well as a new discussion paper regarding the issue of Responsible AI.

In January 2022, the Ministry of Electronics and Information Technology has proposed a new model of "Federated Digital Identities" under which a citizen's multiple digital IDs — from PAN and Aadhaar to driving license and passport numbers could be interlinked, stored, and accessed via one unique ID envisaged under India Digital Ecosystem Architecture 2.0.²²⁴⁶

Facial Recognition

As part of its series of publications on Responsible Artificial Intelligence (RAI), NITI Aayog published a case study for adopting a framework on facial recognition technology, seeking public comments.²²⁴⁷ The objective of this case study is to determine how the "governments can adhere to its stated objective of responsible and safe deployment of AI and algorithmic systems."²²⁴⁸

In 2022, the he European Center for Not-for-Profit Law (ECNL), the International Network of Civil Liberties Organizations (INCLO) and Privacy International (PI) joined together to conduct a broad survey of Covid-19 surveillance measures, such as facial recognition, adopted in 15 countries, including India, to investigate negative impacts of surveillance technology and measures employed during the Covid-19 pandemic on activist movements and organizations.²²⁴⁹ The report shows that "surveillance technologies had and continue to have very serious

implications for the enjoyment of human rights – and for civic space more broadly." 2250

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including India, for children's education during the pandemic. Based on technical and policy analysis of several EdTech products used in India, Human Rights Watch found that India's endorsement of the majority of these online learning platforms put at risk or directly violated children's rights. Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online.

According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.²²⁵¹

Lethal Autonomous Weapons

The Indian Army has been steadily embracing emerging and disruptive technologies to transform itself from a manpower-intensive to a technology-enabled force to meet future security challenges.²²⁵² The Indian Armed force first started acquiring automated drones in 2019 as part of a modernization campaign. "However, modern warfare, situational awareness and battlefield operability failed miserably in recent Indian military tactics against Pakistan and China." Nevertheless India is

²²⁵⁰ Ibid, p. 5.

²²⁵² Sumit Kumar Singh, Indian Army employing autonomous weapon systems (Jan. 16, 2021), <u>https://www.southasiamonitor.org/india/indian-army-employing-autonomous-weapon-systems</u>

determined to take part in the lethal autonomous weapons race in the South Asian region.

India's Defence Research and Development Organization (DRDO) has been involved in the R&D of Direct Energy Weapons, gun-mounted remotely operated vehicles, canasterized nuclear weapons (Agni-V) and swarm-based self-healing minefields. The most crucial project rolled out by DRDO is the unmanned remotely operated tank "Muntra", that comes with three variants. Muntra-S, Muntra-M and Muntra-N have proven efficiency in surveillance, mine detection and reconnaissance in a strategic location. The indigenous R&D of Robots for armed forces is a crucial part of lethal autonomous weapons systems under the new program of Prime Minister Narendra Modi's "Make in India."²²⁵³ As part of this program, the Indian Navy is also focused on incorporating AI and Machine Learning in critical mission areas. The program has brought together government and private organizations working on producing lethal autonomous weapons.²²⁵⁴

India has not taken part in recent initiatives to regulate or prohibit the use of lethal autonomous weapons. In October 2022, 70 states endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²²⁵⁵ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."²²⁵⁶ India did not endorse this joint statement.

²²⁵⁶ United Nations (UN) General Assembly, First Committee, Joint Statement on Lethal Autonomous Weapons Systems First Committee, 77th United Nations General Assembly Thematic Debate – Conventional Weapons (21 Oct. 2022),

At the 78th UN General Assembly First Committee in 2023, India was one of 5 states which voted against²²⁵⁷ resolution L.56²²⁵⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

India was among the original 48 countries that voted in favor of the Universal Declaration of Human Rights in 1948. According to Freedom House, India is a "partly free" country. Its track record in terms of political rights and civil liberties has steadily declined in recent years. Freedom House reports, "While India is a multiparty democracy, the government led by Prime Minister Narendra Modi and the Hindu nationalist Bharatiya Janata Party (BJP) has presided over discriminatory policies and a rise in persecution affecting the Muslim population. The constitution guarantees civil liberties including freedom of expression and freedom of religion, but harassment of journalists, nongovernmental organizations (NGOs), and other government critics has increased significantly under Modi. The BJP has increasingly used government institutions to target political opponents. Muslims, scheduled castes (Dalits), and scheduled tribes (Adivasis) remain economically and socially marginalized."²²⁵⁹

OECD / G20 AI Principles

As a G20 member, India endorsed the G20 AI Principles at the 2019 G20 Leaders' Summit in Japan. India held the Presidency of the G20 from December 1, 2022, to November 30, 2023. The 43 Heads of Delegations, the largest ever in G20, participated in the final New Delhi Summit in

²²⁵⁹ Freedom House, *Freedom in the World 2023 – India* (2023), https://freedomhouse.org/country/india/freedom-world/2023

September 2023.²²⁶⁰ India stated that the "G20 Presidency would be a watershed moment in her history as it seeks to play an important role by finding pragmatic global solutions for the wellbeing of all, and in doing so. manifest the true spirit of 'Vasudhaiva Kutumbakam' or the 'World is One Family'."2261 The New Dehli Summit led G20 leaders to expressly "reaffirm [their] commitment to G20 AI Principles (2019)". In the New Dehli Declaration G20 leaders also asserted, "It is our endeavour to leverage AI for the public good by solving challenges in a responsible, inclusive and human-centric manner, while protecting people's rights and safety. To ensure responsible AI development, deployment and use, the protection of human rights, transparency and explainability, fairness, accountability, regulation, safety, appropriate human oversight, ethics, biases, privacy, and data protection must be addressed. To unlock the full potential of AI, equitably share its benefits and mitigate risks, we will work together to promote international cooperation and further discussions on international governance for AI."2262

According to the OECD, most but not all of the OECD AI principles are addressed in the national AI strategy.²²⁶³ According to OECD AI Observatory, following the #AIforAll initiative, India is now addressing accountability.²²⁶⁴ In 2023, a study published by the OECD.AI Observatory acknowledged that India is providing guidance for developers and operators on how to implement the principles.²²⁶⁵

India is a founding member of the Global Partnership on AI, an international initiative to support responsible and human-centric development and use of AI.²²⁶⁶ "The power of artificial intelligence can be exploited for the good of the citizens and consumers across the globe and ensure that there are adequate guardrails to prevent misuse and user harm,"

UNESCO Recommendation on the Ethics of AI

India has been a member of UNESCO since its inception in 1946. India has endorsed the UNESCO Recommendation on AI Ethics. Recently, UNESCO released a report on the State of the Education Report for India and urged it to implement ethical AI in its education system as India is one of the biggest contributors to AI development.²²⁶⁸

India is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.²²⁶⁹ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.²²⁷⁰

Quad Group

In September 2021, the Quad Group, India, United States, Australia, and Japan, released the "quad principles on Technology Design, Development, Governance and Use," with at their core a commitment to shared democratic values and respect for universal human rights. The principles identified are: 1) Support of universal values, such as freedom of expression, privacy, autonomy, agency, and dignity of individuals; 2) Building trust, integrity and resilience; and 3) Fostering healthy competition and international collaboration to advance the frontier of science and technology.²²⁷¹

In March 2021, the U.S. - India Artificial Intelligence (USIAI) Initiative was launched to serve as a platform to discuss opportunities for bilateral AI R&D collaboration, share ideas for developing an AI workforce, and recommend modes and mechanisms for catalyzing their partnership.²²⁷² In May 2022, India and the US also announced the launch of the U.S.-India initiative on Critical and Emerging Technology (iCET) to

foster closer industrial cooperation in strategic and defense technologies, notably in the areas of artificial intelligence, quantum computing, semiconductors and 5G.²²⁷³

In January 2023, the Initiative on Critical and Emerging Technology (iCET) was inaugurated as a key milestone deepening the relationship between U.S and India. The leaders committed to their vision of fostering an open, accessible, and secure technology ecosystem, based on mutual trust and confidence.²²⁷⁴

AI Safety Summit

In November 2023, India participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²²⁷⁵ India thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

BRICS

At the 2023 BRICS Summit, India, China, Russia, Brazil and South Africa accepted Iran, Ethiopia, Egypt, Saudi Arabia and the United Arab Emirates, as new BRICS member. Russian President Putin who takes over the rotating chairmanship of BRICS in January 2024 said that the bloc seeks "strengthening multilateralism for equitable global development and security".²²⁷⁶ Chinese President Xi Jinping also announced that "BRICS

²²⁷³ <u>https://www.whitehouse.gov/briefing-room/statements-releases/2023/01/31/fact-sheet-united-states-and-india-elevate-strategic-partnership-with-the-initiative-on-critical-and-emerging-technology-icet/</u>

countries have agreed to launch the AI Study Group of the BRICS Institute of Future Networks at an early date."²²⁷⁷

Evaluation

India has endorsed the G20 AI Principles and the UNESCO Recommendation on the Ethics of AI. The country has set out a comprehensive set of national AI strategies with a clear ethical dimension and recently adopted a data protection law. However, the recent decline in human rights protection in India, the non-committal position of India with regard to the regulation or prohibition of lethal autonomous weapons combined with the yet unknown date of entry into force of India new data protection law raise significant concerns in view of the expanded use of the Aadhaar system among others. In 2023, India has revealed itself as a key international actor and power broker with its G20 Presidency and GPAI Chair and its participation in the AI Safety Summit and BRICS Summit. Its overall position remains nevertheless ambiguous.

Indonesia

National AI Strategy

Indonesia published the National Strategy for Artificial Intelligence (*Stranas KA*) in August 2020.²²⁷⁸ The National Strategy is aimed at advancing the Indonesian economy through leadership in AI, through the year 2045.²²⁷⁹ The AI Strategy for Indonesia is intended to implement Vision Indonesia 2024, the country's economic, social, governance and technology development strategy. The National Strategy for AI also follows "Making Indonesia 4.0", a government-sponsored program, announced in 2018, to promote the automation of the Indonesian society. "Making Indonesia 4.0" involves 10 cross-sectoral initiatives aimed at boosting Indonesia's competitive performance in key areas like manufacturing, industry, biology, and hardware automation,²²⁸⁰ through investments in AI, robotics, and technology-based Indonesian firms as well as encouraging investment from leading Japanese, Chinese, and Korean tech firms.²²⁸¹

Stranas KA outlines five national priorities where AI is anticipated to have the biggest impact: (1) health services to accelerate plans for smart hospitals and health security infrastructure in the aftermath of the pandemic; (2) bureaucratic reform to implement digital services for citizen-centric public service ("*pemerintahan digital melayani*"); (3) education and research to aid online schooling and bridge the digital divide; (4) food security for smart agriculture, fisheries, and management of natural resources; as well as (5) mobility and services to facilitate the development of 98 smart cities and 416 smart districts under Indonesia's 100 Smart Cities Movement.²²⁸²

²²⁸² Asia Society Policy Institute, *Raising Standards: Data & Artificial Intelligence in Southeast Asia* (July 2022), <u>https://asiasociety.org/sites/default/files/inline-files/ASPI_RaisingStandards_report_fin_web_0.pdf</u>

The Indonesian National AI Strategy identifies four key focus areas: (1) Ethics and Policy, (2) Talent Development, (3) Infrastructure and Data, and (4) Industrial Research and Innovation. In the focus area of Ethics and Policy, the goals include implementing data sharing ethics, establishing a Data Ethics Board, and strengthening laws to crack down on the abuse of technology and the misuse of data privacy.

Indonesia has already made progress in AI.²²⁸³ A 2018 International Data Corporation survey found that Indonesian companies had the highest rates of AI adoption in Southeast Asia; a number of state projects employ AI, to anticipate state fires for example; and some government agencies are promoting AI development and technology-based tools at schools and other learning institutions.²²⁸⁴ However, the survey mentions data misuse as a hurdle and notes that the country has neither the provisions to regulate AI, nor an official agency to oversee AI development. The survey recommend establishing a data ethics board that would set national standards for AI innovation. There is currently no such agency or institutional structure in place to oversee the governance and ethical use of AI.²²⁸⁵

Pancasila Values

The National Strategy states that Indonesian AI policy should be based on Pancasila values. Pancasila is the philosophical theory that is the foundation of the Indonesian government and policy. It is comprised of five principles: (1) Belief in The One True God, (2) A fair-minded and civilized humanity, (3) Unity of Indonesia, (4) Democracy (from the people) led by Wisdom of consultation [of the] representatives [of the people], and (5) Social justice for every person in Indonesia.²²⁸⁶ The AI Strategy sets out the importance of establishing public trust through transparency, social and ecological welfare, robustness and technical safety, diversity, justice, and non-discrimination, amongst others. The Strategy emphasizes the importance of AI being reliable, safe, open, and accountable. The synergy between stakeholders is also mentioned to ensure that the policy is relevant and helpful.

²²⁸⁶ Wikipedia, Pancasila (politics), <u>https://en.wikipedia.org/wiki/Pancasila (politics)</u>

Public Participation

The Agency for the Assessment and Application of Technology, coordinated the development of the National AI Strategy. The development was carried out with help of a "wide variety of public and private sector organizations" who "contributed to the plan including government ministries, universities, industry associations, and national telecom providers."²²⁸⁷

A website²²⁸⁸ dedicated to the National AI Strategy illustrates the strategy and provides material from the AI Summit 2020. The website also provides an Artificial Intelligence Map²²⁸⁹ that describes the research institutes, universities, industries, and communities that develop and utilize innovative Artificial Intelligence in Indonesia.

According to the Jakarta Post, AI providers and experts have lauded the move to establish a foundation for AI development while urging the government and other stakeholders to improve on the strategy, fix current flaws and anticipate risks.²²⁹⁰ University of Indonesia AI and robotics professor Wisnu Jatmiko described AI as an "extraordinary challenge." He told The Jakarta Post that the country needs to nurture high-quality talent in the field of AI and bolster infrastructure, including fixing internet connection issues and developing its own cloud computing system to prevent the leak of confidential information. Big Data and AI Association chairman Rudi Rusdiah and Institute for Policy Research and Advocacy researcher Alia Yofira Karunian said the national strategy should uphold principles of fairness, accountability, and transparency as pillars of AI implementation. Karunian called on the government to detect and iron out biases in automated decision-making through human intervention, and to ensure people have the right not to have AI make decisions about them. "We must learn from the mistakes of other countries," she said.

The Jakarta Smart City initiative also encouraged community participation and government responsiveness through social media, public figures, and a public reporting system. Further, the "management of community complaints was conducted with effective coordination between

the Jakarta Smart City team and various government departments."²²⁹¹ In August 2023, the Ministry of Communication and Information began the third phase in the implementation of the PDP Law by releasing a Draft Government Regulation on Personal Data Protection (RPP PDP) as a derivative regulation from the 2022 PDP Law, requesting public input.²²⁹² Deputy Minister Nezar Patria highlighted the evolving dynamics of personal data protection in light of technological advancements,

underscoring the critical role of public involvement in refining the RPP PDP.²²⁹³

Data Protection

On 20 September 2022, the Indonesian Government and Parliament passed the first Indonesian Personal Data Protection Law. This is the first step to the enactment of the PDP Bill as law. The second step was Presidential assent, which happened on October 17, 2022, and signifies the enactment and coming into force of the law.²²⁹⁴ The law made many references to the EU GDPR The PDP Law enshrines among others the Data Subject's right to object to automatic profiling activities. PDP Law exempts the financial services sector, stricter requirements on broad record-keeping obligations, unique provisions on facial recognition technology, and special categories of data (children data, personal financial data, etc.).²²⁹⁵

The PDP Law provides for the establishment of a Data Protection Authority (DPA). "Article 58 of the PDP law states that the DPA will implement the PDP Law and report to the Indonesian President, which will

and-context/

create the institution within the Executive branch of the government. The Indonesian DPA will have four key functions: (i) policy, strategy, and guidance formulation; (ii) supervision of the implementation of the PDP Law; (iii) administrative law enforcement against violations; and (iv) facilitating out-of-court dispute resolution."²²⁹⁶

The PDP Law includes fines of up to 2% of a company's annual revenue, the potential confiscation of assets, and a stipulation that individuals could be imprisoned for up to six years for falsifying personal data or up to five years for collecting personal data illegally.

The Indonesian Government and Parliament ratified the Personal Data Protection (PDP) Law, mandating DPO appointments for specific entities, setting the stage for the independent AI oversight through a Data Protection Authority (DPA) by October 2024.²²⁹⁷ Following the ratification of the PDP Law, the Ministry of Communication and Informatics (MOCI) issued the AI Circular Letter, providing guidance for businesses on preparing internal policies on data and AI ethics, further integrating AI considerations within the data protection framework.²²⁹⁸

The Indonesian data protection regime comprises several other laws such as the Law regarding Electronic Information and Transactions (EIT Law) and its implementing regulations.²²⁹⁹

AI Oversight

Until the data protection authority is established, the Minister of Communication and Informatics (MoCI) is responsible for overseeing compliance with the data protection regime.²³⁰⁰ However, certain sectors have their own authorities to ensure compliance with the regulatory regime. For example, the Indonesian Financial Services Authority (FSA) has the

authority to act as the regulator of data privacy in the capital markets sector and with regard to banks' customer data privacy issues.²³⁰¹

The National Human Rights Commission of Indonesia, Komnas HAM aims to "improve the protection and enforcement of human rights in order to develop the whole Indonesian human person and the ability to participate in various fields of life."²³⁰² Komnas HAM is an independent institution established in 1993 by Presidential Decree. The Law Number 39 of 1999 provided for its "existence, purpose, function, membership, principles, completeness, duties and authority." Komnas HAM carries out studies, research, counseling, monitoring, and mediation of human rights.²³⁰³ Komnas HAM has also the authority to conduct investigations into human rights violations and supervise regional and central governmental policies. As such it is competent to address AI-based human rights violations.

AI Ethics and Data as a Compulsory Company Internal Policy

Pursuant to the Ministry of Communications and Informatics Regulation, any company having its line of business of developing artificial intelligence-based programs, must establish and implement its internal policy on Artificial Intelligence Ethics and Data. This requirement is compulsory for a company to run such lines of business.²³⁰⁴

In December 2023, the Indonesian Minister of Communication and Information issued a Circular Letter on the Ethics of Artificial Intelligence to provide a reference for ethical values and principles for business actors, public electronic system operators, and private electronic system operators who have programming activities based on artificial intelligence.²³⁰⁵

In March 2024, the Ministry of Communication and Information announced that Deputy Minister of Kominfo, Nezar Patria, suggested industries implement five strategic steps to respond to artificial intelligence (AI) developments. In particular, Nezar highlighted the following steps:

https://jdih.kominfo.go.id/produk_hukum/view/id/883/t/surat+edaran+menteri+komunika si+dan+informatika+nomor+9+tahun+2023

²³⁰⁵ Indonesia - Ministry of Communication and Informatics, *Circular Letter of the Minister of Communication and Information Technology Number 9 of 2023 concerning Ethics of Artificial Intelligence*, (Dec. 19, 2023),

- To implement leadership that is responsible and strong in making strategic decisions;
- To collaborate between sectors to optimize the use of AI;
- Build and embed an ethical AI framework;
- Review continuously, by integrating existing tools and methods, to detect existing problems; and
- Industry players must be able to ensure that the use of AI will not replace the capacity and role of humans.²³⁰⁶

Al Initiatives

According to the United Nations E-Government Development Index (EGDI), the country is lagging in the implementation of digital services.²³⁰⁷ The country's president, Joko Widodo made the promise to create a "citizen-centric digitised service government (*Pemerintahan Digital Melayani*) in the next five years." After winning his second term in April 2019, President Widodo announced that government agencies have been ordered to replace top civil servants with AI during 2020. This would consolidate the current top four tiers into two tiers.²³⁰⁸ Bureaucratic reform was also revisited in the National AI strategy, in which it is one of the five priority areas.²³⁰⁹

The Indonesian government is facilitating the development of public cloud services that will provide AI services for the wider public. The services will also provide shared infrastructures and platforms through which digital companies can distribute metadata, data examples, as well as computing and learning services that are free to use by AI developers. Indonesia is also fostering a quadruple helix collaboration in AI research and innovation initiatives.

²³⁰⁹ Kecerdasan Artificial Indonesia, AI towards Indonesia Vision 2045, <u>https://ai-innovation.id/stranas-ka</u>

"The Indonesian government has also entered into a partnership with the U.N.-led Global Pulse Lab headquartered in Jakarta to further develop AI-based solutions for public policy programs. Together with the U.N. Country Team, Indonesian representatives identified national development priorities for applied research. The collaboration culminated in the AI-powered platform called Haze Gazer, a crisis analysis tool that combines satellite imagery of fire hotspots, census data, and real-time information captured from social media for disaster management efforts." ²³¹⁰

According to the OECD, Indonesia considers the availability of an integrated trustworthy health data system a key challenge for trustworthy AI in the health sector. ²³¹¹ "At the height of the COVID-19 outbreak, AI was integrated as part of the e-government response in the public health sector. The Ministry of Health used an AI-powered app called Telemedicine Indonesia to link patients with hospitals and doctors." ²³¹²

"Indonesia's booming internet economy is fueled by a "digital mindset" that drives the rapid adoption of AI technologies across the archipelago. It is home to native digital tech unicorns such as Bukalapak, Traveloka, and OVO. Two homegrown digital mammoths, Goiek and Tokopedia, have led Indonesia's mobile-first approach and adoption of AI solutions. As a one-stop shop multiservice platform, Gojek has developed scalable machine learning (ML) models to create personalized customer preferences. It leverages AI and ML to offer biometric security features such as fingerprint and facial recognition. Tokopedia is an e-commerce giant that leverages AL and ML capabilities for product development. It has also promoted AI research and talent development through its partnership with the University of Indonesia, with the 2019 launch of a deep learning supercomputer technology called NVIDIA DGX-1.246 The partnership also launched AI-based solutions like demand prediction. smart warehouses, and smart logistics." 2313

"Bukit Algoritma (Algorithm Hill) was launched as a mega-tech hub located in Sukabumi, West Java to emulate the Silicon Valley spirit. The sprawling 888 hectares will be transformed into a special economic zone

that will host Indonesia's start-ups specializing in AI, digital technology, biotech, and semiconductors. The ambitious multibillion-dollar industrial project hopes to become the country's center of research in neuroscience, nanotechnology, quantum technology, solar cell technology, and space exploration. With completion expected by 2030."²³¹⁴

Smart Cities

In a bid to solve Jakarta's traffic gridlocks, flooding, and waste management, the city has turned to AI. The Indonesian government launched the Jakarta Smart City (JSC) initiative.²³¹⁵ Built on six pillars, the program uses AI to tackle the city's governance, people, living, mobility, economy, and environmental issues. The Smart City initiative encourages public comment to promote transparency of the local government's work and better public services.

There are currently 98 smart cities and 416 smart districts planned under Indonesia's 100 Smart Cities Plan. In 2019, President Widodo announced a new capital on the island of Borneo, to replace Jakarta. It is planned to be a smart city that will "rely heavily on sustainable smart city systems, cleantech and infrastructure run by emerging technologies such as 5G, AI and IoT (Internet of Things)." ²³¹⁶

These smart cities initiatives have been developed without proper legal framework and independent monitoring mechanism.

In December 2023, European defense technology company Thales and the Indonesian new capital city authority have signed a memorandum of understanding (MOU) "for strategic cooperation" regarding a smart city in Nusantara. The MOU says they "will strengthen the cooperation between the two parties in the development of smart city concepts, including digital identity, traffic management of unmanned aircraft systems, cybersecurity and data centers."²³¹⁷

Adoption of AI by Ministries, and State-Owned Enterprises

Many Indonesian national and regional government-related entities begin to officially recognize the adoption of AI in their policies as well as solutions. The Indonesian Ministry of Health in its 2021-2024 Digital Transformation Strategy in the Health Sector recognizes the use of AI in its plan to enable big data analytics in medical sectors. The strategy is now supported by ministerial regulation that provides legal ground for the strategy's implementation.

Additionally, the Indonesian Train Agency/Kereta Api Indonesia, a state-owned enterprise, has recently rolled out a facial recognition system to support passenger verification system. "G42, the leading UAE-based AI and cloud computing company and global nonprofit ocean exploration organization OceanX, along with G-Tech Digital Asia (G-Tech), and the Government of the Republic of Indonesia via its Coordinating Ministry for Maritime Affairs and Investment (CMMAI) have announced the signing of a Letter of Intent to establish a collaboration to develop ocean research to help protect the marine environment. In furtherance of this proposed collaboration, G42 intends to deploy G42 Cloud's large-scale cloud infrastructure and services, remote sensing drone systems by Bayanat, a publicly listed company at ADX in which G42 owns a majority stake, and cutting-edge marine genomics applications by G42 Healthcare in the support of OceanX's social welfare mission and its world-class marine research and media vessel the R/V OceanXplorer, to conduct an advanced, in-depth analysis of the coastal and oceanic environments."2318

EdTechs and Children Tracking

Human Rights Watch conducted an analysis of education technology (EdTech) products between March and August 2021 on the prevalence and frequency of tracking technology embedded in each product. This report is a global investigation of EdTech products that were endorsed by 49 governments for children's online education learning during the Covid-19 pandemic. Indonesia was one of the 49 countries analyzed.

"Based on technical and policy analysis of 163 EdTech products, Human Rights Watch finds that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's privacy and other children's rights, for purposes unrelated to their

²³¹⁸ Businesswire, G42, OceanX, G-Tech and the Indonesian Government to Collaborate to Advance Oceanic Research to Protect the Marine Environment (Nov. 18, 2022), <u>https://www.businesswire.com/news/home/20221118005443/en/G42-OceanX-G-Tech-and-the-Indonesian-Government-to-Collaborate-to-Advance-Oceanic-Research-to-Protect-the-Marine-Environment</u>

education. Of the 163 EdTech products reviewed, 145 (89 percent) appeared to engage in data practices that put children's rights at risk, contributed to undermining them, or actively infringed on these rights. These products monitored or had the capacity to monitor children, in most cases secretly and without the consent of children or their parents, in many cases harvesting data on who they are, where they are, what they do in the classroom, who their family and friends are, and what kind of device their families could afford for them to use." ²³¹⁹

"Most online learning platforms sent or granted access to children's data to third-party companies, usually advertising technology (AdTech) companies. In doing so, they appear to have permitted the sophisticated algorithms of AdTech companies the opportunity to stitch together and analyze these data to guess at a child's personal characteristics and interests, and to predict what a child might do next and how they might be influenced. Access to these insights could then be sold to anyone—advertisers, data brokers, and others—who sought to target a defined group of people with similar characteristics online." ²³²⁰

In Indonesia, Rumah Belajar, Quipper, Ruangguru, and Kelas Pintar apps collected children's advertising IDs. These apps tag children and identify their devices for the sole purpose of advertising to them. Kelas Pintar collected children's International Mobile Equipment Identity (IMEI) numbers. Rumah Belajar, Ruangguru, and Sekolah.mu collected precise location data and pinpoint where they are. Ruangguru and Sekolah.mu collected children's Wi-Fi SSID that shows the name of the Wi-Fi router that the mobile phone is connected to. Kelas Pintar granted access to children's contact data to third-party companies. Third-party SDKs were embedded in Kelas Pintar, Quipper, Ruangguru, Rumah Belajar, Sekolah.mu, and Zenius so they can track what children do.

Indonesia's Rumah Belajar, a government-built EdTech product sent children's data to AdTech companies. Rumah Belajar disclosed in their privacy policy that they collect and use students' data for behavioral advertising.

Lethal Autonomous Weapons

"In general, the Indonesian government has not shown an assertive and consistent attitude towards the development of LAWS, both at the

²³²⁰ Ibid.

national and the global level."2321 However, in February 2023, Indonesia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Indonesia, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²³²² In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."2323

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour²³²⁴ of resolution L.56²³²⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns

autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Indonesia has ratified the Universal Declaration of Human Rights. According to Freedom House, Indonesia is "partly free," with a total score of 58/100 in 2023. Freedom House reports that "Indonesia has made impressive democratic gains since the fall of an authoritarian regime in 1998, enjoying significant political and media pluralism and undergoing multiple, peaceful transfers of power. Significant challenges persist, including systemic corruption, discrimination and violence against minority groups, conflict in Papua, and the politicized use of defamation and blasphemy laws."²³²⁶

OECD / G20 AI Principles

Indonesia is a member of the G20 and endorsed the G20 AI Principles in 2019. According to the OECD, the Indonesia National AI Strategy (*Strategi Nasional Kecerdasan Artifisial*) addresses several OECD AI principles.²³²⁷

Indonesia hosted the G20 in 2022, following the Italian presidency in 2021, and preceding the Indian presidency in 2023. The 17th G20 Heads of State and Government Summit took place at the end of the year 2022 in Bali. "The G20 Digital Economy Ministers met in Bali, Indonesia on 1 September 2022 to deepen discussions on digital connectivity and post-COVID-19 recovery, digital skills and digital literacy, data free flow with trust and cross-border data flows, and other issues associated with digital transformation. These discussions are in line with the overarching theme of the Indonesian G20 Presidency, "Recover Together, Recover Stronger", and its priority issues on inclusive global health architecture, digital-based transformation, and sustainable energy transition. The Bali Package serves as an essential milestone to pave the way toward global recovery through cooperation among the G20 members in Achieving a Resilient Recovery: Working Together for a More Inclusive, Empowering, and Sustainable Digital Transformation."²³²⁸

²³²⁸ G20 Indonesia 2022, *G20 Digital Economy Ministers' Meeting 2022, Chair's Summary, The Bali Package,* (September 1, 2022), pp. 448-449,

Although there was no reference to AI, was mentioned the importance of enhancing digital policies "to create an enabling, inclusive, open, fair and non-discriminatory digital economy that fosters the application of new technologies, allows businesses and entrepreneurs to thrive, and protects and empowers consumers, while addressing the challenges, related to digital divides, privacy, data protection, intellectual property rights, and online safety."²³²⁹

During the 2022 Digital Economy Ministers' Meeting (DEMM), the Indonesia G20 Presidency through its Digital Economy Working Group (DEWG), a specific G20 track to discuss digital economy issues, highlighted the importance of preparing society's fluency in emerging technologies including artificial intelligence. DEMM is the culmination of the DEWG efforts, consisting of representatives from G20 and international organizations. The discussion was made through the circulation of a survey to G20 members which was then reflected in the DEWG's outcomes such as the Chair's Summary and relevant deliverables.²³³⁰

UNESCO Recommendation on the Ethics of AI

As a member of UNESCO, Indonesia along with 192 other member states, adopted the UNESCO Recommendation on the Ethics of AI in November 2021, the first global standard on the ethics of artificial intelligence.²³³¹ It remains to be seen which measures Indonesia will put in place to implement the Recommendation.

Indonesia is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective

implementation of the Recommendation.²³³² The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.²³³³

Al Safety Summit

In November 2023, Indonesia participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²³³⁴ Indonesia thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Evaluation

Indonesia has endorsed the G20 AI Principles, the UNESCO Recommendation on the Ethics of AI and has developed a national AI strategy. The adoption of a new data protection law, the establishment of a new supervisory authority and efforts to instill AI ethical values in the private sector are positive steps toward ensuring trustworthy AI. However, concerns exist with regard to the unregulated mushrooming of Smart Cities in Indonesia.

Iran

National AI Strategy

"Digital Iran,"²³³⁵ a national road map for the advancement of technology, outlines Iran's digital transformation agenda. The Digital Iran framework has three layers: Enabler, Application, and Impact.²³³⁶ The enabler layer consists of six pillars, regulation, security, infrastructure, identity, literacy, and open data. The application layer includes digital society, digital government, and digital business and the impact layer covers the social, economic, and environmental dimensions. The vision of the framework is to build "a healthy cooperative society coupled with the smart economy, sustainable development and effective governance with transparency as a result of utilizing digital technologies." The framework is implemented through 13 strategies, 30 policies and 42 confirmed projects.

The Information & Communications Technology (I.C.T.) Minister of Iran inaugurated the "AI Innovation and Development Center" in February 2020.²³³⁷ The mission of the center is to build partnerships with industries, businesses, universities and research institutes and international centers to define and implement joint research and application projects in AI and provide infrastructure and data needed for researchers, start-up businesses and various industrial, agricultural and e-government sectors.²³³⁸

In October 2022, the center issued the "Draft Iran's National AI Development Roadmap." This road map was compiled using the approach of the Supreme Council of Science, Research, and Technology, which involves comparative studies, environmental analysis, surveying of experts, and vision development.²³³⁹ This publication is divided into two sections: AI use cases and AI enablers. In the application cases section, the objective is to employ AI in high-priority areas like healthcare, transportation, agriculture, education, industry, and the environment. In the second section,

the most essential topics investigated include AI enablers, the training of expert human resources, infrastructures, standards, data, and AI ethics.²³⁴⁰

The Ministry of I.C.T.,²³⁴¹ responsible for implementation of modern technologies in the IT sector, supports AI developments by hosting international technology²³⁴² conferences, cultivation, and creation of new industries with the use of digital technologies, and investment in academic research.²³⁴³

Data Protection

There are currently no comprehensive data protection laws in place in Iran.²³⁴⁴ In February 2018, the I.C.T. Minister unveiled the first drafts of five newly proposed bills for internet and cyberspace regulation in Iran. The legislation addresses e-government, electronic identification, and the responsibilities of service providers, electronic financial transactions, and data protection, respectively.²³⁴⁵ A draft bill on data protection and privacy was presented to the cabinet in July 2018. The Draft is currently under expert revision to align it with the GDPR.²³⁴⁶ According to the deputy minister of I.C.T., the Government will use a special working group for the

digital economy to approve the bill.²³⁴⁷ The draft law provides for the establishment of the Supervisory Board of Personal Data which would be tasked with receiving and processing stakeholder complaints in order to protect personal data. In the absence of an overarching data privacy law, the legal framework for privacy derives from a combination of other laws and regulations dealing with data protection alongside additional issues. Such legislation includes the Law on Publication and Access²³⁴⁸ to Data 2009, the Electronic Commerce Law 2004,²³⁴⁹ and the Cybercrime Law 2009.²³⁵⁰

The Iranian Communications Regulatory Authority has access to a web application known as "SIAM," which allows for the remote manipulation of cellular connections. This application is part of Iran's data restriction, which may help explain why it was implemented. SIAM is a computerized system that operates in the background of Iranian cellular networks, giving its operators a wide range of options for remotely executing commands to modify, interrupt, and monitor customers' phone use. These tools may reveal the data links in a crawl, decrypt phone calls, trace the movements of people or large groups, and generate complete metadata summaries of who spoke to whom and when.²³⁵¹

Freedom of Internet and Digital Rights

Iran saw the most significant decline in internet freedom in 2023, as authorities attempted to suppress protests associated with the Woman, Life, Freedom movement.²³⁵²

In February 2020, the Supreme Council for Cyberspace (SCC), Iran's top internet policymaking body, initiated meetings to set five-year targets for the expansion of the National Information Network (NIN), the country's localized internet architecture. The plan was approved by the SCC in September 2020.²³⁵³ The NIN established several targets to improve

internet access.²³⁵⁴ According to the ICT Minister, more than 120 major projects have been defined under the National Information Network (NIN) in the SCC.²³⁵⁵

Iranian authorities have voiced plans to complete the NIN no later than spring 2024. After the completion of the NIN's roll-out the most Iranian people shall only have access to the NIN itself and shall have no access to the world-wide web. Some officials and academics will have access to the internet however through VPN's that are monitored by the government.²³⁵⁶

The Telecommunication Company of Iran (TCI), which is run by the ICT Ministry, controls internet traffic flowing in and out of the country.²³⁵⁷ The Internet dominance creates opportunity for TCI to monitor online activities, where the majority of TCI's shareholder is the Islamic Revolutionary Guard Corps (IRGC), a powerful branch of the security forces that also controls large portions of the economy.²³⁵⁸

Iran's parliament has been drafting a bill that would impose additional limitations on Iranians' internet access. The measure requires overseas technology businesses to have a legal representation in Iran to comply with Iranian law and cooperate with Iranian authorities.²³⁵⁹ The Iranian government has long monitored individuals, prosecuted them for online expressions, and banned online areas. In addition, the measure intends to prohibit the creation and distribution of censorship "circumvention technologies" (VPNs) that are routinely used in Iran to

access a wide variety of blocked websites.²³⁶⁰ In the meantime, Iranian authorities are deliberating over the concept of a national internet, which appears to entail denying users access to international search engines, news websites, and email servers in favor of providing them with alternatives developed and controlled by the Islamic Republic of Iran.²³⁶¹

Since the 16th of September 2022, when the most recent wave of protests began, the Iranian government has utilized its investments in its national digital network to organize Internet shutdowns and has also expanded various forms of censorship. Instagram and WhatsApp are among the online services that have been disabled. And authorities are currently focusing on Virtual Private Network (VPNs). To make it more difficult for Iranians to use VPNs to avoid censorship, the authorities blocked the Google Play and Apple App Store apps, which provided a quick and easy method for installing VPNs. The government then pushed it further by restricting the websites of most companies that could provide these applications. Lastly, they are disconnecting VPN servers that are accessible from Iran.²³⁶²

Digital ID (National Smart Card)

Iran is currently implementing digital IDs as part of Iran's egovernment program.²³⁶³ Iran's Executive Council of Information Technology has built a new digital platform as part of its ongoing egovernment initiatives. In addition to two pilots with the Ministry of Agriculture and the Ministry of Culture and Islamic Guidance, the council also announced the addition of the Ministry of Cooperatives Labor and Social Welfare, the Ministry of Economic Affairs and Finance, the Iranian Health Insurance Organization, the Ministry of Welfare and Social Security, and the Central Insurance of Iran for the next phase of the digital government.²³⁶⁴ Iran's Law Enforcement Forces signed an agreement with an Iranian digital ID and biometric firm, to acquire a digital ID detection

authentication platform.²³⁶⁵ The digital ID platform obtains 5 to 15-second selfie videos and then runs it through an ID liveness detection algorithm to verify user identity against a user's original image registered with Iran's Civil Registration Organization.

Facial Recognition

Iran is actively integrating facial recognition and biometrics into its law enforcement system for border protection.²³⁶⁶ In 2015, the Iranian government launched a biometric national identity card - a card "issued to all new applicants and to anyone renewing an expired national identity card."²³⁶⁷ Iran's banking sector is adopting biometric methods and requires customers to provide their smart identity for many banking transactions. Iranian officials have also announced plans that would require citizens to verify their identity using the smart identity card to access the internet.²³⁶⁸

In September 2023, the "Hijab and Chastity" Bill, often referred to as "Hijab Law" was adopted. It includes for example that violations of wearing a hijab can result in up to ten years imprisonment. To enforce the law, the use of facial recognition technology in the public space is planned. Iranian clerics are also investigating the possible use AI to issue fatwas (legal ruling on a point of Islamic law) faster in order to enforce hijab law and suppress protests.²³⁶⁹

Lethal Autonomous Weapons

The Iranian military is very interested in the development of AI & Autonomous Weapon systems in the pursuit of force-multiplying asymmetric warfare capabilities. At the Human Rights Council in May

2013, Iran expressed interest in opening multilateral talks on lethal autonomous weapons systems. Iran however has not commented on the concerns raised by removing human control from the use of force or supported proposals to negotiate a new international ban treaty. Iran is not a party to the Convention on Conventional Weapons (CCW), but it attended CCW meetings on killer robots in 2016 and 2018-2019.²³⁷⁰

The Chief Commander of Iran's Islamic Revolution Guards Corps (IRGC) stated in July 2022 that the country achieved the AI required to direct drones and ballistic missiles while under sanction.²³⁷¹ "AI technology enables an autonomous aircraft to fly more than 2,000 kilometers from any point and hit a moving target or a specific location,"²³⁷² he added. Shortly after this interview, another IRGC commander verified the use of AI to beat the enemy and stated that the success was due to the collaboration of universities and military departments.²³⁷³

In October 2022, Iran was not among the 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²³⁷⁴ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."²³⁷⁵

At the 78th UN General Assembly First Committee in 2023, Iran was one of eight states which abstained from voting²³⁷⁶ on resolution L.56²³⁷⁷ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

In view of the expiration of UN sanctions against Iran, the United States committed in October 2023 to take further action. Secretary of State Blinken stated, "While the United States has already sanctioned all possible entities and individuals contained within Security Council Resolution 2231, today we are announcing additional designations on individuals and entities related to Iran's missile, conventional arms, and UAV activities, including such activities involving Russia, the People's Republic of China, Venezuela, and elsewhere. In coordination with the Departments of Commerce, Justice, and the Treasury, we are additionally issuing new public guidance to private industry regarding Iranian missile procurement.²³⁷⁸ The US argued that there is "horrific impact of Iran's provision of missiles and unmanned aerial vehicles (UAVs) to designated terrorist organizations and militant proxies that directly threaten the security of Israel and our Gulf partners." The US provided evidence of components and debris from lethal Iranian-made drones that were recovered from Ukraine and other locations.2379

EdTech and Children Tracking

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Iran, for children's education during the pandemic. Based on

technical and policy analysis of the Shad App, owned and provided by Iran, Human Rights Watch found that the government endorsement of this online learning platform put at risk and directly violated children's rights.

It results from the report that "[t]eachers in Iran told Human Rights Watch that the government compelled those in public schools to use Shad, an app built by Iran's Education Ministry for online learning during Covid-19. One teacher said: "The principal called and said that if I do not install the Shad app, I would be recorded as absent. The authorities do not accept teaching in Telegram and WhatsApp. Students have also been told that if you are not in this app, your score will not be approved and will not be sent to the [school]." In October 2021, the Iranian government reported more than 18 million active users of Shad." Technical analysis of Shad's code by Human Rights Watch found that the app can collect children's precise location data, the time of their current location, the child's last known location, their Wi-Fi SSID, IP address, the child's contacts, and any saved photos of their contacts.

EdTech products in Iran and other countries sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.²³⁸⁰

Human Rights

Iran is a signatory to the UDHR in 1948.²³⁸¹ However, in 2023, the Freedom House Index indicated Iran as a "Not Free" country, with a rating of 12/100, a slight drop from 2022 (14/100) and 2021(16/100).²³⁸² Among

²³⁸⁰ Human Rights Watch, *How Dare They Peep into My Private Life* (May. 25, 2022), <u>https://www.hrw.org/report/2022/05/25/how-dare-they-peep-my-private-life/childrens-rights-violations-governments</u>

 ²³⁸¹ The United Nations, Universal Declaration on Human Rights (1948),

 ²³⁸² Freedom House, Iran - *Freedom in the World – 2023*,

https://freedomhouse.org/country/iran/freedom-world/2023; Iran - Freedom in the World

the key developments in 2022 explaining Iran's decreased score, Freedom House noted, "Protesters mounted mass demonstrations in more than 100 cities across the country beginning in September. They called for freedom and denounced state violence against women in response to the death of Mahsa Amini, a 22-year-old Kurdish woman who had been arrested and beaten by the so-called morality police in Tehran for allegedly not wearing her hijab properly. Security forces responded to the protests with a violent crackdown (...). The deaths of nearly 500 people had been confirmed by vear's end, and an estimated 14,000 people were arrested, including protesters as well as journalists, lawyers, activists, artists, and athletes who voiced support for the movement. The crackdown was particularly harsh among ethnic and religious minority populations in Iran's Kurdish region and the province of Sistan and Baluchistan.²³⁸³ (...) The regime continued a recent trend of sharp increases in the overall number of executions, reportedly putting more than 500 people to death over the course of the year—the highest such figure since 2017. The surge was driven in part by a rise in the number of executions for drug-related offenses.

According to a 2023 Human Rights Watch report on Iran, internet freedom remains highly restricted and State-aligned cyber operations spread disinformation and manipulated the online space. Iran and its judicial system have shown little inclination to curb or confront serious human rights violations perpetrated by Iranian security agencies. The country's security and intelligence apparatus, in partnership with Iran's judiciary, harshly crack down on any form of dissent, including through excessive and lethal force against protesters.²³⁸⁴

The Iranian authorities' suppression of recent protests in Iran is the latest in a cycle of attacks perpetrated by the Iranian authorities against the people who are voicing their concerns. The cycle of attacks started in Iran between December 2017 and January 2018 and continued thereafter. ²³⁸⁵ According to Press TV, in an open letter that was signed by 227 of Iran's 290 members of Parliament, the MPs ask for demonstrators to be taught a

OECD / G20 Principles

Iran has neither endorsed the OECD / G20 AI Principles, nor did it define ethical norms and standards for AI. 2387

UNESCO Recommendation on the Ethics of AI

Iran is one of signatories to the UNESCO recommendation on AI Ethics which aims to deliver the advantages of technology while reducing associated human rights risks.²³⁸⁸ It remains to be seen which steps Iran will take to implement the Recommendation.

Evaluation

Iran has launched the "Digital Iran" framework to oversee and implement modern technologies, recently drafted an AI roadmap and endorsed the UNESCO Recommendation on AI Ethics. The absence of a comprehensive data protection law and independent oversight mechanism as the country seeks to expand national biometric identification and systems for facial recognition is however concerning. Iran is also engaged in the race for developing lethal autonomous weapons while not partaking in any international efforts to regulate, let alone prohibit, their use.

Ireland

National AI Strategy

Ireland's national enterprise strategy, the Economic Recovery Plan and Enterprise 2025 Renewed, set out Ireland's ambition to be at the frontier of disruptive technologies, including AI. In 2019, Ireland published the Future Jobs Ireland Plan, which included a commitment to develop Ireland's national AI strategy and create a Top Team on Standards for AI to focus on increasing Ireland's AI development and assisting AI enterprises.²³⁸⁹Ireland's Department of Enterprise, Trade, and Employment (DETE) published the national AI strategy AI - Here for Good in 2021 that set out a long-term AI roadmap.²³⁹⁰

The aim of AI - Here for Good is to make Ireland "an international leader in using AI to the benefit of our population, through a peoplecentered, ethical approach to AI development, adoption and use."²³⁹¹ Its objectives are grouped into eight strands: AI and Society; A Governance Ecosystem that Promotes Trustworthy AI; Driving Adoption of AI in Irish Enterprise; AI Serving the Public; A Strong AI Innovation Ecosystem; AI Education, Skills and Talent; Supportive and Secure Infrastructure for AI; and Implementation of the Strategy.

In August 2023, Ireland published a development report against the 2021 National AI Strategy, providing details on implementation of tasks under each of these strands as either "complete" or "in progress". The report offers an overview of upcoming planned actions for continued implementation.²³⁹² Among them, Ireland continues to monitor the progress of the EU sandbox pilot and will consider the implications and requirements of regulatory sandboxes for AI in Ireland.²³⁹³

²³⁹³ Government of Ireland, *AI – Here for Good Progress Report on the National AI Strategy* (9 August 2023), <u>https://enterprise.gov.ie/en/publications/progress-report-national-ai-strategy.html</u>

Ireland's national AI policy states that "ensuring explainability, accountability, and fairness" and addressing discrimination are some of the main challenges to be addressed through AI regulation. Ireland's "Strategic Approach to AI" emphasizes the importance of AI that is "accountable and acceptable to society." Under its objective to create an agile AI governance and regulatory framework, Ireland recognizes the risk of unfair discrimination and unequal treatment arising from biased training data, design, and use, along with challenges of "explainability, accountability, and fairness." The Top Team on Standards for AI is responsible for developing certification schemes and codes of conduct for AI to determine or demonstrate fairness, estimate bias in training data, develop auditing mechanisms, and support GDPR rights. This team, alongside similar Ireland government efforts, is working towards creating a common EU framework for trustworthy and innovative AI to create a coherent and borderless single AI market.²³⁹⁴

In July 2023, the National Standards Authority of Ireland, as part of the National Strategy, issued its Artificial Intelligence (AI) Standards & Assurance Roadmap. The Roadmap is based on the work of the The Top Team on Standards for AI and input from experts from across the Irish AI community, including academia; business, information technology industry, SMEs, and legal experts, It is expected that this Roadmap will support the standardization of the development and use of AI in the country.²³⁹⁵

Ireland's Department of Enterprise, Trade, and Employment (DETE) is currently spearheading Ireland's national AI policy, which lists strategic actions to be conducted by various Irish agencies, including the Department of Environment, Climate and Communications, the Department of Justice, the National Standards Authority of Ireland, and the Department of Children, Equality, Disability, Integration, and Youth. It has also established the Top Team on Standards for AI to develop certification schemes and codes of conduct to address AI at different stages of development.

Strand 8 of AI - Here for Good's, "Implementation of the Strategy," lists several entities that compose Ireland's "whole of Government strategy" for

²³⁹⁴ Kingdom of the Netherlands, INNOVATIVE AND TRUSTWORHTY AI: TWO SIDES OF THE SAME COIN (Oct. 8, 2020),

²³⁹⁵ National Standards Authority of Ireland, *AI Standards & Assurance Roadmap* (July 2023), <u>https://www.nsai.ie/images/uploads/general/NSAI_AI_report_digital_links.pdf</u>

AI. The Enterprise Digital Advisory Board (EDAF) was established in May 2022 to represent government departments, businesses, and AI experts, oversee the implementation of business elements of the National AI Strategy, and advise the Irish Government on driving enterprise adoption of AI. The membership of the EDAF was renewed in 2023 after a public call for expressions of interest.²³⁹⁶ The AI Ambassador, a member of the Enterprise Digital Advisory Board, and the GovTech Delivery Board, which is responsible for AI adoption in the public sector, are other entities that Ireland plans to incorporate into its governance of AI.

Following Ireland's 2021 Strategy release, Harnessing Digital - The Digital Ireland Framework, a new national digital strategy, was unveiled in February 2022 by the Department of the Taoiseach to drive and support the digital transition across the Irish economy and society.²³⁹⁷ This high-level framework outlines a roadmap to support Ireland's aspiration to be a digital leader at the center of European and global digital developments, with a strong emphasis on inclusion, security, and safety, anchored by strong governance and a well-resourced regulatory environment.

This framework's objectives are grouped into four strands: Digital Transformation of Business; Digital Infrastructure; Skills; Digitalization of Public Services. The Irish government has identified several digital risks which these objectives aim to mitigate. For instance, this Strategy offers pragmatic and effective mitigation solutions to risks around non-digital adopting organizations and those that might be digitally "left behind" as Ireland's society becomes more technologically literate.

In the 2023 implementation report of this Strategy, Ireland announced the creation of the Competition and Consumer Protection Commission (CCPC) as the competent authority for registration and compliance of data intermediation services. It also announced the establishment of the Central Statistics Office (CSO) as the competent body for assisting public sector bodies which opt to share "protected data."²³⁹⁸

The creation of both agencies is also part of the government's attempts to comply with the 2024 Digital Services Bill adopted in line with the EU Digital Services Act that came into force in February 2024.²³⁹⁹ These developments are expected to align Ireland's data privacy regulations with international standards and show its commitment to "enforcing digital regulation seriously", although it is not clear at the moment how these two agencies will work together, and with the pre-existing Irish Data Protection Commission (DPC).²⁴⁰⁰

Public Participation

To receive engagement and input in the development of its National AI Strategy, Ireland held a public consultation process from October 16 to November 7, 2019, which was open to all stakeholders and interested parties. This consultation aimed to "better understand the views of the public on the opportunities, enablers and challenges for AI in Ireland and to gather views on key areas and issues that should be addressed by the strategy."²⁴⁰¹

Strand 1 of AI - Here for Good, "AI and Society," asserts that Ireland "must also prioritize measures to raise awareness about AI." To that end, Ireland plans to appoint an "AI ambassador to promote awareness among the public and businesses of the potential that AI offers." This AI ambassador is expected to engage with the public, lead a "national conversation around the role of AI" with an emphasis on "an ethical and compliant approach," and champion AI as a positive force for Ireland. Ireland published a call for Expression of Interest for the AI Ambassador position on October 26, 2021, and applications were due November 12, 2021.²⁴⁰² In May 2022, Dr. Patricia Scanlon was appointed to serve as

²⁴⁰² Department of Enterprise, Trade and Employment, *Call for Expression of Interest: Artificial Intelligence (AI) Ambassador* (Oct. 26, 2021), <u>https://www.gov.ie/en/publication/07668-call-for-expression-of-interest-artificial-</u>

intelligence-ai-ambassador/

Ireland's first AI Ambassador. During the drafting phase of the new digital strategy, Harnessing Digital – The Digital Ireland Framework, no public consultation announcement occurred, removing the public's ability to offer feedback. Ireland planned to convene a "Youth Assembly on AI" to discuss young people's views of AI's "benefits, risks and impacts on different groups in society." University College Cork (UCC) currently hosts "The Elements of AI," a massive open online course (MOOC) made available to all EU member states. Ireland plans to use "Elements of AI," which is freely available, "to deliver AI education to at least 1% of the population. As part of the Ireland's AI - Here for Good, young Irish people were asked for their thoughts on AI and its potential applications. The inaugural National Youth Assembly on Artificial Intelligence was held at Trinity College Dublin on October 12, 2022, with 43 young people aged 13 to 23.²⁴⁰³

Public Trust in Al

Strands 1 and 2 of *AI* - *Here for Good* are aimed at "building public trust in AI." Strand 1 seeks to build public trust in AI through public awareness programs and research and grants to develop AI applications for societal good and sustainability, including health and climate change. Strand 2 addresses the need for a "robust governance framework to safeguard against [AI] risks and underpin public trust in AI." It establishes three pillars that Ireland will use to ensure a strong AI governance framework: 1) "an agile and appropriate framework," 2) "active promotion of ethics guidance and frameworks," and 3) "a robust system of standards and certification."

Ireland has played an active part in EU discussions of the AI Act and the EU's prior work related to AI, and Ireland's AI strategy states that it will continue to do so. Ireland's National AI Strategy endorses the EU AI Act as a "'smart mix' of voluntary and mandatory measures [that] will help to protect our people, facilitate innovation in AI and respect our democratic values," Strand 2 emphasized the AI Act's voluntary and self-regulatory oversight of non-high-risk AI and its integration of impact assessments, codes of practice, and ethical guidelines.

²⁴⁰³ ADAPT, ADAPT joins the National Youth Assembly on Artificial Intelligence (Nov. 2, 2022), <u>https://www.adaptcentre.ie/news-and-events/adapt-joins-the-national-youth-assembly-on-artificial-intelligence/</u>

Digital Services Act

As an EU member state, Ireland shall apply the EU Digital Services Act (DSA).²⁴⁰⁴ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.²⁴⁰⁵ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.²⁴⁰⁶

https://ec.europa.eu/commission/presscorner/detail/en/ip_23_4953

²⁴⁰⁴ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

²⁴⁰⁵ European Commission, *The Commission sends request for information to X under the Digital Services Act* (Oct. 2023),

²⁴⁰⁶ European Commission, *Commission sends request for information to Meta under the Digital Services Act* (March 1, 2024), <u>https://digital-</u>

strategy.ec.europa.eu/en/news/commission-sends-request-information-meta-underdigital-services-act-1

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation²⁴⁰⁷ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.²⁴⁰⁸ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force²⁴⁰⁹ on the 2024 European elections.

EU AI Act

As an EU member State, Ireland is bound by the EU AI Act.²⁴¹⁰ The EU AI Act is a risk-based market regulation which supports the objective

²⁴¹⁰ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0

of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;

of:

- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.²⁴¹¹ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not

²⁴¹¹ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

high-risk systems those which do not pose a significant risk of harm to the health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.²⁴¹²

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category,

²⁴¹² Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

must meet some requirements to ensure that these AI systems can be placed on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.²⁴¹³ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

²⁴¹³ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academic-institutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificial-intelligence-act/

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.²⁴¹⁴

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office²⁴¹⁵ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers to take corrective action; Preparing guidance and guidelines, implementing

²⁴¹⁵ European Commission, *European AI Office*, <u>https://digital-strategy.ec.europa.eu/en/policies/ai-office</u>

and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no

longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Ireland will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact²⁴¹⁶ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Ireland is an EU Member State, the General Data Protection Regulation (GDPR)²⁴¹⁷ is directly applicable in Ireland and to Irish people. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."²⁴¹⁸ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.

Regarding the activities of law enforcement authorities, the EU Data Protection Law Enforcement Directive (LED).²⁴¹⁹ protects citizens'

²⁴¹⁹ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data

fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."²⁴²⁰ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²⁴²¹ The LED also requires for Member States, including Italy, to enable data subjects to exercise their rights via national data protection authorities.²⁴²²

The 2018 Irish Data Protection Act both supplements the GDPR and implements the LED in Irish law.

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Ireland is also a member of the Council of Europe. It signed but has not yet ratified²⁴²³ the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁴²⁴

AI Oversight

Established under the Data Protection Act of 2018, the Data Protection Commission (DPC) is Ireland's national independent supervisory authority responsible for upholding the data protection rights of individuals in the EU. The DPC is charged with monitoring the application of the GDPR, including its transparency and automated decision-making

²⁴²² Article 17 of the LED.

provisions, and other Irish and EU regulatory frameworks and directives. The DPC has faced criticism from members of the European Parliament for failing to enforce the GDPR by choosing to bring a legal proceeding in the Schrems II case instead of making a decision on its own, issuing only one GDPR sanction out of thousands of complaints, and failing to reach a draft decision on any case referred to Ireland in 2018. On March 25, 2021, the European Parliament passed a resolution expressing its concern with the slow pace of the Irish DPA and calling for faster investigations to show EU citizens that "data protection is an enforceable right."²⁴²⁵ On May 20, 2021, the European Parliament voted in favor of a resolution calling for the European Commission to open an infringement procedure against the DPC.²⁴²⁶ In December 2022, the EDPB overturned a previous draft decision by the DPC that took the view that Meta's bypass of the GDPR was legal and the EDPB requested changes in the decision on WhatsApp, as well as further investigations into the core violations of WhatsApp. In January 2022, the DPC adapted its limited decision, but refused to investigate other matters, as ordered by the EDPB. According to novb, "the DPC threatens to bring a lawsuit against its European partners."2427 In January 2022 as well, European Commission defended the Irish Data Protection the Commissioner by stating that "there is no proof that the DPC didn't follow the Irish data protection rules or that the cooperation mechanism wasn't employed correctly."2428 Complex cases, especially those involving disputed issues such as WhatsApp, may take a long time. As a result, the European Commission refused to comment on or initiate infringement proceedings against a DPA for its views on a particular subject. The failure of the DPC to exercise enforcement powers has triggered concerns about the Commission's ability to safeguard fundamental rights about AI.

In September 1023, after an *ex officio* investigation started in 2021, the DPC concluded that TikTok failed to secure compliance regarding children users policies as required by the GDPR.²⁴²⁹

The Irish DPA is a member of the Global Privacy Assembly (GPA) since 2002. Although the DPA endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,²⁴³⁰ it did not co-sponsor the 2020 GPA Resolution on AI Accountability,²⁴³¹ the 2022 GPA Resolution on Facial Recognition Technology²⁴³² or the 2023 GPA Resolution on Generative AI.²⁴³³

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Ireland is subject to the GDPR. Irish people have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²⁴³⁴

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems²⁴³⁵ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and

²⁴³⁵ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs."²⁴³⁶

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."²⁴³⁷

Although Ireland has not created its own AI ethical guidelines, its National AI Strategy incorporates the seven requirements of the EU High-Level Expert Group (EU HLEG) on AI's Ethics Guidelines for Trustworthy AI. UCC's Insight Centre currently hosts an online version of EU HLEG's Assessment List for Trustworthy AI, as an accessible checklist for adhering to the seven requirements of the Ethics Guidelines for Trustworthy AI. The Top Team on Standards for AI is tasked with developing codes of conduct that address explainability and transparency.

Transparency is an important part of Ireland's national AI strategy. Ireland views transparency as an essential component of accountability and trust in AI. Strand 1 of AI - Here for Good states that "AI must be developed

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

²⁴³⁶ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

²⁴³⁷ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

and used with trust, transparency and accountability" and that Ireland is committed to ensuring that AI systems are "trustworthy, fair and inclusive."

Transparency remains an important part of Ireland's Harnessing Digital - The Digital Ireland Framework by continuing the implementation of Ireland's Data Sharing and Governance Act, which is designed to protect citizen's privacy by establishing a prescriptive framework in legislation for governance, oversight, and transparency of data processing within the Public Service.

Public Services Card Facial Recognition Controversy

In March 2013, the Department of Employment Affairs and Social Protection (DEASP), Ireland's national social security office, implemented facial image matching software to minimize fraud and errors of the Public Services Card's (PSC) social security applicant identity verification. The Irish Council for Civil Liberties (ICCL), an independent non-profit in Ireland, has criticized the PSC for collecting and storing more data than necessary, increasing the risk of a security breach through its collection of sensitive biometric data, forcing economically vulnerable people to exchange their private data for access to services to which they are legally entitled, and contradicting Ireland's position on privacy at the EU.²⁴³⁸ DEASP has not published their facial image matching software's accuracy and while continuing to use the software despite being under investigation by the Irish Data Protection Commissioner since October 2017. Human Rights Watch has documented reports of eligible applicants being denied social security support due to documentation requirements or objections to the PSC for privacy reasons.²⁴³⁹

In June 2023, the ICCL released a copy of a Data Protection Impact Assessment (DPIA) conducted in 2021 on the upgrade of facial matching software for the PSC.²⁴⁴⁰ The document was obtained through a Freedom of Information Request. The assessment revealed significant issues with the use of FRT by the DEASP, including lack of valid legal foundation under the GDPR for the creation and use of a biometric database; lack of transparency about what data was collected and how it was used; and lack

²⁴³⁹ Human Rights Watch, *Q&A: How the EU's Flawed Artificial Intelligence Regulation Endangers the Social Safety Net* (Nov. 10, 2021),

²⁴³⁸ Irish Council for Civil Liberties, *The Public Services Card*, https://www.iccl.ie/2019/the-public-services-card-contd/

²⁴⁴⁰ ICCL, Assessment of PSC facial recognition software reveals Department of Social Protection has known its biometric processing arising from the PSC is illegal (June 2023), https://www.iccl.ie/press-release/psc-facial-recognition-software-dpia/

of adequate guardrails for the retention of sensitive personal data.²⁴⁴¹ It appears that this DPIA report is not publicly available on the DEASP website.

A proposal to equip the Garda with police facial recognition technology (FRT) to enhance their surveillance powers was made by the Minister of Justice in May of 2022.²⁴⁴² In conjunction with AI and other surveillance capabilities, this FRT system aims to enable the fast identification of criminals from CCTV footage.

An ICCL press release in June 2023²⁴⁴³ found that a Data Protection Impact Assessment (DPIA) of a facial matching software upgrade for the Public Services Card (PSC) in 2021 failed to identify any legal basis under Article 9 GDPR for the creation of a biometric photo and template database of 3.2 million cardholders. This DPIA reveals for the first time that the Department of Social Protection has known that its biometric processing of personal data arising from the PSC project is illegal and reported that cardholders were not directly informed about the biometric processing during face-to-face interviews for the same. Olga Cronin, Surveillance and Human Rights Policy Officer, ICCL, says:"The Department has been building a national biometric database without a relevant legal basis and without transparency. It continues to collect people's biometric information in exchange for services they are legally entitled to. This must stop. This processing is unnecessary, disproportionate, and presents a risk to people's fundamental rights."

Police FRT is used as a method of widespread monitoring to track and identify individuals without the need for reasonable suspicion. FRT's widespread use runs the risk of damaging effects by altering how people interact in public and online settings. While public safety and national security concerns take precedence over individual privacy, the intrusions caused by police FRT surveillance are excessive and unjustified.

content/uploads/2023/06/DPIA-facial-matching-software-upgrade-FINAL-redacted.pdf ²⁴⁴² Conor Gallagher, *Garda to use facial recognition technology*, The Irish Times (May 25, 2022), <u>https://www.irishtimes.com/news/crime-and-law/garda-to-use-facial-</u> recognition-technology-1 4887298

<u>recognition-technology-1.4887298</u> ²⁴⁴³ Irish Council for Civil Liberties, Press Release Assessment of PSC facial recognition software reveals Department of Social Protection has known its biometric processing arising from the PSC is illegal

⁽⁹ June 2023) https://www.iccl.ie/press-release/psc-facial-recognition-software-dpia/

In January 2024, the International Justice Clinic (IJC) submitted comments²⁴⁴⁴ on Ireland's General Scheme of the Garda Síochána (Recording Devices) (Amendment) Bill 2023 to the Joint Committee on Justice at the Houses of the Oireachtas (Irish Parliament)."The Bill grants the Garda Síochána (Irish police) the power to use facial recognition technology on any past images or video that they have legally accessed for (1) crime investigation and prevention and (2) national security, so long as it is not used on live feeds. This facial recognition technology is a powerful tool that automatically extracts unique identifiers from individuals' faces recorded by data and matches them with identifiers on a watch list."

According to the IJC, "post" or retrospective use of facial recognition technology equally causes a formidable impact on fundamental human rights as "live" identification. When facial recognition technology is used on data recorded in a publicly accessible place, "it causes people to experience fear that they might be identified in the future...especially in the case of the indefinite retention and use of images or video for facial identification." Post use still has the potential to limit people's ability to freely participate in a public protest or move in a publicly accessible place.

Over-policing is already an issue in communities with marginalized groups, and this technology has the potential to exacerbate the problem through racial and minority ethnic profiling and the disruption of people's lives. The Garda's use of technologies such as CCTV, ANPR, drones, and body worn cameras are already being scrutinized.²⁴⁴⁵ Furthermore, the continued use of facial recognition by DEASP for determining access to social services and the Irish DPC's weak GDPR enforcement record remain areas of concern.

Lethal Autonomous Weapons

Ireland is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW) and has been an active participant in CCW discussions related to lethal autonomous weapons systems (LAWS). According to Human Rights Watch, Ireland has expressed interest in multilateral talks on LAWS in the UN since at least 2013 and has

²⁴⁴⁵ Elaine Edwards and Kathleen Harris, Data Protection Commissioner raises CCTV concerns with Garda, Irish Times (Nov. 16, 2017),

 $[\]frac{https://www.irishtimes.com/business/technology/data-protection-commissioner-raises-cctv-concerns-with-garda-1.3293400}{2}$

participated in every CCW meeting on LAWS between 2014 and 2019.2446 In 2019, Ireland joined the other High Contracting Parties to the CCW to adopt 11 guiding principles for addressing challenges to international humanitarian law posed by LAWS.²⁴⁴⁷ Ireland also joined eight other CCW parties in finding that the 11 guiding principles were a "useful and valuable starting point" and calling for the development of a "normative and operational framework" for ensuring human control of LAWS.²⁴⁴⁸ Ireland has not called for a prohibition on or new international treaty for the regulation of LAWS.

Ireland is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force."2449

In February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.²⁴⁵⁰ Ireland endorsed the resulting Political Declaration on

Responsible Military Use of AI and Autonomy issued in November 2023.²⁴⁵¹

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.²⁴⁵² The second REAIM summit will take place in 2024 in Korea.²⁴⁵³

At the 78th UN General Assembly First Committee in 2023, Ireland voted in favour²⁴⁵⁴ of resolution L.56²⁴⁵⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to Freedom House, Ireland is "free," with high scores for political rights and civil liberties (97/100). Regarding transparency and openness, Freedom House reports: "The public has broad access to official information under the 2014 Freedom of Information Act, though partial exemptions remain for the police and some other agencies. A Transparency Code requires open records on the groups and individuals that advise public officials on policy. The government has been criticized for failing to consult meaningfully with civil society groups and relevant stakeholders in policy formulation, particularly regarding the Roma, Travelers, and people living with disabilities."²⁴⁵⁶

Ireland has endorsed the Universal Declaration of Human Rights and ratified seven of the nine core international human rights instruments,²⁴⁵⁷ along with the European Convention on Human Rights.²⁴⁵⁸ Strand 1 of Ireland's national AI strategy commits to "making human rights and ethical principles a key focus" of its national AI strategy, although it largely focuses on AI R&D that can improve access and inclusion, e.g., AI tools that help people with impaired hearing through real-time live captioning.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to

amplifying positive effects and preventing or minimising possible adverse effects."²⁴⁵⁹

G20 / OECD Principles

Ireland is a member of the OECD and Council of Europe and has endorsed the OECD AI Principles in May 2019. According to its National AI Strategy, Ireland's AI policies are "underpinned by [Ireland's] engagement" with AI policy processes at the EU, UN, and OECD.

Ireland has joined GPAI as a full member as part of its national AI strategy to establish an "agile and appropriate" AI governance and regulatory environment.

UNESCO Recommendation on the Ethics of AI

Ireland is among the 193 countries that endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.²⁴⁶⁰ In its National AI Strategy, issued a few months before the UNESCO Recommendation, Ireland already explicitly acknowledges the UNESCO Recommendation which is a positive sign that it will take the necessary measures to implement it.

Al Safety Summit

In November 2023, Ireland participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁴⁶¹ Ireland thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-

centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

Ireland contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.²⁴⁶²

Evaluation

Ireland has endorsed the OECD AI Principles and the UNESCO Recommendation on AI Ethics. Ireland has also established a national AI strategy to address trust and transparency issues and improve its AI competitiveness. However recent issues concerning the positions adopted by its data protection authority, in contradiction with those of other national data protection authorities in the EU or the European Data Protection Board and its absence of ratification of Convention 108+, are reasons for concern. The recent facial recognition amendment which included a list of situations where police could use FRT including for offenses such as rioting and violent disorder adds to the list of concerns, particularly since the EU AI Act does not cover the use of AI for national security purposes.

²⁴⁶² Council of Europe, *Draft Framework Convention on AI, human rights, democracy and the rule of law* (March 2024),

https://search.coe.int/cm/pages/result_details.aspx?objectid=0900001680aee411

Israel

National AI Strategy

In terms of governance, Israel's national policy on artificial intelligence regulations and ethics proposes to establish an AI policy coordination center, in collaboration with the Office of Legal Counsel and Legislative Affairs (Economic Law Department), at the Ministry of Justice.²⁴⁶³ The center will serve as an expert-based inter-agency body and is expected to hold various responsibilities aimed at effectively managing and overseeing Israel's AI landscape.

Initially, it will provide guidance to sectoral regulators concerning the necessity and development of AI regulations. Subsequently, it will foster inter-agency coordination to ensure alignment with global policies and minimize overlaps. The center will lead coordinated and horizontal efforts to implement governmental AI policies and regularly update the national policy on artificial intelligence regulations and ethics as necessary. The Center will offer advice to the government on AI regulation and oversee the implementation of the national policy on artificial intelligence regulations and ethics. The Center will also represent Israel in international forums pertaining to AI regulation and standards. The center will disseminate information and tools on responsible AI innovation to regulators and the private sector. Lastly, the Center will establish consultation forums to facilitate ongoing discussions and knowledge-sharing among various stakeholders, including industry, academia, civil society organizations, and the government.

The composition of the center should reflect a diverse array of civil servants possessing expertise in areas such as government policy, regulation, international relations, technology, and law. The center's operations would be supervised by a steering committee led by a senior official from the Ministry of Innovation, Science and Technology. This committee would also comprise other senior officials from the Ministry of Justice, Ministry of Finance, Regulatory Authority, Privacy Protection Authority, Israel National Digital Agency, and Israel Innovation Authority.

The Center is tasked with broad responsibilities but does not have decision-making authority. Operating as a centralized governmental hub for AI regulation, it lacks significant enforcement powers. Existing regulators will maintain their authority to enforce adopted AI principles. However,

²⁴⁶³ Israeli Ministry of Science and Technology and the Office of Legal Counsel and Legislative Affairs at the Ministry of Justice, *Israel's Policy on Artificial Intelligence Regulation and Ethics* (Dec. 17, 2023), p. 9 s. 4(3), https://www.gov.il/en/departments/policies/ai 2023

aside from the Protection of Privacy Authority, other relevant regulators may lack the capacity to develop and enforce segment-specific AI guidance. Consequently, the regulatory framework heavily depends on a non-regulatory entity to equip regulatory bodies with essential knowledge, tools, and resources.²⁴⁶⁴

Public Participation

The initial release of the draft regulatory and ethics policy in October 2022 was followed by a phase of consultation with an explicit request for public comment.

The policy draft also called for the establishment, within the Ministry of Innovation, Science and Technology, of a forum for public participation to discuss the development of AI regulations and oversight.²⁴⁶⁵ Following this call for public participation, the Israeli Democracy Institute provided comments, covered by the media, ²⁴⁶⁶ on the government's plan to regulate AI.²⁴⁶⁷ The Israeli Democracy Institute argued that the suggested AI soft regulation, self-regulation, and ethical principles are insufficient. Instead, the government should design enforceable laws that clearly define "red lines" to avoid Israel becoming the backyard of AI-related experiments. The Israeli regulation should align with international efforts, especially those of the European Union. The Israeli Democracy Institute also advocated for an approach which includes human right protection and risk-based frameworks and which is embedded in a combination of horizontal and sector-specific regulations.

Israel's national AI policy calls for the establishment of two forums to discuss and enhance public participation processes among stakeholders involved in the artificial intelligence sector and those impacted by it: the

²⁴⁶⁷ The Israeli Democracy Institute, *The Regulation of Artificial Intelligence in Israel Requires Red Lines to Prevent Violation of Fundamental Rights* (Dec. 2022), https://www.idi.org.il/knesset-committees/46881

first, an inter-agency forum, comprising regulators and experts in technology, policy, and law, aimed at promoting coordination and coherence in sectoral AI regulation through cooperation and joint learning. The second, a multistakeholder forum, consisting of representatives from industry, academia, and civil society organizations, and intended for open discussions among stakeholders to identify policy gaps and formulate potential responses.²⁴⁶⁸ The establishment of these two forums remains pending amidst the ongoing Gaza-Israel conflict. It is worth noting that the formation pace of the forums is uncertain, as it is unclear whether the current war situation, compounded by Israel's use of AI in the conflict, will expedite or impede the process.

Data Protection

Complementary laws govern data protection in Israel: legal texts and guidelines: (1) the 1992 Basic Law: Human Dignity and Liberty according to which the right for privacy is a constitutional right;²⁴⁶⁹ (2) the 1981 Privacy Protection Law (PPL)²⁴⁷⁰ and subsequent regulations,²⁴⁷¹ such as Israel's 2017 Data Security Regulation;²⁴⁷² and (3) the guidelines of the Israeli Privacy Protection Authority.²⁴⁷³ Chapter 1 of the PPL covers privacy generally, while Chapter 2 concerns data in storage and sets out various registration, purpose-limitation, transparency and security requirements, as well as individual rights of access and rectification.²⁴⁷⁴ Other Chapters address procedural and enforcement matters as well as the

disclosure or sharing of information by public bodies and liabilities for the publication of privacy-infringing material in newspapers.

In 2011, the European Commission determined that Israel satisfied the "adequacy requirement" according to the European Directive 95/46, but this status is under examination currently due to changes in the new European Data Protection Regulation (GDPR). The Israeli Ministry of Justice proposed updates of the PPL, due to the major gap between GDPR and the current Israeli Law. In 2021, the Israeli Ministry of Justice announced approval of updates to the Privacy Protection Law. The amendments include significant new administrative enforcement powers for the Privacy Protection Authority, including the authority to impose financial sanctions, updating technological and social definitions, and reducing the bureaucratic burden on organizations' obligation to register databases.²⁴⁷⁵ In January 2022, the Israeli government introduced a substantial amendment to the PPL, Bill No. 14, aimed to align the PPL with the EU GDPR at least in part.²⁴⁷⁶

Israel's Privacy Protection Authority (PPA) is the primary regulator for matters relating to privacy and data security.²⁴⁷⁷ The PPA sits within the Israeli Ministry of Justice and is headed by the Registrar of Databases. The PPA regulates and enforces data protection across all sectors, private and public, according to the provisions of the Privacy Protection Law.

In July 2022,²⁴⁷⁸ the PPA presented their interpretation of section 11 of the PPL which enshrines the right information. The PPA's interpretation covers AI-based decision-making systems. In August 2022,²⁴⁷⁹ the PPA covered telemedicine (or 'telehealth') services, including AI-based diagnostic services. In August 2022, the PPA issued a detailed report²⁴⁸⁰ about DeepFake technologies and privacy. According to the PPA, "unauthorized

distribution of an image or video forged using the Deepfake technology which displays degrading or demeaning content relating to a person's private life and could be perceived in public as authentic - constitutes a violation of the Privacy Protection Act".

The PPA is a member of the Global Privacy Assembly (GPA) since 2009. The PPA has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,²⁴⁸¹ the 2020 GPA Resolution on AI Accountability,²⁴⁸² or the 2022 GPA Resolution on Facial Recognition Technology.²⁴⁸³ However, it co-sponsored the 2023 GPA Resolution on Generative AI.²⁴⁸⁴

Algorithmic Transparency

In its 2022 interpretation of section 11 of the PPL on the right to information, the PPA clarified that this provision applies to AI-based systems.

The topic of algorithmic transparency had already been raised by the Knesset's Research and Information Center's June 2018 research document that was prepared for the first discussion on the government's readiness for artificial intelligence that month.²⁴⁸⁵ Since then, algorithmic transparency has regularly mention in policy documents and debates, leading to Decision 212. Algorithmic transparency is also mentioned in the draft policy and regulatory policy.

In November 2022, the press reported that the Israeli Police operates an AI-based profiling system that aims to identify drug smugglers at the airport border. The AI-based system draws data from police and

²⁴⁸⁵ Knesset's Research and Information Center, *Information about "Artificial Intelligence"* (Jun. 2018), <u>https://fs.knesset.gov.il/globaldocs/MMM/eb0bf048-de5c-e811-80e1-00155d0a9876/2</u> eb0bf048-de5c-e811-80e1-00155d0a9876 11 10863.pdf

government databases, and outputs names of citizens arriving at the airport. Citizens whose names were outputted by the system, are bodily searched even though there is no prior intelligence information or any other suspicion that they smuggled drugs. According to the journal, the Israeli police refuse to provide details on how the system is operated and how the algorithm works. As a result, it was argued that courts cannot properly monitor the AI-based system and its decisions, and these searches continue without prior suspicion but only as a result of the opaque algorithm.²⁴⁸⁶

Medical Data

In 2018, Israel's Prime Minister announced the establishment of a \$300 million initiative to make Israel's large pool of de-identified clinical data available to researchers, entrepreneurs, and medical institutions to develop new treatments and personalized medicine among other goals. "With all records in a common format, AI systems – using machine learning algorithms – will be able to parse the data, seeking correlations in conditions and treatments to discern which treatments are likely to be most effective" said the Director of the Israel Ministry of Health.²⁴⁸⁷

The initiative currently includes the "Mosaic" ("Psifas") project, a personalized medicine health project, for creating a national information infrastructure for health research in the field of genetics and medical information. Another project is "Timna":²⁴⁸⁸ a national platform for conducting big data research in health data, intended to serve the research community in the health system, academia and Israeli industry.

At the end of 2022, the Ministry of Health, through the Technology and the Digital Health Divisions, requested feedback on guiding principles for developing machine learning-based technologies.²⁴⁸⁹

In April 2023, the Medical Technologies, Information and Research Division and the Digital Health Division at the Ministry of Health, published guiding principles for the development of machine learning based

²⁴⁸⁹ Ministry of Health, *Guiding principles for the development of machine learning* based technologies - request for feedback (Jan. 19, 2023),

technologies.²⁴⁹⁰ These ten guiding principles are intended to facilitate the development and utilization of safe, efficient, and high-quality medical devices incorporating artificial intelligence and machine learning. The principles place particular emphasis on addressing challenges unique to machine learning, including bias prevention, overfitting prevention, transparency, data reliability, privacy, and information security.

Covid-19 Tracking Controversy

Beginning with emergency measures taken in March 2020, the Israeli police used mobile-phone location data and AI techniques to attempt to determine whether those in quarantine were indeed staying in quarantine. A month after the tracking was authorized, the parliamentary committee in charge of overseeing the practice halted the mobile phone tracking. The Committee argued that the harm done to privacy outweighed the benefits of the tracking.²⁴⁹¹

Israel then turned to Shin Bet, the Israeli Security Agency, to monitor the general population and track potential Covid patients and their contacts.²⁴⁹² This action was criticized by human rights activists²⁴⁹³, as well as medical associations²⁴⁹⁴.

On 26 April 2020, Israel's Supreme Court banned the intelligence agency from tracing the phone location of those who may be infected with Covid-19, until new laws are passed.²⁴⁹⁵ "The state's choice to use its preventative security service for monitoring those who wish it no harm, without their consent, raises great difficulties and a suitable alternative (...)

must be found," the court said.²⁴⁹⁶ The Association for Civil Rights in Israel, one of the groups which brought the court challenge, welcomed the decision, saying: "Israel must not be the sole democracy which operates its secret security service to monitor its citizens, even in the fight against the coronavirus."²⁴⁹⁷ In July, Israel's parliament voted to allow the country's Internal Security agency to track the contact relations of Israeli cellphone users for the rest of the year amid a resurgence in new cases.²⁴⁹⁸ Human rights organizations renewed their objections.²⁴⁹⁹

In August 2020 it was revealed that only four percent of those sent for isolation by the intelligence system were actually sick²⁵⁰⁰. In a September 2020 opinion, the PPA also objected to the use of the Israeli Internal Security Service location tracking tool.²⁵⁰¹ The PPA said that the measure cannot be justified, and that use would adversely impact the public's trust in public authorities. The PPA also questioned the effectiveness of the location tracking tool. In January 2021, the government received an automatic extension to the expired law to continue tracking due to the elections at that time. In March 2021, the Supreme Court clarified that the Knesset is not in charge of supervising the tracking tool or limiting its use. In the same month, elections were also held. The same month, a week after the elections to the 24th Knesset and before its inauguration, the Foreign Affairs and Security Committee refused to continue using the tracking tool.²⁵⁰²

Social Ranking

Following a proposal to use scoring technologies for Israelis who may be infected with COVID-19, in April 2020, the PPA also published a review on the use of technologies for the social ranking of citizens to achieve social and governmental goals, and the impact of this on the right to privacy.²⁵⁰³ The April 2020 review indicated that social ranking systems have increased in an era of Big Data and are present, in Israel, in forms such as the credit data rating system or a potential future AI-based system aimed to rate an individual's likelihood of contracting COVID-19. Specifically, the review outlined that such a system, which would process location, medical, and personal data, would constitute a serious violation of the privacy of citizens and should be avoided as far as possible and, where it cannot be avoided, it must be compliant with data protection law.

Facial Recognition

Facial recognition in Israel is implemented in border control and Israel has a biometric database of face photos and fingerprints of citizens and residents, as well as foreigners accessing Israel. A biometric database was enacted in law in 2009.²⁵⁰⁴ The law provides the basis for the Israeli national ID-Card. The database includes biometric face-photos, and voluntary supplied fingerprints. According to the biometric database law, the information can be used for severe crime enforcement, and for state security tasks. In May 2020, the Israeli State Comptroller reported that the data of about 4.5 million Israeli drivers' licenses, including facial pictures, are not sufficiently protected from misuse or outside hacking.²⁵⁰⁵

Still, Israel's military has invested tens of millions of dollars to upgrade West Bank checkpoints with AnyVision facial recognition technology to verify Palestinian workers' identities and ease their entry into Israel. The new system, which began rolling out late 2018, drew criticism about the role the controversial technology plays in Israel's military control over Palestinians.²⁵⁰⁶

Microsoft, which was part of a group that had invested \$74 million in AnyVision, hired a team of lawyers to audit the Israeli firm and determine whether AnyVision's technology applications complied with Microsoft's ethical principles against using facial recognition for mass surveillance. In March 2020, Microsoft said it was pulling investments from AnyVision although the outcomes of the audit did not substantiate claims that the startup's technology was used unethically.²⁵⁰⁷

In 2021, the Washington Post released further information on the program.²⁵⁰⁸ The initiative involves a smartphone technology called Blue Wolf that captures photos of Palestinians' faces and matches them to an image database. The phone app flashes in different colors to alert soldiers if a person is to be detained, arrested or left alone. To create the database, in 2020 soldiers photographed Palestinians, including children and the elderly. The total number of people photographed is unclear. The Israeli military has also installed face-scanning cameras in the divided city of Hebron to assist soldiers at checkpoints to identify Palestinians before they present their ID cards. A wider network of closed-circuit television cameras, provides real-time monitoring of the population and can sometimes see into private homes.

A new security tool was also under development: body cameras with facial recognition technology to enable police to scan crowds and detect suspects in real time, even if their faces are obscured.²⁵⁰⁹ In April 2022, the then minister of justice Gideon Sa'ar opposed the police initiative to operate facial recognition cameras in public spaces.²⁵¹⁰ In February 2023, the issues of using a biometric photo system were removed from the draft law, which regards the police and the "Special Photographic Systems."²⁵¹¹

AI and Warfare

Israel is a High Contracting Party to the UN's Convention on Certain Conventional Weapons (CCW) protocol and as such has presented objections to the distinctions accorded to lethal autonomous weapons systems (LAWS), and the accompanying calls for prohibition. Israel's representatives to the UN maintain that humans must always be accountable for error and human rights abuses, regardless of the weapons technology.²⁵¹² Israel is known to be at the forefront of developing lethal autonomous weapons, including both the Iron Dome defensive system²⁵¹³ and the Harop suicide drone.²⁵¹⁴ The Israeli mission to the GGE on LAWS of the Convention on Certain Conventional Weapons clarified Israel's position in August 2019.²⁵¹⁵ In August 2020, Israel expressed further views on the Eleven Guiding Principles Adopted by the Group of Government Expert concerning lethal autonomous weapons system. Israel's view is that "the law of armed conflict, or international humanitarian law (IHL), applies to the potential development and use of emerging technologies in the area of LAWS; that human judgment will always be an integral part of any process regarding emerging technologies in the area of LAWS, and will be applied during their life-cycle; and that humans will always be responsible for the use of LAWS." Moreover, in Israel's view, "besides the potential risks that may be associated with LAWS, there are also operational advantages to the use of LAWS as well as clear advantages from the humanitarian perspective."2516

Israel was not among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."²⁵¹⁷

At the 78th UN General Assembly First Committee in 2023, Israel abstained from voting²⁵¹⁸ on resolution L.56²⁵¹⁹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

According to New York Times, Israel used an AI-equipped, remotely operated gun to kill an Iranian nuclear scientist.²⁵²⁰ The Israeli system used AI to correct for more than a second and a half of input delay, allowing the system's operator to fire the gun at a moving target while stationed more than 1,000 miles away.

In a statement released by the Israel Defense Forces on November 2, 2023, the unit revealed its deployment of an AI target-creation platform called Habsora (the Gospel, in English) in the Gaza-Israel conflict.²⁵²¹ The

system leverages AI to generate targets at a fast pace using an algorithm that extracts intelligence data from a wide range of sources, and proposes target recommendations to researchers, which are presumably approved by human authorities.

On December 10, 2023, the Association for Civil Rights in Israel, sent a legal correspondence²⁵²² to the Chief Military Prosecutor requesting an assessment of the system and its utilization of AI in determining attack targets, while evaluating its compliance with both Israeli and international legal obligations. The association also sought clarification on potential biases that could result in erroneous targeting, posing risks to innocent civilians. In addition to the legal correspondence, the association filed a freedom of information request²⁵²³ regarding the use of the system.²⁵²⁴ The freedom of information request is a right emanating from the Freedom of Information Law of 1998, which grants Israeli citizens, residents, and registered corporations, the legal right to access government agency records, except those exempted by law. The request aimed to unveil all pertinent information about the Habsora system that could be shared with the public. The association sought documents outlining the ethical rules governing the system's usage, as well as information regarding the associated operational procedures. Questions regarding the predictive capabilities of the algorithm and the level of accuracy achieved by the system were also raised. Further inquiries involved obtaining information on the system's transparency to operators, protocols for handling system failures, the extent of human oversight available to operators, and the traceability of system operations. The association further requested details on how the system's activity could be explained to affected parties and sought information about any external audits conducted on the system and the decisions made based on these audits.

Human Rights

Israel is a signatory to many international human rights treaties and conventions and is considered a free country, receiving a combined score of

https://www.english.acri.org.il/post/examining-the-use-of-the-hasbara-system-used-to-propose-targets-for-military-attacks

²⁵²⁴ The Association for Civil Rights in Israel, *Examining the use of "The Gospel" System, Used to Propose Targets for Military Attacks*, (Dec. 9, 2023)

74/100 from Freedom House reflecting the nation's institutions adhering to a respect for political rights and civil liberties. This score represents a decline of three digits compared to the country's 2023 score.²⁵²⁵

According to Freedom House: "In January 2023, the government proposed a set of legal amendments that would reduce the judiciary's ability to block government actions and legislation, triggering massive protests and criticism from opponents who argued that the changes threatened the checks and balances of Israeli democracy. In July, the Knesset (parliament) passed one of the proposed bills; it was under review by the Supreme Court at year's end, with a decision expected in early 2024. On October 7, the Palestinian militant group Hamas launched a massive terrorist incursion from its base in the Gaza Strip, killing approximately 1,200 Israeli civilians and soldiers. More than 200 hostages, including Israeli and foreign citizens, were also abducted and taken back to Gaza. Following the attack, the Knesset approved an expanded wartime cabinet to oversee Israel's military response. The number of Palestinians held in Israeli prisons-including those held without charge in administrative detention-sharply increased after Hamas's attack and during the ensuing Israeli military operations in Gaza and the West Bank."

OECD AI Principles

Israel has endorsed the OECD AI Principles.

Israeli Government Decision 212²⁵²⁶ from August 2021 instructs to take into account, among other things, the OECD principles as part of the promotion of the national policy in the field of AI. The draft AI regulatory and ethical policy reiterates it.

In November 2021, Israel joined the Global Partnership on Artificial Intelligence in recognition of its advanced artificial intelligence technologies and its adherence to the values of equality and democracy promoted by the OECD.²⁵²⁷

²⁵²⁷ Al-Monitor, Israel joins international artificial intelligence group: Israel was added today to the Global Partnership on Artificial Intelligence, joining 19 an alliance of technologically advanced democratic countries (Nov. 11, 2021), <u>https://www.almonitor.com/originals/2021/11/israel-joins-international-artificial-intelligencegroup#ixzz7K2VqCY5k</u>

UNESCO Recommendation on the Ethics of AI

Israel is not a member of UNESCO and did not endorse the UNESCO Recommendations on the Ethics of AI.

Al Safety Summit

In November 2023, Israel participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁵²⁸ Israel thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

Israel also contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.²⁵²⁹

Evaluation

Israel benefits from a well-established legal regime for data protection but has decided to adopt a different approach with its AI policy, privileging soft regulation and self-regulation. While Israel has long been a leader in AI research and development, the government only recently published its AI policy. The use of an AI-based tracking system for sensitive medical condition by the internal security agency is of concern. Also

https://www.gov.uk/government/publications/ai-safety-summit-2023-the-bletchleydeclaration/the-bletchley-declaration-by-countries-attending-the-ai-safety-summit-1-2november-2023

troubling are the use of facial recognition technology without clear legal basis. Israel's reluctance to support limits on lethal autonomous weapons is particularly problematic in view of the Gaza-Israel conflict. Critical is the deployment of an AI target-creation platform in the Gaza-Israel conflict. Red lines and safeguards with regard to the use of AI in warfare are urgently needed. Italy

National AI Strategy

In July 2020, the Italian Ministry of Economic Development (MISE) published the Proposals for a National Strategy for Artificial Intelligence drafted by the MISE AI Expert Group.²⁵³⁰The final Proposals are the result of a public consultation organized in 2019 on an initial set of proposals,²⁵³¹ and of a background paper providing initial guiding principles and policy recommendations.²⁵³²The final Proposals provide 82 recommendations for developing an Italian strategy.

In introduction to these recommendations, the group of experts in charge of the drafting of the Proposals explain that: "[i]n a global context dominated by the increasing, and often blind rivalry between the United States and China, the European Union has gradually carved for itself a role of defender of the responsible use of technology based on an approach which considers AI as a means and not an end in itself. Working together toward the formulation of public policies is also necessary in the context of the multilevel governance of the EU. Since 2018, the European Commission has played a key role in defining the "European Coordinated Plan on Artificial Intelligence." Ensued, for each EU Member State, the obligation to define a national AI strategy and send it to Brussels. The Italian Government (the Ministry of Economic Development) has followed an approach similar to that of the Commission, by appointing in January 2019 a group of 30 experts, which here presents the results of its work in the shape of proposals for a national AI strategy."²⁵³³

According to the group of experts, Italy has to both contribute in defining a European AI strategy and in developing a national strategy which

²⁵³⁰ Italian Ministry of Economic Development, *Proposte per una strategia nazionale per l'intelligenza artificiale* (July 2020),

https://www.mise.gov.it/images/stories/documenti/Proposte_per_una_Strategia_italiana_AI.pdf

²⁵³² Italian Ministry of Economic Development, Proposte per una strategia italiana per l'intelligenza artificiale. Gruppo di Esperti MISE sull'intelligenza artificiale (July 2019), https://www.mise.gov.it/images/stories/documenti/Proposte-per-una-strategia-italiana-2019.pdf

^{2019.}pdf ²⁵³³ Italian Ministry of Economic Development, *Proposte per una strategia nazionale per l'intelligenza artificiale* (July 2020), p.5 (translated from Italian),

https://www.mise.gov.it/images/stories/documenti/Proposte_per_una_Strategia_italiana_AI.pdf

takes into account Italian specificities. Italy should thus take AI as an opportunity to inaugurate a new "RenAIssance." "Just as Renaissance in the middle of the Fourteenth Century signals a new way of understanding the world, with a focus on human beings and their needs, impulses and sufferings, Renaissance in the digital era could be inspired by the need to define a new relationship between human beings and machines, whereby technology increases human capabilities and becomes a key instrument in drafting a new social contract, oriented towards sustainable development. In this sense, Italy should position itself as the defender of AI for good, so not as an end in itself, but as desirable to the extent that it can contribute to the well-being of human beings and to sustainable development in economic, social and environmental context. The possibility of a new RenAIssance underlines all the Proposals. This approach is far from idealist: to consider the issue of the development of AI from the perspective of the future of work, interpersonal relationships as well as social and environmental governance constitutes a Copernican revolution compared to the traditional approach oriented towards industrial competitiveness which nonetheless plays a central role in the sustainability of our economy."2534

The Group of experts calls for an anthropocentric approach to AI based on three pillars driving the development of technologies and policies:

- AI for human beings. The first pillar concerns the individual and the relationship with "the machine." AI technologies must be at the service of people, guaranteeing human supervision, preventing social and territorial imbalances deriving from unaware and inappropriate uses. It is about defining and implementing initiatives related to safety, public administration, health and medicine, education, new skills, policies for work and digital humanities, media and the cultural and creative industry.
- AI for a reliable, productive and sustainable digital ecosystem. The second pillar includes industrial policies for the manufacturing sector (Industry 4.0). AI must be designed and implemented in a reliable and transparent way, so that it can be adopted in any productive areas. This concerns the promotion of robotics and autonomous systems, software, data processing, internet of things, finance, pharmaceuticals and biotech.

²⁵³⁴ Italian Government, jointly developed by the Ministry of Education, University and Research, the Ministry of Economic Development, and the Minister of Technological Innovation and Digital Transition, *Strategic Programme on Artificial Intelligence 2022-2024* (2021), p. 8, <u>https://assets.innovazione.gov.it/1637777513-strategic-program-</u> <u>aiweb.pdf</u>

• AI for sustainable development. The third pillar focuses on sustainability. AI technologies must generate opportunities of growth and well-being for all individuals, in line with the principles contained in Article 3 of Italian Constitution and the United Nations Sustainable Development Goals. This pillar includes actions related to environmental protection and sustainable infrastructures such as smart cities, transport, agriculture, space.

In November 2021, the Italian government issued a national AI strategy entitled: the Strategic Programme on Artificial Intelligence 2022-2024.²⁵³⁵ The Strategic Programme was jointly developed by the MISE, the Ministry of Education, University and Research and the Ministry of Technological Innovation and Digital Transition.

The Strategic Programme recognizes that the Italian AI ecosystem has vast potential, yet not fully exploited. The current Italian context and international position calls for a national AI strategy characterised by the need to build on the positive elements of its ecosystem while focusing on reforms and investments on specific areas of weakness.

To that end, the Strategic Programme identifies 5 guiding principles: "Italy's AI is a European AI; Italy will be a global research and innovation hub for AI; Italy's AI will be human centred, trustworthy and sustainable; Italian companies will become leaders of AI based research, development and innovation; Italy's public administrations will govern with AI and will govern AI".²⁵³⁶

More particularly, the first guiding principle makes clear that the national AI strategy is to be understood in its European ecosystem. "In line with the EU Coordinated Plan on Artificial Intelligence, the Italian Strategic Programme stems from the awareness that only through common and coordinated actions Europe will be able to compete globally and work towards strategic autonomy." The Strategic Programme specifically acknowledges the necessity of "joint efforts for improving and adopting the harmonised set of rules for AI proposed by the AI Act."²⁵³⁷

²⁵³⁵ Italian Government, jointly developed by the Ministry of Education, University and Research, the Ministry of Economic Development, and the Minister of Technological Innovation and Digital Transition, *Strategic Programme on Artificial Intelligence 2022-*2024 (2021), p. 14, <u>https://assets.innovazione.gov.it/1637777513-strategic-programaiweb.pdf</u>

²⁵³⁶ Italian Government, jointly developed by the Ministry of Education, University and Research, the Ministry of Economic Development, and the Minister of Technological Innovation and Digital Transition, *Strategic Programme on Artificial Intelligence 2022-*2024 (2021), <u>https://assets.innovazione.gov.it/1637777513-strategic-program-aiweb.pdf</u> ²⁵³⁷ Italian Government, jointly developed by the Ministry of Education, University and

Regarding the guiding principle for a human-centred, trustworthy and sustainable AI, the Strategic Programme states that: "[t]echnologies must not promote economic growth per se, but inclusive and sustainable growth, in line with the principles contained in Article 3 of the Italian Constitution and the United Nations Sustainable Development Goals. This means that AI development must be centred around economic and social inclusion, human rights as well as environmental sustainability. AI must be designed and implemented in a responsible and transparent manner, based on trust and robustness so that it can be safely adopted in every sector and be capable of responding to societal challenges. To this aim, Italy adheres to the "Ethics Guidelines for trustworthy AI - Guidance and implementation program" defined by the High Level Expert Group on AI."²⁵³⁸

As for the use of AI in public administrations, the Strategic Programme states that "[o]n the one hand, Italy's Government will improve its internal processes and policies thanks to a responsible use of data and AI technology. On the other hand, the Government is committed to governing AI and mitigating its potential risks, especially to safeguard human rights and ensure an ethical deployment of AI."²⁵³⁹

On the basis of these guiding principles, the Strategic Programme defines "6 objectives: the goals of the Italian strategy"²⁵⁴⁰ among which: "Develop and adopt human-centred and trustworthy AI; Increase AI-based innovation and the development of AI technology; Develop AI-driven policies and services in the public sector."²⁵⁴¹

Innovation and Digital Transition, *Strategic Programme on Artificial Intelligence 2022-2024* (2021), p. 14, <u>https://assets.innovazione.gov.it/1637777513-strategic-programaiweb.pdf</u>

The Strategic Programme also defines "11 priority sectors where Italy intends to focus investments²⁵⁴² as well as 3 areas of intervention: how the country aims to achieve the stated objectives."²⁵⁴³ These are: "Talent and Skills, Research; Applications" with a view to mobilize AI "for more competitive enterprises" and "for a more modern public administration."²⁵⁴⁴ In these 3 areas of interventions, the Strategic Programme indicates 24 policy initiatives deemed "fundamental for Italy to retain technological competitiveness at the international level, connect the excellent results of research with the needs of industry and address the key challenges of Italian society going forward."²⁵⁴⁵

Digital Italy 2026

As part of the Next Generation EU, the European Union's landmark instrument for recovery from the coronavirus pandemic, Italy's Department for digital transformation has introduced a digital strategy which aims to meet the digital objectives and initiatives identified in its National Recovery and Resilience Plan (PNRR).²⁵⁴⁶ Digital Italy 2026 identifies several priority investment areas among which Data and interoperability; Digital services and digital citizenship; Digitization of public administrations; and Basic digital competency. Digital Italy 2026 is complemented by an

Operational Plan that details its lines of action and provides key targets for $2025.^{2547}$

Digital Italy 2026 is devised according to three-year goals that assign deadlines for each investment area and reform axis. These largely aim to adhere to the European Commission's 2030 Digital Compass.²⁵⁴⁸ By 2026, Italy will aim to have:

- 70% of the population using digital ID
- 75% of the population achieving basic digital competency
- 75% of public services operating on the cloud
- 80% of essential public services available online
- 100% of families having broadband access

Public Participation

The Proposals for a National Strategy for Artificial Intelligence drafted by the MISE AI Expert Group in July 2020 followed a 2019 consultation on an initial set of proposals.²⁵⁴⁹ The Expert Group was comprised of ten representatives of enterprises operating in the field of AI, ten representatives of research centers / think tanks or academia, and ten representatives of the labor market, professions, consumers and civil society.²⁵⁵⁰

A 2020 survey of Italian consumers by BEUC, the European Consumer organization, found substantial public concern about the deployment of AI.²⁵⁵¹ More than half of the respondents disagreed or strongly disagreed that current regulation is adequate to efficiently regulate AI. Over 70% of respondents in Italy "strongly agreed that users should be able to say 'no' to automated decision-making." More than half "(strongly) agreed that companies use AI to manipulate consumer decisions."

Digital Services Act

As an EU member state, Italy shall apply the EU Digital Services Act (DSA).²⁵⁵² The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Very large online platforms (VLOPs) or search engines (VLOSEs) have to comply with additional obligations such as give users the right to opt out of recommendation systems and profiling; share key data with researchers and authorities; cooperate with crisis response requirements; and perform external and independent auditing. Providers will need to disclose information on content moderation and algorithmic decision-making in their terms and services. Non-compliance could result in fines of up to 6% of annual worldwide turnover.

Are considered VLOPs or VLOSEs, platforms and search engines with over 45 million monthly users in the EU. The European Commission has already identified 19 platforms and search engines as very large. Online platforms that do not comply with the DSA's rules could see fines up to 6 percent of their global turnover. Refusal to comply could result in a temporary suspension in the EU.

In October 2023, the Commission opened the very first DSA compliance investigation by sending a request for information (RFI) to X. The RFI concerns the alleged spreading of illegal content and disinformation, in particular the spreading of terrorist and violent content and hate speech.²⁵⁵³ The Commission also sent Meta a RFI regarding its Subscription for no Ads options for both Facebook and Meta.²⁵⁵⁴

https://ec.europa.eu/commission/presscorner/detail/en/ip_23_4953

²⁵⁵² Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act), (Oct. 21, 2022), <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=celex%3A32022R2065

strategy.ec.europa.eu/en/news/commission-sends-request-information-meta-underdigital-services-act-1

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

Regarding online harms, is of particular relevance the 2022 Strengthened Code of Practice on Disinformation²⁵⁵⁵ which counts as a mitigation measure under the DSA. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The Commission also published Guidelines under the DSA for the mitigation of systemic risks online for elections.²⁵⁵⁶ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI. The Guidelines also include specific measures ahead of the upcoming European elections. Given their unique cross-border and European dimension, VLOPs and VLOSEs should ensure that sufficient resources and risk mitigation measures are available and distributed in a way that is proportionate to the risk assessments. The Guidelines also encourage close cooperation with the European Digital Media Observatory (EDMO) Task Force²⁵⁵⁷ on the 2024 European elections.

EU AI Act

As an EU member State, Italy is bound by the EU AI Act.²⁵⁵⁸ The EU AI Act is a risk-based market regulation which supports the objective

 ²⁵⁵⁸ European Parliament, Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 - C9-0146/2021 - 2021/0106(COD)), P9_TA(2024)0138, https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/0 3-13/0138/P9 TA(2024)0138 EN.pdf

of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

In order to foster international convergence, the definition of an AI system adopted in the EU AI Act reproduces more or less the definition recently developed by the OECD, with the same issue: the definition overemphasizes machine learning – probabilistic AI – models and excludes traditional – deterministic AI – models.

AI systems placed on the market, put into service, or used with or without modification, for military, defense or national security purposes, are excluded from the scope of the EU AI Act. However if AI systems are placed on the market, put into service, or used, temporarily or permanently, for other purposes such as civilian or humanitarian purposes, law enforcement or public security purposes, they fall within the scope of the EU AI Act. The distinction between national security and law enforcement or public security purposes might be difficult to draw in practice.

AI systems and models specifically developed and put into service for the sole purpose of scientific research and development are also excluded. Although the EU AI Act regulates regulatory sandboxes and testing in real world conditions, this exemption is not conducive to ensuring a human-centric approach by design considering that it also concerns product oriented research, testing and development activity regarding AI systems or models, prior to their being put into service or placed on the market.

The EU AI Act distinguishes between four levels of risks which trigger different legal regimes:

- unacceptable risks, prohibited;
- high-risk AI systems, which constitutes the core of the Regulation with requirements accompanied by a compliance and monitoring system and obligations for relevant operators;
- limited risk AI systems subjected to some transparency obligations
- minimal or no risk, basically exempt of obligations

The EU AI Act draws a list of prohibited AI practices. They consist

- of:
- using subliminal techniques or purposefully manipulative or deceptive techniques to materially distort behaviour, leading to significant harm;
- exploiting vulnerabilities of a person or group due to specific characteristics, leading to significant harm;
- social scoring systems;

- predictive policing based solely on profiling or personality traits, except when supporting human assessments based on objective, verifiable facts linked to criminality;
- facial recognition databases based on untargeted scraping;
- inferring emotions in workplaces or educational institutions, except for medical or safety reasons;
- biometric categorization systems such as an individual person's face or fingerprint, to deduce or infer an individuals' political opinions, trade union membership, religious or philosophical beliefs, race, sex life or sexual orientation;
- real-time remote biometric identification systems in the public for law enforcement purposes;

This is an exhaustive and nuanced list of prohibited AI practices. This means that practices that are not included in the list are legitimated. To give a few examples.

The last prohibition mentioned in the list is the fruit of a long campaign led by European civil society organizations to prevent biometric mass surveillance practices.²⁵⁵⁹ However, the ban concerns only real-time remote biometric identification and not retrospective biometric identification. The prohibition is also accompanied by an important list of exceptions, although a closed one. The ban does not apply for example concerning search for certain victims of crime, certain threats to the life or to the physical safety of natural persons or of a terrorist attack; or the localisation or identification of perpetrators or suspects of some criminal offences.

The prohibition of biometric categorization systems also suffers an exception: "lawful categorization of biometric data such as the sorting of images according to hair colour or eye colour which can be used in the area of law enforcement". However, profiling based on hair colour or eye colour could be directly linked to discriminatory practices.

Emotion recognition is prohibited only in specific fields and again with exceptions.

Concerning high risk AI systems, a consequent part of them consists of AI systems listed in Annex III to the EU AI Act such as not prohibited remote biometric identification systems or AI used in education, employment, credit scoring, law enforcement, migration or the democratic process. However, here as well there is an exception. Are considered as not high-risk systems those which do not pose a significant risk of harm to the

²⁵⁵⁹ EDRi, Reclaim your face, Remote biometric identification: a technical & legal guide (Jan. 23, 2023), <u>https://edri.org/our-work/remote-biometric-identification-a-technical-legal-guide/</u>

health, safety or fundamental rights of natural persons. It remains to be seen how the distinction between high-risk and not high-risk systems will be drawn in practice.

With regard to credit scoring, not prohibited under the EU AI Act contrary to social scoring, it might well be prohibited under the GDPR. Trade secrets under the GDPR might as well not be considered as providing an exception to algorithmic transparency. All this on the basis of the judgment the Court of Justice of the European Union delivered on 7 December 2023 in the SCHUFA case.²⁵⁶⁰

As a matter of principle, it should be recalled that the EU AI Act provides for algorithmic transparency for high-risk AI systems. This ensures a certain coherence between the data protection and the AI legal regimes, although the GDPR might fill in some loopholes, under the control of the Court of Justice. To which extent algorithmic transparency applies to GPAI model will require further specifications.

The EU AI Act imposes a transparency information or disclosure obligation for four categories of AI systems and GPAI models:

- AI systems intended to directly interact with natural persons;
- AI systems, including GPAI systems, generating synthetic audio, image, video or text content;
- emotion recognition systems or biometric categorisation system; deep fakes.

In these cases, the user will have to be informed about the AI system. In some cases, the content will have to be labelled in a machine-readable way so that it can be identified as artificially generated or manipulated content. The AI Act provides for exceptions to this obligation in some circumstances for law enforcement, or when the AI system is used for artistic, satirical, creative or similar purposes.

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The Regulation imposes obligations across the value chain. In particular, providers of high-risk AI systems, a broadly defined category, must meet some requirements to ensure that these AI systems can be placed

²⁵⁶⁰ Court of Justice of the European Union, Case C-634/21, *SCHUFA*, 7 December 2023, ECLI:EU:C:2023:957,

https://curia.europa.eu/juris/document/document.jsf;jsessionid=59BF6046EEA31E86D50 793AFC0115814?text=&docid=280426&pageIndex=0&doclang=EN&mode=req&dir=& occ=first&part=1&cid=601767

on the market or put into service. Providers must conduct risk assessments, use high-quality data, document their technical and ethical choices, keep records of their system's performance, inform users about the nature and purpose of their systems, enable human oversight and intervention, and ensure accuracy, robustness, and cybersecurity. They must also test their systems for conformity with the rules before placing them on the market or putting them into service, and register their systems in an EU database that will be accessible to the public.

Public sector bodies, private entities providing public services such as education, healthcare, housing, social services, and entities engaged in credit scoring or life and health insurance are required to make a fundamental rights impact assessment (FRIA) prior to deploying high-risk AI systems. This assessment requires these entities to list the risks, oversight measures, risk mitigation measures, affected categories of natural persons, intended frequency of use, and the deployer's processes for which the systems will be used.

The imposition of this requirement is the product of a campaign carried by more than 150 university professors from all over Europe and beyond.²⁵⁶¹ The academics called for a transversal FRIA, applicable to both the public and private sectors, as proposed by the European Parliament. Nevertheless, the final version includes a large carve out for the private sector.

The EU AI Act provides for a special regime for General purpose AI (GPAI). Providers of GPAI models are subject to separate obligations that can be considered a light version of the obligations for AI systems. Among other things, they must create and maintain technical documentation, draw up a policy on how to respect copyright law, and create a detailed summary of the content used for training the GPAI model.

Providers of GPAI models with systemic risks have additional obligations, including performing model evaluations, assessing and mitigating systemic risks, documenting and reporting serious incidents to the AI Office and national competent authorities, and ensuring adequate cybersecurity protection.

²⁵⁶¹ Brussels Privacy Hub, More than 150 university professors from all over Europe and beyond are calling on the European institutions to include a fundamental rights impact assessment in the future regulation on artificial intelligence (Sept. 12, 2023), https://brusselsprivacyhub.com/2023/09/12/brussels-privacy-hub-and-other-academicinstitutions-ask-to-approve-a-fundamental-rights-impact-assessment-in-the-eu-artificialintelligence-act/

Since GPAI "models" are not "systems", the rules on high risks AI "systems" do not apply to them. However, a GPAI system built on top of a GPAI model may constitute a high-risk AI system.

Concerns exist that the quantitative criteria for the application of the GPAI provisions is too high to cover most GPAI models, with OpenAI GPT4 and Google Gemini as possible exceptions. This rather lax regime is the product of an intense lobbying led by France, Germany and Italy in defense of "European AI champions." This proved illusory when information surfaced that European startups were, in reality, funded by Silicon Valley, subsequently prompting an investigation by the European Commission on the impact of such investment agreements on competition in the AI market.²⁵⁶²

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office²⁵⁶³ established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU AI Office's tasks consist in contributing to the coherent application of the AI Act across the Member States, including the set-up of advisory bodies at EU level, facilitating support and information exchange; Developing tools, methodologies and benchmarks for evaluating capabilities and reach of general-purpose AI models, and classifying models with systemic risks; Drawing up state-of-the-art codes of practice to detail out rules, in cooperation with leading AI developers, the scientific community and other experts; Investigating possible infringements of rules, including evaluations to assess model capabilities, and requesting providers

²⁵⁶² Julia Tar and Théophane Hartmann, *Microsoft-Mistral AI deal raises concerns* (March 1, 2024), <u>https://www.euractiv.com/section/digital/news/microsoft-mistral-ai-deal-raises-concerns-european-telecom-standardisation-elections-launched/; Pascale</u>

²⁵⁶³ European Commission, *European AI Office*, <u>https://digital-</u> strategy.ec.europa.eu/en/policies/ai-office

to take corrective action; Preparing guidance and guidelines, implementing and delegated acts, and other tools to support effective implementation of the AI Act and monitor compliance with the regulation.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. Engaging in a prohibited AI practice can lead to a penalty of up to EUR 35 million or 7% of the total worldwide annual turnover for companies, depending on the severity of the infringement. For high-risk AI systems, the penalty may be as high as EUR 15 million or 3%.

"National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III" are also involved in implementation and enforcement. This is not the case when GPAI models are concerned.

These national public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Where a national market surveillance authority has sufficient reason to consider an AI system to present risks to fundamental rights, it shall carry out an evaluation of the AI system concerned in respect of its compliance with all the requirements and obligations laid down in the EU AI Act and also inform and fully cooperate with the relevant national public authorities or bodies. The relevant operators shall cooperate as necessary with both the market surveillance authority and with the other national public authorities or bodies.

Where, in the course of that evaluation, the market surveillance authority in cooperation with the national public authority finds that the AI system does not comply with the requirements and obligations of the EU AI Act, it shall without undue delay require the relevant operator to take all appropriate corrective actions to bring the AI system into compliance, to withdraw the AI system from the market, or to recall it.

Where, having performed an evaluation, after consulting the relevant national public authority, the national market surveillance authority finds that although a high-risk AI system is in compliance with the EU AI Act, it nevertheless presents a risk to the health or safety of persons, to fundamental rights of persons, or to other aspects of public interest protection, it shall require the relevant operator to take all appropriate measures to ensure that the AI system concerned, when placed on the market or put into service, no

longer presents that risk without undue delay, within a period it may prescribe.

There are thus elements of cooperation and coordination among the various authorities and bodies involved in implementation and enforcement. However, for GPAI models, AI oversight is not carried independently, since the European Commission has primary competence and the EU AI Office has been established within the European Commission. Regarding high risk systems, it depends on the characteristics of the authority Italy will designate as market surveillance authority.

The AI Act will enter into force 20 days after its publication in the Official Journal, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means approximately end of 2024 / beginning of 2025, the governance rules and the obligations for GPAI models will become applicable after 12 months, so around mid-2025, and the rules for AI systems - embedded into regulated products - will apply after 36 months, so in 2027. The Commission has also launched the AI Pact²⁵⁶⁴ a voluntary initiative that seeks to support the future implementation and invites AI developers from Europe and beyond to comply with the key obligations of the AI Act ahead of time. On the down side, it might privatized the definition of the rules of the game.

Data Protection

Since Italy is an EU Member State, the General Data Protection Regulation (GDPR)²⁵⁶⁵ is directly applicable in Italy and to Italians. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens."²⁵⁶⁶ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Italian Data Protection Code contains provisions to adapt the national legislation to the GDPR.²⁵⁶⁷

https://commission.europa.eu/law/law-topic/data-protection/data-protection-eu_en 2567 Personal Data Protection Code Containing provisions to adapt the national

²⁵⁶⁶ European Commission, *Data protection in the EU*,

legislation to Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016

Regarding the activities of law enforcement authorities, Italy transposed the EU Data Protection Law Enforcement Directive (LED)²⁵⁶⁸ in 2018.²⁵⁶⁹ "The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."²⁵⁷⁰ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²⁵⁷¹ The LED also requires for Member States, including Italy, to enable data subjects to exercise their rights via national data protection authorities.²⁵⁷²

"Consistency and a high level of protection among Member States is key in order to ensure effective judicial cooperation in criminal matters and police cooperation. The LED provides for the European Data Protection Board (EDPB) [of which the Italian data protection authority is a member] to issue guidelines, recommendations and best practices (on its own initiative or at the Commission's request) in order to ensure that the Member States apply the LED consistently."²⁵⁷³ The EDPB has produced

²⁵⁷² Article 17 of the LED.

²⁵⁷³ Communication from the Commission to the European Parliament and the Council, *First report on application and functioning of the Data Protection Law Enforcement Directive (EU) 2016/680 ('LED')*, COM/2022/364 final, <u>https://eur-lex.europa.eu/legal-</u> content/EN/TXT/?uri=CELEX%3A52022DC0364&gid=1658824345764#footnote136

guidelines on the use of facial recognition technologies in the area of law enforcement.²⁵⁷⁴ The EDPB Chair said: "While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights."²⁵⁷⁵

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Italy is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁵⁷⁶

Al Oversight

The Italian Data Protection Authority (DPA) "is an independent administrative authority established by the so-called privacy law (Law No. 675 of 31 December 1996) and regulated subsequently by the Personal Data Protection Code (Legislative Decree No. 196 of 30 June 2003) as amended by Legislative Decree No. 101 of 10 August 2018, which also established that the Italian DPA is the supervisory authority responsible for monitoring application of the General Data Protection Regulation (pursuant to Article

51 of Regulation No. 2016/679)."²⁵⁷⁷ The DPA has direct sanctioning powers as well as extended enforcement capabilities.

The Italian DPA is a member of the Global Privacy Assembly (GPA) since 2002. The DPA was one of the three authors of the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence.²⁵⁷⁸ The DPA also co-sponsored the 2020 GPA Resolution on AI Accountability²⁵⁷⁹ and the 2023 GPA Resolution on Generative AI.²⁵⁸⁰ However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology.²⁵⁸¹

In January 2021, an Italian court determined that an algorithm which evaluates employee performance violates labor law.²⁵⁸² The case concerned the ranking algorithm of the food delivery service Deliveroo. The judge ruled that the algorithm unfairly assessed absent workers noting that it failed to take account of permissible reasons for absence. The court ordered the company to pay a fine and legal costs and to post the judgment.²⁵⁸³

In October 2021, the DPA banned remote surveillance of customer care employees for lack of respect of essential safeguards enshrined in the GDPR.²⁵⁸⁴ The case originated from a complaint by an employee of a public transports operator, which concerned the processing of personal data relating to the company's call centre operators by way of the inbound calls management system. "The investigations by the Italian SA showed that the

employees had not been informed adequately about the processing, and that the system in question allowed recording and replaying phone calls as well as storing, for an unspecified period, additional information on the individual operators' activities such as call duration, called numbers, date and time of each call. Since the software allowed the remote surveillance of workers, its deployment was to be made conditional on the enhanced safeguards set out in this respect by national law pursuant to Article 88 GDPR - namely, either an ad-hoc agreement with trade unions or an authorisation by the competent inspectorate for labour."²⁵⁸⁵ The DPA fined the company EUR 30.000 taking also account of the cooperation provided in the course of the fact-finding activities; the company had immediately discontinued the processing following the on-site inspection.

Algorithmic Transparency

Italy is subject to the GDPR and Convention 108+. Italians have a general right to obtain access to information about automated decisionmaking and to the factors and logic of an algorithm.²⁵⁸⁶

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems²⁵⁸⁷ specifically emphasizes requirements on transparency, accountability and effective remedies. With regard to transparency, the Recommendation provides that "States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be

²⁵⁸⁵ European Data Protection Board, Italian SA bans remote surveillance of customer care employees (Oct. 28, 2021) https://edpb.europa.eu/news/national-news/2021/italiansa-bans-remote-surveillance-customer-care-employees en

subject to particularly high standards as regards the explainability of processes and outputs."²⁵⁸⁸

The Recommendation also clarifies with regard to "contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."²⁵⁸⁹

As for the public sector, in its 2018 White Paper on Artificial Intelligence at the service of citizens,²⁵⁹⁰ the Agency for Digital Italy stressed the necessity for the functioning of AI systems to abide by criteria of transparency and openness. "Transparency is a fundamental prerequisite to avoid discrimination and solve the problem of informational asymmetry, thus guaranteeing for citizens the right to understand public decisions."²⁵⁹¹

In May 2021, the Italian Court of Cassation released its judgment in *Garante per la Protezione dei Dati Personali v. Associazione Mevaluate Onlu.*²⁵⁹² The case concerned the Italian DPA's 2016 order to Mevaluate Italia s.r.l. to suspend the implementation of its online Artificial Intelligence system capable of analyzing documents voluntarily uploaded by users to provide reputational ratings. The Court of Cassation quashed the previous ruling of the Court of Rome, which had opined in favour of the

lawfulness of the system as data subjects had provided their consent. The Court of Cassation found that the lack of transparency regarding Mevaluate's algorithms invalidates such consent, thus violating Article 8 of the EU Charter of Fundamental Rights, the GDPR and a series of articles of Legislative Decree No. 196 of 2003. It was further found that consent can only be valid if the data subject is appropriately informed about the purposes of processing and freely and specifically expresses their consent to the same. Consent cannot be considered as informed, if the logic involved in the algorithm remains unknown to the data subjects, as it was the case in Mevaluate reputational ranking system.

In July 2021, the DPA issued a 2.6 million Euros penalty to the ondemand delivery company Foodinho.²⁵⁹³ The DPA identified some irregularities concerning the algorithm used by the company to rate drivers' performance. The DPA found that the controller had not adequately informed employees regarding the way the system worked and did not guarantee the accuracy and correctness of the results of the algorithms used to evaluate drivers. No information was provided regarding "significant information about the logic used as well as the importance and the consequences of such treatment of personal data by the riders."²⁵⁹⁴ One of the issues of concern was the risk of discrimination arising from the algorithmic system and of relevance has been the decision of the Court of Cassation, a discussed above.

In February 2023, the DPA imposed a provisional limitation on the processing of Italian users' data by the US-based company that has developed and operates an App called Replika. The App features an AI-powered chatbot which generates a virtual friend using text and video interfaces. The App "carries factual risks to children – first and foremost, the fact that they are served replied which are absolutely inappropriate to their age."²⁵⁹⁵ The App does not provide any age verification mechanism.

²⁵⁹³ IAPP, *Italian DPA fines food delivery app 2.6M euros for GDPR violations* (Jul. 6, 2021), <u>https://iapp.org/news/a/italian-dpa-fines-food-delivery-app-3m-euros-for-gdpr-violations/</u>

According to the DPA, the App is in breach of the GDPR. The service provider's "privacy policy is not to be regarded as compliant with the transparency principles and obligations set out in the Regulation as it fails to disclose whatever information on the key elements of the processing at issue, in particular on the use of children's personal data, which is in breach of Article 13 of the Regulation."²⁵⁹⁶ The personal data of children are processed unlawfully "since performance of a contract cannot be invoked as a legal basis, even implicitly, given that children are incapable to enter into a valid contract under Italian law."²⁵⁹⁷

Investigations on OpenAl

In March 2023, the Italian Data Protection Authority temporarily banned ChatGPT in Italy due to concerns over privacy violations and the lack of an age-verification system, marking the first instance of a data protection authority blocking the chatbot. The DPA cited a data breach and required OpenAI to provide additional information, with potential fines looming. Access to OpenAI's platforms, including ChatGPT, was restored in April 2023, with the company guaranteeing more transparency and more rights for European users and non-users. However, based on the outcome of its fact-finding activity, the Italian DPA concluded that the available evidence pointed to the existence of breaches of the provisions contained in the EU GDPR. OpenAI had 30 days to submit its counterclaims concerning the alleged breaches. The Italian DPA stated that it will also take account of the work in progress within the EDPB ad-hoc task force in its final determination on the case.²⁵⁹⁸

In March 2024, the Italian DPA initiated an investigation into OpenAI's new AI model, Sora, due to concerns over the processing of personal data in the EU, particularly in Italy. The inquiry demands that OpenAI provide detailed information within 20 days about Sora's training process, the data it processes and collects, the handling of sensitive personal data, and the sources of this data. Additionally, Italy's DPA seeks to

understand if and how Sora will be offered in the EU, including the methods for informing users and non-users about data processing procedudres and the legal bases for the processing.²⁵⁹⁹

Facial Recognition

According to Privacy International, the municipality of Como, Italy, purchased a facial recognition system "with little transparency and despite the lack of a clear legal framework."²⁶⁰⁰ Privacy International reported that Como "embraced a narrative of technological innovation pushed by Huawei" within the broader concept of smart city and innovation tech, but after the intervention of the Italian Data Protection Authority (DPA), the municipality was obliged to suspend the system. The DPA determined that there was no legal basis to collect facial images. Subsequent reporting by Wired indicated that the municipality had changed vendors and also that the system installed most recently failed to work as proposed.²⁶⁰¹

The Italian National Police intended to use a facial recognition system, called SARI Real-Time which would allow for real-time identification of migrants on boats upon their landing on Italian ports. The SARI Real-Time system, originally purchased to be employed during protests and public events, was discontinued following a decision by the DPA, who ruled in April 2021 that the system could open the doors to unjustified mass surveillance and that there was no legal basis to deploy it.²⁶⁰² The DPA "in line with the stance taken by the Council of Europe"

²⁶⁰² Italian National Data Protection Authority, *Facial recognition: the SARI Real Time* system is not compliant with privacy laws (Apr. 16, 2021),

display/docweb/9575842; Laura Carrer and Riccardo Coluccini, Hermes Center for Transparency and Digital Human Rights, *Technologies for Border Surveillance and Control in Italy. Identification, Facial Recognition, and European Union Funding*, https://www.documentcloud.org/documents/21200979-technologies-for-border-

considered "that the use of facial recognition for the purposes of preventing and suppressing crime is highly problematic."²⁶⁰³

In December 2021, the Italian parliament introduced a moratorium on video surveillance systems that use facial recognition technologies. This law introduces a temporary ban for private entities as well as public authorities to use these systems in public places or places accessible to the public.²⁶⁰⁴ The moratorium, originally set to last until December 31, 2023, has been updated to reflect evolving legislative developments surrounding facial recognition technologies.

According to EDRi, this is an important development, yet the moratorium contains major exceptions: "it only covers video surveillance systems with facial recognition, it doesn't take into account systems such as those developed by Clearview AI." The "moratorium allows the police to use such systems subject to a case-by-case approval by the DPA and it exempts judicial authorities and public prosecutors from any control."²⁶⁰⁵ EDRi also remarked that "[u]ntil now, the Italian DPA had stopped the use of real-time facial recognition systems and remote biometric identification systems by the police and municipalities because Italy lacked a legal basis for the processing of biometric data by law enforcement authorities. Now this moratorium provides a legal basis and risks normalising the use of these technologies during police activities in the field of public security and for investigation and crime prosecution activities."²⁶⁰⁶

In March 2022, the DPA issued a 20 million euro fine on Clearview AI,²⁶⁰⁷ a private firm that offers an identity matching service for law

enforcement, reportedly powered by a database of around 10 billion faces made up by selfies scraped off the internet. The DPA fined Clearview AI "after finding it applied what amounted to biometric monitoring techniques also to individuals in the Italian territory."²⁶⁰⁸ Italy issued the fine citing "without an appropriate unlawful processing legal basis" and "infringements of several fundamental principles including transparency – as it failed to adequately inform users –, purpose limitation – as it processed users' data for purposes other than those for which they had been made available online –, and storage limitation – as it did not set out any data storage period. Thus, Clearview AI is violating data subjects' freedoms including the protection of privacy and non-discrimination."2609 The DPA also "ordered the company to erase the data relating to individuals in Italy; it banned any further collection and processing of the data through the company's facial recognition system. Clearview AI was finally ordered by the Italian SA to designate a representative in the EU to be addressed in addition to or instead of the US-based controller in order to facilitate exercise of data subject rights."2610

AlgorithmWatch reported in 2020 that Italy was exploring the use of facial recognition in football stadiums.²⁶¹¹ In December 2022, Serie A CEO Luigi De Siervo announced that Italian league officals are working on a system of facial recognition technology to be used inside the stadiums to identify fans responsible for racist chants. According to De Servio: "We're still awaiting authorisation from privacy authorities but we should be able to get that with the help of the government."²⁶¹²

Al Literacy

The development and implementation of AI technologies firmly depends on skills and competences. The Government has already shown its intention to strengthen the provision of AI competences at all education levels. At the primary and secondary education level, the government has launched the National Plan for the Digital School (PNSD) to update school curricula and promote new skills in digital education and AI-related courses.²⁶¹³ At higher education levels, the government is encouraging the integration of courses with AI-related themes in bachelors, masters and doctoral programs. The planned budget also aims to support projects among PhDs, researchers and professors. Literacy campaigns will also be fostered via broadcasting and multimedia. Special attention will be devoted to informing about fake news and issues of cyber security.

In September 2022, in order to support the evolution and implementation of the PNSD in view of recent technological changes and the development of digital learning following the COVID-19 pandemic,²⁶¹⁴ the Ministry of Education established a scientific and technical Committee. The Committee of experts is in charge of outlining strategic paths to meet the growing demand for digital skills.²⁶¹⁵

EdTech and Children Tracking

In November 2020, the Council of Europe Consultative Committee of the Convention 108 issued Guidelines on Children's Data Protection in an Education Setting, also applicable to remote e-learning solutions and services.²⁶¹⁶ The Committee recalls that "[t]he UN Convention Committee on the Rights of the Child set out in 2001, that "Education must be provided

²⁶¹⁶ Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data (Convention 108), *Guidelines on Children's Data Protection in an Education Setting* (Nov. 20, 2020), <u>https://rm.coe.int/t-pd-2019-6bisrev5-eng-guidelines-education-setting-plenary-clean-2790/1680a07f2b</u>

in a way that respects the inherent dignity of the child and enables the child to express his or her views freely.""²⁶¹⁷

The Committee also states that: "Stakeholders should collaborate to create a rights-respecting environment, to uphold Article 8 of the European Convention on Human Rights and protect the human dignity and fundamental freedoms of every individual, in respect of data protection.

"Children cannot see or understand how large their digital footprint has become or how far it travels to thousands of third parties across or beyond the education landscape, throughout their lifetime. While children's agency is vital and they must be better informed of how their own personal data are collected and processed, there is at the same time a consensus that children cannot be expected to understand a very complex online environment and to take on its responsibilities alone."²⁶¹⁸

"Processing must not involve more data than necessary to achieve the legitimate purpose. This is particularly important when consent cannot be freely given because the choice is to use a product and receive remote instruction or refuse and receive none."²⁶¹⁹ "A precautionary approach and a strengthened protection towards sensitive, special categories of data, including genetic and biometric data, and ethnic origin, or relating to sexual orientation, or offences, recognising children's additional vulnerability."²⁶²⁰

"Profiling of children should be prohibited by law. In exceptional circumstances, States may lift this restriction when it is in the best interests of the child or if there is an overriding public interest, on the condition that

appropriate safeguards are provided for by law"²⁶²¹ "The Guidelines on artificial intelligence and data protection should be followed in educational settings, with regard to the automatic processing of personal data to ensure that AI applications do not undermine the human dignity, the human rights and fundamental freedoms of every child whether as an individual, or as communities, in particular with regard to the right to non-discrimination."²⁶²²

"Recognising that legislation on educational settings and other domestic and international law have an impact on how the data protection rules are applied, including the rights of data subjects, educational institutions need strong legislative frameworks and Codes of Practice to empower staff, and to give clarity to companies to know what is permitted and what is not, when processing children's data in the context of educational activities, creating a fair playing field for everyone. Policy makers and practitioners, including legislators, supervisory authorities in accordance with Article 15 (2)(e) of the Convention 108+, educational authorities and industry should follow and promote these Guidelines and implement measures to meet data protection and privacy obligations."²⁶²³

In May 2022, the WeSchool app, with an estimated 1.000.000 users in Italy, was analyzed as part of a global investigative report conducted by Human Rights Watch on the education technology (EdTech) endorsed by 49 governments, including Italy, for children's education during the pandemic. Human Rights Watch found that Italy's endorsement of this online learning platform put at risk or directly violated children's rights.

EdTech products, such as WeSchool, sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human

²⁶²³ Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data (Convention 108), *Guidelines on Children's Data Protection in an Education Setting* (Nov. 20, 2020), p. 4, <u>https://rm.coe.int/t-pd-2019-6bisrev5-eng-guidelines-education-setting-plenary-clean-2790/1680a07f2b</u>

rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.²⁶²⁴

Public Administration Digitization

In 2018, the Agency for Digital Italy issued a White Paper on Artificial Intelligence at the service of citizens.²⁶²⁵ The objective is to give an important impulse to innovation in the public sector. The White Paper defines a plan to facilitate the adoption of AI technologies in the Italian Public Administration and improve the quality of public services. Artificial intelligence technologies can be implemented in healthcare, education, security, urban management. The White Paper includes a set of recommendations defining the challenges for developing and implementing AI technologies in the public sector. The White paper defines nine challenges:

- The ethical challenge: the anthropocentric vision on artificial intelligence technologies leads to look at AI technologies as at the service of humans. In this case, it is important to ensure that these technologies meet universal needs. The characteristics of AI technologies leads to raising questions concerning the quality of data, transparency and accountability, as well as protection of rights and freedoms. This step is critical in the public sector to ensure transparency and the respect of individuals' rights and freedoms.
- The technological challenge: AI technologies cannot still replicate the functioning of the human mind. There is the interest in improving and implementing these technologies to make the work of the Public Administration more effective.

²⁶²⁴ Human Rights Watch, *How Dare They Peep into My Private Life* (May 25, 2022), <u>https://www.hrw.org/report/2022/05/25/how-dare-they-peep-my-private-life/childrens-rights-violations-governments</u>

²⁶²⁵ Agency for Digital Italy, *White Paper on Artificial Intelligence at the service of citizens*, <u>https://www.agid.gov.it/en/agenzia/stampa-e-</u>

comunicazione/notizie/2018/04/19/english-version-white-paper-artificial-intelligenceservice-citizen-its-now-online

- The skills challenge: citizens increasingly deal with digital technologies. Therefore, it is critical they understand how the Public Administration implements and uses artificial intelligence technologies to take decisions or provide public services. Civil servants need to constantly improve their skills to ensure they can effectively be aware of the opportunities and challenges of the implementation of AI technologies in the public sector.
- The data challenge: data quality is one of the primary issues when implementing artificial intelligence technologies. Open data of public bodies can provide important information that would be very useful to generate applications of artificial intelligence at the service of the citizens. Therefore, it is critical to ensure equal and nondiscriminatory access to public data.
- The legal challenge: in the field of AI technologies, it is necessary to reconcile the principle of transparency of administrative acts and procedures with the protection of privacy and personal data. A second issue of transparency concerns intellectual property rights over algorithms. Moreover, when the public administration implements decision-making process, it is necessary to deal with accountability.
- The implementation challenge: training public employees, particularly officials and managers, on the functioning, benefits, as well as ethical and technical implications on the use of AI technologies is critical to ensure the development of the public sector.
- The inequalities challenge: AI solutions can reduce social inequalities in the field of education and training, health and disability, knowledge and human rights. However, AI technologies can also increase inequalities like in the case of biased outputs. Therefore, the Public Administration should focus on implementing these technologies ensuring inclusiveness, accessibility, transparency, non-discrimination.
- The measurement challenge: The implementation of new technologies impact on citizens and institution. The Public Administration has not always the instruments to measure these effects. However, the introduction of AI technologies in the public sector can provide more information while requiring an impact assessment.
- The human being challenge: citizens and institutions should be aware of the effects of automated systems. Artificial intelligence

systems are not only a matter of technology but also social innovation.

The Minister of Technological Innovation and Digitization and Fondazione Leonardo have signed a Memorandum of Understanding to shape the framework and boundaries for AI adoption in Public Administration.²⁶²⁶

Lethal Autonomous Weapons

Italy has been an active participant in Convention on Certain Conventional Weapons (CCW) meetings on killer robots since 2014. Italy has been supporting a two-track approach in favor of a legally binding solution with a combination of prohibitions and regulations. According to Italy, a two-track approach would maintain an element of human control while not interfering with the advancement of technology.²⁶²⁷

In a 2019 statement at the UN General Assembly, Italy emphasized that "any existing or future weapon system must be subjet to human control, particularly in relation to the ultimate decision to use lethal force."²⁶²⁸

In October 2022, Italy was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²⁶²⁹ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."2630

²⁶³⁰ United Nations (UN) General Assembly, First Committee, Joint Statement on Lethal Autonomous Weapons Systems First Committee, 77th United Nations General Assembly Thematic Debate – Conventional Weapons (21 Oct. 2022),

In February 2023, Italy participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Government representatives, including Italy, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁶³¹ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."2632

Italy also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁶³³

At the 2023 REAIM Summit, the Netherlands took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The

Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.²⁶³⁴ The second REAIM summit will take place in 2024 in Korea.²⁶³⁵

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour²⁶³⁶ of resolution L.56²⁶³⁷ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Italy is a signatory to the major international human rights instruments, and generally ranks highly for the defense of human rights. In 2023, Freedom House gives Italy a "free" (90/100) rating for political rights and civil liberties.²⁶³⁸ Freedom House notes that "[c]ivil liberties are generally respected, but concerns about the rights of migrants persist, and regional inequalities are substantial and persistent. Endemic problems of corruption and organized crime pose an enduring challenge to the rule of law and economic growth."²⁶³⁹

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that "[c]onsidering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects."²⁶⁴⁰

The Rome Call for Ethics in AI

In February 2020, the Italian Government, together with the Pontificia Accademia per la Vita, Microsoft, IBM and FAO signed The Rome Call for Ethics in AI. This initiative is aimed at increasing awareness of the role of ethics in AIand proposes a more human-centric approach to AI.²⁶⁴¹ The Call sets out a program of "Algorithm Ethics" according to the "fundamental principles of good innovation," including Transparency, Responsibility, Impartiality, Reliability, Security and privacy. The Call is based on three principles:

- Ethics: All human beings are born free and equal in dignity and rights.
- Education: Transforming the world through the innovation of AI means undertaking to build a future for and with younger generations.
- Rights: The development of AI in the service of humankind and the planet must be reflected in regulations and principles that protect people particularly the weak and the underprivileged and natural environments.

²⁶⁴⁰ Recommendation CM/Rec(2020)1 of the Committee of Ministers to member States on the human rights impacts of algorithmic systems (Apr. 8, 2020),

https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

²⁶⁴¹ <u>http://www.academyforlife.va/content/pav/it/events/workshop-intelligenza-artificiale.html</u>

In April 2021, the RenAIssance foundation was set up to guard and promote the Rome Call for AI Ethics.²⁶⁴²

In January 2023, representatives of the Chief Rabbinate of Israel's Commission for Interreligious Relations, the Pontifical Academy for Life and Abu Dhabi Forum for Peace, commended a joint declaration on "AI Ethics: An Abrahamic Commitment to the Rome Call".²⁶⁴³ The joint declaration is meant as a companion to the Rome Call.

Archbishop Vincenzo Paglia, President of the Pontifical Academy for Life and the RenAIssance Foundation, welcomed the participants to the event in which the joint declaration was issued with the following words: "We have gathered with our Jewish and Muslim brothers in an event of great importance to call upon the world to think and act in the name of brotherhood and peace – even in the field of technology. The signing of the Rome Call by Jewish and Muslim religious leaders and the joint call for algorethics to guide the design of artificial intelligence refer precisely to the increasingly urgent need to build paths of peace, mutual respect, dialogue and community."²⁶⁴⁴

OECD / G20 AI Principles

Italy endorsed the OECD and the G20 AI Principles.

In 2021, Italy hosted the G20 summit. Recognizing the "benefits stemming from the responsible use and development of trustworthy humancentered Artificial Intelligence (AI)," the G20 Leaders declared in Rome that they would encourage competition and innovation, "as well as diversity and inclusion."²⁶⁴⁵ Artificial intelligence figured prominently in the G20 Declaration of the Digital Ministers who met in Trieste, Italy. They stated, "We reaffirm our willingness to implement trustworthy Artificial Intelligence (AI) and to commit to a human-centered approach, as decided

in 2019 under the Japanese G20 Presidency, guided by the G20 AI Principles, drawn from the OECD Recommendations on AI."²⁶⁴⁶

Italy is also a founding member of the Global Partnership for AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is "built around a shared commitment to the OECD Recommendation on Artificial Intelligence."²⁶⁴⁷

Under its G7 presidency in 2024, Italy has been working with the Brazilian G20 Presidency to avance dialogues and actions, with AI identified as a common priority for sustainable development. The G7 Italian Presidency underscored its global leadership in AI and technology policy, focusing on fostering international cooperation and ensuring AI development adheres to democratic values. Under the scope 'Digital Development-Growing Together', the Italian G7 Presidency and the G7 countries acknowledged the need to work in partnership with developing countries to strengthen local AI digital ecosystems.²⁶⁴⁸ The Italian Presidency's priorities were also to focus on the impact of AI on jobs and inequality.²⁶⁴⁹

UNESCO Recommendation on the Ethics of AI

Italy is a UNESCO member since 1948. Italy endorsed the 2021 UNESCO Recommendation on AI Ethics,²⁶⁵⁰ the first ever global agreement on the ethics of AI.

Al Safety Summit

In November 2023, Italy participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁶⁵¹ Italy thus committed to participate in

international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

Italy contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.²⁶⁵²

Evaluation

Italy has endorsed the OECD/G20 AI Principles and is a founding member of the Global Partnership on AI. The Rome Call for AI Ethics, undertaken by Pope Francis with the support of the Italian government and private companies, sets out a powerful vision for AI that is human-centric and that diminishes social inequality. This also a key priorities Italy has underscored in the framework of its Presidency of the G7. Italy has also signed the UNESCO Recommendation on the Ethics of AI although it has yet to take steps to implement it.

Italy is subject to the GDPR and has ratified the modernized Council of Europe Convention 108, providing a high level of protection for personal data and the specific right of algorithmic transparency. The Italian Data Protection Authority has played a leading role in fundamental rights protection against possible encroachments stemming from the design, deployment or use of AI systems, most recently through investigations concerning OpenAI

https://search.coe.int/cm/pages/result_details.aspx?objectid=0900001680aee411

The national AI strategy with 24 policy initiatives and its focus on investment in three areas of interventions (Talent and Skills, Research, Applications) does not have the breath of the 2020 Proposals for a National Strategy for Artificial Intelligence and its 82 recommendations. However, the national strategy is defined as EU-centered and acknowledges the forthcoming EU AI Act. Key will be the governance framework put into place by Italy to implement and enforce the EU AI Act.

Jamaica

National AI Strategy

In July 2023, the Jamaican government announced plans to establish an AI Task Force aimed at crafting a National AI Policy. Senator Dr. Dana Morris Dixon, the minister overseeing skills and digital transformation stated, "We must understand the risks and implement the necessary safeguards to allow us to respond to the rapid rate of technology change and to, ultimately, scale with confidence,"²⁶⁵³ The AI Taskforce was officially established in December 2023, the Chairman of the taskforce, Christopher Reckord stated that the main areas being considered are data privacy and security and the ethical use of artificial intelligence.²⁶⁵⁴

In February 2024, the Jamaican government reaffirmed its commitment to addressing the challenges posed by AI and deepfakes to democratic Process. Senator Dr. Dana Morris, Minister for Skills and Digital Transformation, reiterated the government's dedication to preserving democracy and transparency. She stated that "Central to the Administration is our commitment to preserving democracy and the democratic process. The government understands the critical importance of maintaining trust and transparency in our electoral system."²⁶⁵⁵

There are also several significant policy initiatives worth mentioning. Jamaica's 2009 National Development Plan, Vision 2030, which aims among others to advance the achievement of the UN Sustainable Development Goals, does not address per se digital policy. However, the Vision 2030 Jamaica Secretariat acknowledges in its reflections on the "perspectives on the future of national development planning post-COVID-19" that "[t]he advancement of technology enablement geared to support adaptation and agility and access to public goods and services for sustainable and inclusive growth. This includes digitalization and equity in access to technology products and services. It also includes the infusion of cultural values and norms that support the application of technology and

innovation towards improved productivity, competitiveness, and growth." 2656

Jamaica's Broadcasting Commission (BCJ) has been a leader in fostering a human-centered approach to AI in Jamaica and Small Island Developing States (SIDS). The BCJ is an "independent statutory agency which falls within the ambit of the Minister with responsibility for Information," Among others, the BCJ is mandated to "provide advice to policy makers in the formulation of policies for the [media] industry" and "conduct research on all areas relating to the electronic media in Jamaica."²⁶⁵⁷ At the 2019 Regional Forum on Artificial Intelligence in Latin America and the Caribbean, Cordel Green, the Executive Director of the Broadcasting Commission, stated, "As we seek to understand the new environment and the broad impacts of AI on society, UNESCO'S ROAM principles (Rights, Openness, Accessibility to all, Multi stakeholder participation) are critical. We should resist technological determinism. AI must be designed to promote human well-being, enhance human performance and mitigate harm, (...) we must avoid the worst outcomes of the first industrial revolution which left millions of people behind. We can make AI the rising tide which lifts all ships." He also mentioned that "the role of the state is to ensure the regulation, support and planning of the sector by developing policies that address the needs of all citizens and do not undermine fundamental rights."2658

It is to address these issues, and because "Small Island Developing States must protect their own interests", that "the BCJ has spearheaded the Caribbean AI Initiative, which is a collaborative project with the UNESCO Cluster Office for the Caribbean,²⁶⁵⁹ supported by UNESCO's Information

²⁶⁵⁷ Broadcasting Commission of Jamaica, *About us*,

For All Programme (IFAP)."²⁶⁶⁰ The Initiative "aims to develop a subregional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States".²⁶⁶¹ The Caribbean AI Policy Roadmap was released in June 2021,²⁶⁶² following a period of stakeholder consultation.²⁶⁶³

The Caribbean AI Policy Roadmap acknowledges that "AI systems raise new types of ethical issues that include, but are not limited to, their impact on decision-making in employment and labour, social interaction, health care, education, media, freedom of expression, access to information, privacy, democracy, discrimination, and weaponization. Furthermore, new ethical challenges are created by the potential of AI algorithms to reproduce biases, for instance regarding gender, ethnicity, and age, and thus to exacerbate already existing forms of discrimination, identity prejudice and stereotyping. As Caribbean nations expand their adoption of AI tools and other exponential technologies, stakeholders (policymakers, citizens, private sector, academia, and NGOs) must proactively collaborate to create strategies for the humanistic development of guidelines, regulations and laws. Boundaries should be defined to regulate the AI decision-making, AI rights, inclusion of manual overrides and AI accountability protocols."

The Policy Roadmap has been developed based on a series of "assumptions" about the Caribbean and Artificial Intelligence. These include: "Human creativity is inextricably linked to Caribbean identify, economic viability and sustainable development"; "AI is a product of human creativity"; "AI is in service of humanity"; "AI must be inclusive, fair, transparent, accountable"; "AI must be regulated"; "Human rights supersede AI rights"; "Bias is everywhere in AI"; "We Are Our Data"; "Data rights will be the civil rights movement of the 21st century."²⁶⁶⁴

²⁶⁶⁴ Caribbean Artificial Intelligence Initiative, Caribbean AI Policy Roadmap (2021), p. 5, <u>https://ai4caribbean.com/wp-content/uploads/2021/07/Caribbean-Artificial-Intelligence-Policy-Roadmap.pdf</u>

The Policy Roadmap is based on six principles: Resiliency, Transformation. Upskilling, Preservation Governance. and Sustainability.²⁶⁶⁵ With regard to governance, actions to be taken include: "Develop Responsible AI Governance, Oversight, Principles & Policies to Do No Harm and to enhance safety, security and accountability of AI. Promote AI as a tool for service to humanity. Establish common values and principles to ensure fairness, transparency and accountability in digital transformation and increased integration of AI algorithms. Develop policy and legislation to enable the establishment of national and regional AI Governance Committees / Oversight Boards as well as national and regional licensing regime to manage and monitor the development of standards that govern the industry including technical code of conduct for developers, procurement guidelines for buyers, design and use principles and ethically aligned design standards. Regulate AI industry to provide redress and punishment for individuals & companies that violate citizen rights and wellbeing including banning cyberbullying, hate crimes, discriminatory algorithms, disinformation and graphically violent images inclusive of penalties and fines. Develop an AI Appeal Court and Online Dispute Resolution System. Increase advocacy for AI ethics by targeting software developers at global forums and hosting a global software conference to network, lobby, share research and initiate collaborations with big tech. Develop AI software to test AI for biases and identify AI applications in most need of governance. Protect citizen privacy and instill trust."2666

Public Participation

The Caribbean AI Policy Roadmap was the object of a series of stakeholder consultations through the organization of forums and a poll. On February 18-19, 2021, a two-day "Artificial Intelligence Forum: Opportunities to Accelerate Human Progress for Sustainable Development in Caribbean Small Islands Developing States"²⁶⁶⁷ was organized to collect input from diverse stakeholders regarding AI policy topics. In April 2021, three additional workshops addressing the AI Policy Roadmap principles

were held with stakeholders from the private sector, academia, civil society and youth.²⁶⁶⁸ More than one third of the participants were Jamaicans.²⁶⁶⁹

Data Protection

In recognition of the Universal Declaration of Human Rights, the Jamaican Constitution was amended in 2011 to provide for a new Charter of Fundamental Rights and Freedoms. The section 13(3)(j) of the Charter provides for the right to privacy, including of communication.

Jamaica is one of the Caribbean SIDS which have prioritized developing laws similar to the European Union's General Data Protection Regulation (GDPR).²⁶⁷⁰ In June 2020, the Government of Jamaica passed the Data Protection Act (DPA).²⁶⁷¹ The DPA established the Office of the Information Commissioner (OIC) to enforce data privacy rights outlined in the legislation. The OIC is responsible for monitoring compliance with the DPA; advising the Minister of Science, Energy and Technology on matters related to data protection; disseminating information to the public; drafting relevant guidelines. The first Information Commissioner was appointed in December 2021. In May 2022, the Minister of Science, Energy and "Since Technology reportedly declared. her appointment. the Commissioner has been taking steps to operationalize the Office. While the process is still in train, the Office has already been making strides in the data privacy and protection arena. The OIC has been leveraging various public awareness strategies to facilitate preliminary consultations regarding the issues and concerns of different interest groups."²⁶⁷² As of March 2023, the OIC does not benefit from a proper website with regular and detailed information on its action.²⁶⁷³

²⁶⁷³ Alecia Smith, *Office of the Information Commissioner being Operationalized*, Jamaica Information Service (May 15, 2022), <u>https://jis.gov.jm/office-of-the-information-commissioner-being-operationalised/</u>

The DPA applies to both public and private sector organizations. Data controllers have until 1 December 2023 to implement the necessary measures to ensure DPA compliance. This concerns, among others, fairness and lawfulness, purpose limitation, data minimization, accuracy, storage limitation, respect for data subjects' rights. These rights include the right to personal data access; consent to processing; prevent processing, and rights in relation to automated decision-making.²⁶⁷⁴

Jamaica's OIC is not a member of the Global Privacy Assembly.²⁶⁷⁵ The OIC has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence²⁶⁷⁶, the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence,²⁶⁷⁷ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology²⁶⁷⁸ or the 2023 GPA Resolution on Generative AI.²⁶⁷⁹

Algorithmic Transparency

The right to algorithmic transparency is provided by the DPA. One peculiarity is that access to this right is submitted to a "prescribed fee" which might have a deterrent effect even more so for underprivileged individuals.²⁶⁸⁰

The National Identification Systems

In a 2019 landmark decision, "Jamaica's Chief Justice Brian Sykes observed that the government's harsh decision to impose criminal sanctions to enforce compulsory registration by all citizens in a new digital ID system was a remarkable choice "in a democracy where the exercise of executive power rests upon the consent of the governed."

In December 2018, Jamaica adopted the National Identification Act (NIRA), which provided for the establishment of a National Identification System (NIDS) that "facilitates the enrolment of all citizens of Jamaica and all individuals who are ordinarily resident in Jamaica" for "the verification of identity information and the authentication of a National Identity Number and National Identity Card."2681 "The NIRA was approved over the strong objection of sections of civil society and the parliamentary opposition. The law made formal registration by all citizens compulsory and required them to provide specific biometric information on pain of criminal sanctions. A central registering authority, created by the Act, was mandated to collect identity verifiers, including iris scans and fingerprints and using facial recognition technologies. However, in a departure which many citizens and the parliamentary opposition deemed unwarranted and extreme, the Act also required the capture of vein patterns, and if needed, footprints, toe prints, palm prints and the blood type of citizens and residents. The compilation and analysis of these biometrics were to be executed using big data analytics and pattern recognition technologies."2682

In Julian J. Robinson v. The Attorney General of Jamaica, the Supreme Court of Judicature of Jamaica ruled that the NIRA was unconstitutional and nullified it, on the grounds of violating the right to privacy and equality enshrined in the Jamaican Charter of Fundamental Rights. More particularly, "[t]he Court, while giving an extensive interpretation of the right to privacy held the mandatory nature of the Act and the criminal sanctions to be in violation of informational privacy and liberty of the individuals. The disproportionate measures used to enforce the Act, the lack of necessary and a legitimate purpose, and absence of safeguards against misuse of the data collected under the Act were the

primary grounds on which the Court declared the Act to be unconstitutional."²⁶⁸³

In October 2021, a new Act, the National Identification and Registration Act of 2020, which allows for the voluntary submission of biometric information for participation in the NIDS, was passed. ²⁶⁸⁴ While this new Act has not been tested in court, it has attracted criticism from civil society organizations.²⁶⁸⁵

Facial Recognition

In 2016, the Passport, Immigration and Citizenship Agency (PICA) introduced facial recognition components to passport production with the objective to protect the identity of the citizen and reduce passport fraud.²⁶⁸⁶ The implementation of facial recognition programs started through immigration kiosks at major airports in Kingston and Montego Bay.²⁶⁸⁷ Reportedly, in 2017, PICA "has moved a step closer to protecting the identity of Jamaicans by implementing, for the first time in Jamaica, a facial recognition system akin to the Automated Fingerprint Identification System (AFIS) currently in use by the police."²⁶⁸⁸

In recent years, law enforcement authorities in Jamaica have expressed interest in integrating police surveillance technologies into regular law enforcement practices.²⁶⁸⁹ This is the case for example of the Jamaican Constabulary Force, Jamaica's primary domestic law enforcement agency. The agency has announced its procurement of various technologies, including predictive policing, networked camera systems, and

DNA databases.²⁶⁹⁰ A notable development occurred in July 2020, when media reports indicated that the Constabulary Force secretly deployed facial recognition technology support routine to law enforcement investigations.²⁶⁹¹ At issue was the use of facial recognition in the CCTV surveillance system known as JamaicaEye, a traffic monitoring technology.²⁶⁹² In June 2022, Jamaica's Security Minister Horace Chang "announced that an investment will be made to add more cameras to Jamaica Eye. As part of its thrust to incorporate technology in every day policing, (...) some 300 additional CCTV cameras will be installed across the corporate area." "To date, over 850 CCTV cameras have been installed across main townships."2693

Jamaica's largest life insurance company and pension fund manager has implemented "facial recognition technology that will replace the notarized certificate that they had to submit annually as 'proof of life' for their pension payments to continue uninterrupted".²⁶⁹⁴ According to the Financial Gleaner, "[p]ensioners will be required to upload a Governmentissued picture ID, along with a short 'live' video of their face, once a year, which will be verified or validated by the facial recognition technology."²⁶⁹⁵

Lethal Autonomous Weapons

Jamaica is a member of the Non-Aligned Movement (NAM), which supports the negotiation of a legally binding instrument on autonomous weapons systems."²⁶⁹⁶ Jamaica has attended some of the Convention on Certain Conventional Weapons (CCW) Group of Governmental Experts

meetings on Lethal Autonomous Weapons Systems (GGE on LAWS) since $2014.^{2697}$

In February 2023, Jamaica endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,²⁶⁹⁸ which calls for "urgent negotiation" of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

At the 78th UN General Assembly First Committee in 2023, Jamaica voted in favour²⁶⁹⁹ of resolution L.56²⁷⁰⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Since declaring independence from British colonial rule, Jamaica has been organized under a democratic political system featuring competitive elections, a vibrant civil society, and respect for the rule of law. Freedom House identifies Jamaica as a "free" society under its global freedom metrics.²⁷⁰¹ However, Freedom House also notes that "corruption remains a serious problem, and long-standing relationships between officials and organized crime figures are thought to persist. Violent crime remains a concern, as does harassment and violence against LGBT+ people."²⁷⁰²

Jamaica has endorsed the Universal Declaration of Human Rights and ratified the International Covenant on Economic, Social and Cultural Rights and the International Covenant on Civil and Political Rights.

OECD / G20 AI Principles

Jamaica has not endorsed the OECD AI Principles. However, according to the OECD, Jamaica's DPA "better aligns" the country with the OECD AI Principles as it includes the principles of "transparency, explainability and fairness" with regard to data collection and processing.²⁷⁰³

As also noted by the OECD, Jamaica is a "member state of the Inter-American Development Bank (IDB), which has adopted the OECD AI Principles as part of its fAIr LAC initiative."²⁷⁰⁴ The OECD acknowledges the work of the Inter-American Development Bank and its ""fAIr LAC" initiative to promote the responsible and ethical use of AI and improve public services e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries,"²⁷⁰⁵ including in Jamaica.

UNESCO Recommendation on the Ethics of AI

Jamaica has endorsed the UNESCO Recommendation on the Ethics of AI²⁷⁰⁶. Jamaica's Broadcasting Commission played a leading role in the elaboration of the Caribbean AI Policy Roadmap which was drafted on the basis of a first draft of the UNESCO Recommendation.

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the Recommendation in Latin America and the Caribbean. They pledged to

create a Regional Council composed of national and local governments in the region which will support their implementation efforts.

Jamaica signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.²⁷⁰⁷ It aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.²⁷⁰⁸

Evaluation

Jamaica, thanks to its Broadcasting Commission, has played a pioneering role in regional AI policy and has demonstrated a capacity and ability for leadership in the Caribbean SIDS. As an active member of the UNESCO Caribbean Cluster, Jamaica has participated in developing the Caribbean AI Policy Roadmap, which draws inspiration from a first draft of the UNESCO Recommendation on the Ethics of AI and reflects regional concerns of Caribbean SIDS regarding the environment, the history of colonialism, and the maintenance of distinctive Caribbean cultures. Jamaica has also demonstrated the oversight capacity of its judicial system with its Supreme Court striking down a law which would have implemented state surveillance through a mandatory AI-powered national identification system. Jamaica is now building on these efforst and is in the process of drafting a national AI strategy. Concerns persist however with regard to the growing use of facial recognition technology and it remains to be seen the concrete role that Jamaica's Information Commissioner will play.

Japan

National AI Strategy

Under the direction of former Prime Minister Shinzo Abe, Japan has emerged as a global leader in both AI policy and data governance. Abe declared in 2019 that "Artificial Intelligence (AI) must be used solely for humans and humans must be held responsible for its outcome. We will take the lead in establishing human-centered ethical principles for AI."²⁷⁰⁹

Earlier, in 2016, Prime Minister Abe called for the Japanese government to establish an "Artificial Intelligence Technology Strategy Council."²⁷¹⁰ The Council set out an Artificial Intelligence Technology Strategy and Industrialization Roadmap.²⁷¹¹ The Roadmap focuses on public-private collaboration along the AI "full pipeline from Research and development to social implementation."

Japan's AI strategy emphasizes a risk-based, agile, and multistakeholder process, rather than a one-size-fits-all obligation or prohibition.²⁷¹² Priority areas include productivity; health, medical care, and long-term care; mobility; and information security. The roadmap includes three phases: (1) the development and application of AI within various domains, (2) the public use of data and AI across those domains, and (3) the creation of ecosystems that integrate domains together. In August 2018, an action plan specified the objectives and timetable for accomplishment for each initiative under the Strategy.

The government established in parallel separate opportunities for the examination of ethical aspects of AI technology, intellectual property rights, personal information protection, and promotion of open data, as cross-

sectional items.²⁷¹³ Japan updated the AI Strategy in 2019,²⁷¹⁴ 2021²⁷¹⁵ and again in 2022.²⁷¹⁶

The "purpose of this Strategy is to contribute to the resolution of global issues through the realization of Society 5.0 and to present a comprehensive policy package related to AI for overcoming Japan's own social issues and improving industrial competitiveness."²⁷¹⁷ The "Society 5.0" refers to "a human-centered society that balances economic advancement with the resolution of social problems by a system that highly integrates cyberspace and physical space."²⁷¹⁸

"Based on the "Human-centered AI Social Principles", it is important to enable diverse human resources to contribute based on a wide range of knowledge, perspectives, ideas, etc., regardless of their diverse backgrounds such as gender, age, political beliefs, and religion."²⁷¹⁹

The 2022 strategic objectives are: (0) dealing with imminent crises by establishing systems and technological infrastructures to maximize the protection of people's lives and property against pandemics and large-scale disasters; (1) developing and attracting "human resources for the AI era"²⁷²⁰ in a sustainable manner; (2) "Japan should become a top runner in the application of AI in real-world industries and achieve enhanced industrial competitiveness" while contributing to "the promotion of sustainable industries and the achievement of the UN Sustainable Development Goals (SDGs) through innovation"²⁷²¹ "In addition, it is important to further improve the quality of services, improve the working environment, and ultimately reduce the financial burden by applying AI in the public

sector^{"2722} (3) realizing a "sustainable society with diversity"²⁷²³ not only for Japan but also on a global scale to contribute in the achievement of SDGs; (4) "Japan should take the leadership to build an international network in the AI field for research, education and social infrastructure and accelerate AI research and development, human resources development, and achievement of SDGs"²⁷²⁴

Social Principles of Human-Centric AI

Japan's 2019 "Social Principles of Human-Centric AI"²⁷²⁵ were developed by the Council for Social Principles of Human-centric AI chaired by Professor Osamu Sudoh. The Social Principles specify the form of society that Japan should aim for, discuss impacts on society, present a set of AI social principles, and identify issues to consider in AI R&D and social implementation. They call for all relevant stakeholders to cooperate and interact closely.

Three fundamental values underpin the Social Principles of Human-Centric AI: (1) Dignity – a society in which human dignity is respected; (2) Diversity and Inclusion – a society in which people with diverse backgrounds can pursue their own well-being; and (3) Sustainability – a sustainable society.

The social principles themselves are meant to be implemented across the Japanese society, including national and local governments, as well as in multilateral frameworks. They include seven principles for AI:

(1) Human-Centric – the utilization of AI must not infringe upon the fundamental human rights guaranteed by the Constitution and international standards and AI should be developed, utilized, and implemented in society to expand the abilities of people and allow diverse people to pursue their own well-being;

(2) Education/Literacy – all stakeholders must have an accurate understanding of AI, knowledge, and ethics permitting appropriate use of AI in society;

(3) Privacy Protection – AI should not infringe on a person's individual freedom, dignity or equality; AI using personal data should have mechanisms to ensure accuracy and legitimacy, and to allow individuals to be substantially involved in managing the

privacy of their personal data, personal data must be protected appropriately according to its degree of importance and sensitivity; (4) Ensuring Sequrity, a risk management ensures h is response.

(4) Ensuring Security – a risk management approach is necessary;

(5) Fair Competition;

(6) Fairness, Accountability, and Transparency – it is necessary to ensure fairness and transparency in decision-making, appropriate accountability for the results, and trust in the technology so that people who use AI are not subject to undue discrimination with regard to personal background, or unfair treatment in terms of human dignity; and

(7) Innovation.

On January 28, 2022, Japan's Ministry of Economy, Trade and Industry (METI) updated the "Governance Guidelines for implementation of AI Principles" after additionally inviting experts from consumer protection and standardization, aiming to operationalize the AI principles that are required for the facilitation of deployment of AI.²⁷²⁶

In 2023, the Ministry of Economy, Trade and Industry (METI) and the Ministry of Internal Affairs and Communications (MIC) integrated and updated the existing guidelines; AI R&D Guidelines, AI Utilization Guidelines, and Governance Guidelines for Implementation of AI Principles and compiled Draft AI Guidelines for Business.²⁷²⁷

The 2023 "Japanese G7 Presidency also intends to focus on (...) a human-centric approach to artificial intelligence, based on our shared democratic values."²⁷²⁸

AI Utilization Guidelines

The 2019 AI Utilization Guidelines²⁷²⁹ provide practical guidance on matters to be considered by various stakeholders, including developers, end users, and data providers. Aimed to promote the benefits of AI and mitigate risks, the purpose of the Guidelines is to help AI service providers and business users to establish their own AI development and utilization guidelines, based on the Social Principles for Human-centric AI. The Guidelines set out ten principles to be considered, in full or in part, according to the purpose and social context of AI utilization: (1) proper utilization; (2) data quality; (3) collaboration; (4) safety; (5) security; (6) privacy; (7) human dignity and individual autonomy; (8) fairness; (9) transparency; and (10) accountability.

AI R&D Guidelines

The original AI R&D Guidelines are directed at developers.²⁷³⁰ They include 9 principles related to (1) collaboration; (2) transparency; (3) controllability; (4) safety; (5) security; (6) privacy; (7) ethics (respect human dignity and individual autonomy); (8) user assistance; and (9) accountability.

The Japanese AI R&D Guidelines influenced global AI policies. The Japanese government proposed an international discussion on AI policy at the G-7 ICT Ministers' meeting in 2016 and presented the Guidelines to the G-7 Leaders meeting in Turin, Italy in 2017.²⁷³¹ The Japanese AI R&D Guidelines also contributed significantly to the development of the OECD AI Principles, the first global framework for AI Policy. The OECD AI Principles were adopted by 42 countries in May 2019, and then by G-20 Nations at the Leaders' Summit hosted in Osaka, last June 2019. OECD Secretary-General thanked Prime Minister Abe and said that the OECD AI Principles, endorsed by the G-20 nations, are "affirming that the AI we want is centered on people, respects ethical and democratic values, is transparent, safe, and accountable."

AI Governance in Japan

From a regulatory standpoint, Japan has no regulations that generally constrain the use of AI. According to a 2021 report published by the Ministry of Economy, Trade, and Industry (METI) which comprehensively describes Japan's AI regulatory policy, such "legally-binding horizontal requirements for AI systems are deemed unnecessary at the moment." According to this report, legislation faces difficulties in keeping up with the speed and complexity of AI innovation. A prescriptive, static, and detailed regulation in this context could stifle innovation. The government should respect companies' voluntary efforts for AI governance while providing non-binding guidance to support or guide such efforts. The guidance should be based on multi-stakeholder dialogue and be continuously updated in a timely manner.²⁷³²

In the case of sector-specific regulations, none prohibit the use of AI, but rather require businesses to take appropriate measures and disclose information about risks.²⁷³³ For example, the Digital Platform Transparency Act imposes requirements on large online malls, app stores, and digital advertising businesses to ensure transparency and fairness in transactions with business users, including the disclosure of key factors determining their search rankings.²⁷³⁴ The Financial Instruments and Exchange Act²⁷³⁵ requires businesses engaging in algorithmic high-speed trading to register with the government and requires them to establish a risk management system and maintain transaction records.²⁷³⁶

Al Safety Summit

In November 2023, Japan participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁷³⁷ Japan thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be humancentric, trustworthy and responsible." The next AI Safety Summit is due to take place in France in 2024.

Council of Europe Convention on AI

Japan contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers is due to adopt formally the Framework Convention in May 2024 which will then be opened for signature and ratification by any country in the world.²⁷³⁸

Public Participation

Japan organized a conference with public participation in advance of the 2016 G-7 ICT Ministers' meeting.²⁷³⁹ The conclusions of the conference informed the 2016 Takamatsu Declaration.²⁷⁴⁰ The G7 ICT Ministers agreed to promote ICT technology R&D for Artificial Intelligence; meet high standards of privacy and data protection; promote accessibility and digital literacy for everyone; and respect cultural and linguistic diversity.

In October 2016, Japan²⁷⁴¹ also launched a new public conference on the theme "Toward AI Network Society" with the participation of experts from industry, academia, and citizens to examine the social, economic, ethical, and legal implications of AI.²⁷⁴² The AI Network Society conference, chaired by Dr. Osamu Sudoh,²⁷⁴³ formulated the AI R&D Guidelines. In 2019, another meeting of the Toward AI Network Society conference produced the AI Utilization Guidelines, "a commentary on the principles expected to be taken into consideration in the utilization of AI." ²⁷⁴⁴

The 2022 AI Governance Guidelines were elaborated following public consultation. In 2021, the Ministry of Economy, Trade, and Industry issued a call for Public Comments on "AI Governance Guidelines for Implementation of AI Principles Ver. 1.1."²⁷⁴⁵ The Governance Guidelines reflect the advice of companies, academics, legal experts, and auditors.

Data Protection

The 2003 Act on the Protection of Personal Information (APPI) initially governed data processing in the private sector only.²⁷⁴⁶ As of April 2022, the APPI shall apply to the private sector, national administrative agencies, local governments, national and public hospitals, national and public universities, and national research and development corporations.²⁷⁴⁷ This amendment accompanies the launch of a new Digital Agency in September 2021. The aim is "to accelerate the digitization of local and

central government after the COVID 19 pandemic further exposed the necessity of reformation". The Agency "commits to "Human-friendly digitalization: No one left behind", underpinned by the vision of "Government as a service" and "Government as a startup"."²⁷⁴⁸

The 2020 amendments to the APPI bring the law closer to the EU's General Data Protection Regulation (GDPR).²⁷⁴⁹ The amendments upgrade individuals' rights, introduce the concept of pseudonymization, reinforce data breach reporting, and increase penalties for offenders. In January 2019, the European Commission adopted an adequacy decision on Japan's APPI, allowing personal data to flow freely between the two economies.²⁷⁵⁰

Prime Minister Abe put forward the concept of Data Free Flow with Trust (DFFT) in a speech at the World Economic Forum in January 2019.²⁷⁵¹ Abe said, "We must, on one hand, be able to put our personal data and data embodying intellectual property, national security intelligence, and so on, under careful protection, while on the other hand, we must enable the free flow of medical, industrial, traffic and other most useful, non-personal, anonymous data to see no borders, repeat, no borders." Abe underscored the importance of privacy protection, explaining that the DFFT regime should be built on "non-personal data." Abe further emphasized that the appropriate framework for the protection and governance of data according to their sensitivity would allow higher freedom of data flow across borders.

At the 2019 G20 Summit in Osaka, OECD Secretary Gurria described Abe's vision for Data Free Flow with Trust as "ambitious and

timely."²⁷⁵² The G20 Leaders adopted the concept at the 2019 Summit,²⁷⁵³ and reaffirmed the goal at the 2020 Summit in Riyadh.²⁷⁵⁴

Regulatory cooperation for DFFT was also discussed at the Digital Ministers' G7 Digital Track during the G7 Germany 2022 and it is expected to be a key topic during the G7 Digital Ministers' meeting in Takasaki in April 2023 as well.²⁷⁵⁵

The G7 2022 Action Plan for Promoting DFFT emphasized the importance of regulatory cooperation. Key topics for discussion include regulatory approaches related to privacy-enhancing technologies and interoperability of data protection frameworks, as well as regulatory cooperation between data protection and privacy authorities on enforcing data protection and regulations.²⁷⁵⁶

The third G7 Data Protection and Privacy Authorities Roundtable took place in Japan in June 2023. Issues such as "the promotion of DFFT, cross-border enforcement cooperation and advanced technologies and privacy protection with the aim of fostering cooperation amongst each other" were addressed.²⁷⁵⁷

members exercise their official authority independently. The PPC also supervises the implementation of the My Number Act, which regulates the use of numeric identifiers for social security and taxation.²⁷⁵⁸

The PPC is a member of the Global Privacy Assembly since 2017.²⁷⁵⁹ The PPC endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,²⁷⁶⁰ the 2020 GPA Resolution on AI Accountability,²⁷⁶¹ the 2022 GPA Resolution on Facial Recognition Technology²⁷⁶² and the 2023 GPA Resolution on Generative AI.²⁷⁶³

Algorithmic Transparency

Japanese law does not contain a general right of algorithmic transparency.²⁷⁶⁴ However, there are specific provisions for certain sectors. For example, for financial services, the Comprehensive Guidelines for Supervision over Major Banks require that the concerned individual be provided with specific explanations of the reasons for the rejection of a request to conclude a loan agreement.²⁷⁶⁵

In July 2022, the Tokyo District Court ruled in favor of Hanryumura, a Korean-style BBQ restaurant chain operator in an antitrust case brought against Kakaku.com, operator of Tabelog, Japan's largest restaurant review platform. Japanese legal experts have said an antitrust case related to a local restaurant website could change how large internet platforms such as Google, Facebook, and Amazon operate in the country, forcing them to reveal the inner workings of their secret algorithms. "There hasn't been a case in competition law anywhere else in the world where a court has requested a digital platform to disclose its algorithm," said Kentaro Hirayama, a lawyer specializing in antitrust regulator. The internet company has appealed against the decision.²⁷⁶⁶

Facial Recognition

Japan has deployed facial recognition in several sectors, including transportation, banking (ATMs), police, and immigration. According to Japan Times, Japan used facial recognition technology, originally intended for security purposes, to prevent the spread of the novel coronavirus when it hosted the Tokyo Olympics and Paralympics in 2021.²⁷⁶⁷ "During the Tokyo Olympics, as many as 303 facial recognition terminals were in operation and used to verify the identity of visitors as they entered the venues. The system was used against 430,000 people at the Olympics and 300,000 people at the Paralympics." Go Iwashita, the Director of the Security Bureau for Tokyo Organizing Committee for the Olympic and Paralympic Games, said "Throughout the game, four million facial recognition operations had been performed and we received no reports of failure."²⁷⁶⁸

Osaka Metro Co. has developed automated ticket gates with facial recognition with a view to equipping all metro stations in Osaka by 2024,

under the Act on the Protection of Personal Information (March 19, 2019) (par. 93), <u>https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32019D0419</u>

ahead of the 2025 World Expo.²⁷⁶⁹ Likewise, the Japanese Ministry of Economy, Trade and Industry is testing facial recognition ticketing on driverless buses in several cities across the country.²⁷⁷⁰

In September 2020, Japan Times reported that Japanese Police Forces have been using facial recognition technology across the nation since March 2020 to locate criminal suspects. Critics warned that the system could transform the country into a surveillance society unless it operates under strict regulations, a senior National Police Agency (NPA) official said "we are using the system only for criminal investigations and within the scope of the law. We discard facial images that are found to be unrelated to cases."²⁷⁷¹ The NPA manages and utilizes facial images under rules set by the National Public Safety Commission,²⁷⁷² as it does with fingerprints and DNA. The agency's database currently holds 10 million facial images of criminal suspects.

Japan does not have specific legislation for facial recognition in the government sector. As of September 2020, the Japanese APPI covers the use of facial biometric data gathered from security cameras.²⁷⁷³ Law enforcement is however exempt from this type of privacy regulation. APPI also allows the use of anonymized facial recognition data beyond the intended purposes if such data is sufficiently protected from being restored to its original form. The Personal Information Protection Commission formed a committee of experts in January 2022 to review and prepare a guideline for the appropriate use of camera images for crime prevention and

safety in public spaces.²⁷⁷⁴ The draft guidelines were released for public comment in January 2023. According to them, the PPC supports the use of facial recognition cameras in public places for crime prevention or security purposes, but recommends that operators increase transparency so as not to cause undue anxiety to those being filmed. ²⁷⁷⁵

Biometric Identification

In 2021, the Digital Agency has been endowed with the task to accelerate the digitization of public services, industries and lifestyle through the My Number System and My Number Card. My Number System relates primarily to the Social Security and Tax Number System which provides one unique number to all registered residents in Japan. The system serves to centralize all personal information dispersed across various administrations with the aim to improve the efficiency of public services. The My Number Card can be used as an official identification card as well as a multi-purpose card for a wide-range of public services or for various private on-line transactions.

Before the COVID-19, the former Director-General of the Administrative Management Bureau at the Ministry of Internal Affairs and Communications, Susumu Kamimura, explained that among the reasons why AI usage progressed slowly in the Japanese Public sector are the "black-box effect" and the "privacy issue". As for the black box effect, "this is more likely the reason AI has not been deployed in the public sector, where transparency and accountability are often more important than efficiency and low-cost."²⁷⁷⁶ "The privacy issue is another factor. Japanese people are extremely sensitive to a lack of privacy, and that is the main reason Japan does not have a true national ID system, and its partial substitute – My Number – has not been fully implemented. An AI-powered precise identification of personal features will not be readily tolerated."²⁷⁷⁷

In October 2022, a survey on attitudes toward the My Number Card by Kioicho Strategy Institute showed that, "Among respondents, 59.4% said they have a My Number Card, which roughly corresponds to the 55.7% of Japanese as a whole (...). By contrast, 18.4% of respondents said that they had no intention of obtaining a card." "As a means of promoting the My

Number Card scheme, the government is conducting a campaign to give card holders up to \$20,000 worth of My Number Points that can be used for shopping and other purposes. The campaign seems to be having a certain effect, with 56% of respondents that have cards saying they have received points. However, when asked if they have used their My Number Card for purposes such as identification or applications to government agencies, only 29.9% said they have." "Although the use of My Number Cards to verify health insurance status was introduced in October 2021, only 3.3% of the respondents had registered and were using the IDs in lieu of standard health insurance cards, while 35.3% had registered but not yet used the card or had not found medical institutions where it could be used."²⁷⁷⁸

In February 2023, the Tokyo Medical Practitioners Association filed a lawsuit against the government with the Tokyo District Court to prevent the replacement of patients' insurance cards with My Number from April 2023. "The suit claims that in order for the government to require medical institutions to accept My Number cards, the Health Insurance Act should be amended."²⁷⁷⁹

EdTech and Children Tracking

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Japan, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop,

refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so. 2780

Lethal Autonomous Weapons

Since 2014, Japan has participated in international talks on lethal autonomous weapons systems. Japan often states that it has "no plans" to acquire such weapons and highlights the need to retain meaningful human control over the use of force. However, Japan does not support the negotiation for a new treaty to address mounting concerns over fully autonomous weapons and has yet to join the group of 29 countries calling for a prohibition on such weapons.²⁷⁸¹

In December 2021, Japan and other countries blocked any advancement in U.N. talks toward legally binding measures to ban and regulate the development and use of lethal autonomous weapon systems. The Sixth Review Conference of the Convention on Certain Conventional Weapons ended in December 2021 in Geneva without progress, failing to reflect eight years of work and leaving countries and nongovernmental organizations that have called for legally binding rules expressing disappointment.²⁷⁸²

At the 77th UN General Assembly First Committee meeting in October 2022, Japan issued a statement, noting that the country "recognizes the meaningful results achieved by the Group of Governmental Experts (GGE) in the discussion on emerging technologies in the area of lethal autonomous weapons systems (LAWS) in the past years, as one of the key topics under the CCW. Despite the sensitivity and complexity of this issue, intensive deliberations at the GGE meetings have significantly contributed to fostering bases for common understanding. Japan believes it is beneficial for the High Contracting Parties to continue the discussion on LAWS stepby-step within the CCW framework. Japan also welcomes many proposals submitted to the GGE this year to advance such discussion. Japan will

continue to actively contribute to international rule-making."²⁷⁸³ Japan were also among the 70 countries which delivered a joint statement on autonomous weapons systems at the 77th UN General Assembly. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."²⁷⁸⁴

On February 16-17, 2023, the Dutch Government organized the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM) in The Hague. On this occasion, government representatives, including Japan,²⁷⁸⁵ agreed a joint call to action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁷⁸⁶ Japan also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁷⁸⁷

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. Human Rights

According to Freedom House, Japan's Global Freedom Score in 2021 was 96/100. Based on the latest Freedom House's Country Report, political rights and civil liberties in Japan are generally well respected. Outstanding challenges include ethnic and gender-based discrimination and claims of improperly close relations between the government and the business sector.²⁷⁹⁰

OECD AI Principles

Japan endorsed the OECD and the G20 AI Principles and is a member of the Global Partnership on AI (GPAI). Japan was a catalyst for the adoption of the OECD AI Principles at the G20 Ministerial meeting in Tsukuba and the G20 Leaders' Summit in Osaka, Japan, in 2019.²⁷⁹¹

UNESCO Recommendation on the Ethics of Artificial Intelligence

Japan, along with 192 other States, endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.

METI has been holding meetings of the Expert Group on how AI principles should be implemented. While compiling its report on the AI Governance in Japan, the Expert Group acknowledged the UNESCO Recommendation as part of the "high-level guidance from AI principles to implementation" while describing "the governance structure in the era of Society 5.0."²⁷⁹² The Japanese Government also supported the launch of a

G7 Hiroshima Process

The G7, led by Prime Minister Kishida, released the G7 Leaders' Statement on the Hiroshima AI Process.²⁷⁹⁴ The G7 leaders emphasized: "We also recognize the need to manage risks and to protect individuals, society, and our shared principles including the rule of law and democratic values, keeping humankind at the center."

The G7 leaders confirmed the need for generative AI governance. Thanks to Japanese diplomacy, by the end of 2023, the G7 leaders reached an agreement on the world's first international framework, known as the G7 Hiroshima AI Process Comprehensive Policy Framework. It includes both a set of Guiding Principles applicable to all AI actors throughout the entire AI lifecycle and a Code of Conduct that lists in more detail the actions that AI developers must abide by.²⁷⁹⁵ The Hiroshima process was supported by a report prepared by the OECD geared towards ensuring a common understanding on generative AI.²⁷⁹⁶

Evaluation

Japan is a pioneer in the field of AI policy. Japan hosted the G20 Leaders' meeting in Osaka in 2019 at which time the G20 nations endorsed the OECD AI Principles. The former Prime Minister Shinzo Abe promoted the concept of Data Free Flow with Trust (DFFT), a core concept for human-centric AI, that carries forward in the policy recommendations of the OECD, the G20, the G7 and the European Commission. Japan hosted the G7 Leaders' meeting in 2023 which led to the first international framework on generative AI. Japan also endorsed the UNESCO Recommendation on the Ethics of AI and is taking steps towards its implementation. However, concerns about the unregulated use of facial recognition remain.

Kazakhstan

National AI Strategy

In recent years, Kazakhstan has taken an active interest in AI and new technologies to reform the country's economy and extend internal security and policing.²⁷⁹⁷ Kazakhstan has also expressed interest in Russia's AI development.²⁷⁹⁸ Although Kazakhstan has not defined a precise AI strategy yet, the government has set out an AI and other smart technologies Agenda in 2017. This includes the cultivation and creation of new industries with the use of digital technologies, and productivity growth through the widespread introduction of automation, robotics, AI, and the exchange of big data.²⁷⁹⁹ One of Kazakhstan's primary purposes in embracing AI is to spark foreign investment in the country to diversify the economy and reduce its economic dependence on natural resources.²⁸⁰⁰ Developing AI is a means for Kazakhstan to strengthen social governance and welfare. Kazakhstan's 2017 AI Agenda mentions the threat of terrorism growth and the prevention of religious extremism propaganda on the Internet and social networks.²⁸⁰¹

The state program "Digital Kazakhstan" describes the implementation of this Agenda through the realization of the following projects in the AI sector:²⁸⁰²

- Creation of an international technopark of IT start-ups (Astana Hub)
- Creation of model factories based on Industry 4.0 technologies
- Development of open platforms (Open API), Big Data, and AI

- Development of telecommunications infrastructure, including broadband internet access
- Development of innovative financial technologies
- Implementation of Smart City components

The country has established several IT and research centers that are planned to be the flagships for the development of AI in Kazakhstan: Nazarbayev University, Astana International Financial Centre and Astana International Technology Park of IT Startups. Despite these aspirations, Kazakhstan has only scored 45.78 out of 100 in the Government AI Readiness Index, with the lowest score in the technology sector.²⁸⁰³ A dearth of qualified IT specialists²⁸⁰⁴ and low R&D spending (0.13% of GDP in 2021)²⁸⁰⁵ are two significant barriers to a dynamic and innovative technology sector. According to Kazakhstan Prime Minister Askar Mamin, Kazakhstan "simply does not have such financial means to develop its own AI technologies."²⁸⁰⁶ The country is trying to address this problem with the help of foreign investors²⁸⁰⁷ and international partners.²⁸⁰⁸

Public Participation

Kazakhstan has yet to develop a systematic process for public consultation in matters of policy. A law on public access to government

information was adopted in 2015, but it is "poorly implemented in practice."²⁸⁰⁹

On transparency, Freedom House states, "The government and legislature offer little transparency on their decision-making processes, budgetary matters, and other operations. The media and civil society do not have a meaningful opportunity to provide independent commentary and input on pending laws and policies.

A 2020 OECD report analyzed the legal and policy framework of more than 200 public councils that gathered civil society in Kazakhstan.²⁸¹⁰ Recommendations included the implementation of clearer guidelines for public consultation, and training, and ensuring a feedback loop of the input from the Councils.

In 2022, the Presidential Decree that establishes the action plan for legal policy included an action to increase public participation in the process of testing candidates for judges (Action N82) and improvement of legal education and legal propaganda (Action N99).²⁸¹¹

Presidential and governmental decrees, as well as other legal documents, are published on the official webpage operating under the Ministry of Justice, readily available to the public, and the e-gov page connects to more than 700 government services.

As part of the Digital Kazakhstan National program, the Ministry of Digital Development, Innovations and Aerospace Industry of the Republic of Kazakhstan oversees 740 e-government integrated services. Services are availed to citizens via egov.kz portal, mgov mobile app, and front offices of "Government for Citizens."²⁸¹²

Data Protection

The Law of the Republic of Kazakhstan of 21 May 2013 No. 94-V on Personal Data and its Protection (Personal Data Law)²⁸¹³ sets the general regulations for data localization, collection and processing of personal data.

In 2019, the country experienced a wave of major data breaches from the databases of the CEC and the Prosecutor General's Office.²⁸¹⁴ Soon after, the personal information of 11 million people was published online and could be accessed by anyone through a published database.²⁸¹⁵ These incidents led to the amendment of the existing data protection law, which was revised to mostly align with the GDPR.²⁸¹⁶

In 2020, the Law on Amendments and Additions to Some Legislative Acts of the Republic of Kazakhstan on the Regulation of Digital Technologies (Amendment Law) was enacted.²⁸¹⁷ The Amendments entered into force in two phases, first in July 2020,²⁸¹⁸ and then in January 2021.²⁸¹⁹ The amendments established the Ministry of Digital Development, Innovation and Aerospace Industry of Kazakhstan as the competent authority to enforce the data protection law, created rules for the collection and processing of personal data and introduced the concept of "personal data safety protection service," as well as an obligation requires

that the content and amount of personal data collected strictly correspond to those previously declared and to the legal purposes of their processing.

In 2021-2022, Court practice regarding non-compliance with personal data protection measures began to develop.²⁸²⁰ While the GDPR requires "the appropriate data protection training to personnel having permanent or regular access to personal data," the Kazakhstan's amendments do not require data protection training. Training is important because human error is one of the major causes of data breaches across the world.

Algorithmic Transparency

Although Kazakhstan's Personal Data Law has been inspired by the GDPR, it does not include the concept of the 'right to not be subject to automated decision-making."²⁸²¹ Kazakhstan would have the possibility to ratify the Council of Europe's Modernized Convention for the Protection of individuals with regard to the processing of personal data which provides for the right to algorithmic transparency but has not done so yet.²⁸²²

AI Regulation

Kazakhstan has started regulating artificial intelligence. On October 15, 2021, the President of Kazakhstan issued Decree No. 674 "On the approval of the Concept of Legal Policy of the Republic of Kazakhstan until 2030." ²⁸²³ The Decree addresses the issue of AI accountability. The Decree states, "The need for the legal regulation of artificial intelligence and robotics is determined primarily by the solution of the issue of distribution of responsibility for the harm caused by their actions, as well as the solution of the problem of determining the ownership of intellectual property rights to works created with the participation of artificial intelligence".²⁸²⁴

On April 29, 2022, the Government of Kazakhstan issued Decree No. 264 On approval of the Action Plan for the implementation of the Concept of the legal policy of the Republic of Kazakhstan until 2030.²⁸²⁵ In Action N61, ICRIAP, State Enterprise, Ministry of Internal Affairs, and other state bodies, are tasked with the "Development of the concept of 'artificial intelligence', including the procedure, scope and range of its use, status and legal consequences, with the subsequent introduction of a separate offense providing for liability for its use for criminal purposes" ²⁸²⁶ by December of 2025 and 2026.

Action N72 sets government entities with the responsibility to submit proposals for "Codification of the rules of law governing the most important public relations in the field of information and communication technologies, data processing, digital assets, industrial automation, information security, machine learning and artificial intelligence, protection of the rights of personal data subjects" are planned to be finished by the end of 2023.²⁸²⁷

Research & Development

In 2020 The World Bank announced a cooperation with Nazarbayev University to create a National Cluster of Artificial Intelligence, including a country-based laboratory, a data processing research center, and a science park for the development of artificial intelligence.²⁸²⁸ Among other plans was establishing active cooperation in developing common standards, rules, and policies in the field of data exchange and integration. In April of the same year, the Kazakh Ministry of Education and Science, along with the World Bank, launched the Fostering Productive Innovation Project

(FPIP)²⁸²⁹ to support and develop high-quality scientific research on, and the commercialization of new technologies.

Facial Recognition and Smart Cities

Facial recognition surveillance technology is becoming increasingly widespread in Kazakhstan. While the government insists that the main goal is to maintain public safety, many activists are worried that this will ultimately create a totalitarian surveillance state.²⁸³⁰ This concern is even more pregnant that the companies behind these surveillance systems in Kazakhstan are under U.S. sanctions for unethical use of AI technology.

In October 2019, facial recognition systems were first installed on buses.²⁸³¹ Notably, President Tokayev paid a visit and discussed future cooperation with Hikvision,²⁸³² a Chinese state-owned surveillance company under U.S. sanctions²⁸³³ that provided the hardware for Kazakhstan's newly established surveillance system. In the same year, the small city of Akkol was proclaimed the first complete "Smart City" in Kazakhstan. Akkol is digitally monitored by an AI-based facial recognition surveillance system. Its functions include thermal imaging, searching for a car by number plates, recognizing missing persons, and detecting the presence of weapons in schools, hospitals, and other public places.²⁸³⁴ Over 4,000 cameras have blanketed Nur-Sultan, the capital.²⁸³⁵

In 2020, the authorities announced that Kazakhstan would be spending \$23 million to install facial recognition software in its largest city, Almaty.²⁸³⁶ In mid-March 2020, Kazakhstan's government was fighting the novel coronavirus. The Ministries of Health and Internal Affairs ultimately turned to AI technological solutions to confront the coronavirus outbreak. The range of technologies reoriented to enforce quarantine and curfews included traffic cameras, facial recognition technologies, and smartphone apps.²⁸³⁷ The Ministry required the 8,000 or so Kazakhstani citizens under quarantine to use the SmartAstana tracking app, to allow officials monitoring compliance of isolation mandates.

The government also monitored citizens through facial recognition video surveillance technology to find violators of the quarantine regime in Almaty. By the end of the country's two-month state of emergency, 2,424 people had been charged with violating quarantine in Almaty and 3,347 in Nur-Sultan.²⁸³⁸ According to experts, the pandemic exacerbated the existing arbitrary and uneven policing practices as national and municipal authorities surveillance practices increased without any public oversight.²⁸³⁹

In 2022, the country launched a facial recognition system at airports, religious institutions, and underground walkways of Nur-Sultan city.²⁸⁴⁰ Reports of arrests of protesters based on facial recognition from surveillance cameras and AI-powered recognition technology continued in 2022.²⁸⁴¹ Kazakhstan and China have strengthened their cooperation in AI, big data, cloud computing, and other high-tech sectors.²⁸⁴²

Biometrics

Kazakhstan implemented the use of biometrics in the eGov Mobile app in 2022.²⁸⁴³ The system requires a Digital ID video identification. The Chairman of the Board of National Information Technology highlighted this development as an "easier and time-efficient [process] that provides more reliable personal data protection." The authentication via biometrics applies for 400 public services and e-license services, across over 2.4M citizens, using the airport, train services, banking, mobile services, postal service, and notary public.

Lethal Autonomous Weapons

In October 2022, Kazakhstan was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²⁸⁴⁴ In this joint statement, States declared that they "are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law ("IHL"), including through maintaining human responsibility and accountability in the use of force."²⁸⁴⁵

In February 2023, Kazakhstan participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Kazakhstan, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁸⁴⁶ In this joint call, States "stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and

accountability." They also "affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data." States also "stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain."²⁸⁴⁷

Human Rights

According to Freedom House, Kazakhstan is not a "Free" country and rates (23/200) for political rights and civil liberties.²⁸⁴⁸ Freedom House reports "Parliamentary and presidential elections are neither free nor fair, and major parties exhibit continued political loyalty to the government. The authorities have consistently marginalized or imprisoned genuine opposition figures. The dominant media outlets are either in state hands or owned by government-friendly businessmen. Freedoms of speech and assembly remain restricted, and corruption is endemic."
